iv. The Department will make payments by wire transfer or electronic funds transfer unless the CHC-MCO is unable or unwilling to receive payment through wire or electronic funds transfer. If such arrangements are not in place, the Department will provide payments through the U.S. Mail.

v. Upon notice to the CHC-MCO, and for those months specified by the Department, by the fifteenth (15th) of each month, the Department will make a Capitation payment, referenced in Section VII.B.1, for each Participant for all dates of Enrollment indicated on the Department's eCIS through the last day of the current month. This payment will be limited to those days for which the Department has not previously made payment to the CHC-MCO.

vi. This paragraph vi. is applicable unless it is superseded by paragraph v. immediately above. By the fifteenth (15th) of each month, the Department will make a Capitation payment, referenced in Section VII.B.1, for each Participant for all dates of Enrollment indicated on the Department's eCIS prior to the first day of the current month. This payment will be limited to those days for which the Department has not previously made payment to the CHC-MCO.

vii. The Department will recover Capitation payments made for Participants who were later determined to be ineligible for managed care for up to twelve (12) months after the service month for which payment was made. The Department will recover Capitation payments made for deceased Participants for up to twenty-one (21) months after the service month in which the date of death occurred. See Exhibit K, CHC-MCO Participant Coverage Document.

viii. The CHC-MCO must report to the Department within sixty (60) calendar days when it has identified capitation payments or other payments in excess of amounts specified in the Agreement.

ix. Upon written notification to the CHC-MCO, the Department may delay the capitation payments made in May and/or June of each calendar year that would have otherwise been made under Section VII.B.2.v above, to payment dates in July of the same calendar year. The Department will include in the written notification the applicable payment dates for the delayed capitation payments.

3. Program Changes

Amendments, revisions, or additions to the Medicaid State Plan, the CHC 1915(b) and 1915(c) Waivers, or to Federal or State statutes and regulations, guidelines, or policies shall, insofar as they affect the scope or nature of benefits available to Participants, amend the CHC-MCO's obligations as specified herein, unless the Department notifies the CHC-MCO otherwise. The Department will inform the CHC-MCO of any changes, amendments, revisions, or additions to the Medicaid State Plan or 1915(b) and 1915(c) Waivers or changes in the Department's regulations, guidelines, or policies in a timely manner.

If the scope of Eligible Individuals or services, inclusive of limitations on those services that are the responsibility of the CHC-MCO, is changed, the Department will determine whether the change is sufficient that an actuarial analysis might conclude that a rate change is appropriate. If the Department makes such determination in the affirmative, the Department will arrange for the actuarial analysis, and the Department will determine whether a rate change is appropriate. The Department will take into account the actuarial analysis and will consider input from the CHC-MCO when making this determination. At a minimum, the Department will adjust the rates as necessary to maintain actuarial soundness. If the Department makes a change, the Department will provide the analysis used to determine the rate adjustment. If the scope of services or Eligible Individuals that are the responsibility of the CHC-MCO is changed, upon request by the CHC-MCO, the Department will provide written information on whether the rates will be adjusted and how, along with an explanation for the Department’s decision.

The Department will appropriately adjust the rates provided by Appendix 3c, Capitation Rates, to reflect changes in an Assessment, Premium Tax, or other similar tax.

The rates in Appendix 3c, Capitation Rates, will remain in effect until an Agreement is reached on new rates and their effective date**,** unless modified to reflect changes to the scope of services or consumers in the manner

described in the preceding paragraph.

C. Acceptance of Actuarially Sound Rates

By executing this Agreement, the CHC-MCO has reviewed the rates set forth in Appendix 3c, Capitation Rates, and accepts the rates for the relevant Agreement period.

D. Claims Processing Standards, Monthly Report and Sanctions

These requirements and assessments are applied separately by zone.

1. Timeliness Standards

The CHC-MCO must adjudicate Provider Claims consistent with the requirements below. These requirements apply to Claims processed both by the CHC-MCO and by any subcontractor the CHC-MCO may have contracted with to receive and process claims for it. Subcapitation payments and claims adjustments are excluded from these requirements.

The adjudication timeliness standards follow for each of four (4) categories of Claims:

a. Claims received from a hospital for inpatient admissions ("Inpatient"):

90.0% of Clean Claims must be adjudicated within thirty (30) days of receipt.

100.0% of Clean Claims must be adjudicated within forty-five (45) days of receipt.

100.0% of all Claims must be adjudicated within ninety (90) days of receipt.

b. Nursing Facility (NF) Claims:

90.0% of Clean Claims must be adjudicated within thirty (30) days of receipt.

100.0% of Clean Claims must be adjudicated within forty-five (45) days of receipt.

100.0% of all Claims must be adjudicated within ninety (90) days of receipt.

c. Home and Community Based Services (HCBS) Claims:

90.0% of Clean Claims must be adjudicated within thirty (30) days of receipt.

100.0% of Clean Claims must be adjudicated within forty-five (45) days of receipt.

100.0% of all Claims must be adjudicated within ninety (90) days of receipt.

d. Other Claims (Not Inpatient, NF, HCBS or Pharmacy):

90.0% of Clean Claims must be adjudicated within thirty (30) days of receipt.

100.0% of Clean Claims must be adjudicated within forty-five (45) days of receipt.

100.0% of all Claims must be adjudicated within ninety (90) days of receipt.

The adjudication timeliness standards do not apply to Claims submitted by Providers under investigation for Fraud, Waste or Abuse from the date of service to the date of adjudication of the Claims. The CHC-MCO, however, must provide immediate notification to the Department of providers under investigation by the CHC-MCO.

The CHC-MCO must adjudicate every Claim entered into its MIS that is not a Rejected Claim. The CHC-MCO must maintain an electronic file of Rejected Claims, including a reason or reason code for rejection. The CHC-MCO will deny a claim for services provided to an individual who was not a CHC-MCO Participant as of the date of service and notify the Provider of the denial.

The amount of time required to adjudicate a paid Claim is computed by comparing the date the Claim was received with the check date or the CHC-MCO bank notification date for electronic payment. The check date is the date printed on the check. The amount of time required to adjudicate a Denied Claim is computed by comparing the date the Claim was received with the date the denial notice was created or the transmission date of an electronic denial notice. The CHC-MCO must mail checks no later than three (3) business days from the check date. Electronic payments must also occur within three (3) business days of the bank notification date.

The CHC-MCO must record, on every Claim processed, the date the Claim

was received. A date of receipt embedded in a Claim reference number is acceptable. The CHC-MCO must have this date carried on Claims records in the Claims processing computer system. Each hardcopy Claim received by the CHC-MCO, or the electronic image thereof, must be date-stamped with the date of receipt no later than the first (1st) business day after the date of receipt. The CHC-MCO must add a date of receipt to each Claim received in the form of an electronic record or file within one (1) business day of receipt.

If responsibility to receive Claims is subcontracted, the date of initial receipt by the subcontractor determines the date of receipt applicable to these requirements.

2. Sanctions

The Department will utilize the monthly report that is due on the fifth (5th) calendar day of the fifth (5th) subsequent month after the Claim is received to determine compliance with Claims processing standards. For example, the Department shall utilize the monthly report that is due January 5th, to determine Claims processing compliance for Claims received in the previous August.

The Department will consider all Claims received during the month for which compliance is being determined and that remain non-adjudicated at the time compliance is being determined to be Clean Claims.

If a Commonwealth audit, or an audit done on the Commonwealth's behalf, determines Claims processing timeliness data that are different than data submitted by the CHC-MCO, or if the CHC-MCO has not submitted required Claims processing data, the Department will use the audit results to determine compliance.

If the Department determines that a CHC-MCO has not complied with the Claims Processing timeliness standards, the Department may separately impose sanctions to the following claims types:

a) Inpatient Claims.
b) NF Claims
c) HCBS Claims
d) Other Claims (Not Inpatient, NF, HCBS or Pharmacy)

The sanctions provided by this Section apply to all Claims, including Claims processed by any subcontractor.

The CHC-MCO will be considered in compliance with the requirement for adjudication of one hundred percent (100.0%) of all Inpatient, NF, and HCBS Claims if ninety-nine-and-one-half percent (99.5%) of all Inpatient, NF and

HCBS Claims are adjudicated within ninety (90) days of receipt. The CHC-MCO will be considered in compliance with the requirement of adjudication of one hundred percent (100.0%) of all Other Claims (not Inpatient, NF, HCBS or Pharmacy) if ninety-nine-and-one-half percent (99.5%) of all Other Claims (not Inpatient, NF, HCBS or Pharmacy) are adjudicated within ninety (90) days of receipt.

The Department will reduce the sanctions below by one-third (1/3) if the CHC-MCO has fifty thousand (50,000) to one hundred thousand (100,000) Participants and by two-thirds (2/3) if the CHC-MCO has less than fifty thousand (50,000) Participants.

CLAIMS ADJUDICATION MONTHLY SANCTIONS CHART

The Department will compute sanctions for failure to adjudicate Inpatient, NF, HCBS and Other Claims (not Inpatient, NF, HCBS, or Pharmacy) as shown in the following tables.

Percentage of Clean Claims Adjudicated within Thirty (30) Days	Sanctions
88.0 – 89.9	$2,000
80.0 – 87.9	$6,000
70.0 – 79.9	$10,000
60.0 – 69.9	$16,000
50.0 – 59.9	$20,000
Less than 50.0	$30,000
Percentage of Clean Claims Adjudicated within Forty-five (45) Days	Sanctions
98.0 – 99.5	$2,000
90.0 – 97.9	$6,000
80.0 – 89.9	$10,000
70.0 – 79.9	$16,000
60.0 – 69.9	$20,000
Less than 60.0	$30,000
Percentage of All Claims Adjudicated within Ninety (90) Days	Sanctions
98.0 – 99.5	$2,000
90.0 – 97.9	$6,000
80.0 – 89.9	$10,000
70.0 – 79.9	$16,000
60.0 – 69.9	$20,000

Less than 60.0	$30,000

E. Other Financial Requirements

1. Provider Incentive Arrangements

a. CHC-MCOs must comply with the PIP requirements included under 42 C.F.R. §§ 422.208 and 422.210, which apply to MA managed care under 42 C.F.R. § 438.3(i).

b. The CHC-MCO may operate PIPs if 1) no specific payment is made directly or indirectly to a physician or physician group as an inducement to reduce or limit Medically Necessary services furnished to a Participant; and 2) the disclosure, computation of Substantial Financial Risk, Stop-Loss Protection, and Participant survey requirements of this section are met.

c. The CHC-MCO must provide information specified in the regulations to the Department and CMS, upon request. In addition, the CHC-MCO must provide the information on its PIPs to any Participant, upon request. CHC-MCOs that have PIPs placing a physician or physician group at Substantial Financial Risk for the cost of services the physician or physician group does not furnish must require that the physician or physician group has adequate Stop-Loss Protection. CHC-MCOs that have PIPs placing a physician or physician group at Substantial Financial Risk for the cost of service the physician or physician group does not furnish must also conduct surveys of Participants and disenrollees addressing their satisfaction with the quality of services and their degree of access to the services.

d. CHC-MCOs must provide the following information concerning their PIPs to the Department:

- whether referral services are included in the PIP,
- the type of incentive arrangement used, i.e., withhold, bonus, capitation,
- a determination of the percent of payment under the contract that is based on the use of referral services to determine if Substantial Financial Risk exists,
- panel size and, if patients are pooled, pooling method used to determine if Substantial Financial Risk exists, and
- Evidence that the physician or physician group has adequate Stop-Loss Protection and the type of coverage, if this requirement applies.

Where Participant/disenrollee survey requirements exist, the CHC-MCO must provide the survey results.

e. The CHC-MCO must provide the disclosure information specified in 1.d. immediately above to the Department annually, unless the Department has notified the CHC-MCO of the suspension of this requirement.

f. CHC-MCOs shall not use any financial incentive that compensates any provider for providing less than medically necessary and appropriate care to a Participant.

2. Retroactive Eligibility Period

The CHC-MCO shall not be responsible for any payments owed to Providers for services that were rendered prior to the Participants' Start Date.

3. In-Network Services

The CHC-MCO must make timely payment for Medically Necessary, Covered Services rendered by Network Providers when:

a. Services were rendered to treat an Emergency Medical Condition;

b. Services were rendered under the terms of the Provider Agreement;

c. Services were Prior Authorized or did not require Prior Authorization;

d. The CHC-MCO denied Prior Authorization of services but the Department determined, after a hearing, that the services should have been authorized.

4. Payments for Out-of-Network Providers

The CHC-MCO must coordinate with Out-of-Network Providers to make timely payments for Medically Necessary Covered Services as otherwise provided for in this Agreement, including, but not limited to, when:

a. Services were rendered to treat an Emergency Medical Condition;

b. Services were Prior Authorized;

c. Services were not available in Network;

d. The CHC-MCO denied Prior Authorization of services but the Department determined, after a hearing, that the services

should have been authorized.

The CHC-MCO may not impose any cost on the Participant for using an Out-of-Network Provider that is greater than the cost would have been if a Network Provider furnished the services.

The CHC-MCO must allow a Participant, who is an Indian as defined in 42 CFR § 438.14(a), to obtain Covered Services from Out-of-Network I/T/U HCPs from which that Participant is otherwise eligible to receive services.

The CHC-MCO is not financially liable for:

a. Services rendered to treat a non-emergency condition in a hospital ED except to the extent required elsewhere in law, unless the services were Prior Authorized;

b. Prescriptions presented at Out-of-Network Pharmacies that were written by Non-Participating or non-network prescribers unless:

- the Non-Participating Provider or non-network Provider arrangements were approved in advance by the CHC-MCO and any Prior Authorization requirements (if applicable) were met; or
- the Non-Participating or non-network prescriber and the pharmacy are the Participant's Medicare Providers; or
- the Participant is covered by a third party carrier and the Non-Participating or non-network prescriber and the pharmacy are the Participant's third party Providers.

The CHC-MCO is responsible, in accordance with applicable law, for emergency services and urgently needed services as defined in 42 C.F.R. § 417.401 that are obtained by its Participants from Providers and suppliers outside the Network even in the absence of the CHC-MCO's prior approval.

5. Payments to FQHCs and Rural Health Centers (RHCs)

The CHC-MCO must pay all FQHCs and RHCs rates that are not less than FFS Prospective Payment System (PPS) rates, as determined by the Department. The CHC-MCO must also include in its Network every FQHC and RHC that is willing to accept FFS Prospective Payment System rates as payment in full and are located within the CHC zone. The CHC-MCO must consider the FQHC and/or RHC as both the billing and rendering provider of clinic services provided to Participants.

If a FQHC/RHC has opted-out of receiving the PPS rate from the CHC-MCOs, upon notification from the Department of the date that the FQHC/RHC has opted-out, the CHC-MCO is no longer required to make payment at the FFS

PPS rate, as noted above. Effective with the FQHC/RHC opt-out, the CHC-MCO must negotiate and pay the opted-out FQHC/RHC at rates that are no less than what the CHC-MCO pays to other providers who provide comparable services within the CHC-MCO's Provider Network.

CHC-MCOs will have 90 days from the date of the Department's notification to the CHC-MCO of a retroactive PPS rate adjustment to reprocess all applicable FQHC and/or RHC claims that were subject to the requirements of this section. The CHC-MCO must send notification to the Department no later than 10 working days after the completion of the required claims reprocessing.

1. Failure to complete the required claims reprocessing for each FQHC and RHC and to submit notification of the completion of the claims reprocessing to the Department will result in the full assessment of the 90 day claims processing sanctions in Section VII.D. In addition to the sanction amount, the Department will complete a settlement in place of the CHC-MCO's claims reprocessing for the FQHC or RHC. The amount the Department pays to the FQHC or RHC for this settlement will be an obligation of the CHC-MCO to the Department and recovered by the Department from the CHC-MCO through a reduction to a future payment.

The CHC-MCO may require that an FQHC and RHC comply with Service Coordination procedures that apply to other entities that provide similar benefits or services.

6. Payments to Nursing Facilities

The CHC-MCO shall pay all NFs at a payment rate that is not less than the facility-specific minimum payment rate established by the Department and shared with the CHC-MCO. The Department will notify the MCO of the facility-specific payment rate. Nothing in this provision should be construed to prohibit the CHC-MCO and the NF to agree to a higher payment rate or to a VBP Payment Arrangement in accordance with Section VII.E.16 that provides an alternative payment for services that is at a payment rate equal to or greater than the facility-specific minimum payment rate. An incentive payment earned under the Nursing Facility Quality Incentive Program described in Exhibit DD(2) shall be in addition to the facility-specific minimum payment rate required under this subsection.

7. Coverage for Participants in an IMD

The Department will make Capitation payments for a Participant aged twenty-one through sixty-four (21 – 64) residing in a freestanding Institution for Mental Diseases (IMD) and the Participant's condition is not related to Substance Use Disorder (SUD) based on the following criteria:

- If the stay is no more than fifteen (15) cumulative days during the period of the monthly capitation payment and the provision of inpatient psychiatric treatment in a freestanding IMD meets the requirements for in lieu of services in 42 C.F.R. 438.3 (e) (2)(i) through (iv), payment will be full capitation in which a Participant is enrolled in the CHC-MCO.

- If the stay is at least sixteen (16) cumulative days during the period of the monthly capitation payment and the provision of inpatient psychiatric treatment in a freestanding IMD meets the requirements for in lieu of services in 42 C.F.R. 438.3 (e) (2)(i) through (iv), the payment will be based as follows: per diem rate identified in Section VII.B.1 multiplied by the number of days the Participant is both enrolled in the CHC-MCO and not residing in a freestanding IMD.

8. Liability during an Active Grievance or Appeal

The CHC-MCO shall not be liable to pay Claims to Providers if the validity of the Claim is being challenged by the CHC-MCO through a Grievance or appeal, unless the CHC-MCO is obligated to pay the Claim or a portion of the Claim through a separate Agreement with the Provider.

9. Financial Responsibility for Dual Eligible Participants

The CHC-MCO must pay Medicare deductibles and coinsurance amounts relating to any Medicare-covered service for Dual Eligible Participants in accordance with Section 4714 of the Balanced Budget Act of 1997. If Medicare's payment exceeds the CHC-MCOs contracted rates for a particular Medicare service, the CHC-MCO does not make a payment. When the CHC-MCOs contracted rate exceeds the amount paid by Medicare, the CHC-MCO must pay the difference between the amount paid by Medicare and the CHC-MCO contracted rate. The CHC-MCO will not be responsible for copayments or cost-sharing for Medicare Part D prescriptions.

If no contracted CHC-MCO rate exists or if the Provider of the service is an Out-of-Network Provider, the CHC-MCO must pay deductibles and coinsurance up to the applicable MA fee schedule rate for the service.

For Medicare services that are not covered by MA or the CHC-MCO, the CHC-MCO must pay cost-sharing to the extent that the payment made under Medicare for the service and the payment made by the CHC-MCO do not exceed eighty percent (80%) of the Medicare-approved amount.

The CHC-MCO, its subcontractors and Providers are prohibited from balance

billing Participants for Medicare deductibles or coinsurance. Participants who are dually eligible for Medicare and Medicaid are allowed to continue using their Medicare PCP even if the PCP is not MA enrolled. The CHC-MCO must provide a Dual Eligible Participant access to Medicare products and services from the Medicare Provider of his or her choice. The CHC-MCO is responsible to pay any Medicare coinsurance and deductible amount, whether or not the Medicare Provider is included in the CHC-MCO's Provider Network, is a participating provider in Medicaid, and whether or not the Medicare Provider has complied with the Prior Authorization requirements of the CHC-MCO.

The Commonwealth enters into a Coordination of Benefits Agreement with Medicare. Consistent with 42 C.F.R. §438.3(t), the CHC-MCO must enter into individual Coordination of Benefits Agreements with Medicare for members dually eligible for Medicaid and Medicare and participate in the automated claims crossover process.

10. Confidentiality

The Department may elect from time to time to share with the CHC-MCO an internal Business Requirements Document or an internal Business Design Document, FFS inpatient hospital rates, cost-to-charge ratio information, and other LTSS rates. The CHC-MCO shall not use this information for any purpose other than to support the CHC-MCO's performance of its responsibilities under this Agreement and related responsibilities provided by law. The CHC-MCO may share a Business Requirements Document, a Business Design Document, or the FFS inpatient hospital rates, cost-to-charge ratio, and relative value information provided by the Department with another party, provided that the other party does not use the information for any purpose other than to support the CHC-MCO's performance of its responsibilities of this Agreement and any other related responsibilities provided by law.

11. Audits

The CHC-MCO must comply with audit requirements as specified in Exhibit O, CHC Audit Clause.

12 Restitution for Overpayments

The CHC-MCO must make full and prompt restitution to the Department, as directed by the Department, for any payments received in excess of amounts due to the CHC-MCO after such overpayment is discovered by the CHC-MCO, the Department, or third party.

13 Penalty Periods

The CHC-MCO must, in coordination with the Department, monitor the

completion of all NF and HCBS related processes, including the maintenance of a Penalty Period, if applicable.

14 Prohibited Payments

The CHC-MCO shall not pay for an item or service (other than an emergency item or service, not including items or services furnished in an emergency room of a hospital), that is furnished:

a. by, or at the medical direction or prescription of, any individual or entity during any period that the individual or entity is excluded from participation in Medicare, Medicaid, the federal Maternal and Child Health Services Block Grant program or the federal Social Services Block Grant program; or

b. by any individual or entity during any period when there is a pending investigation of a credible allegation of fraud against the individual or entity, unless the Department determines in accordance with then-applicable federal regulations there is good cause not to suspend such payments.

The CHC-MCO must not pay any amount for which funds may not be used under the federal Assisted Suicide Funding Restriction Act of 1997, including payments for items or services furnished for the purpose of causing, or for the purpose of assisting in causing, the death of any individual, such as by assisted suicide, euthanasia or mercy killing.

The CHC-MCO must not pay for any item or service for road bridges, stadiums, or any other item or service not provided for under this Agreement.

15 Payment for Personal Assistance Services

The Department requires CHC-MCOs to pay for Personal Assistance Services at no less than the HCBS MA fee schedule rate. Nothing in this provision should be construed to prohibit the CHC-MCO and the provider to agree to a higher payment rate.

16 Value-Based Purchasing (VBP)

Value-based purchasing (VBP) is the Department's initiative to transition providers to being paid for the value of the services provided, rather than simply the volume of services. VBP Payment Strategies and VBP Models are critical for improving quality of care, efficiency of services, reducing cost, and addressing Social Determinants of Health.

The Department has developed an aligned VBP framework that consists of both VBP Payment Strategies and VBP Models. VBP Payment Strategies define the mechanism by which the providers are paid by the MCO. VBP Payment Strategies are tiered by three levels of risk: low, medium, and high.

VBP Models define a way to organize and deliver care and may incorporate one or more VBP Payment Strategies as ways to pay providers. The Department is categorizing VBP Models into recommended models and required models.

CHC-MCOs, BH-MCOs, PH-MCOs, and CHIP-MCOs can form integrated VBP models. MCOs should work towards integrating VBP models, because addressing all service and supports needs will improve health outcomes.

a. VBP Payment Strategies

The MCO must enter into VBP Payment Arrangements with Providers that incorporate approved VBP Payment Strategies. The Department retains the ability to accept or reject any proposals to count toward the required VBP medical spend percentage. The approved VBP Payment Strategies are tiered as low-risk (performance based contracting), medium risk (shared savings, shared risk, bundled payments), and high risk (global payments).

Each arrangement must include quality benchmarks, financial incentives, penalties or both, without which the Department will reject the arrangement as counting towards the required VBP medical or LTSS spend percentage. MCOs can also layer additional non-financial incentives as long as financial incentives are also in the arrangement.

Approved payment strategies:

i. Performance based contracting (low-risk strategy): FFS contracts in which incentives payments and/or penalties are linked to Network Provider performance. The MCO must measure Network Providers against quality benchmarks or incremental improvement benchmarks and must include in the contract incentives or penalties or both based upon meeting these benchmarks.

ii. Shared Savings (medium-risk strategy): Supplemental payments to Network Providers if they can reduce health care spending relative to an annual cost benchmark, either for a defined Participant sub-population or the total Participant population served by a Network Provider. The cost benchmark

should be developed prospectively, based at least in part on historical claims, and be risk adjusted if needed. The supplemental payment is a percentage of the net savings generated by the Network Provider.

iii. Shared Risk (medium-risk strategy): Supplemental payments to Network Providers if they are able to reduce health care spending relative to a cost benchmark, either for a defined Participant sub-population or the total Participant population served by a Network Provider. The cost benchmark should be developed prospectively, based at least in part on historical claims, and risk adjusted if needed. The payment is a percentage of the net savings generated by the Network Provider. These arrangements also include shared losses with Network Providers if costs are higher relative to a benchmark.

iv. Bundled payments (medium-risk strategy): Bundled payments include all payments for services rendered to treat a Participant for an identified condition during a specific time period. The payments may either be made in bulk, or be paid over regular predetermined intervals. DHS may specify certain services that must be paid through bundled payments.

v. Global payment (high-risk strategy): Population-based payments that cover all services rendered by a Network Provider, hospital, or health system by the participating MCO.

i. An annual global budget is developed prospectively. These payments can either be made in bulk, delivered over regular predetermined intervals, or based on fee-for-service payments with retrospective reconciliation to the global budget. If these payments are subject to retrospective reconciliation, at least a portion of the payment must be prospective to allow Network Providers to make upfront investments in population health infrastructure.

ii Global payments should link payments to both improved physical health and behavioral health quality measures, and provide incentive to reduce potentially avoidable utilization and address social determinants of health. Global payments must also take into consideration market shift on an annual basis, to ensure that Network Providers are not simply decreasing the amount of care provided.

iii Network Providers who are paid via global payments are excluded from participating in separate bundled payment, shared savings, and shared risk arrangements with the same MCO, because this would be a duplication of payment for services rendered.

b. VBP Models:

VBP Models are divided into Recommended Models, which the Department encourages MCOs to adopt, and Required Models, which are models that MCOs must adopt if they decide to contract with participating Network Providers. MCOs may also implement VBP payment arrangements outside of the recommended models and required models.

Recommended Model:

i. Accountable Care Organization (ACO): An ACO Model integrates the financing arm with the delivery arm within the same organization, such that both are collectively responsible for the Participant. ACO models may include shared savings, shared risk, or global payments.

ii. Patient Centered Medical Home (PCMH): MCOs may include PCMH models as defined by NCQA, current existing Medicare PCMH programs, current D-SNP PCMH programs, and the HealthChoices PCMH program to have the arrangement qualify as a PCMH. Note that payments to PCMHs must be categorized as one of the VBP payment arrangements listed in Section A, and still include quality benchmarks, with incentives or penalties or both based upon meeting these benchmarks, without which the payments will not count towards the required VBP medical spend percentage.

iii. Performance-based Contracting (PBC): Fee-for-Service (FFS) contracts in which incentives payments and/or penalties are linked to Network Provider performance. The MCO must measure Network Providers against quality benchmarks or incremental improvement benchmarks, and must include in the contract incentives or penalties or both based upon meeting these benchmarks.

iv. Shared Savings: Supplemental payments to Network Providers if they can reduce health care spending relative to an annual cost benchmark, either for a defined Participant sub-population or the total Participant population served by a Network Provider. The cost benchmark should be developed prospectively, based at least in part on historical claims and be risk adjusted if needed. The supplemental payment is a percentage of the net savings generated by the Network Provider.

v. Shared Risk: Supplemental payments to Network Providers if they are able to reduce health care spending relative to a cost benchmark, either for a defined Participant sub-population or the total Participant population served by a Network Provider. The cost benchmark should be developed prospectively, based at least in part on historical claims and risk adjusted if needed. The payment is a percentage of the net savings generated by the Network Provider. These arrangements also include shared losses with Network Providers if costs are higher relative to a benchmark.

vi. Bundled Payments: Bundled payments include all payments for services rendered to treat a Participant for an identified condition during a specific time period. The payments may either be made in bulk or be paid over regular predetermined intervals. The Department of Human Services (DHS) may specify certain services that must be paid through bundled payments.

vii. Global Payment: Population-based payments that cover all services rendered by a Network Provider, hospital or health system by the participating MCO.

1) An annual global budget is developed prospectively. These payments can either be made in bulk, delivered over regular predetermined intervals or based on FFS payments with retrospective reconciliation to the global budget. If these payments are retrospective, at least a portion of the payment must be prospective to allow Network Providers to make upfront investments in population health infrastructure.
2) Global payments should link payments to both improved physical health and behavioral health quality measures, and provide incentive to reduce potentially avoidable utilization and address social determinants of health. Global payments must also take into consideration market shift on an annual basis, to ensure that Network Providers are not simply decreasing the amount of care provided.
3) Network Providers who are paid via global payments are excluded from participating in bundled payment arrangements, because this

would make the Network Provider doubly liable for the services rendered. MCOs should consider reduction of prior authorization requirements for Network Providers who are paid via global payments.

Required Models:

MCOs must participate in required VBP payment models if specified by the Department and work with the Department on the development of new models.

c. Financial Goals

The financial goals for the VBP strategies for each calendar year are based on a percentage of the CHC-MCO's expenditures to the medical portion of the risk adjusted capitation revenue without consideration of risk sharing risk pools, P4P or other revenue or revenue adjustments. These goals apply collectively to all Community HealthChoices Agreements between the CHC-MCO and the Department in all Community HealthChoices Zones. For the purpose of this requirement, Capitation revenue is gross of premiums for risk sharing or risk pool arrangements without adjustment for risk sharing or risk pool results. The CHC-MCO must achieve the following percentages through VBP arrangements:

i. Calendar year 2024 – fifteen percent (15%) of the medical portion of the capitation must be expended through VBP. The fifteen percent (15%) may be from any combination of strategies 8.a.i through 8.a.v., and twenty five percent (25%) of LTSS payments through a value-based payment arrangement. A minimum of ten percent (10%) of the total LTSS spend must be in the Medium or High Financial Risk categories.

d. Reporting

The Department will measure compliance through required reports that have been developed by the Department. By October 1st of each calendar year, the CHC-MCO must submit its proposed VBP plan to the Department in the format required by the Department that outlines and describes its plan for compliance in that calendar year. The Department will review and provide feedback on the plan to the CHC-MCO. By the last work day of every quarter, the CHC-MCO must submit a progress report.

By June 30 of the subsequent calendar year, the CHC-MCO must submit a report as directed by the Department on accomplishments from the prior year. This annual report must include a listing of the VBP arrangements by

provider; and an explanation of each arrangement; and the dollar amount spent for medical services and LTSS provided during the previous year through these arrangements. The dollar amounts that qualify toward meeting the VBP goals are as follows:

i. Performance based contracting – dollar value of performance (bonus) payments and direct payments made to the Provider for Participants attributed to the provider's panel during the calendar year.

ii. The CHC-MCOs will use the Nursing Facility Quality Measurement Program to evaluate nursing homes and develop a valued based incentive arrangement as detailed in Exhibit DD(2) Pay for Performance Nursing Facility Quality Measurement Program.

iii. Shared savings– dollar value of any performance (bonus) payments, direct payments made to the provider and total medical costs incurred by the CHC-MCO for Participants of the provider's panel during the time period of the calendar year the Participant was attributed to the provider's panel.

iv. Shared risk – dollar value of any performance (bonus) payments and penalty payments, direct payments made to the provider total medical costs incurred by the CHC-MCO for Participants of the provider's panel during the time period of the calendar year the Participant was attributed to the provider's panel.

v. Bundled payments– dollar value of bundled payments made to providers. The Department may add additional reporting requirements depending on the services being bundled.

vi. Global payments – dollar value of any performance (bonus) payments, direct payments made to the provider and total medical costs incurred by the CHC-MCO for Participants of the provider's panel inclusive of any previous (bonus) payments during the time period of the calendar year the Participant was attributed to the provider's panel.

e. New Agreements

If a new CHC-MCO Agreement is executed and effective during a calendar year, the reporting requirements are applicable to the calendar

year that crosses Agreements, and the Department will determine compliance for the complete calendar year.

f. Assessment

This section provides for an assessment against the CHC-MCO's revenue if an annual goal is not met.

Not later than 60 calendar days after receipt from the CHC-MCO of the annual report on VBP accomplishments, the Department will notify the CHC-MCO of its determination about compliance with the goal for the preceding year. The CHC-MCO may provide a response within 30 calendar days. After considering the response from the CHC-MCO, if any, the Department will notify the CHC-MCO of its final determination of compliance.

If the CHC-MCO fails to provide a timely and adequate report on VBP accomplishments, the Department may determine that the CHC-MCO is not compliant with the goal of the preceding year.

If the determination results in a finding of non-compliance, the Department may reduce the next monthly capitation payment by an amount equivalent to .5 percent (.5%) of the capitation it paid to the CHC-MCO for December of the prior calendar year.

g. Data Sharing

The CHC-MCOs must provide timely and actionable data to its providers participating in VBP arrangements. This data should include, but is not limited to, the following:

i. Identification of high risk patients;

ii. Comprehensive care gaps inclusive of gaps related to quality metrics used in the VBP arrangement; and

iii. Service utilization and claims data across clinical areas such as inpatient admissions, non-inpatient facility (Short Procedure Unit/Ambulatory Surgical Center), emergency department, radiology services, lab services, durable medical equipment and supplies, specialty physician services, home health services, nursing facilities, HCBS services and prescriptions,

iv. Care management information such as initial assessments and care plans, reassessments and updated

care plans, as well as transition of care information from nursing home to the community.

F. Third Party Liability

The CHC-MCO must comply with the TPL procedures implemented by the Department. Under this Agreement, the TPL responsibilities of the Department will be allocated between the Department and the CHC-MCO.

1. Cost-Avoidance Activities

a. The CHC-MCO will have primary responsibility for cost avoidance through the COB relative to federal and private health insurance-type resources, including, but not limited to, Medicare, private health insurance, ERISA plans, and workers compensation. Except as provided in subparagraph ii, the CHC-MCO must attempt to avoid initial payment of Claims, whenever possible, where federal or private health insurance-type resources are available. The CHC-MCO must report all funds that are cost-avoided by the CHC-MCO to the Department via Encounter Data submissions. The number of claims cost avoided by the CHC-MCO's claims system should be reported in Financial Report #8A, “Claims Cost Avoided.” The use of the appropriate HIPAA 837 Loop(s) for Medicare and Other Insurance Paid shall indicate that TPL has been pursued and the amount which has been cost-avoided. The CHC-MCO shall not be held responsible for any TPL errors in EVS or the Department's TPL file. The CHC-MCO must sign a Coordination of Benefits Agreement and participate in the automated claims crossover process administered by Medicare.

b. The CHC-MCO may not deny or delay approval of otherwise covered treatment or services based upon TPL considerations. The CHC-MCO may neither unreasonably delay payment nor deny payment of Claims unless the probable existence of TPL is established at the time the Claim is adjudicated.

2. Post-Payment Recoveries

a. Post-payment recoveries are categorized by (a) health-related insurance resources, and (b) Other Resources. Health-related insurance resources are ERISA health benefit plans, Blue Cross/Blue Shield subscriber contracts, Medicare, private health insurance, workers′ compensation, and health insurance contracts. Other Resources include but are not limited to recoveries from personal injury claims, liability insurance, first-party automobile medical insurance and accident indemnity insurance.

b. The Department's Division of TPL retains the sole and exclusive right to investigate, pursue, collect, and retain all Other Resources. The CHC-MCO assigns to the Department the CHC-MCO's subrogation rights to collect the Other Resources covered by this provision. The CHC-MCO must immediately forward to the Division of TPL any correspondence or Inquiry received by the CHC-MCO (by an attorney, Provider of service, insurance carrier, etc.) relating to a personal injury accident or trauma-related medical service, or which in any way indicates that there is, or may be, legal involvement regarding the Participant and the services which were provided. The CHC-MCO may neither unreasonably delay payment nor deny payment of Claims because they involve an injury stemming from an accident such as a motor vehicle accident, where the services are otherwise covered. Those funds recovered by the Department under the scope of these "Other Resources" shall be retained by the Department.

With respect to any third party payment received by the CHC-MCO from a Provider, the CHC-MCO shall return all casualty funds to the Department. CHC-MCOs will not instruct Providers to send funds directly to the Department. The CHC-MCO may not hold these third party payments more than thirty (30) days. If the casualty funds received by the Department must be returned to the CHC-MCO for any reason, for example, an outdated check or the amount of the check does not match supporting documentation, the CHC-MCO shall have ninety (90) days to return all casualty funds to the Department using the established format.

c. The CHC-MCO is responsible for pursuing, collecting, and retaining recoveries of a claim involving Workers' Compensation.

d. Due to potential time constraints involving casualty cases subject to litigation as well as estate cases, and due to the large dollar value of many claims which are potentially recoverable by the Department's Division of TPL, the Department must ensure that it identifies these cases and establishes its claim before a settlement has been negotiated for a casualty case or a final accounting has been approved for an estate. Should the Department fail to identify and establish a claim prior to settlement due to the CHC-MCO's untimely submission of notice of legal involvement where the CHC-MCO has received such notice, the amount of the Department's actual loss of recovery shall be assessed against the CHC-MCO. The Department's actual loss of recovery shall not include the attorney's fees or other costs which would not have been retained by the Department. If the Department fails to identify and establish a casualty or estate claim prior to settlement due to the CHC-MCO's untimely submitting of notice of legal involvement where the CHC-MCO has received such notice, the Department's actual loss of recovery shall be assessed against the CHC-MCO. The Department's assessment will not include the attorney's fees or other costs that the Department would not have retained

from the recovery.

e. The CHC-MCO has the sole and exclusive responsibility and right to pursue, collect and retain all health-related insurance resources for a period of nine (9) months from the date of service or six (6) months after the date of payment, whichever is later. The CHC-MCO must indicate its intent to recover on health-related insurance by providing to the Department an electronic file of those cases it will pursue. The cases must be identified, and a file provided to the Department by the CHC-MCO within the window of opportunity afforded by the nine (9) months from the date of service or six (6) months after the date of payment unless otherwise permitted by the Department. The Department's Division of TPL may pursue, collect and retain recoveries of all health-related insurance cases which are not identified by the CHC-MCO for recovery, after the later of nine (9) months from the date of service or six (6) months after the date of payment. Notification of intent to pursue, collect and retain health-related insurance is the sole responsibility of the CHC-MCO, and cases not identified for recovery will become the sole and exclusive right of the Department to pursue, collect and retain. In such cases where the CHC-MCO has identified the cases to be pursued, the CHC-MCO shall retain the exclusive responsibility for the cases for a period not to exceed eighteen (18) months. The calculation of the eighteen (18) month period shall commence with receipt of the file from the CHC-MCO identifying the cases to be pursued. Any case not completed within the eighteen (18) month period will become the sole and exclusive right of the Department to pursue, collect and retain. The CHC-MCO is responsible for notifying the Department through the prescribed electronic file process of all outcomes for those cases identified for pursuit. Cases included in Encounter files that were suspended will not be able to be included in the flagging process because the Claims cannot be adjusted in the Department’s automated processing system.

With respect to any third party payment received by the CHC-MCO from a Provider, the CHC-MCO shall ensure that the funds are within their right of recovery. If the funds are outside the allowable recovery window, the funds shall be returned to the Department. These third party payments shall not be held by the MCO for more than thirty (30) calendar days. If the provider funds received by the Department from the CHC-MCO must be returned to the CHC-MCO for any reason, for example, an outdated check or the amount of the check does not match supporting documentation, then the CHC-MCO shall have sixty (60) calendar days to return all provider funds to the Department using the established format.

f. Should the Department lose recovery rights to any Claim due to late or untimely filing of a Claim with the liable third party, and the untimeliness in filing that specific Claim is directly related to untimely submission of

Encounter Data or additional records under special request, or inappropriate denial of Claims for accidents or emergency care in casualty related situations, the amount of the unrecoverable claim shall be assessed against the CHC-MCO. The same will apply in any situation where the Department loses recovery rights on an estate due to the CHC-MCO's failure to timely supply the data necessary to perfect the Department's claim and meet the forty-five (45) day regulatory mandate.

g. Encounter Data that is not submitted to the Department in accordance with the data requirements and/or timeframes identified in this Agreement can possibly result in a loss of revenue to the Department. Strict compliance with these requirements and timeframes shall therefore be enforced by the Department and could result in the assessment of sanctions against the CHC-MCO.

h. Health Insurance Premium Payment (HIPP) Program. The HIPP Program pays for employment-related health insurance for Participants when it is determined to be cost effective.

3. Requests for Additional Data

The CHC-MCO must provide, at the Department's request, such information not included in the Encounter Data submissions that may be necessary for the administration of TPL activity, specifically casualty and estate recoveries. The CHC-MCO must provide casualty information within fifteen (15) calendar days of the Department's request. The CHC-MCO must provide information for urgent requests involving casualty and Encounter data for estate cases within forty-eight (48) hours. Such information may include, but is not limited to, individual medical records for the express purpose of determining TPL for the services rendered. Confidentiality of the information must be maintained as required by Federal and State regulations

4. Accessibility to TPL Data

The Department will provide the CHC-MCO with access to data maintained on the TPL monthly file.

5. Third Party Resource Identification

The CHC-MCO must supply the Department with TPL information identified by the CHC-MCO or its subcontractors, which does not appear on the Department's TPL database, as well as information on coverage for other household members, addition of a coverage type, changes to existing resources, including termination of coverage and changes to coverage dates. The method of reporting must be by electronic file or by any alternative method approved by the Department. TPL resource information must be submitted within two (2) weeks of its receipt by the CHC-MCO. A web-based referral is

only to be submitted in the following instances: the CHC-MCO is no longer the Participant's CHC-MCO; the Contract /Policy ID number is longer than 12 digits; or the referral is from the Pennsylvania Health Insurance Premium Payment Program. For web-based referrals, the CHC-MCO must use an exact replica of the TPL resource referral form supplied by the Department. For electronic submissions, the CHC-MCO must follow the required report format, data elements, and specifications supplied by the Department.

The Department will contact the CHC-MCO when the validity of a resource is in question. The CHC-MCO shall verify inconclusive resource information within two (2) business days of notification by the Department that the resource information is in dispute. However, if the verification notification is requested on the last business day of the week, the CHC-MCO must respond by the close of business that day to avoid a potential access to care issue for its Participant.

The CHC-MCO must use EVS and secured services on the Internet (previously known as POSNet) to identify insurance information the Participants have on file. If there is additional or different insurance information, the CHC-MCO or its subcontractors need to communicate the information as listed above.

6. Estate Recovery

The Department is required to recover MA costs paid on behalf of certain deceased individuals age fifty-five (55) and older who were receiving MA benefits for any of the following services:

a. Public or private NF services;

b. Residential care for home and community-based services;

c. Any hospital care and prescription drug services provided while receiving NF services or residential care for home and community-based services.

The Department's Division of TPL is solely responsible for administering the Estate Recovery Program. The CHC-MCO must supply all requested Encounter data timely to permit the Department's timely filing of a claim.

SECTION VIII: REPORTING REQUIREMENTS

A. Department Monitoring Requirements

To demonstrate compliance with 42 CFR § 438.66, State Monitoring Requirements, the Department must have in effect a monitoring system for CHC. The Department's system must address all aspects of the managed care

program, including the performance of each CHC-MCO as required in § 438.66 (b). The Department must use the data collected from its monitoring activities to improve the performance of its managed care program, including, at a minimum the areas noted in § 438.66 (c).

In addition, § 438.66 (e) requires the Department to submit to CMS, no later than 180 days after each contract year, a report on its managed care programs. The first annual report for CHC is due to CMS no later than June 29, 2023 for the 2022 calendar year. The annual program report must provide information on and an assessment of the operation of CHC on, at a minimum, the following areas:

- Financial performance of each CHC-MCO, including MLR experience.
- Encounter data reporting by each CHC-MCO.
- Enrollment and service area expansion (if applicable) of each CHC-MCO.
- Modifications to, and implementation of, MCO benefits covered under the contract with the Department.
- Grievance, appeals, and State fair hearings for CHC.
- Availability and accessibility of covered services within the CHC-MCO agreements, including network adequacy standards.
- Evaluation of the CHC-MCO's performance on quality measures, including as applicable, consumer report card, surveys, or other reasonable measures of performance.
- Results of any sanctions or corrective action plans imposed by the Department or other formal or informal intervention on a CHC-MCO to improve performance.
- Activities and performance of the beneficiary support system.
- Any other factors in the delivery of LTSS not otherwise addressed in § 438.66 (e)(2)(i)-(ix) as applicable.

The CHC-MCO must comply with all state and federal reporting requirements that are set forth in this Agreement and provided through Guidance from the Department. If the CHC-MCO fails to submit the required reports within timeframes specified, the Department shall assess sanctions upon the CHC-MCO as specified in Section VIII.I, Sanctions, and Section VII D.2, Sanctions, and Exhibits T, X, BB of this Agreement.

B. General

The CHC-MCO must comply with state and federal reporting requirements that are set forth in this Agreement and provided in guidance from the Department.

The CHC-MCO must certify and submit to the Department the data required to be certified under 42 C.F.R. § 438.604, whether in written or electronic form. Such certification must be submitted concurrently with the data and must be based on

the knowledge, information and belief of the Chief Executive Officer, Chief Financial Officer or an individual who has delegated authority to sign for, and who reports directly to, the CEO or CFO in accordance with 42 C.F.R. § 438.604.

The CHC-MCO will provide the certification in the manner prescribed by the Department.

The CHC-MCO must cooperate with the Department in all activities related to compliance with federal mental health parity requirements. The CHC-MCO must provide all information requested by the Department related to these activities within ten (10) days of the Department's request.

For critical and urgent issues, the CHC-MCO is required to respond to the Department the same day or within 12 hours. The CHC-MCO is required to respond to the Department's questions and issues within three business days of receiving questions and requests for clarification. The Department will determine the appropriate contact method, (e.g., phone call or email to the CHC-MCO Government Liaison or other CHC-MCO contact).

C. Systems Reporting

The CHC-MCO must submit electronic data as specified by the Department. Whenever possible, the Department will provide reasonable advance notice of modifications or additions to required electronic data submissions.

Information on the submission of the Department's data files is available on the Pennsylvania HealthChoices Extranet.

1. Encounter Data Reporting

The CHC-MCO must record Encounter Data for internal use and submit timely, complete, and accurate Encounter Data to the Department. The CHC-MCO shall only submit Encounter Data for Participants enrolled in its CHC plan on the date of service and must not submit duplicate records.

The CHC-MCO must maintain appropriate systems and mechanisms to obtain all data from its Providers needed to comply with Encounter Data and TMSIS reporting requirements.

The Department will provide a minimum of sixty (60) days advance written notice to the CHC-MCO regarding changes to Encounter Data requirements.

Failure of Providers or Subcontractors to submit Claims and Encounter Data to the CHC-MCO in a complete, timely, and accurate manner shall not excuse the CHC-MCO's noncompliance with this requirement.

The CHC-MCO must comply with all sections of 42 C.F.R. § 438.242, including, but not limited to, compliance with Section 6504(a) of the Affordable Care Act, which requires that Claims processing and retrieval systems collect data elements necessary to meet the requirements of section 1903(r)(1)(F) of the Act.

a. Data Format

The CHC-MCO must submit Encounter Data to the Department using established protocols. Prior to submission of production data, the CHC-MCO must pass Encounter Data certification for all transaction types.

i. The CHC-MCO must adhere to Encounter Data file specifications, including the collection and maintenance of sufficient Participant Encounter Data to identify the Provider who delivers any items or services to Participants.

ii. The CHC-MCO must adhere to the file size, format specifications, and file submission schedule provided by the Department. The CHC-MCO must submit Participant Encounter Data to the Department at a frequency and level of detail specified by CMS and the Department, based on program administration, oversight, and program integrity needs.

The CHC-MCO must provide Encounter Data files in the following ASC X12 transactions:

- 837P
  - Professional
  - Professional Crossover
  - Professional Drug
- 837I
  - Inpatient
  - Inpatient Crossover
  - Outpatient
  - Outpatient Crossover
  - Outpatient Drug
  - Long Term Care (LTC)
- 837D
  - Dental
- NCPDP D.0
  - NCPDP Pharmacy
  - Compound Pharmacy

b. Timing of Data Submittal

i. Provider Claims

The CHC-MCO must require Providers to submit claims ready for adjudication to the CHC-MCO within one hundred eighty (180) days after the date of service.

The CHC-MCO may include a requirement for more prompt submissions of Claims or Encounter Data in Provider Agreements and Subcontracts. Claims adjudicated by a third party vendor must be provided to the CHC-MCO by the end of the month following the month of adjudication.

ii. Encounter Submissions

All Encounter Data except NCPDP transactions must be submitted by the CHC-MCO and approved by the Department on or before the last calendar day of the third (3rd) month after the adjudication calendar month in which the CHC-MCO adjudicated the Claim.

NCPDP transactions must be submitted by the CHC-MCO and approved in the Department's MMIS within thirty (30) days following the adjudication date.

Encounter Data sent to the Department is considered approved when all Department edits are passed.

A file with Encounter Data records that deny due to Department edits will be returned to the CHC-MCO. These records must be corrected and resubmitted as "new" Encounter records within the timeframe referenced above.

Corrections and resubmissions must pass all edits before they are approved by the Department.

When Error Status Code (ESC) denials occur due to CHC-MCO, Subcontractor, or Provider system faults or limitations, it is the responsibility of the CHC-MCO to make every attempt to remediate the systems concerns within a reasonable amount of time. Based on the impact of the errors and the length of time to implement a solution, the CHC-MCO may be subject to assessments, Corrective Action, or both.

iii. Response Files

The CHC-MCO's Encounter Data system must be able to receive,

process, and reconcile the U277, NCPDP, and ESC Supplemental response files. The CHC-MCO must also store the Department's MMIS ICN associated with each processed Encounter Data record returned on the files.

c. Data Completeness

The CHC-MCO must submit Encounter Data each time a Participant has an Encounter with a Provider. The CHC-MCO must have a data completeness monitoring program in place that:

i. Demonstrates that all Claims and Encounters submitted to the CHC-MCO by its Providers and Subcontractors are submitted accurately and timely as Encounters and that denied Encounters are resolved and resubmitted,

ii. Evaluates Provider and Subcontractor compliance with contractual reporting requirements, and

iii. Demonstrates the CHC-MCO has processes in place to act on information from the monitoring program and takes appropriate action to ensure full compliance with Encounter Data reporting requirements.

Upon request of the Department, the CHC-MCO must submit a Data Completeness Plan for advance written review and approval. This Plan must include the three (3) elements listed above.

d. Financial Sanctions

The CHC-MCO must provide complete, accurate, and timely Encounter Data to the Department. In addition, the CH-MCO must maintain complete medical service history data.

The Department will request the CHC-MCO submit a Corrective Action Plan when areas of noncompliance are identified.

The Department may assess financial sanctions as provided in Exhibit X, Encounter Data Submission Requirements and Damages Applications, based on the identification of instances of non-compliance.

e. Data Validation

The CHC-MCO must assist the Department in its validation of Encounter Data by making medical records and Claims data available as requested. The validation may be completed by Department staff, independent

external review organizations, or both.

f. Release of Encounter Data

All Encounter Data for Participants is the property of the Department. The CHC-MCO may use this data for the sole purpose of operating the CHC Program under this Agreement.

g. Drug Rebate Supplemental File

The CHC-MCO must submit a complete, accurate, and timely monthly file containing supplemental data for NCPDP, 837P Professional Drug, and 837I Outpatient Drug transactions used for the purpose of drug rebate dispute resolution. The file must be submitted by the fifteenth (15^{th}) day of the month following the month in which the drug transaction was processed in the Department's MMIS as specified on the Pennsylvania HealthChoices Extranet.

The MCO Supplemental Data Status Report will be provided by the Department to the CHC-MCO on or after the 20th of each month following receipt of the Drug Rebate Supplemental File. CHC-MCOs must use this report to reconcile and correct any errors on Drug Rebate data that was submitted.

2. Third Party Liability Reporting

Third Party Resources identified by the CHC-MCO or its subcontractors, which do not appear on the Department's TPL database, must be supplied to the Department's Division of TPL within two (2) weeks of its receipt by the CHC-MCO. The Department will contact the CHC-MCO when the validity of a resource is in question. The CHC-MCO shall verify inconclusive resource information within two (2) business days of notification by the Department that the resource information is in dispute. However, if the verification notification is requested on the last business day of the week, the CHC-MCO must respond by the close of business that day to avoid a potential access to care issue for its member. The method of reporting shall be by electronic submission via a batch file or by hardcopy document, whichever is deemed most convenient and efficient by the CHC-MCO for its individual use. For electronic submissions, the CHC-MCO must follow the required report format, data elements, and specifications supplied by the Department. For hardcopy submissions, the CHC-MCO must use an exact replica of the TPL resource referral form supplied by the Department. Submissions lacking information key to the TPL database update process will be considered incomplete and will be returned to the CHC-MCO for correction and subsequent resubmission.

3. PCP Assignment

The CHC-MCO must provide a weekly file (EVS-PCP) to the Department's MMIS containing PCP assignments for all its Participants other than those who have a Medicare PCP. This file is used to update the Department's Eligibility Verification System.

The CHC-MCO must provide this file at least weekly or more frequently if requested by the Department. The CHC-MCO must confirm that the PCP assignment information is consistent with all requirements specified by the Department by utilizing the response report provided by the Department. The CHC-MCO must comply with the file submission requirements found on the Pennsylvania HealthChoices Extranet.

4. Provider Network

The CHC-MCO must provide a monthly Network Provider File (PRV640M) to the Department. The initial file must contain records for its entire Provider Network, including Subcontractors. Subsequent monthly files should contain only updates.

The CHC-MCO must confirm the information is consistent with all requirements by utilizing the response report (PRM640M) provided by the Department. The CHC-MCO must use this report to reconcile and correct any errors. The CHC-MCO must comply with file submission requirements found on the Pennsylvania HealthChoices Extranet.

5. Alerts

The CHC-MCO must report to the Department on a Weekly Enrollment/Disenrollment/Alert File: pregnancy (not on eCIS), death (not on eCIS), and returned mail.

The CHC-MCO must confirm the information is consistent with all requirements specified on the Pennsylvania HealthChoices Extranet.

D. Operations Reporting

The CHC-MCO is required to submit such reports as specified by the Department to enable the Department to monitor the CHC-MCO's internal operations and service delivery. These reports include, but are not limited to:

1. Operations and Quality Reporting Requirements

As a condition of approval of the Waivers for the operation of CHC, CMS has imposed specific reporting requirements related to the Home and Community

Based Waiver and overall CHC monitoring. OLTL has also established additional Operations and Quality Management Reports to oversee CHC. Required reports are identified on the Operations and Quality Management Reporting Requirements Submission Schedule. CHC-MCOs are required to meet identified due dates, submit accurate data, and provide requested documentation.

2. Fraud, Waste and Abuse,

The CHC-MCO must submit to the Department quarterly and annual statistical reports which relate to its Fraud, Waste and Abuse detection and sanctioning activities regarding Providers. The CHC-MCO must include information for all situations where a Provider action caused an overpayment to occur and must identify cases under review (including approximate dollar amounts), Providers terminated due to Medicare/Medicaid preclusion, provider terminations for good cause or best interest, overpayments recovered and cost avoidance issues related to identifying and/or identified fraud, waste, and abuse (42 CFR §438.608(a)(2)). The CHC-MCO must comply with all requirements regarding Operations Report format and timeframes provided on the DHS/CHC-MCO docuShare Reporting pages and on the HealthChoices Extranet at Managed Care Program/Fraud and Abuse.

E. Financial Reports

The CHC-MCO must submit such reports as specified by the Department to assist the Department in assessing the CHC-MCO's financial viability and compliance with this Agreement.

The Department will distribute financial reporting requirements to the CHC-MCO. The CHC-MCO must furnish all financial reports timely and accurately, with content in the format prescribed by the Department. This includes, but is not limited to, the CHC financial reporting requirements issued by the Department.

F. Equity

Not later than May 25, August 25, and November 25 of each Agreement year, the CHC-MCO must provide the Department with:

- A copy of quarterly reports filed with PID.
- A statement that its Equity is in compliance with the Equity requirements or is not in compliance with the Equity requirements.
- If Equity is not in compliance with the Equity requirements, the CHC-MCO must supply a report that provides an analysis of its fiscal health and steps that management plans to take, if any, to improve fiscal health.

Not later than March 10 of each Agreement year, the CHC-MCO must provide

the Department with:

- A copy of unaudited annual reports filed with PID.
- A statement that its Equity is in compliance with the Equity requirements or is not in compliance with the Equity requirements.
- If Equity is not in compliance with the Equity requirements, the CHC-MCO must supply a report that provides an analysis of its fiscal health and steps that management plans to take, if any, to improve fiscal health.

G. Claims Processing Reports

The CHC-MCO must provide the Department with monthly Claims processing reports with content in a format specified by the Department. The reports are due on the fifth (5^{th}) calendar day of the second (2^{nd}) subsequent month. Claims returned by a web-based clearinghouse (e.g., WebMD Envoy) are not considered as Claims received and would be excluded from Claims reports.

The Department may impose the following sanction for the CHC-MCO's failure to submit a timely Claims processing report that is accurate and fully compliant with the reporting requirements: Two Hundred Dollars ($200.00) per day for the first ten (10) calendar days from the date that the report is due, and One Thousand Dollars ($1,000.00) per day for each calendar day thereafter.

H. Presentation of Findings

The CHC-MCO must obtain advance written approval from the Department before publishing or making formal public presentations of statistical or analytical material based on its CHC Participant Population.

I. Sanctions

1. The Department may impose sanctions for noncompliance with the requirements under this Agreement and failure to meet applicable requirements in Sections 1932, 1903(m), and 1905(t) of the SSA in accordance with 42 C.F.R §§ 438.700; 438.702 and 438.704 in addition to any sanctions described in Exhibit B of this Agreement, Standard Terms and Conditions for Services, and in Exhibit B(1) of this Agreement, DHS Addendum to Standard Contract Terms and Conditions. The sanctions which can be imposed shall depend on the nature and severity of the breach, which the Department, in its reasonable discretion, will determine as follows:

    a. Imposing civil monetary penalties of a minimum of One Thousand Dollars ($1,000.00) per day for noncompliance;

    b. Requiring the submission of a corrective action plan;

c. Suspending or Limiting Enrollment of new Participants;

d. Suspension of payments;

e. Preclusion or exclusion of the CHC-MCO, its officers, managing employees or other individuals with direct or indirect ownership or control interest in accordance with 42 U.S.C. § 1320a-7, 42 C.F.R. Parts 1001 and 1002; 62 P.S. § 1407 and 55 Pa. Code §§ 1101.75 and 1101.77;

f. Temporary management subject to applicable Federal or State law; and/or

g. Termination of the Agreement

2. Where this Agreement provides for a specific sanction for a defined infraction, the Department may, at its discretion, apply the specific sanction provided for the noncompliance or apply any of the general sanctions set forth in this Section VIII.I, Sanctions. Specific sanctions contained in this Agreement include the following:

a. Claims Processing: Sanctions related to Claims processing are provided in Section VII D.2 of this Agreement, Sanctions.

b. Report or File, exclusive of Audit Reports: If the CHC-MCO fails to provide any report or file that is specified by this Agreement by the applicable due date, or if the CHC-MCO provides any report or file specified by this Agreement that does not meet established criteria, a subsequent payment to the CHC-MCO may be reduced by the Department. The reduction shall equal the number of days that elapse between the due date and the day that the Department receives a report or file that meets established criteria, multiplied by the average Per-Member, Per-Month Capitation rate that applies to the first (1^{st}) month of the Agreement year. If the CHC-MCO provides a report or file on or before the due date, and if the Department notifies the CHC-MCO after the fifteenth (15^{th}) calendar day after the due date that the report or file does not meet established criteria, no reduction in payment shall apply to the sixteenth (16^{th}) day after the due date through the date that the Department notifies the CHC-MCO.

c. Encounter Data Reporting: The sanctions related to the submission of Encounter Data are set forth in Section VIII.C of this Agreement, Systems Reports, and Exhibit X, Encounter Data Submission Requirements and Sanction Applications.

d. Marketing: The sanctions for engaging in unapproved marketing practices are described in Section V.O.3 of this Agreement, CHC-MCO Outreach Activities.

e. Access Standard: The sanction for noncompliance with the access standard is set forth in Exhibit T, Provider Network Composition/ Service Access.

f. Outpatient Drug Encounters: The sanctions for non-compliance with outpatient drug encounter data timeliness is set forth in Exhibit D, Drug Services.

J. Non-Duplication of Financial Penalties

If the Department assesses a financial sanction pursuant to one (1) of the provisions of Section VIII.I of this Agreement, Sanctions, it will not impose a financial sanction pursuant to Section VIII.I with respect to the same infraction.

SECTION IX: REPRESENTATIONS AND WARRANTIES OF THE CHC-MCO

A. Accuracy of Proposal

The CHC-MCO must notify the Department within ten (10) business days of any material fact, event, or condition which arises or is discovered subsequent to the date of the submission of its Proposal, which affects the truth, accuracy, or completeness of such representations and information.

B. Disclosure of Interests

The CHC-MCO must provide, on its behalf and for its subcontractors, written disclosure to the Department of information on ownership and control, business transactions, and persons convicted of crimes in accordance with 42 C.F.R. § 438.608 and with 42 C.F.R. Part 455, Subpart B.

The CHC-MCO shall make the disclosures required by 42 C.F.R. § 438.608 and by 42 C.F.R. Part 455, Subpart B at the following times:

1. when the CHC-MCO may submit a proposal in accordance with the Department's procurement process, if any;

2. when the CHC-MCO executes this Agreement; or

3. when the CHC-MCO may renew or extend this Agreement; or

4. within thirty-five (35) days after any change in ownership of the CHC-MCO.

The CHC-MCO must report to the Department a description of transactions between the CHC-MCO and a party in interest (as defined in 42 U.S.C. § 300e-17(b)), including the following transactions:

1. Any sale or exchange, or leasing of any property between the CHC-MCO and such a party.

2. Any furnishing for consideration of goods, services (including management services), or facilities between the CHC-MCO and such a party, but not including salaries paid to employees for services provided in the normal course of their employment.

3. Any lending of money or other extension of credit between the CHC-MCO and such a party.

The CHC-MCO shall make the forgoing information available to Participants upon reasonable request.

The CHC-MCO warrants that the members of its governing body and its officers and directors have no interest and will not acquire any interest, direct or indirect, which conflicts with the performance of its services hereunder. The CHC-MCO will not knowingly employ any person having such interest.

The Department may terminate this Agreement based on the CHC-MCO's failure to properly disclose required information and may recover as overpayments any payments improperly made by the CHC-MCO.

C. Disclosure of Change in Circumstances

Notwithstanding the disclosure requirements above, the CHC-MCO must notify the Department in writing of all changes affecting the delivery of care, the administration of its program, or its performance of Agreement requirements. The CHC-MCO must notify the Department in writing no later than ninety (90) days prior to any significant change to the manner in which services are rendered to Participants, including, but not limited to, reprocurement or termination of a Provider.

The CHC-MCO will report to the Department, as well as the DOH and PID, within ten (10) business days of the CHC-MCO's notice of same, circumstances that may have a material adverse effect upon financial or operational conditions of the CHC-MCO or CHC-MCO's parent(s), including, but not limited to, the following:

1. Suspension, or debarment, or exclusion from federally funded healthcare

programs of the CHC-MCO, CHC-MCO's parent(s), or any Affiliate or Related Party of either, by any state or the federal government;

2. Having a person who is debarred or suspended, or excluded act as a director, officer, or partner of the CHC-MCO with beneficial ownership of more than five percent (5%) of the CHC-MCO's Equity who has been debarred from participating in procurement activities under Federal regulations;
3. Notice of suspension, debarment, or exclusion from participation in healthcare programs or notice of an intent to suspend, debar, or exclude issued by any state or the federal government to CHC-MCO, CHC-MCO's parent(s), or any Affiliate or Related Party; and
4. Any lawsuits or investigations by any federal or state agency involving CHC-MCO, CHC-MCO's parent(s), or any Affiliate or Related Party.

SECTION X: TERMINATION AND DEFAULT

A. Termination by the Department

1. Termination for Convenience upon Notice

The Department may terminate this Agreement for convenience as provided in Section 18 of Exhibit B, Standard Terms and Conditions for Services. The Department is not required to provide advance notice of termination if this Agreement is replaced by another Agreement to operate a CHC Program in the zone.

2. Termination for Cause

The Department may terminate this Agreement for cause as provided in Section 18 of Exhibit B, Standard Terms and Conditions for Services. The Department is not required to provide advance written notice if it is terminating the Agreement based on:

a. An act of theft or Fraud against the Department, any state agency, or the Federal Government; or

b. An adverse material change in circumstances as described in Section IX.C, Disclosure of Change in Circumstances.

3. Termination Due to Unavailability of Funds or Approvals

In addition to Section 18 of Exhibit B, Standard Terms and Conditions for Services, the Department may terminate this Agreement immediately upon the occurrence of any of the following events:

a. Notification by the US DHHS of the withdrawal or disapproval of Federal Financial Participation in all or part of the cost for CHC Covered Services;

b. Notification of the unavailability of funds for the CHC Program; or

c. Notification that the federal approvals necessary to operate the CHC Program are not obtained or not retained; or

d. Notification by the PID or DOH that the authority under which the CHC-MCO operates is subject to suspension or revocation proceedings or sanctions, has been suspended, limited, or curtailed, has been revoked, or has expired and shall not be renewed.

B. Responsibilities of the CHC-MCO upon Termination

1. Continuing Obligations

Termination or expiration of this Agreement shall not discharge the CHC-MCO of obligations with respect to services or items furnished prior to termination, including retention of records and verification of overpayments or underpayments. The Department's payment obligations to the CHC-MCO and the CHC-MCO's payment obligations to its subcontractors and Providers for services provided prior to the termination or expiration survive the termination or expiration of the Agreement.

Upon any termination or expiration of this Agreement, the CHC-MCO must:

a. Provide the Department with all information deemed necessary by the Department within thirty (30) days of the request;

b. Be financially responsible for Claims with dates of service through the expiration or termination, except as provided below, including those submitted within time limits;

c. Be financially responsible for hospitalized patients through the date of discharge or thirty-one (31) days after termination or expiration, whichever is earlier;

d. Be financially responsible for services provided to NF Participants until the NF has completed a safe and orderly transfer of Participant care and records to another CHC-MCO in which the NF is operating after termination or expiration of this Agreement;

e. Be financially responsible for services rendered through 11:59 p.m. on the date of termination or expiration, except as provided below, for which payment is denied by the CHC-MCO and subsequently approved upon appeal;

f. Be financially responsible for Participant appeals of adverse decisions rendered by the CHC-MCO concerning services requested prior to termination or expiration that would have been provided but for a denial which is overturned at a DHS Fair Hearing or Grievance proceeding; and

g. Arrange for the orderly transfer of Participant care and records to those Providers who will be assuming care for the Participants.

2. Notice to Participants and Network Providers

If this Agreement is terminated, or expires without a new Agreement in place, the CHC-MCO must notify all Participants and Network Providers of such termination or expiration at least forty-five (45) days in advance of the effective date of termination or expiration, if practical. The CHC-MCO must make notices available in an accessible format and in the relevant language as required for Vital Documents. The CHC-MCO must coordinate the continuation of care prior to termination or expiration for Participants who are undergoing treatment for an acute condition.

3. Submission of Invoices

Upon termination or expiration, the CHC-MCO must submit to the Department all outstanding invoices for allowable services rendered prior to the date of termination or expiration in the form stipulated by the Department no later than forty-five (45) days from the effective date of termination or expiration. The Department will not make payment for invoices submitted after forty-five (45) days. This does not apply to submissions and payments in Appendices 3a – 3f.

4. Termination Requirements

Within one year (365 days) of expiration or termination of the Agreement, the CHC-MCO must provide the Department with all outstanding Encounter Data and Maternity Care Claims. The Department will withhold ten percent (10%) of one (1) month's Capitation payment until the Department determines that the CHC-MCO has complied with this requirement. The Department will not unreasonably delay or deny a determination of compliance. The Department will provide its determination to the CHC-MCO by the first (1^{st}) day of the fifth (5^{th}) month after the Agreement ends. If the Department determines that the CHC-MCO has not complied, the Department will provide subsequent

determinations by the first (1st) day of each subsequent month.

C. Transition at Expiration or Termination of Agreement

If the CHC-MCO and the Department have not entered into a new Agreement, the Department will develop a transition plan. During the transition period, the CHC-MCO must comply with the requirements of the plan and must cooperate with any subsequent CHC-MCO and the Department. The Department will consult with the CHC-MCO regarding the transition plan, including information requirements and the relationship between the CHC-MCOs. The length of the transition period shall be no less than three (3) months and no more than six (6) months in duration.

The CHC-MCO is responsible for the costs relating to the transfer of materials and responsibilities as a normal part of doing business with the Department.

SECTION XI: RECORDS

A. Financial Records Retention

1. The CHC-MCO must maintain and must cause its subcontractors to maintain all books, records, and other evidence pertaining to revenues, expenditures, and other financial activity pursuant to this Agreement in accordance with the standards and procedures specified in this Agreement, including Section V.X.3, Records Retention and Exhibit O, CHC Audit Clause.

2. The CHC-MCO will include the requirements set forth in Section XII, Subcontractual Relationships, in all Subcontracts it enters for the CHC Program, and will monitor subcontractors for compliance with these requirements.

B. Operational Data Reports

The CHC-MCO must maintain and must require its subcontractors to maintain all source records for data reports in accordance with the procedures specified in Section V.X.3., Records Retention.

C. Medical Records and Comprehensive Medical and Service Records Retention

The CHC-MCO must maintain and must cause its subcontractors to maintain all Comprehensive Medical and Service records in accordance with the procedures outlined in this Agreement, including Section V.X.3., Records Retention.

The CHC-MCO must provide Participants' Comprehensive Medical and Service Records to the Department or its representatives within twenty (20) business days

of the Department's request. The CHC-MCO will mail copies of such records to the Department if requested.

D. Review of Records

1. The CHC-MCO must make all records relating to the CHC Program, including, but not limited to, the records referenced in this Section, available for audit, review, or evaluation by the Department, the Pennsylvania Office of Attorney General Medicaid Fraud Control Section, federal agencies or their designees. Such records shall be made available on site, subject to the Department's approval, at any time or through the mail. The Department will, to the extent required by law, maintain as confidential any confidential information provided by the CHC-MCO.

2. In the event that the Department the Pennsylvania Office of Attorney General Medicaid Fraud Control Section, or federal agencies request access to records, subject to this Agreement, after the expiration or termination of this Agreement or at such time that the records no longer are required by the terms of this Agreement to be maintained at the CHC-MCO's location, but in any case, before the expiration of the period for which the CHC-MCO is required to retain such records, the CHC-MCO, at its own expense, must send copies of the requested records to the requesting entity within thirty (30) days of such request.

SECTION XII: SUBCONTRACTUAL RELATIONSHIPS

A. Compliance with Program Standards

With the exception of Provider Agreements, the CHC-MCO must comply with the procedures set forth in Section V.X.2. Contracts and Subcontracts and in Exhibit P, Required Contract Terms for Administrative Subcontractors.

Prior to the award of a contract or Subcontract, the CHC-MCO must disclose to the Department in writing information on ownership interests of five percent (5%) or more in the proposed Subcontractor.

The CHC-MCO’s contracts and Subcontracts for CHC must be in writing and must contain all items as required by this Agreement.

The CHC-MCO must require its subcontractors to provide written notification of a denial, partial approval, reduction, or termination of service or coverage, or a change in the level of care, according to the standards outlined in Exhibit F, Quality Management and Utilization Management Program Requirements, using the denial notice templates provided on the Pennsylvania HealthChoices Extranet. In addition, the CHC-MCO must include in its contracts or Subcontracts

that cover the provision of Covered Services to the CHC-MCO's Participants the following provisions:

1. A requirement for cooperation with the submission of all Encounter Data for all services provided within the timeframes required in Section VIII, Reporting Requirements, regardless of whether reimbursement for these services is made by the CHC-MCO either directly or indirectly through capitation.

2. Language which requires compliance with all applicable Federal and State laws, including applicable sub-regulatory guidance and contract provisions.

3. Language which prohibits gag clauses which would limit the subcontractor from disclosure of Medically Necessary or appropriate healthcare information or alternative therapies to Participants, other LTSS Providers, or to the Department.

4. Provides for access for Federal and State agencies and their designees to any and all documents and records of transactions, computer or other electronic systems pertaining to the provision of services to Participants or determinations of amounts payable under this Agreement.

5. The definition of Medically Necessary as outlined in Section II, Definitions.

6. The CHC-MCO must require, if applicable, that its Subcontractors adhere to the standards for Network composition and adequacy.

7. Should the CHC-MCO use a subcontracted utilization review entity, the CHC-MCO must require that its subcontractors process each request for benefits in accordance with Section V.B, General Prior Authorization Requirements.

8. Should the CHC-MCO subcontract with an entity to provide any information systems services, the Subcontract must include provisions for a transition plan in the event that the CHC-MCO terminates the Subcontract or enters into a Subcontract with a different entity. This transition plan must include information on how the data shall be converted and made available to the new subcontractor. The data must include all historical Claims and service data.

B. Consistency with Regulations

The CHC-MCO must require all Subcontracts to be consistent, as may be applicable, with DOH regulations governing HMO Contracting with Integrated Delivery Systems at 28 Pa. Code §§ 9.721 – 9.725 and PID regulations at 31 Pa. Code §§ 301.301 – 301.314.

SECTION XIII: CONFIDENTIALITY

A. The CHC-MCO must comply with all applicable Federal and State laws regarding the confidentiality of Participant records, including medical records. The CHC-MCO must also require each of its subcontractors to comply with all applicable Federal and State laws regarding the confidentiality of medical records.

B. The CHC-MCO will be liable for any State or Federal fines, sanctions, financial penalties, or damages levied upon the Department for a breach of confidentiality due to the negligent or intentional conduct of the CHC-MCO in relation to the CHC-MCO's systems, staff, or other area of responsibility.

C. The CHC-MCO will return all data and material obtained in connection with this Agreement and the implementation thereof, including confidential data and material, at the Department's request. The CHC-MCO is not permitted to use this material for any purpose after the expiration or termination of this Agreement.

D. The CHC-MCO is entitled to receive all information relating to the health status of its Participants in accordance with applicable confidentiality laws.

SECTION XIV: INDEMNIFICATION AND INSURANCE

A. Indemnification

1. In addition to Section 14 of Exhibit B, Standard Grant Terms and Conditions for Services, the CHC-MCO must indemnify and hold the Department and the Commonwealth of Pennsylvania, their respective employees, agents, designees and representatives harmless against any and all liabilities, losses, settlements, Claims, demands, and expenses of any kind (including, but not limited to, attorneys' fees) which may result or arise out of any dispute by and between the CHC-MCO and its subcontractors or Providers with Participants, agents, or clients in the performance or omission of any act or responsibility assumed by the CHC-MCO pursuant to this Agreement.

2. In addition to Section 14 of Exhibit B, Standard Grant Terms and Conditions for Services, the CHC-MCO must indemnify and hold harmless the Department and the Commonwealth of Pennsylvania from any audit disallowance imposed by the federal government resulting from the CHC-MCO's failure to follow Federal or State statutes, rules, regulations, or procedures unless prior approval was given by the Department. The Department shall provide timely notice of any disallowance to the CHC-MCO and allow the CHC-MCO an opportunity to participate in the disallowance appeal process and any subsequent judicial review to the extent permitted by law. Any payment required under this provision shall be due from the CHC-MCO upon notice from the Department. The indemnification provision hereunder shall not extend to disallowances which result from a determination by the federal government that the terms of this Agreement are not in

accordance with federal law. The obligations under this paragraph shall survive any termination or cancellation of this Agreement.

B. Insurance

The CHC-MCO must maintain for itself and each of its employees, agents, and representatives, general liability and all other types of insurance in such amounts as reasonably required by the Department and all applicable laws. In addition, the CHC-MCO must require that each of the Network Providers with which the CHC-MCO contracts maintains professional malpractice and all other types of insurance in such amounts as required by all applicable laws. The CHC-MCO must provide to the Department, upon the Department's request, certificates evidencing such insurance coverage.

SECTION XV: DISPUTES

In the event of a dispute between the parties to this Agreement, the Project Officer for the Department will make a determination in writing of his or her interpretation and will send the determination to the CHC-MCO. The determination is final and binding on the CHC-MCO and unreviewable unless the CHC-MCO files a written appeal with the Department's BHA. The CHC-MCO must file an appeal of an appealable agency action regarding this Agreement in accordance with 67 Pa.C.S. §§ 101-11006 and implementing regulations at 55 Pa. Code Chapter 41.

SECTION XVI: GENERAL

A. Suspension from Other Programs

If the CHC-MCO learns that a Network Provider is suspended or excluded from participation in any federally funded healthcare Program by another state or the or the federal government, the CHC-MCO must promptly notify the Department, in writing, of such suspension or exclusion.

The CHC-MCO may not employ, contract with, or make any payments to a Provider for services rendered during the period in which the Provider is suspended or excluded from participation in a federally funded healthcare program.

B. Rights of the Department and the CHC-MCO

The rights and remedies of the Department provided herein shall not be exclusive and are in addition to any rights and remedies provided by law.

Except as otherwise stated in Section XV, Disputes, the rights and remedies of the CHC-MCO provided herein shall not be exclusive and are in addition to any rights and remedies provided by law.

C. Invalid Provisions

Any provision of this Agreement which is in violation of any Federal or State law or regulation shall be deemed amended to conform with such law or regulation, pursuant to the terms of this Agreement, except that if such change would materially and substantially alter the obligations of the parties under this Agreement, any such provision shall be renegotiated by the parties. The invalidity or unenforceability of any terms or provisions hereof shall in no way affect the validity or enforceability of any other terms or provisions hereof.

D. Notice

Any written notice to any party under this Agreement shall be deemed sufficient if delivered personally, or by facsimile, telecopy, electronic or digital transmission (provided such delivery is confirmed), or by recognized overnight courier service (e.g., DHL, Federal Express, etc.), with confirmed receipt, or by certified or registered United States mail, postage prepaid, return receipt requested, sent to the address set forth below or to such other address as such party may designate by notice given pursuant to this section:

To the Department via U.S. Mail:
Department of Human Services
Deputy Secretary, Office of Long-Term Living
P.O. Box 8052
Harrisburg, Pennsylvania 17105

With a Copy to:

Department of Human Services
Office of Legal Counsel
3rd Floor West, Health and Welfare Building
625 Forster Street
Harrisburg, Pennsylvania 17120
Attention: Chief Counsel

To the CHC-MCO

E. Counterparts

This Agreement may be executed in counterparts, each of which shall be deemed an original for all purposes, and all of which, when taken together, shall constitute but one and the same instrument.

F. Headings

The section headings used herein are for reference and convenience only and shall not enter into the interpretation of this Agreement.

G. No Third Party Beneficiaries

This Agreement does not, nor is it intended to, create any rights, benefits, or interest to any third party, person, or organization.

APPENDIX 3a

Explanation of Capitation Payments

I. Base Waiver Capitation Rates

The schedule of Base Waiver Capitation Rates will be provided to the CHC-MCOs. The Department will provide the CHC-MCO with information on methodology and data used to develop the schedule of Base Waiver Capitation Rates.

II. Risk Adjusted Rates (RAR)

A. Applicability of RAR

The Department will risk adjust the Base Waiver Capitation Rates using an actuarially sound method to reflect differences in functional status and demographics of the Members enrolled in each CHC-MCO's program.

The Department may elect to terminate the risk adjustment of any or all Base Waiver Capitation Rates. If the Department makes this election, the Department will notify the CHC-MCO and will provide an effective date for this change. If the Department makes this election, the Department will enter into negotiations with the CHC-MCO on the subject of Base Waiver Capitation Rates that will apply on and after the effective date of the change.

B. RAR CHC-MCO Plan Factors

If Base Waiver Capitation Rates are risk adjusted, the Department and its actuarial consultant will develop each RAR CHC-MCO Plan Factor to reflect the functional status and demographics of Participants enrolled in the CHC-MCO's program within one Rate Cell and one Rating Region or combinations thereof.

The Department and its actuaries will recalculate the RAR CHC-MCO Plan Factors in accordance with a schedule determined by the Department.

C. MCO Assessment Amount

The Base Waiver Capitation Rates include an MCO Assessment Amount. The MCO Assessment Amount is the amount included in the Base Waiver Capitation Rates for the MCO Assessment fee inclusive of

a multiplier that accounts for the CHC-MCO's responsibility to pay the MCO Assessment fee for partial member months.

D. Risk-Adjusted Portion of the Base Waiver Capitation Rate

If the Base Waiver Capitation Rate is higher than the lowest Base Waiver Capitation Rate that the Department has calculated for a given Rate Cell and Rating Region for the applicable program month among all CHC-MCOs that operate in a zone, the difference is referred to as Amount A.

For each CHC-MCO, the following calculation will be made for each Rate Cell and Rating Region:

	Base Waiver Capitation Rate
MINUS	Acute Services Portion of Rate
MINUS	MCO Assessment Amount
MINUS	Amount A
TIMES	RAR CHC-MCO Plan Factor
EQUALS	Risk-Adjusted Portion of the Base Waiver Capitation Rate

E. Revised Base Waiver Capitation Rate

For each CHC-MCO, the following calculation will be made for each Rate Cell and Rating Region:

	Risk-Adjusted Portion of the Base Waiver Capitation Rate
PLUS	Acute Services Portion of Rate
PLUS	MCO Assessment Amount
PLUS	Amount A
EQUALS	Revised Base Waiver Capitation Rate

III. Capitation Payment Rate

The Capitation Payment Rate will include a Participant Enrollment Mix Adjustment, which is described in Appendix 3e. The Participant Enrollment Mix Adjustment calculation will utilize the Revised Base Waiver Capitation Rate.

In accordance with Section VII.B.2.ii of this Agreement, the Department will make capitation payments at per diem equivalents of the Capitation Payment Rates that are calculated and issued by the Department.

APPENDIX 3b

Medical Loss Ratio (MLR) Reporting and Remittance Requirements

This appendix establishes requirements for the CHC-MCO's responsibility to calculate and report their medical loss ratio (MLR) to the Department consistent with the 2016 Medicaid/CHIP Managed Care Final Rule requirements at 42 CFR §438.8. This appendix also establishes a requirement for remittance to the Department.

The reporting requirements apply collectively to all Agreements the CHC-MCO has with the Department to operate Community HealthChoices (CHC) programs during a CY. The CHC-MCO must provide one report inclusive of all zones, rating periods and Agreements within a CY. The CHC-MCO must not include revenue or costs that are not specific to the CHC program.

I. Timing

The CHC-MCO must submit the annual MLR report to the Department by November 30 of the following CY.

II. MLR Reporting Year

Consistent with 42 CFR §438.8, the MLR reporting year is a 12-month period that aligns with the Department's CHC rating period. The Department's current, standard rating period is a 12-month CY.

III. Contents of Annual MLR Report

The CHC-MCO is to submit their MLR report containing at least the information outlined herein for the current MLR reporting year, consistent with the requirements in 42 CFR §438.8(k) or subsequently modified by CMS. The Department reserves the right to request additional information and/or require the use of a MLR report template.

1. Total incurred claims (including fraud reduction efforts)
2. Expenditures on quality improving activities
3. Expenditures on fraud prevention activities (not applicable)
4. Non-claim costs
5. Premium revenue
6. Premium related taxes, licensing, and regulatory fees
7. Methodologies for allocation of expenditures
8. Any credibility adjustment applied
9. The calculated MLR (including numerator and denominator)
10. Any remittance potentially owed to the Department
11. A comparison of the MLR report information to the CHC-MCO's audited financial report(s)
12. The number of member months
13. A description of the aggregation method used to aggregate data for all Medicaid eligibility groups covered under this Agreement

IV. New Community HealthChoices CHC-MCOs

The Department, at its discretion, may exclude a CHC-MCO that did not previously have a CHC Agreement from these requirements for the first year of the CHC-MCO's operations. However, the new CHC-MCO will be required to comply with these requirements during the next MLR reporting year even if the first year of operations was not a full 12 months. For example, if a CHC-MCO is new on July 1, 2024, the Department may exclude the new CHC-MCO from completing and submitting the CY 2024 MLR report. The new CHC-MCO will be required to complete the subsequent CY 2025 MLR report. If a CHC-MCO exits CHC, a report will still be required, even if it is less than twelve months of experience.

V. MLR Numerator and Denominator

Detail of what is included and how the MLR numerator and denominator are computed can be found in 42 CFR §438.8(e) and (f) respectively. If an expenditure related to Social Determinants of Health is an "activity that improves health care quality" as specified in 42 CFR § 438.8(e)(3), the CHC-MCO may include the costs in the numerator of the MLR. The CHC-MCO is expected to comply with any additional requirements, guidance or instructions released by CMS that relate to the computation of the MLR as required in 42 CFR §438.8.

VI. Aggregate Medicaid Eligibility Groups

The Department requires the CHC-MCO's MLR report to be calculated as a single aggregated group across all populations. This aggregated group must represent all CHC Medicaid/Title XIX rate cells/populations and rating regions/zones combined that are covered under the CHC Agreements.

VII. Credibility Adjustment

Per 42 CFR §438.8(h), the CHC-MCO may add a credibility adjustment to the reported MLRs per Aggregate Medicaid Eligibility Group in section VI of this appendix if the CHC-MCO has sufficient member months to be partially credible, but not enough member months to be fully credible. The credibility adjustment is required for any remittance calculations. CMS will publish the table of credibility adjustments to be used. Fully credible plans may not use a credibility adjustment.

VIII. Remittance

Per 42 CFR §438.8(c) the Department has chosen a minimum MLR of 90.00 percent (90.00%). The Department will require a remittance in accordance with 42 CFR §438.8(j) for each Aggregate Medicaid Eligibility Group listed in section VI above. Settlement of any remittance obligation will be due 75 calendar days after the Department has issued a remittance notification to the CHC-MCO.

IX. Attestation

The CHC-MCO must provide an attestation of the accuracy of the information provided in their submitted MLR report as required in 42 CFR §438.8(n) and consistent with 42 CFR §438.606. The attestation is due on the report due date.

X. Sub-Regulatory Guidance and Capitation Adjustments

These requirements are subject to change as CMS releases sub-regulatory guidance. If there are retroactive capitation adjustments these MLR reports may need to be updated. For more information about MLR calculations, please see 42 CFR §438.8.

XI. Continuation

If CMS issues regulation that revises or replaces the citations in this appendix, the revised or replacement citations will apply.

APPENDIX 3c

Capitation Rates

This Appendix will be used for specifying the capitation rates that will be paid by the Department to the CHC-MCO.

APPENDIX 3d

Overview of Methodologies for Rate Setting

I. Rate Setting Methodology #1 – Use of Historical Fee-For-Service Data and Managed Care Encounter Data

To develop capitation rates on an actuarially sound basis for the Community HealthChoices (CHC) program using historical fee-for-service (FFS) data and managed care encounter data, the following general steps are performed:

- Summarize the FFS claims, managed care encounter and eligibility data
- Combine the Multiple Years of Data Together, If Applicable
- Project the Base Data Forward
- Include the Effect of Program/Policy Changes
- Adjust the FFS Data to Reflect Managed Care Principles
- Add an Appropriate Administration/Underwriting Gain Load
- Add an Amount for Taxes/Assessments

Summarize the FFS Claims, Managed Care Encounter and Eligibility Data — The Department provides summarized FFS claims, encounters and eligibility data for the recipients and services to be covered under the CHC program. Normally, multiple years of data are made available for rate-setting purposes; however, the actuary may choose one or more years of data to base rates upon. This data is then adjusted to account for items not included in the initial data collection process. These adjustments (positive and negative) generally include, but are not limited to: completion factors, legal settlements, gross adjustments, graduate medical education payments, pharmacy rebates, and other adjustments needed to improve the accuracy of the data.

Combine the Multiple Years of Each Data Source Together, If Applicable — To arrive at a single year of each data source to serve as the basis for rate setting, the multiple years of each data source can be combined together if more than one year of data was selected for the base. The blending of the base years of data may be on Participant months or other weighting factors selected by the actuary.

Project the Base Data Forward — The base data is then projected forward to the time period for which the capitation rates are to be paid. Trend factors are used to estimate the future costs of the services for the populations covered by the managed care program. These trend factors normally vary by service and/or population group.

Include the Effect of Program/Policy Changes — Changes from Commonwealth and/or federal policy may occur to the services or populations covered under the CHC program (e.g., expands dental care, restricts enrollment, or encourages innovations in service or workforce recruitment and retention). Material program changes are included in the capitation rates by either increasing or decreasing the base data by an appropriate adjustment.

Adjust the FFS Data to Reflect Managed Care Principles — Because Community HealthChoices is a managed care program and not FFS, the projected FFS data needs to be adjusted to reflect the typical changes that occur when changing from a FFS program to a managed care program. This generally involves increasing the cost/use of preventive services and decreasing hospital and emergency room cost/use. It may also include increasing the use of community services and transitioning individuals out of nursing facilities, as applicable.

Add an Appropriate Administration/Underwriting Gain Load — After the base data has been trended to the appropriate time period, adjusted for program/policy changes and adjusted to reflect managed care principles, an administration/underwriting gain load will be added to the service claims cost component to determine the overall capitation rates applicable to each population group. The administration/underwriting gain load may be applied as a percentage of the total capitation rate (i.e., percent of premium) and includes all reasonable and appropriate administrative expenses expected for a health plan operating the program in an efficient and effective manner. The underwriting gain component of the load includes consideration for the cost of capital and a risk margin.

Add an Amount for Taxes/Assessments — The final capitation rate, after all other components have been completed, is further adjusted to reflect legislatively mandated taxes/assessments as applicable. These taxes/fees can be applied as a percent of final premium or a PMPM adjustment added to the original final capitation rate. The Department will adjust the payment to the CHC-MCOs for the Medicaid portion of the MCO assessment cost based upon changes to the assessment fee in accordance with Act 92 of 2015 and any amendments thereto.

II. **Rate Setting Methodology #2 – Use of Managed Care Data**

To develop capitation rates on an actuarially sound basis for the CHC program using actual CHC program-specific managed care data, the following general steps are performed:

- Summarize, Analyze, and Adjust the Managed Care Data
- Project the Managed Care Base Data Forward
- Include the Effect of Program/Policy Changes
- Add an Appropriate Administration/Underwriting Gain Load
- Add an Amount for Taxes/Assessments
- Optional Rate Update

Summarize, Analyze, and Adjust the Managed Care Data — The Department collects data from each of the managed care organizations (MCOs) participating in the CHC program. This data is summarized, analyzed, and adjustments (positive and negative) are applied as needed to account for underlying differences between each MCO's management of the program. These adjustments can account for items such as collection of TPL/COB, over- or under- reserving of unpaid claims, management efficiency, and Provider contracting relations. After adjusting each MCO's data, each plan's specific service claim costs are aggregated together to arrive at a set of base data for each population group.

Project the Managed Care Base Data Forward — The aggregate base of managed care data is projected forward to the time period for which the capitation rates are to be paid. Trend factors are used to estimate the future costs of the services that the covered population would generate in the managed care program. These trend factors normally vary by service and/or population group.

Include the Effect of Program/Policy Changes — The Commonwealth occasionally changes, or Federal statutes or regulations will impact, the services or populations covered under the CHC (e.g., expands dental care, restricts enrollment). Any new, material program/policy changes that were not already reflected in the managed care data are included in the capitation rates by either increasing or decreasing the managed care data by an appropriate adjustment.

Add an Appropriate Administration/Underwriting Gain Load — After the base data has been trended to the appropriate time period, adjusted for program/policy changes, adjusted to reflect managed care principles, and blended into one data source, an administration/underwriting gain load will be added to the service claim cost component to determine the overall capitation rates applicable to each population group. The administration/underwriting gain load may be applied as a percentage of the total capitation rate (i.e., percent of premium) and includes all reasonable and appropriate administrative expenses expected for a health plan operating the program in an efficient and effective manner. The underwriting gain component of the load includes consideration for the cost of capital and a risk margin.

Add an Amount for Taxes/Assessments — The final capitation rate, after all other components have been completed, is further adjusted to reflect legislatively mandated taxes/assessments as applicable. These taxes/fees can be applied as a percent of final premium or a PMPM adjustment added to the original final capitation rate.

Optional Rate Update — In lieu of rebasing rates on newer experience base data, it is possible to update the prior year's rates for new, material program changes, trends and other adjustments following a similar process outlined above.

III. Rate Setting Methodology #3 – Blending of Prior Year's Rates and Managed Care Data

When updated FFS data is unavailable and actual CHC managed care experience first becomes available, capitation rates for the program can be developed on an actuarially sound basis using a blending of both data sources using the following two-track approach:

- Project the Prior Year's Rates Forward (Track 1)
- Summarize and Adjust the CHC Managed Care Data (Track 2)
- Include the Effect of New Program/Policy Changes (Track 1 and Track 2)
- Apply Credibility Factors to Each Track and Blend Together
- Add an Appropriate Administration/Underwriting Gain Load

- Add an Amount for Taxes/Assessments

Project the Prior Year's Rates Forward (Track 1) — The first step of Track 1 is to begin with the previous year's capitation rates. This data is projected forward to the time period for which the new capitation rates are to be paid. Trend factors are used to estimate the future costs of the services the covered population would generate under managed care. These trend factors normally vary by service and/or population group.

Include the Effect of New Program/Policy Changes (Track 1) — In Track 1, any new, material program/policy changes implemented by the Department or required by the federal government, which were not already accounted for in the previous year's rates, are included in the new capitation rates by either increasing or decreasing the rates by an appropriate adjustment.

Summarize and Adjust the CHC Managed Care Data (Track 2) — The more recent managed care data is collected from the MCOs, summarized, and analyzed to support rate setting. Adjustments (positive and negative) are applied to the managed care data as needed to account for underlying differences between each MCO's management of the CHC program. These adjustments can account for items such as collection of TPL/COB, over- or under-reserving of unpaid claims, management efficiency, and Provider contracting relations.

Include the Effect of Trend and New Program/Policy Changes (Track 2) — In Track 2, the managed care data is projected forward to the time period the capitation rates are to be paid. Trend factors may vary by service and/or population group, and are used to estimate the future costs of the services that the covered population would generate under managed care. Any new, material program/policy changes that were not already reflected in the managed care data are included in the rates by either increasing or decreasing the data by an appropriate adjustment.

Apply Credibility Factors to Each Track and Blend Together — After separately developing capitation rates using Track 1 and Track 2, the two sets of rates are combined together. This blending involves applying a credibility weight to each track and adding the two components together. The credibility weights may vary between the population groups.

Add an Appropriate Administration/Underwriting Gain Load — After the data has been trended to the appropriate time period, adjusted for program/policy changes, adjusted to reflect managed care principles, and blended into one data source, an administration/underwriting gain load will be added to the service claim cost component to determine the overall capitation rates applicable to each population group. The administration/underwriting gain load may be applied as a percentage of the total capitation rate (i.e., percent of premium) and includes all reasonable and appropriate administrative expenses expected for a health plan operating the program in an efficient and effective manner. The underwriting gain component of the load includes consideration for the cost of capital and a risk margin.

Add an Amount for Taxes/Assessments — The final capitation rate, after all other

components have been completed, is further adjusted to reflect legislatively mandated taxes/assessments as applicable. These taxes/fees can be applied as a percent of final premium or a PMPM adjustment added to the original final capitation rate. The Department will adjust the payment to the CHC-MCOs for the Medicaid portion of the MCO assessment cost based upon changes to the assessment fee in accordance with Act 92 of 2015 and any amendments thereto.

IV. Additional Information on Rate Development

The reimbursement provided under this Agreement is intended for Medically Necessary services covered under the Commonwealth's State Plan. For NFCE individuals, the reimbursement is also intended to cover HCBS services determined necessary based on the individual's assessed need. The MCO has the option to utilize this reimbursement to provide alternatives to the Medically Necessary services covered under the State Plan in order to meet the needs of the individual Participant in the most efficient manner. However, an adjustment may be required in the rate development process to incorporate only the cost of state plan and HCBS waiver services which would have been provided in the absence of alternative services. Cost effective in lieu of services may be addressed differently than other non-cost effective in lieu of services. The CHC-MCO may be required to provide documentation, supporting analyses and data related to the provision and justification of non-state plan services.

_

APPENDIX 3e

Participant Enrollment Mix Adjustment

The Department will apply a budget-neutral Participant Enrollment Mix Adjustment (PEMA) to adjust capitation payments based on the CHC-MCO's enrollment mix of nursing facility Participants and NFCE HCBS Participants.

I. Covered Participants

The PEMA applies collectively to all Participants for which the Department has made or will make a capitation payment under one of the eligible NFCE rate cells identified in Appendix 3c for the applicable rate period or rate year.

II. Timing of the PEMA Process

The PEMA will be applied once for each rate period and or rate year. Until the Department, in its sole discretion, either determines that the PEMA is no longer necessary or implements a substitute mechanism, the Department will apply the PEMA prospectively for each rate year.

III. Data and Computation

The PEMA is a budget neutral mix adjustment applied to the CHC-MCO payments for every CHC-MCO in a given zone.

The Department will adjust payment by a PEMA based on Participant location in November in the preceding calendar year. The Participant's status shall be the Participant's location in the given November.

APPENDIX 3f

Peer Group 13 Risk Pool

Overview

Starting 12 months after the Implementation Date, the Department will establish, administer and distribute funds from three quarterly Peer Group 13 Risk Pools per zone for costs associated with Peer Group 13 facilities.

The CHC-MCO will fund the quarterly risk pool based on Peer Group 13 Risk Pool Allocation Amounts developed annually by the Department's actuary. To determine the CHC-MCO-specific quarterly distributions based on the Peer Group 13 facility service costs, the Department will utilize encounter data, unless it notifies the CHC-MCO that it will utilize files submitted by the CHC-MCO with information on Participants and associated costs for Peer Group 13 facility services during the twelve-month period defined below. For each CHC zone, the Department will sum the amount spent by each CHC-MCO on Peer Group 13 facilities for the Defined Twelve-Month Period in order to determine what portion of the risk pool each CHC-MCO will receive. The Department will distribute the funds in the Peer Group 13 Risk Pool in proportion to each CHC-MCO's adjusted Peer Group 13 expenditures on all Covered Participants for the Defined Twelve-Month Period. The Department's payment to each CHC-MCO will be net of the CHC-MCO's Peer Group 13 Risk Pool Allocation Amount obligation for the quarter. If the CHC-MCO's Peer Group 13 Risk Pool Allocation Amount obligation exceeds its share of the Peer Group 13 Risk Pool, the Department will reduce a subsequent payment to the CHC-MCO by the amount of the difference.

Medicaid Eligible Group (MEG)

The Department will administer one budget-neutral risk pool per quarter per zone for each of the following groups, starting twelve months after CHC implementation in a zone:

- Nursing Facility Clinically Eligible (NFCE) Dual Eligibles (Duals)
- NFCE Non-Dual Eligibles
- Nursing Facility Ineligible (NFI) Dual Eligibles (Duals)

CHC-MCO Inclusion/exclusion in the Peer Group 13 Risk Pool

The Peer Group 13 Risk Pool threshold for Peer Group 13 facility claims is $0.00 for each of the above noted MEGs.

A CHC-MCO will participate in the quarterly Peer Group 13 Risk Pool if both of the following criteria are met:

- The Department has made or will make capitation payments to the CHC-MCO in the zone for all three months during the quarter; and
- The Department has made or will make capitation payments to the CHC-MCO for the zone for all three months of each of the four previous quarters.

If the CHC-MCO does not meet the criteria for inclusion in the quarterly Peer Group 13 Risk Pool, then:

- The CHC-MCO has no Peer Group 13 Risk Pool Allocation Amount obligation for that quarter; and
    - The CHC-MCO has no opportunity to receive a distribution from that quarterly Peer Group 13 Risk Pool; and
    - The CHC-MCO will not be required to contribute to that quarterly Peer Group 13 Risk Pool through a reduction to a subsequent payment.

The Department will determine each quarter which of the CHC-MCOs meet the criteria for inclusion in that quarter's Peer Group 13 Risk Pool.

DHS Calculation of Quarterly Funds in the Peer Group 13 Risk Pool

After each quarter has ended, the Department will determine the sum of the CHC-MCO's Peer Group 13 Risk Pool Allocation Amount obligation for the quarter, by multiplying the Peer Group 13 Risk Pool Allocation Amount by the number of member months included in the CHC-MCO during the quarter. The Department will use Participant data compiled as of one date for the purpose of determining each CHC-MCO's Peer Group 13 Risk Pool Allocation Amount obligation for the quarter. The Department will provide documentation to the CHC-MCO and will consider any issues the CHC-MCO brings to the Department's attention.

The sum of the Peer Group 13 Risk Pool Allocation Amount obligation for every CHC-MCO in the zone will be the total amount allocated to the Peer Group 13 Risk Pool for that quarter.

Covered Services

The CHC-MCO may include all claims paid by the CHC-MCO for Peer Group 13 facility services received by an enrolled Participant during the Defined Twelve-Month Period on files submitted to the Department unless the service is eligible in another risk sharing program. The Department may reprice each Peer Group 13 facility claim to the amount the Department would have paid for the same claim. The Department may elect to use CHC-MCO encounter data in lieu of Peer Group 13 Risk Pool-specific files submitted by the CHC-MCO, in whole or in part. The Department will apply the same criteria if it elects to use CHC-MCO encounter data in lieu of Peer Group 13 Risk Pool-specific files submitted by the CHC-MCOs.

For members for which a Peer Group 13 Risk Pool Allocation Amount was collected, this Arrangement covers services provided by Peer Group 13 facilities.

Defined Twelve-Month Period

The Defined Twelve-Month Period is the twelve months that ended the day before the quarter for which the Peer Group 13 Risk Pool is allocated to the quarterly risk pool.

Example: The Defined Twelve-Month Period for the Southwest zone for the January – March 2020 Peer Group 13 Risk Pool quarter is January 2019 – December 2019.

The Defined Twelve-Month Period encompasses dates of service, not the dates claims are paid.

The Defined Twelve-Month Period may include months that are covered by a different CHC-MCO agreement that applies to the same zone.

Data Source

The Department will use the Commonwealth's MMIS approved encounter data, unless the Department notifies the CHC-MCO that it will use different data. The Department will provide the run dates for extraction of encounter data to the CHC-MCO.

If the Department decides not to use encounter data, upon notification from the Department, the CHC-MCO will submit files in a format specified by the Department for the administration of the risk pool in lieu of encounter data.

For purposes of risk pool allocation, the Department will utilize information on Participants whose costs exceed the Peer Group 13 Risk Pool threshold during the Defined Twelve-Month Period, after repricing and other adjustments.

Calculation of Quarterly Distributions

The Department will utilize the Commonwealth's MMIS approved encounter data to administer the steps outlined in this Appendix and to determine the adjusted amount each CHC-MCO paid in excess of the Peer Group 13 threshold for each Participant for Covered Services provided during the Defined Twelve-Month Period. The CHC-MCO-specific sum will be the numerator in the calculation for the risk pool distribution. The denominator will be the applicable sum for all CHC-MCOs in the CHC zone. The resulting percentage figure will be multiplied by the amount in the risk pool. The CHC-MCO's uncollected Peer Group 13 Risk Pool Allocation Amount obligation for the quarter will be subtracted from this amount. If the result is a positive number, the Department will pay the amount to the CHC-MCO. If the result is a negative number, the Department will reduce a subsequent payment to the CHC-MCO by this amount.

Early Payment of a CHC-MCO's Peer Group 13 Risk Pool Allocation Amount Obligation

If the Department notifies the CHC-MCO of termination of this Agreement; or if the CHC-MCO notifies the Department of termination of this CHC Agreement; or if this Agreement expires within four months; or if an CHC-MCO fails to submit a required report or file to support the administration of a risk pool or risk-sharing arrangement within fifteen work days of the final due date:

- The Department may elect to reduce a subsequent monthly capitation payment by the total amount of the outstanding Peer Group 13 Risk Pool Allocation Amount obligation for current and previous program months; and
- The Department may reduce each subsequent monthly capitation payment by the CHC-MCO's Peer Group 13 Risk Pool Allocation Amount obligation for the same month.

APPENDIX 3g

COVID-19 VACCINE NON-RISK ARRANGEMENT

This appendix establishes a non-risk arrangement for the coverage and administration of COVID-19 vaccines, in accordance with 42 CFR 447.362. COVID-19 vaccines are the financial responsibility of the CHC-MCO during the January 1, 2024 to December 31, 2024 Calendar Year (CY 2024, hereinafter known as the Arrangement Year).

For the Arrangement Year, the following terms shall apply:

I. Covered Population

Any Participant that is eligible to receive a COVID-19 vaccine and is enrolled with the CHC-MCO during the Arrangement Year is potentially eligible for this Arrangement. To be included in this Arrangement, a Participant must have received a covered COVID-19 vaccine during the Arrangement Year.

II. Covered Services

Covered Services for this Arrangement will include any COVID-19 vaccine, as well as the associated cost to administer the vaccine, that ultimately becomes the financial responsibility of the CHC-MCO during the Arrangement Year. Only vaccines to specifically address COVID-19 will be included. To be eligible for this Arrangement, COVID-19 vaccines must be included on the MA Fee-for-Service Fee Schedule (hereinafter, Fee Schedule). The Fee Schedule is subject to change. Any changes to the Fee Schedule will be applicable to the terms of this Arrangement as of the effective date of those changes. The Non-Risk Arrangement only applies to Covered Services with dates of service during the Arrangement Year.

III. Quarterly Payment Process

There will be quarterly payments. Each payment will include covered services paid by the CHC-MCO for dates of service beginning with the start date of the Non-Risk Arrangement and limited to not more than eighteen (18) months prior to the end of the payment quarter. The payment for each covered service will be the lesser of the amount paid by the CHC-MCO or the MA Allowed Amount. Each payment will exclude any claim that was included in a prior quarter's payment. The Department will provide the CHC-MCO with the payment amount, and documentation not later than the last workday of the fourth month after the end of the quarter. The Department will utilize the Department's MMIS approved encounter data for the purpose of calculating payments for this Non-Risk Arrangement at least seventy-five (75) days after the last day in the quarter.

If the CHC-MCO does not operate a Community HealthChoices program in a zone under this Agreement throughout the complete quarter, then the payment quarter consists of the portion of the quarter in which the CHC-MCO operates the program under this Agreement.

IV. CMS Requirements

This Arrangement shall comply with all applicable CMS requirements and regulations pertaining to non-risk arrangements, and is subject to the CMS regulations for payments under non-risk managed care contracts at 42 CFR 447.362. Payments to the CHC-MCO are contingent upon CMS approval and participation of federal matching funds. The CHC-MCO agrees to provide DHS any supporting information or data that may be required to respond to CMS questions about this Arrangement. The CHC-MCO agrees to perform under the terms of this Appendix beginning on the effective date of this Appendix pending CMS approval. In the event that CMS rejects this Appendix, the parties shall work in good faith to propose an alternate arrangement to CMS within twenty (20) business days of notification of rejection by CMS. In the event that the parties fail to negotiate an acceptable proposed alternative within the twenty-day period specified herein, or in the event that CMS does not accept the alternative jointly submitted by the Parties pursuant to this paragraph, all obligations under this Appendix are immediately terminated without further recourse from either party. No payment obligation under this Arrangement shall arise prior to CMS approval of this Appendix.

Appendix 4

Community HealthChoices Revenue Sharing

This Appendix establishes a requirement for remittance to the Department of any Realized Revenue, as defined in this Appendix, earned by a CHC-MCO in excess of 3 percent.

The reporting requirements apply collectively to all Community HealthChoices (CHC) zone(s) in which the CHC-MCO operates under this Agreement or a previous Agreement with the Department during the applicable time period. This requirement is specific to the CHC program only and does not include revenue from any other MA managed care program in which the CHC -MCO may operate.

I. Time Period

The time period for purposes of reporting CHC program revenue aligns with the Department's CHC program year and the CHC program rating period. The applicable Time Period included in this Appendix will be CHC program year CY2024.

II. Extent of Calculation

Revenue sharing calculations will be based on CHC revenue and corresponding costs for all Rate Cells for each rating region and zone as identified in Appendix 3c. The CHC-MCO may not include revenue or costs that are not specific to the CHC program.

III. Calculation Process

The revenue sharing calculation will utilize information reported in each applicable annual Medical Loss Ratio Report (Annual Financial Report) for the Time Period. The Department will utilize the Department reviewed and approved Annual Financial Report for each applicable program year within the Time Period and will combine the reported amounts in each referenced section on the Annual Financial Report for each Aggregated Medicaid Eligibility Group for the applicable Time Period.

The following items reference Sections within the Annual Financial Report:

a. **Capitation Revenue** will be based on "Total Premium Revenue" as reported in Section 4 as follows:

   i. Capitation revenue will not include CHC-MCO quality incentive payments, such as any received CHC-MCO Nursing Facility Quality Incentive Program funds, as detailed in Exhibit DD(2), or any future Pay-for-Performance initiatives.
   ii. The MCO Assessment will be deducted from Capitation Revenue.
   iii. Applicable Federal and Pennsylvania State taxes will be deducted from Capitation Revenue.

iv. If the CHC-MCO paid a MLR Remittance amount to the Department as calculated on the Annual Financial Report, the MLR Remittance amount paid by the CHC-MCO will be deducted from the Capitation Revenue.

b. **Medical Expenses** will include paid claims and alternative method payments made by the CHC-MCO for allowable covered services rendered to Participants during the Time Period. Medical Expenses will be based on "Total Incurred Claims" as reported in Section 1. The Department may review a portion of or all of the reported Medical Expenses and may exclude Medical Expenses that do not constitute payment for State Plan services and/or allowed in lieu of services, including but not limited to:

    i. Any allowance for Unpaid Claim Liability (UCL). The Department has full discretion to modify UCL allowances that, in the professional judgment of the Department's Actuary, overstate projected liabilities; and
    ii. Payments to Related Parties.

c. **Activities that improve health care quality** are reported in Section 2 and will be considered in the revenue sharing calculation in a manner consistent with the Medical Loss Ratio calculation in Appendix 3b, as long as they meet one or more of the following criteria:

    i. CHC-MCO activity that meets requirements of 45 CFR § 158.150(b) and is not excluded under 45 CFR § 158.150(c).
    ii. CHC-MCO activity related to any External Quality Review related activity as described in 45 CFR § 438.358(b) and (c).
    iii. CHC-MCO expenditure that is related to Health Information Technology and meaningful use, under 45 CFR § 158.151.

d. **Administrative Expenses** will include those administrative expenses as reported in Section 6 and determined by the Department to be an allowable program expense.
    i. The Department will review all payments to parent companies and reserves the right to limit consideration for these payments in the profit calculation.
    ii. The Department reserves the right to limit total Administrative Expenses to an amount based on assumptions used in the capitation rate development process for this Agreement Period**.**

e. **Taxes and assessments** imposed on the CHC-MCO pursuant to law are to be included in Section 5.

f. **Prohibited Expenses** – the following expenses will not be included as expenses under this Appendix:
    i. Outreach activities as described in Section V.O.3 of this Agreement
    ii. Payments described in Section VII.E.14: Prohibited Payments of this Agreement

iii. Claims payments covered under a non-risk arrangement(s) included in this CHC Agreement
iv. Premium Deficiency Reserves
v. Cost of advertisements in mass media
vi. Start-up, development or RFA expenses incurred before the Start Date on which the CHC-MCO is responsible for the provision of services to Participants
vii. Any expense related to exiting or terminating operations in a given zone/region under this Agreement
viii. Donations
ix. Excessive allocation of corporate overhead, as determined by the Department (see also item IV.d.i).

g. **Percent Limit** will be the maximum retained percentage of certain CHC revenue, which is 3 percent.

h. **Maximum Retained Revenue**, or the amount of revenue that may be retained by the CHC-MCO, will be calculated by multiplying Capitation Revenue by the Percent Limit.

i. **Realized Revenue -** the Department will calculate the Realized Revenue for the Time Period as follows:

	Capitation Revenue
LESS:	Medical Expenses
LESS:	Expenses for Activities that improve health care quality
LESS:	Administrative Expenses
EQUALS:	Realized Revenue

j. **Revenue Recovery Amount -** If the Realized Revenue is greater than the Maximum Retained Revenue, the Revenue Recovery Amount will be the difference between the Realized Revenue and Maximum Retained Revenue. If this amount is greater than zero (0), then the Revenue Recovery Amount is an obligation due from the CHC-MCO to the Department. The Department will recover this obligation due from the CHC-MCO by offsetting a future payment due to the CHC-MCO under this Agreement. The Department will notify the CHC -MCO of the future payment that will be offset in advance of that scheduled payment.

k. **Retention of Excess Revenue –** The CHC-MCO may retain fifty percent (50%) of the Realized Revenue in excess of the Maximum Retained Revenue with express written approval from the Department if the CHC-MCO agrees to expend the remaining fifty percent (50%) of funds in excess of the Maximum Retained Revenue on initiatives that align with the Department's goals of improving access and provider retention; investments in social determinants of health such as housing, employment and food

insecurity; achieving health equity; and programs that focus on community development.

i. A CHC-MCO shall submit to the Department a written expenditure proposal for any funds in excess of the Maximum Retained Revenue.

ii. This proposal shall be submitted within thirty (30) days of receiving the preliminary calculation per Section V, below.

iii. After the Department accepts the CHC-MCO's proposal, the Department will decrease the Revenue Recovery Amount to zero (0).

IV. Risk of Insolvency

If the CHC-MCO decides not to invest excess revenue as described in Section III.k of this Appendix, and the Department determines that payment of a Revenue Recovery Amount by the CHC-MCO would result in the CHC-MCO being put at significant risk of insolvency, the Department may at the Department's discretion, waive all or a portion of the Revenue Recovery Amount owed by the CHC-MCO.

V. Communication and Timing of Revenue Sharing Administration

The Department will notify each CHC-MCO of the preliminary revenue sharing calculation and associated Revenue Recovery Amount within ninety (90) days following the date the Department completes the review and approves the Annual Financial Report for CY2024. The CHC-MCO will have thirty (30) days from the notification date to provide additional documentation or supplemental information to the Department regarding the calculation, including the reported amounts in the Annual Financial Report. The Department will have up to sixty (60) days to review the additional documentation and supplemental information submitted by the CHC-MCO and to finalize the Revenue Recovery Amount calculation. If the Revenue Recovery Amount is greater than zero (0), the Department will recover this amount per Section IV of this Appendix.

VI. Final Revenue Sharing Notification and Remittance

The Department will provide the CHC-MCO with written notification of the final Revenue Recovery Amount and the date when the amount due to the Department will be recovered, if applicable.

VII. Documentation of CHC-MCO Expenses

At the request of the Department, the CHC-MCO shall make available all books, accounts, documents, files and information that relate to the CHC-MCO's transactions within ten (10) business days after the request was made. The CHC-MCO shall cooperate with the Department and any representatives of the Department.

VIII. Continuation

If CMS issues regulation(s) that revises or replaces the requirements in this appendix, the revised or replacement requirements will apply. The Department at its discretion may choose to waive any or all requirements of this Appendix. If the requirements of this Appendix are waived in full or in part, the Department will notify the CHC-MCO in writing of the waived Sections.

Appendix 5

In Lieu of Services (ILOS)

ILOS Definition. ILOS is a cost-effective, medically necessary service or setting that is offered to a Participant as a substitute for a State Plan service or setting in accordance with 42 CFR § 438.3(e)(2) and all future regulations and sub-regulatory federal guidance. All ILOS must be allowable under Medicaid State Plan or Section 1915(c) waiver rules and approved by the Department in advance.

Compliance With Federal Requirements. ILOSs must not violate any applicable federal requirements, including 42 CFR § 438.3(e)(2), general prohibitions on payment for room and board costs under Title XIX of the Social Security Act, the Americans with Disabilities Act, Section 504 of the Rehabilitation Act, and the Emergency Medical Treatment and Labor Act.

Department Approved ILOS. The services or settings listed below are determined by the Department to be a medically appropriate and cost-effective substitute for the named covered services or settings under the State Plan for the following clinically defined target populations. The CHC-MCO may provide ILOS only from this approved list to Participants during the contract year.

Pursuant to 42 CFR 438.3, CHC-MCOs may not provide ILOS without first applying to the Department and obtaining approval to offer the ILOS by demonstrating all requirements will be met. If the CHC-MCO identifies a potential ILOS that they would like to offer during a future contract period, the CHC-MCO must follow the process described in the ILOS development guidelines and request form documents as detailed in the In Lieu of Services Operations Memorandum.

ILOS Name	ILOS Definition	Substituted State Plan Service or Setting	Procedure Code(s) (e.g., HCPCS or CPT) That Identify ILOS	Clinically Defined Target Population(s)
Assisted Living	A group living situation, licensed under 55 PA Code Chapter 2800, for NFCE members that provides food, shelter, assistance with personal care and activities of daily living, health assessment and monitoring, and assistance or supervision of supplemental health care services.	Nursing Facility Services	T2030 and T2031	NFCE individuals in a nursing facility who are interested in transition to a less restrictive setting or individuals at risk of nursing facility placement who are interested in diversion from placement in a Nursing Facility.

ILOS Name	ILOS Definition	Substituted State Plan Service or Setting	Procedure Code(s) (e.g., HCPCS or CPT) That Identify ILOS	Clinically Defined Target Population(s)

Encounter Data. The CHC-MCO must utilize identified codes to submit encounter data on ILOS.

Clinical Determination of Appropriateness. For each approved ILOS, the Department determined a clinically defined target population as individuals who are medically appropriate for the ILOS and for whom the use of the ILOS is likely to result in lower costs than utilization of the substituted State Plan service and setting.

For a Participant to receive an ILOS, a determination of medical appropriateness must be made by the CHC-MCO using their professional judgement and assessing the Participant's presenting medical condition, preferred course of treatment, and current or past medical treatment. Prior to offering the ILOS, the CHC-MCO must develop a policy and procedure for determining whether an ILOS is medically necessary and the individual meets the targeted population to receive an ILOS and submit to the Department for review and approval.

The CHC-MCO shall document the determination of medical appropriateness within the Participant's records, which could include the Participant's PCSP, medical record (paper or electronic), or another record that details the Participant's level of care. The documentation must include how each ILOS is expected to address the Participant's needs. The Department must approve the CHC-MCO's documentation process before the CHC-MCO elects to provide the ILOS.

CHC-MCO Responsibilities:

1. **ILOS Option for the CHC-MCO.** The CHC-MCO is not required to offer an ILOS to Participants.
2. **Public Disclosure of ILOS Provided.** The CHC-MCO shall include in its Participant handbook the protections available to participants who receive ILOS, including a description of the process to determine eligibility for specific ILOS, the voluntary nature of ILOS, and the right to file a Complaint, Grievance or Fair Hearing with regards to the denial or receipt of an ILOS.
3. **Calculation of Cost of ILOS.** CHC-MCO shall supply any information needed by the Department to assist in calculating cost projections for approved or potential ILOS, including but not limited to, specific claims, cost information, encounter data, and other Participant data that will assist the Department in meeting and current or future CMS documentation requirements. The CHC-MCO will also comply with any standards detailed in the Community HealthChoices Financial Reporting Requirements documenting ILOS expenditures.

4. **Provision of ILOS Encounter Data to the Department.** Encounter data must be submitted to the Department by the CHC-MCO in accordance with Section VIII.A.1 for ILOS and, when available, include data necessary for the State to stratify ILOS utilization by sex (including sexual orientation and gender identity), race, ethnicity, disability status, and language spoken to inform health equity initiatives and efforts to mitigate health disparities.

   To the extent that existing health care codes do not accurately identify ILOS, the Department will provide specific codes and modifiers that the CHC-MCO shall use to ensure consistent use.

5. **Operations and Quality Reporting Requirements.** The CHC-MCO is required to comply with Operations and Quality Management Reporting requirements as specified in Section VIII:D.1 to enable the Department to monitor the CHC-MCO's in-lieu of program.

Participant Rights

1. **ILOS Option for Participants.** The CHC-MCO shall not require Participants to use an ILOS as a substitute for a State Plan Service.

2. **Participant Rights and Protections.** When receiving an ILOS, Participants retain all of the rights afforded to them in 42 CFR Part 438, including, for example, the right to make informed decisions about their health care and to receive information on available treatment options and alternatives per 42 CFR § 438.100(b)(2). In accordance with 42 CFR § 438.3(e)(2)(ii), the CHC-MCO shall not require Participants to utilize ILOS or from mandating replacement of a State Plan Service for an ILOS. ILOS may not be used to reduce, discourage, or jeopardize Participants'' access to covered State Plan Services or Settings. If a Participant chooses not to receive an ILOS, they always retain their right to receive the covered State Plan Service or Setting on the same terms as would apply if an ILOS were not an option. The CHC-MCO is not permitted to deny a Participant a medically appropriate State Plan Service or Setting on the basis that a Participant has been offered an ILOS, is currently receiving an ILOS, or has received an ILOS in the past.

   In accordance with 42 CFR § 438.10(g)(2)(ix), all of the CHC-MCO's Participant handbooks must contain information on Participant rights and responsibilities, including the Complaint, Grievance, and fair hearings requirements outlined in Exhibit G. Regardless of a Participant's 's utilization of an ILOS, the Participant retains all rights and privileges under Exhibit G. The Department will review and approve the ILOS language included in the Participant handbooks annually.

Oversight

Performance Monitoring The Department will include any ILOSs the CHC-MCO elects to provide in the overall quality monitoring structure detailed in Exhibit F- Quality Management and Utilization Management Program Requirements, to ensure that all ILOS received by Participants are medically appropriate, cost effective, and used at the option of the Participant and CHC-MCO.

Utilization and Cost The utilization and actual cost of ILOSs shall be taken into account in developing the component of the capitation rates that represents the covered State Plan services, unless a federal statute or regulation explicitly requires otherwise.

Network Adequacy The CHC-MCO must develop and maintain a network of ILOS providers that have the capacity and capability to deliver medically appropriate and cost effective ILOSs selected by the Participant.

Discontinuation of ILOS by the CHC-MCO The CHC-MCO may discontinue offering an approved ILOS with notice to the Department at least 60 calendar days prior to the discontinuation date. The CHC-MCO must ensure that any ILOS that were authorized for a Participant prior to the discontinuation of that specific ILOS are not disrupted by a change in ILOS offerings, either by completing the authorized service or by seamlessly transitioning the Participant into other medically necessary services or programs that meet the Participant's needs. The CHC-MCO's transition plan must be provided to the Department as part of the ILOS discontinuation process. The transition plan must identify the total number of Participants utilizing the ILOS through the discontinuation date and the alternative services that will be offered (either State Plan services or other approved ILOS). The CHC-MCO must not offer the ILOS after the date of discontinuation.

At least 45 calendar days before discontinuing an ILOS, the CHC-MCO must notify Participants affected by the discontinuation of the ILOS of the following:

- The discontinuance of the ILOS and the last date the Participant can receive the ILOS, and
- How the CHC-MCO will ensure that the Participant will receive the ILOS as authorized or the plan to transition the Participant to other comparable medically necessary services.

Discontinuation of ILOS by the Department In the event the Department or CMS determines an ILOS not to be medically appropriate or cost effective, the CHC-MCO will assist the Department in preparing a transition plan to phase out the applicable ILOS while ensuring access for affected Participants to contractually required services with minimal disruption of care. The transition plan will include a process to notify Participants of the termination of the ILOS that they are currently receiving as expeditiously as required by the Participants' health condition. If the Department discontinues an ILOS, the Department will amend the Agreement to remove the applicable ILOS.

EXHIBIT A

COVERED SERVICES LIST

In the event that a conflict arises between this Agreement and the content of the CHC Waivers approved by CMS, the CHC waivers shall take precedence.

CHC Covered Physical Health Services	
Category	**Category**
Inpatient Hospital Services	**Clinic Services**
Inpatient Acute Hospital	Independent Clinic
Inpatient Rehab Hospital	Maternity – Physician, Certified Nurse Midwives, Birth Centers
Outpatient Hospital Clinic	Renal Dialysis Services
Outpatient Hospital Clinic	Ambulatory Surgical Center (ASC) Services
Outpatient Hospital Short Procedure Unit	**Dental Services**
Federally Qualified Health Center / Rural Health Clinic	**Physical Therapy, Occupational Therapy, and Services for Individuals with Speech, Hearing, and Language Disorders**
Other Laboratory and X-ray Service	**Prescribed Drugs, Dentures, and Prosthetic Devices; and eyeglasses prescribed by a physician skilled in diseases of the eye or by an optometrist**
Laboratory	Prescribed Drugs
Radiology (For example: X- rays, MRIs, CTs)	Dentures
Nursing Facility Services	Prosthetic Devices
	Eyeglasses
Family Planning Clinic Services, and Supplies	**Diagnostic, Screening, Preventive, and Rehabilitative Services**
Physician Services	Tobacco Cessation
Primary Care Provider	Therapy (Physical, Occupational, Speech) - Rehabilitative
Physician Services and Medical and Surgical Services provided by a Dentist	**Certified Registered Nurse Practitioner Services**

Medical care and any other type of remedial care	Any other medical care and any other type of remedial care recognized under state law, specified by the Secretary
Podiatrist Services	Ambulance Transportation
Optometrist Services	Non-Emergency Medical Transport
Chiropractor Services	Emergency Room
Home Health Services	Hospice Care
Home Healthcare Including Nursing, Aide and Therapy	Limited Abortions*
Medical Supplies	
Durable Medical Equipment Including home accessibility durable medical equipment	
Therapy (Physical, Occupational, Speech)	Definitions for Physical Health Services may be found in the Pennsylvania Medicaid State Plan at: http://www.dhs.state.pa.us/publications/medicaidstateplan/
Personal Protective Equipment (PPE)	

CHC LTSS Benefits
Nursing Facility Services
Nursing Facility Services are professionally supervised nursing care and related medical and other health services furnished by a healthcare facility licensed by the Pennsylvania Department of Health as a long-term care nursing facility under Chapter 8 of the Healthcare Facilities Act (35 P.S. §§ 448.801-448.821) and certified as a nursing facility provider in the MA Program (other than a facility owned or operated by the Federal or State government or agency thereof). Nursing facility services include services that are skilled nursing and rehabilitation services under the Medicare Program and health-related care and services that may not be as inherently complex as skilled nursing or rehabilitation services but which are needed and provided on a regular basis in the context of a planned program or healthcare and management. A Participant must be NFCE to receive nursing facility services under the CHC Program. Nursing Facility Services includes at least the items and services specified in 42 CFR 483.10(f)(11)(i). Nursing facility services are covered as defined in 55 Pa. Code § 1187.51.
Exceptional DME for CHC Participants Residing in a Nursing Facility.
Home and Community-Based Services

Adult Daily Living	
Assistive Technology	Occupational Therapy
Behavior Therapy	Participant-Directed Community Supports
Benefits Counseling	Participant-Directed Goods and Services
Career Assessment	Personal Assistance Services
Cognitive Rehabilitation	
Community Integration	Personal Emergency Response System
Community Transition Services	Pest Eradication
Counseling	Physical Therapy
Employment Skills Development	Residential Habilitation
	Respite
Financial Management Services	Specialized Medical Equipment and Supplies
Home Adaptations	Speech and Language Therapy
Home Delivered Meals	Structured Day Habilitation
Home Health Aide	Telecare
Job Coaching	Vehicle Modifications
Job Finding	
Nursing	
Non-Medical Transportation	
Nutritional Consultation	

*Some services are included on the CHC Covered Physical Health Services list and the CHC LTSS Benefits list. The CHC LTSS Benefits are available only after the Participant's State Plan, Medicare or private insurance limitations have been reached, or the service is not covered under the State Plan, Medicare or private insurance.

Definitions for the LTSS listed above can be found in the 1915(c) Home and Community Based Services Waiver, and may be amended from time to time, found at: https://www.dhs.pa.gov/HealthChoices/HC-Services/Pages/CHC-Supporting-Documents.aspx

***An Abortion is a Covered Service only when a physician has found, and certified in writing to the Medicaid agency that, on the basis of that physician's professional judgment, the life of the mother would be endangered if the fetus were carried to term (which is in accordance with 42 CFR 441.202).**

EXHIBIT B

STANDARD TERMS AND CONDITIONS

1. TERM

The term of this Agreement shall commence on the effective date and shall end on the expiration date identified in the Agreement, subject to the other provisions of the Agreement. The Agreement shall not be a legally binding Agreement until fully executed by the CHC-MCO and by the Commonwealth and all approvals required by Commonwealth and federal procurement procedures have been obtained. No agency employee has the authority to verbally direct the commencement of any work under this Agreement. The Commonwealth may, upon notice to the CHC-MCO, extend the term of the Agreement for up to three (3) months upon the same terms and conditions, which will be utilized to prevent a lapse in Agreement coverage and only for the time necessary, up to three (3) months, to enter into a new Agreement.

2. PARTY RELATIONSHIP

In performing the services required by the Agreement, the CHC-MCO will act as an independent contractor and not as an employee or agent of the Commonwealth.

3. Reserved.

4. ENVIRONMENTAL PROVISIONS

In the performance of the Agreement, the CHC-MCO shall minimize pollution and shall strictly comply with all applicable environmental statutes and regulations.

5. Reserved.

6. COMPENSATION/EXPENSES

The CHC-MCO shall be required to perform the specified services at the prices provided for in the Agreement. All services shall be performed within the time periods specified in the Agreement. The CHC-MCO shall be compensated only for work performed to the satisfaction of the Commonwealth. The CHC-MCO shall not be paid travel or per diem expenses.

7. Reserved.

8. OFFSET

The Commonwealth may set off the amount of any state tax liability or other obligation of the CHC-MCO, or its subsidiaries, owed to the Commonwealth against any payments due the CHC-MCO under any Agreement between the Commonwealth and CHC-MCO.

9. TAXES

The Commonwealth is exempt from all excise taxes imposed by the Internal Revenue Service and has accordingly registered with the Internal Revenue Service to make tax-free

purchases under Registration No. 23740001-K. With the exception of purchases of the following items, no exemption certificates are required and none will be issued: undyed diesel fuel, tires, trucks, gas guzzler emergency vehicles, and sports fishing equipment. The Commonwealth is also exempt from Pennsylvania state sales tax, local sales tax, public transportation assistance taxes and fees and vehicle rental tax. The Department of Revenue regulations provide that exemption certificates are not required for sales made to governmental entities and none will be issued. Nothing in this paragraph is meant to exempt a construction Contractor from the payment of any of these taxes or fees which are required to be paid with respect to the purchase, use, rental, or lease of tangible personal property or taxable services used or transferred in connection with the performance of a construction Contract.

10. WARRANTY

The CHC-MCO warrants that all services performed by the CHC-MCO, its employees, representatives, agents and subcontractors shall be performed in a professional and workmanlike manner and in accordance with prevailing professional and industry standards. Unless otherwise stated in this Agreement, all services are warranted for a period of one (1) year following completion of performance by the CHC-MCO and acceptance by the Commonwealth. The CHC-MCO shall correct any problem with the service without any additional cost to the Commonwealth.

11. PATENT, COPYRIGHT, AND TRADEMARK INDEMNITY

The CHC-MCO warrants that it is the sole owner or author of, or has entered into a suitable legal agreement concerning either: a) the design of any product or process provided or used in the performance of the Agreement which is covered by a patent, copyright, or trademark registration or other right duly authorized by Federal or State law, or b) any copyrighted matter in any report document or other material provided to the Commonwealth. The CHC-MCO shall defend any suit or proceeding brought against the Commonwealth on account of any alleged patent, copyright or trademark infringement in the United States of any of the products provided or used in the performance of the Agreement. This is upon condition that the Commonwealth shall provide prompt notification in writing of such suit or proceeding; full right, authorization and opportunity to conduct the defense thereof; and full information and all reasonable cooperation for the defense of same. As principles of governmental or public law are involved, the Commonwealth may participate in or choose to conduct, in its sole discretion, the defense of any such action. If information and assistance are furnished by the Commonwealth at the CHC-MCO's written request, it shall be at the CHC-MCO's expense, but the responsibility for such expense shall be only that within the CHC-MCO's written authorization. The CHC-MCO shall indemnify and hold the Commonwealth harmless from all damages, costs, and expenses, including attorney's fees that the CHC-MCO or the Commonwealth may pay or incur by reason of any infringement or violation of the rights occurring to any holder of copyright, trademark, or patent interests and rights in any products provided or used in the performance of the Agreement. If any of the products provided by the CHC-MCO in such suit or proceeding are held to constitute infringement and the use is enjoined, the CHC-MCO shall, at its own expense and at its option, either procure the right to continue use of such infringement products, replace them with non-infringement equal performance products or modify them so that they are no longer infringing. If the CHC-MCO is unable to do any of the preceding, it will remove all the equipment or software which are obtained contemporaneously with the infringing product, or, at the option of the Commonwealth, only those items of

equipment or software which are held to be infringing, and to pay the Commonwealth: 1) any amounts paid by the Commonwealth towards the purchase of the product, less straight line depreciation; 2) any license fee paid by the Commonwealth for the use of any software, less an amount for the period of usage; and 3) the pro rata portion of any maintenance fee representing the time remaining in any period of maintenance paid for. The obligations of the CHC-MCO under this paragraph continue without time limit. No costs or expenses shall be incurred for the account of the CHC-MCO without its written consent.

12. OWNERSHIP RIGHTS

The Commonwealth shall have unrestricted authority to reproduce, distribute, and use any submitted report, data, or material, and any software or modifications and any associated documentation that is designed or developed and delivered to the Commonwealth as part of the performance of the Agreement.

13. ASSIGNMENT OF ANTITRUST CLAIMS

The CHC-MCO and the Commonwealth recognize that in actual economic practice, overcharges by the CHC-MCO's suppliers resulting from violations of Federal or State antitrust laws are in fact borne by the Commonwealth. As part of the consideration for the award of the Agreement, the CHC-MCO assigns to the Commonwealth all right, title and interest in and to any claims the CHC-MCO now has, or may acquire, under Federal or State antitrust laws relating to the products and services which are the subject of this Agreement.

14. INDEMNIFICATION

The CHC-MCO shall indemnify and defend the Commonwealth against all third-party claims, suits, demands, losses, damages, costs, and expenses, including without limitation, litigation expenses, attorneys' fees, and liabilities, arising out of or in connection with any activities performed by the CHC-MCO or its employees and agents pursuant to this Agreement, as determined by the Commonwealth in its sole discretion.

15. AUDIT PROVISIONS

In addition to its other audit requirements, the Commonwealth shall have the right, at reasonable times and at a site designated by the Commonwealth, to audit, review, or inspect the books, documents and records of the CHC-MCO to the extent that the books, documents and records relate to costs or pricing data for the Agreement. The CHC-MCO will maintain records which will support the prices charged and costs incurred for the Agreement. The CHC-MCO shall preserve books, documents, and records that relate to costs or pricing data for the Agreement for a period of five (5) years from date of final payment. The CHC-MCO shall give full and free access to all records to the Commonwealth and its authorized employees, agents, representatives, or designees.

16. DEFAULT

a. The Commonwealth may, subject to the provisions of Paragraph 17, Force Majeure, and in addition to its other rights under the Agreement, declare the CHC-MCO in default by written notice to the CHC-MCO, and terminate as provided in Paragraph 18, Termination Provisions, the whole or any part of this Agreement for any of the following reasons:

1) Failure to begin services within the time specified in the Agreement

or as otherwise specified;

2) Failure to perform the services with sufficient labor, equipment, or material to ensure the completion of the specified work in accordance with the Agreement terms;
3) Unsatisfactory performance of services;
4) Discontinuance of services without approval;
5) Failure to resume services, which has been discontinued, within a reasonable time after notice to do so;
6) Insolvency or bankruptcy;
7) Assignment made for the benefit of creditors;
8) Failure or refusal within ten (10) days after written notice, to make payment or show cause why payment should not be made, of any amounts due for materials furnished, labor supplied or performed, for equipment rentals, or for utility services rendered;
9) Failure to protect, to repair, or to make good any damage or injury to property;
10) Theft, fraud, waste, or abuse involving the Commonwealth or the federal government;
11) An adverse material change in circumstances as describe in Section IX of the Agreement;
12) Notification by PID or DOH that the CHC-MCO's authority to operate has been suspended, limited or revoked or has expired and will not be renewed;
13) Failure to obtain NCQA certification; or
14) Breach of any provision of the Agreement.

b. In the event that the Commonwealth terminates this Agreement in whole or in part, the Commonwealth may procure, upon such terms and in such manner as it determines, services similar or identical to those so terminated, and the CHC-MCO shall be liable to the Commonwealth for any reasonable excess costs for such similar or identical services included within the terminated part of the Agreement.

c. If the Agreement is terminated, the Commonwealth, in addition to any other rights provided in this paragraph, may require the CHC-MCO to transfer title and deliver immediately to the Commonwealth in the manner and to the extent directed by the Department, such partially completed work, including, where applicable, reports, working papers and other documentation, as the CHC-MCO has specifically produced or specifically acquired for the performance of such part of the Agreement as has been terminated. Except as provided below, payment for completed work accepted by the Commonwealth shall be at the Agreement price. Except as provided below, payment for partially completed work including, where applicable, reports and working papers, delivered to and accepted by the Commonwealth shall be in an amount agreed upon by the CHC-MCO and the Department. The Commonwealth may withhold from amounts otherwise due the CHC-MCO for such completed or partially completed works such sum as the Department determines to be necessary to protect the Commonwealth against loss.

d. The rights and remedies of the Commonwealth provided in this paragraph are not exclusive and are in addition to any other rights and remedies provided by

law or under the Agreement.

17. FORCE MAJEURE

Neither party will incur any liability to the other if its performance of any obligation under this Agreement is prevented or delayed by causes beyond its control and without the fault or negligence of either party. Causes beyond a party's control may include, but are not limited to, acts of God or war, changes in controlling statutes, regulations, orders, or the requirements of any governmental entity, severe weather conditions, civil disorders, natural disasters, fire, epidemics and quarantines, general strikes throughout the trade, and freight embargoes.

The CHC-MCO shall notify the Commonwealth orally within five (5) days and in writing within ten (10) days of the date on which the CHC-MCO becomes aware, or should have reasonably become aware, that such cause would prevent or delay its performance. Such notification shall (i) describe fully such cause(s) and its effect on performance, (ii) state whether performance under the Agreement is prevented or delayed, and (iii) if performance is delayed, state a reasonable estimate of the duration of the delay. The CHC-MCO shall have the burden of proving that such cause(s) delayed or prevented its performance despite its diligent efforts to perform and shall produce such supporting documentation as the Commonwealth may reasonably request. After receipt of such notification, the Commonwealth may elect either to cancel the Agreement or to extend the time for performance as reasonably necessary to compensate for the delay.

In the event of a declared emergency by competent governmental authorities, the Commonwealth by notice to the CHC-MCO, may suspend all or a portion of the Agreement.

18. TERMINATION PROVISIONS

a. The Commonwealth has the right to terminate the Agreement for any of the following reasons. Termination shall be effective upon written notice to the CHC-MCO and in accordance with the Agreement terms.

1) **TERMINATION FOR CONVENIENCE:** Upon one hundred twenty (120) days written notice, the Commonwealth may terminate the Agreement for its convenience if the Commonwealth determines termination to be in its best interest. The effective date of the termination will be the last day of the month in which the one hundred-twentieth (120^{th}) day fall. The CHC-MCO shall be paid for services satisfactorily completed prior to the effective date of the termination, but in no event shall the CHC-MCO be entitled to recover loss of profits.

2) **NON-APPROPRIATION:** The Commonwealth's obligation to make payments during any Commonwealth fiscal year succeeding the current fiscal year shall be subject to availability and appropriation of funds. When funds (state and/or federal) are not appropriated or otherwise made available to support continuation of performance in a subsequent fiscal year period, the Commonwealth shall have the right to terminate the Agreement. The CHC MCO shall be reimbursed for the reasonable value of any nonrecurring costs incurred but not amortized in the price of the supplies or services delivered under this Agreement. Such reimbursement shall not include loss of profit, loss of use of money, or administrative or overhead

costs. The reimbursement amount may be paid for any appropriations available for that purpose.

3) **TERMINATION FOR CAUSE:** The Commonwealth may terminate the Agreement for default under Paragraph 16, Default, or other cause as specified in the Agreement or by law, by providing written notice of default to the CHC-MCO. Except as provided in Section X.A.2 of the Agreement, the Commonwealth will provide forty-five (45) days written notice setting forth the grounds for termination and provide the CHC-MCO with forty-five (45) days or such longer time as approved by the Commonwealth in which to implement a corrective action plan and cure the deficiency. If corrective action is not implemented to the satisfaction of the Commonwealth within the approved cure period, the termination shall be effective at the expiration of the approved cure period. If it is later determined that the Commonwealth erred in terminating the Agreement for cause, then, at the Commonwealth's discretion, the Agreement shall be deemed to have been terminated for convenience under the Subparagraph 18.a.

19. Reserved.

20. ASSIGNABILITY AND SUBGRANTING

a. Subject to the terms and conditions of this Paragraph 20, this Agreement shall be binding upon the parties and their respective successors and assigns.

b. The CHC-MCO shall not subcontract with any person or entity to perform all or any part of the services to be performed without the prior written consent of the Department, which consent may be withheld at the sole and absolute discretion of the Department.

c. The CHC-MCO may not assign, in whole or in part, the Agreement or its rights, duties, obligations, or responsibilities hereunder without the prior written consent of the Department, which consent may be withheld at the sole and absolute discretion of the Department.

d. The CHC-MCO may, without the consent of the Department, assign its rights to payment to be received under the Agreement, provided that the CHC-MCO provides written notice of such assignment to the Department together with a written acknowledgement from the assignee that any such payments are subject to all of the terms and conditions of the Agreement.

e. For the purposes of this Agreement, the term "assign" shall include, but shall not be limited to, the sale, gift, assignment, pledge, or other transfer of any ownership interest in the CHC-MCO, provided, however, that the term shall not apply to the sale or other transfer of stock of a publicly traded company.

f. Any assignment consented to by the Department shall be evidenced by a written assignment Agreement executed by the CHC-MCO and its assignee in which the assignee agrees to be legally bound by all of the terms and conditions of the Agreement and to assume all duties, obligations, and responsibilities being assigned.

g. A change of name, following which the CHC-MCO's federal identification number remains unchanged, shall not be considered to be an assignment. The CHC-MCO shall give the Department written notice of any such change of name.

21. NONDISCRIMINATION/SEXUAL HARASSMENT

a. **Representations.** The CHC-MCO represents that it is presently in compliance with and will remain in compliance with all applicable federal, state, and local laws, regulations, and policies relating to nondiscrimination and sexual harassment for the term of the agreement. The CHC-MCO shall, upon request and within the time periods requested by the Commonwealth, furnish all necessary employment documents and records, including EEO-1 reports, and permit access to its books, records, and accounts by the Commonwealth for the purpose of ascertaining compliance with provisions of this Nondiscrimination/Sexual Harassment Clause.

b. **Nondiscrimination/Sexual Harassment Obligations.** The CHC-MCO shall not:

i. in any manner discriminate in the hiring of any employee(s) for the performance of the activities required under this agreement or any subgrant agreement, contract, or subcontract, by reason of race, gender, creed, color, sexual orientation, gender identity or expression, or in violation of the Pennsylvania Human Relations Act ("PHRA") and applicable federal laws, against any citizen of this Commonwealth who is qualified and available to perform the work to which the employment relates.

ii. in any manner discriminate by reason of race, gender, creed, color, sexual orientation, gender identity or expression, or in violation of the PHRA and applicable federal laws, against or intimidate any of its employees.

iii. in any manner discriminate by reason of race, gender, creed, color, sexual orientation, gender identity or expression, or in violation of the PHRA and applicable federal laws, in the provision of services under this agreement or any subgrant agreement, contract, or subcontract.

iv. in any manner discriminate by reason of race, gender, creed, color, sexual orientation, gender identity or expression, or in violation of PHRA and applicable federal laws, against any subgrantee, contractor, subcontractor, or supplier who is qualified to perform the work to which this agreement relates.

v. in any manner discriminate against employees by reason of participation in or decision to refrain from participating in labor activities protected under the Public Employee Relations Act, Pennsylvania Labor Relations Act, or National Labor Relations Act, as applicable, and to the extent determined by entities charged with the Acts' enforcement and shall comply with any provision of law establishing organizations as employees' exclusive representatives.

c. **Establishment of CHC-MCO Policy.** The CHC-MCO shall establish and

maintain a written nondiscrimination and sexual harassment policy that complies with the applicable law and these Nondiscrimination/Sexual Harassment provisions and shall inform its employees in writing of the policy. The policy must contain a provision that states that sexual harassment will not be tolerated and employees who practice it will be disciplined. For the entire period of this agreement, the CHC-MCO shall: (1) post its written nondiscrimination and sexual harassment policy or these Nondiscrimination/Sexual Harassment provisions conspicuously in easily accessible and well-lighted places customarily frequented by employees at or near where the grant activities are performed; or (2) provide electronic notice of the policy or this clause to its employees not less than annually.

d. **Notification of Violations.** The CHC-MCO's obligations pursuant to these provisions are ongoing from the effective date and through the termination date of the agreement. Accordingly, the CHC-MCO shall notify the Commonwealth if, at any time during the term of this agreement, it becomes aware of any actions or occurrences that would result in violation of these provisions.

e. **Cancellation or Termination of Agreement.** The Commonwealth may cancel or terminate this agreement and all money due or to become due under this agreement may be forfeited for a violation of the terms and conditions of these Nondiscrimination/Sexual Harassment provisions. In addition, the Department may proceed with debarment or suspension and may place the CHC-MCO in the Contractor Responsibility File.

f. **Subgrant Agreements, Contracts, and Subcontracts**. The CHC-MCO shall include these Nondiscrimination/Sexual Harassment provisions in its subgrant agreements, contracts, and subcontracts with all subgrantees, contractors, and subcontractors providing goods or services under this agreement. The incorporation of these provisions in the Department's subgrants, contracts, or subcontracts does not create privity of contract between the Commonwealth and any subgrantee, contractor, or subcontractor, and no third-party beneficiaries are created by those provisions. If the CHC-MCO becomes aware of a subgrantee's, contractor's, or subcontractor's violation of these provisions, the CHC-MCO shall use its best efforts to ensure the subgrantee's, contractor's, or subcontractor's compliance with these provisions.

22. CHC-MCO INTEGRITY

a. **Definitions.** For purposes of these CHC-MCO Integrity Provisions, the following definitions apply:

i. "Affiliate" means two or more entities where (a) a parent entity owns more than 50% of the voting stock of each of the entities; (b) a common shareholder or group of shareholders owns more than 50% of the voting stock of each of the entities; or (c) the entities have a common proprietor or general partner.

ii. "CHC-MCO" means the individual or entity, that has entered into this agreement with the Commonwealth.

iii. "CHC-MCO Related Parties" means any Affiliates of the CHC-MCO and the CHC-MCO's executive officers, Pennsylvania officers and directors, or owners of five percent or more interest in the CHC-MCO.

iv. "Financial Interest" means ownership of more than a five percent interest in any business or holding a position as an officer, director, trustee, partner, employee, or holding any position of management.

v. "Gratuity" means tendering, giving, or providing anything of more than nominal monetary value including, but not limited to, cash, travel, entertainment, gifts, meals, lodging, loans, subscriptions, advances, deposits of money, services, employment, or contracts of any kind. The exceptions set forth in the Governor's Code of Conduct, Executive Order 1980-18, as may be amended, 4 Pa. Code §7.153(b), apply.

vi. "Non-Solicitation Award Process" means a method of awarding grants based on predetermined criteria, without the solicitation of grant applications.

b. **Representations and Warranties.**

i. **CHC-MCO Representation and Warranties.** The CHC-MCO represents, to the best of its knowledge and belief, and warrants that within the last five years neither the CHC-MCO nor CHC-MCO Related Parties have:

1. been indicted or convicted of a crime involving moral turpitude or business honesty or integrity in any jurisdiction;
2. been suspended, debarred, or otherwise disqualified from entering into any contract with any governmental agency;
3. had any business license or professional license suspended or revoked;
4. had any sanction or finding of fact imposed as a result of a judicial or administrative proceeding related to fraud, extortion, bribery, bid rigging, embezzlement, misrepresentation or anti-trust; and
5. been, and are not currently, the subject of a criminal investigation by any federal, state, or local prosecuting or investigative agency or civil anti-trust investigation by any federal, state, or local prosecuting or investigative agency.

ii. **Contractor Explanation**. If the CHC-MCO cannot make the representations and warranties set forth above at the time of its submission of its grant application or if the agreement is awarded pursuant to a Non-Solicitation Award Process at the time of the execution of the agreement, the CHC-MCO shall submit a written

explanation outlining the reasons why it cannot make those representations and warranties. The Commonwealth may, based on its evaluation of the explanation provided, determine whether it is in the Commonwealth's best interest to execute the agreement.

iii. **Further Representations**. By submitting any bills, invoices, or requests for payment pursuant to the agreement, the CHC-MCO further represents that it has not violated any of these CHC-MCO Integrity Provisions during the term of the agreement.

iv. **Notice.** The CHC-MCO shall immediately notify the Commonwealth, in writing, if at any time during the term of the agreement it becomes aware of any event that would cause the Contractor's certification or explanation to change. The CHC-MCO acknowledges that the Commonwealth may, in its sole discretion, terminate the agreement for cause if it learns that any of the certifications made in these CHC-MCO Integrity Provisions are currently false or misleading due to intervening factual circumstances or were false or misleading or should have been known to be false or misleading when entering into the agreement.

c. **CHC-MCO Responsibilities.** During the term of this agreement, the CHC-MCO shall:

i. maintain the highest standards of honesty and integrity.

ii. take no action in violation of any applicable laws, regulations, or other requirements applicable to the CHC-MCO that govern Commonwealth contracting or grant administration.

iii. establish and implement a written business integrity policy that includes, at a minimum, the requirements of these CHC-MCO Integrity Provisions as they relate to the CHC-MCO's activity with the Commonwealth and Commonwealth employees and ensure that its employees comply with the policy.

iv. not accept, agree to give, offer, confer, agree to confer, or promise to confer, directly or indirectly, any gratuity or pecuniary benefit to any person, or to influence or attempt to influence any person in violation of any federal or state law, regulation, executive order, statement of policy, management directive, or bulletin applicable to the award of grants or the administration of this agreement.

v. not have a financial interest in any other subgrantee, contractor, subcontractor, or supplier providing services, labor, or material under this agreement, unless the financial interest is disclosed to the Commonwealth in writing and the Commonwealth consents to CHC-MCO's financial interest. The CHC-MCO must disclose the financial interest to the Commonwealth at the time of submission of its grant application, or if a Non-Solicitation Award Process is used, no later

than the date the CHC-MCO signs the agreement. The Commonwealth shall be deemed to have consented if the required disclosure is received and all of the required Commonwealth signatures are affixed.

vi. comply with the requirements of the Lobbying Disclosure Act (65 Pa.C.S. § 13A01 et seq.) regardless of the method of award.

vii. comply with the requirements of Section 1641 of the Pennsylvania Election Code (25 P.S. § 3260a) if this agreement was awarded pursuant to a Non-Solicitation Award Process.

viii. immediately notify the Commonwealth or the Office of the State Inspector General, in writing, when the CHC-MCO has reason to believe that any breach of ethical standards as set forth in law, the Governor's Code of Conduct, or these CHC-MCO Integrity Provisions has occurred or may occur, including, but not limited to, contact by a Commonwealth officer or employee, which, if acted upon, would violate the ethical standards.

d. **Investigations.** If a State Inspector General investigation is initiated, the CHC-MCO shall:

i. reimburse the Commonwealth for the reasonable costs of investigation incurred by the Office of the State Inspector General for investigations of the CHC-MCO's compliance with the terms of this or any other agreement between the CHC-MCO and the Commonwealth that results in the suspension or debarment of the CHC-MCO. The CHC-MCO shall not be responsible for investigative costs for investigations that do not result in the CHC-MCO's suspension or debarment.

ii. cooperate with the Office of the State Inspector General in its investigation of any alleged Commonwealth agency or employee breach of ethical standards and any alleged CHC-MCO non-compliance with these CHC-MCO Integrity Provisions and make identified CHC-MCO employees and volunteers available for interviews at reasonable times and places.

iii. upon the inquiry or request of an Inspector General, provide, or if appropriate, make promptly available for inspection or copying, any information of any type or form deemed relevant by the Office of the State Inspector General to CHC-MCO's integrity and compliance with these provisions. This information may include, but is not be limited to, the CHC-MCO's business or financial records, documents or files of any type or form that refer to or concern this agreement.

e. **Termination.** For violation of any of these CHC-MCO Integrity Provisions, the Commonwealth may terminate this agreement and any other contract with the CHC-MCO, claim liquidated damages in an amount equal to the value of anything received in breach of these CHC-MCO Integrity provisions, claim

damages for all additional costs and expenses incurred in obtaining another grantee to complete performance under this agreement, and debar and suspend the CHC-MCO from doing business with the Commonwealth. These rights and remedies are cumulative, and the use or non-use of any one does not preclude the use of all or any other. These rights and remedies are in addition to those the Commonwealth may have under law, statute, regulation, or otherwise.

f. **Subcontracts.** The CHC-MCO shall include these CHC-MCO Integrity Provisions in its subgrant agreements, contracts, and subcontracts with all subgrantees, contractors, and subcontractors providing goods or services under this agreement. The incorporation of this provision in the CHC-MCO's subgrant agreements, contracts, and subcontracts shall not create privity of contract between the Commonwealth and any subgrantee, contractor, or subcontractor, and no third-party beneficiaries are created by the inclusion of these provisions. If the CHC-MCO becomes aware of a subgrantee's, contractor's, or subcontractor's violation of these provision, the CHC-MCO shall use its best efforts to ensure their compliance with these provisions.

23. CONTRACTOR RESPONSIBILITY PROVISIONS

a. **Definition**. For the purpose of these provisions, the term "Contractor" means as any person, including, but not limited to, a bidder, offeror, loan recipient, grantee or lessor, who has furnished or performed or seeks to furnish or perform, goods, supplies, services, leased space, construction or other activity, under a contract, grant, lease, purchase order or reimbursement agreement with the Commonwealth. The term also includes a permittee, licensee, or any agency, political subdivision, instrumentality, public authority, or other public entity in the Commonwealth.

b. **Contractor Representations.**

i. The Contractor represents for itself and its subgrantees, contractors, and subcontractors required to be disclosed or approved by the Commonwealth, that as of the date of its execution of this agreement, that neither the Contractor, nor any of its subgrantees, contractors, and subcontractors, are under suspension or debarment by the Commonwealth or any governmental entity, instrumentality, or authority and, if the Contractor cannot make this representation, the Contractor shall submit, along with the agreement, a written explanation of why the certification cannot be made.

ii. The Contractor represents that, as of the date of its execution of this agreement, it has no tax liabilities or other Commonwealth obligations, or has filed a timely administrative or judicial appeal, if any liabilities or obligations exist, or is subject to a duly approved deferred payment plan if any liabilities exist.

c. **Notification.** The Contractor shall notify the Commonwealth if, at any time during the term of the agreement, it becomes delinquent in the payment of taxes, or other Commonwealth obligations, or if it or, to the best of its knowledge, any of its

subgrantees, contractors, or subcontractors are suspended or debarred by the Commonwealth, the federal government, or any other state or governmental entity. The Contractor shall provide this notification within 15 days of the date of suspension or debarment.

d. **Default.** The Contractor's failure to notify the Commonwealth of its suspension or debarment by the Commonwealth, any other state, or the federal government constitutes an event of default of the agreement with the Commonwealth.

e. **Reimbursement.** The Contractor shall reimburse the Commonwealth for the reasonable costs of investigation incurred by the Office of State Inspector General for investigations of the Contractor's compliance with the terms of this agreement or any other agreement between the Contractor and the Commonwealth that results in the suspension or debarment of the Contractor. These costs include, but are not limited to, salaries of investigators, including overtime; travel and lodging expenses; and expert witness and documentary fees. The Contractor shall not be responsible for investigative costs for investigations that do not result in the Contractor's suspension or debarment.

f. **Suspension and Debarment List.** The Contractor may obtain a current list of suspended and debarred Commonwealth contractors by visiting the eMarketplace website at http://www.emarketplace.state.pa.us and clicking the Debarment list tab.

24. AMERICANS WITH DISABILITIES ACT

a. **No Exclusion.** Pursuant to the Americans with Disabilities Act, 42 U.S. Code § 12101, et seq., no qualified individual with a disability may, on the basis of the disability, be excluded from participation in this contract or from activities provided for under this agreement.

b. **Compliance.** For all goods and services provided pursuant to this agreement, the CHC-MCO shall comply with Title II of the Americans with Disabilities Act, the "General Prohibitions Against Discrimination" set forth in 28 C. F. R. § 35.130, and all other regulations promulgated under Title II of the Americans with Disabilities Act that apply to state and local governments.

c. **Indemnification.** The CHC-MCO shall indemnify the Commonwealth against all third-party claims, suits, demands, losses, damages, costs, and expenses, including without limitation, litigation expenses, attorneys' fees, and liabilities, arising out of or in connection with the CHC-MCO's failure or its employee's or agent's failure to comply with the provisions of paragraph a, as determined by the Commonwealth in its sole discretion.

25. Reserved.

26. COVENANT AGAINST CONTINGENT FEES

The CHC-MCO warrants that no person or selling agency has been employed or retained to solicit or secure this Agreement upon an agreement or understanding for a commission, percentage, brokerage, or contingent fee, except bona fide employees or bona fide established commercial or selling agencies maintained by the CHC-MCO for the purpose

of securing business. For breach or violation of this warranty, the Commonwealth may terminate this Agreement without liability or in its discretion to deduct from the Agreement price or consideration, or otherwise recover the full amount of such commission, percentage, brokerage, or contingent fee.

27. APPLICABLE LAW AND FORUM

This Agreement is governed by and must be interpreted and enforced in accordance with the laws of the Commonwealth of Pennsylvania (without regard to any conflict of laws provisions) and the decisions of the Pennsylvania courts. The Contractor consents to the jurisdiction of any court of the Commonwealth of Pennsylvania and any federal courts in Pennsylvania and waives any claim or defense that such forum is not convenient or proper. Any Pennsylvania court or tribunal has in personam jurisdiction over the Contractor, and the Contractor consents to service of process in any manner authorized by Pennsylvania law. This provision may not be interpreted as a waiver or limitation of the Commonwealth's rights or defenses.

28. INTEGRATION

The Agreement, including all referenced documents, constitutes the entire agreement between the parties. No agent, representative, employee or officer of either the Commonwealth or the CHC-MCO has authority to make, or has made, any statement, agreement or representation, oral or written, in connection with this Agreement, which in any way can be deemed to modify, add to or detract from, or otherwise change or alter its terms and conditions. No negotiations between the parties, nor any custom or usage, shall be permitted to modify or contradict any of the terms and conditions of the Agreement. No modifications, alterations, changes, or waiver to this Agreement or any of its terms shall be valid or binding unless accomplished by a written amendment signed by both parties.

29. CHANGE ORDERS

The Commonwealth may issue change orders at any time during the term of the Agreement or any renewals or extensions thereof: 1) to increase or decrease the quantities resulting from variations between any estimated quantities in the Agreement and actual quantities; 2) to make changes to the services within the scope of the Agreement; 3) to notify the CHC-MCO that the Commonwealth is exercising any renewal or extension option; or 4) to modify the time of performance that does not alter the scope of the Agreement to extend the completion date beyond the Expiration Date of the Agreement or any renewals or extensions thereof. Any such change order shall be in writing signed by the Project Officer. The change order shall be effective as of the date appearing on the change order, unless the change order specifies a later effective date. Such increases, decreases, changes, or modifications will not invalidate the Agreement, nor, if performance security is being furnished in conjunction with the Agreement, release the security obligation. The CHC-MCO will provide the service in accordance with the change order.

30. RIGHT TO KNOW LAW

a. **Applicability**. The Pennsylvania Right-to-Know Law, 65 P.S. §§ 67.101-3104, ("RTKL") applies to this Agreement.

b. **CHC-MCO Assistance.** If the Commonwealth needs the CHC-MCO's

assistance in any matter arising out of the RTKL related to this Agreement, the Commonwealth shall notify the CHC-MCO that it requires the CHC-MCO's assistance, and the CHC-MCO shall provide to the Commonwealth:

i. access to, and copies of, any document or information in the CHC-MCO's possession (Requested Information) arising out of this Agreement that the Commonwealth reasonably believes is a public record under the RTKL, within ten calendar days after receipt of written notification; and

ii. any other assistance as the Commonwealth may reasonably request, in order to comply with the RTKL with respect to this Agreement.

c. **Trade Secret or Confidential Proprietary Information.** If the CHC-MCO considers the Requested Information to include a Trade Secret or Confidential Proprietary Information, as those terms are defined by the RTKL, or other information that the Contractor considers exempt from production under the RTKL, the CHC-MCO shall notify the Commonwealth and provide, within seven calendar days of receipt of the written notice a written statement, signed by a representative of the CHC-MCO, that explains why the requested material is exempt from public disclosure under the RTKL. If the Commonwealth determines that the Requested Information is clearly not exempt from disclosure, the CHC-MCO shall provide the Requested Information to the Commonwealth within five business days of receipt of written notice of the Commonwealth's determination.

d. **Reimbursement**

i. **Commonwealth Reimbursement.** If the CHC-MCO fails to provide the Requested Information and the Commonwealth is ordered to produce the Requested Information, the CHC-MCO shall reimburse the Commonwealth for any damages, penalties, or costs that the Commonwealth may incur as a result of the CHC-MCO's failure, including any statutory damages assessed against the Commonwealth.

ii. **Contractor Reimbursement**. The Commonwealth will reimburse the CHC-MCO for any costs that the CHC-MCO incurs as a direct result of complying with these provisions only to the extent allowed under the fee schedule established by the Office of Open Records or as otherwise provided by the RTKL.

e. **Challenges of Commonwealth Release.** The CHC-MCO may file a legal challenge to any Commonwealth decision to release a record to the public with the Office of Open Records, or in the Pennsylvania Courts, however, the CHC-MCO shall reimburse the Commonwealth for any legal expenses incurred by the Commonwealth as a result of the challenge, including any damages, penalties or costs that the Commonwealth may incur as a result of the CHC-MCO's legal challenge, regardless of the outcome.

f. **Waiver.** As between the parties, the CHC-MCO waives all rights or remedies that may be available to it as a result of the Commonwealth's disclosure of Requested Information pursuant to the RTKL.

g. **Survival.** The CHC-MCO's obligations contained in this Section survive the termination or expiration of this Agreement.

31. WORKER PROTECTION AND INVESTMENT

The CHC-MCO shall comply with all applicable Pennsylvania state labor laws and worker safety laws including, but not limited to, the following:

a. Construction Workplace Misclassification Act;
b. Employment of Minors Child Labor Act;
c. Minimum Wage Act;
d. Prevailing Wage Act;
e. Equal Pay Law;
f. Employer to Pay Employment Medical Examination Fee Act;
g. Seasonal Farm Labor Act;
h. Wage Payment and Collection Law;
i. Industrial Homework Law;
j. Construction Industry Employee Verification Act;
k. Act 102: Prohibition on Excessive Overtime in Healthcare;
l. Apprenticeship and Training Act; and
m. Inspection of Employment Records Law.

EXHIBIT B(1)

DEPARTMENT OF HUMAN SERVICES
ADDENDUM TO STANDARD CONTRACT
TERMS AND CONDITIONS

A. APPLICABILITY

This Addendum is intended to supplement the Standard Terms and Conditions. To the extent any of the terms contained herein conflict with terms contained in the Standard Contract Terms and Conditions, the terms in the Standard Contract Terms and Conditions shall take precedence. Further, it is recognized that certain terms contained herein may not be applicable to all the services which may be provided through Department contracts.

B. CONFIDENTIALITY

The parties shall not use or disclose any information about a Participant of the services to be provided under this Agreement for any purpose not connected with the parties' Agreement responsibilities except with written consent of such Participant, Participant's attorney, or Participant's parent or legal guardian.

C. INFORMATION

During the period of this Agreement, all information obtained by the CHC-MCO through work on the project will be made available to the Department immediately upon demand. If requested, the CHC-MCO shall deliver to the Department background material prepared or obtained by the CHC-MCO incident to the performance of this Agreement. Background material is defined as original work, papers, notes and drafts prepared by the CHC-MCO to support the data and conclusions in final reports, and includes completed questionnaires, materials in electronic data processing form, computer programs, other printed materials, pamphlets, maps, drawings and all data directly related to the services being rendered.

D. CERTIFICATION AND LICENSING

CHC-MCO agrees to obtain all licenses, certifications and permits from Federal, State and Local authorities permitting it to carry on its activities under this Agreement.

E. PROGRAM SERVICES

Definitions of service, eligibility of recipients of service and other limitations in this Agreement are subject to modification by amendments to Federal, State, and local statutes, regulations, and program requirements without further notice to the CHC-MCO hereunder.

F. CHILD PROTECTIVE SERVICE LAWS

In the event that the Agreement calls for services to minors, the CHC-MCO shall comply with the provisions of the Child Protective Services Law (Act of November 26, 1975, P.L. 438, No. 124; 23 P.S. §§ 6301-6384, and all regulations promulgated thereunder at 55 Pa. Code chapter 3490.

G. PRO-CHILDREN ACT OF 1994

The CHC-MCO agrees to comply with the requirements of the Pro-Children Act of 1994, as amended; Public Law 103- 277, Part C-Environment Tobacco Smoke (also known as the Pro-Children Act of 1994), which requires that smoking not be permitted in any portion of any indoor facility owned or leased or

contracted by an entity and used routinely or regularly for the provision of healthcare services, day care and education to children under the age of 18, if the services are funded by Federal programs whether directly or through State and Local governments. Federal programs include grants, cooperative agreements, loans or loan guarantees and contracts. The law does not apply to children's services provided in private residences, facilities funded solely by Medicare or Medicaid funds, and portions of facilities used for inpatient drug and alcohol treatment.

H. MEDICARE/MEDICAID REIMBURSEMENT

1. To the extent that services are furnished by contractors, subcontractors, or organizations related to the CHC-MCO and such services may in whole or in part be claimed by the Commonwealth for Medicare/Medicaid reimbursements, the CHC-MCO agrees to comply with 42 C.F.R. Part 420, including:

    a. Preservation of books, documents, and records until the expiration of four (4) years after the services are furnished under this Agreement.

    b. Full and free access to (i) the Commonwealth, (ii) the US Comptroller General, (iii) the US DHHS, and their authorized representatives.

2. The CHC-MCO's authorized representative's signature on the proposal certifies under penalty of law that the CHC-MCO has not been suspended or terminated from the Medicare or Medicaid Program and will notify the contracting DHS Facility or DHS Program Office immediately should a suspension or termination occur during the Agreement period.

I. TRAVEL AND PER DIEM EXPENSES

The CHC-MCO shall not be allowed or paid travel or per diem expenses except as provided for in CHC-MCO's Budget and included in the Agreement amount. Any reimbursement to the CHC-MCO for travel, lodging, or meals under this Agreement shall be at or below state rates as provided in Management Directive 230.10, Commonwealth Travel Policy, as may be amended, unless the CHC-MCO has higher rates which have been established by its offices or officials, and published prior to entering into this Agreement. Higher rates must be supported by a copy of the minutes or other official documents, and submitted to the Department. Documentation in support of travel and per diem expenses will be the same as required of Commonwealth employees.

J. INSURANCE

1. The CHC-MCO shall accept full responsibility for the payment of premiums for Workers' Compensation, Unemployment Compensation, Social Security, and all income tax deductions required by law for its employees who are performing services under this Agreement. As required by law, an independent contractor is responsible for Malpractice Insurance for healthcare personnel. CHC-MCO shall provide the insurance Policy Number and Provider Name, or a copy of the policy with all renewals for the entire Agreement period.

2. The CHC-MCO shall, at its expense, procure and maintain during the term of the Agreement the following types of insurance, issued by companies acceptable to the Department and authorized to conduct such business under the laws of the Commonwealth of Pennsylvania:

    a. Worker's Compensation Insurance for all of the CHC-MCO's employees and those of any subcontractor engaged in work at the site of the project as required by law.

    b. Public liability and property damage insurance to protect the Commonwealth, the CHC-MCO, and any and all subcontractors from claim for damages for personal injury (including bodily injury), sickness or disease, accidental death and damage to property, including loss of use resulting from any property damage, which may arise from the activities performed under this Agreement or the failure to perform under this Agreement whether such performance or nonperformance be by the

CHC-MCO, by any subcontractor, or by anyone directly or indirectly employed by either. The limits of such insurance shall be in an amount not less than $500,000 each person and $2,000,000 each occurrence, personal injury and property damage combined. Such policies shall be occurrence rather than claims-made policies and shall name the Commonwealth of Pennsylvania as an additional insured. The insurance shall not contain any endorsements or any other form designated to limit or restrict any action by the Commonwealth, as an additional insured, against the insurance coverage in regard to work performed for the Commonwealth.

Prior to commencement of the work under the Agreement and during the term of the Agreement, the CHC-MCO shall provide the Department with current certificates of insurance. These certificates shall contain a provision that the coverages afforded under the policies will not be cancelled or changed until at least thirty (30) days' written notice has been given to the Department.

K. PROPERTY AND SUPPLIES

1. The CHC-MCO agrees to obtain all supplies and equipment for use in the performance of this Agreement at the lowest practicable cost and to purchase by means of competitive bidding whenever required by law.

2. Title to all property furnished in-kind by the Department shall remain with the Department.

3. The CHC-MCO has title to all personal property acquired by the CHC-MCO, including purchase by lease/purchase agreement, for which the CHC-MCO is to be reimbursed under this Agreement. Upon cancellation or termination of this Agreement, disposition of such purchased personal property which has a remaining useful life shall be made in accordance with the following provisions.

    a. The CHC-MCO and the Department may agree to transfer any item of such purchased property to another contractor designated by the Department. Cost of transportation shall be borne by the CHC-MCO receiving the property and will be reimbursed by the Department. Title to all transferred property shall vest in the designated CHC-MCO. The Department will reimburse the CHC-MCO for its share, if any, of the value of the remaining life of the property in the same manner as provided under subclause b of this paragraph.

    b. If the CHC-MCO wishes to retain any items of such purchased property, depreciation tables shall be used to ascertain the value of the remaining useful life of the property. The CHC-MCO shall reimburse the Department in the amount determined from the tables.

    c. When authorized by the Department in writing, the CHC-MCO may sell the property and reimburse the Department for its share. The Department reserves the right to fix the minimum sale price it will accept.

4. All property furnished by the Department or personal property acquired by the CHC-MCO, including purchase by lease/purchase contract, for which the CHC-MCO is to be reimbursed under this Agreement shall be deemed "Department Property" for the purposes of subsection 5, 6 and 7 of this section.

5. The CHC-MCO shall maintain and administer in accordance with sound business practice a program for the maintenance, repair, protection, preservation and insurance of Department Property so as to assure its full availability and usefulness.

6. Department property shall, unless otherwise approved in writing by the Department, be used only for the performance of this Agreement.

7. In the event that the CHC-MCO is indemnified, reimbursed or otherwise compensated for any loss, destruction or damage to Department Property, it shall use the proceeds to replace, repair or renovate the property involved, or shall credit such proceeds against the cost of the work covered by the Agreement, or shall reimburse the Department, at the Department's direction.

L. DISASTERS

If, during the terms of this Agreement, the Commonwealth's premises are so damaged by flood, fire or other Acts of God as to render them unfit for use; then the Agency shall be under no liability or obligation to the CHC-MCO hereunder during the period of time there is no need for the services provided by the CHC-MCO except to render compensation which the CHC-MCO was entitled to under this Agreement prior to such damage.

M. SUSPENSION OR DEBARMENT

In the event of suspension or debarment, 4 Pa. Code Chapter 60, as it may be amended, shall apply.

N. COVENANT AGAINST CONTINGENT FEES

The CHC-MCO warrants that no person or selling agency has been employed or retained to solicit or secure this Agreement upon an Agreement or understanding for a commission, percentage, brokerage or contingent fee (excepting bona fide employees or bona fide established commercial or selling agencies maintained by the CHC-MCO for the purpose of securing business). For breach or violation of this warranty, the Department shall have the right to annul this Agreement without liability or, in its discretion, to deduct from the consideration otherwise due under the Agreement, or otherwise recover, the full amount of such commission, percentage, and brokerage or contingent fee.

O. CHC-MCO'S CONFLICT OF INTEREST

The CHC-MCO hereby assures that it presently has no interest and will not acquire any interest, direct or indirect, which would conflict in any manner or degree with the performance of its services hereunder. The CHC-MCO further assures that in the performance of this Agreement, it will not knowingly employ any person having such interest. CHC-MCO hereby certifies that no member of the Board of the CHC-MCO or any of its officers or directors has such an adverse interest.

P. INTEREST OF THE COMMONWEALTH AND OTHERS

No officer, member or employee of the Commonwealth and no member of its General Assembly, who exercises any functions or responsibilities under this Agreement, shall participate in any decision relating to this Agreement which affects his or her personal interest or the interest of any corporation, partnership or association in which he or she is, directly or indirectly, interested; nor shall any such officer, member or employee of the Commonwealth or member of its General Assembly have interest, direct or indirect, in this Agreement or the proceeds thereof.

Q. CONTRACTOR RESPONSIBILITY TO EMPLOY CASH ASSISTANCE BENEFICIARIES
(Applicable to contracts Twenty-Five Thousand Dollars ($25,000.00) or more)

1. The CHC-MCO, within ten (10) days of receiving the notice to proceed, must contact the Department's Contractor Partnership Program (CPP) to present, for review and approval, the CHC-MCO's plan for recruiting and hiring recipients currently receiving cash assistance. If the contract was not procured via Request for Proposal (RFP); such plan must be submitted on Form PA-778. The plan must identify a specified number (not percentage) of hires to be made under this Agreement. If no employment opportunities arise as a result of this Agreement, the CHC-MCO must identify other employment opportunities available within its organization that are not a result of this Agreement. The entire completed plan (Form PA-778) must be submitted to the Bureau of Employment and Training Programs (BETP)**:** Attention CPP Division. (Note: Do not keep the pink copy of Form PA-778). The approved plan will become a part of the Agreement.

2. The CHC-MCO's CPP approved recruiting and hiring plan shall be maintained throughout the term of the Agreement and through any renewal or extension of the Agreement. Any proposed change must be submitted to the CPP Division, which will make a recommendation to the Contracting Officer

regarding course of action. If an Agreement is assigned to another CHC-MCO, the new CHC-MCO must maintain the CPP recruiting and hiring plan of the original Agreement.

3. The CHC-MCO, within (10) days of receiving the notice to proceed, must register in the Commonwealth Workforce Development System (CWDS). In order to register, the CHC-MCO must provide business, location, and contact details by creating an Employer Business Folder for review and approval, within CWDS at https://www.cwds.state.pa.us. Upon CPP review and approval of Form PA-778 and the Employer Business Folder in CWDS, the CHC-MCO will receive written notice (via the pink CHC-MCO's copy of Form PA-778) that the plan has been approved.

4. Hiring under the approved plan will be monitored and verified by Quarterly Employment Reports (Form PA-1540) submitted by the CHC-MCO to the Central Office of Employment and Training – CPP Division. A copy of the submitted Form PA-1540 must also be submitted by the CHC-MCO to the Department's Contract Monitor (i.e., Contract Officer). The reports must be submitted on the DHS Form PA-1540. The form may not be revised, altered, or re-created.

5. If the CHC-MCO is non-compliant, CPP Division will contact the Contract Monitor to request corrective action. The Department may cancel this Agreement upon thirty (30) days written notice in the event of the CHC-MCO's failure to implement or abide by the approved plan.

R. TUBERCULOSIS CONTROL

Recommendations of the Centers for Disease Control and Prevention (CDC), United States Department of Health and Human Services (HHS) shall be followed in screening, testing and surveillance for TB and in treating and managing persons with confirmed or suspected TB. Currently the CDC recommends:

1) TB screening with an individual risk assessment and symptom evaluation at baseline (preplacement); 2) TB testing with an interferon-gamma release assay (IGRA) or a tuberculin skin test (TST) for persons without documented prior TB disease or latent TB infection (LTBI); 3) no routine serial TB testing at any interval after baseline in the absence of a known exposure or ongoing transmission; 4) encouragement of treatment for all health care personnel with untreated LTBI, unless treatment is contraindicated; 5) annual symptom screening for health care personnel with untreated LTBI; and 6) annual TB education of all health care personnel. In the event that a CHC-MCO employee is unwilling to submit to the test due to previous positive reading, allergy to testing material, or refusal, the risk assessment questionnaire must be completed. If a CHC-MCO employee refuses to be tested in accordance with this policy, the facility will not be able to contract with this provider and will need to procure the services from another source.

S. ACT 13 APPLICATION TO CHC-MCO

The CHC-MCO shall be required to submit with its bid information obtained within the preceding one-year period for any personnel who will have or may have direct contact with residents from the facility or unsupervised access to their personal living quarters in accordance with the following:

1. Pursuant to 18 Pa. C.S. Chap. 91 (relating to criminal history record information), a report of criminal history information from the Pennsylvania State Police or a statement from the State Police that its central repository contains no such information relating to that person. The criminal history record information shall be limited to that which is disseminated pursuant to 18 Pa. C.S. § 9121(b)(2) (relating to general regulations).

2. Where the applicant is not, and for the two (2) years immediately preceding the date of application has not been, a resident of this Commonwealth, the Department shall require the applicant to submit with the application a report of Federal criminal history record information pursuant to the Federal Bureau of Investigation's under Department of State, Justice, and Commerce, the Judiciary, and Related Agencies Appropriation Act, 1973 (Public Law 92-544, 86 Stat. 1109). For the purpose of this paragraph, the applicant shall submit a full set of fingerprints to the State Police, which shall forward them to the Federal Bureau of Investigation for a national criminal history check. The information obtained from the criminal record check shall be used by the Department to determine the applicant's

eligibility. The Department shall ensure confidentially of the information.

3. The Pennsylvania State Police may charge the applicant a fee of not more than $10 to conduct the criminal record check required under subsection 1. The State Police may charge a fee of not more than the established charge by the Federal Bureau of Investigation for the criminal history record check required under subsection 2.

The CHC-MCO shall apply for clearance using the State Police Background Check (SP4164) at its own expense. The forms are available from any State Police Substation. When the State Police Criminal History Background Report is received, it must be forwarded to the Department. State Police Criminal History Background Reports not received within sixty (60) days may result in cancellation of the Agreement.

T. LOBBYING CERTIFICATION AND DISCLOSURE

(applicable to agreements $100,000 or more)

Commonwealth agencies will not contract with outside firms or individuals to perform lobbying services, regardless of the source of funds. With respect to an award of a federal contract, grant, or cooperative agreement exceeding $100,000 or an award of a federal loan or a commitment providing for the United States to insure or guarantee a loan exceeding $150,000, all recipients must certify that they will not use federal funds for lobbying and must disclose the use of non-federal funds for lobbying by filing required documentation. The CHC-MCO will be required to complete and return a “Lobbying Certification Form” and a “Disclosure of Lobbying Activities form” with their signed Agreement, which forms will be made attachments to the Agreement.

U. AUDIT CLAUSE

(applicable to Agreements $100,000 or more)

This Agreement is subject to audit in accordance with Exhibit O, the Audit Clause.

EXHIBIT C

MANAGED LONG-TERM SERVICES AND SUPPORTS REGULATORY COMPLIANCE GUIDELINES

The CHC-MCO must comply with all applicable Federal and State laws (including, but not limited to, applicable regulations found in 55 Pa. Code Chapters 52, 1101 through 1249) and policy bulletins issued, by the Department.

As a general manner, regulatory provisions that no longer apply relate to Early and Periodic Screening, Diagnosis, and Treatment requirements (EPSDT) and to the calculation of MA provider payment rates and fees.

The following is a non-exhaustive outline of regulations in Title 55 of the Pennsylvania Code and policy bulletins relating to those regulations that do not apply to the CHC-MCO:

Chapter 52. Long-term Living Home and Community-Based Services

- Subsection 52.26(e) (relating to service coordination entity as Organized Healthcare Delivery System (OHCDS))
- Section 52.27 (relating to service coordinator qualifications and training)
- Sections 52.41 and 52.42 (relating to billing and payment policies)
- Section 52.45 (relating to fee schedule rates)
- Sections 52.51 and 52.52 (relating to vendor goods and services)
- Section 52.53 (relating to OHCDS)
- Section 52.64 (relating to payment sanctions)

Chapter 1101. General Provisions

- Section 1101.21 (relating to the following definitions: Prior Authorization; Shared Health Facility)
- Subsection 1101.31(b)(13) (relating to dental services)
- Subsection 1101.31(f) (relating to program exception process)
- Subsection 1101.33(a) (relating to recipient eligibility)
- Subsection 1101.33(b) (relating to a single-provider exception)
- Section 1101.51(a) (relating to freedom of choice)
- Section 1101.61 (relating only to fees and payments)
- Section 1101.62 (relating to maximum fees)
- Subsections 1101.63(b)(1) through (9) (relating to cost payments)
- Subsection 1101.63(c) (relating to MA deductibles)
- Subsection 1101.64(b) (only as to the reference to rates and fees)
- Section 1101.65 (relating to method of payment)
- Section 1101.67 (relating to prior authorization)
- Section 1101.68 (relating to invoices)
- Section 1101.69 (relating to overpayments and underpayments)

- Section 1101.72 (relating to invoice adjustments)
- Section 1101.83 (relating to restitution and repayment)

Chapter 1121. Pharmaceutical Services

- Section 1121.2 (relating to the definitions of: CAP; Compounded Prescription; Pricing Service; Federal Upper Limit; CMS Multisource Drug; State MAC; and Usual and Customary Charge)
- Subsections 1121.52(a)(6) and (b) (relating to payment conditions)
- Subsections 1121.53(a), (b)(1), (b)(2), (c), and (f) (relating to limitations on payment)
- Section 1121.55 (relating to the Department's payment to pharmacies)
- Section 1121.56 (relating to Drug Cost Determination)

Chapter 1123. Medical Supplies

- Section 1123.1 (only as to the reference to MA Fee Schedule)
- Subsections 1123.13(a) and (b) (relating to inpatient services)
- Subsection 1123.22(1) and (2) (relating to medical supplies which have been prescribed through the school medical program and EPSDT)
- Section 1123.51 (only as to the reference to MA Fee)
- Section 1123.53 (relating to hemophilia products)
- Section 1123.54 (relating to Orthopedic shoes)
- Section 1123.55 (relating to oxygen and related equipment)
- Section 1123.56 (relating to vision aids)
- Section 1123.57 (relating to hearing aids)
- Subsections 1123.58 (relating to prostheses and orthoses)
- Section 1123.60 (relating to limitations on payment)
- Section 1123.61 (relating to non-compensable services and items)
- Section 1123.62 (relating to method of payment)
- MA Bulletin 05-86-02
- MA Bulletin 05-87-02
- MA Bulletin 1123-91-01

Chapter 1126. Ambulatory Surgical Center and Hospital Short Procedure Unit Services

- Subsections 1126.51(f) through (h), and (k) through (m) (relating to payment for same-day surgical services)
- Subsections 1126.52 (relating to maximum reimbursement and developed fees)
- Subsection 1126.53(b) (relating to limitations on covered procedures)
- Subsection 1126.54(a)(7) (relating to sex reassignment)
- Subsections 1126.54(b) (relating to non-compensable services and items)

Chapter 1127. Birth Center Services

- Subsection 1127.51(d) (relating to claims submissions)
- Subsections 1127.52(a) through (c) (relating to fees and payment methodology)
- Subsection 1127.52(d) (relating to termination of birth center services during

prenatal care)
- Subsection 1127.52(e) (relating to payment if complications develop during labor and patient is transferred to a hospital)
- Subsection 1127.53(c) (relating to limitations on payment)

Chapter 1128. Renal Dialysis Facilities
- Subsection 1128.51(a) – (d) (only as it relates to payment provisions)
- Subsection 1128.51(f) through (m) (only as it relates to fees)
- Subsection 1128.51(n) (relating to payment to Out-of-State dialysis facilities)
- Section 1128.52 (relating to payment criteria)
- Subsection 1128.53(a) though (e) (relating to limitations on payment)
- Subsection 1128.53(f) (only as it relates to payment for back up visits)
- Subsection 1128.53(g) (relating to limitations on payment)

Chapter 1129. Rural Health Clinic Services
- Subsection 1129.51(b) and (c) (only as it relates to billings to, and payments from, the Department to payment to Rural Health Clinics)
- Sections 1129.52 and 1129.53 (relating to payment policies for Rural Health Clinics)

Chapter 1130. Hospice Services
- Subsections 1130.22(4), 1130.41(a), 1130.41(c) and Subsection 1130.42(a) (only as it relates to the use of the specific form; however, the provider must have a form that is substantively the same)
- Subsection 1130.63(b) (relating to limitations on coverage)
- Subsection 1130.63(c) (to the extent it provides that bereavement counseling is not reimbursable)
- Subsection 1130.63(e) (relating to limitations on coverage)
- Subsection 1130.71(d) through (h) (as those provisions relate to MA payments process)
- Section 1130.72 (relating to services performed by hospice physicians)
- Section 1130.73 (relating to additional payment to nursing facility residents)

Chapter 1140. Healthy Beginnings Plus Program
- Subsections 1140.52(2), 1140.53 and 1140.54(1) (as those provisions relate to billing, payment process and non-compensable services and items)

Chapter 1141. Physicians' Services
- Subsection 1141.53(a) through (c) (relating to payment made in an approved short procedure unit only if the service could not appropriately and safely be performed in the physician's office, clinic or ED of a hospital; prior authorization requirements for specialists' examinations and consultations; and services provided to recipients in skilled and intermediate care facilities by the physician administrator or medical director)
- Subsection 1141.53(f) and (g) (relating to all covered outpatient physicians' services billed to the Department shall be performed by such physician personally or by a registered nurse, physician's assistant, or a midwife under the physician's

direct supervision; and payment by the Department of a Ten Dollar ($10.00) per month fee to physicians who are approved by the Department to participate in the restricted recipient program)

- Subsection 1141.54(a)(1) through (3) (relating to when a physician is eligible to bill the Department for services provided to a hospitalized recipient)
- Subsection 1141.54(f) (relating to inpatient physicians' services billed to the Department shall be performed by the physician, an RN, physician's assistant or midwife under the physician's direct supervision)
- Subsection 1141.55(b)(1) (only as it relates to the Department's forms)
- Subsections 1141.55(c), 1141.55(c)(2) and Subsection 1141.55(c)(3) and 1141.56(a)(3) (to the extent those provisions referenced the Provider Handbook)
- Subsection 1141.57(a)(2) (only to the extent that the incident must be reported within seventy-two (72) hours)
- Subsection 1141.57(a)(1)(i) (to the extent of the invoice and report)
- Subsection 1141.57(a)(2)(i) (to the extent of the invoice and report)
- Subsections 1141.59(1) through (5), 1141.59(7) and (8), and 1141.59(10) and (11) and 1141.59(14) through (16) (relating to non-compensable services)
- Section 1141.60 (relating to payment for medications dispensed or ordered in the course of an office visit)

Chapter 1142. Midwives' Services

- Section 1142.51 (only as to MA payment fees)
- Subsection 1142.52(2) (only as to MA billing)
- Subsection 1142.55 (relating to non-compensable services)

Chapter 1143. Podiatrists' Services

- Section 1143.2 (only as to the definition of Medically Necessary)
- Section 1143.51 (only as to the MA fee schedule)
- Section 1143.53 (relating to payment conditions for outpatient services)
- Section 1143.54 (relating to payment conditions for inpatient hospital services)
- Subsection 1143.55 (relating to payment conditions for diagnostic services)
- Section 1143.56 (relating to payment conditions for orthopedic shoes, molded shoes and shoe inserts)
- Section 1143.57 (relating to limitations on payment for podiatrist visits and x-rays)
- Subsection 1143.58(a)(1) through (12) (relating to non-compensable services and items for podiatry services)
- Subsection 1143.58(b) (relating to non-compensable services and items)

Chapter 1144. Certified Registered Nurse Practitioner Services

- Subsection 1144.42(b) (only as to the reference to the Department)
- Subsection 1144.52 (relating to payment conditions)
- Subsection 1144.53 (relating to non-compensable services)

Chapter 1145. Chiropractor's Services

- Subsections 1145.11 through 1145.14 (relating to services and payment

limitations)

- Section 1145.51 (only as to the MA fee schedules and billing)
- Section 1145.54 (relating to non-compensable services)

Chapter 1147. Optometrists' Services

- Section 1147.2 (only as to remove "untinted" from the definition of "Eyeglasses")
- Section 1147.11 (only as to MA)
- Section 1147.12 (only as to MA fee schedules)
- Section 1147.13 (only as to MA fee Schedules)
- Subsection 1147.14(1) (relating to orthoptic training)
- Section 1147.23 (to the extent of "only" and "They are not eligible for eyeglasses, low vision aids or eye prostheses. However, State Blind Pension recipients are eligible for eye prostheses if they are also categorically needy.")
- Section 1147.51 (relating to limitations on payment; and non-compensable services and items; Medical Assistance Program fee schedule; and Optometric services shall be billed in the name of the optometrist providing the service)
- Section 1147.53 (relating to limitations on payments for optometric services)
- Section 1147.54 (relating to non-compensable optometric services and items)

Chapter 1149. Dentists' Services

- Section 1149.1 (only as to MA fee schedule)
- Subsection 1149.43(6) (relating to radiographs are requested by the Department for prior authorization purposes)
- Subsection 1149.43(9) through (11) (relating to pathology reports are required for surgical excision services; pre- operative X-rays are required for surgical services; and postoperative X-rays are required for endodontic procedures)
- Section 1149.51 (relating to general payment policy)
- Section 1149.52 (relating to payment conditions for various dental services)
- Section 1149.54 (relating to payment policies for orthodontic services)
- Subsection 1149.55(1) and Subsections 1149.55(5) through (8) (relating to payment policies for orthodontic services)
- Section 1149.56 (relating to payment limitations for orthodontic services)
- Section 1149.57 (relating to non-compensable dental services and items)

Chapter 1150. Medical Assistance Program Payment Policies

- Section 1150.2 (only as to definitions of place of service review (PSR) and Second Opinion program)
- Subsections 1150.51 (relating to general Medical Assistance Program payment policies)
- Section 1150.52 (relating to payment for Anesthesia services)
- Section 1150.54 (relating to payment for surgical services)
- Section 1150.55 (relating to payment for obstetrical services)
- Section 1150.56 (relating to payment for medical services)
- Section 1150.56a (relating to payment policy for consultations)

- Section 1150.57 (relating to payment for diagnostic services and radiation therapy)
- Section 1150.58 (relating to prior authorization)
- Section 1150.59 (relating to the PSR Program)
- Section 1150.60 (relating to the Second Opinion Program)
- Section 1150.61 (relating to guidelines for fee schedule changes)
- Section 1150.62 (relating to payment levels and notices of rate setting changes)
- Section 1150.63 (only as to references to the Department and CAO)

Chapter 1151. (relating to inpatient psychiatric services)

Chapter 1153. (relating to outpatient psychiatric services)

Chapter 1163. Inpatient Hospital Services, Subchapter A, Acute Care General Hospitals under the Prospective Payment System

- Section 1163.32 (relating to hospital units excluded from the DRG prospective payment system)
- Subsections 1163.51 (relating to payment for hospital services)
- Sections 1163.52 through 1153.59 (relating to prospective payment methodology, assignment of DRG, prospective capital reimbursement system, payments for direct medical education, outliers, payment policy for readmissions and transfers, and non-compensable services and items and outlier days)
- Subsection 1163.60(b)(1), Subsection 1163.60(c)(2), and Subsection 1163.60(c)(3) (only as to references to the Provider Handbook)
- Subsections 1163.62(a)(2) through 1163.65 (relating to payment conditions for abortions , billing, cost reports, and payment for out-of-state services)
- Subsection 1163.66(b) through (g) (relating to third party liability)
- Section 1163.67 (relating to disproportionate share payments)
- Sections 1163.70 (relating to changes of ownership or control)
- Subsections 1163.72(a), (c) through (g) (relating to general utilization review, admissions, day and cost outliers)
- Sections 1163.73 (relating to hospital utilization review plan)
- Subsections 1163.75 (6) and (12) (relating to, the Department's forms and manual)
- Sections 1163.76 through 1163.77 (only as to the written plan of care within two (2) days of admission and admission review requirements within twenty-four (24) hours of admission)
- Section 1163.78a and 1163.78b (relating to review requirements for day outliers and cost outliers)
- Subsections 1163.92(a) through (f) (relating to administrative sanctions)
- Subsection 1163.101(a) (relating to right to appeal under Chapter 1101 (relating to general provisions))
- Section 1163.122 (relating to determination of DRG relative values)
- Section 1163.126 (relating to computation of hospital specific computation rates)

Chapter 1163. Inpatient Hospital Services, Subchapter B, Hospitals and Hospital Units Under Cost Reimbursement Principles

- Section 1163.402 (only as to definition of “certified day”)
- Subsections 1163.451 (relating to general payment policies)
- Section 1163.452 (relating to payment methods and rates)
- Subsections 1163.453(a) and (c) (relating to allowable and non-allowable costs, allowable costs for inpatient services, payment not higher than hospital’s customary charge)
- Subsections 1163.453(d) (2) through (9) (relating to costs not allowable under the Medical Assistance Program)
- Subsections 1163.453(e) and (f) (relating to allowable costs)
- Section 1163.454 (relating to limitations on payment)
- Subsection 1163.455 (a)(1) through (5) and (7) through (16) (relating to non-compensable inpatient services)
- Subsection 1163.455 (b) and (c) (relating to non-compensable inpatient services)
- Section 1163.457 (relating to payment policies relating to out-of-state hospitals)
- Section 1163.458 (relating to payment policies relating to same calendar day admissions and discharges)
- Section 1163.459 (relating to disproportionate share payments)
- Section 1163.472 (relating to concurrent hospital review)
- Section 1163.476 and 1163.477 (only as to the written plan of care within two (2) days of admission and admission review requirements within twenty-four (24) hours of admission)
- Subsection 1163.481(b) and (c) (relating to utilization review sanctions)
- Section 1163.501 (relating to provider right to appeal)
- Section 1163.511 (relating to change of ownership or control)

Chapter 1181. Nursing Facility Care

- Subchapter A (related to nursing facility care)
- Subchapter B (related to manual for allowable cost reimbursement for skilled nursing and intermediate care facilities)

Chapter 1187. Private Nursing Facility Services

- Section 1187.2 (for definitions relating to payment calculation)
- Subsection 1187.21(4) (only as to "Payment will be based on criteria found in § 1187.101(b) (relating to general payment policy)")
- Section 1187.23 (relating to nursing facility incentives and adjustments)
- Subsections 1187.33(b)(1)-(3) (relating to sanctions)
- Subchapter E (relating to allowable program cost policies)
- Subchapter F, except for 1187.78 (relating to accountability requirements related to resident personal fund management) and 1187.79 (relating to auditing requirements related to resident personal fund management)
- Subchapter G
- Subsection 1187.102(e) (only as to reporting allowable Medicare Part B-type

costs)
- Section 1187.103 (relating to cost finding and allocation of costs)
- Section 1187.104 (only as to payment rates)
- Section 1187.105 (relating to limitations on payment for prescription drugs)
- Section 1187.106 (relating to limitations on payment during strike or disaster situations requiring resident evacuation)
- Sections 1187.107 through 1187.117, including 1187.113a and 1187.113b (relating to payment provisions)
- Subchapter J (relating to NF right of appeal)
- Subchapter K (relating to exceptional payments for nursing facility services)

Chapter 1189. County Nursing Facility Services

- Sections 1189.1 and 1189.2 (relating to policy and definitions)
- Section 1189.2C (relating to payment calculations)
- Subchapter B (relating to allowable program costs and policies)
- Section 1189.75 (related to auditing requirements for MA Cost Reports)
- Subchapter D (relating to rate setting)
- Subsection 1189.102(e) (relating to reporting allowable Medicare Part B-type costs)
- Subsection 1189.71 (related to cost reporting) and 1189.72 (related to cost reporting for Medicare Part B type services)
- Section 1189.103 (only as to payment)
- Section 1189.104 (relating to limitations on payment during strike or disaster situations requiring resident evacuation)
- Section 1189.105 (relating to incentive payments)
- Section 1189.106 (relating to adjustments relating to sanctions and fines)
- Section 1189.107 (relating to adjustment relating to errors and corrections of NF payments)
- Section 1189.108 (relating to supplemental payments)
- Subchapter F (relating to county facility right of appeal)

Chapter 1221. Clinic and Emergency Room Services

- Sections 1221.43 through 1221.44 (relating to participation requirements for hospital clinics and emergency rooms for higher reimbursement rates, and additional participation requirements for independent clinics)
- Sections 1221.51 and 1221.52 (relating to general payment policy for clinic and emergency room services and payment conditions for various services)
- Subsection 1221.55(b)(1) (except that an informed consent form is required)
- Subsections 1221.57(a)(2) and 1221.57(c) (except that the CHC-MCO must comply with Medical Assistance Bulletin 99- 95-09)
- Sections 1221.58 and 1221.59 (relating to limitations on payments and non-compensable services and items)
- MA Bulletin 11-95-04

- MA Bulletin 11-95-10
- MA Bulletin 11-95-12

Chapter 1223. Outpatient Drug and Alcohol Clinic Services

Chapter 1225. Family Planning Clinic Services

- Sections 1225.1 and 1225.51 (only as to MA fees)
- Subsection 1225.54(2) (relating to non-compensable family planning services)

Chapter 1230. Portable X-Ray Services

- Sections 1230.1, 1230.51 and 1230.52(b) (only as to MA fees)
- Subsection 1230.53 (relating to portable x-ray services, provider maximum payment, payment for transportation of portable x-ray equipment, and electrocardiogram services)
- Subsection 1230.54 (relating to non-compensable)

Chapter 1239. Medical Assistance Case Management Services for Recipients under the Age of 21

- MA Bulletin 99-94-08

Chapter 1241. Early and Periodic Screening, Diagnosis, and Treatment Program

Chapter 1243. Outpatient Laboratory Services

- Section 1243.1 and 1243.51 (only as to MA fees)
- Subsection 1243.52(b) (only as to billing)
- Subsection 1243.53(a) (relating to limitations on payment)
- Subsection 1243.54(1)(2) (relating to non-compensable services)

Chapter 1245. Ambulance Transportation

- Section 1245.1 (only as to MA fees)
- Subsection 1245.52(1) (relating to payment conditions for ambulance services)
- Subsections 1245.52(3) through (5) (relating to transportation to the nearest appropriate medical facility and medical services/supplies invoice)
- Section 1245.53 (relating to limitations on payment for ambulance service when more than one patient is transported. Payment is made for transportation of the patient whose destination is the greatest distance. No additional payment is allowed for the additional person)
- Subsections 1245.54(1) through (7) (relating to non-compensable services)

Chapter 1249. Home Health Agency Services

- Section 1249.1 and 1249.51 (only as to MA fee schedule)
- Section 1249.52 (relating to payment conditions for various services.)
- Subsection 1249.55(a) (only as to MA fee schedule) and (b) (relating to reimbursement for supplies)
- Section 1249.57(a) (relating to payment conditions for maternal/child services) and 1249.57 (b).
- Section 1249.58 (relating to payment conditions for travel costs)
- Section 1249.59 (relating to limitations on payment)

EXHIBIT D

DRUG SERVICES

1. General Requirements

a. All requirements in this Exhibit apply to all Covered Drugs regardless of the setting in which the drug is dispensed or administered the billing provider type, or how the CHC-MCO makes payment for the drug (pharmacy benefit and medical benefit).

b. The amount, duration, and scope of Covered Drugs must be consistent with coverage under the Fee-for-Service (FFS) program. The CHC-MCO must cover all Covered Drugs listed on the CMS Quarterly Drug Information File when determined to be Medically Necessary, unless otherwise excluded from coverage. (See Section 2, Coverage Exclusions, below for exclusions.) This includes brand-name and generic drugs, and over-the-counter drugs (OTCs), prescribed by licensed Providers enrolled in the Medical Assistance program, and sold or distributed by drug manufacturers that participate in the Medicaid Drug Rebate Program.

c. The CHC-MCO must provide coverage for all medically accepted indications, as described in Section 1927(k)(6) of the Social Security Act, 42 U.S.C.A. § 1396r-8(k)(6). This includes any use which is approved under the Federal Food, Drug, and Cosmetic Act, 21 U.S.C.A. §§ 301 et seq., or whose use is supported by the nationally recognized pharmacy compendia, or peer-reviewed medical literature.

d. Unless financial responsibility is otherwise assigned, all Covered Drugs are the payment responsibility of the Participant's CHC-MCO. The only exception is that the behavioral health managed care organization (BH-MCO) is responsible for the payment of methadone when used in the treatment of substance abuse disorders and when prescribed and dispensed by BH-MCO Service Providers.

e. All Covered Drugs must be dispensed through CHC-MCO Network Providers. This includes Covered Drugs prescribed by both the CHC-MCO and the BH-MCO Providers.

f. Under no circumstances will the CHC-MCO permit the therapeutic substitution of a drug by a pharmacist without explicit authorization from the licensed prescriber.

g. All proposed Covered Drug policies, programs and drug Utilization Management programs, such as but not limited to Prior Authorization, Step Therapy, partial fills, specialty pharmacy, pill-splitting, mail order, 90-day supply programs, limited pharmacy networks, medication therapy management

programs, etc., must be submitted to the Department for review and written approval prior to implementation, prior to implementation of any changes, and annually thereafter.

h. The CHC-MCO must include in its written policies and procedures an assurance that all requirements and conditions governing coverage and payment for Covered Drugs, such as, but not limited to, Prior Authorization (including Step Therapy), medical necessity guidelines, age edits, drug rebate Encounter submission, reporting, notices of decision, etc., will:

   i. Apply, regardless of whether the Covered Drug is provided as an drug benefit or as a "medical benefit" incident to a medical service and billed by the prescribing Provider using codes such as the Healthcare Common Procedure Coding System (HCPCS).

   ii. Ensure access for all medically accepted indications as documented by package labeling, nationally recognized pharmacy compendia, peer-reviewed medical literature, Statewide Preferred Drug List (PDL) prior authorization guidelines, if applicable, and FFS guidelines to determine medical necessity of drugs that require Prior Authorization in the Medical Assistance FFS Program, when designated by the Department.

i. The CHC-MCO must submit for review and approval a policy for each section of Exhibit D that includes the requirements in the respective section and the CHC-MCO's procedures to demonstrate compliance.

j. The CHC-MCO must agree to adopt the same requirements for prior authorization and some or all of the same guidelines to determine medical necessity of selected drugs or classes of drugs as those adopted by the Medical Assistance FFS Program when designated by the Department.

k. The CHC-MCO must comply with Section 2117 of Article XXI of the Insurance Company Law of 1921, 40 P.S. § 991.2117 regarding continuity of care requirements and 28 Pa. Code Chapter 9. The CHC-MCO must also comply with the procedures outlined in Medical Assistance Bulletin # 99-03-13 and Medical Assistance Bulletin # 99-96-01. The CHC-MCO policy and procedures for continuity of care for drugs, and all subsequent changes to the Department-approved policy and procedures, must be submitted to the Department for review and approval prior to implementation. The policy and procedures must address how the CHC-MCO will ensure no interruption in drug therapy and the course of treatment, and continued access to drugs that the Participant was prescribed before enrolling in the CHC-MCO.

l. The CHC-MCO must allow access to all new drugs approved by the Food and Drug Administration (FDA) and meet the definition of a Covered Drug either by addition to the Statewide PDL or MCO Formulary or through prior authorization, within 10 days from their availability in the marketplace.

m. The CHC-MCO must comply with 1902(a)(85); Section 1004 of the Substance Use Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities Act (SUPPORT Act). The CHC-MCO will implement prospective safety edits on subsequent fills of opioid prescriptions, as specified by the state, which may include edits to address days' supply, early refills, duplicate fills and quantity limitations for clinical appropriateness.

2. Coverage Exclusions

a. In accordance with Section 1927 of the Social Security Act, 42 U.S.C.A. § 1396r-8, the CHC-MCO must exclude coverage for any drug marketed by a drug company (or labeler) that does not participate in the Medicaid Drug Rebate Program. The CHC-MCO is not permitted to provide coverage for any drug product, brand name or generic, legend or non-legend, sold or distributed by a company that did not sign an agreement with the federal government to provide rebates to the Medicaid agency. This requirement does not apply to vaccines, compounding materials, certain vitamins and minerals or diabetic supplies.

b. The CHC-MCO may not provide coverage for Drug Efficacy Study Implementation (DESI) drugs under any circumstances.

c. The CHC-MCO must exclude coverage of noncompensable drugs in accordance with 55 Pa. Code § 1121.54

3. Formularies and Preferred Drug Lists (PDLs)

a. The CHC-MCO must utilize the Statewide PDL developed by the Department's Pharmacy and Therapeutics (P&T) Committee.

   If the CHC-MCO fails to meet Statewide PDL quarterly compliance of 95% (excluding TPL) a financial sanction consistent with the difference in net cost using CHC-MCO actual compliance rate and the net cost if compliance rate was 95%. The minimum penalty of $25,000 per quarter will be imposed. The CHC-MCO is responsible for submitting prior authorization approval and denial information in a format designated by the Department.

b. The CHC-MCO must implement use of the Statewide PDL, any changes to the Statewide PDL, the Statewide PDL prior authorization guidelines, and any changes to the Statewide PDL prior authorization guidelines on the effective date provided by the Department.

c. The CHC-MCO must apply Statewide PDL prior authorization guidelines to all drugs and products included on the Statewide PDL. The CHC-MCO may not impose additional prior authorization requirements for drugs and products included on the Statewide PDL. Quantity limits can be no more restrictive than the Department's quantity limits.

   The CHC-MCO must submit the policies, procedures, and guidelines to determine

medical necessity of drugs included on the Statewide PDL to the Department. Submissions must occur prior to the effective date of the changes as determined by the Department and at least annually.

d. The CHC-MCO may use a Formulary or PDL to manage MA covered drugs and products that are outside the scope of the Statewide PDL as long as the Department has prior approved it and the Formulary or PDL meets the clinical needs of the MA population.

   The Formulary or PDL must be developed and reviewed at least annually by the CHC-MCO's P&T Committee, as defined in Section 6 of this Exhibit.

e. The CHC-MCO must allow access to all non-formulary or non-preferred drugs that are included in the CMS Quarterly Drug Information File, other than those excluded from coverage by the Department, when determined to be Medically Necessary through a process such as Prior Authorization (including Step Therapy), in accordance with Section V. B.1., Prior Authorization of Services, and Exhibit E, Prior Authorization Guidelines for the CHC-MCO, and this Exhibit.

f. The CHC-MCO must receive written approval from the Department of the Formulary or PDL, the list of specialty drugs, quantity limits, age edits, and the policies, procedures and guidelines to determine medical necessity of drugs and products not included on the Statewide PDL that require Prior Authorization, including drugs that require Step Therapy and drugs that are designated as non-formulary or non-preferred, prior to implementation of the Formulary or PDL, the designation of specialty, and the requirements. CHC-MCOs may add drugs to the specialty drug list that are in therapeutic classes already included on the specialty drug list prior to receiving approval from the Department. However, these additions must be included in the specialty drug designations submitted to the Department for written approval. Submissions for annual reviews must occur at least 30 days before the effective date of the updated information.

g. The CHC-MCO must submit all Formulary or PDL deletions for drugs and products outside the scope of the Statewide PDL to the Department for review and written approval prior to implementation.

h. The CHC-MCO must submit written notification of any Formulary or PDL additions for drugs and products outside the scope of the Statewide PDL to the Department within fifteen (15) days of implementation.

i. In addition to providing a link to the Statewide PDL on the CHC-MCO's website, the CHC-MCO must make available on the website in electronic format, information about its drug Formulary or PDL, listing which medications are covered, including both brand and generic names.

4 Prior Authorization of Drugs

a. For Covered Drugs that require Prior Authorization (including Step Therapy) as a condition of coverage or payment:

   i. The CHC-MCO must provide a response to the request for Prior Authorization by telephone or other telecommunication device to approve or deny the prescription within twenty-four (24) hours of the request; and

   ii. If a Participant's prescription for a medication is not filled when a prescription is presented to the pharmacist due to a Prior Authorization requirement, the CHC-MCO must instruct the pharmacist to dispense either:

      1) A fifteen (15) day supply if the prescription qualifies as an Ongoing Medication.

      2) A seventy-two (72) hour supply of a new medication.

b. For drugs not able to be divided and dispensed into individual doses, the CHC-MCO must instruct the pharmacist to dispense the smallest amount that will provide at least a seventy-two (72) hour or fifteen (15) day supply, whichever is applicable.

c. The requirement that the Participant be given at least a seventy-two (72) hour supply for a new medication or a fifteen (15) day supply for an Ongoing Medication does not apply when a pharmacist determines that the taking of the prescribed medication, either alone or along with other medication that the Participant may be taking, would jeopardize the health or safety of the Participant. The CHC-MCO and/or its subcontractor must require that its participating dispensing Provider make good faith efforts to contact the prescriber.

d. If the CHC-MCO denies the request for Prior Authorization, the CHC-MCO must issue a written denial notice to the Participant and the Provider, using the appropriate Drug Denial Notice template within twenty-four (24) hours of receiving the request for Prior Authorization. The specific reason(s) for denial must be included in the notice of decision. If additional information is required to approve the request, the specific documentation needed must be listed in the notice. If the requested drug is non-preferred/non-formulary and within the scope of the Statewide PDL or the CHC-MCO's Formulary, the CHC-MCO must list preferred alternatives appropriate for the beneficiary's diagnosis and clinical condition in the denial notice.

e. If the CHC-MCO approves the request for prior authorization, the CHC-MCO must issue a written approval notice to Participant and Provider including the drug name and strength, effective and end dates of the approval within twenty-four (24) hours of receiving the request for prior authorization.

f. If the Participant files a Grievance or DHS Fair Hearing request from a denial of an Ongoing Medication, the CHC-MCO must authorize the medication until the Grievance or DHS Fair Hearing request is resolved.

g. When medication is authorized due to the obligation to cover pre-existing services while a Grievance or DHS Fair Hearing is pending, a request to refill that prescription, made after the Grievance or DHS Fair Hearing has been finally concluded in favor of the MCO, is not an Ongoing Medication.

h. Requests for Prior Authorization will not be denied for lack of Medical Necessity unless a physician reviews the request for a Medical Necessity determination. Such a request for Prior Authorization must be approved when, in the professional judgment of the physician reviewer, the services are Medically Necessary to meet the medical needs of the Participant.

i. When medication is authorized due to the CHC-MCO's obligation to continue services while a Participant's Grievance or Fair Hearing is pending, and the final binding decision is in favor of the CHC-MCO, a request for subsequent refill of the prescribed medication does not constitute an Ongoing Medication.

j. The CHC-MCO guidelines to determine Medical Necessity of Covered Drugs outside the scope of the Statewide PDL cannot be more stringent than the FFS guidelines. The CHC-MCO must follow the Statewide PDL Prior Authorization guidelines for drugs and products included on the Statewide PDL.

k. The CHC-MCO must comply with the requirements of Section V. B. 1. Of the Agreement, Prior Authorization of Services, and Exhibit E, Prior Authorization Guidelines for CHC-MCOs, and receive written approval from the Department prior to implementation and annually thereafter. If a CHC-MCO covers a specific drug through both their medical and pharmacy benefits, the CHC-MCO must apply the same Department approved prior authorization guidelines to prior authorization requests.

5. Provider and Participant Notification

The CHC-MCO must have policies and procedures for notification to Providers and Participants of changes to the Statewide PDL or Formulary used by the CHC-MCO for drugs and products outside the scope of the Statewide PDL, Prior Authorization requirements, and other requirements for Covered Drugs such as, but not limited to, specialty program requirements.

a. Written notification for changes to the requirements must be provided to all affected Providers and Participants at least thirty (30) days prior to the effective date of the change.

b. The CHC-MCO must provide all other Providers and Participants written notification of changes to the requirements upon request.

c. The CHC-MCO also must generally notify Providers and Participants of changes through Participant and Provider newsletters, its website, or other regularly published media of general distribution.

d. Participant notices must be submitted to the Department for review and approval prior to mailing.

6. CHC-MCO Pharmacy & Therapeutics (P&T) Committee

a. The P&T Committee membership must include physicians (including a minimum of two (2) behavioral health physicians), pharmacists, Medical Assistance Program Participants and other appropriate clinicians. Medical Assistance Program Participant representative membership must include the following:

   i. One (1) physical health Participant representative. The physical health Participant representative must be a Participant enrolled in the CHC-MCO, or a physician, a pharmacist, or a physical health Participant advocate designated by Participants enrolled in the CHC-MCO to represent them.

   ii. One (1) behavioral health Participant representative. The behavioral health Participant representative must be a Participant enrolled in the CHC-MCO, or a physician, a pharmacist, a behavioral health Participant advocate, or a family member designated by Participants enrolled in the CHC-MCO to represent them.

   iii. One (1) LTSS Participant representative. The LTSS Participant representative must be a Participant enrolled in the CHC-MCO, or a physician, a pharmacist, a LTSS Participant advocate, or a family member designated by Participants enrolled in the CHC-MCO to represent them.

b. The CHC-MCO must submit a P&T Committee membership list for Department review and approval upon request.

c. When the P&T Committee addresses specific drugs or entire drug classes requiring medical expertise beyond that of the P&T Committee membership, specialists with knowledge appropriate to the drug(s) or class of drugs being addressed must be added as non-voting, ad hoc members.

d. The minutes from each CHC-MCO P&T Committee meeting must be posted for public view on the CHC-MCO's website within thirty (30) days of the date of the meeting at which the minutes are approved. Minutes will include vote totals.

7. Pharmacy Provider Network and Payment

a. The CHC-MCO or Subcontractor must contract on an equal basis with any pharmacy qualified to participate in the Medical Assistance program that is willing to comply with the CHC-MCO's payment rates and terms and to adhere to quality standards established by the CHC-MCO as required by 62 P.S. § 449.

   i. The provisions for any willing pharmacy apply if the CHC-MCO or Subcontractor enters into agreements with specific pharmacies to provide defined drugs or services, such as but not limited to, specialty, mail order, and 90-day supplies. CHC-MCOs are required to contract on an equal basis with any pharmacy qualified to participate in the Medical Assistance program that is willing to accept the same payment rate(s) and comply with the same terms and conditions for quality standards and reporting.

   ii. Subcontracts and agreements with specific pharmacies contracted to provide defined drugs or services must be submitted to the Department for advance written approval. Any changes to subcontracts or agreements must also be submitted to the Department for advance written approval.

   iii. The CHC-MCO must submit annually the list of specific pharmacies contracted to provide defined drugs or services, and a list of the drugs or services each pharmacy is contracted to provide, to the Department for review and written approval. Submissions for annual reviews must occur at least thirty (30) days before the effective date of the updated information.

   iv. The CHC-MCO must notify the Department on an ongoing basis of the following: (1) specific pharmacies that are no longer contracted to provide defined drugs or services and the reason why, (2) pharmacies that request contracting to provide defined drugs or services but are not admitted into the specific pharmacy network and the reason why, (3) any pharmacies that are only contracted to provide a limited scope of defined drugs or services and the reason why.

b. The CHC-MCO and any subcontractor must develop, implement, and maintain a process that ensures the amount paid to all network pharmacies reflects the pharmacy’s acquisition cost, professional services and cost to dispense the prescription to a Medicaid beneficiary. The CHC-MCO must submit to the Department the policies and procedures for development of network pharmacy payment methodology including the process to ensure that brand and generic payment rates reflect the pharmacy’s acquisition cost (from a readily available distributor doing business in Pennsylvania) and the professional dispensing fee accurately reflects the pharmacist’s professional services and cost to dispense the prescription to a Medicaid beneficiary.

c. The CHC-MCO or subcontractor must submit to the Department for review and approval all changes to the payment methodology prior to implementation.

d. The CHC-MCO or subcontractor must report all changes to the payment methodology, rates, and dispensing fee in advance to network pharmacy providers.

e. The CHC-MCO or subcontractor must report all changes to the maximum allowable cost rates in real-time to network pharmacy providers.

f. (1) If a network pharmacy's claim is approved through the adjudication process, the CHC-MCO and any subcontractor may not retroactively deny or modify the payment unless any of the following:

i. The claim was fraudulent.
ii. The claim was duplicative of a previously paid claim.
iii. The pharmacy did not render the service.

(2) Nothing in 7.e.(1) shall be construed to prohibit the modification of or recovery of an adjudicated claim that was determined to be an overpayment or underpayment resulting from audit, review or investigation by a federal or state agency or CHC-MCO.

g. The CHC-MCO and any subcontractor will not charge a fee related to a network pharmacy's claim unless the amount of the fee is disclosed and applied at the time of the claim adjudication.

h. The CHC-MCO and any subcontractor shall not utilize an effective rate for reimbursement to a network pharmacy, including, but not limited to, generic effective rates, brand effective rates, dispensing fee effective rates, and direct and indirect renumeration fees. For the purposes of this Exhibit, an "effective rate contract" allows for adjustment of reimbursements over time so the overall reimbursement averages out to a guaranteed amount; the result is some claims are paid below the effective rate and others are paid above the effective rate. For the purposes of this Exhibit, "direct and indirect remuneration fees" are any fees charged by PBMs to pharmacies that are outside of administration fees and are generally collected after the point of sale.

8. Drug Rebate Program

a. The CHC-MCO must report the necessary Drug Encounter Data in order for the Department to invoice drug manufacturers for rebates for all Covered Drugs. This includes physician-administered drugs, drugs dispensed by 340B covered entities or contract pharmacies, and drugs dispensed to Participants with private or public pharmacy coverage and CHC-MCO secondary coverage.

b. The CHC-MCO must report all Drug information, including National Drug Codes (NDCs) and accurate NDC units for all drug claim types, NCPDP, 837 Professional, 837 Institutional, etc., as designated by the Department.

If the CHC-MCO fails to submit Drug Encounter Data, then the Department shall impose a sanction of Twenty-Five Thousand Dollars ($25,000.00) per quarter until the CHC-MCO is compliant.

The CHC-MCO or subcontractor may not negotiate rebates and discounts for Covered Drugs. The CHC-MCO or subcontractor may not negotiate rebates and discounts for non-drug products included on the Statewide PDL. If the CHC-MCO negotiates and collects its own rebates and discounts for non-drug products that are not included on the Statewide PDL, the CHC-MCO must report to the Department the full value of the rebates and discounts in a format designated by the Department. If the CHC-MCO assigns responsibility for negotiating and/or collecting the rebates and discounts for non-drug products not included on the Statewide PDL to a subcontractor, the subcontractor must pass the full value of all rebates and discounts on drugs dispensed to the CHC-MCO's Participants back to the CHC-MCO. The subcontractor may not retain any portion of the rebates or discounts. The CHC-MCO must report the full value of the rebates and discounts to the Department in a format designated by the Department.

9. Drug Encounters

a. The CHC-MCO shall submit all Drug Encounters to the Department within thirty (30) days (for NCPDP) and 90 days (for 837P and 837I) of the adjudication date of the claim to the CHC-MCO for payment.

b. The CHC-MCO shall provide all Pharmacy Drug Encounter Data and supporting information as specified below for the Department to collect rebates through the Medicaid Drug Rebate Program and the Statewide PDL. For all Drug Encounter Data, including pharmacy point-of-sale (NCPDP), physician-administered drugs (837P), hospital drugs (837I), and drugs dispensed by 340B-covered entities and contract pharmacies, the following data elements are required:

i. Valid NDC for the drug or product dispensed.

1. The CHC-MCO shall also include the HCPCS code associated with the NDC for all 837P and 837I Encounters where payment was made by the CHC-MCO based on the HCPCS code and HCPCS code units.
2. The CHC-MCO shall also include the diagnosis codes associated with the NDC for all 837P and 837I Encounters where payment was made by the CHC-MCO based on the HCPCS code and HCPCS code units.

ii. Valid NDC units for the drug or product dispensed.

1. The CHC-MCO shall also include the HCPCS units associated with the NDC for all 837P and 837I Encounters where payment was made by the CHC-MCO based on the HCPCS code and HCPCS code units.

iii. Actual paid amount by the CHC-MCO to the Provider for the drug

dispensed.

iv. Actual TPL amount paid by the Participant's primary pharmacy coverage to the Provider for the drug dispensed.

v. Actual copayment paid by the Participant to the Provider for the drug dispensed.

vi. Actual dispensing fee paid by the CHC-MCO to the Provider for the drug dispensed.

vii. The billing Provider's:

1. NPI and/or Medical Assistance Identification Number.

2. Full address and phone number associated with the NPI.

viii. The prescribing Provider's:

1. NPI and/or Medical Assistance Identification Number.

2. Full address and phone number associated with the NPI.

ix. The date of service for the dispensing of the drug by the billing Provider.

x. The date of payment by the CHC-MCO, or the CHC-MCO's PBM, to the Provider for the drug.

xi. Any other data elements identified by the Department to invoice for drug rebates.

c. The CHC-MCO shall edit and validate claim transaction submissions and Drug Encounter Data for completeness and accuracy in accordance with claim standards such as NCPDP. The actual paid amount by the CHC-MCO to the dispensing Provider must be accurately submitted on each pharmacy Encounter to the Department.

d. The CHC-MCO shall ensure that the NDC on all Drug Encounters is appropriate for the HCPCS code based on the NDC and units billed.

e. The Department will review the Drug Encounters and remove applicable 340B covered entity Encounters from the drug rebate invoicing process.

f. The CHC-MCO shall meet Drug Encounter Data accuracy requirements by submitting CHC-MCO paid pharmacy Encounters with no more than a three percent (3%) error rate, calculated for a month's worth of Encounter submissions. The Department will monitor the CHC-MCO's corrections to denied Encounters by random sampling performed quarterly and over the term of this Agreement. The CHC-MCO shall have corrected and resubmitted

seventy-five percent (75%) of the denied Encounters for services covered under this Agreement included in the random sample within thirty (30) calendar days of denial.

g. If the CHC-MCO fails to submit Drug Encounter data within timeframes specified, the Department shall assess civil monetary penalties upon the CHC-MCO. These penalties shall be Two Thousand Dollars ($2,000.00) for each calendar day that the Drug Encounter Data is not submitted. The Department may waive these sanctions if it is determined that the CHC-MCO was not at fault for the late submission of the data.

10. Prospective Drug Utilization Review (Pro-DUR)

a. The CHC-MCO must provide for a review of drug therapy before each prescription is filled or delivered to a Participant at the point-of-sale or point-of-distribution. The review shall include screening for potential drug therapy problems due to therapeutic duplication, drug-disease contraindications, drug-drug interactions, incorrect drug dosage or duration of drug treatment, drug-allergy interactions and clinical abuse/misuse.

b. The CHC-MCO must provide for counseling of Participants receiving benefits from pharmacists in accordance with State Board of Pharmacy requirements.

11. Retrospective Drug Utilization Review (Retro-DUR)

a. The CHC-MCO must, through its drug claims processing and information retrieval system, examine claims data and other records to identify patterns of fraud, abuse, gross overuse, or inappropriate or medically unnecessary care among physicians, pharmacists, and Participants.

b. The CHC-MCO shall, on an ongoing basis, assess data on drug use against explicit predetermined standards (using nationally recognized compendia and peer-reviewed medical literature), including but not limited to monitoring for therapeutic appropriateness, overutilization and underutilization, appropriate use of generic products, therapeutic duplication, drug-disease contraindications, drug-drug interactions, incorrect drug dosage or duration of drug treatment, and clinical abuse/misuse, and, as necessary, introduce remedial strategies, in order to improve the quality of care.

c. The CHC-MCO shall provide for active and ongoing educational outreach programs to educate practitioners on common drug therapy problems aimed at improving prescribing or dispensing practices.

12. Annual DUR Report

The CHC-MCO must submit an annual report on the operation of its Pennsylvania Medicaid Drug Utilization Review (DUR) program in a format designated by the Department. The format of the report will include a description of the nature and scope of the prospective and retrospective drug use review programs, a summary of the interventions used, an assessment of the impact of these educational interventions on quality of care, and an estimate of the cost savings generated as a result of the DUR program.

13. Drug Utilization Review Board (DUR Board)

The Department maintains a DUR Board that reflects the structure of the healthcare delivery model that includes both a managed care and a Fee-for-Service delivery system. Each CHC-MCO that does not already include a PH-MCO representative and each BH-MCO is required to include a representative to serve as a member of the DUR Board. The DUR Board is a standing advisory committee that recommends the application of predetermined standards related to Pro-DUR, Retro-DUR, and related administrative and educational interventions designed to protect the health and safety of the Medical Assistance Program Participants. The Board reviews and evaluates pharmacy claims data and prescribing practices for efficacy, safety, and quality against predetermined standards using nationally recognized drug compendia and peer-reviewed medical literature as a source. The Board recommends appropriate utilization controls and protocols, including Prior Authorization, automated Prior Authorization, system edits, guidelines to determine medical necessity, generic substitution, and quantity limits for individual medications or for therapeutic categories.

14. Pharmacy Benefit Manager (PBM)

The CHC-MCO may use a PBM to process prescription Claims only if the PBM Subcontract complies with the provisions in Section XII, Subcontractual Relationships, Exhibit P: Required Contract Terms for Administrative Subcontractors, and has received advance written approval by the Department. The standards for Network composition and adequacy for Covered Drug services includes the requirements for any willing pharmacy as described above. The CHC-MCO must indicate the intent to use a PBM, identify the proposed PBM Subcontract and the ownership of the proposed PBM subcontractor.

The PBM subcontract must be submitted in unredacted format to the Department for review and written approval prior to implementation, prior to implementation of any changes, and annually thereafter. Changes that only impact non-Community HealthChoices lines of business do not need to be submitted for Department approval. The final Department-approved, fully executed, and unredacted CHC-MCO and PBM subcontract must be submitted to the Department.

If the PBM is owned wholly, in part, or by the same parent company as a CHC-

MCO, retail pharmacy Provider, chain drug store or pharmaceutical manufacturer, the CHC-MCO must submit a written description of the assurances and procedures that will be put in place under the proposed PBM Subcontract, such as an independent audit, to assure confidentiality of proprietary information. These assurances and procedures must be submitted and receive advance written approval by the Department prior to initiating the PBM Subcontract. The Department will allow the continued operation of existing PBM Subcontracts while the Department is reviewing new contracts.

The CHC-MCO must:

a. Report the PBM's payment methodology, or methodologies for actual payment to all network pharmacy providers of covered drugs, including community pharmacies, long-term care pharmacies, network pharmacies contracted to provide specialty drugs, and dispensing prescribers for existing PBM Subcontractors and new PBM Subcontractors.

b. Submit unredacted PBM contracts with the CHC-MCO's network pharmacies upon request.

c. Include on each drug encounter the PBM received amount (amount paid to the PBM by the CHC-MCO [ingredient cost and dispensing fee]) and the provider received amount (the actual amount paid by the PBM [ingredient cost and dispensing fee] to the dispensing pharmacy or prescribing provider.

d. Report any differences between the amount paid by the CHC-MCO to the PBM and the amount paid by the PBM to the providers of covered drugs as other fees.

e. Report all PBM fees charged to the CHC-MCO and to the pharmacy provider, in a format designated by the Department.

f. Submit a written description of the procedures that the CHC-MCO will put in place to monitor the PBM for compliance with the term and conditions of the Agreement related to covered drugs and actual payments to the providers of covered drugs.

g. Upon request by the Department, conduct an independent audit of the PBM's transparent pricing arrangement in compliance with the provision in Exhibit O CHC Audit Clause.

h. Ensure that the PBM is fully compliant with the requirements in Section V. T. Provider Dispute Resolution System.

i. Develop, implement, and maintain a Second Level PBM Provider Pricing Dispute Resolution Process that provides for settlement of a PBM network Provider's pricing dispute with the PBM, on the condition that the PBM's network Provider exhausted all of its remedies against the PBM.

j. Submit to the Department, prior to implementation, the CHC-MCO's policies and procedures relating to the resolution of PBM Provider pricing disputes.

i. The CHC-MCO must submit any changes to the policies and procedures to the Department for approval prior to implementation of the changes.

ii. The CHC-MCO's submission of new or revised policies and procedures for review and approval by the Department shall not act to void any existing policies and procedures that have been prior approved by the Department for operation in a CHC zone. Unless otherwise required by law, the CHC-MCO may continue to operate under such existing policies and procedures until the Department approves the new or revised version.

k. At a minimum, include in the CHC-MCO's Second Level PBM Provider Pricing Dispute Resolution policies and procedures the following:

i. The process for submission and settlement of Second Level PBM Provider Pricing Disputes;

ii. A requirement that the PBM Provider must exhaust all of its remedies against the PBM before requesting a CHC-MCO Second Level PBM Provider Pricing Dispute Resolution;

iii. Acceptance and usage of the Department's definition/delineation of Provider Disputes;

iv. Timeframes for submission and resolution of Second Level PBM Provider Pricing Disputes;

v. Processes to ensure equal treatment of all PBM providers in the resolution of pricing disputes.

vi. Process to ensure the paid amount reflects the pharmacy's drug acquisition cost, professional services, and cost to dispense the prescription to an MA beneficiary.

vii. A requirement for both the PBM Provider and the PBM to provide documentation supporting each entity's position(s) related to the pricing dispute;

viii. Designation of CHC-MCO staff responsible for resolution of the PBM Provider Pricing Dispute who have:

- The knowledge and expertise to address and resolve PBM Provider Pricing Disputes;
- Access to data and documentation of the informal resolution of the PBM Provider Dispute and the formal PBM Provider

Appeal and decisions necessary to assist in making decisions; and

ix. Mechanisms and time-frames for reporting CHC-MCO PBM Provider Pricing Dispute decisions to the PBM Provider, the PBM and the Department. If the dispute is denied by the CHC-MCO, the Provider Pricing Dispute decisions must include the specific rationale for the denial;

l. Require the PBM and the PBM provider to abide by the final decision of the CHC-MCO. If the Provider Pricing Dispute is overturned by the CHC-MCO, adjustment must be made to the appealed claim and to future claims for the appealed drug. The PBM/CHC-MCO must update their payment methodology for the appealed drug; and

m. Require the PBM to inform all PBM providers of the process and conditions to request a Second Level PBM Provider Pricing Dispute.

15. Requirements for CHC-MCO and BH-MCO Interaction and Coordination of Drug Services

a. BH-MCO prescribing Providers must comply with the CHC-MCO requirements for Utilization Management of behavioral health drugs.

b. The BH-MCO will be required to issue an initial list of BH-MCO Providers to the CHC-MCO, and quarterly updates that include additions and terminations. Should the CHC-MCO receive a request to dispense medication prescribed by a BH Provider not listed on the BH-MCO's Provider file, the CHC-MCO must work through the appropriate BH-MCO to identify the Provider. The CHC-MCO is prohibited from denying prescribed medications solely on the basis that the BH-MCO Provider is not clearly identified on the BH-MCO Provider file.

c. Payment for inpatient pharmaceuticals during a BH admission is the responsibility of the BH-MCO and is included in the hospital charge.

d. The CHC-MCO may deny payment of a Claim for a Covered Drug prescribed by a BH-MCO Provider only if one of the following occurs:

i. The drug is not being prescribed for the treatment of substance use disorder or mental illness and any side effects of psychopharmacological agents. Those drugs are to be prescribed by the CHC-MCO's PCP or specialists in the Participant's CHC-MCO Network.

ii. The prescription has been identified as a case of Fraud, Abuse, or gross

overuse, or the dispensing pharmacist determined that taking the medication either alone or along with other medications that the Participant may be taking would jeopardize the health and safety of the Participant.

e. The CHC-MCO must receive written approval from the Department of the policies and procedures for the CHC-MCO and BH-MCO to:

   i. When deemed advisable, require consultation between practitioners before prescribing medication, and sharing complete, up-to-date medication records.

   ii. Comply with any CHC-BH MCO drug data exchange procedures specified by the Department.

   iii. Timely resolve disputes which arise from the payment for or use of drugs, including a mechanism for timely, impartial mediation when resolution between the CHC-MCO and BH-MCO does not occur.

   iv. Share independently developed Quality Management/Utilization Management information related to drug services, as applicable.

   v. Collaborate in adhering to a drug utilization review program approved by the Department. Collaborate in identifying and reducing the frequency of patterns of Fraud, Abuse, gross overuse, inappropriate or medically unnecessary care among physicians, pharmacists and Participants associated with specific drugs.

EXHIBIT E

PRIOR AUTHORIZATION GUIDELINES FOR THE CHC-MCO

A. GENERAL REQUIREMENT

The CHC-MCOs must submit to the Department all written policies and procedures for the Prior Authorization of services. Prior authorization is not required for Family Planning services (V.A.6), Emergency Services (see V.A.8), or services for which Medicare is the primary payor except where Medicare has denied the service. The CHC-MCO may require Prior Authorization for any services that require Prior Authorization in the Medical Assistance Fee-for-Service (FFS) Program. The CHC-MCO must notify the Department of the FFS authorized services they will continue to prior authorize and the basis for determining if the service is Medically Necessary. The CHC-MCO must receive advance written approval from the Department to require the Prior Authorization of any services not currently required to be Prior Authorized under the FFS Program. For each service to be Prior Authorized, the CHC-MCO must submit for the Department's review and approval the written policies and procedures in accordance with the guidelines described below. The policies and procedures must:

- Be submitted in writing, for all new and revised criteria, prior to implementation;
- Be approved by the Department in writing prior to implementation;
- Adhere to specifications of the CHC RFP, this Agreement, the CHC 1915(c) Waiver, federal regulations, and Department regulations, including 55 Pa. Code Chapter 1101;
- Ensure that Covered Services are Medically Necessary and provided in an appropriate, effective, timely, and cost-efficient manner;
- Adhere to the applicable requirements of Centers for Medicare and Medicaid Services (CMS) Guidelines for Internal Quality Assurance Programs of Health Maintenance Organizations (HMOs), Health Insuring Organizations, and Prepaid Health Plans (PHPs), contracting with Medicaid/Quality Assurance Reform Initiative (QARI);
- Include an expedited review process to address those situations when an item or service must be provided on an urgent basis;
- Specify that Person-Centered Service Plans serve as Prior Authorization for the services outlined therein.

Future changes in State and Federal statutes, regulations, or court cases may require re-evaluation of any previously approved Prior Authorization proposal. Any deviation from the policies and procedures approved by the Department, including time frames for decisions, is considered to be a change and requires a new request for approval. Failure of the CHC-MCO to comply may result in sanctions and/or penalties by the Department.

The Department defines Prior Authorization as a determination made by a CHC-MCO to approve or deny payment for a Provider's request to provide a service or course of treatment of a specific duration and scope to a Participant prior to the Provider's initiation or continuation of the requested service.

The Department's Prior Authorization Review Panel (PARP) has the sole responsibility to review and approve all Prior Authorization proposals from the CHC-MCOs.

B. GUIDELINES FOR REVIEW

1. Basic Requirements:

   a. The CHC-MCO must identify individual service(s), medical item(s), and/or therapeutic categories of drugs to be Prior Authorized.

   b. If the Prior Authorization is limited to specific populations, the CHC-MCO must identify all populations who will be affected by the proposal for Prior Authorization.

2. Medically Necessary Requirements:

   a. The CHC-MCO must describe the process to validate medical necessity for:

      - covered care and services;
      - procedures and level of care;
      - medical or therapeutic items.

   b. The CHC-MCO must identify the source of the criteria used to review the request for Prior Authorization of services. The criteria must be consistent with the CHC Agreement definition for a service or benefit that is Medically Necessary. All criteria must be submitted to the Department for evaluation and approval under Utilization Review Criteria Assessment Process (URCAP).

   c. For CHC-MCOs, if the criteria being used are:

      - Purchased and licensed, the CHC-MCO must identify the vendor;
      - Developed/recommended/endorsed by a national or state Provider association or society, the CHC-MCO must identify the association or society;
      - Based on national best practice guidelines, the CHC-MCO must identify the source of those guidelines;
      - Based on the medical training, qualifications, and experience of the CHC-MCO's Medical Director, Dental Director, or other qualified and trained practitioners, the CHC-MCO must identify the individuals who will determine if the service or benefit is Medically Necessary.

d. CHC-MCO guidelines to determine medical necessity of all drugs that require Prior Authorization must be posted for public view on the CHC-MCO's website. This includes, but is not limited to, guidelines to determine medical necessity of both specific drugs and entire classes of drugs that require Prior Authorization for health and safety reasons, non-formulary designations, appropriate utilization, quantity limits, or mandatory generic substitution. The guidelines must specify all of the conditions that the CHC-MCO reviewers will consider when determining medical necessity, including requirements for step therapy.

e. The CHC-MCO must identify the qualification of staff that will determine if the service is Medically Necessary.

   Requests for service will not be denied for lack of Medical Necessity unless a physician or other healthcare professional with appropriate clinical expertise in treating the Participant's condition or disease determines:

   - That the prescriber did not make a good faith effort to submit a complete request, or

   - That the service or item is not Medically Necessary, after making a reasonable effort to consult with the prescriber. The reasonable effort to consult must be documented in writing.

f. The CHC-MCO must outline how the Service Planning process with PCPT approach will ensure that Medically Necessary services specified in the Person-Centered Service Plan are authorized by virtue of inclusion in the Person-Centered Service Plan and processed into all appropriate systems.

g. In accordance with Section V.I., the CHC-MCO must outline which PCSP changes during the period covered by the PCSP may be made by the Participant and Service Coordinator without PCPT involvement and which must be made by the CHC-MCO in accordance with the CHC-MCO Prior Authorization plan and must outline the timeframes specified in V.B.2.

h. For LTSS in home and community-based settings, Covered Services will be authorized in accordance with the requirements of the CHC 1915(c) Waiver.

3. <u>Administrative Requirements</u>

a. The CHC-MCO's written policies and procedures must identify the time frames for review and decisions and the CHC-MCO must demonstrate that the time frames are consistent with the requirements specified in V.B.2 and Exhibit D for drug services.

b. The CHC-MCO's written policies and procedures must demonstrate how the CHC-MCO will ensure adequate care management and overall continuity of care among all levels and specialty areas.

c. The CHC-MCO's written policies and procedures must explain how Prior

Authorization data will be incorporated into the CHC-MCO's overall Quality Management plan.

4. Notification, Grievance, and DHS Fair Hearing Requirements

   The CHC-MCO must demonstrate how written policies and procedures for requests for Prior Authorization comply and are integrated with the Participant and Provider notification requirements and Participant Grievance and DHS Fair Hearing requirements of the RFP and Agreement.

5. Requirements for Care Management/Care Coordination of Non Prior Authorized Service(s)/Items(s)

   For purposes of tracking care management/identification of certain diagnoses or conditions, and with advance written approval from the Department, the CHC-MCO may choose to establish a process or protocol requiring notification prior to service delivery. This process must not involve any approvals/denials or delays in receiving the service. The CHC-MCO must notify Providers of this notification requirement. This process may not be administratively cumbersome to Providers and Participants. These situations need not comply with the other Prior Authorization requirements contained in this Exhibit.

EXHIBIT F

QUALITY MANAGEMENT AND UTILIZATION MANAGEMENT PROGRAM REQUIREMENTS

The Department will monitor the QM and UM programs of the CHC-MCO and retains the right of advance written approval of all QM and UM activities. The CHC-MCO's QM and UM programs must incorporate all the requirements outlined in this Agreement and must be designed to assure and improve the accessibility, availability, and quality of care and services being provided to its Participants. The CHC-MCO's QM and UM programs must, at a minimum:

A. Contain a written program description, work plan, evaluation and policies/procedures that meet requirements outlined in this Agreement;

B. Allow for the development and implementation of an annual work plan of activities that focuses on areas of importance as identified by the CHC-MCO in collaboration with the Department;

C. Be based on statistically valid clinical and financial analysis of Encounter Data, Participant demographic information, HEDIS, CAHPS, Pennsylvania Performance Measures and other data that allows for the identification of prevalent medical conditions, barriers to care and services and racial/ethnic disparities to be targeted for quality improvement, case and disease management initiatives;

D. Allow for the continuous evaluation of its activities and adjustments to the program based on these evaluations;

E. Submit all reports on data elements and quality measures as required, and in the manner to be required by the Department;

F. Demonstrate sustained improvement for clinical performance over time;

G. Allow for the timely, complete, and accurate reporting of Encounter Data and other data required to demonstrate clinical and service performance, including HEDIS and CAHPS as outlined in Exhibit W(2), Healthcare Effectiveness Data and Information Set (HEDIS®) and Consumer Assessment of Healthcare Providers and Systems (CAHPS®);

H. Include processes for the investigation and resolution of individual performance or quality of care issues whether identified by the CHC-MCO or the Department that:

   1) Allow for the tracking and trending of issues on an aggregate basis pertaining to patterns of care and services;

   2) Allow for submission of improvement plans, as determined by and within time frames established by the Department. Failure by the CHC-MCO to comply with

the requirements and improvement actions requested by the Department may result in the application of penalties and/or sanctions as outlined in Section VIII.I, Sanctions, of the Agreement.

I. Obtain accreditation by a nationally recognized organization, such as National Committee for Quality Assurance (NCQA);

J. Obtain NCQA Health Equity or the Health Equity Plus accreditation by July 1, 2024. ; and

K. Comply with National Quality Forum or other LTSS quality requirements as designated by the Department.

L. Determine whether algorithms used for case management, disease management, quality management, or decisions about which enrollees receive additional services from the CHC-MCO, contain inadvertent racial bias. If any racial bias is identified, the CHC-MCO must take steps to eliminate that bias to the satisfaction of the Department. As part of the determination of whether the algorithms contain racial bias and the elimination of racial bias, the CHC-MCO will work with entities designated by the Department to identify bias and the actions that can be taken to eliminate or mitigate bias.

Standard I: The scope of the QM and UM programs must be comprehensive in nature, allow for improvement and be consistent with the Department's goals related to access, availability, and quality of care and services. At a minimum, the CHC-MCO's QM and UM programs must:

A. Adhere to current Medicaid CMS guidelines.

B. Be developed and implemented by professionals with adequate and appropriate experience in QM/UM and techniques of peer review.

C. Ensure that that all QM and UM activities and initiatives undertaken by the CHC-MCO are based upon clinical and financial analysis of Encounter Data, Participant demographic information, HEDIS, CAHPS, Pennsylvania Performance Measures and/or other identified areas.

D. Contain policies and procedures which provide for the ongoing review of the entire scope of care and services provided by the CHC-MCO, assuring that all demographic groups, races, ethnicities, disabilities, care and service settings and types and models of services are addressed.

E. Contain a written program description that addresses all standards, requirements and objectives established by the Department and that describes the goals, objectives, and structure of the CHC-MCO's QM and UM programs. The written program description must, at a minimum:

1) Include standards and mechanisms for ensuring the accessibility of primary care services, specialty care services, urgent care services, and Participant services in accordance with timeframes outlined in Exhibit T, Provider Network Composition/Service Access.

2) Distinct policies and procedures regarding how Service Coordinators will authorize LTSS and communicate those authorizations to providers.

3) Include mechanisms for planned assessment and analysis of the quality of care and services provided and the utilization of services against formalized standards, including but not limited to:

   a) Primary, secondary, and tertiary care;
   b) Preventive care and wellness programs;
   c) Acute and/or chronic conditions;
   d) Emergency Department utilization and ED diversion efforts;
   e) Dental care;
   f) LTSS;
   g) Service Coordination; and
   h) Continuity of care.

4) Allow for the timely, accurate, complete collection and clinical and financial analysis of Encounter Data and other data including, but not limited to, HEDIS, CAHPS, and Pennsylvania Performance Measures.

5) Allow for systematic analysis and re-measurement of barriers to care and services, the quality of care and services provided to Participants, and utilization of services over time.

F. Provide a comprehensive written evaluation, completed on at least an annual basis, that details all QM and UM program activities including, but not limited to:

   a) Studies and activities undertaken, including the rationale, methodology and results;
   b) Subsequent improvement actions; and
   c) Aggregate clinical and financial analysis of Encounter, HEDIS, CAHPS, Pennsylvania Performance Measures, and other data on the quality of care rendered to Participants and utilization of services.

G. Include a work plan and timetable for the coming year which clearly identifies target dates for implementation and completion of all phases of all QM activities, including, but not limited to:

   1) Data collection and analysis;
   2) Evaluation and reporting of findings;
   3) Implementation of improvement actions where applicable; and
   4) Individual accountability for each activity.

H. Provide for aggregate and individual analysis and feedback of Provider

performance and CHC-MCO performance in improving access to Covered Services, the quality of care and services provided to Participants and utilization of Covered Services.

I. Include mechanisms and processes which ensure that related and relevant operational components, activities, and initiatives from the QM and UM programs are integrated into activities and initiatives undertaken by other departments within the CHC-MCO including, but not limited to, the following:

1) Provider Relations;
2) Participant Services; and
3) Management Information Systems.

J. Include procedures for informing both physician and non-physician Providers about the written QM and UM programs, and for securing cooperation with the QM and UM programs in all physician and non-physician Provider Agreements.

K. Include procedures for feedback and interpretation of findings from analysis of quality and utilization data to Providers, health professionals, CHC-MCO staff, and Medical Assistance Consumers/family members.

L. Include mechanisms and processes which allow for the development and implementation of CHC-MCO-wide and Provider-specific improvement actions in response to identified barriers to care and services, quality of care and services concerns; and overutilization, underutilization, and misutilization of services.

M. The CHC-MCO shall provide for methods of assuring the appropriateness of inpatient care. Such methodologies as described below shall be based on individualized determinations of medical necessity in accordance with UM policies and procedures.

- Pre-admission certification process for non-emergency admissions;
- A concurrent review program to monitor and review continued inpatient hospitalization, length of stay, or diagnostic ancillary services regarding their appropriateness and medical necessity. In addition, the CHC-MCO shall have a process in place to determine for emergency admissions, based upon medical criteria, if and when a Participant can be transferred to a contract facility in the network, if presently in a non-contract facility;
- Admission review for urgent and/or emergency admissions, on a retroactive basis when necessary, in order to determine if the admission is medically necessary and if the requested length of stay for the admission is reasonable based upon an individualized determination of medical necessity. Such reviews shall not result in delays in the provision of medically necessary urgent or emergency care;
- Restrictions against requiring pre-admission certification for admissions for the normal delivery of children; and
- Prospective review of same day surgery procedures.

N. The CHC-MCO shall ensure that reimbursement of nursing facility care is provided for Participants who have been determined to be eligible for reimbursement of nursing facility care for the period specified. The CHC-MCO shall monitor the Participant's condition for ongoing care and potential discharge back to community living.

O. The CHC-MCO shall utilize the following guidelines in identifying and managing care for Participants who are determined to have excessive and/or inappropriate ED utilization:

- Review ED utilization data, at a minimum, every six (6) months to identify Participants with utilization exceeding the threshold defined as six (6) or more visits in the defined six (6) month period (January through June, and July through December);
- For Participants whose utilization exceeds the threshold of ED visits defined above in the previous six (6) month period, the CHC-MCO shall conduct appropriate follow-up to identify the issues causing frequent ED utilization and determine appropriate next steps.
- As appropriate, make contact with Participants whose utilization exceeded the threshold of ED visits in the previous six (6) month period and their primary care providers for the purpose of providing education on appropriate ED utilization.
- Assess the most likely cause of high utilization and develop a PCSP based on results of the assessment for each Participant.

P. The CHC-MCO shall comply with any applicable Federal and State laws or rules related to length of hospital stay.

Q. In addition to meeting the reporting requirement for oversight and monitoring of the program, the CHC-MCO must report all information required for early implementation evaluation, as outlined by the Department. The CHC-MCO must also comply with all implementation, monitoring, and oversight requirements. The CHC-MCO must comply with any program policy changes resulting from the Department's rapid cycle, implementation monitoring, or other evaluation of the CHC Program.

Standard II: The organizational structures of the CHC-MCO must ensure that:

A. The Governing Body:

1) Has formally designated an accountable entity or entities within the CHC-MCO to provide oversight of QM and UM program activities or has formally decided to provide such oversight as a committee, e.g., Quality Management Committee.

2) Regularly receives written reports on the QM and UM program activities that describe actions taken, progress in meeting objectives and improvements made. The governing body formally reviews, on at least an annual basis, a

written evaluation of the QM and UM program activities that includes studies undertaken, results of studies, and subsequent improvement actions taken. The written evaluation must include aggregate clinical and financial analysis of quality and utilization data, including HEDIS, CAHPS, and Pennsylvania Performance Measures.

3) Documents actions taken by the governing body in response to findings from QM and UM program activities.

B. The Quality Management Committee (QMC):

1) Must contain policies and procedures which describe the role, structure and function of the QMC that:

a) Demonstrate that the QMC has oversight responsibility and input, including review and approval, on all QM and UM program activities;

b) Ensure membership on the QMC and active participation by individuals representative of the composition of the CHC-MCO's Providers; and

c) Provide for documentation of the QMC's activities, findings, recommendations, and actions.

2) Meets at least monthly, and otherwise as needed.

C. The Director of LTSS ensures the provision of LTSS in home and community-based settings is provided in accordance with the requirements outlined in this Agreement and the CHC 1915(c) Waiver.

D. The Director of Quality Management serves as liaison and is accountable to the governing body and Quality Management Committee for all QM and UM activities and initiatives.

E. The Senior Medical Director must be directly accountable to and act as liaison to the Department's Chief Medical Officer.

F. The Medical Director:

1) Is available to the CHC-MCO's medical staff for consultation on referrals, denials, Complaints and problems;

2) Is directly involved in the CHC-MCO's recruiting and credentialing activities;

3) Is familiar with local standards of medical practice and nationally accepted standards of practice, including those for LTSS and with "most integrated setting" requirements under the ADA;

4) Has knowledge of due process procedures for resolving issues between Network Providers and the CHC-MCO administration, and between

participants and the CHC-MCO, including those related to medical decision making and utilization review;

5) Is available to review, advise and take action on questionable hospital admissions, Medically Necessary days and all other medical care and medical cost issues;

6) Is directly involved in the CHC-MCO's process for prior authorizing or denying services and is available to interact with Providers on denied authorizations;

7) Has knowledge of current peer review standards and techniques;

8) Has knowledge of risk management standards;

9) Is directly accountable for all Quality Management and Utilization Management activities; and

10) Oversees and is accountable for:

a) Referrals to the Department and appropriate agencies for cases involving quality of care and services that have adverse effects or outcomes; and

b) The processes for potential Fraud, Waste, and Abuse audit, investigation, review, sanctioning, and referral to the appropriate oversight agencies.

G. The CHC-MCO must have sufficient material resources, and staff with the appropriate education, experience and training, to effectively implement the written QM and UM programs and related activities.

Standard III: The QM and UM programs must include methodologies that allow for the objective and systematic monitoring, measurement, and evaluation of the quality and appropriateness of care and services provided to Participants through quality of care studies and related activities with a focus on identifying and pursuing opportunities for continuous and sustained improvement.

A. The QM and UM programs must include professionally developed practice guidelines/standards of care and services that are:

1) Written in measurable and accepted professional formats;
2) Based on scientific evidence; and
3) Applicable to Providers for the delivery of certain types or aspects of healthcare or LTSS.

B. The QM and UM programs must include clinical/quality Indicators in the form of written, professionally developed, objective and measurable variables of a specified clinical or health services delivery area, which are reviewed over a period

of time to screen delivered healthcare and/or monitor the process or outcome of care delivered in that clinical area.

C. Practice guidelines and clinical indicators must address the full range of healthcare and LTSS needs of the populations served by the CHC-MCO. The areas addressed must include but are not limited to:

1) Adult preventive care;
2) LTSS;
3) Service Coordination provision;
4) Obstetrical care, including a requirement that Participants be referred to obstetricians or certified nurse midwives at the first visit during which pregnancy is determined;
5) Selected diagnoses and procedures relevant to the CHC-MCO's Participant population;
6) Selected diagnoses and procedures relevant to racial and ethnic subpopulations within the CHC-MCO's Participant population; and
7) Preventive dental care.

D. The QM and UM programs must provide practice guidelines, clinical indicators, and medical record keeping standards to all Providers, appropriate subcontractors, and to potential Participants upon request. This information must also be provided to Participants upon request.

E. The CHC-MCO must develop methodologies for assessing performance of PCPs/PCP sites, high risk/high volume specialists, dental Providers, LTSS Providers, and Providers of ancillary services not less than every two (2) years (i.e., medical record audits). These methodologies must, at a minimum:

1) Demonstrate the degree to which PCPs, specialists, and dental Providers are complying with clinical and preventive care guidelines adopted by the CHC-MCO;

2) Demonstrate the degree to which LTSS Providers are complying with requirements of the Department and the CHC-MCO;

3) Allow for the tracking and trending of individual and CHC-MCO-wide Provider performance over time;

4) Include active mechanisms and processes that allow for the identification, investigation and resolution of quality of care and services concerns, including events such as Healthcare-Associated Infections, medical errors, and adverse patient outcomes; and

5) Include mechanisms for detecting instances of overutilization, underutilization, and misutilization.

F. The QM and UM program must have policies and procedures for implementing and monitoring improvement plans. These policies and procedures must include

the following:

1) Processes that allow for the identification, investigation and resolution of quality of care and services concerns, including Healthcare-Associated Infections, medical errors, and adverse patient outcomes;

2) Processes for tracking and trending patterns of care and services;

3) Use of progressive sanctions as indicated;

4) Person(s) or body responsible for making the final determinations regarding quality problems; and

5) Types of actions to be taken, such as:

   a) Education;
   b) Follow-up monitoring and re-evaluation;
   c) Changes in processes, structures, forms;
   d) Informal counseling;
   e) Procedures for terminating the affiliation with the physician or other health professional or Provider;
   f) Assessment of the effectiveness of the actions taken; and
   g) Recovery of inappropriate expenditures (e.g., related to Healthcare-Associated Infections, medical errors, and other inappropriate expenditures).

G. The QM and UM programs must include methodologies that allow for the identification, verification, and timely resolution of inpatient and outpatient quality of care and services concerns, Participant quality of care and services complaints, overutilization, underutilization, and/or misutilization, access/availability issues, and quality of care and services referrals from other sources;

H. The QM and UM programs must contain procedures for Participant satisfaction surveys that are conducted on at least an annual basis, including the collection of annual Participant satisfaction data through application of the CAHPS instrument as outlined in Exhibit W(2), Healthcare Effectiveness Data and Information Set (HEDIS®) and Consumer Assessment of Healthcare Providers and Systems (CAHPS®). The Department will continue to monitor the development of evidence-based LTSS satisfaction surveys and reserves the right to implement a CAHPS, CAHPS-like, or other survey at a later date.

I. The QM and UM programs must contain procedures for Provider satisfaction surveys to be conducted on at least an annual basis. Surveys are to include PCPs, specialists, LTSS Providers, Nursing Facilities, dental Providers, hospitals, and Providers of ancillary services.

J. Each CHC-MCO will be required to comply with requirements for Performance Improvement Projects (PIPs) as outlined in Exhibit W, External Quality Review.

K. The QM and UM programs must contain procedures for measuring Participant and Provider satisfaction with LTSS Service delivery.

Standard IV: The QM and UM programs must objectively and systematically monitor and evaluate the appropriateness and cost effectiveness of care and services provided to Participants through utilization review activities with a focus on identifying and correcting instances and patterns of overutilization, underutilization and misutilization.

A. Semi-annually, or more frequently as appropriate, the QM and UM programs must provide for production and distribution to Providers, (in either hard copy or web-based electronic formats) profiles comparing the average medical care utilization rates of the Participants of each PCP to the average utilization rates of all CHC-MCO Participants. The CHC-MCO must develop statistically valid methodologies for data collection (Denominator must be ≥ 30 participants) regarding Provider profiling. PCP can be defined as individual PCP or can be group practices identified by group tax ID or NPI numbers. Profiles shall include, but not be limited to:

1) Utilization information on Participant Encounters with PCPs;
2) Specialty Claims;
3) Prescriptions;
4) Inpatient stays;
5) Nursing Facility use;
6) Community-based LTSS use;
7) Emergency room use; and
8) Clinical indicators for preventive care services (i.e., mammograms, immunizations, pap smears, etc.).

B. The CHC-MCO must have mechanisms and processes for profiling all Providers using risk-adjusted diagnostic data for profiles.

C. The CHC-MCO must have mechanisms and processes for aggregate trending of changes to services and reporting aggregate data to the Department.

D. The QM and UM programs must implement statistically valid methodologies for analysis and follow-up of semi-annual practitioner utilization profiles for patterns and instances of overutilization, underutilization, and misutilization across the continuum of care and services, as well as trending of Provider utilization patterns over time. Follow up includes but is not limited to Provider education, Provider improvement plans, and Provider sanctions as necessary.

E. The QM and UM programs must, at least annually, provide for verification of Encounter reporting rates and accuracy and completeness of Encounter information submitted by PCPs.

Standard V: The CHC-MCO must develop mechanisms for integration of case/disease and health management programs that rely on wellness promotion, prevention of complications, and treatment of chronic conditions for Participants identified. The CHC-MCO must have a Complex Case Management Program and a Disease Management Program that must:

A. Include mechanisms and processes that ensure the active collaboration and coordination of care and services for identified Participants.

B. Include mechanisms and processes that allow for the identification of conditions to be targeted for case/disease and health management programs and that allow for the assessment and evaluation of the effectiveness of these programs in improving outcomes for and meeting the needs of individuals with targeted conditions.

C. Include care guidelines and/or protocols for appropriate and effective management of individuals with specified conditions. These guidelines must be written in measurable and accepted professional formats and be based on scientific evidence.

D. Include performance indicators that allow for the objective measurement and analysis of individual and CHC-MCO-wide performance in order to demonstrate progress made in improving access and quality of care and services.

E. Include mechanisms and processes that lead to healthy lifestyles such as weight loss program memberships, gym memberships and asthma camps.

F. Include collaboration with the Department and Health Information Organizations (HIOs) to develop, adopt and disseminate a resource and referral tool.

G. Include meaningful participation in the DOH Health Equity Action Team for each region in which the CHC-MCO operates.

Standard VI: The QM and UM programs must have mechanisms to ensure that Participants receive seamless, continuous, and appropriate care and services throughout the continuum of care and services, including transitions between care setting and coverage, by means of coordination of care and services, benefits, and quality improvement activities between:

A. PCPs and specialty care practitioners and other Providers**;**

B. Other CHC-MCOs;

C. The CHC-MCO and Medicare D-SNPs whether aligned or not aligned;

D. The CHC-MCO and Medicare FFS or Medicare Advantage;

E. The CHC-MCO and HealthChoices BH-MCOs;

F. The CHC-MCOs and Physical Health HealthChoices MCOs;

G. The CHC-MCO and the Department's FFS Program;

H. The CHC-MCO and other third party insurers;

I. The CHC-MCOs and LIFE providers;

J. The CHC-MCOs and State Lottery-funded services;

K. The CHC-MCOs and Hospitals or Nursing Facilities; and

L. The CHC-MCO and any other agency providing services to the Participant.

Standard VII: The CHC-MCO must demonstrate that it retains accountability for all QM and UM program functions, including those that are delegated to other entities. The CHC-MCO must:

A. Have a written description of the delegated activities, the delegate's accountability for these activities, and the frequency of reporting to the CHC-MCO.

B. Have written procedures for monitoring and evaluating the implementation of the delegated functions and for verifying the actual quality of care and services being provided.

C. Document evidence of continuous and ongoing evaluation of delegated activities, including approval of quality improvement plans and regular specified reports.

D. Make available to the Department and its authorized representatives any and all records, documents, and data detailing its oversight of delegated QM and UM program functions.

E. Ensure that delegated entities make available to the Department and its authorized representatives any and all records, documents and data detailing the delegated QM and UM program functions undertaken by the entity of behalf of the CHC-MCO.

F. Compensation and payments to individuals or entities that conduct Utilization Management activities may not be structured so as to provide incentives for the individual or entity to deny, limit, or discontinue Medically Necessary services to any Participant.

Standard VIII: The QM/UM program must have standards for credentialing/ recredentialing Providers to determine whether all Providers who provide healthcare services or LTSS under contract to the CHC-MCO are qualified to perform their services.

A. The CHC-MCO must establish and maintain minimum credentialing and recredentialing criteria for all Provider types that satisfies the Department's requirements outlined in this Agreement and through the credentialing framework to be provided to plans. Recredentialing activities must be conducted by the CHC-MCO at least every five (5) years. Criteria must include, but not be limited to, the

following as applicable to the Provider type:

1) Appropriate license or certification as required by Pennsylvania state law;

2) Verification that each Provider has not been suspended, terminated, or party to a settlement for voluntary withdrawal from the Medicaid or Medicare Programs;

3) Verification that each Provider and subcontractor has a current Provider Agreement and an active MMIS Provider ID number issued by the Department;

4) Evidence of malpractice/liability insurance;

5) A valid Drug Enforcement Agency (DEA) certification;

6) Adherence to the Principles of Ethics of the American Medical Association, the American Osteopathic Association, or any appropriate professional organization involved in a multidisciplinary approach;

7) Consideration of quality issues such as Participant Complaint and/or Participant satisfaction information, sentinel events, and quality of care concerns.

B. For purposes of credentialing and recredentialing, the CHC-MCO must perform a check on all PCPs and other physicians by contacting the National Practitioner Data Bank (NPDB). If the CHC-MCO does not meet the statutory requirements for accessing the NPDB, then the CHC-MCO must obtain information from the Federation of State Medical Boards

C. Appropriate PCP qualifications:

1) Seventy-five to one hundred percent (75-100%) of the Network consists of PCPs who have completed an approved primary care residency in family medicine, osteopathic general medicine, internal medicine or geriatrics;

2) No more than twenty-five percent (25%) of the Network consists of PCPs without appropriate residencies but who have, within the past seven (7) years, five (5) years of post-training clinical practice experience in family medicine, osteopathic general medicine, internal medicine or geriatrics. Post-training experience is defined as having practiced at least as a half (0.5) full-time equivalent in the practice areas described;

3) No more than ten percent (10%) of the Network consists of PCPs who were previously trained as specialist physicians and changed their areas of practice to primary care, and who have completed Department-approved primary care retraining programs;

4) A PCP must have the ability to perform or directly supervise the ambulatory primary care services of Participants;

5) Membership of the medical staff with admitting privileges of at least one (1) general hospital or an acceptable arrangement with a PCP with admitting privileges;

6) Evidence of continuing professional medical education;

7) Attendance at least one CHC-MCO sponsored Provider education training session as outlined in Section V.AA.2, Provider Education;

8) Assurance that any CRNP, Certified Registered Midwife, or physician's assistant, functioning as part of a PCP team, is performing under the scope of his or her respective license.

D. As part of the Provider release form, the potential Provider must agree to release all MA records pertaining to sanctions and/or settlement to the CHC-MCO and the Department.

E. The Department will recoup from the CHC-MCO any and all payments made to a Provider that does not meet the enrollment and credentialing criteria for participation or is used by the CHC-MCO in a manner that is not consistent with the Provider's licensure.

F. The CHC-MCO must notify its PCPs and all subcontractors of the prohibitions and sanctions for the submission of false Claims and statements.

G. The CHC-MCO shall evaluate a Provider's professional qualifications through objective measures of competence and quality. Providers should be given the opportunity to have input on the CHC-MCO's credentialing practices.

H. Any economic profiles used by the CHC-MCOs to credential Providers should be adjusted to adequately account for factors that influence utilization independent of the Provider's clinical management, including Participant age, Participant sex, Provider case-mix and Participant severity. The CHC-MCO must report any utilization profile that it utilizes in its credentialing process and the methodology that it uses to adjust the profile to account for non-clinical management factors at the time and in the manner requested by the Department.

I. In the event that a CHC-MCO renders an adverse credentialing decision, the CHC-MCO must provide the affected Provider with a written notice of the decision. The notice should include a clear and complete explanation of the rationale and factual basis for the determination. The notice shall include any utilization profiles used as a basis for the decision and explain the methodology for adjusting profiles for non-clinical management factors. All credentialing decisions made by the CHC-MCO are final and may not be appealed to the Department.

J. The CHC-MCO must meet the following standards related to timeliness of processing new Provider applications for credentialing:

1) The CHC-MCO must begin its credentialing process upon receipt of a

Provider's credentialing application if the application contains all required information.

2) The CHC-MCO may not delay processing the application if the Provider does not have an MAID number that is issued by the Department. However, the CHC-MCO cannot complete its process until the Provider has received its MAID number from the Department.

3) Provider applications submitted to the CHC-MCO for credentialing must be completed within sixty (60) days of receipt of the application packet if the information is complete.

Standard IX: The CHC-MCO's UM program must have policies and procedures that describe the scope of the program, mechanisms, and information sources used to make decisions on Covered Services in conjunction with the requirements in Exhibit E, Prior Authorization Guidelines for the CHC-MCO.

A. The UM program must contain policies and procedures for Prospective, Concurrent, and Retrospective review and coverage decisions on Covered Services.

B. A PCSP shall be developed and implemented for all NFCE Participants and others who request or require Service Coordination. The CHC-MCO shall audit a Department-approved sample size of the PCSPs to demonstrate compliance with the requirements of the QM/UM program and the CHC monitoring report requirements. The CHC-MCO must use a protocol to select the PCSPs that either has been submitted to and reviewed and approved by the Department or that has been provided by the Department. Audit results must be submitted to the Department as part of the Annual QAPI Program Evaluation or the applicable CHC monitoring report.

C. The UM program must allow for coverage decisions about Covered Services that are consistent with the CHC definition of Medically Necessary found in Section II, Definitions, and the requirements of the CHC 1915(c) Waiver.

Coverage decisions for Covered Services, whether made on a Prior Authorization, Concurrent Review, or Retrospective Review basis, shall be documented in writing. The CHC-MCO shall base its determination on information provided by the Participant, the Participant's family/caretaker and the PCP, as well as any other Providers, programs and agencies that have evaluated the Participant. Medical necessity determinations must be made by qualified and trained Providers. A Provider who makes such determinations of Medical Necessity is not considered to be providing a healthcare service under this Agreement.

D. If the CHC-MCO wishes to require Prior Authorization of any services, it must establish and maintain written policies and procedures for the Prior Authorization review process as required under Section V.B., Prior Authorization of Services, and Exhibit E, Prior Authorization Guidelines for the CHC-MCO.

E. The CHC-MCO must provide all Licensed Proprietary Products that it will use in evaluating Medical Necessity for medical services. Licensed Proprietary Products may include but are not limited to Interqual and Milliman. All Utilization Review Guidelines and/or policies and procedures that contain Utilization Review Guidelines used to determine Medical Necessity must:

1) Require definitions of Medical Necessity that are consistent with the CHC definition of Medically Necessary;

2) Require that clinical reviewers make determinations of Medical Necessity that are consistent with the CHC definition of Medically Necessary;

3) Require that clinical reviewers assess the Participant's current condition and response to treatment and/or co-morbidities, psychosocial, environmental, and other needs that influence the need for care and services;

4) Provide direction to clinical reviewers on how to use clinical information gathered in making a determination to approve, deny, continue, reduce, or terminate a service;

5) Be developed using a scientific based process;

6) Be reviewed at least annually and updated as necessary; and

7) Provide for evaluation of the consistency with which clinical reviewers implement the guidelines on at least an annual basis.

F. The CHC-MCO must ensure that Prior Authorization and Concurrent review decisions:

1) Are made by an individual who has appropriate expertise in addressing the enrollee's medical, behavioral health, or LTSS needs;

2) That result in a denial may only be made by an individual who has appropriate expertise in addressing the enrollee's medical, behavioral health, or long-term services and supports needs;

3) Are made in accordance with established timeframes outlined in this Agreement for routine, urgent, or emergency care; and

4) Are made by clinical reviewers using the CHC definition of medical necessity.

G. The CHC-MCO must provide twenty-four (24) hour staff availability to authorize weekend services, including but not limited to: home healthcare, pharmacy, DME, LTSS, and medical supplies. The CHC-MCO must have written policies and procedures that address how Participants and Providers can make contact with the CHC-MCO to receive instruction or Prior Authorization, as necessary

H. Additional Prior Authorization requirements can be found in Exhibit E, Prior Authorization Guidelines for the CHC-MCO.

I. The CHC-MCO must ensure that utilization records document efforts made to obtain all pertinent clinical information and efforts to consult with the prescribing Provider before issuing a denial based upon medical necessity.

J. The CHC-MCO must ensure that sources of utilization criteria are provided to Participants and Providers upon request.

K. The UM program must contain procedures for providing written notification to Participants of denials of medical necessity and terminations, reductions and changes in level of care or placement, which clearly document and communicate the reasons for each denial. These procedures must:

1) Meet requirements outlined in Exhibit G, Complaint, Grievance, and DHS Fair Hearing Processes.

2) Provide for written notification to Participants of denials, terminations, reductions and changes in medical services at least ten (10) days before the effective date of the denial, termination, reduction or change.

3) Include notification to Participants of their right to file a Complaint, Grievance or DHS Fair Hearing as outlined in Exhibit G, Complaint, Grievance, and DHS Fair Hearing Processes.

L. The CHC-MCO must agree to comply with the Department's quality monitoring and utilization review monitoring processes, including, but not limited to:

1) Submission of a log of all denials issued using formats to be specified by the Department.

2) Submission of denial notices for review as requested by the Department.

3) Submission of utilization review records and documentation as requested by the Department.

4) Ensure that all staff who have any level of responsibility for making determinations to approve or deny services for any reason have completed a utilization review training program.

5) Development of an internal quality assurance process designed to ensure that all denials issued by the plan and utilization review record documentation meet Department requirements. This process must be approved by the Department.

Standard X: The CHC-MCO must have a mechanism in place for Provider Appeals and Provider Disputes related to the following:

A. Denials of Claims and payment of Claims at an alternate level of care than what was provided, i.e., acute versus skilled days. This includes the appeal by a Provider of a CHC-MCO's decision to deny payment for services already rendered by the Provider to a Participant.

B. QM/UM sanctions.

C. Adverse credentialing/recredentialing decisions.

D. Provider Terminations.

Standard XI: The CHC-MCO must ensure that findings, conclusions, recommendations, and actions taken as a result of QM and UM program activities are documented and reported to appropriate individuals within the CHC-MCO for use in other management activities.

A. The QM and UM program must have procedures which describe how findings, conclusions, recommendations, actions taken, and the results of actions taken are documented and reported to individuals within the CHC-MCO for use in conjunction with other related activities, such as:

1) CHC-MCO Provider Network changes;
2) Benefit changes;
3) Medical management systems (e.g., pre-certification);
4) Practices feedback to Providers; and
5) Service Coordination or Service Planning changes.

Standard XII: The CHC-MCO must have written policies and procedures for conducting prospective and retrospective DUR that meet requirements outlined in Exhibit D, Drug Services.

Standard XIII: The CHC-MCO must have written standards for maintaining Comprehensive Medical and Service Record (including PCSPs) record keeping. The CHC-MCO must ensure that the Comprehensive Medical and Service Records contain written documentation of the medical necessity of a rendered, ordered or prescribed service.

A. The CHC-MCO must have written policies and procedures for the maintenance of Comprehensive Medical and Service Records so that those records are documented accurately and in a timely manner, are Readily Accessible and permit prompt and systematic retrieval of information. Written policies and procedures for the CHC-MCO and its Network Providers must contain standards for medical records that promote maintenance of medical records in a legible, current, detailed, organized and comprehensive manner that permits effective patient care and quality review.

B. Medical record standards for the CHC-MCO and its Network Providers must meet or exceed medical record keeping requirements contained in at 55 Pa. Code § 1101.51(d)(e) of the Medical Assistance Manual and in medical record keeping

standards adopted by DOH.

C. Comprehensive Medical and Service Records must, at a minimum, include the following information to the extent related to CHC-MCO Covered Services or related to other services coordinated by the CHC-MCO but covered by a Participant's Medicare or other source of coverage:

1) History and physical that is appropriate to the patient's current condition;
2) Treatment plan, progress and changes in treatment plan;
3) Diagnostic tests and results
4) Therapies and other prescribed regimens;
5) Disposition and follow-up;
6) Referrals and results thereof;
7) Hospitalizations;
8) Reports of operative procedures and excised tissues;
9) Medication record\PCSP, where applicable;
10) Services provided as per the PCSP for Participants who have one;
11) Service Coordination contact notes; and
12) All other aspects of patient care or Participant service delivery.

D. The CHC-MCO must have written policies and procedures to assess the content of Comprehensive Medical and Service Records for legibility, organization, completion and conformance to its standards.

E. The CHC-MCO must ensure access of the Participant to his or her Comprehensive Medical and Service Records at no charge and upon request.

F. The Department and/or its authorized agents (i.e., any individual or corporation or entity employed, contracted or subcontracted with by the Department) shall be afforded prompt access to all Participants' Comprehensive Medical and Service Records, whether electronic or paper. All Comprehensive Medical and Service Records copies are to be forwarded to the requesting entity within fifteen (15) calendar days of such request and at no expense to the requesting entity. The Department is not required to obtain written approval from a Participant before requesting the Participant's Comprehensive Medical and Service Records from the CHC-MCO, PCP or any other agency.

G. Comprehensive Medical and Service Records must be preserved and maintained for a minimum of ten (10) years from expiration of the CHC-MCO's contract. Comprehensive Medical and Service Records must be made available in paper form upon request.

H. When a Participant changes PCPs, the CHC-MCO must facilitate the transfer of his or her medical records or copies of medical records to the new PCP within five (5) business days from receipt of the request. In emergency situations, the CHC-MCO must facilitate the transfer of medical records as soon as possible from receipt of the request.

I. When a Participant changes CHC-MCOs, the CHC-MCO must facilitate the

transfer of his or her Comprehensive Medical and Service Records or copies of the Comprehensive Medical and Service Records to the new CHC-MCO within five (5) business days from the Start Date in the receiving CHC-MCO. In emergency situations, the CHC-MCO must facilitate the transfer of Comprehensive Medical and Service Records as soon as possible from receipt of the request.

Standard XIV: The QM and UM program must demonstrate a commitment to ensuring that Participants are treated in a manner that acknowledges their defined rights and responsibilities.

A. The CHC-MCO must have a written policy that recognizes the rights of Participants outlined in Exhibit L, Participant Rights.

B. The CHC-MCO must have a written policy that addresses Participant's responsibility for cooperating with those providing healthcare services. This written policy must address Participant's responsibility for:

1) Providing, to the extent possible, information needed by professional staff in caring for the Member; and

2) Following instructions and guidelines given by those providing healthcare services.

3) Participants shall be asked to provide consent to the CHC-MCO, Providers, and their respective designees for the purpose of providing patient care management, outcomes improvement and research. For these purposes, Participants will remain anonymous to the greatest extent possible.

C. The CHC-MCO's policies on Participant rights and responsibilities must be provided to all Network Providers.

D. Upon enrollment, Participants must be provided with a written statement that includes information on the following:

1) Rights and responsibilities of Participants as outlined in Exhibit L, Participant Rights.

2) A Participant Handbook fulfilling the Participant Handbook requirements of this Agreement.

3) All other items outlined in Section V.O., Exhibit M, and requirements of that section for distribution to Participants upon Enrollment.

E. The CHC-MCO must have policies and procedures for resolving Participant Complaints and Grievances that meet all requirements outlined in Exhibit G, Complaint, Grievance, and DHS Fair Hearing Processes. These procedures must include mechanisms that allow for the review of all Complaints and Grievances to determine if quality of care and services issues exists and for

appropriate referral of identified issues.

F. Opportunity must be provided for Participants to offer suggestions for changes in policies and procedures.

G. The CHC-MCO must take steps to promote accessibility of services offered to Participants. These steps must include identification of the points of access to primary care, specialty care, LTSS, and hospital services. At a minimum, Participants must be given information about:

- How to obtain services during regular hours of operation;
- How to obtain after-hours, urgent and emergency care; and
- How to obtain the names, qualifications, and titles of the Healthcare or LTSS Provider providing and/or responsible for their care.

H. The CHC-MCO must develop and maintain policies and procedures to ensure that Participant information (e.g., Participant brochures, announcements, and handbooks) is provided in language that is readable and easily understood.

Standard XV: The CHC-MCO must maintain systems, which document implementation of the written QM and UM program descriptions.

A. The CHC-MCO must document that it is monitoring the quality of care and services across all services, all treatment modalities, and all sub-populations according to its written QM and UM programs.

B. The CHC-MCO must adhere to all systems requirements as outlined in Section V.X.6, Management Information Systems, and Section VIII.C, Systems Reporting, of the Agreement and in Management Information System and Systems Performance Review Standards provided by the Department on the Pennsylvania HealthChoices Extranet.

C. The CHC-MCO must adhere to all Encounter Data requirements as outlined in Section VIII.C.1, Encounter Data Reporting, of the Agreement.

Standard XVI: The QM and UM systems must ensure timely, complete, and regular Assessments for Participants who so require and must oversee development and implementation of PCSPs. They must also measure Participant satisfaction with quality of services, quality of life, experience of care, community integration, and quality of Service Coordination.

A. The CHC-MCO must document that it is monitoring the Assessment process across all populations. Assessments must comply with the content and timeline requirements outlined in this Agreement and must be provided to the populations outlined in Section V.E.

B. The CHC-MCO must demonstrate that it is complying with its Department-approved service coordination staffing, communications, and Participant contact plan as required in this Agreement.

C. The CHC-MCO must demonstrate that Participants who require it are provided person-centered service planning with input into who participates in their PCPTs and into the content of their PCSPs.

D. The CHC-MCO must demonstrate how PCSPs are implemented and how they are monitored to ensure that services outlined are being provided or coordinated across coverages, systems, or agencies.

E. The CHC-MCO must conduct annual Participant surveys using a survey tool approved by the Department to obtain feedback on quality of services, quality of life, experience of care, community integration, and quality of Service Coordination services provided.

Standard XVII: CHC-MCOs must help establish a nursing facility (NFs) Learning Network (LN) with a vendor approved by the Department. The LN will be established in conjunction with each of the MCOs and the Department to provide NFs a consistent approach to quality improvement and infection control as referenced in the NF Quality Incentive Program. The LN will help establish training modules, and regional meetings that will assist NFs in clinical and technical assistance. MCOs will collaborate and coordinate with the Department on the following activities of the LN:

1) Participate in regional and statewide trainings and meetings to support NF personnel to enhance and improve quality measures as defined in the NF Quality Incentive Program.

2) Increase BH services within NFs.

3) Help drive quality improvement by helping to collect data, perform rapid PDCA cycles, and share best practices.

4) Work with local health systems to better enhance transitions of care from the emergency department and inpatient discharges.

5) Implement and/or participate in regional quarterly quality meetings for NFs to share best practices, identify and help resolve NF operational issues that affect quality, and share quality improvement results.

6) Participate in an annual statewide quality meeting that will bring all regions together to share regional experiences and report on the effectiveness of the LN.

EXHIBIT G

COMPLAINT, GRIEVANCE, AND DHS FAIR HEARING PROCESSES

A. General Requirements

1. The CHC-MCO must obtain the Department's prior written approval of its Complaint, Grievance, and Fair Hearing policies and procedures.

2. The CHC-MCO must have written policies and procedures for registering, responding to, and resolving Complaints and Grievances as they relate to the MA population and must make these policies and procedures available to Participants upon request.

3. The CHC-MCO must maintain an accurate written record of each Complaint and Grievance and the actions taken by the CHC-MCO to resolve each Complaint and Grievance. The record must include at least the following:
    a. The name of the Participant on whose behalf the Complaint or Grievance was filed;
    b. The date the Complaint or Grievance was received;
    c. A description of the reason for the Complaint or Grievance;
    d. The date of each review or review meeting;
    e. The date of resolution of the Complaint or Grievance and how the Complaint or Grievance was resolved; and
    f. A Copy of any documents or records reviewed.

    The CHC-MCO must provide the record of each Complaint and Grievance and the actions taken by the CHC-MCO to resolve each Complaint and Grievance to the Department and CMS upon request.

4. The CHC-MCO must submit a log of all Complaint and Grievance decisions in a format specified by the Department and must include review of the Complaint and Grievance processes in its QM and UM programs as outlined in Exhibit F Quality Management and Utilization Management Program Requirements.

5. The CHC-MCO must have a data system to process, track, and trend all Complaints and Grievances.

6. The CHC-MCO must designate and train sufficient staff as reported in the Operating Procedures Report (OPS) 11 Provider Education, to be responsible for receiving, processing, and responding to Participant Complaints and Grievances in accordance with the requirements specified in this Exhibit.

7. CHC-MCO staff performing Complaint and Grievance reviews must have the necessary orientation, clinical training, and experience to make an informed and impartial determination regarding issues assigned to them.

8. The CHC-MCO must provide information about the Complaint and Grievance process to all Providers and subcontractors when the CHC-MCO enters into a contract or agreement with the Provider or subcontractor.

9. The CHC-MCO may not use the timeframes or procedures of the Complaint or Grievance process to avoid the medical decision process or to discourage or prevent a Participant from receiving Medically Necessary care in a timely manner.

10. The CHC-MCO must require that anyone who participates in making the decision on a Complaint or Grievance was not involved in and is not a subordinate of an individual who was involved in any previous level of review or decision-making on the issue that is the subject of the Complaint or Grievance.

11. The CHC-MCO may not charge Participants a fee for filing a Complaint or a Grievance.

12. CHC-MCOs must permit both a Participant or Participant's representative, which may include the Participant's Provider, with proof of the Participant's written authorization for the representative to be involved and/or act on the Participant's behalf, to file a Complaint or Grievance. If a Complaint or Grievance is received by a CHC-MCO from a representative on behalf of the Participant that does not include the Participant's authorization the CHC-MCO must contact the Participant to obtain authorization.

13. The CHC-MCO must allow the Participant and the Participant's representative to have access to all relevant documentation pertaining to the subject of the Complaint or Grievance free of charge and sufficiently in advance of the time frame for resolution of the Complaint or Grievance outlined in this Exhibit.

14. The CHC-MCO must maintain the following information in the Participant's case file:
    a. Medical records;
    b. Any documents or records relied upon or generated by the CHC-MCO in connection with the Complaint or Grievance, including any Medical Necessity criteria used to make a decision or information on coverage limits relied upon to make a decision; and
    c. Any new or additional evidence considered, relied upon, or generated by the CHC-MCO in connection with the Complaint or Grievance.

15. The CHC-MCO must ask the Participant if the Participant needs interpreter services. The CHC-MCO must provide language interpreter services at no cost when requested by a Participant. The CHC-MCO must include in the Complaint or Grievance record documentation that the Participant was asked if the Participant needed an interpreter and if an interpreter was provided.

16. The CHC-MCO must accept Complaints and Grievances from individuals with disabilities which are in alternative formats including: TTY/Videophone/TDD for telephone inquiries and Complaints and Grievances from Participants who are deaf or hearing impaired; Braille; tape; computer disk; and other commonly accepted alternative forms of communication. The CHC-MCO must make its employees who receive telephone Complaints and Grievances aware of the speech limitations of Participants with disabilities so they treat these individuals with patience, understanding, and respect.

17. The CHC-MCO must provide Participants with disabilities assistance in presenting their case at Complaint or Grievance reviews at no cost to the Participant. This includes but is not limited to:
    a. Providing qualified sign language interpreters for Participants who are deaf or hearing impaired;
    b. Providing information submitted on behalf of the CHC-MCO at the Complaint or Grievance review in an alternative format accessible to the Participant filing the Complaint or Grievance. The alternative format version must be supplied to the Participant at or before the review, so the Participant can discuss and/or refute the content during the review; and
    c. Providing personal assistance to a Participant filing the Complaint or Grievance who has other physical limitations in copying and presenting documents and other evidence.

18. The CHC-MCO must offer Participants the assistance of a CHC-MCO staff member throughout the Complaint and Grievance processes at no cost to the Participant.

19. The CHC-MCO must provide Participants with a toll-free number to file a Complaint or Grievance, request information about the Complaint or Grievance process, and ask any questions the Participant may have about the status of a Complaint or a Grievance.

20. The CHC-MCO must, at a minimum, hold in-person reviews of Complaints and Grievances at one location within each of its zones of operation. If a Participant requests an in-person review, the CHC-MCO must notify the Participant of the location of the review and who will be present at the review, using the template specified by the Department.

21. The CHC-MCO must ensure that any location where it will hold in-person reviews is physically accessible for persons with disabilities.

22. The CHC-MCO must notify the Participant when the CHC-MCO fails to decide a first level Complaint or a Grievance within the time frames specified in this Exhibit, using the

template specified by the Department. The CHC-MCO must mail this notice to the Participant one (1) day following the date of the decision (day 31).

23. The CHC-MCO must notify the Participant when it denies payment after a service or item has been delivered because the service or item was provided without authorization by a provider not enrolled in the MA Program, using the template specified by the Department. The CHC-MCO must mail this notice to the Participant on the day the decision is made to deny payment.

24. The CHC-MCO must notify the Participant when it denies payment after a service or item has been delivered because the service or item provided is not a Covered Service for the Participant, using the template specified by the Department. The CHC-MCO must mail this notice to the Participant on the day the decision is made to deny payment.

25. The CHC-MCO must notify the Participant when it denies payment after a service or item has been delivered because the CHC-MCO determined that the service or item was not Medically Necessary, using the template specified by the Department. The CHC-MCO must mail this notice to the Participant on the day the decision is made to deny payment.

26. The CHC-MCO must notify the Participant when it denies the Participant's request to dispute a financial liability, including cost sharing, copayments, premiums, deductibles, coinsurance, and other enrollee financial liabilities using the template specified by the Department. The CHC-MCO must mail this notice to the Participant on the day the decision is made to deny payment.

27. If a Participant continued to receive services at the previously authorized level because the Participant filed a Complaint, Grievance, or Fair Hearing to dispute a decision to discontinue, reduce, or change a service that the Participant has been receiving within fifteen (15) days from the mail date on the written notice of decision, the CHC-MCO must pay for the services pending resolution of the Complaint, Grievance, or Fair Hearing.

28. The CHC-MCO must use all templates specified by the Department, which are available in DocuShare. The CHC-MCO may not modify the templates. The CHC-MCO must follow the instructions in the templates for including detailed, specific information related to the Complaint or Grievance.

B. Complaint Requirements

Complaint: A dispute or objection regarding a particular Provider or the coverage operations, or management of a CHC-MCO, which has not been resolved by the CHC-MCO and has been filed with the CHC-MCO or with PID's Bureau of Managed Care (BMC), including but not limited to:

- a denial because the requested service or item is not a Covered Service; which does not include BLE;

- the failure of the CHC-MCO to provide a service or item in a timely manner, as defined by the Department;

- the failure of the CHC-MCO to decide a Complaint or Grievance within the specified time frames;

- a denial of payment by the CHC-MCO after a service or item has been delivered because the service or item was provided without authorization by a provider not enrolled in the MA Program;

- a denial of payment by the CHC-MCO after a service or item has been delivered because the service or item provided is not a Covered Service for the Participant; or

- a denial of a Participant's request to dispute a financial liability, including cost sharing, copayments, premiums, deductibles, coinsurance, and other Participant financial liabilities.

The term does not include a Grievance.

1. First Level Complaint Process

a. A CHC-MCO must permit a Participant or Participant's representative, which may include the Participant's Provider, with proof of the Participant's written authorization for the representative to be involved and/or act on the Participant's behalf, to file a first level Complaint either in writing or orally. The CHC-MCO must commit oral requests to writing if not confirmed in writing by the Participant and must provide the written Complaint to the Participant or Participant's representative for signature. The signature may be obtained at any point in the process, and failure to obtain a signed Complaint may not delay the Complaint process.

b. If the first level Complaint disputes one of the following, the Participant must file a Complaint within sixty (60) days from the date of the incident complained of or the date the Participant receives written notice of a decision:

- a denial because the service or item is not a Covered Service;
- the failure of the CHC-MCO to provide a service or item in a timely manner, as defined by the Department;
- the failure of the CHC-MCO to decide a Complaint or Grievance within the specified time frames;
- a denial of payment after the service or item has been delivered because the service or item was provided without authorization by a provider not enrolled in the MA Program;
- a denial of payment after the service or item has been delivered because the service or item provided is not a Covered Service for the Participant; or
- a denial of a Participant's request to dispute a financial liability, including cost sharing, copayments, premiums, deductibles, coinsurance, and other Participant financial liabilities,

For all other Complaints, there is no time limit for filing a first level Complaint.

c. A Participant who files a first level Complaint to dispute a decision to discontinue, reduce, or change a service or item that the Participant has been receiving on the basis that the service or item is not a Covered Service must continue to receive the disputed service or item at the previously authorized level pending resolution of the first level Complaint, if the first level Complaint is made verbally, hand delivered, faxed, submitted electronically (via secure e-mail or secure web portal, if available), or post-marked within fifteen (15) days from the mail date on the written notice of decision.

d. Upon receipt of the Complaint, the CHC-MCO must send the Participant and Participant's representative, if the Participant has designated one in writing, a first level Complaint acknowledgment letter using the template specified by the Department. The first level Complaint acknowledgement letter must be sent no later than three (3) business days after the receipt of the Complaint.

e. The first level Complaint review for Complaints **not involving a clinical issue** must be conducted by a first level Complaint review committee, which must include one or more employees of the CHC-MCO who were not involved in and are not the subordinates of an individual involved in any previous level of review or decision-making on the issue that is the subject of the Complaint.

f. The first level Complaint review for Complaints **involving a clinical issue** must be conducted by a first level Complaint review committee, which must include one or more employees of the CHC-MCO who were not involved in and are not the subordinates of an individual involved in any previous level of review or decision-making on the issue that is the subject of the Complaint. The first level Complaint review committee must include a licensed physician or licensed dentist in the same or similar specialty that typically manages or consults on the service or item in question. Other appropriate providers may participate in the review, but the licensed physician or licensed dentist in the same or similar specialty that typically manages or consults on the service or item in question must decide the first level Complaint.

g. A committee member who does not personally attend the first level Complaint review meeting may not be part of the decision-making process unless that member actively participates in the review by telephone or videoconference and has the opportunity to review all information presented during the review.

h. The CHC-MCO must afford the Participant a reasonable opportunity to present evidence and testimony and make legal and factual arguments, in person as well as in writing.

i. The CHC-MCO must give the Participant at least ten (10) days advance written notice of the first level Complaint review date, using the template specified by the Department. The CHC-MCO must be flexible when scheduling the review to facilitate the Participant's attendance. If the Participant cannot appear in person at the review, the CHC-MCO must provide an opportunity for the Participant to communicate with the first level Complaint review committee by telephone or videoconference.

j. The Participant may elect not to attend the first level Complaint review meeting, but the meeting must be conducted with the same protocols as if the Participant was present. All Complaint review meetings must be recorded and transcribed and the recording and transcription must be maintained as part of the Complaint record.

k. If a Participant requests an in-person first level Complaint review, at a minimum, a member of the first level Complaint review committee must be physically present at the location where the first level Complaint review is held and the other members of the first level Complaint review committee must participate in the review through the use of videoconferencing.

l. The decision of the first level Complaint review committee must take into account all comments, documents, records, and other information submitted by

the Participant or the Participant's representative without regard to whether such information was submitted or considered in the initial determination of the issue.

m. Prior to the start of the first level Complaint review meeting, the Participant must be told that the testimony will be recorded. If the Participant agrees to the testimony taken by the Complaint review committee (including the Participant's comments) being recorded, the testimony must be recorded and transcribed verbatim and maintained as part of the Complaint record. If the Participant objects to the testimony being recorded, the Participant's objection must be documented in the Complaint record and the first level Complaint review meeting must proceed without the testimony being recorded.

n. The first level Complaint review committee must complete its review of the Complaint as expeditiously as the Participant's health condition requires.

o. The first level Complaint review committee must prepare a summary of the issues presented and decisions made, which must be maintained as part of the Complaint record.

p. The CHC-MCO must send a written notice of the first level Complaint decision, using the template specified by the Department, to the Participant, Participant's representative, if the Participant has designated one, service Provider and prescribing Provider, if applicable, within thirty (30) days from the date of receipt of the Complaint unless the time frame for deciding the Complaint has been extended by up to fourteen (14) days at the request of the Participant.

q. If the Complaint disputes one of the following, the Participant may file a request for a Fair Hearing, a request for an external review, or both a request for a Fair Hearing and a request for an external review:

    - a denial because that the service or item is not a Covered Service;

    - the failure of the CHC-MCO to provide a service or item in a timely manner, as defined by the Department;

    - the failure of the CHC-MCO to decide the Complaint or Grievance within the specified time frames;

    - a denial of payment by the CHC-MCO after the service or item has been delivered because the service or item was provided without authorization by a provider not enrolled in the MA Program;

    - a denial of payment by the CHC-MCO after the service or item has been delivered because the service or item provided is not a Covered Service for the Participant; or

- a denial of a Participant's request to dispute a financial liability, including cost sharing, copayments, premiums, deductibles, coinsurance, and other Participant financial liabilities.

The Participant or Participant's representative may file a request for a Fair Hearing within one hundred and twenty (120) days from the mail date on the written notice of the CHC-MCO's first level Complaint decision.

The Participant or Participant's representative, which may include the Participant's Provider, with proof of the Participant's written authorization for the representative to be involved and/or act on the Participant's behalf, may file a request for an external review in writing with PID's BMC within fifteen (15) days from the date the Participant receives written notice of the CHC-MCO's first level Complaint decision.

For all other Complaints, the Participant or Participant's representative, which may include the Participant's Provider, with proof of the Participant's written authorization for the representative to be involved and/or act on the Participant's behalf, may file a second level Complaint either in writing or orally within forty-five (45) days from the date the Participant receives written notice of the CHC-MCO's first level Complaint decision.

2. Second Level Complaint Process

a. A CHC-MCO must permit a Participant or Participant's representative, which may include the Participant's Provider, with proof of the Participant's written authorization for the representative to be involved and/or act on the Participant's behalf, to file a second level Complaint either in writing or orally for any Complaint for which a Fair Hearing and external review is not available.

b. Upon receipt of the second level Complaint, the CHC-MCO must send the Participant and Participant's representative, if the Participant has designated one in writing, a second level Complaint acknowledgment letter using the template specified by the Department. The second level Complaint acknowledgement letter must be sent no later than three (3) business days after the receipt of the second level Complaint.

c. The second level Complaint review for Complaints **not involving a clinical issue** must be performed by a second level Complaint review committee made up of three (3) or more individuals who were not involved in and are not the subordinates of an individual involved in any previous level of review or decision-making on the issue that is the subject of the Complaint.

d. The second level Complaint review for Complaints **involving a clinical issue** must be conducted by a second level Complaint review committee made up of three (3) or more individuals who were not involved in and are not the subordinates of an individual involved in any previous level of review or

decision-making on the issue that is the subject of the Complaint. The second level Complaint review committee must include a licensed physician or licensed dentist in the same or similar specialty that typically manages or consults on the service or item in question. Other appropriate providers may participate in the review, but the licensed physician or licensed dentist in the same or similar specialty that typically manages or consults on the service or item in question must decide the second level Complaint.

e. At least one-third of the second level Complaint review committee members may not be employees of the CHC-MCO or a related subsidiary or Affiliate.

f. A committee member who does not personally attend the second level Complaint review may not be part of the decision-making process unless that member actively participates in the review by telephone or videoconference and has the opportunity to review all information introduced during the review.

g. The CHC-MCO must afford the Participant a reasonable opportunity to present evidence and testimony and make legal and factual arguments, in person as well as in writing.

h. The CHC-MCO must give the Participant at least fifteen (15) days advance written notice of the second level review date, using the template specified by the Department. If the Participant cannot appear in person at the review, the CHC-MCO must provide an opportunity for the Participant to communicate with the second level Complaint review committee by telephone or videoconference. The CHC-MCO must be flexible when scheduling the review to facilitate the Member's attendance.

i. The Participant may elect not to attend the second level Complaint review meeting, but the meeting must be conducted with the same protocols as if the Participant was present. All second level Complaint review meetings must be recorded and transcribed verbatim and the recording and transcription must be maintained as part of the second level Complaint record.

j. If a Participant requests an in-person second level Complaint review, at a minimum, a member of the second level Complaint review committee must be physically present at the location where the second level Complaint review is held and the other members of the second level Complaint review committee must participate in the review through the use of videoconferencing.

k. The decision of the second level Complaint review committee must take into account all comments, documents, records, and other information submitted by the Participant or the Participant's representative without regard to whether such information was submitted or considered previously. The decision of the

second level Complaint review committee must be based solely on the information presented at the review.

l. Prior to the start of the second level Complaint review meeting, the Participant must be told that the testimony will be recorded. If the Participant agrees to the testimony taken by the second level Complaint review committee (including the Participant's comments) being recorded, the testimony must be tape-recorded and transcribed verbatim and maintained as part of the second level Complaint record. If the Participant objects to the testimony being recorded, the Participant's objection must be documented in the second level Complaint record and the second level Complaint review meeting must proceed without the testimony being recorded

m. The second level Complaint review committee must complete its review of the second level Complaint as expeditiously as the Participant's health condition requires.

n. The CHC-MCO must send a written notice of the second level Complaint decision, using the template specified by the Department, to the Participant, Participant's representative, if the Participant has designated one in writing, service Provider, and prescribing Provider, if applicable, within forty-five (45) days from the date of receipt of the second level Complaint.

o. The Participant or the Participant's representative, which may include the Participant's Provider, with proof of the Participant's written authorization of the representative to be involved and/or act of the Participant's behalf, may file in writing a request for an external review of the second level Complaint decision with PID's BMC within fifteen (15) days from the date the Participant receives the written notice of the CHC-MCO's second level Complaint decision.

3. **External Complaint Process**

a. If a Participant files a request directly with PID's BMC for an external review of a Complaint decision that disputes a decision to discontinue, reduce, or change a service or item that the Participant has been receiving on the basis that the service or item is not a Covered Service, the Participant must continue to receive the disputed service or item at the previously authorized level pending resolution of the external review, if the request for external review is hand-delivered, faxed, or post-marked within fifteen (15) days from the mail date on the written notice of the CHC-MCO's first or second level Complaint decision.

b. Upon the request of PID's BMC, the CHC-MCO must transmit all records from the CHC-MCO's Complaint review to PID's BMC within thirty (30) days from

the request in the manner prescribed by PID's BMC. The Participant, the Provider, or the CHC-MCO may submit additional materials related to the Complaint.

4. **Expedited Complaint Process**

a. The CHC-MCO must conduct expedited review of a Complaint if the CHC-MCO determines that the Participant's life, physical or mental health, or ability to attain, maintain, or regain maximum function would be placed in jeopardy by following the regular Complaint process or if a Participant or Participant's representative, with proof of the Participant's written authorization for the representative to be involved and/or act on the Participant's behalf, provides the CHC-MCO with a certification from the Participant's Provider that the Participant's life, physical or mental health, or ability to attain, maintain, or regain maximum function would be placed in jeopardy by following the regular Complaint process. The certification must include the Provider's signature.

b. A request for an expedited review of a Complaint may be filed in writing via mail, by fax, submitted electronically (via secure email or secure web portal, if available), or orally.

c. Upon receipt of an oral or written request for expedited review, the CHC-MCO must inform the Participant of the right to present evidence and testimony and make legal and factual arguments in person as well as in writing and of the limited time available to do so.

d. If the Provider certification is not included with the request for an expedited review and the CHC-MCO cannot determine based on the information provided that the Participant's life, physical or mental health, or ability to attain, maintain, or regain maximum function would be placed in jeopardy by following the regular Complaint process, the CHC-MCO must inform the Participant that the Provider must submit a certification as to the reasons why the expedited review is needed. The CHC-MCO must make a reasonable effort to obtain the certification from the Provider. If the Provider certification is not received within seventy-two (72) hours of the Participant's request for expedited review, the CHC-MCO must decide the Complaint within the standard time frames as set forth in this Exhibit, unless the time frame for deciding the Complaint has been extended by up to fourteen (14) days at the request of the Participant. If the CHC-MCO decides that expedited consideration within the initial or extended time frame is not warranted, the CHC-MCO must make a reasonable effort to give the Participant prompt oral notice that the Complaint is to be decided within the standard time frame and send a written notice within two (2) business days of the decision to deny expedited review, using the template specified by the Department.

e. A Participant who files a request for expedited review of a Complaint to dispute a decision to discontinue, reduce, or change a service or item that the Participant has been receiving on the basis that the service or item is not a Covered Service must continue to receive the disputed service or item at the previously authorized level pending resolution of the Complaint, if the request for expedited review is made orally, hand delivered, faxed, submitted electronically (via secure email or secure web portal, if available), or post-marked within fifteen (15) days from the mail date on the written notice of decision.

f. Expedited review of a Complaint must be conducted by a Complaint review committee that includes a licensed physician or licensed dentist in the same or similar specialty that typically manages or consults on the service or item in question. If the Complaint is related to dental services, the expedited Complaint review committee must include a dentist. Other appropriate providers may participate in the review, but the licensed physician or licensed dentist in the same or similar specialty that typically manages or consults on the service or item in question must decide the Complaint. The members of the expedited Complaint review committee may not have been involved in and not be the subordinates of an individual involved in any previous level of review or decision-making on the issue that is the subject of the Complaint.

g. Prior to the start of the expedited Complaint review meeting, the Participant must be told that the testimony will be recorded. If the Participant agrees to the testimony taken by the Complaint review committee (including the Participant's comments) being recorded, the testimony must be recorded and transcribed verbatim and maintained as part of the Complaint record. If the Participant objects to the testimony being recorded, the Participant's objection must be documented in the Complaint record and the expedited review meeting must proceed without the testimony being recorded.

h. The CHC-MCO must issue the decision resulting from the expedited review in person or by phone to the Participant, the Participant's representative, if the Participant has designated one in writing, service Provider and prescribing Provider, if applicable, within either forty-eight (48) hours of receiving the Provider certification or seventy-two (72) hours of receiving the Participant's request for an expedited review, whichever is shorter, unless the time frame for deciding the expedited complaint has been extended by up to fourteen (14) days at the request of the Participant. In addition, the CHC-MCO must mail written notice of the decision to the Participant, the Participant's representative, if the Participant has designated one in writing, the Participant's service Provider, and prescribing Provider, if applicable, within two (2) business days of the decision, using the template specified by the Department.

i. The Participant or the Participant's representative may file a request for a Fair Hearing within one hundred and twenty (120) days from the mail date on the written notice of the CHC-MCO's expedited Complaint decision.

j. A request for an expedited Fair Hearing may be filed verbally, or in writing via mail, fax, or secure email.

k. The Participant, or the Participant's representative, which may include the Participant's Provider, with proof of the Participant's written authorization for the representative to be involved and/or act on the Participant's behalf, may file a request for an expedited external Complaint review with the CHC-MCO within two (2) business days from the date the Participant receives the CHC-MCO's expedited Complaint decision. A Participant who files a request for an expedited Complaint review that disputes a decision to discontinue, reduce, or change a service or item that the Participant has been receiving must continue to receive the disputed service or item at the previously authorized level pending resolution of the request for expedited Complaint review.

l. The CHC-MCO must follow PID's BMC guidelines relating to submission of requests for expedited external Complaint reviews.

m. The CHC-MCO may not take punitive action against a Provider who requests expedited resolution of a Complaint or supports a Participant's request for expedited review of a Complaint.

C. Grievance Requirements

Grievance: A request to an MA Managed Care Plan by a Participant or a health care provider (with the written consent of the Participant), or a Participant's authorized representative to have an MA Managed Care Plan reconsider a decision solely concerning the medical necessity, appropriateness, health care setting, level of care or effectiveness of a health care service. If the MA Managed Care Plan is unable to resolve the matter, a grievance may be filed regarding the decision that:

(1) disapproves full or partial payment for a requested health care service;

(2) approves the provision of a requested health care service for a lesser scope or duration than requested; or

(3) disapproves payment for the provision of a requested health care service but approves payment for the provision of an alternative health care service

(4) reduces, suspends, or terminates a previously authorized service.

The term does not include a complaint.

1. Grievance Process

a. A CHC-MCO must permit a Participant or Participant's representative, which may include the Participant's Provider, with proof of the Participant's written authorization for the representative to be involved and/or act on the Participant's behalf, to file a Grievance either in writing or orally. The CHC-MCO must commit oral requests to writing if not confirmed in writing by the Participant and must provide the written Grievance to the Participant or the Participant's representative for signature. The signature may be obtained at any point in the process, and the failure to obtain a signed Grievance may not delay the Grievance process.

b. A Participant must file a Grievance within sixty (60) days from the date the Participant receives written notice of decision.

c. A Participant who files a Grievance to dispute a decision to discontinue, reduce, or change a service or item that the Participant has been receiving must continue to receive the disputed service or item at the previously authorized level pending resolution of the Grievance, if the request for review of the Grievance is made orally, hand delivered, faxed, submitted electronically (via secure email or secure web portal, if available), or post-marked within fifteen (15) days from the mail date on the written notice of decision.

d. Upon receipt of the Grievance, the CHC-MCO must send the Participant and Participant's representative, if the Participant has designated one in writing, a Grievance acknowledgment letter using the template specified by the Department. The Grievance acknowledgement letter must be sent no later than three (3) business days after receipt of the Grievance.

e. A Participant who consents to the filing of a Grievance by a Provider may not file a separate Grievance. The Participant may rescind consent throughout the process upon written notice to the CHC-MCO and the Provider.

f. In order for the Provider to represent the Participant in the conduct of a Grievance, the Provider must obtain the written consent of the Participant and submit the written consent with the Grievance. A Provider may obtain the Participant's written permission at the time of treatment. The CHC-MCO must assure that a Provider does NOT require a Participant to sign a document authorizing the Provider to file a Grievance as a condition of treatment. The written consent must include:

    i. The name and address of the Participant, the Participant's date of birth and identification number;

    ii. If the Participant is legally incompetent, the name, address, and relationship to the Participant of the person who signed the consent;

iii. The name, address, and CHC-MCO identification number of the Provider to whom the Participant is providing consent;

iv. The name and address of the CHC-MCO to which the Grievance will be submitted;

v. An explanation of the specific service or item which was provided or denied to the Participant to which the consent will apply;

vi. The following statement: "The Participant or the Participant's representative may not submit a Grievance concerning the service or item listed in this consent form unless the Participant or the Participant's representative rescinds consent in writing. The Participant or the Participant's representative has the right to rescind consent at any time during the Grievance process.";

vii. The following statement: "The consent of the Participant or the Participant's representative shall be automatically rescinded if the Provider fails to file a Grievance or fails to continue to prosecute the Grievance through the review process.";

viii. The following statement: "The Participant or the Participant's representative, if the Participant is legally incompetent, has read, or has been read, this consent form, and has had it explained to his/her satisfaction. The Participant or the Participant's representative understands the information in the Participant's consent form."; and

ix. The dated signature of the Participant, or the Participant's representative, and the dated signature of a witness.

g. The Grievance review must be conducted by a Grievance review committee made up of three (3) or more individuals who were not involved in and are not the subordinates of an individual involved in any previous level of review or decision-making on the issue that is the subject of the Grievance.

h. At least one-third of the Grievance review committee may not be employees of the CHC-MCO or a related subsidiary or Affiliate.

i. The Grievance review committee must include a licensed physician or licensed dentist in the same or similar specialty that typically manages or consults on the service or item in question. If the Grievance is related to dental

services, the Grievance review committee must include a dentist. Other appropriate providers may participate in the review, but the licensed physician or licensed dentist in the same or similar specialty that typically manages or consults on the service or item in question must decide the Grievance.

j. A committee member who does not personally attend the Grievance review may not be part of the decision-making process unless that member actively participates in the review by telephone or videoconference and has the opportunity to review all information introduced during the review.

k. The CHC-MCO must afford the Participant a reasonable opportunity to present evidence and testimony and make legal and factual arguments, in person as well as in writing.

l. The CHC-MCO must give the Participant at least ten (10) days advance written notice of the review date, using the template specified by the Department. The CHC-MCO must be flexible when scheduling the review to facilitate the Participant's attendance. If the Participant cannot appear in person at the review, the CHC-MCO must provide an opportunity for the Participant to communicate with the Grievance review committee by telephone or videoconference.

m. The Participant may elect not to attend the Grievance review meeting, but the meeting must be conducted with the same protocols as if the Participant was present. All Grievance review meetings must be recorded and transcribed verbatim and the recording and transcription must be maintained as part of the Grievance record.

n. If a Participant requests an in-person Grievance review, at a minimum, a member of the Grievance review committee must be physically present at the location where the Grievance review is held and the other members of the Grievance review committee must participate in the review through the use of videoconferencing.

o. The decision of the Grievance review committee must take into account all comments, documents, records, and other information submitted by the Participant or the Participant's representative without regard to whether such information was submitted or considered in the initial determination of the issue. The decision of the Grievance review committee must be based solely on the information presented at the review.

p. Prior to the start of the Grievance review meeting, the Participant must be told that the testimony will be recorded. If the Participant agrees to the testimony taken by the Grievance review committee (including the Participant's comments) being recorded, the testimony must be recorded and transcribed

verbatim and a written transcription prepared and maintained as part of the Grievance record. If the Participant objects to the testimony being recorded, the Member's objection must be documented in the Grievance record and the Grievance review meeting must proceed without the testimony being recorded.

q. The Grievance review committee must complete its review of the Grievance as expeditiously as the Participant's health condition requires.

r. The CHC-MCO must send a written notice of the Grievance decision, using the template specified by the Department, to the Participant, Participant's representative, if the Participant has designated one in writing, service Provider and prescribing Provider, if applicable, within thirty (30) days from the date the CHC-MCO received the Grievance, unless the time frame for deciding the Grievance has been extended by up to fourteen (14) days at the request of the Participant.

s. The Participant may file a request for a Fair Hearing, a request for an external review, or both a request for a Fair Hearing and a request for an external review.

t. The Participant or Participant's representative may file a request for a Fair Hearing within one hundred and twenty (120) days from the mail date on the written notice of the CHC-MCO's Grievance decision.

u. The Participant or Participant's representative, which may include the Participant's Provider, with proof of the Participant's written authorization for a representative to be involved and/or act on the Participant's behalf, may file a request with the CHC-MCO for an external review of a Grievance decision by a IRO appointed by PID's BMC. The request must be filed in writing or orally within fifteen (15) days from the date the Participant receives the written notice of the CHC-MCO's Grievance decision.

2. External Grievance Process:

a. The CHC-MCO must process all requests for external Grievance review. The CHC-MCO must follow the protocols established by PID's BMC in meeting all time frames and requirements necessary in coordinating the request and notification of the decision to the Participant, Participant's representative, if the Participant has designated one in writing, service Provider, and prescribing Provider.

b. A Participant who files a request for an external Grievance review that disputes a decision to discontinue, reduce, or change a service or item that the

Participant has been receiving must continue to receive the disputed service or item at the previously authorized level pending resolution of the external Grievance review, if the request for external Grievance review is made orally, hand delivered, faxed, or post-marked within fifteen (15) days from the mail date on the written notice of the CHC-MCO's Grievance decision.

c. Within five (5) business days of receipt of the request for an external Grievance review, the CHC-MCO must notify the Participant, the Participant's representative, if the Participant has designated one in writing, the Provider if the Provider filed the request for the external Grievance, and PID's BMC that the request for external Grievance review has been filed.

d. The external Grievance review must be conducted by a IRO not affiliated with the CHC-MCO.

e. Within two (2) business days from receipt of the request for an external Grievance review, PID's BMC will randomly assign a IRO to conduct the review and notify the CHC-MCO and assigned IRO of the assignment.

f. Within the same two (2) business day timeframe, PID's BMC shall notify the Participant or the Participant's authorized representative of the name, address, e-mail address, fax number and telephone number of the IRO assigned under this subsection. The notice shall inform the Participant and the Participant's authorized representative of the right to submit additional written information to the IRO within twenty (20) days of the date the IRO assignment notice was mailed and shall include instructions for submitting additional information to the IRO by mail, fax, or electronically.

g. If PID's BMC fails to select an IRO within two (2) business days from receipt of a request for an external Grievance review, the CHC-MCO may designate an IRO to conduct a review from the list of IROs approved by PID's BMC. The CHC-MCO may not select an IRO that has a current contract or is negotiating a contract with the CHC-MCO or its Affiliates or is otherwise affiliated with the CHC-MCO or its Affiliates.

h. The CHC-MCO must forward all documentation regarding the Grievance decision, including all supporting information, a summary of applicable issues, and the basis and clinical rationale for the Grievance decision, to the IRO conducting the external Grievance review. The CHC-MCO must transmit this information within fifteen (15) days from receipt of the Participant's request for an external Grievance review.

i. Within fifteen (15) days from receipt of the request for an external Grievance review by the CHC-MCO, the Participant or the Participant's representative, or the Participant's Provider, may supply additional information to the IRO

conducting the external Grievance review for consideration. Copies must also be provided at the same time to the CHC-MCO so that the CHC-MCO has an opportunity to consider the additional information.

j. Within sixty (60) days from the filing of the request for the external Grievance review, the IRO conducting the external Grievance review must issue a written decision to the CHC-MCO, the Participant, the Participant's representative, PID's BMC and the Provider (if the Provider filed the Grievance with the Participant's consent), that includes the basis and clinical rationale for the decision. The standard of review must be whether the service or item is Medically Necessary and appropriate under the terms of this Agreement.

k. The external Grievance decision may be appealed by the Participant, the Participant's representative, or the Provider to a court of competent jurisdiction within sixty (60) days from the date the Participant receives notice of the external Grievance decision.

3. Expedited Grievance Process

a. The CHC-MCO must conduct expedited review of a Grievance if the CHC-MCO determines that the Participant's life, physical or mental health, or ability to attain, maintain, or regain maximum function would be placed in jeopardy by following the regular Grievance process or if a Participant or Participant representative, with proof of the Participant's written authorization for a representative to be involved and/or act on the Participant's behalf, provides the CHC-MCO with a certification from the Participant's Provider that the Participant's life, physical or mental health, or ability to attain, maintain, or regain maximum function would be placed in jeopardy by following the regular Grievance process. The certification must include the Provider's signature.

b. A request for expedited review of a Grievance may be filed either in writing via mail, by fax, electronically (via secure email or secure web portal, if available), or orally.

c. The expedited review process is bound by the same rules and procedures as the Grievance review process with the exception of timeframes, which are modified as specified in this section.

d. Upon receipt of an oral or written request for expedited review, the CHC-MCO must inform the Participant of the right to present evidence and testimony and make legal and factual arguments in person as well as in writing and of the limited time available to do so.

e. If the Provider certification is not included with the request for an expedited review and the CHC-MCO cannot determine based on the information provided that the Participant's life, physical or mental health, or ability to attain, maintain, or regain maximum function would be placed in jeopardy by following the regular Grievance process, the CHC-MCO must inform the Participant that the Provider must submit a certification as to the reasons why the expedited review is needed. The CHC-MCO must make a reasonable effort to obtain the certification from the Provider. If the Provider certification is not received within seventy-two (72) hours of the Participant's request for expedited review, the CHC-MCO must decide the Grievance within the standard time frames as set forth in this Exhibit unless the time frame for deciding the Grievance has been extended by up to fourteen (14) days at the request of the Participant. If the CHC-MCO decides that expedited consideration with the initial or extended time frame is not warranted, the CHC-MCO must make a reasonable effort to give the Participant prompt oral notice that the Grievance is to be decided within the standard time frame and send a written notice within two (2) business days of the decision to deny expedited review, using the template specified by the Department.

f. A Participant who files a request for expedited review of a Grievance to dispute a decision to discontinue, reduce or change a service or item that the Participant has been receiving must continue to receive the disputed service or item at the previously authorized level pending resolution of the Grievance, if the request for expedited review of a Grievance is made verbally, hand delivered, submitted electronically (via secure email or secure web portal, if available), or post-marked within fifteen (15) days from the mail date on the written notice of decision.

g. Expedited review of a Grievance must be conducted by a Grievance review committee made up of three (3) or more individuals who were not involved in and are not the subordinates of an individual involved in any previous level of review or decision-making on the issue that is the subject of the Grievance.

h. At least one-third of the expedited Grievance review committee may not be employees of the CHC-MCO or a related subsidiary or Affiliate.

i. The expedited Grievance review committee must include a licensed physician or licensed dentist in the same or similar specialty that typically manages or consults on the service or item in question. If the Grievance is related to dental services, the expedited Grievance review committee must include a dentist. Other appropriate providers may participate in the review, but the licensed physician or licensed dentist in the same or similar specialty that typically manages or consults on the service or item in question must decide the Grievance.

j. Prior to the start of the expedited Grievance review meeting, the Participant must be told that the testimony will be recorded. If the Participant agrees to

the testimony taken by the Grievance review committee (including the Participant's comments) being recorded, the testimony must be recorded and transcribed verbatim and a written transcription prepared and maintained as part of the Grievance record. If the Participant objects to the testimony being recorded, the Participant's objection must be documented in the expedited Grievance record and the expedited Grievance review meeting must proceed without the testimony being recorded.

k. The CHC-MCO must issue the decision resulting from the expedited review in person or by phone to the Participant, to the Participant's representative if the Participant has designated one in writing, to the service Provider, and to the prescribing Provider within either forty eight (48) hours of receiving the Provider certification or seventy-two (72) hours of receiving the Participant's request for an expedited review, whichever is shorter, unless the time frame for deciding the expedited Grievance has been extended by up to fourteen (14) days at the request of the Participant. In addition, the CHC-MCO must mail written notice of the decision to the Participant, to the Participant's representative, if the Participant has designated one in writing, to the service Provider, and to the prescribing Provider, if applicable, within two (2) business days of the decision, using the template specified by the Department.

l. The Participant or the Participant's representative may file a request for a Fair Hearing within one hundred and twenty (120) days from the mail date on the written notice of the CHC-MCO's expedited Grievance decision.

m. A request for an expedited Fair Hearing may be filed with the Department's Bureau of Hearings and Appeals verbally, or in writing via mail, fax, or secure email.

n. The Participant, or Participant's representative, which may include the Participant's Provider, with proof of the Participant's written authorization for the representative to be involved and/or act on the Participant's behalf, may file a request for an expedited external Grievance review with the CHC-MCO within two (2) business days from the date the Participant receives the CHC-MCO's expedited Grievance decision. A Participant who files a request for an expedited external Grievance review to dispute a decision to discontinue, reduce, or change a service or item that the Participant has been receiving must continue to receive the disputed service or item at the previously authorized level pending resolution of the request for expedited Grievance review.

o. The CHC-MCO must follow PID's BMC guidelines relating to submission of requests for expedited external reviews.

p. The CHC-MCO may not take punitive action against a Provider who requests expedited resolution of a Grievance or supports a Participant's request for expedited review of a Grievance.

D. Department's Fair Hearing Requirements

Fair Hearing: A hearing conducted by the Department's Bureau of Hearings and Appeals (BHA) or a Department designee.

1. Fair Hearing Process

a. A Participant or Participant's representative must file a Complaint or Grievance with the CHC-MCO and receive a decision on the Complaint or Grievance before filing a request for a Fair Hearing. If the CHC-MCO fails to provide written notice of a Complaint or Grievance decision within the time frames specified in this Exhibit, the Participant is deemed to have exhausted the Complaint or Grievance process and may request a Fair Hearing.

b. The Participant or the Participant's representative may request a Fair Hearing within one hundred and twenty (120) days from the mail date on the written notice of the CHC-MCO's first level Complaint decision or Grievance decision for any of the following:

i. the denial, in whole or part, of payment for a requested service or item based on lack of Medical Necessity;

ii. the denial of a requested service or item because the service or item is not a Covered Service;

iii. the reduction, suspension, or termination of a previously authorized service or item;

iv. the denial of a requested service or item but approval of an alternative service or item;

v. the failure of the CHC-MCO to provide a service or item in a timely manner, as defined by the Department;

vi. the failure of a CHC-MCO to decide a Complaint or Grievance within the specified time frames;

vii. the denial of payment after a service or item has been delivered because the service or item was provided without authorization by a provider not enrolled in the MA Program;

viii. the denial of payment after a service or item has been delivered because the service or item is not a Covered Service for the Participant;

ix. the denial of a Participant's request to dispute a financial liability, including cost sharing, copayments, premiums, deductibles, coinsurance, and other Participant financial liabilities.

c. The request for a Fair Hearing must include a copy of the written notice of decision that is the subject of the request unless the CHC-MCO failed to provide written notice of the Complaint or Grievance decision within the time frames specified in this Exhibit. Requests must be sent to:

Department of Human Services
OLTL/Forum Place 6th Floor
Complaint, Grievance and Fair Hearings
P.O. Box 8025
Harrisburg, Pennsylvania 17105-8025

d. A Participant who files a request for a Fair Hearing that disputes a decision to discontinue, reduce, or change a service or item that the Participant has been receiving must continue to receive the disputed service or item at the previously authorized level pending resolution of the Fair Hearing, if the request for a Fair Hearing is hand delivered, emailed, faxed, or post-marked within fifteen (15) days from the mail date on the written notice of decision.

e. Upon receipt of the request for a Fair Hearing, BHA or the Department's designee will schedule a hearing. The Participant and the CHC-MCO will receive notification of the hearing date by letter at least ten (10) days before the hearing date, or a shorter time if requested by the Participant. The letter will outline the type of hearing, the location of the hearing (if applicable), and the date and time of the hearing.

f. The CHC-MCO is a party to the hearing and must be present. The CHC-MCO, which may be represented by an attorney, must be prepared to explain and defend the issue on appeal. BHA's decision is based solely on the evidence presented at the hearing. The absence of the CHC-MCO from the hearing will not be reason to postpone the hearing.

g. The CHC-MCO must provide Participants, at no cost, with records, reports, and documents, relevant to the subject of the Fair Hearing.

h. BHA will issue an adjudication within ninety (90) days of the date the Participant filed the first level Complaint or the Grievance with the CHC-MCO, not including the number of days before the Participant requested the Fair Hearing. If BHA fails to issue an adjudication within ninety (90) days of receipt of the initial request for the Fair Hearing, the CHC-MCO must comply with the requirements at 55 Pa. Code § 275.4 regarding the provision of interim assistance upon the request for such by the Participant. When the Participant is responsible for delaying the hearing process, the time limit by which BHA must issue the adjudication prior to interim assistance being afforded will be extended by the length of the delay attributed to the Participant.

i. BHA's adjudication is binding on the CHC-MCO unless reversed by the Secretary of Human Services. Either party may request reconsideration from the Secretary within fifteen (15) days from the date of the adjudication. Only the Participant may appeal to Commonwealth Court within thirty (30) days from the date of the BHA adjudication or from the date of the Secretary's final order, if reconsideration was granted. The decisions of the Secretary and the Court are binding on the CHC-MCO.

2. Expedited Fair Hearing Process

a. A Participant or the Participant's representative may file a request for an expedited Fair Hearing with the Department either in writing or orally.

b. A Participant must exhaust the Complaint or Grievance process prior to filing a request for an expedited Fair Hearing.

c. BHA will conduct an expedited Fair Hearing if a Participant or a Participant's representative provides the Department with a signed written certification from the Participant's Provider that the Participant's life, physical or mental health, or ability to attain, maintain, or regain maximum function would be placed in jeopardy by following the regular Fair Hearing process or if the Provider provides testimony at the Fair Hearing which explains why using the usual time frames would place the Participant's health in jeopardy.

d. A Participant who files a request for an expedited Fair Hearing to dispute a decision to discontinue, reduce, or change a service or item that the Participant has been receiving must continue to receive the disputed service or item at the previously authorized level pending resolution of the Fair Hearing, if the request for an expedited Fair Hearing is made verbally, hand

delivered, emailed, faxed, or post-marked within fifteen (15) days from the mail date on the written notice of decision.

e. Upon the receipt of the request for an expedited Fair Hearing, BHA or the Department's designee will schedule a hearing.

f. The CHC-MCO is a party to the hearing and must be present. The CHC-MCO, which may be represented by an attorney, must be prepared to explain and defend the issue on appeal. The absence of the CHC-MCO from the hearing will not be reason to postpone the hearing.

g. The CHC-MCO must provide the Participant, at no cost, with records, reports, and documents relevant to the subject of the Fair Hearing.

h. BHA has three (3) business days from the receipt of the Participant's oral or written request for an expedited review to process final administrative action.

i. BHA's adjudication is binding on the CHC-MCO unless reversed by the Secretary of Human Services. Either party may request reconsideration from the Secretary within fifteen (15) days from the date of the adjudication. Only the Participant may appeal to Commonwealth Court within thirty (30) days from the date of adjudication or from the date of the Secretary's final order, if reconsideration was granted. The decisions of the Secretary and the Court are binding on the CHC-MCO.

E. Provision of and Payment for Service or Item Following Decision

1. If the CHC-MCO, BHA, or the Secretary reverses a decision to deny, limit, or delay a service or item that was not furnished during the Complaint, Grievance, or Fair Hearing process, the CHC-MCO must authorize or provide the disputed service or item as expeditiously as the Participant's health condition requires but no later than seventy-two (72) hours from the date it receives notice that the decision was reversed. If the CHC-MCO requests reconsideration, the CHC-MCO must authorize or provide the disputed service or item pending reconsideration unless the CHC-MCO requests a stay of the BHA decision and the stay is granted.

2. If the CHC-MCO, BHA, or the Secretary reverses a decision to deny authorization of a service or item, and the Participant received the disputed service or item during the Complaint, Grievance, or Fair Hearing process, the CHC-MCO must pay for the service or item that the Participant received.

3. If a Participant requests both an external appeal/review and a Fair Hearing, and

if the decisions rendered as a result of the external review and Fair Hearing are in conflict with one another, the CHC-MCO must abide by the decision most favorable to the Participant. In the event of a dispute or uncertainty regarding which decision is most favorable to the Participant, the CHC-MCO must submit the matter to DHS' the Department's Grievance and Appeals Coordinator for review and resolution.

EXHIBIT H

COORDINATION WITH

BEHAVIORAL HEALTH MANAGED CARE ORGANIZATIONS

Written agreements between the CHC-MCO and the BH-MCO must reflect the requirements for how the CHC-MCO and BH-MCO will coordinate services for all Participants, including those in NFs and those receiving LTSS at home. A sample coordination agreement (which does not include all required procedures) is available on the Intranet supporting CHC. The written agreements must include, but not be limited to:

- Procedures which govern referral, collaboration, and coordination of diagnostic assessment and treatment, prescribing practices, the provision of ED services, and other treatment issues necessary for optimal health and prevention of disease. The CHC-MCO and the BH-MCO must collaborate in relation to the provision of ED services. Emergency services provided in general hospital EDs are the responsibility of the CHC-MCO, regardless of the diagnosis or services provided. The only exception is for ED evaluations for voluntary or involuntary commitment pursuant to the 1976 Mental Health Procedures Act, 50 P.S. §§ 7107 - 7116, which are the responsibility of the BH-MCO. Responsibility for inpatient admission will be based upon the Participant's primary diagnosis. Procedures must define and explain how payment will be shared when the Participant's primary diagnosis changes during a continuous hospital stay;

- Procedures, including Prior Authorization, which govern reimbursement by the BH- MCO to the CHC-MCO for BH services provided by the CHC-MCO or vice versa. Procedures must include provisions for differential diagnosis of persons with coexisting physical and BH disorders, as well as provisions for cost-sharing when both physical and BH services are provided to a Participant;

- Procedures for the exchange of enrollment and health-related information among the BH-MCO, the CHC-MCO, the PCP, and Providers of BH and Covered Services in accordance with Federal and State confidentiality statutes and regulations (e.g., periodic treatment updates with identified primary and relevant specialty Providers);

- Policy and procedures for obtaining releases to share clinical information and providing health records to each other as requested, consistent with Federal and State confidentiality requirements;

- Procedures for training and consultation to each other to facilitate continuity of care and cost-effective use of resources;

- A mechanism for timely resolution of any clinical and fiscal payment disputes, including procedures for entering into binding arbitration to obtain final resolution;

- Procedures for serving on interagency teams, as necessary;

- Procedures for the development of adequate Provider Networks to serve special needs populations and coordination of specialized service plans between the BH-MCO service managers, BH service provider(s) and the PCP for Participants with special health needs (e.g., older adults with coexisting physical and behavioral health disorders);

- Procedures for the coordination and payment of emergency and non-emergency Medically Necessary ambulance transportation of Participants. All emergency and non-emergency Medically Necessary ambulance transportation for both physical and BH services Covered Services is the responsibility of the CHC-MCO, including for a BH diagnosis.

- Procedures for the coordination of laboratory services;

- Mechanisms and procedures to ensure coordination between the BH-MCO service managers, Participant services staff and BH-MCO network providers with the CHC-MCO's Service Coordination unit. The effectiveness of these mechanisms shall be included as an area for review by the BH-MCO's Quality Assurance Program and the CHC-MCO's QM Program;

- Procedures for the CHC-MCO to provide physical examinations required for the delivery of BH services, within designated time frames for each service;

- Procedures for the interaction and coordination of pharmacy services.

To ensure that there is support for the coordination of care between the PCP and the BH provider, appropriate county contacts can be found at the following Internet addresses:

County MH/ID Administrators:
https://www.dhs.pa.gov/providers/Providers/Pages/County-Mental-Health-System.aspx
Single County Authorities (SCAs):
https://www.ddap.pa.gov/Get%20Help%20Now/Pages/County-Drug-and-Alcohol-Offices.aspx

EXHIBIT I

GUIDELINES FOR CHC-MCO ADVERTISING, SPONSORSHIPS, AND OUTREACH

I. Overview

The CHC-MCO must submit a plan for advertising, sponsorship, and outreach procedures to the Department for advance written approval in accordance with the guidelines outlined in this exhibit. This plan must address how the CHC-MCO will market its D-SNP to Participants.

II. Community HealthChoices Outreach Procedures

The CHC-MCO must adhere to the following guidelines and all the requirements specified in Section V.O.2, CHC-MCO Outreach Materials, and V.O.3, CHC-MCO Outreach Activities, of the Agreement when submitting outreach materials, policies and procedures to the Department.

A. Submission of CHC-MCO Outreach Materials

Purpose: To obtain Department approval of new or revised outreach materials, plans or procedures.

Objectives:

1. To assure that CHC-MCO outreach materials are accurate.

2. To prevent the CHC-MCO from distributing outreach materials that mislead, confuse or defraud either the Participant or the Department.

Process:

1. The CHC-MCO submits outreach materials to the Department for prior approval using the CHC Educational Materials Approval Form (form attached).

2. The Department's contract monitoring Core Team will review and forward to the CHC-MCO a preliminary response within thirty (30) calendar days from date of receipt of the request form.

   Exception: Should the materials require comments or approval from offices outside the Department contract monitoring Core Team, the turnaround time would be as soon as possible.

3. The CHC-MCO will submit a final copy of the outreach materials to the Department contract monitoring Core Team for a final written approval prior to circulating the materials.

4. The Department review agency will forward a final written approval to the CHC-MCO within ten (10) business days.

5. Outreach material usage:

   a. Direct outreach materials will be used only by the IEB personnel after final written approval is received by the CHC-MCO from the Department.

   b. Indirect outreach materials (i.e., advertisements) may be utilized immediately after final written approval is received by the CHC-MCO from the Department.

B. Criteria for Review of CHC-MCO Outreach Materials

Purpose: To ensure that printed materials, advertising, promotional activities, and new Participant orientations coordinated through the IEB are designed to enable Participants to make an informed choice.

Objectives:

1.To ensure that the information complies with all Federal and State requirements.

2.To determine if the information is grammatically correct and appropriate for Pennsylvania's Medical Assistance population.

3. To ensure that outreach materials are accurate and do not mislead, confuse, or defraud the Participant or the Department with the assertion or statement that the Participant must enroll in the CHC-MCO in order to obtain Medical Assistance benefits, or in order to not lose Medical Assistance benefits.

4. To ensure that the outreach materials do not contain assertions or statements that a Participant must enroll in the aligned D-SNP of the CHC-MCO.

5. To ensure that there are no assertions or statements that the CHC-MCO is endorsed by CMS, the Federal or State government, or similar entity.

Process:

1. Receive a written overall outreach plan annually if the CHC-MCO anticipates participation in outreach activities. Requests for specific indirect advertising must be submitted thirty (30) calendar days in advance for written Department approval.
2. Determine if approval is necessary from other offices.
3. Review the information with the following criteria:

    a. Is the CHC-MCO identified?
    b. Does the information comply with all Federal and State regulations?
    c. Is the information presented in grammatically correct, precise, appropriate and unambiguous language, easily understood by the target audience (i.e., age and language) and does it avoid the use of industry jargon?
    d. Is the information fair, relevant, accurate and not misleading or disparaging to competitors?
    e. Can the information be easily understood by a person with a sixth grade education?
    f. Does the information include symbols or pictures that are discriminating because of race, color, creed, age, religion, sex, sexual orientation, gender identity, national origin, ancestry, marital status, income status, health status, physical or mental disability, or otherwise?
    g. Does the information create a negative image of the traditional FFS system?

4. The Department will forward a final written response to the CHC-MCO within ten (10) business days.

C. CHC-MCO Participating In or Hosting an Event

The CHC-MCO may submit requests to sponsor or participate in health fairs or community events; the request should demonstrate that the CHC-MCO will participate in such fairs or events through activities, including approved outreach activities that are primarily health-care related. The CHC-MCO must receive advance written approval from the Department prior to the event date. All requests must be submitted to the Department at least thirty (30) calendar days in advance of the event, on the forms which are included as part of this attachment.

Purpose: To clarify for CHC-MCOs that Pennsylvania laws and regulations prohibit certain kinds of offers or payments to Participants as inducements or incentives for Participants to use the CHC-MCO's services.

Objectives:

1. To provide amenities that create an environment that is comfortable and convenient for Participants but is not offered as an artificial outreach inducement or incentive.

2. To eliminate fraudulent, abusive and deceptive practices that may occur as incentives or inducements to obtain specific Covered Services from the CHC-MCO.

Process:

1. The CHC-MCO must submit a request, using the applicable Community HealthChoices CHC-MCO Outreach Approval Form or the Community HealthChoices Educational Materials Approval Form, to the appropriate Department review agency thirty (30) calendar days in advance of the event (see attached). Should the event require approval from other offices, the approval process may extend beyond thirty (30) calendar days.

2. The Department review agency considers the request as confidential.

EXHIBIT J

PARTICIPANT CHC-MCO SELECTION AND ASSIGNMENT

IEB Responsibilities for Advance Plan Selections and Plan Assignments

During the pre-transition period, the IEB will contact Potential Participants to offer them information about CHC and the CHC-MCOs and assist the individual to choose a CHC-MCO before being assigned to one. If an individual does not select a CHC-MCO, the individual will be assigned to a CHC-MCO according to the hierarchy criteria described below. If none of the hierarchy criteria applies to an individual, the individual will be assigned to a CHC-MCO using the automatic assignment process described below. Participants who are enrolled in a CHC-MCO through either mechanism may select a different CHC-MCO at any time. The IEB will assist Participants in choosing a different CHC-MCO.

After the CHC transition date, all eligible Participants will be enrolled in a CHC-MCO using the automatic assignment process described below.

Potential Participants who are NFI Dual Eligibles. In making CHC-MCO assignments, the IEB will use the following hierarchy:

- First, if the individual is enrolled in a D-SNP, the individual will be enrolled in the CHC-MCO aligned with that D-SNP;
- Second, if the individual is transferring from Health Choices and is a member of a Physical Health HealthChoices MCO that is also a CHC-MCO, the individual will be enrolled in that CHC-MCO; and
- Last, if the individual's PCP is a Network Provider with only one CHC-MCO, the individual will be enrolled in that CHC-MCO.

Potential Participants who are NFCE. In making CHC-MCO assignments, the IEB will use the following hierarchy:

- First, if on the Enrollment Date the individual is residing in a NF that is a Network Provider in only one CHC-MCO, the individual will be enrolled in that CHC-MCO;
- Second, if the individual is enrolled in a D-SNP, the individual will be enrolled in the CHC-MCO that is aligned with that D-SNP;
- Third, if the individual is transferring from HealthChoices and is a member of a Physical Health HealthChoices MCO that is also a CHC-MCO, the individual will be enrolled in that CHC-MCO;
- Last, if the individual's PCP is a Network Provider with only one CHC-MCO, the individual will be enrolled in that CHC-MCO.

Automatic Assignments

If a Participant does not select a CHC-MCO and none of the hierarchy criteria described above applies to the individual, the Participant will be enrolled in a CHC-

MCO using the following auto-assignment process:

- If the Participant's case record includes another active Participant in the case who is enrolled in a CHC-MCO, the Participant will be enrolled in that same CHC-MCO. Participants in a family unit will be enrolled in the same CHC-MCO. These Participants will not be included in the percentages designated for auto-assignment.
- All remaining Participants will be included in the pool of Participants who will be auto-assigned to CHC-MCOs using an algorithm that directs a monthly distribution of Participants in the auto-assignment pool in all Zones based on the number of CHC-MCOs in the Zone. .

A CHC-MCO may not receive auto-assignments if it does not have the capacity to take on additional Participants or if it is subject to sanctions.

A CHC Participant who is auto-assigned to a CHC-MCO may select a different CHC-MCO at any time. The IEB will assist Participants in choosing a different CHC-MCO.

Participant Re-Assignment Following Resumption of Eligibility

A Participant who becomes ineligible and becomes eligible again within six (6) months will automatically be re-enrolled in the Participant's previously selected CHC-MCO, as long as the Participant's eligibility status and geographical residence are still valid for enrollment in that same CHC-MCO.

If a Participant becomes ineligible and becomes eligible again after six (6) months, the Participant may be enrolled in the same CHC-MCO as the payment name, the case payment name, or any other Participant in the case that is enrolled in the CHC-MCO. If there is no active CHC-MCO record in the case, the Participant will be enrolled in a CHC-MCO through the auto-assignment process. Prior to the Start Date of the auto-assigned CHC-MCO, the Participant may select a different CHC-MCO and override the auto-assigned CHC-MCO by contacting the IEB. When the Participant contacts the IEB to make this change, the IEB will enroll the Participant in the CHC-MCO of choice through the weekly enrollment process.

Continued Enrollment When Moving Between Zones

A Participant who moves from one CHC zone to another will remain in the CHC-MCO in which he or she was enrolled prior to the move, if the CHC-MCO is also operational in the zone to which the Participant moved.

The Department may reassess the distribution process, modify it in accordance with sound programmatic management principles, and institute any modifications at any time following appropriate written notification to the CHC-MCO.

EXHIBIT K

CHC-MCO PARTICIPANT COVERAGE DOCUMENT

This Participant Coverage Document (PCD) includes descriptions of policies supported by the Department's data systems and processes. In cases where policies in this document conflict with another provision of the CHC-MCO Agreement, the Agreement will take precedence.

CHC-MCO coverage as detailed in this document does not imply coverage under a BH-MCO. Refer to the BH-MCO Recipient Coverage Document for behavioral health coverage guidelines.

The Department will provide sufficient information to each CHC-MCO to reconcile CHC-MCO Participant data and amounts paid to and recovered from the CHC-MCO. The Department will pay capitation to only one CHC plan per-Participant, per-month.

Coverage Rules

A CHC-MCO is responsible for a Participant if coverage is determined by applying the general rules found in paragraph A or B below, subject to exceptions and clarifications in paragraphs C, D, E, and F.

Refer to the Community HealthChoices Intranet site for additional information on Participant coverage, clarifications, examples, and Participant Enrollment/Disenrollment procedures.

A. **Responsibility to Provide MA Benefits**. Unless otherwise specified, each CHC-MCO is responsible for providing MA benefits to its Participants in accordance with eligibility information included on the Daily or Monthly 834 Eligibility File, which is provided by the Department to each CHC-MCO.

B. **Participant Files/Coverage Dates/Eligibility**. Daily and Monthly 834 Eligibility Files are provided to each CHC-MCO containing information and changes that apply to its Participants. The CHC-MCO is responsible for providing services for each non-LTSS CHC-MCO Participant identified on the Daily or Monthly 834 Eligibility File from the first day of the calendar month or the CHC-MCO Start Date, whichever is later, through the last day of the calendar month or the CHC-MCO coverage end date, if different. The Department will pay prorated Capitation to the CHC-MCO from the first day of coverage in a month through the last day of the calendar month. CHC-MCO coverage dates beyond the last day of the month are preliminary information that is subject to change.

   For LTSS participants, the CHC-MCO is responsible for providing services starting the day after MA eligibility determination. The Department will provide information about these individuals to the CHC-MCOs on a Daily or Monthly 834 Eligibility File.

eCIS will retain a Participant's CHC-MCO selection for six (6) months after a Participant becomes ineligible for MA. These Participants will become the responsibility of the same CHC-MCO if they regain MA eligibility during that six-month period and their category of assistance and geographic location are valid for that CHC-MCO. Upon regaining MA eligibility, the CHC-MCO Start Date will be the MA eligibility Start Date on Client Information System (eCIS) or the date MA eligibility was reopened in eCIS, whichever is later.

C. Exceptions and Clarifications. The Department will recover Capitation payments made for Participants who the Department has determined the CHC-MCO was not responsible for providing services.

The CHC-MCO will not be responsible for nor paid when the Department notifies the CHC-MCO of Participants for whom they are not responsible.

1. Errors in CHC-MCO coverage identified from any source must be reported to the Department within forty-five (45) days of receipt of the Daily 834 Eligibility File for changes to be considered.

   If a Participant is enrolled in a CHC-MCO in error, that CHC-MCO is responsible for covering the Participant until the Department is notified and the correction is applied to the eCIS eligibility record.

   If at the time of notification to the Department, the Participant was disenrolled in error from a CHC-MCO and then enrolled in a different CHC-MCO, the Participant will be reenrolled in the previous CHC-MCO effective the first of the next month. However, if at the time of notification, the Participant is covered by FFS, the Participant will be reenrolled into the same CHC-MCO effective the day following notification to the Department.

2. If eCIS shows an exemption code or a facility/placement code that precludes CHC-MCO coverage, the Participant will not be enrolled in a CHC-MCO.

3. If eCIS shows Fee-For-Service (FFS) coverage that coincides with CHC-MCO coverage, the Participant may elect to use either coverage and there will be no monetary adjustment between the Department and the CHC-MCO. (This is subordinate to #7 below.)

4. If a CHC-MCO has actual knowledge that a Participant is deceased, and if such Participant shows on either the Daily or Monthly 834 Eligibility File as active, the CHC-MCO is required to notify the County Assistance Office (CAO) and the Department. The Department will recover Capitation payments made for up to twenty-one (21) months after the service month in which the date of death occurred.

5. The Department will recover Capitation payments for Participants who were later determined to be ineligible for CHC-MCO coverage or who were placed in a setting that results in the termination of CHC-MCO coverage by the Department. The Department will recoup payments back to the month following the month in which the termination of coverage occurred, for up to twelve (12) months afterwards. For example, today's date is 9/18/2022 and central office staff end-dated managed care coverage 9/30/2021 – payments are recouped for 10/2021 through 9/2022. See Section E for examples of placements that result in termination of coverage.

6. A Participant's change of residence out of a CHC-MCO's service area does not necessarily exempt the CHC-MCO from the responsibility to provide MA benefits. It is the CHC-MCO's responsibility to inform the CAO of the address change upon receipt of information that a Participant is residing outside the CHC-MCO service area.

7. Pursuant to the rules outlined in this PCD, the absence of MA eligibility indicated on eCIS for a particular date does not necessarily exempt the CHC-MCO from its responsibility to provide MA benefits for that date. Refer to Section D, Change in CHC-MCO Coverage during Inpatient Hospital Stays, for applicable rules.

8. The Department reserves the right to intercede in requests for expedited enrollments when Medically Necessary. The Department's determination for the expedited enrollment will be final. The Capitation rate will be retroactively adjusted for the CHC-MCO based on the expedited Start Date.

9. The CHC-MCO must provide Out-of-Area Covered Services for a Participant as long as they remain a resident of the Commonwealth and the zone. The CHC-MCO remains responsible for a Participant who is:
    - attending a college or university in a state other than Pennsylvania,
    - attending a college or university in a zone other than their zone of residence, or
    - traveling outside of the zone.

10. If eCIS shows Living Independence for the Elderly (LIFE) coverage that coincides with CHC-MCO coverage due to a Participant transfer from CHC to LIFE, the LIFE program will receive a Capitation payment, and the CHC-MCO will not be entitled to a Capitation payment for the consecutive month(s) after the transfer in which the LIFE and CHC-MCO coverages coincide. The Department will recover Capitation payments received by the CHC-MCO for month(s) the LIFE coverage and CHC-MCO coverage coincide due to a Participant transfer from CHC to LIFE.

11. If a Participant transfers from LIFE to CHC and coverage coincides, the CHC-MCO will receive a Capitation payment, and the LIFE program will not be entitled to a Capitation payment for the consecutive month(s) after the transfer

in which the CHC-MCO and LIFE coverages coincide. The Department will recover Capitation payments received by the LIFE program for month(s) the CHC-MCO coverage and LIFE coverage coincide due to a Participant transfer from LIFE to CHC.

D. Change in CHC-MCO Coverage during Inpatient Hospital Stays. Payment responsibility when an MA Participant has CHC coverage during part of a hospital stay is detailed in the Rules below. Note that one or more of these rules may apply during a particular hospital stay.

RULE: D-1.	
Condition	**A Participant who is covered by FFS when admitted to a hospital becomes eligible for CHC-MCO coverage while still in the hospital.**
CHC-MCO Coverage Responsibility	As of the CHC-MCO Start Date, the CHC-MCO is responsible for physician, DME, and all other Covered Services not included in the hospital bill.
MA FFS Coverage Responsibility	The FFS program is responsible for the hospital bill through the date of discharge. Note: If the Participant is discharged from the initial hospital and admitted to another hospital (acute or rehabilitation) after the CHC-MCO Start Date, FFS is only responsible for the stay in the initial hospital through the date of discharge. The CHC-MCO is responsible for the stay in the subsequent hospital upon admission.

RULE: D-2	
Condition	**A Participant who is covered by a CHC-MCO when admitted to a hospital loses CHC-MCO coverage and assumes FFS coverage while still in the hospital.**
CHC-MCO Coverage Responsibility	The CHC-MCO is responsible for the hospital stay with the following exceptions: EXCEPTION #1: If the Participant is still in the hospital on the FFS coverage begin date, and the Participant's FFS coverage begin date is the first (1st) day of the month, the CHC-MCO is financially responsible for the stay through the last day of that month. Example: If a Participant covered by the CHC-MCO is admitted to a hospital on June 21 and the FFS coverage begin Date is July 1, the FFS program assumes payment responsibility for the stay on August 1. The CHC-MCO remains financially responsible for the stay through July 31. EXCEPTION #2: If the Participant is still in the hospital on the FFS coverage begin date, and the Participant's FFS coverage begin date is any day other than the first day of the month, the CHC-MCO is financially responsible for the stay through the last day of the following month.

	Example: If a Participant covered by a CHC-MCO is admitted to a hospital on June 21 and the FFS program coverage begin date is July 15, the FFS program assumes payment responsibility for the stay on September 1. The CHC-MCO program remains financially responsible for the stay through August 31.
MA FFS **Coverage Responsibility**	Starting with the FFS coverage begin date, FFS is responsible for physician, DME, and other bills not included in the hospital bill. EXCEPTION #1: The FFS program is financially responsible for the stay beginning on the first day of the next month. EXCEPTION #2: The FFS program is financially responsible for the stay beginning on the first day of the month following the next month.

RULE: D-3	
Condition	**A Participant covered by a CHC-MCO when admitted to a hospital transfers to another CHC-MCO while still in the hospital.**
CHC-MCO **Coverage Responsibility**	The surrendering CHC-MCO is responsible for the hospital stay with the exceptions below. As of the gaining CHC-MCO's Start Date, it is responsible for the physician, DME, and all other Covered Services not included in the hospital bill. EXCEPTION #1: If the Participant is still in the hospital on the receiving CHC-MCO Start Date, and the Participant's gaining CHC-MCO Start Date is the first day of the month, the surrendering CHC-MCO is financially responsible for the stay through the last day of that month. The gaining CHC-MCO is financially responsible for the stay beginning on the first day of the next month. Example: If a Participant is admitted to a hospital on June 21 and the receiving CHC-MCO Start Date is July 1, the gaining CHC-MCO assumes payment responsibility for the stay on August 1. The surrendering CHC-MCO remains financially responsible for the stay through July 31. EXCEPTION #2: If the Participant is still in the hospital on the gaining CHC-MCO Start Date, and the gaining CHC-MCO Start Date is any day other than the first day of the month, the surrendering CHC-MCO is financially responsible for the stay through the last day of the following month. The gaining CHC-MCO is financially responsible for the stay beginning on the first day of the month following the next month. Example: If a Participant is admitted to a hospital on June 21 and the receiving CHC-MCO Start Date is July 15, the gaining CHC-MCO assumes payment responsibility for the stay on September 1. The surrendering CHC-MCO remains financially responsible for the stay through August 31.

MA FFS **Coverage Responsibility**	There is no FFS coverage in this example.

RULE: D-4	
Condition	**A Participant covered by a CHC-MCO when admitted to a hospital loses and regains MA eligibility while in the hospital (Participant is not discharged), resulting in a break in CHC-MCO coverage. The Department's Division of Medicaid Management Information Systems (MMIS) Operations becomes aware of the break in CHC-MCO coverage by the end of the month following the month in which it is lost.**
CHC-MCO **Coverage Responsibility**	MMIS Operations will reopen the Participant's CHC-MCO coverage retroactive to the day it was end-dated on eCIS and adjust the Capitation payment accordingly. The CHC-MCO continues to be financially responsible for the stay, including the physician, DME, and all other Covered Services. Example: A Participant who is admitted to the hospital on March 10 loses MA eligibility effective March 22 and regains it on April 9 retroactive to March 22. The CHC-MCO coverage on eCIS shows the Participant was end-dated March 31 and reopened in the CHC-MCO with a new CHC-MCO Start Date of April 9. On April 25, MMIS Operations becomes aware of the situation. Because MMIS Operations is aware of the loss of MA eligibility within the month following the month in which it was lost, MMIS Operations reopens the CHC-MCO coverage retroactive to April 1, the day after the CHC-MCO end-date is posted on eCIS (March 31). The CHC-MCO continues to be financially responsible for the stay, including the physician, DME, and all other Covered Services.
MA FFS **Coverage Responsibility**	There would be no FFS coverage in this example.

RULE: D-5	
Condition	**A Participant covered by a CHC-MCO when admitted to a hospital loses and regains MA eligibility while in the hospital (Participant is not discharged), resulting in a break in CHC-MCO coverage. MMIS Operations does not become aware of the break in CHC-MCO coverage by the end of the month following the month in which it is lost.**
CHC-MCO **Coverage Responsibility**	Example: A recipient who is admitted to the hospital on March 10 loses MA eligibility effective March 22 and regains it on April 9 retroactive to March 22. The CHC-MCO coverage on eCIS shows the recipient as end-dated March 31 and reopened in the CHC-MCO with a new begin date of April 9. Because MMIS Operations was not aware of the break in CHC-MCO coverage by the end of the month following the month in which it was lost, the CHC-MCO coverage is not reopened retroactive to the day it was end-dated on eCIS (March 31). The CHC-MCO is only responsible for covering the Participant through the end of March, then again starting April 9 with a prorated

	capitation payment for the remainder of April.
MA FFS **Coverage Responsibility**	FFS is responsible effective April 1 through April 8.

RULE: D-6.	
Condition	**A Participant covered by a CHC-MCO when admitted to a hospital loses MA eligibility while in the hospital (Participant is not discharged). The Participant regains MA eligibility retroactively after the month following the month in which the MA eligibility was ended, regardless of when MMIS Operations became aware of the action.**
CHC-MCO **Coverage Responsibility**	Example: A Participant who is admitted to the hospital on March 10 loses MA eligibility effective March 22. The Participant regains MA eligibility on May 15 retroactive to March 22. The CHC-MCO coverage on eCIS shows the Participant was end-dated March 31 and reopened in the CHC-MCO with a new Start Date of May 15. Because the MA eligibility was not reopened within the month following the month in which it was lost, the CHC-MCO coverage is not reopened retroactive to the day it was end-dated on eCIS (March 31). The CHC-MCO is only responsible for covering the Participant through the end of March.
MA FFS **Coverage Responsibility**	FFS is responsible effective April 1st.

RULE: D-7.	
Condition	**A Participant covered by a CHC-MCO when admitted to a hospital loses MA eligibility while in the hospital. The Participant is discharged from the hospital after the month in which the MA eligibility was lost but before the MA eligibility is regained by the Participant and reopened retroactively, regardless of when MMIS Operations became aware of the situation.**
CHC-MCO **Coverage Responsibility**	Example: A Participant who is admitted to the hospital on March 10 loses MA eligibility effective March 22. The Participant is discharged from the hospital April 3. The Participant regains MA eligibility on April 22 retroactive to March 22. The CHC-MCO coverage on eCIS shows the Participant was end-dated March 31 and reopened in the CHC-MCO with a new Start Date of April 22. Because the Participant was discharged from the hospital before the MA eligibility was reopened, which resulted in a three (3)-day period of FFS coverage on eCIS, MMIS Operations does not reopen the CHC-MCO coverage retroactive to April 1. The CHC-MCO is only responsible for the stay through the end of March.
MA FFS	FFS is responsible effective April 1.

Coverage Responsibility	

RULE: D-8	
Condition	**A hospitalized Participant never regains MA eligibility.**
CHC-MCO **Coverage Responsibility**	If the Participant is never determined retroactively eligible for MA, the CHC-MCO is only responsible to cover the Participant through the end of the month in which MA eligibility ended.
MA FFS **Coverage Responsibility**	FFS is not responsible for coverage since the Participant has not regained MA eligibility.

RULE: D-9	
Condition	**A Participant who is covered by a PH-MCO when admitted to a hospital loses PH-MCO and assumes CHC-MCO while still in the hospital.**
CHC-MCO **Coverage Responsibility**	The surrendering PH-MCO is responsible for the hospital stay with the exceptions below. As of the gaining CHC-MCO's Start Date, the gaining CHC-MCO is responsible for the physician, DME, and all other Covered Services not included in the hospital bill. EXCEPTION #1: If the Participant is still in the hospital on the gaining CHC-MCO Start Date, and the Participant's gaining CHC-MCO Start Date is the first (1st) day of the month, the surrendering PH-MCO is financially responsible for the stay through the last day of the month. The gaining CHC-MCO is financially responsible for the stay beginning on the first day of the next month. Example: If a Participant is admitted to a hospital on June 21 and the gaining CHC-MCO Start Date is July 1, the gaining CHC-MCO assumes payment responsibility for the stay on August 1. The surrendering PH-MCO remains financially responsible for the stay through July 31. EXCEPTION #2: If the Participant is still in the hospital on the gaining CHC-MCO Start Date, and the Participant's gaining CHC-MCO Start Date is any day other than the first day of the month, the surrendering PH-MCO is financially responsible for the stay through the last day of the following month. The gaining CHC-MCO is financially responsible for the stay beginning on the first day of the month following the next month. Example: If a Participant is admitted to a hospital on June 21 and the gaining CHC-MCO Start Date is July 15, the gaining CHC-MCO assumes payment responsibility for the stay on September 1. The surrendering PH-MCO remains financially responsible for the stay through August 31.

MA FFS **Coverage Responsibility**	There is no FFS coverage in this example.

RULE: D-10	
Condition	**A Participant who is covered by a CHC-MCO when admitted to a hospital loses CHC-MCO and assumes PH-MCO while still in the hospital.**
CHC-MCO **Coverage Responsibility**	The surrendering CHC-MCO is responsible for the hospital stay with the exceptions below. Starting with the gaining PH-MCO's Start Date, the gaining PH-MCO is responsible for the physician, DME, and all other Covered Services not included in the hospital bill. EXCEPTION #1: If the Participant is still in the hospital on the gaining PH-MCO Start Date, and the Participant's gaining PH-MCO Start Date is the first (1st) day of the month, the surrendering CHC-MCO is financially responsible for the stay through the last day of the month. The gaining PH-MCO is financially responsible for the stay beginning on the first day of the next month. Example: If a Participant is admitted to a hospital on June 21 and the gaining PH-MCO Start Date is July 1, the gaining PHC-MCO assumes payment responsibility for the stay on August 1. The surrendering CHC-MCO remains financially responsible for the stay through July 31. EXCEPTION #2: If the Participant is still in the hospital on the gaining PH-MCO Start Date, and the Participant's gaining PH-MCO Start Date is any day other than the first day of the month, the surrendering CHC-MCO is financially responsible for the stay through the last day of the following month. The gaining PH-MCO is financially responsible for the stay beginning on the first day of the month following the next month. Example: If a Participant is admitted to a hospital on June 21 and the gaining PH-MCO Start Date is July 15, the gaining PH-MCO assumes payment responsibility for the stay on September 1. The surrendering CHC-MCO remains financially responsible for the stay through August 31.
MA FFS **Coverage Responsibility**	There is no FFS coverage in this example.

E. Other Causes for Coverage Termination and Involuntary Disenrollment. If a condition described in the following sections occurs, the CHC-MCO must notify the Department. In accordance with the Department's disenrollment guidelines, MMIS Operations will take action to disenroll the Participant. The Department will recoup payments back to the month following the month in which the termination of coverage occurred, for up to twelve (12) months afterwards. For example, today's date is 9/18/2022 and central office staff end date managed care coverage 9/30/2021 – payments are recouped for 10/2021 through 9/2022).

If a Participant is placed in a setting listed in these sections and is under FFS prior to the CHC-MCO's Start Date, CHC-MCO coverage will be voided and adjustments will be processed for any Capitation payments made.

The CHC-MCO must notify the Department within sixty (60) days following the satisfaction of the Department's disenrollment guidelines for MMIS Operations to end-date the Participant's enrollment. Failure on the part of the CHC-MCO to notify MMIS Operations within the sixty (60) days will result in the end-date being delayed, thereby extending the CHC-MCO's responsibility for covering the Participant. The CHC-MCO should not hold and then later submit the notifications.

RULE: E-1	
Condition	**A Participant is admitted to an out-of-state Nursing Facility (regardless of who places the Participant in the facility).**
CHC-MCO Coverage Responsibility	The CHC-MCO is not responsible for Participants who are placed in a Nursing Facility outside of Pennsylvania. A Participant who is placed in an out-of-state Nursing Facility is disenrolled from the CHC-MCO the day before the admission date.

RULE: E-2	
Condition	**A Participant is admitted to a Veteran's Home (MA Provider type/specialty 03/042).**
CHC-MCO Coverage Responsibility	The CHC-MCO is not responsible for Participants who are admitted to a Veteran's Home. A Participant who is admitted to a Veteran's Home is disenrolled from the CHC-MCO the day before the admission date.

RULE: E-3	
Condition	**A Participant is admitted to a State Facility (MA Provider Type/Specialty Codes 01/23 - Public Psychiatric Hospital and 03/37 - State LTC Unit located at State Mental Hospitals).**
CHC-MCO Coverage Responsibility	The CHC-MCO is not responsible for Participants in a state facility. A Participant admitted to a state facility is disenrolled from the CHC-MCO the day before the admission date.
MA FFS Coverage Responsibility	FFS coverage is effective on the admission date.

RULE: E-4	
Condition	**A Participant is incarcerated in a Penal Facility, Correctional Institution (including work release), or Youth Development Center.**
CHC-MCO **Coverage Responsibility**	The CHC-MCO is not responsible for coverage since the Participant is no longer eligible for MA upon placement in a correctional facility. The Participant is disenrolled from the CHC-MCO effective the day before incarceration in the facility or institution.
MA FFS **Coverage Responsibility**	FFS is not responsible for coverage since the Participant is no longer eligible for MA upon placement in a correctional facility, except for inpatient hospital services. Note: This rule is based upon section 392.2 of the MA Eligibility Handbook which states: "For purposes of MA eligibility, other than eligibility for inpatient hospital services, the needs of an inmate in a correctional institution are the responsibility of the governmental authority exercising administrative control over the facility."

RULE: E-5	
Condition	**A Participant is enrolled in the Living Independence for the Elderly Program (LIFE) (MA Provider Type/Specialty Code 07/70 – LIFE).** LIFE is Pennsylvania's managed care option for individuals who are Nursing Home Clinically Eligible (NFCE) and age 55 and older. It provides fully integrated acute care, long-term care, behavioral health, and pharmacy services to individuals who wish to remain in the community.
CHC-MCO **Coverage Responsibility**	A Participant enrolled in LIFE is disenrolled from the CHC-MCO effective the day before the Start Date in the LIFE program.
MA FFS **Coverage Responsibility**	LIFE coverage begins the day after the disenrollment date.

F. Other Facility Placement Coverage. The following rules provide information relating to CHC-MCO coverage of Participants placed in psychiatric facilities.

RULE: F-1	
Condition	**A Participant is admitted to an Extended Acute Psychiatric Care Hospital (MA Provider Type/Specialty Code 01/18 – Extended Acute Psych Inpatient Unit).**
CHC-MCO **Coverage Responsibility**	A Participant admitted to an extended acute psychiatric hospital remains covered by the selected CHC-MCO for all Covered Services. If the Participant is placed in the facility by the BH-MCO, then the BH-MCO is responsible for

	the residential and treatment costs.
MA FFS **Coverage Responsibility**	FFS is responsible for the residential and treatment costs.

RULE: F-2	
Condition	**A Participant is admitted to an Inpatient Private Psychiatric Facility (MA Provider Type/Specialty Code 01/11 – Private Psychiatric Hospital and 01/22 – Private Psychiatric Unit).**
CHC-MCO **Coverage Responsibility**	A Participant admitted to a private psychiatric hospital remains covered by the selected CHC-MCO for all Covered Services. The BH-MCO is responsible for the residential and treatment costs.
MA FFS **Coverage Responsibility**	FFS is responsible for the residential and treatment costs.

Exhibit L
PARTICIPANT RIGHTS AND RESPONSIBILITIES

PARTICIPANTS' RIGHTS

Each CHC-MCO must have written policies regarding the Participant rights specified in this Exhibit.

Each CHC-MCO must comply with any applicable Federal and State laws that pertain to Participant rights, and its staff and Network Providers must take those rights into account when furnishing services to enrollees.

A participant has the right to:

- Receive information in a manner and format that may be easily understood and is readily accessible to Participants and potential Participants.
- Receive accurate, easily understood information and assistance in making informed health care and LTSS decisions about his or her health plans, professionals, and facilities.
- A choice of healthcare and LTSS providers that is sufficient to ensure access to appropriate high-quality healthcare.
- Access emergency health care services when and where the need arises.
- Fully participate in all decisions related to his or her healthcare and LTSS. Participants who are unable to fully participate in treatment decisions have the right to be represented by parents, guardians, family members, or other conservators.
- Considerate, courteous and respectful care from all members of the healthcare and LTSS system at all times and under all circumstances.
- Communicate with Providers in confidence and to have the confidentiality of his or her individually identifiable healthcare and LTSS information protected. Participants also have the right to review and copy his or her own medical and LTSS records and request amendments or corrections to their records.
- A fair and efficient process for resolving differences with their health plans, healthcare and LTSS Providers, and the institutions that serve them, including a rigorous system of internal review and an independent system of external review.
- Be free from any form of restraint or seclusion used as a means of coercion, discipline, convenience or retaliation, as specified in other Federal regulations on the use of restraints and seclusion.

The information requirements for services that are not covered under the contract because of moral or religious objections are set forth in 42 C.F.R. §438.10(g)(2)(ii)(A) and (B).

Each Participant is free to exercise his or her rights, and the exercise of those rights may not adversely affect the way the CHC-MCO and its providers treat the enrollee.

Each CHC-MCO must comply with any other applicable Federal and State laws (such as: Title VI of the Civil Rights Act of 1964 as implemented by regulations at 45 CFR part 80; the Age Discrimination Act of 1975 as implemented by regulations at 45 CFR part 91; the Rehabilitation Act of 1973; and Titles II and III of the Americans with Disabilities Act..

PARTICIPANTS' RESPONSIBILITIES

CHC Participants have the following responsibilities:

- Take responsibility for maximizing healthy habits, such as exercising, not smoking, and eating a healthy diet.
- Become involved in specific health care decisions.
- Work collaboratively with healthcare and LTSS Providers in developing and carrying out agreed-upon treatment plans.
- Disclose relevant information and clearly communicate wants and needs.
- Use the health plan's internal complaint and appeal processes to address concerns that may arise.
- Avoid knowingly spreading disease.
- Recognize the reality of risks and limits of the science of medical care and the human fallibility of the health care professional.
- Be aware of a healthcare and LTSS Provider's obligation to be reasonably efficient and equitable in providing care to other patients and the community.
- Become knowledgeable about his or her health plan and LTSS coverage and health plan and LTSS options (when available) including all covered benefits, limitations, and exclusions, rules regarding use of network providers, coverage and referral rules, appropriate processes to secure additional information, and the process to appeal coverage decisions.
- Show respect for other patients, health workers, and LTSS workers.
- Make a good-faith effort to meet financial obligations.
- Abide by administrative and operational procedures of health plans, healthcare and LTSS Providers, and Government health benefit programs.
- Report wrongdoing and fraud to appropriate resources or legal authorities.

EXHIBIT M

PARTICIPANT HANDBOOK

The CHC-MCO must adhere to the following guidelines and all the requirements in section V.0.4, LEP requirements, V.O.5, Alternative Format Requirements, and V.O.16, Participant handbook. The CHC-MCO must utilize the Participant handbook template provided by the Department. The CHC-MCO must provide a Participant Handbook in the appropriate prevalent language, or alternative format, to all Participants within five (5) business days of being notified of a Participant's Enrollment.

At a minimum, the Participant handbook must include:

1. Information about the CHC-MCO, its Covered Services, excluded services, Network Providers, and the Participant's rights and responsibilities as outlined in Exhibit L, Participant Rights and Responsibilities.

2. Role of the PCP in directing and managing care and as a Participant advocate.

3. Information on the role of the IEB and how to access services, including but not limited to what services it provides to Participants and contact information.

4. Description of services, which should include assistance with changing CHC-MCOs, PCPs, and the right to request an updated Provider Directory.

5. Procedure to access after-hour, non-emergency care.

6. Description of the CHC-MCO ID card and the ACCESS card and their uses.

7. Statement that no balanced billing is allowed, Participants are not to be balanced billed by Providers, and are to be held harmless for any bills the CHC-MCO declines to pay, and a statement of what steps to take in the event the Participant is billed or balance billed.

8. Information about the right to contact the Long-Term Care ombudsman, and about how to contact Protective Services (to assist those at risk for abuse, neglect, financial exploitation, and abandonment).

9. Information about co-payments, Prior Authorization, service limits, and the Covered Services exception process.

10. An explanation of the Participant's financial responsibilities for payment of services provided by an Out-of-Network Provider, when an item or service that requires Prior Authorization is provided without Prior Authorization being obtained, or when an item or service is provided that is not covered by the CHC-MCO.

- An explanation that prescriptions for medications that are written by Out-of-Network Providers (whether or not they are presented at an out-of-network pharmacy) will be the Participant's

  Responsibility, with the following exceptions:

  - The Non-Participating Provider or non-network Provider arrangements were approved in advance by the CHC-MCO and any Prior Authorization requirements (if applicable) were met;
  - The Non-Participating Provider or non-network prescriber and the pharmacy are the Participant's Medicare Providers; or
  - The Participant is covered by a third party carrier, and the Non-Participating Provider or non-network prescriber and the pharmacy is the Participant's third party Provider.

11. Information that the Participant is not liable for payment of authorized Covered Services provided when a Medical Assistance participating Provider does not receive payment from the CHC-MCO.

12. Rights of the Participant regarding confidentiality of his or her medical records.

13. Rights of the Participant to request and receive a copy of his or her medical records and to request that they be corrected or amended as specified in 45 C.F.R. §§164.524 and 164.526.

14. Rights of Participants to receive information regarding the patient payment responsibilities related to NF services.

15. Information on the availability of and how to access or receive assistance in accessing, at no cost to the Participant, oral interpretation services for all services provided by the CHC-MCO in all non-English languages and translated Vital Documents, in prevalent languages identified by the Department.

16. Availability of and information on how to access or receive assistance in accessing, at no cost to the Participant, communication methods including TTY/Videophone and relay services and materials in alternative formats such as Braille, audio tape, large print, compact disc (CD), DVD, computer diskette, and/or electronic communication, including how the CHC-MCO will arrange for providing these alternative format Participant materials.

17. Table of contents.

18. Information about choosing and changing PCPs.

19. Information about choosing a primary dentist, if applicable.

20. Information on how to request a specialist as a PCP or a standing referral to a specialist.

21. Information on availability of specialists.

22. Information about Dual Eligibles' right to access Medicare providers for Medicare services regardless of whether the Medicare providers are in the CHC-MCO network and without having to obtain prior approval from the CHC-MCO for Medicare-covered services.

23. Information about what to do when family size, address, or phone number changes.

24. Information regarding appointment standards.

25. Information regarding Participants' rights and CHC-MCOs' responsibilities per Section 1867 of the SSA.

26. A description of all available Covered Services, including LTSS, and how to access those services, which services require Prior Authorization, and an explanation of any service limitations or exclusions from coverage, specific instructions on how transportation is provided, and a notice stating that the CHC-MCO will be liable only for those services that are the responsibility of the CHC-MCO.

27. A description of the services not covered if the CHC-MCO elects not to provide, reimburse for, or provide coverage of, a counseling or referral service because of an objection on moral or religious grounds and information on how to access the services.

28. Information on how to request guidelines, including utilization review and clinical practice guidelines.

29. An explanation of the procedures for obtaining benefits, including self-referred services, services requiring Prior Authorization, services requiring a Covered Service Limit Exception request, if applicable, and services requiring a referral.

30. Information on how to contact Participant Services, the Nurse Hotline, the Service Coordinator unit and a description of their functions.

31. Information regarding the Complaint, Grievance and DHS Fair Hearing processes, as set forth in the CHC Participant Handbook Template for Complaints, Grievances and Fair Hearings, and the right to interim relief within the relevant time frames of the process,55 Pa. Code § 275.4(d).

32. What to do in case of an Emergency Medical Condition and instructions for receiving advice on care in case of an emergency, including instructions to use the emergency medical services (EMS) available and/or activate EMS by dialing 9-1-1 in a life-threatening situation.

33. Information on how to obtain non-medical transportation, emergency transportation, and non-emergency medical transportation.

34. The names and telephone numbers for county MATP Providers.

35. Information on how and where to access Behavioral Health, Family Planning and vision services.

36. Information on how to obtain prescription drugs, including information on how to request a copy of the CHC-MCO's formulary or PDC, and how to obtain assistance with the benefit of enrolling in a Medicare Part D plan with a zero copay.

37. Information on what to do regarding out-of-county and out-of-state moves.

38. A description of wellness behaviors and activities the Participant can engage in to improve his or her own health, such as diet, exercise, and age-appropriate vaccinations and screenings.

39. Information regarding pregnancies which conveys the importance of prenatal care and continuity of care to promote optimum care for mother and infant, including the concept of remaining with the same CHC-MCO for the entire pregnancy.

40. Notification that the selection of certain PCP sites may result in medical residents, nurse practitioners, and physicians assistants providing care to Participants.

41. Information regarding the availability of second opinions and when and how to access them.

42. Information regarding the right to receive services from an Out-of-Network Provider when the CHC-MCO cannot offer a choice of two (2) qualified specialists, and an explanation of how to request authorization for Out-of-Network services.

43. Information on the availability and process for accessing MA Out-of-Plan Services which are not the responsibility of the CHC-MCO, but are available to Participants.

44. Information regarding the WIC Program (WIC) and how to access the program.

45. Information regarding HIV/AIDS Programs and how to access them.

46. Information on Tobacco Cessation Programs and how to access them.

47. Information about Estate Recovery.

48. Information about Assessment, Reassessment, and PSCP processes.

49. Information about Service Coordination.

50. Information on advance directives (durable healthcare power of attorney and living wills) for adult Participants, including:
    a. The description of State law, if applicable.
    b. The process for notifying the Participant of any changes in applicable State law as soon as possible, but no later than ninety (90) days after the effective date of the change.
    c. Any limitation the CHC-MCO has regarding implementation of advanced directives as a matter of conscience.
    d. The process for Participants to file a Complaint concerning noncompliance with the advanced directive requirements with the CHC-MCO and DOH.
    e. How to request written information on advance directive policies.

51. A statement that all Participants will be treated with respect and due consideration for their dignity and privacy.

52. A statement that Participants may receive, from a Provider, information on available treatment options and alternatives, presented in a manner appropriate to the Participant's condition and ability to understand.

53. A statement that Participants have the right to participate in decisions regarding their healthcare, including the right to refuse treatment.

54. A statement that Participants are guaranteed the right to be free from any form of restraint or seclusion used as a means of coercion, discipline, convenience, or retaliation.

55. A statement that each Participant is free to exercise his or her rights and that the exercise of those rights does not adversely affect the way the CHC-MCO and its Providers or the Department treat the Participant.

56. An explanation of the CHC-MCO's and Recipient Restriction Program, including how to request a DHS Fair Hearing regarding a restriction action and how to request a change of pharmacy or Provider.

57. A description of the Department's MA Provider Compliance Hotline telephone number.

58. A description of the Expanded Services or Value-Added Services the CHC-MCO has been approved by the Department to provide and the guaranteed period in which those services must be available to participants.

59. Information on how Participants can participate in CHC-MCO advisory

committees.

60. Procedures for disenrolling from the CHC-MCO and policies for transition of care.

61. Procedures for recommending changes in policies and services.

EXHIBIT N

PROVIDER DIRECTORY

The Provider Directory must include, at a minimum, the following information about PCPs, hospitals, specialists, or ancillary providers, Pharmacies, and LTSS providers:

- The names, addresses, website address, group practice names, email address if the Provider makes the address available to patients, and telephone numbers of Provider.

- The hospital affiliations of the Provider.

- Information on whether or not the Provider is accepting new patients.

- Identification of whether the Provider is a Doctor of Medicine or Osteopathy.

- Identification of whether the Providers are board-certified and, if so, in what area(s).

- Identification of whether a Provider dental is DDS or DMD, and whether the dentist is a periodontist.

- Identification of whether the dentist possesses anesthesia certificates.

- Identification of whether the dentist is able to serve adults with developmental disabilities.

- Identification of the specialty area of each specialist.

- Identification of the Provider's cultural and linguistic capabilities, including languages (including American Sign Language) offered by the provider or a certified medical interpreter at the Provider's office, and whether the Provider has completed cultural competence training

  Identification of sites which are wheelchair accessible for people with physical disabilities, including offices, exam room(s) and equipment

- Identification of the days of operation and the hours when the Provider's office is available to Participants.

  The CHC-MCO, at the request of the PCP or dentist, may include the PCP's or dentist's experience or expertise in serving individuals with particular conditions.

EXHIBIT O

CHC AUDIT CLAUSE

Annual Agreement Audits

The CHC-MCO shall cause, and bear the costs of, an annual agreement audit to be performed by an independent, licensed Certified Public Accountant. The agreement audit shall be completed using guidelines provided by the Department. Such audit shall be made in accordance with generally accepted government auditing standards. The contract audit shall be digitally submitted to OLTL, Bureau of Finance via the E-FRM system no later than June 30 after the contract year is ended.

> If circumstances arise in which the Department or the CHC-MCO invokes the termination clause or determines this Agreement will cease, the agreement audit for the period ending with the termination date or the last date the CHC-MCO is responsible to provide Covered Services to Participants shall be submitted to the Department within one hundred eighty (180) days after the termination date or the last date the CHC-MCO is responsible to provide Covered Services.

The CHC-MCO shall ensure that audit working papers and audit reports are retained by the CHC-MCO's auditor for a minimum of ten (10) years from the date of final payment under the Agreement, unless the CHC-MCO's auditor is notified in writing by the Commonwealth to extend the retention period. Audit working papers shall be made available, upon request, to authorized representatives of the Commonwealth or federal agencies. Copies of working papers deemed necessary shall be provided by the CHC-MCO's auditor.

Annual Entity-Wide Financial Audits

The CHC-MCO shall provide to the Department a copy of its annual entity-wide financial audit, performed by an independent, licensed Certified Public Accountant. Such audit shall be made in accordance with generally accepted auditing standards. Such audit shall be submitted to the OLTL, Bureau of Finance via E-FRM within thirty (30) days from the date it is made available to the CHC-MCO.

Other Financial and Performance Audits

The Commonwealth reserves the right for Federal and State agencies or their authorized representatives to perform additional financial or performance audits of the CHC-MCO, its subcontractors or Providers. Any such additional audit work will rely on work already performed by the CHC-MCO's auditor to the extent possible. The costs incurred by the Federal or State agencies for such additional work will be borne by those agencies.

Audits of the CHC-MCO, its subcontractors or Providers may be performed by the

Commonwealth or its designated representatives and include, but are not limited to:

1. Financial and compliance audits of operations and activities for the purpose of determining the compliance with financial and programmatic record keeping and reporting requirements of this Agreement.

2. Audits of automated data processing operations to verify that systems are in place to ensure that financial and programmatic data being submitted to the Department is properly safeguarded, accurate, timely, complete, reliable, and in accordance with contract terms and conditions.

3. Program audits and reviews to measure the economy, efficiency, and effectiveness of program operations under this Agreement.

4. The Commonwealth must periodically, but no less frequently than once every three (3) years, conduct or contract for the conducting of, an independent audit of the accuracy, truthfulness, and completeness of the encounter and financial data submitted by, or on behalf of, the CHC-MCO.

Audits performed by the Commonwealth shall be in addition to any federally-required audits or any monitoring or review efforts. Commonwealth audits of the CHC-MCO or its subcontractor's operations will generally be performed on an annual basis. However, the Commonwealth reserves the right to audit more frequently, to vary the audit period, and to determine the type and duration of these audits. Audits of subcontractors or Providers will be performed at the Commonwealth's discretion.

The following provisions apply to the CHC-MCO, its subcontractors, and Providers:

1. Except in cases where advance notice is not possible or advance notice may render the audit less useful, the Commonwealth will give the entity at least three (3) weeks advance written notice of the start date, expected staffing, and estimated duration of the audit. In the event of a claims processing audit, the Commonwealth will strive to provide advance written notice of a minimum of thirty (30) calendar days. While the audit team is on-site, the entity shall provide the team with adequate and secure workspace; access to a telephone, photocopier and facsimile machine; access to the Internet; electrical outlets; and privacy for conferences. The CHC-MCO shall also provide, at its own expense, necessary systems and staff support to timely extract and/or download information stored in electronic format, gather requested documents or information, complete forms or questionnaires, and respond to auditor inquiries. The entity shall cooperate fully with the audit team in furnishing, either in advance or during the course of the audit, any policies, procedures, job descriptions, contracts or other documents or information requested by the audit team.

2. Upon issuance of the final report to the entity, the entity shall prepare and submit, within thirty (30) calendar days after issuance of the report, a Corrective action plan for each observation or finding contained therein. The corrective action plan shall include a brief description of the finding, the specific steps to be taken to correct the situation or specific reasons why corrective action is not necessary, a timetable for performance of the corrective action steps, and a description of the monitoring to be performed to ensure that the steps are taken.

Record Availability, Retention and Access

The CHC-MCO shall, at its own expense, make all records available for audit, review or evaluation by the Commonwealth, its designated representatives or federal agencies. Access shall be provided either on-site during normal business hours or through the mail. During the contract and record retention period, these records shall be available at the CHC-MCO's chosen location, subject to approval of the Commonwealth. All records to be sent by mail shall be sent to the requesting entity within fifteen (15) calendar days of such request and at no expense to the requesting entity. Such requests made by the Commonwealth shall not be unreasonable.

The CHC-MCO shall maintain books, records, documents, and other evidence pertaining to all revenues, expenditures and other financial activity pursuant to this Agreement as well as to all required programmatic activity and data pursuant to this Agreement. Records other than medical records may be kept in an original paper state or preserved on micro media or electronic format. Medical records shall be maintained in a format acceptable by the Department. These books, records, documents and other evidence shall be available for review, audit or evaluation by authorized Commonwealth personnel or their representatives during the contract period and ten (10) years thereafter, except if an audit is in progress or audit findings are yet unresolved, in which case records shall be kept until all tasks are completed.

Audits of Subcontractors

The CHC-MCO shall include, in all risk sharing CHC-MCO subcontract agreements, clauses, which reflect the above provisions relative to "Annual Contract Audits," "Annual Entity-Wide Financial Audits," "Other Financial and Performance Audits" and "Record Availability, Retention, and Access."

The CHC-MCO shall include, in all contract agreements with other subcontractors or Providers, clauses which reflect the above provisions relative to "Other Financial and Performance Audits" and "Record Availability, Retention, and Access."

EXHIBIT P

REQUIRED CONTRACT TERMS FOR ADMINISTRATIVE SUBCONTRACTORS

All subcontracts must be in writing and must include, at a minimum, the following provisions:

- The specific activities and report responsibilities delegated to the subcontractor.
- A provision for revoking delegation or imposing other sanctions if the subcontractor's performance is inadequate.
- All applicable requirements of this Agreement.
- The applicable requirements of 42 C.F.R. § 434.6.
- Nondiscrimination provisions.
- The requirements of the Americans with Disabilities Act (42 U.S.C. §§ 12101 et seq.).
- In all subcontracts with any individual firm, corporation, or any other entity which provides medical services or LTSS and receives payment from the CHC-MCO either directly or indirectly through capitation, a requirement that data for all services provided will be reported timely to the CHC-MCO and that penalties and sanctions will be imposed for failure to comply. The data is to be included in the utilization and Encounter Data provided to the Department in the format required.
- In all subcontracts with any individual, firm, corporation, or any other entity which provides medical services or LTSS to CHC Participants, a requirement that the subcontractor will report all new third party resources to the CHC-MCO identified through the provision of medical services, which previously did not appear on the Department's Participant information files provided to the CHC-MCO.
- A hold harmless clause that stipulates that the CHC-MCO subcontractor agrees to hold harmless the Commonwealth, all Commonwealth officers and employees and all CHC-MCO Participants in the event of nonpayment by the CHC-MCO to the subcontractor. The subcontractor shall further indemnify and hold harmless the Commonwealth and its agents, representatives, officers, and employees against all injuries, death, losses, damages, claims, suits, liabilities, judgments, costs, and expenses which may in any manner accrue against the Commonwealth or its agents, representatives, officers or employees, through the intentional conduct, negligence or omission of the subcontractor, its agents, representatives, officers, or employees or the CHC-MCO.
- Compliance with all applicable Federal and State laws and policy and guidance issued by the Department.

- In all subcontracts with any individual firm, corporation or any other entity which provides medical services or LTSS to Community HealthChoices Participants, that prohibits gag clauses which limit the subcontractor from disclosure of Medically Necessary or appropriate healthcare information or alternate therapies to Participants, other healthcare professionals, or the Department.

- In all employee contracts prohibiting gag clauses which limit said employees from the disclosure of information pertaining to the Community HealthChoices Program.

- In all subcontracts with any individual, firm, corporation or any other entity which provides medical services or LTSS to Community HealthChoices Participants, that limits incentives to those permissible under the applicable federal regulation.

The CHC-MCO shall require as a written provision in all subcontracts that the Department has ready access to any and all documents and records of transactions pertaining to the provision of services to Participants.

The CHC-MCO and its subcontractor(s) must agree to maintain books and records relating CHC services and expenditures, including reports to the Department and source information used in preparation of these reports. These records include but are not limited to financial statements, records relating to quality of care, medical records and prescription files.

The CHC-MCO and its subcontractor(s) also must agree to comply with all standards for practice and medical records keeping specified by the Commonwealth.

The CHC-MCO and its subcontractor(s) shall, at their own expense, make all records available for audit, review or evaluation by the Commonwealth, its designated representatives or federal agencies. Access shall be provided either on-site during normal business hours or through the mail. During the contract and record retention period, these records shall be available at the CHC-MCO's chosen location, subject to approval of the Commonwealth. The CHC-MCO must fully cooperate with any and all reviews and/or audits by Federal or State agencies or their agents, such as the Independent Assessment Contractor, by assuring that appropriate employees and involved parties are available for interviews relating to reviews or audits. All records to be sent by mail shall be sent to the requesting entity in the form of accurate, legible paper copies, unless otherwise indicated, within fifteen (15) calendar days of such request and at no expense to the requesting entity. Such requests made by the Commonwealth shall not be unreasonable.

The CHC-MCO and its subcontractor(s) shall maintain books, records, documents and other evidence pertaining to all revenues, expenditures and other financial activity pursuant to this contract as well as to all required programmatic activity and data pursuant to this contract. Records other than medical records may be kept in an original paper state or preserved on micro media or electronic format. Medical records shall be maintained in a format acceptable by the Department. These books, records, documents and other evidence shall be available for review, audit or evaluation by authorized Commonwealth personnel or their representatives during the contract period and ten (10) years thereafter, except if an audit is in progress or audit findings are yet unresolved, in which case, records shall be kept until all tasks are completed.

The CHC-MCO shall require as a written provision in all subcontracts that the subcontractor recognize that payments made to the subcontractor are derived from Federal and State funds. Additionally, the CHC-MCO shall require, as a written provision in all contracts for services rendered to the Participant, that the subcontractor shall be held civilly and/or criminally liable to both the CHC-MCO and the Department in the event of nonperformance, misrepresentation, fraud, waste, or abuse. The CHC-MCO shall notify its PCPs and all subcontractors of the prohibition and sanctions for the submission of false claims and statements.

The CHC-MCO shall require as a written provision in all subcontracts that the subcontractor cooperate with Quality Management/Utilization Management Program requirements.

The CHC-MCO shall require Providers to comply with all Service Coordination program requirements, including, where applicable, cooperation with the PCPT approach for PCSP and Service Coordination.

The CHC-MCO shall monitor the subcontractor's performance on an ongoing basis and subject it to formal review according to a periodic schedule established by the Department, consistent with industry standards or State statutes and regulations. If the CHC-MCO identifies deficiencies or areas needing improvement, the CHC-MCO and the subcontractor must take corrective action.

EXHIBIT Q

REPORTING SUSPECTED FRAUD, WASTE, AND ABUSE

The following requirements are adapted from 55 Pa. Code Chapter 1101, General Provisions for the Medical Assistance Program, specifically 55 Pa. Code § 1101.75(a) and (b), Provider Prohibited Acts, which are directly adapted from 62 P.S. § 1407 (also referred to as Act 105 of 1980, Fraud and Abuse Control Act). The basis for Participant referrals is 55 Pa. Code § 1101.91 and § 1101.92, Recipient Mis-utilization and Abuse and Recipient Prohibited Acts. These regulations are available at http://www.pacode.com.

Reporting Requirements:

CHC-MCOs must report to the Department any act by any MA enrolled Providers, Participants, caregivers and employees that may affect the integrity of the CHC Program under the Medical Assistance Program. Specifically, if the CHC-MCO suspects that Fraud, Abuse or Waste, as discussed in Section V.X.4, Fraud and Abuse, may have occurred, the CHC-MCO must report the issue to the Department. The CHC-MCO must have a process to notify the Department of any adverse actions and/or Provider disclosures received during the credentialing/re-credentialing process. Depending on the nature or extent of the problem, it may also be advisable to place the individual Provider on prepayment review or suspend payments to avoid unnecessary expenditures during the review process.

In addition to referrals to the Department, the CHC-MCO is required to promptly submit any potential fraud directly to the Pennsylvania Office of Attorney General, Medicaid Fraud Control Section as provided in 42 CFR § 438.608(a)(7). The referrals to the Department shall be submitted using the Department's CHC-MCO Referral Form. Potential fraud referrals submitted to the Department using the CHC-MCO Referral Form will be forwarded by the Department to the Pennsylvania Office of Attorney General, Medicaid Fraud Control Section if it is determined by the Department that there is a credible allegation of fraud. After the referral form is submitted, the CHC-MCO is required to upload the supporting documentation to the Department using docuShare. The CHC-MCO is also required to upload the same supporting documentation of fraud to the Office of Attorney General, Medicaid Fraud Control Section through ShareFile.

CHC-MCOs are required to report quality issues to the Department for further investigation. Quality issues are those which, on an individual basis, affect the Participant's health (e.g., poor quality services, inappropriate and or potentially harmful treatment, and withholding of Medically Necessary services from the Participant).

All Confirmed Abuse, Waste, or quality referrals must be made with supporting documentation promptly, within thirty (30) calendar days of the identification of the problem/issue. For all Potential Fraud referrals, the CHC-MCO must conduct a preliminary investigation to the level of an indication of fraud. The CHC-MCO may

informally consult with other state agencies or law enforcement to reach this determination. The CHC-MCO must send to BPI all relevant documentation within thirty (30) calendar days after the preliminary allegations have been confirmed through the additional review and/or documentation, and there is now a potential credible allegation of fraud. Such information includes, but is not limited to, the materials listed on the "Checklist of Supporting Documentation for Referrals" located at the end of this exhibit. The Fraud and Abuse Coordinator, or the responsible party completing the referral, should check the appropriate boxes on the "Checklist of Supporting Documentation for Referrals" form indicating the supporting documentation information that is sent with each referral. A copy of the completed checklist and all supporting documentation should accompany each referral. Any egregious situation or act (e.g., those that are causing or imminently threaten to cause harm to a Participant or significant financial loss to the Department) must be referred immediately to the Department for further investigation.

The CHC-MCO must follow the reporting processes unless prior approval is received from the Department. Reports must be submitted online using the CHC-MCO Referral Form. The instructions and form templates are located at:

https://www.humanservices.state.pa.us/hc-extranet/forms/form_mcoreferral_chc.asp

Once completed, the CHC-MCO must electronically submit the form to BPI. Additionally, the following information must be submitted to BPI electronically using a docuShare page designated by BPI: Checklist of Supporting Documentation for Referrals, accessible on the CHC-MCO Referral Form. The same information must be uploaded to the Office of Attorney General, Medicaid Fraud Control Section ShareFile system.

- A copy of the confirmation page which will appear after “Submit” button is clicked, submitting the CHC-MCO Referral Form.
- All supporting documentation.

If docuShare is inaccessible for any reason at the time the CHC-MCO attempts to submit the form, then the CHC-MCO will note the unavailability of docuShare on the form and mail the supporting information above to the below address:

Attn: Division Director
Department of Human Services
Bureau of Program Integrity - DPPC
P.O. Box 2675
Harrisburg, PA 17105-2675

Checklist of Supporting Documentation for Referrals

- All referrals must have the confirmation page from online referral attached.
- Please check the appropriate boxes that indicate the supporting documentation included with your referral.

Example of materials for Provider or staff person referrals [***The below list is provided as examples of materials that could be relevant to an investigation of the referral. The list is not all-inclusive.]*** –

- ☐ confirmation page from online referral
- ☐ encounter forms (lacking signatures or forged signatures)
- ☐ timesheets
- ☐ attendance records of Participant
- ☐ written statement from parent, Provider, school officials or client that services were not rendered or a forged signature
- ☐ progress notes
- ☐ internal audit report
- ☐ interview findings
- ☐ sign-in log sheet
- ☐ complete medical records
- ☐ résumé and supporting résumé documentation (college transcripts, copy of degree)
- ☐ credentialing file (DEA license, CME, medical license, board certification)
- ☐ copies of complaints filed by Participants
- ☐ admission of guilty statement
- ☐ other: _____

Example of materials for pharmacy referrals –

- ☐ paid claims
- ☐ prescriptions
- ☐ signature logs
- ☐ encounter forms
- ☐ purchase invoices
- ☐ EOB's
- ☐ delivery slips
- ☐ licensing information
- ☐ other: _____

Example of materials for behavioral health referrals –

- ☐ complete medical and mental health record
- ☐ results of treatment rendered/ordered, including the results of all lab tests and diagnostic studies
- ☐ summaries of all hospitalizations all
- ☐ psychiatric examinations
- ☐ all psychological evaluations treatment
- ☐ plans
- ☐ all prior authorizations request packets and the resultant prior authorization number(s)
- ☐ encounter forms (lacking signatures or forged signatures) plan of care
- ☐ summaries
- ☐ documentation of treatment team or Interagency Service Planning Team meetings
- ☐ progress notes
- ☐ other: _____

Example of materials for DME referrals –

- ☐ orders, prescriptions, and/or certificates of medical necessity (CMN for the equipment)
- ☐ delivery slips and/or proof of delivery of equipment copies of checks
- ☐ or proof of copay payment by recipient diagnostic testing in the
- ☐ records
- ☐ copy of company's current licensure
- ☐ copy of the policy and procedure manual applicable to DME items
- ☐ other: _____

EXHIBIT R

Behavioral Health Mixed Services Protocol

Services	Payment/Clinical Responsibility
Ambulatory Care	
Assessment and treatment of a BH condition when provided by a BH provider	BH-MCO
Assessment and treatment of a BH condition when provided by a PCP	CHC-MCO
Assessment and treatment of dementia/Alzheimer's	CHC-MCO
Assessment and treatment of Asperger's/Autism Spectrum Disorder	BH-MCO or CHC-MCO depending on provider type and location of care
Methadone Maintenance Treatment	BH-MCO
Medication Assisted Treatment (MAT) for opioid addiction	CHC-MCO
Psychiatrist prescribed Medication Assisted Treatment (MAT) for opioid addiction	BH-MCO
24-Hour Care	
Admission to an acute care hospital, psychiatric facility or other specialty facility that is a licensed mental health inpatient facility for the treatment of a BH condition	BH-MCO
Admission to an inpatient drug and alcohol detoxification hospital that is licensed by DDAP	BH-MCO
Detoxification in a medical bed that is certified by DDAP for acute withdrawal, seizures, delirium tremens or medical instability	BH-MCO
Stabilization in a medical bed or in an intensive care unit for treatment of eating disorders or following attempted suicide or self-induced trauma/poisoning	CHC-MCO
Residential services for treatment of MH or SUD	BH-MCO
Emergency Department	
Facility and ancillary charges and professional fees for primary BH diagnoses	CHC-MCO
Facility and ancillary charges and professional fees for primary PH diagnosis, including medical stabilization for attempted suicide or self-induced trauma/poisoning	CHC-MCO

Services	Payment/Clinical Responsibility
Emergency room evaluations for voluntary and involuntary commitments pursuant to the Mental Health Procedures act of 1976	BH-MCO
All emergency and non-emergency medically necessary ambulance transportation for both PH and BH covered services, including BH diagnosis	CHC-MCO
Consults	
BH consultation specific to a BH diagnosis on medical surgical unit, nursing home or assisted living facility	BH-MCO
BH consultation not specific to a Serious Mental Illness (SMI) on medical surgical unit, nursing home or assisted living facility	CHC-MCO
Medical/surgical consult on a BH unit	CHC-MCO
Medical/surgical assessment on an inpatient admission with primary BH diagnoses	CHC-MCO
Psychological Testing	
Psychological/neuropsychological testing requested by a BH provider and/or used to clarify BH diagnosis.	BH-MCO
Psychological/neuropsychological testing when ordered by medical provider to rule out or clarify organic pathology	CHC-MCO
Miscellaneous	
Any BH service delivered through a federally qualified health center or rural health clinic	BH-MCO
Electroconvulsive therapy, including anesthesiology services	BH-MCO

EXHIBIT S

PROVIDER MANUAL

The CHC-MCO shall work with the Department to develop, distribute, and maintain a Provider manual. In addition, the CHC-MCO and/or CHC-MCO Subcontractors will be expected to distribute copies of all manuals and subsequent policy clarifications and procedural changes to Network Providers following advance written approval of the documents by the Department. Provider manuals must be updated to reflect any program or policy change(s) made by the Department via Medical Assistance bulletin within six (6) months of the effective date of the change(s), or within six (6) months of the issuance of the Medical Assistance bulletin, whichever is later, when such change(s) affect(s) information that the CHC-MCO is required to include in its Provider manual, as set forth in this exhibit. The Provider manual must include, at a minimum, the following information:

A. A description of the needs screening, Assessment and Reassessment, service planning system and protocols and a description of the Provider's role in Service Planning and Service Coordination.

B. A description of Service Coordination and how the Provider will fit into the Person-Centered Planning Team approach.

C. A description of the population being served through CHC.

D. A description of the accessibility requirements with which Providers are required to comply.

E. A description of the role of a PCP as described in Section II, Definitions, and Section V.BB.4, Primary Care Practitioner (PCP) responsibilities.

F. Information on how Participants may access specialists, including standing referrals and specialists as PCPs.

G. A summary of the guidelines and requirements of Title VI of the Civil Rights Act of 1964, as amended, and its guidelines, and how Providers can obtain qualified interpreters familiar with medical terminology.

H. Contact information to access the CHC-MCO, DHS, advocates, other related organizations, etc.

I. A copy of the CHC-MCO's Prior Authorization and program exception process.

J. A copy of the CHC-MCO's Formulary in the same machine readable file and format as made available to enrollees as specified under 42 C.F.R. § 438.10(i)(3).

K. Contact follow-up responsibilities for missed appointments.

L. Description of role of the Service Coordinator and how to contact them.

M. Description of drug and alcohol treatment available and how to make referrals.

N. Complaint, Grievance and DHS Fair Hearing information.

O. Information on Provider Disputes.

P. CHC-MCO policies, procedures, available services, and sample forms applicable to the Provider type.

Q. A full description of Covered Services, listing all Covered Services outlined in Exhibit A, Covered Services List.

R. Billing instructions.

S. Information regarding applicable portions of 55 Pa. Code, Chapter 1101, General Provisions.

T. Information on self-referred services and services which are not the responsibility of the CHC-MCO but are available to Participants on a Fee-for-Service basis.

U. Provider performance expectations, including disclosure of Quality Management and Utilization Management criteria and processes.

V. Information on procedures for sterilizations, hysterectomies and abortions (if applicable).

W. A description of certain Providers' obligations, under law, to follow applicable procedures in dealing with Participants on "Advanced Directives" (durable healthcare power of attorney and living wills). This includes notification and record keeping requirements.

X. Information on ADA and Section 504 of the Rehabilitation Act of 1973, other applicable laws, and available resources related to the same.

Y. A definition of “Medically Necessary” consistent with the language in this Agreement.

Z. Information on Participant confidentiality requirements.

AA. The Department’s Medical Assistance Provider Compliance Hotline (formerly the Fraud and Abuse Hotline) telephone number and explanatory statement.

BB. Explanation of CHC-MCO’s and the Department’s Recipient Restriction Program.

CC. Information regarding written translation and oral interpretation services for

Participants with LEP and alternate methods of communication for those requesting communication in alternate formats.

DD. List and scope of services for referral and Prior Authorization.

EE. Information about Recipient Restriction and how it works.

FF. All of the items in Section V AA.2- Provider Orientation and Ongoing Education.

The CHC-MCO is required to provide documented training to its Providers and their staffs and to Subcontractors regarding the contents and requirements of the Provider manuals.

EXHIBIT T

PROVIDER NETWORK COMPOSITION/SERVICE ACCESS

1. Network Composition

The CHC-MCO must consider the following in establishing and maintaining its Provider Network:

- The anticipated Medical Assistance Enrollment.
- The expected utilization of services, taking into consideration the characteristics and needs of specific Medical Assistance populations represented in the CHC-MCO.
- The number and types, in terms of training, experience, and specialization, of Providers required to furnish the contracted Medical Assistance services.
- All Providers operating within the Provider Network who provide services to Recipients must be enrolled in the Commonwealth's Medical Assistance program and possess an active MMIS Provider ID.
- The number of Network Providers who are not accepting new Medical Assistance Participants.
- The geographic location of Providers and Participants, considering distance, travel time, the means of transportation ordinarily used by Participants, and whether the location provides physical access for Participants with disabilities.

The CHC-MCO must ensure that its Provider Network is adequate to provide its Participants in this CHC zone with access to quality Participant care through participating professionals, in a timely manner, and without the need to travel excessive distances. Upon request from the Department, the CHC-MCO must supply geographic access maps using Participant-level data detailing the number, location, and specialties of its Provider Network in order to verify accessibility of Providers within its Network in relation to the location of its Participants. The Department may require additional numbers of specialists, ancillary, and LTSS Providers should it be determined that geographic access is not adequate. The CHC-MCO must also have a process in place which ensures that the CHC-MCO knows the capacity of its Network PCP panels at all times and have the ability to report on this capacity.

The CHC-MCO must make all reasonable efforts to honor a Participant's choice of Providers who are credentialed in the Network. If the CHC-MCO is unable to ensure a Participant's access to Provider or specialty Provider services within the Provider Network, within the travel times set forth in this exhibit, the CHC-MCO must make all reasonable efforts to ensure the Participant's access to these services within the travel times herein through Out-of-Network providers. In locations where the CHC-MCO can provide evidence that it has conducted all reasonable efforts to contract with Providers and specialists and can provide verification that no Providers or specialists exist to ensure a Participant's access

to these services within the travel times set forth in this exhibit, the CHC-MCO must work with Participants to offer reasonable Provider alternatives. Additionally, the CHC-MCO must ensure and demonstrate that the following Provider Network and access requirements are established and maintained for the entire CHC zone in which the CHC-MCO operates if Providers exist.

The Department will require annual submission of a GeoAccess Report and Gap Analysis to be done by the CHC-MCO. The CHC-MCO must demonstrate access to the provider types outlined below through application of the specified access criteria. The Network Gap Analysis must be detailed and include all reasonable efforts to fill network gaps.

a. PCPs

Make available to every Participant a choice of at least two (2) appropriate PCPs with open panels whose offices are located within a travel time no greater than thirty (30) minutes (Urban) and sixty (60) minutes (Rural). This travel time is measured via public transportation, where available.

Participants may, at their discretion, select PCPs located further from their homes.

b. Specialists

For the following Provider types, the CHC-MCO must ensure a choice of two (2) Providers who are accepting new patients within the travel time limits (thirty (30) minutes Urban, sixty (60) minutes Rural). This travel time is measured via public transportation, where available.

General Surgery
Optometry
Rehabilitation
Neurological Surgery
Urology
Dermatology
Oral Surgery
Orthopedic Surgery
Allergy and Immunology
Otolaryngology
Neurology
Cardiology
Gastroenterology
Podiatry
Common Laboratory and Diagnostic Service
Obstetrical and Gynecological Service

For the following provider types, the CHC-MCOs must ensure a choice of one (1) provider who is accepting new patients within the travel time limits (30 minutes Urban, 60 minutes Rural) and a second choice, within the CHC Zone.

Endocrinologist
Rheumatology
Nephrology
Hematology/Oncology
Speech Therapy

All Other Provider Types must meet the Participants needs through in-network or out-of-network arrangements. CHC-MCOs should make all reasonable efforts to offer two (2) or more Specialty Providers when possible.

c. Hospitals

Ensure at least one (1) hospital within the travel time limits (thirty (30) minutes Urban, sixty (60) minutes Rural) and a second (2nd) choice within the CHC zone. This travel time is measured via public transportation, where available.

d. LTSS Providers

LTSS network adequacy requirements are based on the full-time equivalent (FTE) calculations developed by the Department for services where the Provider is traveling to the Participant. FTE network adequacy data must be submitted by CHC zone. For services where the Participant is traveling to the Provider, the CHC-MCO must ensure a choice of two (2) Providers who are accepting new clients within the travel time limits (thirty (30) minutes Urban, sixty (60) minutes Rural). This travel time is measured via public transportation, where available.

e. Out-of-Network Access

Ensure the provision of Covered Services to all Participants such that if the CHC-MCO does not have at least two (2) specialists or sub-specialists qualified to meet the particular needs of the individuals who are accepting new patients and within the travel time requirements, then the CHC-MCO must allow Participants to pick an Out-of-Network Provider if not satisfied with the Network Provider. The CHC-MCO must develop a system to determine Prior Authorization for Out-of-Network Services through the Person-Centered Planning Team and UM, depending on the service for which the Out-of-Network Provider is being authorized, including provisions for informing the Participant of how to request this authorization for Out-of-Plan Services.

If the CHC-MCO is unable to ensure a Participant's access to Provider or specialty Provider services within the Provider Network, within the travel times set forth in this exhibit, the CHC-MCO must make all reasonable efforts to ensure the Participant's access to these services within the travel times herein through Out-of-Network Providers. In locations where the CHC-MCO can provide evidence that it has conducted all reasonable efforts to contract with Providers and specialists and can provide verification that no Providers or specialists exist to ensure a Participant's access to these

services within the travel times set forth in this exhibit, the CHC-MCO must work with Participants to offer reasonable Provider alternatives.

f. Medicare Network Compliance

If the Medicare Network standards would require more Providers for any Provider type or Service Area, the CHC-MCO must meet the Medicare standards in its CHC-MCO.

g. Anesthesiology and Anesthesia for Dental Care

CHC-MCOs must ensure there are two (2) anesthesiologists available for each location that performs medical procedures that require aesthesia.

For Participants needing anesthesia for dental care, the CHC-MCO must ensure a choice of at least two (2) dentists within the Provider Network with privileges or certificates to perform specialized dental procedures under general anesthesia or pay Out-of-Network.

h. Rehabilitation Facilities

Ensure a choice of at least two (2) rehabilitation facilities within the Provider Network, at least one (1) of which must be located within this CHC zone.

i. CNMs / CRNPs, Other Providers

Ensure access to Certified Nurse Midwives (CNMs), Certified Registered Nurse Practitioners (CRNPs) and other Providers. The CHC-MCO must demonstrate its attempts to contract in good faith with a sufficient number of CNMs, CRNPs and other Providers and maintain payment policies that reimburse CNMs, CRNPs and other Providers for all services provided within the scope of their practice and allow them to practice to the fullest extent of their education, training and licensing.

j. Qualified Providers

The CHC-MCO must limit its PCP Network to appropriately Qualified Providers. The CHC-MCO's PCP Network must meet the following:

- Seventy–five to one hundred percent (75-100%) of the Network consists of PCPs who have completed an approved Primary Care residency in family medicine, osteopathic general medicine, or internal medicine.

- No more than twenty-five percent (25%) of the Network consists of PCPs

without appropriate residencies but who have, within the past seven (7) years, five (5) years of post-training clinical practice experience in family medicine, osteopathic general medicine, internal medicine. Post-training experience is defined as having practiced at least as a 0.5 full-time equivalent in the practice areas described.

k. Participant Freedom of Choice

The CHC-MCO must demonstrate its ability to offer its Participants freedom of choice in selecting a PCP. At a minimum, the CHC-MCO must have or provide one (1) full-time equivalent (FTE) PCP who serves no more than one thousand (1,000) Participants. For the purposes of this section, a full-time equivalent PCP must be a physician involved in clinical care. The minimum weekly work hours for one (1.0) FTE is the number of hours that the practice considers to be a normal work week, which may be thirty-seven-and-one-half (37.5), forty (40), or fifty (50) hours. A physician cannot be counted as more than one (1.0) FTE regardless of the number of hours worked. If the PCP/PCP Site employs Certified Registered Nurse Practitioners (CRNPs)/Physician Assistants (PAs), then the Provider/Provider Site will be permitted to add an additional one thousand (1,000) Participants to the panel. The number of Participants assigned to a PCP may be decreased by the CHC-MCO if necessary to maintain the appointment availability standards.

l. PCP Composition and Location

The CHC-MCO and the Department will work together to avoid the PCP having a caseload or medical practice composed predominantly of Participants. In addition, the CHC-MCO must organize its PCP Sites so as to ensure continuity of care to Participants and must identify a specific PCP within the PCP site for each Participant. The CHC-MCO may apply to the Department for a waiver of these requirements on a PCP Site-specific basis. The Department may waive these requirements for good cause demonstrated by the CHC-MCO.

m. FQHCs/RHCs/Opioid Use Disorder Centers of Excellence (OUD-COE)

The CHC-MCO must contract with a sufficient number of Federally Qualified Health Centers (FQHCs) and Rural Health Clinics (RHCs) to ensure access to FQHC and RHC services. If the CHC-MCO's Primary care Network includes FQHCs and RHCs, these sites may be designated as PCP Sites. If a CHC-MCO cannot contract with a sufficient number of FQHCs and RHCs, the CHC- MCO must demonstrate in writing it has attempted to reasonably contract in good faith.

The CHC-MCO must make a good faith effort to contract with all Physical

Health Opioid Use Disorder Centers of Excellence (OUD-COE). If a CHC-MCO does not contract with a Physical Health OUD-COE, the CHC-MCO must provide an explanation for each Physical Health OUD-COE that the CHC-MCO does not contract with for CHC participants.

n. Medically Necessary Emergency Service

The CHC-MCO must comply with the provisions of Act 112 of 1996 (H.B. 1415, P.N. 3853, signed July 11, 1996), the Balanced Budget Reconciliation Act of 1997, as amended, and Act 68 of 1998, the Quality Healthcare Accountability and Protection Provisions, 40 P.S. §§ 991.2101 et seq. pertaining to coverage and payment of Medically Necessary Emergency Services. The definition of such services is set forth at Section IIt, Definitions.

o. ADA Accessibility Guidelines

The CHC-MCO must inspect the office of any Provider who provides services on site at the Provider's location and who seeks to participate in the Provider Network to determine whether the office is architecturally accessible to persons with mobility impairments. Architectural accessibility means compliance with ADA accessibility guidelines with reference to parking (if any), path of travel to an entrance, and the entrance to both the building and the office of the Provider, if different from the building entrance.

The CHC-MCO must submit quarterly reports to the Department, in a format to be specified by the Department, on the results of the inspections. OLTL will also utilize other reporting mechanisms, such as Physical Health HealthChoices reports and licensing visits.

If the office or facility is not accessible under the terms of this paragraph, the office or facility may participate in the Provider Network provided that the office or facility: 1) requests and is determined by the CHC-MCO to qualify for an exemption from this paragraph, consistent with the requirements of the ADA; or 2) agrees in writing to remove the barrier to make the office or facility accessible to persons with mobility impairments within one hundred-eighty (180) days after the CHC-MCO identified the barrier.

The CHC-MCO must document its efforts to determine architectural accessibility. The CHC-MCO must submit this documentation to the Department upon request.

p. Laboratory Testing Sites

The CHC-MCO must ensure that all laboratory testing sites providing

services have either a Clinical Laboratory Improvement Amendment (CLIA) certificate of waiver or a certificate of registration along with a CLIA Community HealthChoices Agreement identification number in accordance with CLIA 1988. Those laboratories with certificates of waiver will provide only the eight (8) types of tests permitted under the terms of their waiver. Laboratories with certificates of registration may perform a full range of laboratory tests. The PCP must provide all required demographics to the laboratory when submitting a specimen for analysis.

q. CHC-MCO Discrimination

The CHC-MCO may not discriminate with respect to participation, reimbursement, or indemnification as to any Provider who is acting within the scope of the Provider's license or certification under applicable State law, solely on the basis of such license or certification or on the basis that the provider serves high risks populations or specializes in conditions that require costly treatment. This paragraph must not be construed to prohibit a CHC-MCO from including Providers only to the extent necessary to meet the needs of the organization's Participants or from establishing any measure designed to maintain quality and control costs consistent with the responsibilities of the CHC-MCO.

r. Declined Providers

If the CHC-MCO declines to include individual Providers or groups of Providers in its Network, it must give the affected Providers written notice of the reason for its decision.

s. Second Opinions

The CHC-MCO must provide for a second opinion from a qualified Provider within the Network, at no cost to the Participant. If a qualified Provider is not available within the Network, the CHC-MCO must assist the Participant in obtaining a second opinion from a qualified Provider outside the Network, at no cost to the Participant, unless co-payments apply.

2. Appointment Standards

The CHC-MCO will require the PCP, dentist, or specialist to conduct or contact the Services Coordinator to conduct affirmative outreach whenever a Participant misses an appointment and to document this in the medical record. Such an effort shall be deemed to be reasonable if it includes three (3) attempts to contact the Participant. Such attempts may include, but are not limited to: written attempts, telephone calls and home visits. At least one (1) such attempt must be a follow-up telephone call.

Service Coordinators will evaluate any barriers to Participant attendance at appointments and develop any necessary plan to facilitate and improve Participant compliance with appointments scheduled.

a. General

PCP scheduling procedures must ensure that:

i. Emergency Medical condition cases must be immediately seen or referred to an emergency facility.

ii. Urgent Medical Condition cases must be scheduled within twenty- four (24) hours.

iii. Non-Urgent Sick Visits must be scheduled with a PCP within seventy-two (72) hours of request, as clinically indicated.

iv. Routine appointments must be scheduled within ten (10) business days. Health assessment/general physical examinations and first examinations must be scheduled within three (3) weeks of Enrollment.

v. The CHC-MCO must provide the Department with its protocol for ensuring that a Participant's average office waiting time for an appointment for Routine Care is no more than thirty (30) minutes or at any time no more than up to one (1) hour when the physician encounters an unanticipated Urgent Medical Condition visit or is treating a Participant with a difficult medical need. The Participant must be informed of scheduling timeframes through educational outreach efforts.

vi. The CHC-MCO must monitor the adequacy of its appointment processes and reduce the unnecessary use of ED visits.

b. Specialty Referrals

For specialty referrals, the CHC-MCO must be able to provide for:

i. Emergency Medical Condition appointments immediately upon referral.

ii. Urgent Medical Condition care appointments within twenty-four (24) hours of referral.

iii. Scheduling of appointments for routine care shall be scheduled to occur within thirty (30) days for all specialty Provider types.

c. Pregnant Women

Should the IEB or Participant notify the CHC-MCO that a new Participant is pregnant or there is a pregnancy indication on the files transmitted to the CHC-MCO by the Department, the CHC-MCO must contact the Participant within five (5) days of the Start Date to assist the woman in obtaining an appointment with an OB/GYN or Certified Nurse Midwife. For maternity care, the CHC-MCO must arrange initial prenatal care appointments for enrolled pregnant Participants as follows:

i. First trimester — within ten (10) business days of the Participant being identified as being pregnant.

ii. Second trimester — within five (5) business days of the Participant being identified as being pregnant.

iii. Third trimester — within four (4) business days of the Participant being identified as being pregnant.

iv. High-risk pregnancies — within twenty-four (24) hours of identification of high risk to the CHC-MCO or maternity care Provider, or immediately if an emergency exists.

3. Policies and Procedures for Appointment Standards

The CHC-MCO will comply with the program standards regarding service accessibility standards that are set forth in this exhibit and in Section V.BB.2. of the Agreement, Provider Agreements.

The CHC-MCO must have written policies and procedures for disseminating its appointment standards to all Participants through its Participant Handbook and through other means. In addition, the CHC-MCO must have written policies and procedures to educate its Provider Network about appointment standard requirements. The CHC-MCO must monitor compliance with appointment standards and must have a corrective action plan when appointment standards are not met.

4. Compliance with Access Standards

a. Mandatory Compliance

The CHC-MCO must comply with the access standards in accordance with this exhibit and Section V.BB.2 of the Agreement, Provider Agreements. If

the CHC-MCO fails to meet any of the access standards by the dates specified by the Department, the Department may terminate this Agreement. To the extent the Department designates new provider types in the future, the CHC-MCOs must adhere to distance standards for those new provider types when it promotes the objectives of the Medicaid program for the provider type to be subject to time and distance access standards, as determined by CMS, if the provider type is covered under the Agreement.

b. Reasonable Efforts and Assurances

The CHC-MCO must make reasonable efforts to honor a Participant's choice of Providers among Network Providers as long as:

i. The CHC-MCO's Agreement with the Network Provider covers the services required by the Participant.

ii. The CHC-MCO has not determined that the Participant's choice is clinically inappropriate.

The CHC-MCO must provide the Department adequate assurances that the CHC-MCO, with respect to this CHC zone, has the capacity to serve the expected Enrollment in this CHC zone. The CHC-MCO must provide assurances that it will offer the full scope of Covered Services as set forth in this Agreement and access to preventive and Primary Care services. The CHC-MCO must also maintain a sufficient number, mix and geographic distribution of Providers and services in accordance with the standards set forth in this exhibit and Section V.BB.2 of the Agreement, Provider Agreements.

c. Compliance with Access Standards

The CHC-MCO must continuously monitor its contracted networks throughout the contract year to ensure participant access to services within the access criteria set forth above. The CHC-MCO must obtain DHS approval for network exception requests to cover situations in which the CHC-MCO determines that Pennsylvania Medicaid Providers are not available within the access criteria established above. The network exception request must detail the specific service and provider type/specialist that the CHC-MCO has deemed as unavailable including identification of the geographic service area. DHS may consider exception requests for other provider types/specialties upon review of the evidence submitted by the CHC-MCO as part of the exception request. Each request will need to be submitted as part of the GeoAccess and Network Gap Analysis Report, when network access has changed due to closure or disenrollment of the service provider, and when the CHC-MCO has identified a gap in network access. The Department will review and

approve network exception requests based on the service type and provider type/specialist within the identified service area.

d. CHC-MCO's Corrective Action

The CHC-MCO must take all necessary steps to resolve, in a timely manner, any demonstrated failure to comply with the access standards. Prior to a termination action or other sanction by the Department, the CHC-MCO will be given the opportunity to institute a corrective action plan. The CHC-MCO must submit a corrective action plan to the Department for approval within thirty (30) days of notification of such failure to comply, unless circumstances warrant and the Department demands a shorter response time. The Department's approval of the CHC-MCO's corrective action plan will not be unreasonably withheld. The Department will make its best effort to respond to the CHC-MCO within thirty (30) days from the submission date of the corrective action plan. If the Department rejects the corrective action plan, the CHC-MCO shall be notified of the deficiencies of the corrective action plan. In such event, the CHC-MCO must submit a revised corrective action plan within fifteen (15) days of notification. If the Department does not receive an acceptable corrective action plan, the Department may impose sanctions against the CHC-MCO, in accordance with Section VIII.C. of the Agreement, Sanctions. Failure to implement the corrective action plan may result in the imposition of a sanction as provided in this Agreement.

EXHIBIT U

PROVIDER AGREEMENTS

The CHC-MCO is required to have written Provider Agreements with a sufficient number of Providers to ensure Participant access to all Medically Necessary Covered Services.

The CHC-MCO's Provider Agreements must include the following provisions:

a. A requirement that the Provider participate, as needed, in the needs screening, Assessment and Reassessment, service planning, and service coordination processes.

b. A requirement that the Provider comply with any accessibility, Cultural Competency, Linguistic Competency, and Disability Competency requirements the Department issues for meeting the needs of the CHC population.

c. A provision that the CHC-MCO may not exclude or terminate a Provider from participation in the CHC-MCO's Provider Network due to the fact that the Provider has a practice that includes a substantial number of patients with expensive medical conditions.

d. A provision that the CHC-MCO may not exclude a Provider from the CHC-MCO's Provider Network because the Provider advocated on behalf of a Participant for Medically Necessary and appropriate healthcare consistent with the degree of learning and skill ordinarily possessed by a reputable Provider practicing according to the applicable standard of care.

e. Notification of the prohibition and sanctions for submission of false Claims and statements.

f. The definition of Medically Necessary in Section II, Definitions.

g. A provision that the CHC-MCO may not prohibit or restrict a Provider acting within the lawful scope of practice from discussing Medically Necessary care and advising or advocating appropriate medical care with or on behalf of a Participant, including information regarding the nature of treatment options in order to decide among those options; the risks, benefits, and consequences of treatment and non-treatment; alternative treatments; or the availability of alternative therapies, consultation or tests that may be self-administered.

h. A provision that the CHC-MCO may not prohibit or restrict an LTSS Provider acting within the lawful scope of practice from discussing needed services and advising or advocating appropriate LTSS with or on behalf of a Participant, including information regarding the nature of LTSS options; risks; and the availability of alternative services.

i. A provision that the CHC-MCO may not terminate a contract or employment with a Provider for filing a Grievance on a Participant's behalf.

j. A provision which specifies that the agreement will not be construed as requiring the Provider to provide a counseling or referral service if the Provider objects to the provision of such services on moral or religious grounds.

k. A requirement that the Provider cooperate with the QM/UM Program standards outlined in Exhibit F, Quality Management and Utilization Management Program Requirements.

l. A requirement for cooperation for the submission of Encounter Data for all services provided within the time frames required in Section VIII, Reporting Requirements, no matter whether reimbursement for these services is made by the CHC-MCO either directly or indirectly through capitation.

m. A continuation of benefits provision which states that the Provider agrees that in the event of the CHC-MCO's insolvency or other cessation of operations, the Provider must continue to provide benefits to the CHC-MCO's Participants, including Participants in an inpatient setting, through the period for which the capitation has been paid.

n. A requirement that PCPs contact new Participants identified in the quarterly Encounter lists who have not had an Encounter during the first six (6) months of Enrollment or who have not complied with the scheduling requirements outlined in the RFP and this Agreement.

o. A requirement that should the Provider terminate its agreement with the CHC-MCO for any reason, the Provider must provide services to the Participants assigned to the Provider under the contract up to the end of the month in which the effective date of termination falls.

p. A requirement that each physician providing services to Participants must have a MMIS Provider ID Number.

q. A requirement that the Provider disclose annually any Physician Incentive Plan or risk arrangements it may have with physicians either within its group practice or other physicians not associated with the group practice, even if there is no Substantial Financial Risk between the CHC-MCO and the physician or physician group.

r. A requirement for cooperation with the CHC-MCO's and the Department's Recipient Restriction Program.

s. A requirement that healthcare facilities and ambulatory surgical facilities develop and implement, in accordance with P.L.154, No. 13, known as the Medical Care

Availability and Reduction of Error (Mcare) Act, an internal infection control plan that is established for the purpose of improving the health and safety of patients and healthcare workers and includes effective measures for the detection, control, and prevention of Healthcare-Associated Infections.

t. A provision that the Provider must agree to the CHC-MCO's QM/UM Department's monitoring of the appropriateness of a continued inpatient stay beyond approved days according to established Medical Necessity guidelines under the direction of the CHC-MCO's Medical Director, and to provide all clinical information on the inpatient stay in a timely manner which allows for decision and appropriate management of care.

u. Language requiring the Provider to hold harmless all Participants in the event of nonpayment by the CHC-MCO for failure to obtain Prior Authorization or failure to follow any other CHC-MCO rules. Participants may not be billed or balanced billed for Covered Services.

v. Requirements regarding coordination with BH Providers (if applicable):

- Comply with all applicable statutes and regulations pertaining to the confidentiality of Participant medical records, including obtaining any required written Participant consents to disclose confidential medical records.
- Make referrals for social, vocational, education, or human services when a need for such service is identified through assessment.
- Provide health records if requested by the BH Provider.
- Notify the BH Provider of all prescriptions and, when advisable, consult with the BH Provider before prescribing medication. Make certain the BH Provider has complete, up-to-date record of medications.
- Be available to the BH Provider on a timely basis for consultations.

w. A provision that requires the Provider to comply with the procedures for reporting suspected abuse and neglect under the Older Adult Protective Services Act and the Adult Protective Services Act and for performing exams for the county.

x. Requirements that Providers follow CHC-MCO requirements for ongoing communication with Participants' Service Coordinators.

y. Requirements that Providers return Participant calls within three (3) business days of receipt.

z. A requirement that the Providers must allow for and process voluntary payroll deductions of fringe benefits or wage supplements for any employee who requests it, in accordance with the Wage Payments and Collection Law (43 P.S. §§ 260.2a and 260.3).

aa. A provision that the Provider agrees that, as required by the Department, the CHC-MCO may offset any past due amount that Provider owes to the Department against any payments due to the Provider under the Provider Agreement; provided that the Department of the CHC-MCO first provides written notice of its intention to do so.

bb. A requirement that all Nursing Facilities in the CHC-MCOs network adhere to DOH regulations.

cc. A provision that Providers in the CHC-MCOs network are prohibited from soliciting Participants to receive services from the Provider including:

- Referring an individual for CHC evaluation with the expectation that, should CHC enrollment occur, the Provider will be selected by the Participant as the service provider;
- Communicating with existing CHC Participants via telephone, face-to-face or written communication for the purpose of petitioning the Participant to change Providers;
- Communicating with hospitals, discharge planners or other institutions for the purposes of soliciting potential CHC Participants. Providers in the CHC-MCOs network are allowed to outreach to hospitals, discharge planners or other institutions only to provide education and information about their agency/program, however, they cannot solicit for any potential CHC participants. The Provider cannot solicit for referrals of CHC participants, nor can they offer or provide any incentives to the hospital/institutions, discharge planner, or any other staff.

The CHC-MCO must make all necessary revisions to its Provider Agreements to be in compliance with the requirements set forth in this section. Revisions may be completed as Provider Agreements become due for renewal, provided that all Provider Agreements are amended within one (1) year of the effective date of this Agreement, with the exception of the Encounter Data requirements, which must be amended before the Implementation Date, if necessary, to ensure that all Providers are submitting Encounter Data to the CHC-MCO within the time frames specified in Section VIII.C.1, Encounter Data Reporting.

EXHIBIT V

CHC-MCO REQUIREMENTS FOR PROVIDER TERMINATIONS

1. Termination by the CHC-MCO

A. Notification to Department

The CHC-MCO must notify the Department in writing of its intent to terminate a Network Provider and services provided by a Network Provider (which includes, but is not limited to, a home care agency, nursing facility, hospital, specialty unit within a facility, and/or a large Provider group) ninety (90) days prior to the effective date of the termination.

The CHC-MCO must submit a Provider termination work plan and supporting documentation within ten (10) business days of the CHC-MCO notifying the Department of the termination and must provide weekly updates to this information. Workplans do not need to be submitted for Providers that have less than ten (10) Participants, unless specifically requested by the Department. The requirements for the work plan and supporting documentation are found in this Exhibit, under 3. Work plans and Supporting Documentation.

B. Continuity of Care

The CHC-MCO must comply with both this section and 28 Pa. Code § 9.684.

Unless the Provider is being terminated for cause as described in 40 P.S. § 991.2117(b), the CHC-MCO must allow a Participant to continue an ongoing course of treatment from the Provider for up to sixty (60) days from the date the Participant is notified by the CHC-MCO of the termination or pending termination of the Provider, or for up to sixty (60) days from the date of Provider termination, whichever is greater. A Participant is considered to be receiving an ongoing course of treatment from a Provider if during the previous twelve (12) months the Participant was treated by the Provider for a condition that requires follow-up care or additional treatment or the services have been Prior Authorized**.** Any adult Participant with a previously scheduled appointment shall be determined to be in receipt of an ongoing course of treatment from the Provider, unless the appointment is for a well adult check-up. Per 28 Pa. Code § 9.684(d), the transitional period may be extended by the CHC-MCO if the extension is determined to be clinically appropriate. The CHC-MCO shall consult with the Participant and the Provider in making the determination. The CHC-MCO must also allow a Participant who is pregnant to continue to receive care from the Provider that is being terminated through the completion of the Participant's postpartum care.

For a Participant who is receiving LTSS but whose LTSS Provider leaves the CHC-

MCO Provider Network, the CHC-MCO must continue to allow the Participant to receive services for a sixty (60) day period and must pay that Provider until such time as an alternative Network Provider can be identified and begins to deliver the same LTSS services as the former Provider.

The CHC-MCO must review each request to continue an ongoing course of treatment and notify the Participant of the decision as expeditiously as the Participant's health condition requires, but no later than two (2) business days. If the CHC-MCO determines what the Participant is requesting is not an ongoing course of treatment, the CHC-MCO must issue the Participant a denial notice using the template notice titled C(4) Continuity of Care Denial Notice found on the Intranet supporting CHC.

The CHC-MCO must also inform the Provider that to be eligible for payment for services provided to a Participant after the Provider is terminated from the Network, the Provider must agree to meet the same terms and conditions as Network Providers.

C. Notification to Participants

If the Provider that is being terminated from the Network is a PCP, the CHC-MCO, using the template notice titled C(1) Provider Termination Template For PCPs found on the Intranet supporting CHC, must notify all Participants who receive primary care services from the Provider forty-five (45) days prior to the effective date of the Provider's termination. Participants who are receiving an ongoing course of treatment from the Provider may continue to receive this treatment for up to sixty (60) days from the date the Participant is notified of the termination or pending termination of the Provider, or for up to sixty (60) days from the date of Provider termination, whichever is greater.

If the Provider that is being terminated from the Network is not a PCP or a hospital, the CHC-MCO, using the template notice titled C(3) Provider Termination Template for Specialist and FQHC Providers Who Are Not PCPs, found on the Intranet supporting CHC, must notify all Participants who have received services from the Provider during the previous twelve (12) months, as identified through referral and claims data; all Participants who are scheduled to receive services from the Provider; and all Participants who have a pending or approved Prior Authorization request for services from the Provider forty-five (45) days prior to the effective date of the Provider's termination. Participants who are receiving an ongoing course of treatment from the Provider may continue to receive this treatment for up to sixty (60) days from the date the Participant is notified of the termination or pending termination of the Provider, or for up to sixty (60) days from the date of Provider termination, whichever is greater.

If the Provider that is being terminated from the Network is a hospital (including a specialty unit within a facility or hospital), the CHC-MCO, using the template notice titled C(2) Hospital/Specialty Unit Within a Facility or Hospital Termination found on the Intranet supporting CHC, must notify all Participants assigned to a PCP with

admitting privileges at the hospital, all Participants assigned to a PCP that is owned by the hospital, and all Participants who have utilized the hospital's services within the past twelve (12) months forty-five (45) days prior to the effective date of the hospital's termination. The MCO must utilize claims data to identify these Participants.

If the CHC-MCO is terminating a specialty unit within a facility or hospital**,** the Department may require the CHC-MCO to provide forty-five (45) day advance written notice to a specific Participant population or to all of its Participants, based on the impact of the termination.

The Department, at its sole discretion, may allow exceptions to the forty-five (45) day advance written notice depending upon verified status of contract negotiations between the CHC-MCO and Provider.

The Department, in coordination with DOH, may require the CHC-MCO to include additional information in the notice of a termination to Participants.

The forty-five (45) day advance written notice requirement does not apply to terminations by the CHC-MCO for cause in accordance with 40 P.S. §991.2117(b). The CHC-MCO must notify Participants within five (5) business days using the template notice titled C(1) Provider Termination Template For PCPs, found on the Intranet supporting CHC.

The CHC-MCO must update hard copy and web-based Provider directories to reflect changes in the Provider Network as required in Section V.O.17, Provider Directories, of this Agreement.

D. Notification to the Provider

The CHC-MCO must notify Network Providers in writing of their intent to terminate the Provider's contract a minimum of forty-five (45) days in advance of termination.

2. Termination by the Provider

A. Notification to Department

If the CHC-MCO is informed by a Provider that the Provider intends to no longer participate in the CHC-MCO's Network, the CHC-MCO must notify the Department in writing ninety (90) days prior to the date the Provider will no longer participate in the CHC-MCO's Network. If the CHC-MCO receives less than ninety (90) days' notice that a Provider will no longer participate in the CHC-MCO's Network, the CHC-MCO must notify the Department by the next business day after receiving notice from the Provider.

The CHC-MCO must submit a Provider termination work plan within ten (10) business days of the CHC-MCO notifying the Department of the termination and must provide weekly status updates to the work plan. Workplans do not need to be submitted for Providers that have less than ten (10) Participants, unless specifically requested by the Department. The requirements for the work plan are found in this Exhibit, under 3. Work plans and Supporting Documentation.

The CHC-MCO must comply with both this section and 28 Pa. Code § 9.684.

B. Notification to Participants

If the Provider that is terminating its participation in the Network is a PCP, the CHC-MCO, using the template notice titled C(1) Provider Termination Template For PCPs, found on the Intranet supporting CHC, must notify all Participants who receive primary care services from the Provider.

If the Provider that is terminating its participation in the Network is not a PCP or a hospital, the CHC-MCO, using the template notice titled C(3) Provider Termination Template for Specialist and FQHC Providers Who Are Not PCPs, found on the Intranet supporting CHC, must notify all Participants who have received services from the Provider during the previous twelve (12) months, all Participants who were scheduled to receive services from the terminating Provider, and all Participants who have a pending or approved Prior Authorization request for services from the Provider forty-five (45) days prior to the effective date of the Provider's termination. The CHC-MCO must use referral and claims data to identify these Participants.

If the Provider that is terminating its participation in the Network is a hospital or specialty unit within a facility, the CHC-MCO, using the template notice titled C(2) Hospital/Specialty Unit Within a Facility or Hospital Termination, found on the Intranet supporting CHC, must, forty-five (45) days prior to the effective date of the hospital's termination, notify all Participants assigned to a PCP with admitting privileges at the hospital, all Participants assigned to a PCP that is owned by the hospital, and all Participants who have utilized the terminating hospital's services within the past twelve (12) months. The MCO must use referral and claims data to identify these Participants.

If the Provider that is terminating its participation in the Network is a specialty unit within a facility or hospital**,** the Department may require the CHC-MCO to provide forty-five (45) days advance written notice to a specific Participant population or to all of its Participants, based on the impact of the termination.

The Department, in coordination with DOH, may require additional information be included in the notice of a termination to Participants.

The CHC-MCO must update hard copy and web-based Provider directories to reflect changes in the Provider Network as required in Section V.O.17, Provider

Directories, of this Agreement.

3. Work plans and Supporting Documentation

A. Workplan Submission

The CHC-MCO must submit a Provider termination work plan within ten (10) business days of the CHC-MCO notifying the Department of the termination and must provide weekly updates to the work plan. Workplans do not need to be submitted for Providers that have less than ten (10) Participants, unless specifically requested by the Department. The work plan must provide detailed information on the tasks that will take place to ensure the termination is tracked from the time it is first identified until the termination effective date. The work plan should be organized by task, responsible person(s), target dates, completed dates, and status. The work plan should define the steps within each of the tasks. The tasks may include, but are not limited to:

- Commonwealth Notifications (DHS and DOH).
- Provider Impact and Analysis.
- Provider Notification of the Termination.
- Participant Impact and Analysis.
- Participant Notification of the Termination.
- Participant Transition.
- Participant Continuity of Care.
- Systems Changes.
- Provider Directory Updates for the IEB (include date when all updates will appear on Provider files sent to enrollment broker).
- CHC-MCO Online Directory Updates.
- Participant Service and Provider Service Script Updates.
- Submission of Required Documents to the Department (Participant notices and scripts for prior approval).
- Submission of Final Participant Notices to the Department (also include date that DOH received the final notices).
- Communication with the Public Related to the Termination.
- Termination Retraction Plan, if necessary.

B. Supporting Documentation

The Department is also requesting that the CHC-MCO submit the following supporting documentation, in addition to the work plan, within ten (10) business days of the CHC-MCO notifying the Department of the termination and must provide weekly updates as appropriate. The Department is not prescribing the format for the supporting documentation, but electronic means is preferable.

1) Background Information

a) Submit a summary of issues/reasons for termination.
b) Submit information on negotiations or outreach that has occurred between the CHC-MCO and the Provider including dates, parties present, and outcomes.

2) Participant Access to Provider Services

a) Submit information that identifies Providers remaining in the Network by Provider type and location that would be available within the appropriate travel times for those Participants once the termination is effective. Provide the travel times for the remaining Providers based upon the travel standards outlined in Exhibit T, Provider Network Composition/Service Access. For PCPs also list current panel sizes and the number of additional Participants that are able to be assigned to those PCPs.
b) Submit geographic access reports and maps documenting that all Participants currently accessing terminating Providers can access services being provided by the terminating Provider from remaining Network Providers who are accepting new Participants. This documentation must be broken out by Provider type.
c) Submit a comprehensive list of all Providers, broken out by Provider type, who are affected by the termination and that also indicates the current number of Participants either assigned (for PCPs) or utilizing these Providers.
d) Submit information that includes the admitting privileges at other hospitals or facilities for each affected Provider and whether each affected Provider can serve the CHC-MCO's Participants at another hospital or facility.
e) Submit a copy of the final Provider notices to the Department.

3) Participant Identification and Notification Process

a) Submit information that identifies the total number of Participants affected by the termination, i.e., assigned to an owned/affiliated PCP or utilizing the hospital or owned/affiliated Provider within the twelve (12) months preceding the termination date, broken down by Provider.
b) Submit information on the number of Participants with Prior Authorizations in place that will extend beyond the Provider termination date.

c) Submit draft and final Participant notices, utilizing the templates included as C(1) – C(4), Provider and Hospital Termination Templates and Continuity of Care Denial Notice, found on the Intranet supporting CHC, as appropriate, for Department review and prior approval.

4) Participant Services

a) Submit, for Department prior approval, the call center script to be used to respond to inquiries regarding the termination.
b) Identify a plan for handling increased call volume in the call center while maintaining call center standards.
c) Submit to the Department a call center report for the reporting of summary

call center statistics, if requested as part of the termination. This call center report should include, at a minimum, the following elements:

- Total Number of Inbound Participant services calls (broken out by PCP, Specialist, and Hospital).
- Termination call reasons (broken out by Inquiries, PCP Change, Opt Out/Plan Change).

5) Affected Participants in Service Coordination

a) Submit the total number of Participants in Service Coordination affected by the termination.
b) Submit the criteria to the Department that the CHC-MCO will utilize for continuity of care for Participants affected by the termination.
c) Submit an outreach plan and outreach script to the Department for prior approval if outbound calls are to be made to inform Participants in care management about the termination.

6) Participants Affected by Home Care Agency Termination:

a) Submit the total number of Participants in the home care agency affected by the termination.
b) Submit the criteria to the Department that the CHC-MCO will utilize for continuity of care for Participants affected by the termination.
c) Submit an outreach plan and outreach script to the Department for prior approval if outbound calls are to be made to inform Participants about the termination.

7) Participants Affected by Nursing Facility Termination

a) Submit the total number of Participants affected by the termination.
b) Submit the criteria to the Department that the CHC-MCO will utilize for continuity of care for Participants affected by the termination.
c) Submit an outreach plan and outreach script to the Department for prior approval if outbound calls are to be made to inform Participants in care management about the termination.

8) Enrollment Services

Submit final, approved Participant notices to the Department on CHC-MCO letterhead.

9) News Releases

Any news releases related to the termination must be submitted to the Department for prior approval.

10) Website Update

Indicate when the CHC-MCO's web-based Provider directories will be updated, and what, if any, additional information will be posted to the CHC-MCO website.

EXHIBIT W

EXTERNAL QUALITY REVIEW

External Quality Review (EQR) is a requirement under Title XIX of the Social Security Act, Section 1932(c)(2), for states to obtain an independent, external review body to perform an annual review of the quality of services furnished under state contracts with Managed Care Organizations, including the evaluation of quality outcomes, timeliness and access to services. The requirements for EQR were further outlined in 42 C.F.R. Parts 433 and 438, External Quality Review of Medicaid Managed Care Organizations. EQR refers to the analysis and evaluation of aggregated information on timeliness, access, and quality of healthcare services furnished to Participants. "Quality," as it pertains to EQR, means the degree to which a CHC-MCO maintains or improves the health outcomes of its Participants through its structural and operational characteristics and through the provision of services. The results of the EQR are made available, upon request, to specified groups and to interested stakeholders. This is one of many tools that facilitate achieving continuous quality improvement in the delivery of care and services, healthcare outcomes, and timeliness of care and services, access to services, quality and utilization management systems, and program oversight. The Department will use the EQR process for its early implementation process. The CHC-MCO must comply with all information requests from the External Quality Review Organization (EQRO). The Department requires as part of the EQR process that the CHC-MCOs:

A. Actively participate in planning and developing the measures to be utilized with the Department and the EQRO. The Medical Assistance Advisory Committee will be given an opportunity to provide input into the measures to be utilized.

B. Accurately, completely and within the required timeframe identify eligible Participants to the EQRO.

C. Correctly identify and report the numerator and denominator for each measure.

D. Actively encourage and require Providers, including subcontractors, to provide complete and accurate Provider medical records within the timeframe specified by the EQRO.

E. Demonstrate how the results of the EQR are incorporated into the Plan's overall Quality Improvement Plan and demonstrate progressive improvements during the term of the contract.

F. Improve Encounter Data in an effort to decrease the need for extensive Provider medical record reviews.

G. Provide information to the EQRO as requested to fulfill the requirements of the mandatory and optional activities required in 42 C.F.R. Parts 433 and 438.

H. Ensure that data, clinical records and workspace located at the CHC-MCO's work

site are available to the independent review team and to the Department, upon request.

I. Participate in Performance Improvement Projects whose target areas are dictated by the Department to address key quality areas of focus for improvements. The CHC-MCO will comply with the PIP timelines as prescribed by the EQRO.

1. The CHC-MCO shall perform at least two (2) PIPs, one (1) clinical and one (1) non-clinical. Clinical PIPs include projects focusing on prevention and care of acute and chronic conditions, high-volume services, high-risk services, and continuity and coordination of care and services; non-clinical PIPs include projects focusing on availability, accessibility, and cultural competency of services, interpersonal aspects of care and services, and appeals, grievances, and other complaints.
2. The CHC-MCO shall follow CMS protocols for PIPs and document all steps outlined in the CMS protocols for PIPs
3. The CHC-MCO shall identify benchmarks and set achievable performance goals for each of its PIPs. The CHC-MCO shall identify and implement intervention and improvement strategies for achieving the performance goal set for each PIP and promoting sustained improvements.
4. The CHC-MCO shall report on PIPs as required in the Reporting Requirements For Performance Improvement Project topics that are conducted in the assigned Zone of the State. The CHC-MCO shall submit one Performance Improvement Project Summary Report that includes Zone-specific data and information, including *improvement strategies* as required by CMS.
5. After three (3) years, the CHC-MCO shall, using evaluation criteria established by the Department, determine if one or all of the PIPs should be continued.

EXHIBIT W(1)

CRITICAL INCIDENT REPORTING AND MANAGEMENT AND

PROVIDER PREVENTABLE CONDITIONS/PREVENTABLE SERIOUS ADVERSE EVENTS REPORTING

All CHC-MCO staff and staff of providers in their networks are mandatory reporters under both the Adult Protective Services Act (APS) and the Older Adult Protective Services Act (OAPSA). Reporting requirements can be found at:

- APS- http://www.dhs.pa.gov/citizens/reportabuse/dhsadultprotectiveservices/
- OAPSA- http://www.aging.pa.gov/organization/advocacy-and-protection/Pages/Protective-Services.aspx

CHC-MCOs must train or educate its Network Providers and ensure they comply with the reporting requirements established in the OAPSA and APS. In addition, CHC-MCOs must ensure that Network Providers comply with the following critical incident and adverse event reporting requirements outlined in this Exhibit.

Critical Incident Reporting to the Department

A. Network Providers and Subcontractors must report critical events or incidents to the CHC-MCOs.

B. Using the Department's Enterprise Incident Management System (EIM), the CHC-MCOs must investigate critical events or incidents reported by Network Providers and Subcontractors and report the outcomes of these investigations. CHC-MCOs must require all information entered in EIM to be written in English. To report the outcome the Department has established an Operations Report for critical incidents (OPS 30: CHC Waiver Assurance Performance Measures – Health & Welfare). This reporting requirement is in addition to any other reporting requirements that may exist under the law.

C. CHC-MCO must establish a process to receive and manage critical incident reports that:

1. Safeguards the health and welfare of the participant involved in a critical incident, including seeking emergency medical services if needed.
2. Determines if an incident is reportable based on the definition of a critical incident.
3. Requires the CHC-MCO staff person or Network Provider to submit a critical incident report in EIM within forty-eight (48) hours of discovery of the incident, excluding weekends and holidays. The forty-eight (48) hour clock begins at the time that the incident was discovered. If the incident was discovered on a weekend or holiday the clock would start at 12:00 a.m. on the first business following the discovery of the incident.
4. Ensures all required fields are completed in EIM.

5. Requires the CHC-MCO to notify the Participant involved in the incident and the Participant's designated representative (unless the representative is suspected to be involved in the incident) within twenty-four (24) hours that a critical incident report was filed.
6. Requires CHC-MCO staff and Network Providers to report critical incidents even if the Participants involved choose not to report.
7. Respects the right of a Participant involved in a critical incident to: not report the incident; decline further interventions; refuse involvement in a critical incident investigation; and have an advocate present during any investigation resulting from a critical incident report.
8. Provides the number and percentage of substantiated cases of abuse, neglect and exploitation where potential issues related to health and welfare were addressed.

D. The following are critical incidents:

1. Death (other than by natural causes);
2. Serious injury that results in emergency room visits, hospitalizations, or death;
3. Hospitalization except in certain cases, such as hospital stays that were planned in advance;
4. Provider or staff misconduct, including deliberate, willful, unlawful, or dishonest activities;
5. Abuse, which includes the infliction of injury, unreasonable confinement, intimidation, punishment, mental anguish, or sexual abuse of a participant. Types of abuse include, but are not necessarily limited to:
6. Physical abuse, defined as a physical act by an individual that may cause physical injury to a participant;
7. Psychological abuse, defined as an act, other than verbal, that may inflict emotional harm, invoke fear, or humiliate, intimidate, degrade or demean a participant;
8. Sexual abuse, defined as an act or attempted act, such as rape, incest, sexual molestation, sexual exploitation, or sexual harassment and/or inappropriate or unwanted touching of a participant; and
9. Verbal abuse, defined as using words to threaten, coerce, intimidate, degrade, demean, harass, or humiliate a participant;
10. Neglect, which includes the failure to provide a participant the reasonable care that he/she requires, including, but not limited to, food, clothing, shelter, medical care, personal hygiene, and protection from harm. Seclusion, which is the involuntary confinement of an individual alone in a room or an area from which the individual is physically prevented from having contact with others or leaving, is a form of neglect;
11. Exploitation, which includes the act of depriving, defrauding, or otherwise obtaining the personal property from a participant in an unjust, or cruel manner, against one's will, or without one's consent, or knowledge for the benefit of self or others;
12. Restraint, which includes any physical, chemical or mechanical intervention that is used to control acute, episodic behavior that restricts the movement or

function of the individual or a portion of the individual's body. Use of restraints and seclusion are both restrictive interventions, which are actions or procedures that limit an individual's movement, a person's access to other individuals, locations or activities, or restricts participant rights;

13. Service interruption, which includes any event that results in the participant's health and/or safety being at risk because of their inability to receive services. This includes involuntary termination by the provider agency, and failure of the participant's back-up plan. If these events occur, the provider agency must have a plan for temporary stabilization; and
14. Medication errors that result in hospitalization, an emergency room visit or other medical intervention.

For the purposes of Critical Incident reporting an emergency room visit is defined as the use of a hospital emergency room. This includes situations that are clearly emergencies, such as a serious injury, life-threatening medical conditions, medication errors, as well as those when an individual is directed to an emergency room in lieu of a visit to the PCP or as the result of a visit to the PCP. The use of an emergency room by an individual, in place of the physician's office, is not reportable.

A serious injury is defined as an injury that:
1) causes a person severe pain; or
2) significantly impairs a person's physical or mental functioning, either temporarily or permanently.

Critical Incident Investigation and Management

The CHC-MCO must ensure that the investigation of critical incidents begins within twenty-four (24) hours after the CHC-MCO discovers the incident.

The CHC-MCO must conclude critical incident investigations and provide the results of their investigations in EIM within thirty (30) calendar days of discovery of the incident. If the CHC-MCO is unable to conclude an investigation within thirty (30) days, the CHC-MCO must document the need for an extension and the reasons for the delay in EIM.

For any participant with more than three critical incidents within a 12-month period, the CHC-MCO must perform an analysis and take action as necessary to prevent or mitigate further incidents. The CHC-MCO must commence the analysis and implement the actions to address potential issues related to the health and welfare of the Participant within the 30-day investigation period. If additional time is needed to investigate and to implement any necessary actions to address potential issues related to the health and welfare of the Participant, the CHC-MCO must document an extension in EIM.

For critical incidents reportable under APS and OAPSA, including those involving suspected abuse, neglect, exploitation or abandonment, the CHC-MCO is responsible to report the incident to APS or OAPSA but not to investigate. CHC-MCO staff and service coordinators are required to provide information to and cooperate with APS and OAPSA staff who are conducting the investigation. In addition, the CHC-MCO shall fully cooperate with APS and OAPSA staff in the coordination of any services provided by the CHC-MCO.

Upon being notified by APS and OAPSA staff that a case has been closed, or upon being notified by OLTL, the CHC-MCO will resume full responsibility for subsequent critical incident reporting and investigation for that Participant.

As part of its quality management plan, the CHC-MCO shall have a means to identify Participants who may be at risk of abuse or neglect and take steps to minimize those risks while balancing the right of the Participant to live in his or her community or place of choice.

The Department retains the right to review any incident reports or internal documentation, to conduct its own investigations and to require further corrective actions by the CHC-MCO.

Critical Incident Reporting Requirements for Providers

Providers must report in accordance with applicable requirements.

The CHC-MCO must require providers to cooperate with its investigation of critical incidents. The CHC-MCO must include critical incidents training in its annual training plan and quarterly updates to demonstrate all applicable CHC-MCO staff, Network Providers and their staff and contractors have received the training.

Provider Preventable Conditions/Preventable Serious Adverse Events (PSAE)

The CHC-MCO must require all Network Providers to identify provider preventable conditions as defined in 42 C.F.R. § 447.26 and may not pay for services related to provider preventable conditions unless the condition existed prior to the initiation of treatment for the patient. The CHC-MCO must submit all identified Provider Preventable Conditions in a form or frequency as required by the Department.

The CHC-MCO is prohibited from making payment to a provider for provider preventable conditions that meet the following criteria:

a. Is identified in the State Plan;
b. Has been found by the State, based upon a review of medical literature by qualified professionals, to be reasonably preventable through the application of procedures supported by the evidence-based guidelines;
c. Has a negative consequence for the Participant;
d. Is auditable;
e. Includes, at a minimum, wrong surgical or other invasive procedure performed on a patient; surgical or other invasive procedure performed on the wrong body part; surgical or other invasive procedure performed on the wrong patient.

The CHC-MCO must develop and disseminate policies and procedures that prohibit payments for inpatient services related to treating provider preventable conditions.

The Department will recoup any funds expended by the CH-MCO for payments related to inpatient services for provider preventable conditions.

Please refer to the Department's website for additional information regarding PSAE
http://www.dpw.state.pa.us/cs/groups/webcontent/documents/document/c_101648.pdf

EXHIBIT W(2)

HEALTHCARE EFFECTIVENESS DATA AND INFORMATION SET (HEDIS®)

AND

CONSUMER ASSESSMENT OF HEALTHCARE PROVIDERS AND SYSTEMS (CAHPS®)

Annually, the CHC-MCO must complete all HEDIS measures designated by NCQA as relevant to Medicaid. The HEDIS measure results must be reported separately for each Zone in which the CHC-MCO operates. The CHC-MCO must contract with an NCQA-certified HEDIS auditor to validate the processes of the CHC-MCO in accordance with NCQA requirements. Audited HEDIS results must be submitted to the Department, NCQA and the Department's EQRO annually by June 15th of each calendar year.

The CHC-MCO must utilize the Hybrid methodology (i.e., gathered from administrative and medical record data) as the data collection method for any Medicaid HEDIS measure containing Hybrid Specifications as identified by NCQA. If, in the event the CHC-MCO fails to pass the medical record review for any given standard and NCQA *mandates* that administrative data must be submitted instead of hybrid, the administrative data may be used.

The CHC-MCO must submit to the Department by June 15th of each calendar year a detailed explanation for any Medicaid HEDIS measure marked as "Not Reported."

HEDIS is a set of standardized performance measures designed to reliably compare health plan performance. HEDIS performance measures are divided into the following domains of care:

- Effectiveness of care
- Access/availability of care
- Experience of care
- Utilization and Risk Adjusted Utilization
- Health plan descriptive information
- Measures Reported Using Electronic Clinical Data Systems

The Department requires that the CHC-MCOs:

A. Must produce rates for all Medicaid reporting measures unless otherwise specified by the Department.

B. Must follow NCQA specifications as outlined in the HEDIS Technical Specifications, clearly identifying the numerator and denominator for each measure.

C. Must have all HEDIS results validated by an NCQA-licensed vendor. The Department currently contracts with an NCQA-licensed entity to validate the MCOs' HEDIS results used in public reporting. The MCO may utilize these validation results for other purposes such as pursuit of accreditation. The Department may at some future date relinquish the direct contracting of NCQA validation activities.

D. Must assist with the HEDIS validation process by the Department's NCQA licensed contractor.

E. Must demonstrate how HEDIS results are incorporated into the CHC-MCO's overall Quality Improvement Plan.

F. Must submit validated HEDIS results annually on June 15th unless otherwise specified by the Department.

G. Must provide Participant level data on select measures and must oversample select measures, as defined by the Department and the EQRO.

Consumer Assessment of Healthcare Providers and Systems (CAHPS)

The CHC-MCO must conduct any CAHPS survey required by the Department. CAHPS surveys are standardized instruments that assess various aspects of patient experience with care. CHC requires that both the Adult CAHPS and HCBS CAHPS surveys be conducted for Participants. Specific requirements are listed below for both surveys.

CAHPS Health Plan Survey (Adult CAHPS)

The Adult CAHPS is a subset of HEDIS reporting required by the Department. The CHC-MCO must conduct the Adult CAHPS using the most current CAHPS version specified by NCQA. Survey results must be reported to the Department both electronically and hardcopy in an Excel file in the format determined by the Department. The survey results must be reported separately for each Zone in which the CHC-MCO operates. Validated survey results must be submitted to the Department, NCQA and the Department's EQRO annually by June 15th of each calendar year unless otherwise specified by the Department.

The CHC-MCO must enter into an Agreement with a vendor that is certified by NCQA to perform CAHPS surveys. The CHC-MCO's vendor must perform the CAHPS Adult survey using the most current CAHPS version specified by NCQA.

The CHC-MCO must submit annually the Relative Resource Use (RRU) data to the

Department within ten (10) business days of receipt from NCQA. The CHC-MCO must submit both the Regional and National RRU results.

CAHPS are a set of standardized surveys that assess patient satisfaction with the experience of care. The Adult CAHPS survey is a subset of HEDIS reporting required by the Department. For HEDIS, MCOs must contract with an NCQA-certified vendor to administer the survey according to the HEDIS survey protocol that is designed to produce standardized results. The survey is based on a randomly selected sample of Participants from the CHC-MCO and summarizes satisfaction with the experience of care through ratings and composites. For the Department's purposes, the sample and response rate must be sufficient to ensure a margin of error for each question to be less than 5% for the CHC-MCO's enrolled population at a 95% confidence level. It is recommended that the CHC-MCOs work with their certified CAHPS vendors to determine an adequate sample size to meet the 5% margin of error at a 95% confidence level (CAHPS recommends a minimum of 300 completed responses).

The HEDIS protocol for administering CAHPS surveys consists of a mail protocol followed by telephone administration to those not responding by mail. CHC-MCOs must contract with a certified vendor to administer the Adult CAHPS survey. The CHC-MCO must generate a sample frame for each survey sample and arrange for an NCQA-certified auditor to verify the integrity of the sample frame before the certified vendor draws the sample and administers the survey. The CHC-MCOs are also required to have the certified vendor submit Participant-level data files to NCQA for calculation of HEDIS CAHPS survey results. The Department requires that the CHC-MCOs:

A. Must conduct the Adult CAHPS survey using the current version of CAHPS.

B. Must include all Medicaid core questions in the survey.

C. Must add all state specific modifications, which may include unique specifications or content as directed by the Department to the Adult CAHPS survey.

D. Must add the following supplemental questions to the Adult CAHPS survey:

1. In the last 6 months, did you get care from a dentist's office or dental clinic?
2. In the last 6 months, how many times did you go to a dentist's office or dental clinic for care for yourself?
3. We want to know your rating of all your dental care from all dentists and other dental providers in the last 6 months. Using any number from 0 to 10, where 0 is the worst dental care possible and 10 is the best dental care possible, what number would you use to rate your dental care?

E. Must add the following supplemental question from the Supplemental Items for the Adult Questionnaires to the Adult CAHPS survey:

1. In the last 6 months, how often was it hard to find a personal doctor who speaks your language?
2. In the last 6 months, how often was it hard to find a personal doctor who

knows your culture?

3. In the last 6 months, how often did your personal doctor consider your cultural needs, including race, ethnicity or background, when providing care?
4. In the last 6 months, if you utilized an interpreter or language services to help speak with your doctors or other healthcare providers, how would you rate your experience (with 0 being the worst possible experience, and 10 being the best possible experience)?

F. Must forward Adult CAHPS data to the Department both electronically and hardcopy in an Excel file in the format determined by the Department.

G. Must submit validated Adult CAHPS results annually on June 15th unless otherwise specified by the Department.

The Department annually releases an Ops Memo that contains detailed information regarding the submission of HEDIS and Adult CAHPS, and may include additional Pa-specific questions.

Home and Community-based Services CAHPS Survey (HCBS CAHPS)

CHC-MCOs must contract with a vendor to administer the HCBS CAHPS survey. The CHC-MCO's vendor must conduct the HCBS CAHPS Survey using the most current version of the survey instrument provided by CMS. Each CHC-MCO's vendor will administer the survey using the mode determined by the Department, which can be in-person or via telephone. Survey results must be reported to the Department both electronically and hardcopy in an Excel file in the format determined by the Department. The survey results must be reported separately for each Zone in which the CHC-MCO operates. Validated survey results must be submitted to the Department, and the Department's EQRO annually each calendar year unless otherwise specified by the Department.

CAHPS are a set of standardized surveys that assess Participant satisfaction with the experience of care. CHC-MCOs must contract with a vendor to administer the survey according to CMS survey protocol that is designed to produce standardized results. The survey is based on a randomly selected sample of Participants from the CHC-MCO and summarizes satisfaction with the experience of care through ratings and composites. The Department also requires that the CHC-MCOs:

A. Provide to the Department the name of the selected survey vendor and a copy of the contract with the selected survey vendor.

B. Ensure that the selected survey vendor uses computer assisted interviewing software, has sufficient personnel to conduct recruitment of Participants as well as availability to schedule interviews to achieve required number of surveys considered complete due to the respondent providing a substantive response for at least 50% of the questions that all respondents are eligible to answer, not including the "About You" section.

C. Ensure that the selected survey vendor develops and submits a comprehensive Quality Assurance Plan (QAP) for survey administration that details its implementation of and compliance with all required HCBS CAHPS Survey protocols and provide the Department with a copy of the selected survey vendor's QAP.

D. Provide the selected survey vendor with a complete file of its HCBS population for use in selecting the statistically random sample as specified by the Department. If a minimum effective sample size is not specified by the Department, the selected vendor must select a statistically valid random sample based on a 95% Confidence Level, ± 5% Confidence Interval, and a 50% Distribution. Insure that the selected survey vendor stratifies the sample to assure equal race/ethnicity representation of the CHC waiver population and stratifies by region to assure geographic representation of the CHC waiver population.

E. Must send a pre-notification letter to CHC Participants seven business days before the initial recruitment call after the letter has been reviewed and approved by the Department.

F. Meet the following requirements if the selected survey vendor administers the survey to Participants by telephone and/or the Participant declines to take the survey:

- The CHC-MCO's vendor must ask the Participant "*Would you have preferred to take this survey in person? In that case, an interviewer would have come to where you live or another location you agreed on in advance."*

- In the event the Participants decline to take the survey, the CHC-MCO's vendor must summarize in the plan-specific HCBS CAHPS Survey results the reasons why the Participants declined to take the survey.

G. Ensure that the selected survey vendor obtains and records consent by Participants or their legal guardians, as well as consent by Participants when a legal guardian or proxy will be surveyed on their behalf. Consent can be verbal for telephone and written for in-person interviews.

H. Ensure that the selected survey vendor has a process in place to report suspected participant abuse, neglect and/or exploitation to both the CHC-MCO and to the Department.

I. Must conduct the HCBS CAHPS survey using the current version of CAHPS.

J. Must include all HCBS core questions in the survey.

K. Must include all HCBS supplemental employment questions in the survey.

L. Must add all supplemental state specific questions as directed by the Department to the HCBS CAHPS survey.

M. Must add the following supplemental dental care questions to the HCBS CAHPS survey. The Department reserves the right to modify these questions as necessary:

1. In the last 6 months, did you get care from a dentist's office or dental clinic?
2. In the last 6 months, how many times did you go to a dentist's office or dental clinic for care for yourself?
3. We want to know your rating of all your dental care from all dentists and other dental providers in the last 6 months. Using any number from 0 to 10, where 0 is the worst dental care possible and 10 is the best dental care possible, what number would you use to rate your dental care?

N. Must forward HCBS CAHPS data to the Department electronically in an Excel format including an executive summary in the format determined by the Department.

O. Must have selected survey vendor submit a First Twenty-Five Completed HCBS CAHPS Survey data file annually per the due date and in the format determined by the Department.

P. Must have selected survey vendor submit a weekly Survey Administration Status report during the course of administering the survey beginning by the second week of survey administration in the format determined by the Department.

Q. Must provide a validated disposition report using disposition categories defined by the American Association for Public Opinion Research (AAPOR) or developed by the selected survey vendor. This final disposition for all sampled cases indicates the final outcome in terms of whether the participant responded to the survey and, if not, why they did not respond. The disposition report must be submitted annually on November 15 unless otherwise specified by the Department.

R. Must submit validated HCBS CAHPS results annually on November 15th unless otherwise specified by the Department.

S. Provide Limited English Proficiency and Text Telephone services in support of the HCBS CAHPS Survey if requested by the survey participant.

The Department reserves the right to review the subsequent years' results and determine if an in-person interview will be required. The Department will notify the CHC-MCOs in advance of any change in the requirements.

The Department annually releases an Ops Memo that contains detailed information regarding the submission of HCBS CAHPS.

EXHIBIT X

ENCOUNTER DATA SUBMISSION REQUIREMENTS AND DAMAGES APPLICATIONS

The submission of timely, complete, and accurate Encounter Data is critical to the Department's ability to establish and maintain cost-effective and quality managed care programs.
Consequently, the requirements for submission and metrics for measuring the value of the data for achieving these goals are crucial.

- **CERTIFICATION REQUIREMENTS**

  The CHC-MCO must be certified through the Department's MMIS prior to the submission of live encounter data. The certification process is detailed on the Pennsylvania HealthChoices Extranet.

- **SUBMISSION REQUIREMENTS**

  - Timeliness:

    With the exception of NCPDP Encounters, all CHC-MCO approved Encounters and specified CHC-MCO denied Encounters must be approved in the Department's MMIS by the last day of the third month following the month of initial CHC-MCO adjudication. NCPDP Encounters must be submitted and approved in the Department's MMIS within thirty (30) days following the CHC-MCO adjudication.

    - Metric:

      During the six (6) months following the month of the initial MMIS adjudication, Encounters will be analyzed for timely submission.

      - Failure to achieve the Department's MMIS approved status for 98% of all CHC-MCO approved and specified CHC-MCO denied Encounters by the last day of the third month following initial CHC-MCO adjudication may result in damages.
      - Any Encounter Data corrected or initially submitted after the last day of the third month following initial CHC-MCO adjudication may be subject to damages.

  - Accuracy and Completeness:

    Accuracy and completeness are based on consistency between Encounter Data submitted to the Department's MMIS and information for the same service maintained by the CHC-MCO in their Claims and service history databases.

- Metric:

  Accuracy and completeness will be determined through a series of analyses of CHC-MCO Claims history data and Encounters received and processed through the Department's MMIS. The analysis will be conducted in accordance with triennial audit requirements found in Exhibit O of this Agreement.

- **PENALTY PROVISION**

  - Timeliness:

    Failure to comply with timeliness requirements may result in a sanction of up to $10,000 for each program month.

  - Completeness and Accuracy:

    Errors in accuracy or completeness identified by the Department in an annual or semi-annual analysis may result in sanctions as follows. Multiple errors in accuracy or completeness in one sample record count as one error.

Percentage of the sample that includes an error	Sanction
Less than 1.0 percent	None
1.0 – 1.4 percent	$4,000
1.5 – 2.0 percent	$10,000
2.1 - 3.0 percent	$16,000
3.1 – 4.0 percent	$22,000
4.1 – 5.0 percent	$28000
5.1 – 6.0 percent	$34,000
6.1 – 7.0 percent	$40,000
7.1 – 8.0 percent	$46,000
8.1 – 9.0 percent	$52,000
9.1 – 10.0 percent	$58,000
10.1 percent and higher	$100,000

Rev. 08-11-09

EXHIBIT Y

GUIDELINES FOR SANCTIONS REGARDING FRAUD, WASTE AND ABUSE

The Department recognizes its responsibility to administer the Community HealthChoices (CHC) Program and ensure that the public funds which pay for this program are properly spent.

To maintain the integrity of the CHC Program and to ensure that CHC-MCOs comply with pertinent provisions and related state and federal policies, including rules and regulations involving Fraud, Waste and Abuse issues, the Department will impose sanctions on the CHC-MCOs as deemed appropriate where there is evidence of violations involving Fraud, Waste and Abuse issues in the CHC Program. To that end, program compliance and improvement assessments, including financial assessments payable to BPI, will be applied by BPI for the CHC-MCO's identified program integrity compliance deficiencies. Note that the Department also retains discretion to impose additional remedies available under applicable law and regulations.

FRAUD, WASTE AND ABUSE ISSUES WHICH MAY RESULT IN SANCTIONS

The Department may impose sanctions, for non-compliance with Fraud, Waste and Abuse requirements which include, but are not limited to, the following:

A. Failure to implement, develop, monitor, continue and/or maintain the required compliance plan and policies and procedures directly related to the detection, prevention, investigation, referral or sanction of Fraud, Waste and Abuse by providers, caregivers, members or employees.

B. Failure to cooperate with reviews by oversight agencies or their designees, including the Department, Pennsylvania Office of Attorney General Medicaid Fraud Control Unit, Office of Inspector General of the U.S. DHHS, and other state or federal agencies and auditors under contract to CMS or the Department 42 CFR §438.3(h).

C. Failure to adhere to applicable state and federal laws and regulations.

D. Failure to adhere to the terms of the CHC- Agreement, and the relevant Exhibits which relate to Fraud, Waste and Abuse issues.

E. If a CHC-MCO fails to provide the relevant operating agency, upon its written request, encounter data, claims data and information, payment methodology, policies and/or other data required to document the services and items delivered by or through the CHC-MCO to Participants 42 CFR §438.604.

F. CHC MCO engaging in actions that indicate a pattern of wrongful denial of payment for a health-care benefit, service or item that the organization is required to provide under its agreement.

G. If a CHC-MCO or associate fails to furnish services or to provide Participants a health benefit, service or item that the organization is required to provide under its Agreement 42 CFR § 438.700(b)(1).

H. CHC-MCO engaging in actions that indicate a pattern of wrongful delay of at least for 45 days or a longer period specified in the Agreement (not to exceed 60 days) in making payment for a health-care benefit, service or item that the organization is required to provide under its Agreement.

I. Discriminating against Participants or prospective Participants on any basis including without limitation, age, gender, ethnic origin or health status 42 CFR §438.3(d)(3- 4)

J. The CHC-MCO must conduct a preliminary investigation and may consult with other state agencies or law enforcement to determine credible allegations of fraud for which an investigation is pending under the Medicaid program against an individual, a provider, or other entity (42 CFR §455.23(a)). Allegations are to be considered credible when there is indicia of reliability and the State Medicaid agency has reviewed all allegations, facts and evidence carefully and acts judiciously on a case by case basis (42 CFR §455.2).

K. CHC-MCO failure to pay overpayments to DHS as identified through network provider audits, reviews, investigations conducted by BPI or its designee and other state and federal agencies.

RANGE OF SANCTIONS

The Department may impose any of the sanctions indicated in Section VIII.I. of the Agreement including, but not limited to, the following:

Preclusion or exclusion of the CHC-MCO, its officers, managing employees or other individuals with direct or indirect ownership or control interest in accordance with 42 U.S.C. §1320a-7, 42 C.F.R. Parts 1001 and 1002; 62 P.S. §1407 and 55 Pa. Code §§1101.75 and 1101.77.

These sanctions may, but need not be, progressive. The Department's intends to maintain an effective, reasonable and consistent sanctioning process as deemed necessary to protect the integrity of the CHC- Program.

EXHIBIT Z

PERSON-CENTERED SERVICE PLANNING

Federal and state regulations (42 CFR § 441.301, 55 Pa. Code §§ 52.25 and 52.26) require that Person-Centered Planning be used in Medicaid LTSS programs. Person-Centered Planning is a process directed by the CHC LTSS Participant. The process involves a PCPT actively coordinated by the LTSS Participant's Service Coordinator. The PCSP must be developed by the Service Coordinator, the Participant, the Participant's representative, and the Participant's PCPT. The process assists the Participant to articulate a plan for the future and helps determine the supports and services that the Participant needs to achieve identified outcomes.

Note: The information in this exhibit is to be used in conjunction with, and does not replace, the requirements in the CHC 1915(c) HCBS waiver.

Guidelines for Person-Centered Service Planning

i. The CHC-MCO must deliver LTSS in a person-centered way:

   a. LTSS must be furnished under a written service plan, based on a person-centered approach that identifies and addresses an LTSS Participant's needs, goals, and preferences while incorporating existing resources and supports as identified by the Participant.

   b. Service plans must be:

      1. Approved by the CHC-MCO no more than thirty (30) calendar days from the date the Assessment or Reassessment is completed.

PCSP Procedures Overview

i. General

   a. The PCSP must be adequate and appropriate according to needs identified by the Assessment.
   b. If a legal guardian has been appointed for the Participant, the guardian must be an integral part of the PCPT. The Participant's legal guardian

has the right to actively participate on the Participant's behalf in the planning process and to file an appeal or grievance on behalf of the Participant.

c. If the Participant uses an alternative means of communication or if the Participant's primary language is not English, the process must utilize the Participant's primary means of communication or an interpreter.
d. The Participant's cultural preferences must be acknowledged and reflected in the planning process.
e. The CHC-MCO must provide the necessary level of support to ensure that the individual directs the PCPT process to the maximum extent possible and is enabled to make informed choices and decisions.
f. The Department may review, question, and request revisions to LTSS Participants' PCSPs. The CHC-MCO must provide the Department with monthly aggregate reports on PCSP changes in a format specified by the Department.
g. CHC-MCOs must annually submit and obtain Department approval of their Service Coordination staffing, caseloads, the required frequency of in-person contact with Participants, and how Service Coordinators share and receive real-time information about Participants and Participant encounters.

ii. Participant Education

a. The Service Coordinator must educate the Participant on the following:

1. Strategies for resolving conflict or disagreement within the PCPT process, including clear conflict-of-interest guidelines for all members of the Person-Centered Planning Team.
2. Informed choice regarding the services and supports they receive and from whom.
3. Informed choice regarding their right to select their Service Coordinator and to change Service Coordinators at any time.

4. A method for the Participant to request updates to the PCSP as needed.
5. Participant self-directed services.
6. The Complaint, Grievance and Fair Hearing Appeals Processes.
7. How to report abuse, neglect, and exploitation. The Service Coordinator must obtain a signature verifying that the Participant or their representative fully understand the process.

b. The Service Coordinator provides Participants and their representative, if any, with a Participant handbook within 5 days of enrollment. The handbook is intended to provide Participants with a basis for self-advocacy safeguards. The Service Coordinator educates the Participant and/or their representative on the following:

1. Participant rights and responsibilities;
2. Participant choice;
3. the role of the Service Coordinator;
4. the role of the PCPT;
5. how to connect to other community resources;
6. abuse, neglect and exploitation;
7. fraud and abuse; and
8. Participant self-directed services.

iii. Content of the PCSP for Participants Receiving LTSS in the Community

a. The holistic PCSP at minimum must include the following:

1. A Care Management Plan to identify and address how the Participant's physical, cognitive, and behavioral healthcare needs will be care managed. See Section V.G.1 of the CHC Agreement for the required components of PCSP Care Management Plans.

2. An LTSS Service Plan to identify and address how LTSS needs will be met and how services will be provided in accordance with the PCSP. The requirements for the LTSS Service Plan are in Section V.G.2 of the CHC Agreement. In addition to the requirements listed in the CHC Agreement, the CHC-MCO must also include the following in the PCSP and PCSP process:

    A. Individualized and emergency back-up plans to ensure the health and safety of Participants.

        i. Service Coordinators must review the PCSP quarterly to validate that the strategies and back-up plans are working and are current.
        ii. Service Coordinators must update back-up plans as necessary, or if the back-up has failed at any point.

3. The PCSP must document the following:

    A. The Participant's eligibility and CHC/MA ID number;
    B. The names of individuals who participated in the PCSP process;
    C. The Participant's household composition (i.e., does the individual live alone, with a sibling or other relative, or friend?);
    D. The Participant's emergency contacts;
    E. The Service Coordinator must describe contact with the Participant, family members, and providers in the case management notes of the PCSP.
    F. The Service Coordinator's quarterly review of the Participant's back-up plan, including updates to the back-up plan if necessary;
    G. The Participant's completed Assessment, including the Diagnosis, Medications, Allergies, and Medical Contacts;
    H. Any CHC services that reflect unmet needs identified in the Assessment;

I. The Participant's strengths and capabilities;
J. That the Participant was offered a choice of network providers;
K. The review of rights and responsibilities with the Participant;
L. The Participant's delivery preferences for all services;
M. Any barriers, risks, and mitigation strategies;
N. The assignment of responsibilities to implement and monitor the PCSP;
O. A list of the Participant's preferences for employment, education, and community engagement, as well as an overview of the discussion the Service Coordinator had with the Participant on these issues;
P. When a participant uses informal supports, the CHC-MCO must discuss with and document in the PCSP each informal support's availability, willingness, and ability to provide the needed HCBS and the participants' acceptance of assistance from that informal support. The PCSP also must identify each informal support, and, with respect to each informal support, the day(s) and number of hours per day informal supports is provided, as well as the specific type and scope of services provided.
Q. If the Participant does not have informal support, include reasons why informal support is not available;
R. The type, scope, amount, duration, and frequency of services needed by the Participant;
S. Justification for all services;
T. If a service definition requires a physician prescription, documentation that the Service Coordinator obtained the prescription prior to adding the service to the PCSP; and
U. If the Participant refuses to have a need addressed, when the Participant refused to have the need addressed and why the Participant chose for the need to remain unaddressed.

iv. Content of the PCSP for Participants Receiving LTSS in Nursing Facilities

1. For nursing facility residents, nursing facilities are responsible to develop care plans and provide services consistent with state licensing requirements and federal conditions of participation. The Department of Health will continue to enforce state licensing requirements and act as the State Survey Agency for federal survey and certification purposes.

2. The CHC-MCO Service Coordinator will review a Participant's nursing facility care plan as part of coordination of care and provide input into the plan. The CHC-MCO Service Coordinator will work with the nursing facility staff to determine the services that the Participant needs and the roles of who should be providing the services in the PCSP process. The CHC-MCO Service Coordinator will be responsible for the coordination of Medicare benefits, Veterans benefits, behavioral health services, and other health coverage insurers and supports in conjunction with the nursing facility. A separate PCSP does not have to be created as long as the NF care plan includes all appropriate services, goals for transitioning to the community (if desired by the Participant), and how Medicare benefits, Veterans benefits, behavioral health services, and other health coverage will be coordinated.

v. PCSP Process

1. The Service Coordinator describes and explains the concept of person-centered service planning to the Participant and/or his or her representative.
2. Prior to a PCPT meeting, the Service Coordinator works with the Participant and/or his or her representative to coordinate attendees and meeting dates, times and locations. The Participant chooses who to invite and when and where meetings will take place.
3. The Service Coordinator provides information to the Participant and to his or her representative, if any, in advance of the planning meeting so that the Participant can make informed choices about their services and service delivery in order to effectively develop a PCSP.

4. The Service Coordinator, along with the PCPT, utilizes the assessments, documentation obtained from direct services and discussions with the Participant to secure information about the Participant's needs, including health care needs, preferences, goals, health status, and available, willing and able informal supports to develop the PCSP. This information is captured by the Service Coordinator and then documented in the Participant's record.
5. Service Coordinators ensure that the PCSP includes sufficient and appropriate services to maintain health, safety and welfare, and, for CHC Waiver Participants, provides the support that an individual needs or is likely to need in the community to avoid institutionalization. Service unit calculations must be accurate and appropriate. Each Participant need must be addressed unless the Participant chooses for a need not to be addressed.
6. The Service Coordinator reviews, in conjunction with the Participant, the Participant's services to ensure the services are adequate to meet the desired outcomes. Revisions are discussed with the Participant and incorporated into the PCSP. All service plan meetings and discussions with the Participant are documented in the Participant's record.
7. Annually, the Service Coordinator provides the Participant with the choice of receiving community services in the CHC Waiver, LIFE Program (if age 55 or older), nursing facility services, or no LTSS services. Completed forms detailing this must be maintained in the Participant's file.
8. Participants are also given the choice of willing and qualified Providers within the network at each Reassessment and at any time during the year when a Participant requests a change of services. The Service Coordinator must document the Participant's choice of provider as part of the Participant's PCSP. As noted above, the Service Coordinator must also document that the Participant was offered a choice of network providers.

9. The Service Coordinator provides Participants and/or his or her representative with information on services and supports available to LTSS Participants and the processes for selecting qualified Providers of services.
10. For Participants receiving home and community-based services, the Service Coordinator must provide information regarding opportunities for Participant-Directed Services and responsibilities for directing those services. The Service Coordinator must document these discussions in the Participant's record and record why the Participant declined this model when a reason is provided.
11. The Service Coordinator gathers information on an ongoing basis to ensure the PCSP reflects the Participant's current needs. The Service Coordinator discusses potential revisions to the PCSP with the Participant and individuals important to the Participant. All changes to existing PCSPs must be documented in the Participant's record.
12. The Service Coordinator must obtain the electronic or written signatures of the Participant, Participant's representative and any others involved in the planning process, indicating they participated in the process, they approve and understand the services outlined in the PCSP, and that services are adequate and appropriate to the Participant's needs. The PCSP is not considered complete until all of the required signatures are received. The finalized PCSP must include the type, scope, amount, duration and frequency of the services authorized by the PCSP. If a Participant refuses to sign their PCSP, not because they do not agree with the plan, but because they simply refuse to sign it at that time and there is no representative to sign on their behalf, the PCSP should not be deemed invalid due to lacking the signature. For instances where this occurs the Service Coordinator should document the refusal of the Participant to sign the document and note verbal consent of the PCSP by the Participant. The Service Coordinator should attempt to obtain the Participant's signature during their next interaction. A Participant may also sign indicating disapproval of the plan if the Participant disagrees

with the PCSP. When this occurs, the Service Coordinator must provide the Participant with a denial notice within two (2) business days that includes his or her right to file a grievance, and assist the Participant through the process as appropriate. Every Participant must be given a copy or mailed a copy of his or her PCSP within two (2) business days of when initial completion or subsequent revisions are finalized. A copy of the signed PCSP is given to the Participant as well as all members of the PCPT who the Participant consents to receiving the PCSP or portions of the PCSP.

13. If the CHC-MCO makes the decision to deny in whole or in part, reduce, suspend or terminate a service or item in the Participant's PCSP, the CHC-MCO must use the templates specified by the Department to issue a written denial notice which meets the following criteria:

    A. Written at a 6th grade reading level;
    B. Written in an individualized manner;
    C. Specifically references the service or item that is being reduced or denied;
    D. Includes specific references to approved medical necessity guidelines, rules, or protocols on which the decision is based.

14. Section V.B.2e of the CHC Agreement contains a limited number of exceptions to the notice requirement. One exception is the receipt of a clear written statement signed by a Participant that he or she no longer wishes to receive the requested service or gives information that requires termination or reduction of services and indicates that he or she understands that termination will be the result of supplying that information. If this occurs the CHC-MCO must still offer the Participant appeal rights. The CHC-MCO may not consider a Participant's signature on the PCSP in itself to be a "clear written statement" as described in V.B.2e.

15. If the Participant grieves the CHC-MCOs authorized PCSP, the Service Coordinator must provide the final, approved PCSP to the Participant at the conclusion of the grievance process.
16. Once the PCSP is authorized by the CHC-MCO, the Service Coordinator communicates the service plan content to the Participant and to the Participant's appropriate service provider or providers to ensure that service delivery matches the approved PCSP. The CHC-MCO must approve the PCSP prior to the provision of services.
17. The Service Coordinator initiates a Reassessment at least annually (at least once every 365 days) and when either there is a significant change in the Participant's situation or condition, a trigger event occurs, or the Participant requests Reassessment. CHC-MCOs may conduct a Reassessment prior to the one-year mark of the last Assessment for Participants who are transitioning to them from another CHC-MCO.
18. The CHC-MCO must complete the PCSP in a format approved by the CHC Agreement and enter the PCSP in the CHC-MCO's designated information system.

EXHIBIT AA

MANAGED CARE DEFINITIONS FOR PARTICIPANT COMMUNICATIONS

The 2016 CMS "Medicaid and Children's Health Insurance Program (CHIP) Programs; Medicaid Managed Care, CHIP Delivered in Managed Care, and Revisions Related to Third Party Liability" final rule established a requirement (42 CFR § 438.10(c)(4)(i)) that mandated that all states which contract with MCOs for delivery of Medicaid services must develop standardized definitions for a set of managed care related terms to be utilized by MCOs in communications with Participants. The state developed definitions were required to be written at no higher than a sixth-grade reading level and are to be utilized by CHC-MCOs for communications with Participants such as newsletters, informational pamphlets, Participant handbooks, etc.

When using any of the terms below in communications to Participants, CHC-MCOs must utilize the terms with the same intent as defined by the state.

Managed Care Definitions

1) **Appeal-** To file a Complaint, Grievance, or request a Fair Hearing.
2) **Complaint**- When a Participant tells a CHC-MCO that he or she is unhappy with the CHC-MCO or his or her provider or does not agree with a decision by the CHC-MCO.
3) **Co-Payment-** A co-payment is the amount a Participant pays for some covered services. It is usually only a small amount.
4) **Durable Medical Equipment**- A medical item or device that can be used in a Participant's home or in any setting where normal life activities occur and is generally not used unless a person has an illness or injury.
5) **Emergency Medical Condition**- An injury or illness that is so severe that a reasonable person with no medical training would believe that there is an immediate risk to a person's life or long-term health.
6) **Emergency Medical Transportation**- Transportation by an ambulance for an emergency medical condition.
7) **Emergency Room Care**- Services needed to treat or evaluate an emergency medical condition in an emergency room.
8) **Emergency Services**- Services needed to treat or evaluate an emergency medical condition.
9) **Excluded Services**- Term should not be used. CHC-MCO should use "Services That Are Not Covered" instead.
10) **Grievance**- When a Participant tells a CHC-MCO that he or she disagrees with a CHC-MCO's decision to deny, decrease, or approve a service or item different than the service or item the Participant requested because it is not medically necessary.

11) **Habilitation Services and Devices**- Term should not be used by CHC-MCO. CHC-MCO should define specific service.
12) **Health Insurance**- A type of insurance coverage that pays for certain health care services. (If used by CHC-MCO, should be used to refer only to private insurance.)
13) **Home Health Care**- Home health care is care provided in a Participant's home and includes skilled nursing services; help with activities of daily living such as bathing, dressing, and eating; and physical, speech, and occupational therapy.
14) **Hospice Services**- Home and inpatient care that provides treatment for terminally ill Participants to manage pain and physical symptoms and provide supportive care to Participants and their families.
15) **Hospitalization-** Care in a hospital that requires admission as an inpatient.
16) **Hospital Outpatient Care**- Care provided by a hospital or hospital-based clinic that does not require admission to the hospital.
17) **Medically Necessary**- A service, item, or medicine that does one of the following:
    - Will, or is reasonably expected to, prevent an illness, condition, or disability;
    - Will, or is reasonably expected to, reduce or improve the physical, mental, or developmental effects of an illness, condition, injury or disability;
    - Will help a Participant get or keep the ability to perform daily tasks, taking into consideration both the Participant's abilities and the abilities of someone of the same age.
    - Will help a CHC Participant receiving long-term services and supports (LTSS) to take part in community living, meet the Participant's goals, and live and work in the setting of the Participant's choice.
18) **Network**- Contracted providers, facilities, and suppliers that provide covered services to CHC-MCO Participants.
19) **Non-Participating Provider**- When referring to a provider that is not in the network, CHC-MCOs should use the term "Out-of-Network Provider."
20) **Physician Services**- Health care services provided or directed by a licensed medical physician (M.D. – Medical Doctor or D.O. – Doctor of Osteopathic Medicine).
21) **Plan**- A health care organization that provides or pays for the cost of services or supplies.
22) **Preauthorization or Prior Authorization**- Approval of a service or item before a Participant receives the service or item.
23) **Participating Provider**- When referring to a provider that is in the network, CHC-MCOs should use "Network Provider."
24) **Premium**- The amount a Participant pays for health care coverage.
25) **Prescription Drug Coverage**- A benefit that pays for prescribed drugs or medications.
26) **Prescription Drugs**- Drugs or medications that require a prescription for coverage.

27) **Primary Care Physician**- A physician (M.D. – Medical Doctor or D.O. – Doctor of Osteopathic Medicine) who directly provides or coordinates a range of health care services for a patient.
28) **Primary Care Provider**- A doctor, doctors' group, or certified registered nurse practitioner who provides and works with a Participant's other health care providers to make sure the Participant gets the health care services the Participant needs.
29) **Provider**- An individual or entity that delivers health care services or supplies.
30) **Rehabilitative Services and Devices**- Term should not be used by CHC-MCO. CHC-MCO should define specific service.
31) **Skilled Nursing Care**- Services provided by a licensed nurse.
32) **Specialist**- A doctor, a doctor's group, or a certified registered nurse practitioner who focuses his or her practice on treating one disease or medical condition or a specific part of the body.
33) **Urgent Care**- Care for an illness, injury, or condition which if not treated within 24 hours, could rapidly become a crisis or an emergency medical condition.
34) **Network Provider**- A provider, facility, or supplier that has a contract with an CHC-MCO to provide services to Participants.
35) **Out-of-Network Provider**- A provider that does not have a contract with an CHC-MCO to provide services to Participants.

EXHIBIT BB

CHC Waiver Assurance Performance Measure Requirements and Sanctions

The submission of timely, complete, and accurate Operations Reports is critical to the Department's oversight of the CHC program. The CHC 1915(c) Waiver requires the Department to have systems in place to measure and improve its performance in meeting certain waiver assurances. There are fifteen (15) CHC Waiver Assurance Performance Measures ("WPM") : two (2) for Administrative Authority; one (1) for Qualified Providers; five (5) for Person-Centered Service Plans ("PCSP"); and, seven (7) for Health & Welfare.

SUBMISSION REQUIREMENTS

CHC-MCOs must report WPM data on the following forms and by the due dates specified in the Operations Reporting Requirements Submission Schedule (add link):

a. OPS 004 (Compliant and Grievance Detail)
b. OPS 011 (Provider Education)
c. OPS 029 (CHC PCSP Waiver Assurance Performance Measures)
d. OPS 030 (CHC Health & Welfare Waiver Assurance Performance Measures).
e. OPS 038 (Financial Management Services)

- Metric 1:

During the reporting quarter, the total number of timely submissions in the reporting quarter is divided by the total number of required submissions in the reporting quarter. CHC-MCO zone level performance will be combined and measured at the plan level (e.g., four submissions of a report x 5 zones result in 20 total submissions for the applicable report). 86% of all required reports must be submitted by the established due date.

Failure to achieve the CMS required level of 86% may result in imposition of sanctions as provided under Sanctions for Metric 1.

- Metric 2:

CHC-MCO compliance will be measured based on the WPM for each identified OPS report. During the reporting quarter, the total number of WPM meeting the 86% required level of performance is divided by the total number of WPM measured in the reporting quarter. CHC-MCO zone level performance will be combined and measured at the plan level (e.g., fifteen WPMs x 5 zones result in 75 total WPM measured for the reporting period)

- Failure to achieve the CMS required level of 86% may result in the imposition of sanctions as provided under Sanctions for Metric 2.

- **SANCTIONS**

  - Metric 1: Timeliness

    Failure to comply with timeliness requirements may result in a sanction of up to $10,000 for each program month.

  - Metric 2: CHC-MCO Performance Compliance

    Failure to meet the CMS required level of performance for a WPM may result in sanctions as follows. (e.g. if 4 WPMs have an 85% compliance, the CHC-MCO may be sanctioned $4,000 x 4 WPMs = $16,000)

WPM Performance Compliance	Sanction
86% or more	None
85.0% to 85.9%	$4,000
84.0% to 84.9%	$10,000
83.0% to 83.9%	$16,000
82.0% to 82.9%	$22,000
81.0% to 81.9%	$28,000
80.0% to 80.9%	$34,000
79.0% to 79.9%	$40,000
78.0% to 78.9%	$46,000
77.0% to 77.9%	$52,000
76.0% to 76.9%	$58,000
75% or less	$100,000

Exhibit CC

Financial Management Services (FMS)

All HCBS LTSS participants have the option to make decisions about and self-direct their own waiver services as identified in Section E-1.g of the CHC Waiver and Section V.A.16 of the CHC Agreement. Participants in the CHC Waiver may choose to hire and manage staff using Employer Authority or manage an individual budget using Budget Authority. In addition, Participants may choose a combination of service models to meet their individual needs.

Financial Management Services (FMS) are provided to participants across the Commonwealth by qualified Vendor Fiscal/Employer Agent(s) (F/EA). The CHC-MCOs are responsible for FMS functions and must process, file, and pay all applicable state and federal taxes on behalf of participants and their direct service workers. The CHC-MCOs must operate as an F/EA or subcontract this function.

The CHC-MCOs must submit in writing for prior approval by the Department any subcontracts to perform part or all of the FMS administrative services described herein, together with documentation that the proposed FMS subcontractor meets all requirements herein, before commencing the provision of FMS with any subcontractor. The Department must pre-approve the proposed FMS subcontractor in writing. The Department reserves the right to reject any subcontractor who does not meet these requirements. Whether the CHC-MCO provides the FMS administrative services directly or through an approved subcontractor, the entity which provides those services (hereinafter the “FMS Entity”) must provide all the services and meet all the requirements below.

A. General Requirements

Conflict Free Requirements

The FMS Entity must be free of any conflict of interest with any existing or future waiver and program providers. To ensure an objective, unbiased provision of functions, the FMS Entity and any subcontractors must be free of real or perceived conflicts of interest.

1. The FMS Entity and its subcontractors may not be a part of or affiliated with and must remain independent from any provider of HCBS. Neither the governing body of the FMS Entity nor individual members of the governing body may be affiliated with any provider of HCBS. The FMS Entity or its subcontractors may not be affiliated with or a subsidiary of any existing provider of HCBS.

No personnel assigned to the FMS Entity may work for any provider of HCBS. Personnel assigned to the FMS Entity may receive direct care services or supports from such provider as long as the services are purchased at fair rates (either private pay, through an HCBS program, or through another third-party program).

FMS Entity Obligations

An FMS Entity enrolls Participants in FMS and applies for and receives approval from the IRS to act as an agent on behalf of the Participant. As the Participant's agent, the FMS Entity processes timesheets, makes payments, and manages all required tax withholdings, including Federal Insurance Contributions Act (FICA) taxes, for personal assistance workers employed by Participants under each self-directed model. If choosing to subcontract this administrative service, the CHC-MCO must jointly collaborate with all other contracted CHC-MCOs to contract with a single statewide FMS Entity under the requirements described below, and each CHC-MCO must establish agreements and cooperate with this statewide entity in order that necessary FMS services are provided to participants. The FMS Entity must enroll in PA Medicaid and sign an MA provider agreement.

The FMS Entity must maintain an online portal to allow both Participants and those involved in their service delivery access to documents, time entry, utilization and budget information, access to pay stubs and tax documents, lists of employees, and the ability to communicate with the FMS Entity.

The CHC-MCO must provide sufficient funds to the FMS Entity so that payroll is satisfied on a timely basis. The amount, time period and other terms for those funds shall be set forth in policies established by the CHC-MCO and approved by the Department. The CHC-MCOs must notify OLTL as soon as possible when made aware that a payroll for all DCWs on a particular payroll schedule will be or has been missed for any reason.

The CHC-MCO must verify that before a direct care worker provides services, the direct care worker received a pre-service orientation provided through a training vendor organization who meets the requirements outlined in this agreement and under contract with the FMS Entity. The CHC-MCO must ensure each direct care worker obtains a Unique ID number from the DHS Unique ID registry and provide it to the FMS Entity prior to providing services.

Qualifications

The FMS Entity must have:

1. Demonstrated financial health. The CHC-MCO must ensure that a reserve of at least six (6) weeks of payroll is maintained and readily available to avoid a negative impact to operations of the organization;
2. At least five years of experience successfully managing and paying a distributed group of individuals and operate a current program(s) serving participant-directed participants in at least one other state;
3. Demonstrated experience providing FMS services to a self-directed services model;
4. A minimum of 10,000 individuals who are paid by the vendor in a current program or as of one year (365 days) before the start of the provision of this function. This count may be at the parent company or a partner or subcontracted organization level;

5. A transition methodology including industry standard project management tools (e.g. Project Management Institute standards tools for documenting and managing projects);
6. A current Comprehensive Policies and Procedures Manual for managing distributed DCWs;
7. Policies and procedures for data management standards reflecting data integrity and data governance practices;
8. A call center staffed by qualified representatives;
9. Demonstrated experience and arm's length references demonstrating collaboration with relevant stakeholders in participant-directed services, including the disability community, senior groups, and DCW organizations;
10. Ability to track and provide, upon request by the Department, accurate workforce data, including demographics, wages, benefits, DCW turnover, family caregivers, comprehensive list with contact information of active DCWs in the participant-directed program, participation and completion of orientation and/or training, average timeline for enrollment, and other workforce data and analysis as requested.

Training and Orientation

The CHC-MCO or FMS Entity is responsible for ensuring Participants obtain enrollment and informational materials. In addition, the CHC-MCO or FMS Entity is responsible for ensuring orientation is provided to the Participant or common law employer prior to employing their direct care worker. Orientation and training materials must be submitted to the Department for review and approval prior to implementation and must include the following at minimum:

- Review of the information and forms contained in both the Employer and Direct Care Worker enrollment packets and how they should be completed
- The role and responsibilities of the common law employer;
- The role and responsibilities of the FMS Entity;
- The process for receipt and processing timesheets and employee payroll checks;
- The process for resolving issues and complaints; and
- The process for reviewing workplace safety issues, managing workplace injuries, and workers compensation.

Providing Direct Care Worker Pre-Service Orientation Training

Pre-Service Orientation

The CHC-MCO or FMS Entity must:

1. Verify that all newly hired DCWs have completed an in-person, pre-service orientation. In the limited situations where in-person, pre-service orientation is not

possible due to geographical limitations or a health pandemic, the CHC-MCO or FMS Entity will verify that the newly hired DCW has completed pre-service orientation by a DHS approved alternative means, including real time, instructor-led virtual orientation.

2. Notify DCWs of this pre-service orientation requirement and how they may enroll and complete this pre-service orientation.

3. Provide standardized core training that includes the following required hours and elements which shall be offered as 8 hours of training within the first 4 months of hire.

- First Aid & CPR
- Home Health & Safety
- Universal Precautions

4. Maintain documentation to verify a DCW's completion of this pre-service orientation along with the Qualified DCW Employment Packet. This pre-service orientation and documentation must be completed before a DCW is given clearance to provide services.

5. Receive prior approval by OLTL of the content of DCW pre-service orientation. Pre-service orientation must, at a minimum, cover the following topics: a basic understanding of the functions and requirements of the participant-directed programs; the role and responsibility of the common law employer as the employer to direct, supervise, train, and select the DCWAs; operational procedures and paperwork; roles and responsibilities in independent living system; workplace safety; transparency and fraud; eligibility for public benefits and DCW support organization; electronic visit verification; and worker rights and responsibilities. The content of the pre-service orientation shall be consistent across the Commonwealth as well as consistent with information provided through SCEs, and other elements of the participant-directed program.

6. The CHC-MCO or FMS Entity must ensure that the pre-service orientation is provided by an OLTL approved statewide entity. The CHC-MCO or FMS Entity may use a subcontractor to satisfy the pre-service orientation experience requirements. The selected entity must have at least 2 years of experience in providing training and in-person orientation for participant-directed DCWs in Pennsylvania and home caregivers such as DCWs, in the development and implementation of relevant participant-directed orientation curriculum, and the demonstrated experience working in participant directed orientation programs that orient at least 5,000 DCWs per year. Any orientation subcontractor must be pre-approved by OLTL and have current statewide capacity in Pennsylvania to implement a consistent, timely pre-service orientation program, including in-person training sites in at least 30 locations across the Commonwealth, a call center specifically designated to handle DCW registration, the capacity to do proactive outreach to DCWs via text, phone, and mail, and trainers to ensure opportunities for all DCWs to attend a local, pre-service orientation within 14 days of initial employment application.

7. Pay the DCW an hourly wage not to exceed the maximum DCW hourly wage rate (as defined by the PA Medicaid Fee Schedule or other criteria as specified and

directed by OLTL) and not less than prevailing minimum wage rules in the applicable region in which the DCW is to provide services for all time spent in DCW pre-service orientation. The CHC-MCO or FMS Entity shall include the payment for the hours of this pre-service orientation in the first paycheck after a DCW has been cleared to provide services.

Training

To make available optional training for active DCWs, the CHC-MCO or FMS Entity must:

Contract with a training vendor to offer and provide foundational skills training that include the following required hours and elements which may be offered as 24 hours of training.

- ADLs & IADLs
- Cultural Competency
- Communication
- Medication
- Body Mechanics
- Early Intervention

In the event a DCW chooses this optional training, the DCW must be paid for completing this training. DCWs may take this training more than once, but are only required to be paid for the initial training.

Processing and Distributing Payroll, Related Taxes and Insurances for Qualified DCWs The CHC-MCO or FMS Entity must process requests for voluntary deductions from the wages paid to DCWs for the convenience of those employees as permitted and authorized by Section 3 of the Wage Payment and Collection Law (43 P.S. § 260.3) and its implementing regulations, provided that the third party receiving the deductions is a not-for-profit organization exempt from taxes under Section 501(c) of the Internal Revenue Code in good standing. The CHC-MCO will ensure:

A. That the cost of processing such requests for voluntary deductions and transmittal of those deductions to the third party be borne by the third party, with the proviso that said costs shall be limited to the actual and reasonable costs of modifying the existing payroll system to permit these periodic deductions.
B. That an accurate payroll deduction mechanism is in place to deduct the applicable payments each pay period and transmit the payments to the third party.
C. That the amount deducted is printed on the DCWs payroll form.
D. That any authorization for voluntary deductions from the wages paid to DCWs shall terminate and such deductions shall cease upon the happening of any of the following events:
    a. Termination of the DCWs employment.
    b. Written notice by the third party that the DCWs authorization has been cancelled; or
    c. When the third-party states that it will no longer accept payment from the DCW.

E. That a record keeping system in place which maintains an accurate list of those DCWs who have submitted signed authorizations for the voluntary deductions and transmittal of those deductions to the third party.

Oversight and Monitoring Responsibilities

The CHC-MCO will ensure that the contract deliverables are met, and Participants are in receipt of FMS in accordance with their PCSP. The CHC-MCOs will monitor the performance of FMS administrative activities, as well as adherence to contract conditions and waiver requirements. These requirements include, but are not limited to, Participant satisfaction, timeliness of processing employer and employee paperwork, timeliness of and accuracy of payments to workers, accuracy of information provided to Participants and workers by the FMS Entity, timeliness and accuracy of tax fillings on behalf of the Participant, timeliness of executed agreements between the FMS Entity and the workers or other vendors and timeliness of criminal background checks and child abuse clearances as needed.

If the CHC-MCO or its subcontractor is not in compliance with contractual or waiver provisions, the CHC-MCO will take the necessary steps to address any issues of non-compliance, including the completion of remediation and/or Quality Improvement Plans (QIPs).

In addition to the process described above, the CHC-MCOs will monitor performance as described in the Reporting Requirements section below. CHC-MCOs will also conduct on-site monitoring more frequently if utilization or problem identification reports indicate additional review is necessary. CHC-MCOs will also be required to report any issues with the FMS Entity's performance to OLTL.

The CHC-MCO or its subcontractor will conduct a Common Law Employer Satisfaction Survey using the survey tool approved by the Department. The survey must be conducted 60 days after enrolling a new common law employer and annually. Survey data must be collected and analyzed by the CHC-MCO or its subcontractor, and a report must be prepared and submitted to OLTL based upon specifications determined by the Department.

Lastly, through an established claims oversight process, the CHC-MCO will monitor claims submitted by the FMS Entity to the CHC-MCO and ensure the payments to the vendor for both administrative fees and services are in accordance with all applicable regulations and requirements. The CHC-MCOs must also ensure that all EVV requirements outlined by the Department are followed. The CHC-MCOs are responsible for monitoring compliance with requirements outlined in corresponding EVV bulletins.

Performance Standards

The following standards must be adhered to:

1. Department-approved Common Law Employer (CLE) enrollment packets must be mailed within three (3) business days of referral. (Minimum Acceptable: Department approved CLE Enrollment packet mailed within five (5) business days of referral.)

2. Complete the processing of CLE enrollment paperwork within seven (7) business days of receipt of correctly completed-documents. (Minimum Acceptable: Seven (7) business days unless acceptable documentation for a delay is provided.)

3. Collect and process completed documents and forms for enrollment of DCWs, Vendors, Small Unlicensed Providers and Independent Contractors within seven (7) business days of receipt of correctly completed and file with the appropriate federal, state, and local government agencies. (Minimum Acceptable: Seven (7) business days (unless acceptable documentation for a delay is provided). This minimum standard assumes that only the State Police background check is required and that the DCW has no record. ChildLine and FBI Clearance require longer dissemination times by the agency.)

4. Conduct face to face meetings as requested by new Participants to orient them to the program and to assist in completion of any necessary paperwork. (Minimum Acceptable: The requested visit must occur on the date scheduled with the Participant.)

5. Level of customer satisfaction based on Employer Satisfaction Surveys. (Minimum Acceptable: 95% satisfaction rate from active Participants.)

If the standards are not met, the Department will notify the CHC-MCO of the specific deficiencies, request a CAP, and follow-up on the plan to ensure compliance. The CAP must be submitted to the Department within 15 business days. The Department will review and accept or reject the CAP within 30 business days. The Department will monitor the interventions to ensure the CAP was completed and successful in resolving the issue in accordance with the timeframes established for corrective action in the CAP. If the CAP was not successful in correcting the identified issue, technical assistance will be provided by the Department.

Reporting Requirements

The CHC-MCOs will be required to submit monthly and annual reports to the Department utilizing the OPS 38 template which covers activities performed and issues encountered during the reporting period and reflect progress in meeting all contractual obligations. Required reporting elements are as directed by the Department. The CHC-MCOs must coordinate with the selected entity to ensure all required reporting elements are transmitted to the CHC-MCOs in a timely manner to meet the Department's reporting deadlines.

OLTL staff will review this information and intercede, when necessary, with corrective actions to ensure compliance. Meetings will be held as needed between the CHC-

MCOs and the Department to discuss any issues and for the Department to provide any necessary technical assistance it feels is needed.

Direct Care Worker Referral and Matching System

The CHC-MCO or FMS entity must develop a secure statewide web-based DCW referral and matching system to match Participants utilizing Participant-Directed services with potential individual direct care workers. The intent of the referral and matching service is to create additional opportunities for direct care workers and to strengthen support for individuals who choose participant direction as the preferred model of service delivery. The CHC-MCO must jointly collaborate with all other contracted CHC-MCOs to contract with a single statewide vendor under the requirements described below, and each CHC-MCO must establish agreements and cooperate with this statewide entity.

The referral and matching portal shall manage worker and Participant information, match DCWs' qualifications with Participants' needs, and provide participants with lists of potential workers for them to interview. The portal must be directly usable by DCWs with specific functionality for creating profiles and searching for jobs with CHC Participants. The portal must be usable by Participants or their representative with specific functionality for posting jobs and searching from providers near them with availability.

The portal vendor should have at least three years of experience successfully operating a technology-driven referral system in a participant-directed Medicaid funded home care program.

Minimum portal requirements include the following:

1. Data Collection:
    a. During the first year of implementation, which is one year from the go live date of the portal, the portal shall collect either the FMS entity's ID for the DCW or last four digits of the DCWs social security number, or birth date to validate the DCW's status as an enrolled provider or at minimum has completed the required background checks. The portal should be open to DCWs who are currently working, and workers who have had background checks within the past year (365 days) who are either currently enrolled or in the process of getting enrolled.
    b. The portal shall allow common law employers and DCWs to view relevant certifications, credentials, and completed training when possible.
    c. The portal shall also verify the Participant is enrolled in CHC.
    d. The portal needs to have functionality to address consent to share data among DCWs and Participants.
    e. Information management and privacy: Users can upload and enter data while keeping personal contact info (email, phone number and address private) from other users until they are ready to share it. Primary users can manage personal information, such as their availability, preferences, and updated contact information. Users choose when to share their personal

contact information and the system does not force a reveal of this information.

2. Training: The web-based system should have in-app training and other training materials in addition to options for train-the-trainer for local training organizations that can do on the ground support for Participants.

3. System auto-generated reminders: The web-based system must support engagement by enabling auto-generated reminders such as personal information updates, mandated training requirements, certifications, and worker credentials.

4. Geographic search results: The web-based system should present geographically based results that include travel time by car and public transport while not revealing exact addresses.

5. Equity & Accessibility: The system must conform to Web Content Accessibility Guidelines 2.0 (WCAG 2.0) Level AA or similar framework regarding sensory characteristics, such as color, sound, and accommodations for individuals experiencing low vision to read content on websites via screen readers and high-contrast text. The system should be available in more than one language and be capable of adding additional languages. To facilitate choice and promote dignity and independence, workers and consumers should be able self-select categories related to their gender identities.

EXHIBIT DD(1)

CHC-MCO PAY FOR PERFORMANCE

This Exhibit DD(1) defines a potential payment obligation by the Department to the CHC-MCO for long-term services and support measures as defined below. This Exhibit is effective only if the CHC-MCO operates a statewide Community HealthChoices program under this Agreement in CY 2024. If the CHC-MCO does not operate a statewide CHC program under this Agreement in CY 2024, the Department has no payment obligation under this Exhibit. In cases where a CHC-MCO fails to successfully implement a corrective action plan from the previous year related to an associated Quality Performance Measure below in Section I, the CHC-MCO will not be eligible to receive an incentive payment for that measure.

This Exhibit does not supplant Exhibits that provide for any incentive payments directly impacting NFs.

I. Quality Performance Measures

For 2024, the Department selected National Committee for Quality Assurance (NCQA) and Pennsylvania Performance Measures (PAPMs) impacting nursing home transition, long-term services and supports, overall health plan satisfaction, Participant self-direction, competitive integrated employment, and participant satisfaction as quality measures using established statewide specific goals. The Department chose these indicators based on an analysis of past data indicating the need for improvement across the CHC Program as well as the potential to improve services and support for CHC participants receiving CHC services. The quality measures include:

1. Comprehensive Assessments (CAU)
2. Care Plans (CPU)
3. Reassessments and Care Planning after Inpatient Discharge (RAC)
4. Sharing Care Plans with PCP (SCP)
5. CAHPS Health Plan Survey- Overall Satisfaction with Health Plan (Aligned/Medicaid only population)
6. CAHPS Home and Community Based Services (HCBS) Survey- Person Centered Service Plan (PCSP) included all things important to you
7. Nursing Home Transition
8. Participant Self-Direction Enrollment by Zone

9. Participants in Competitive Integrated Employment

NOTE: The CHC-MCO P4P measures may be subject to change due to NCQA specifications or PAPM requirements.

The CHC-MCO P4P Program incentivizes Benchmark Performance and Incremental Improvement Performance. The incentive dollars will be distributed equally between the Benchmark and Incremental Improvement results as described in Section II.

A. Benchmark Performance*:* The Department will award a Benchmark Performance payout amount for each measure that meets the statewide goal that will be defined below in Table 1. The Department will distribute the payouts according to the following criteria:100% payout will occur if the CHC-MCO meets or exceeds the established goal defined below for each measure. Note: The Department has the right to change current CY 2024 goals based on CY 2023 performance. This will be done in consultation with the CHC-MCOs. Each of the seven measures will be considered equally for a benchmark payment. Calendar year (CY) 2024 measurement results will be used to calculate results.

Table 1

Basis	Baseline Year	Measurement Year	Description	Statewide Goal
HEDIS	CY 2023	CY 2024	Comprehensive Assessment and Update (CAU)	
HEDIS	CY 2023	CY 2024	Comprehensive Care Plan Update (CPU)	
HEDIS	CY 2023	CY 2024	Reassessment and Care Plan Update after Inpatient Discharge (RAC)	
HEDIS	CY 2023	CY 2024	Shared Care Plan with Primary Care	

			Practitioner (SCP)	
CAHPS HP	CY 2023	CY 2024	Overall Satisfaction with Health Plan (Aligned SNP/Medicaid only population)	
HCBS CAHPS	CY 2023	CY 2024	PCSP included all things important to you	
Ops 32 Report	CY 2023	CY 2024	Number of Participants who, as defined on Ops 32, were successfully transitioned from the NF to the community and remained there for at least six months	
Encounter Data	CY 2023	CY 2024	Participant-Directed Services (including PAS, Agency with Choice, and Services My Way) by MCO by Zone, weight by HCBS in each zone	
Ops 22 Report	CY 2023	CY 2024	Supported Employment Benchmark for Competitive Integrated Employment - MCO Ratio Based on HCBS	

			population age group 21-64	

B. Incremental Improvement Performance*:* The Department will award an Incremental Improvement Performance payout amount for each measure in Table 1 that will range from 0% up to and including 100% of the measure's value. Incremental performance improvements are measured comparing rates from HEDIS® 2024 (CY 2023) to HEDIS® 2025 (CY 2024) and PAPM 2024 (CY 2023) to PAPM 2025 (CY 2024). Each of the nine measures will be considered equally for an incremental payment.

The percent payout for each measure will be determined by the following sliding scale:

- ≥ 3 Percentage Point Improvement: 100 percent of the measure value.
- ≥ 2 and < 3 Percentage Point Improvement: 85 percent of the measure value.
- ≥ 1 and < 2 Percentage Point Improvement: 75 percent of the measure value.
- ≥ 0.5 and < 1 Percentage Point Improvement: 50 percent of the measure value.
- < 0.5 Percentage Point Improvement: no payout.

II. Payment for CHC-MCO Pay for Performance

The Maximum Program Payout amount will be proportionally split between the CHC-MCOs based on membership as of December 1, 2024. Each CHC-MCO's maximal allocation will then be split with 50% of the funds allocated to benchmark performance and 50% to incremental improvement. Within the benchmark allocation, each of the nine measures will be eligible for equal payment based on achieving the statewide goal. Within the incremental improvement allocation, each of the nine measures will be eligible for equal payment based on the sliding scale results for each measure.

The Department will inform the CHC-MCO of the Maximum Program Payout amount by November 30, 2025.

Per 42 C.F.R. 438.6(b)(2)(ii) –(iii), this incentive arrangement does not automatically renew and is made available to both public and private CHC-MCOs under the same terms of performance.

NOTE: The Department may change the payout methodology based on reporting restrictions due to a natural disaster, pandemic or other unforeseen events. The payout methodology will be shared with the CHC-MCOs prior to finalizing.

If the CHC-MCO has a payment obligation to the Department pursuant to this Exhibit DD(1), the Department will reduce a subsequent payment to the CHC-MCO by this amount.

EXHIBIT DD(2)

NURSING FACILITY QUALITY INCENTIVE PROGRAM

This Exhibit DD(2) defines a potential payment obligation by the Department to the CHC-MCO for a Nursing Facility Quality Incentive Program to evaluate Nursing Facilities (NFs) that participate in the Medical Assistance Program and to develop a valued-based incentive arrangement. This Exhibit is effective only if the CHC-MCO operates a statewide Community HealthChoices program under this Agreement in CY 2024. If the CHC-MCO does not operate a statewide CHC program under this Agreement in 2024 the Department has no payment obligation under this Exhibit.

I. Quality Performance Measures

For 2024, the Department selected Centers for Medicare and Medicaid Services (CMS) Compare quality metrics impacting clinical care using the Minimum Data Set (MDS) system and utilization using Medicare Part A data. The Department chose these indicators based on national and state analysis of past data indicating the need for improvements across the NFs and to improve quality of care for a broad base of the CHC population. The NF quality metrics include:

1. Percentage of short-stay residents who were re-hospitalized after a NF admission (Claims)
2. Percentage of long-stay residents with pressure ulcers (MDS)
3. Percentage of long-stay residents experiencing one or more falls with major injury (MDS)
4. Percentage of long-stay residents assessed and appropriately given the seasonal influenza vaccine (MDS)
5. Percentage of long-stay residents assessed and appropriately given the pneumococcal vaccine (MDS)
6. Percentage of long-stay residents who received an antipsychotic medication (MDS)

The above quality metrics must be used in any NF VBP arrangements for calendar year 2024.

NOTE: The CHC-MCO NF quality metrics may be subject to change due to NQF specifications, CMS requirements, or the Pennsylvania Department of Health requirements.

The CHC-MCO NF Quality Incentive Program rewards NFs based on achieving statewide benchmark goals and incremental improvement for these quality measures. The Department will establish CY 2024 statewide benchmark goals for measures 1-6 above. NFs will be rewarded for incremental improvement from the CY 2023 (base year) to CY 2024 results for measures 1-6 above. CHC adjusted payments will be made to NFs as described in Section ll below.

A. Benchmark Performance*:* The Department will establish CY 2024 statewide benchmark goals for measures 1-6 above. The Department will award a benchmark performance payout amount for each metric in Section I. NFs will be rewarded one point for obtaining the statewide 50th percentile and one point for obtaining the next quartile of improvement for the quality and utilization metrics. NFs can receive up to 14 points for benchmark performance. These points will be used to calculate a CHC adjusted incentive payment described in Section ll.

B. Incremental Improvement Performance*:* The Department will award an incremental improvement payment for measures 1-6 above. NFs will be rewarded for incremental improvement from CY 2023 (base year) to CY 2024. For each measure, NFs can earn from 0 to 2 points based on the sliding scale below. NFs can earn a maximal incremental improvement score of 12 points.

Sliding Scale:

- 2 points for ≥ 2.0 Percentage Point Improvement
- 1 point for ≥ 1 and < 2.0 Percentage Point Improvement
- 0.5 point for ≥ 0.5 and < 1 Percentage Point Improvement
- 0 points for < 0.5 Percentage Point Improvement

II. Payment for CHC-MCO Pay for Performance

The Department will direct the CHC-MCO to make Nursing Facility Incentive Program CHC adjusted payments based on performance measures defined in Section I for CY 2024 benchmark performance and incremental improvement from CY 2023 (base year) to CY 2024. NFs must participate fully in Medical Assistance Programs to be eligible for this incentive program. The NFs are eligible to earn up to 12 points for benchmark performance and 12 points for incremental performance with a maximum of 24 incentive points as described above in IA and IB. The Department will distribute CHC adjusted payments based on each NF's total incentive points and CHC MA occupancy. The Department will determine a maximum potential dollar amount for each incentive point. Payouts will be based on multiplying each NF's total number of points by the dollar amount per incentive point as adjusted for each facility's CHC MA occupancy. The Department will direct the CHC-MCO to make payments to assigned NFs.

The Department will inform the CHC-MCO of the Maximum Program Payout amount by November 30, 2025.

Per 42 C.F.R. 438.6(b)(2)(ii) –(iii), this incentive arrangement does not automatically renew and is made available to both county and non-public nursing facilities under the same terms of performance.

NOTE: The Department may change the payout methodology based on reporting restrictions due to a natural disaster, pandemic or other unforeseen events. The payout methodology will be shared with the CHC-MCOs prior to finalizing.

III. Value-Based Arrangements

The CHC MCOs will use the six quality measures listed above in Section I to develop value-based arrangements with nursing facilities in 2024 to help achieve the 25% VBP goal described in section VII.E.16.b.ii, Value-Based Purchasing. The CHC MCOs may use additional quality and utilization metrics to develop value-based arrangements with nursing facilities.

Exhibit EE

OPIOID USE DISORDER CENTERS OF EXCELLENCE

A. The CHC-MCO must develop an adequate network of physical health Opioid Use Disorder Centers of Excellence (OUD-COE) enrolled in the MA Program as Provider Specialty Type 232 – Opioid Center of Excellence according to the terms of Exhibit T of this Agreement.

B. The CHC-MCO must coordinate with a Participant's BH-MCO and any OUD-COE providing services to the Participant in accordance with Section V.D.2 of this Agreement to ensure that the Participant's care is coordinated and not duplicated.

C. The following services, when provided as clinically appropriate and included or reflected in the individual Participant's care plan, constitute community-based care management services. COE care management services may be provided via telemedicine in accordance with Medical Assistance Bulletin 99-21-06: Guidelines for the Delivery of Physical Health Services via Telemedicine.

1. Screening and Assessment

    a. Assessments to identify a Participant's needs related to Social Determinants of Health, administered in home and community-based settings whenever practicable.

    b. Level of Care Assessments, which may be completed either by the OUD-COE or through a referral. If a level of care assessment results in a recommendation of MAT, the OUD-COE must provide education related to MAT.

    c. Screenings for clinical needs that require referrals or treatment, including screenings for risk of suicide.

2. Care Planning

    a. Development of integrated, individualized care plans that include, at a minimum:

        1. A Participant's treatment and non-treatment needs

        2. The Participant's preferred method of care management, such as in-person meetings, phone calls, or through a secure messaging application

        3. The identities of the members of the Participant's community-based care management team, as well as the members of the Participant's individual support system

b. Care coordination with a Participant's primary care provider, mental health service provider, drug & alcohol treatment provider, pain management provider, obstetrician or gynecologist, and CHC-MCO, as applicable

3. Referrals

   a. Facilitating referrals to necessary and appropriate clinical services according to the Participant's care plan, including:

      1. Primary Care, including screening for and treatment of positive screens for: HIV, Hepatitis A (screening only); Hepatitis B; Hepatitis C; and Tuberculosis

      2. Perinatal Care and Family Planning Services

      3. Mental Health Services

      4. Forms of medication approved for use in MAT not provided at the OUD-COE Provider's enrolled service location(s)

      5. MAT for pregnant women, if the OUD-COE Provider does not provide MAT to pregnant women

      6. Drug and Alcohol Outpatient Services

      7. Pain Management

   b. Facilitating referrals to any ASAM Level of Care that is clinically appropriate according to a Level of Care Assessment

   c. Facilitating referrals to necessary and appropriate non-clinical services according to the results of the Participant's needs identified through a Social Determinants of Health screening

4. Monitoring

   a. Individualized follow-up with Participants and monitoring of Participants' progress per the Participant's care plan, including referrals for clinical and non-clinical services

   b. Continued and periodic re-assessment of a Participant's Social Determinants of Health needs

   c. Performing Urine Drug Screenings at least monthly

5. Making and receiving warm hand-offs. In the event of a warm hand-off from an overdose event, the OUD-COE must provide education related to overdose risk and naloxone.

D. To determine whether OUD-COE care management services are appropriate for a Participant, the CHC-MCO, in coordination with the OUD-COE, shall utilize the inclusion and exclusion criteria established in the OUD-COE Fidelity Checklist. The Department will make the OUD-COE Fidelity Checklist available to the CHC-MCO upon request.

Exhibit FF

Requirements for Non-Commonwealth Hosted Applications/Services

The purpose of this Attachment is to define requirements for business or technology solutions and services procured by the Commonwealth that are hosted within the Licensor's or its subcontractor's managed infrastructure.

A. Hosting Requirements

1. The Licensor or its subcontractor shall supply all hosting equipment (hardware and software) required for the cloud services and performance of the software and services set forth in the Quote and Statement of Work.

2. The Licensor shall provide secure access to applicable levels of users via the internet.

3. The Licensor shall use commercially reasonable resources and efforts to maintain adequate internet connection bandwidth and server capacity.

4. The Licensor or its subcontractors shall maintain all components of the hosted solution with commercially reasonable support and replace as necessary to maintain compliance.

5. The Licensor shall monitor, prevent and deter unauthorized system access. The Licensor shall use all commercially reasonable methods to confirm suspected breaches. In the event of any impermissible disclosure unauthorized loss or destruction of Confidential Information, the receiving Party must immediately notify the disclosing Party and take all reasonable steps to mitigate any potential harm or further disclosure of such Confidential Information. In addition, pertaining to the unauthorized access, use, release, or disclosure of data, the Licensor shall comply with state and federal data breach notification statutes and regulations, and shall report security incidents to the Commonwealth within **twenty-four (24) hours** of when the Licensor has reasonable confirmation of such unauthorized access, use, release, or disclosure of data.

6. The Licensor or the Licensor's subcontractor shall allow the Commonwealth or its delegate, at times chosen by the Commonwealth, and with at least **ten (10) business days'** notice, to review the hosted system's data center locations and security architecture.

7. The Licensor's employees or subcontractors, who are directly responsible for day-to-day monitoring and maintenance of the hosted system, shall have industry standard certifications applicable to the environment and system architecture used.

The Licensor or the Licensor's subcontractor shall locate servers in a climate- controlled environment. The Licensor or the Licensor's contractor shall house all servers and equipment in an operational environment that meets industry standards including climate control, fire and security hazard detection, electrical needs, and physical security.

8. The Licensor shall examine applicable system and error logs daily to minimize and predict system problems and initiate appropriate action.

9. The Licensor shall completely test and apply patches for all third-party software products in the server environment before release.

10. The Licensor shall provide all Commonwealth data to the Commonwealth, upon request, in a form acceptable to the Commonwealth, at no cost to the Commonwealth.

B. System and Organization Controls (SOC) Reporting Requirements

1. Subject to this section and unless otherwise agreed to in writing by the Commonwealth, the Licensor shall, and shall require its subcontractors to, engage, on an annual basis, a CPA certified third-party auditing firm to conduct the following, as applicable:

   (i) Reserved

   (ii) a SOC 2 Type II report with respect to controls used by the Licensor relevant to internal and external procedures and systems that access, process, host or contain Commonwealth Data designated as Class "C" Classified Records or Closed Records, as defined in ITP-SEC019, or in compliance with mandates by federal or state audit requirements and/or policy.

   The Licensor shall receive and review their subcontractor's relevant SOC reports, and the Licensor shall provide the Commonwealth with a Letter of Attestation that includes an analysis of their subcontractor's SOC report.

2. Unless otherwise agreed to in writing by the Commonwealth, the Licensor's SOC Report(s) shall be provided upon contract execution and annually thereafter. While it is preferable that SOC Reports coincide with Pennsylvania's fiscal year (July 1 through June 30), SOC Reports, at the very least, must cover at least **6 consecutive months** of Pennsylvania's fiscal year.

3. SOC 2 Type II reports shall address the following:

   (i) Security of Information and Systems;

(ii) Availability of Information and Systems;
(iii) Processing Integrity;
(iv) Confidentiality; and
(v) Privacy.
(vi) Reserved

4. At the request of the Commonwealth, the Licensor shall, and shall require its subcontractors, as applicable, complete a SOC for Cybersecurity audit, or another risk management framework as may be approved by the Commonwealth in its sole discretion, in the event:

(i) repeated non-conformities are identified in any SOC report required by subsection 1; or

(ii) if the Licensor's business model changes (such as a merger, acquisition, or change sub-contractors, etc.).

The SOC for Cybersecurity report shall detail the controls used by the Licensor or its subcontractor setting forth the description and effectiveness of the Licensor's or subcontractor's cybersecurity risk management program and the policies, processes and controls enacted to achieve each cybersecurity objective.

The Licensor shall provide to the Commonwealth a report of the SOC for Cybersecurity audit findings within **60 days** of its completion.

5. The Commonwealth may specify other or additional standards, certifications or audits it requires under any Purchase Orders or within an ITP.

6. The Licensor shall adhere to Statement on Standards for Attestation Engagements (SSAE) 18 audit standards. The Licensor acknowledges that the SSAE guidance may be updated during the Term of this Contract, and the Licensor shall comply with such updates which shall be reflected in the next annual report.

7. In the event an audit reveals any non-conformity to SSAE standards, the Licensor shall provide the Commonwealth, within **45 days** of the issuance of the SOC report, a documented corrective action plan that addresses each non-conformity that is identified within the SOC report, including any subcontractor's SOC report. The corrective action plan shall provide, in detail:

(i) clear responsibilities of the personnel designated to resolve the non-conformity;
(ii) the remedial action to be taken by the Licensor or its subcontractor(s);
(iii) the dates when each remedial action is to be implemented; and
(iv) a summary of potential risks or impacts to the Commonwealth that are associated with the non-conformity(ies).

8. The Commonwealth may in its sole discretion agree, in writing, to accept alternative security report in lieu of a SOC report.

C. Security Requirements

1. The Licensor shall conduct a third-party independent security/vulnerability assessment at its own expense on an annual basis.

2. The Licensor shall comply with the Commonwealth's directions/resolutions to remediate the results of the security/vulnerability assessment to align with the standards of the Commonwealth.

3. The Licensor shall use industry best practices to protect access to the system with a firewall and firewall rules to prevent access by non-authorized users and block all improper and unauthorized access attempts.

4. The Licensor shall use industry best practices to provide applicable system intrusion detection and prevention in order to detect intrusions in a timely manner.

5. The Licensor shall use industry best practices to provide applicable malware and virus protection or compensating controls on all servers and network components.

7.1

6. The Licensor shall limit access to Commonwealth-specific systems, data and services and provide access only to those staff, located within CONUS (any of the Continental United States and Hawaii) that must have access to provide services proposed. If Licensor staff located outside of the United States require access to the Commonwealth's data for any purpose, such as **but not limited to** system administration and support services, investigation, or debugging, these provisions shall apply to any offshore support provided by the Licensor and any subcontractors:

7.2

i. No offshore support shall be permitted from any countries that are identified as state sponsors of terrorism by the US Department of State, which shall be monitored by the purchasing Agency to ensure compliance through the life of the Agreement, Contract, or Purchase Order;
ii. Access by offshore vendor resources shall be limited to solely that which is required to perform the Services, including support services;
iii. Offshore vendor resources who are providing the services shall be trained in the proper handling of Commonwealth Data;
    a. Any vendor offshore resources that are dedicated to the Commonwealth shall be required to undergo Commonwealth Security Awareness Training provided by the Commonwealth and the vendor shall provide monthly compliance report.
    b. Vendor attests that offshore vendor resources shall comply with Management Directive 205.34 and Management Directive 245.18 and

that the Vendor has trained the offshore resources in the proper handling of Commonwealth Data.

iv. Offshore vendor resources that are providing the services shall be obligated to handle Commonwealth Data in ways at least as restrictive as the requirements outlined in the Agreement;

v. Offshore vendor resources that are providing the services and require access must be uniquely identified (e.g., by a unique User ID);

vi. Offshore vendor resources that are providing the services shall access Commonwealth systems, data, or services in a manner that meets or exceeds the minimum requirements set forth in Commonwealth ITPs;

vii. The date, time (including time zone), resource name, source IP, and nature of the access (i.e., read-only or modify) shall be recorded in a log file which is maintained and preserved according to applicable data protection law(s) and industry best practice standards;

viii. Any offshore vendor resource access must be granted by an authorized Commonwealth resource and shall only be granted on least required privilege or need-to-know basis prior to any offshore vendor resource obtaining access and shall only be granted to offshore vendor resource that must have access to provide and/or support the services;

ix. The vendor shall agree explicitly in the agreement that with respect to any services provided by any offshore vendor resources, the vendor shall be obligated to comply with the terms and conditions of the Agreement, Contract or Purchase Order, as though the offshore vendor resources were located within the United States and that the vendor shall assume all obligations and risks associated with the use of offshore vendor resources as if those resources were located within the United States;

x. The purchasing agency shall ensure that background check requirements apply to all offshore vendor resources assigned to perform services under the Agreement, Contract or Purchase Order.

a. The vendor shall identify each offshore vendor resource that will perform services under the Agreement, Contract or Purchase Order and shall perform the following background checks on each individual offshore vendor resource providing services:

i. Criminal Records Database check (country where the offshore vendor resource is located);

ii. Civil Litigation Database check (country where the offshore vendor resource is located);

iii. Credit and Reputational Risk Database Check (country where the offshore vendor resource is located);

iv. Compliance Authorities (global check);

v. Regulatory Authorities (global check);

vi. Serious and Organized Crimes (global check); and

vii. Web and media searches (global check).

b. On an annual basis, the vendor shall provide written confirmation that the above required background checks have been completed and that the background checks did not identify any criminal record that includes a felony or misdemeanor (or equivalent) involving terroristic behavior, violence, use of a lethal weapon, or breach of trust/fiduciary

responsibility or which raises concerns about building, system or personal security or is otherwise job-related. This written confirmation must be provided prior to the subject offshore vendor resource being provided access to Commonwealth data or systems. The vendor shall not assign any offshore vendor resource that fails to pass the background checks required in this section to any Commonwealth services and shall remove any access privileges already given to the offshore vendor resource unless the Commonwealth consents to the access, in writing, prior to the access.

xi. No recording, streaming, monitoring, or photographic devices enter, are accessible, or utilized in the workspace where work under the Agreement, Contract or Purchase Order is performed while located outside of the United States.

7. The Licensor shall provide the services, using security technologies and techniques in accordance with industry best practices and the Commonwealth's ITPs set forth in Attachment 1, including those relating to the prevention and detection of intrusions, and any other inappropriate use or access of systems and networks.

D. Data Protection

1. The Licensor shall only host, store or backup Commonwealth Data in physical locations within CONUS.

2. The Licensor shall use industry best practices to update and patch all applicable systems and third-party software security configurations to reduce security risk.

3. The Licensor shall protect their operational systems with applicable anti-virus, host intrusion protection, incident response monitoring and reporting, network firewalls, application firewalls, and employ system and application patch management to protect its network and customer data from unauthorized disclosure.

4. The Licensor shall be solely responsible for applicable data storage required.

5. The Licensor shall encrypt all Commonwealth data in transit and at rest. The Licensor shall comply with ITP-SEC031, and ITP-SEC019, encryption policies and minimum standards or stronger.

6. The Licensor shall take all commercially viable and applicable measures to protect the data availability including, but not limited to, real-time replication, traditional backup, and/or georedundant storage of Commonwealth data in accordance with industry best practices and encryption techniques.

7. The Licensor shall have appropriate controls in place to protect critical or sensitive data and shall employ stringent policies, procedures, to protect that

data particularly in instances where such critical or sensitive data may be stored on a Licensor-controlled or Licensor-owned electronic device.

8. The Licensor shall utilize a secured backup solution to prevent loss of data. Stored backups must be kept in an all-hazards protective storage environment at the primary location and any additional locations where the data is being maintained. All back up data and media shall be encrypted.

E. Adherence to Policy

1. The Licensor support and problem resolution solution shall provide a means to classify problems as to criticality and impact and with appropriate resolution procedures and escalation process for classification of each problem.

2. The Licensor shall abide by the applicable Commonwealth's Information Technology Policies (ITPs), a list of the most relevant being attached hereto as Attachment 1.

3. The Licensor shall comply with all pertinent federal and state privacy regulations.

F. Closeout

When the purchase order's or other procurement document's term expires or terminates, and a new purchase order or other procurement document has not been issued by a Commonwealth Agency within **60 days** of expiration or termination, or at any other time at the written request of the Commonwealth, the Licensor must promptly return to the Commonwealth all Commonwealth's data (and all copies of this information) that is in the Licensor's possession or control. The Commonwealth's data shall be returned in a format agreed to by the Commonwealth.

Upon confirmation that Commonwealth data is in possession or control of the Commonwealth, the Licensor shall ensure all residual user account(s) are promptly deleted or reset in the solution. The Licensor shall notify the Commonwealth within **10 business days** that all user account(s) have been deleted or reset.

Cloud Services Requirements

Offeror/Contractors proposing solutions that include cloud services must respond to the questions included in this document. The purpose of this document is to gain the necessary information from the Offeror/Contractor to fully understand and evaluate the cloud service being proposed.

Offeror/Contractor shall describe if any part of the proposed cloud service is provided by another third party or subcontractor. The ability of each subcontractor to meet these Cloud Services Requirements must be incorporated into this document. Offeror/Contractor may add a separate attachment or denote responses as "Offeror/Contractor" or "Name of Subcontractor".

If using links in Offeror/Contractor Response column, please provide specific reference point that addresses the question.

REQ #	Category	Question	Offeror/Contractor Response
1	General	Offeror/Contractor shall provide an overview of the proposed cloud service. Please list the solution components, hosting environments, as well as the service organization and subservice organizations operating all aspects that are a part of the overall proposed solution. • Solution Component(s) – SKU/Product Titles and/or Resources utilized by solution provider • Solution Environment(s) – Which public cloud provider, which private cloud stack, and/or who's datacenter for traditional hosting of components. • Solution Operator(s) – Organizational name of the Service Organization and any Subservice Organizations actively supporting the proposed solution.	
2	General	Offeror/Contractor shall describe if the proposed cloud service is a dedicated single tenant or shared (multi-tenant) cloud solution. If multi-tenant, Offeror/Contractor shall describe the security controls to isolate the tenants.	
3	General	Offeror/Contractor shall describe Service Level Agreements (SLAs) included with the proposed	

		Cloud Service that identify both the services required and the expected level of service including, but not limited to, the following: • Availability • Performance • Disaster Recovery expectations (RTO/RPO) • Pandemic Recovery expectations • Location of the data Primary/Secondary (if applicable?) • Access to the data • Portability of the data (ability to move data to a different hosting provider) • Metrics used to measure the service, e.g. service level objectives	
4	General	Offeror/Contractor shall describe controls for record retention and data destruction of data past retention period in accordance with ITP-SEC019 Policy and Procedures for Protecting Commonwealth Data and ITP-SEC015 Data Cleansing Policy. Offeror/Contractor shall describe how they will confirm that the data has been destroyed. Commonwealth preference is certified letter(s) of confirmation at end of contract and quarterly for aged data.	
5	General	Offeror/Contractor shall, upon contract expiration or at any other time at the written request of the Commonwealth, return to the Commonwealth all of its data (and all copies of this information) in a format agreed to by the Commonwealth. Offeror/Contractor shall provide method of export of Commonwealth data during the contract term.	
6	General	Offeror/Contractor shall provide current FedRamp Status (ready, in process, authorized, not yet applied) and level (Low, Moderate, or High). If FedRamp status is "authorized," Offeror/Contractor shall provide details for the following: • Service Model	

		• Deployment Model • Impact Level • Independent Assessor • Authorization Date • Service Description • Agencies using this service	
7	General	Offeror/Contractor shall indicate if the following NIST guidelines are adhered to: • NIST SP 800-53 Assessing Security and Privacy Controls in FIS organizations • NIST SP 800-63 Digital Identity Guidelines • NIST SP 800-92 Guide to Computer Security Log Management • NIST SP 800-144 Guideline on Security and Privacy in Public Cloud Computing • NIST SP 800-145 NIST Definition of Cloud Computing and Deployment Models • NIST SP 800-146 NIST Cloud Computing Synopsis and Recommendations Please also indicate if other NIST guidelines apply to the proposed cloud service.	
8	Regulatory Compliance Verification	Offeror/Contractor shall indicate if the proposed cloud service is subject to any of the following laws: • CJIS and CHRIA for criminal history data • HIPAA for health-related data • IRS Pub 1075 and SSA for federal protected data • PCI-DSS for financial data Offeror/Contractor shall provide certifications or letters of attestation for any deemed applicable to the proposed cloud service.	
9	Access to Commonwealth specific systems, data, and	Offeror/Contractor shall limit access to Commonwealth-specific systems, data and services and provide access only to those staff,	

	services (ITP-SEC040 CSR-L3)	located within CONUS, that must have access to provide services proposed. Offeror/Contractor shall describe their support model including after-hours support. Offeror/Contractor shall indicate if any support mechanism or staff are located outside of CONUS and describe in detail the offshore access required to provide services proposed. a) If OCONUS, Offeror/Contractor shall indicate if logging is enabled to capture the date, time, named user, and nature of the offshore access (i.e., read-only or modify) and whether such logs are maintained and preserved according to applicable data protection law(s) and industry best practice standards. b) If OCONUS support is required, Offeror/Contractor shall indicate whether offshore staff are direct employees or are subcontracted staff. c) If OCONUS, Offeror/Contractor shall indicate whether offshore staff have direct access to Commonwealth data or if the Commonwealth must grant access? If Commonwealth must grant access, please provide request and approval process flow. d) Please describe any additional protections in place with respect to Commonwealth data that vendors employees and/or subcontractors would have access to while OCONUS.	
10	Data Hosting (ITP-SEC040 CSR-L4)	Offeror/Contractor shall only host, store, or backup Commonwealth Data in physical locations within CONUS. • Offeror/Contractor shall describe which data centers are intended for use with the proposed cloud service. • Offeror/Contractor shall provide a description of the physical security measures in place within the proposed data centers. Describe both the physical	

		data center access as well as server room and physical host access. Offeror/Contractor shall completely test and apply patches for all third-party software products before release. • Offeror/Contractor shall describe how often the infrastructure, hardware, and software are upgraded, hardened, and patched and what notifications are provided to the customer.	
11	System and Organization Controls (SOC) Reporting (ITP-SEC040 CSR-L5)	Offeror/Contractor shall provide relevant SOC reports, which have been performed by an independent CPA-certified auditor, for the proposed cloud service. Reports should be submitted to the Contract Manager. Link to OPD_SEC040B SOC Reporting Procedures SOC 1 TYPE II Report is required under the following conditions: • The service organization is hosting financial information that could affect or have a material impact on a Commonwealth agency's financial statements and/or reporting. • Compliance mandate for federal or state audit requirements and/or policy. • A third-party provides financial service(s) (such as, but not limited to, payroll processing, accounts receivable, payable, or collection service). SOC 2 TYPE II Report is required under the following conditions: • The service organization is hosting, **handling, or processing Class "C"** Classified Records or Closed Records as defined in ITP-SEC019 • Compliance mandated with federal or state audit requirements and/or policy.	
12	Accessibility Standards (ITP-SEC040 CSR-A1)	Offeror/Contractor shall comply with the Accessibility Standards in Section 6 of ITP-ACC001 for all provided	

		products and services. • Offeror/Contractor shall submit a completed VPAT using the most current version of the VPAT template for the proposed cloud service(s). o The VPAT template should be filled out in its entirety and include testing methodology, conformance level, and remarks for any partially supported or non-supported level. o If VPAT(s) are submitted, using an older version of the template, Offeror/Contractor should provide an explanation, as to why the most current version is not being used.	
13	System Monitoring Audit Logging (ITP-SEC040 CSR-S1)	Commonwealth policy requirements: • Audit logging must be enabled and accessible to the Commonwealth (Information Security Office or designee) • Verbose logging is required • Vendor must have ability to correlate events, create security alerts, and based on severity of event (critical, severe, high-level) send incident notifications to Commonwealth Information Security Officers (ISOs). • Maintain reports online for a minimum of 90 days and archive for a minimum of 1 year. If the Commonwealth requires longer retention periods, the longer retention requirement takes precedence and should be documented in the SOW. a) Offeror/Contractor shall review and evaluate the system monitoring and audit logging requirements listed in ITP-SEC040 Section 5.2 and describe which apply and how they are being addressed as part of the proposed cloud service. Offeror/Contractor shall also indicate if any additional monitoring and logging is included.	

		b) Offeror/Contractor shall describe which system monitoring and audit logs are available to the customer and indicate how they are made available to the Commonwealth Information Security Officers (ISOs). Please indicate if authorized direct access, available only upon request, or other. c) Offeror/Contractor shall provide an example of the logs to show what level of detail is available. d) Offeror/Contractor shall describe if any dashboards and/or analytics are in place for Commonwealth ISO use. e) Offeror/Contractor shall provide examples of monthly reporting. f) Offeror/Contractor shall provide examples of annual reporting. g) Offeror/Contractor shall define their continuous monitoring strategy, including measures, metrics and control assessments including frequencies. h) Offeror/Contractor shall provide examples of log review, contingency plan testing, incident response plan testing and vulnerability scans i) Offeror/Contractor shall describe responses to assessment findings, threshold alerts, decisions to either mitigate, transfer, or accept risks related to identified vulnerabilities j) Offeror/Contractor shall describe method of access for all of the above.	
14	Data Segmentation Boundary Protection (ITP-SEC040 CSR-S2)	Offeror/Contractor shall provide a network/architecture diagram showing what security and technical controls are performing the network segmentation within the cloud service offering. • If solution spans more than one hosting environment (such as	

		integration to Commonwealth managed environments, or across multiple hosting providers), provide details on what solution components and data are deployed in which environment. • Include border gateway, perimeter and/or network firewall, web application firewall, VPN tunnels, security zone access as applicable to the solution. • Describe data encryption methods at rest and in transit across environments. • Include the direction of connectivity (specify whether initiated inbound, outbound, or both) and specifications for API calls, protocols, etc. • Estimated Transaction size, and frequency to be identified for each connection. Offeror/Contractor shall describe how data segregation (physically or logically) of Commonwealth data from non-Commonwealth data is guaranteed. Offeror/Contractor shall maintain the diagram throughout the contract term and provide updates if changes occur.	
15	Exploit and Malware Protection (ITP-SEC040 CSR-S3)	Offeror/Contractor shall provide and manage security controls. These are required to identify attacks, identify changes to files, protect against malware, protect user web services, Data Loss Prevention (DLP) and provide for forensic analysis. Offeror/Contractor shall describe which of these security controls are included in the proposed cloud service and how these additional controls would generate a notification to the Commonwealth. Please indicate if any are not used and also if any are used that are not listed below. o File Monitoring controls	

		o Antivirus controls o Cloud Aware IDS/IPS o DLP controls o Forensic controls o Advanced Persistent Threat (APT) controls	
16	Encryption (ITP-SEC040 CSR-S4)	Commonwealth policy requires the vendor to comply with SEC031, and SEC019 encryption policies and minimum standards with the proposed cloud service. Encryption technical controls are required to protect data in transit and data at rest. Link to SEC031 Encryption Standards Data in Transit Link to SEC019 Protection of Commonwealth Data Offeror/Contractor shall describe what encryption protocols are used to secure data in transit, file uploads or transfers. Offeror/Contractor shall describe what encryption technology is used for data at rest. Describe how those encryption keys are managed. Offeror/Contractor shall describe what encryption technology is used for data backup and recovery. Describe how those encryption keys are managed. If databases are used, describe what level of encryption is applied.	
17	Identity and Access Management (ITP-SEC040 CSR-S5)	Offeror/Contractor must provide technical controls for authenticating users, provisioning and deprovisioning users, identity interaction and nonrepudiation needs for admins, internet users, and internal users. Offeror/Contractor must describe reporting and audit mechanism for new staff, access changes, and deprovisioning of Offeror/Contractor staff. Offeror/Contractor must support use of Commonwealth Authentication services and Commonwealth Multi-Factor Authentication services.	

		If cloud service is accessed by Commonwealth employees, Offeror/Contractor shall indicate if they can support Microsoft Azure Active Directory (AAD) or integration with ADFS. If cloud service is accessed by citizens or business partners, Offeror/Contractor shall indicate if they can support use of Keystone Login. If Offeror/Contractor cannot support use of Commonwealth authentication methods, Offeror/Contractor shall describe the technical controls used for authenticating users, multifactor services, provisioning and deprovisioning users, identity interaction and nonrepudiation needs for admins, internet user, internal users, etc.	
18	Vulnerability Assessment (ITP-SEC040 CSR-S6)	Offeror/Contractor shall conduct third-party independent security/vulnerability assessments on an annual basis. Offeror/Contractor shall describe its vulnerability assessment practices for the proposed cloud service and indicate how the following requirements will be addressed: a) Offeror/Contractor shall ensure cloud hosted application(s) are securely coded, vetted, and scanned. b) Offeror/Contractor shall conduct quarterly vulnerability assessments, or sooner if due to compliance regulations or other requirements, or upon a major change to the solution. *c)* Offeror/Contractor shall conduct a vulnerability assessment on an annual basis during the term of the contract and shall provide a copy of the results to the Commonwealth. *(Refer to ITP-SEC021 and ITP-SEC023 for guidance)* d) Offeror/Contractor shall be able to identify and validate vulnerabilities required for remediation and provide a mitigation plan and timeline to the Commonwealth. e) Offeror/Contractor shall ensure patching is up to date.	

19	Data Protection Recovery (ITP-SEC040 CSR-S7)	Offeror/Contractor shall provide a business continuity plan that addresses the following (indicate N/A if not applicable to the proposed cloud service and/or if customer responsibility): o Data / Database Recovery o Application Recovery o Operating System Recovery o Infrastructure Recovery Offeror/Contractor shall describe its capability to do a complete restoration in the event of a disaster. Offeror/Contractor shall describe what tests are performed as part of its disaster recovery plan. Offeror/Contractor shall describe its capability to provide services during a pandemic event.	
20	Compliance (ITP-SEC040 CSR-S8)	Offeror/Contractor shall describe its capability to meet compliance requirements if the proposed cloud service is subject to any regulations. At minimum, all offerings shall meet Commonwealth ITP requirements and NIST Moderate Level security controls specified in the Federal Information Processing Standards (FIPS) and Special Publications (SPs). NIST control enhancements shall also apply unless specified otherwise. The agency reserves the right to upgrade the NIST control level. The agency also reserves the right to mandate additional regulations or standards such as HIPAA, PCI, IRS, CMs/ARS, etc.	
21	Security Incident Handling (ITP-SEC040 CSR-S9)	Offeror/Contractor shall agree to monitor, prevent, and deter unauthorized system access as per the requirements outlined below and per the Requirement for Non-Commonwealth Hosted Applications/Services. Offeror/Contractor shall provide a copy of its customer facing Incident Response Plan (IRP). IRP should include incident handling practices, severity classification levels, customer	

		notification and escalation processes, expected timeframes from time of impact to resolution, etc. • The Commonwealth will provide escalation contacts and resource account to be used for notification purposes.	
22	Inventory (ITP-SEC040 CSR-S10)	Offeror/Contractor shall describe how it maintains a complete, accurate, and up-to-date asset inventory of all resources involved in the proposed cloud service. Offeror/Contractor shall provide a detailed asset inventory list, including country of origin, that will be used for the proposed cloud service offering. The Commonwealth reserves the right to prohibit use of certain hardware based on risk. Include manufacturer, model numbers, processors, disk drives, database hardware, data center networking components (routers, switches, etc.), security devices (firewalls, etc.), load balancers, and any other hardware relevant to the delivery of the service. Offeror/Contractor shall provide notice to the Commonwealth for any changes to the asset inventory used to support the cloud service being provided to the Commonwealth that would impact regulatory compliance (refer to REQ#5 Regulatory Compliance Verification)	
23	Capacity (ITP-SEC040 CSR-I4)	Offeror or contractor shall provide capacity data associated with their offering. If metrics were provided by the agency, values should be based on those metrics. If exact numbers are not available, Offeror shall provide the following details: • Typical values for organizations of similar size and type (note any known deviations in the expected PA implementation). • Values for individual transactions and connections (ex: Each connection of type X consumes approximately 200	

		Kbps, or each transaction is approximately 5KB). • For each of the above, provide details indicating whether such connections/transactions are batch processes (and expected/recommended intervals and run times) or not.	
24	Data Backup and Recovery (Hosting Terms)	Offeror/Contractor shall take all necessary measures to protect the data including, but not limited to, the backup of the servers on a daily and weekly basis in accordance with industry best practices and encryption techniques in accordance with Commonwealth retention requirements. Offeror/Contractor shall describe its backup and archival process including but not limited to the following: • What is the length of time backups are available? • Do you perform test restores? • What archival backup/restore/versioning is part of the agreement and what actions require any additional service fees? • Explain any shadowing or redundancy you have across multiple datacenters or repositories and if those data repositories are within the US and controlled by the vendor. • Is storage of backup media offsite provided? If so, for how long? • Location of backups and key management and storage for any backup encryption keys.	

Community HealthChoices RFA

Released Tuesday, January 30, 2024

Background

The CHC Program serves individuals who are dually eligible for Medicare and Medicaid and people with physical disabilities who receive home and community-based waiver services or nursing facility care.

CHC is the sole Medicare Advantage (MA) program option for fully dual eligible beneficiaries and most nursing facility clinically eligible (NFCE) individuals who reside in the five zones. The regional CHC zones are as follows:

- ***Southwest zone:*** Allegheny, Armstrong, Beaver, Bedford, Blair, Butler, Cambria, Fayette, Green, Indiana, Lawrence, Somerset, Washington, and Westmoreland counties.
- ***Southeast zone:*** Bucks, Chester, Delaware, Montgomery, and Philadelphia Counties.
- ***Remaining zones*** and respective counties, including:
    - ***Lehigh/Capital zone***: Adams, Berks, Cumberland, Dauphin, Fulton, Franklin, Huntingdon, Lancaster, Lebanon, Lehigh, Northampton, Perry, and York.
    - ***Northeast zone:*** Bradford, Carbon, Centre, Clinton, Columbia, Juniata, Lackawanna, Luzerne, Lycoming, Mifflin, Monroe, Montour, Northumberland, Pike, Schuylkill, Snyder, Sullivan, Susquehanna, Tioga, Union, Wayne, and Wyoming.
    - ***Northwest zone:*** Cameron, Clarion, Clearfield, Crawford, Elk, Erie, Forest, Jefferson, McKean, Mercer, Potter, Venango, and Warren.

Current Market

The CHC incumbents are AmeriHealth Caritas (Keystone First), Centene (PA Health and Wellness), and University of Pittsburgh Medical Center (UPMC), serving 411,034 CHC members as of October 2023.

Pennsylvania Community HealthChoices Enrollment by Plan, October 2023

Plan	Enrollment	% Market Share
AmeriHealth Caritas	179,896	43.8%
Centene	88,180	21.5%
UPMC	142,958	34.8%
Total	**411,034**	

Source: Pennsylvania Department of Human Services

DHS published a historical data summary here: Community HealthChoices Historical Data.

Rate Methodology Historical Data Observations:

- **Reduction in utilization** caused by COVID-19 and utilization management by MCOs, resulting in downward pressure on capitation rates for 2023.
- The Nursing Facility change in ratios will require more staff in nursing facilities. Rate adjustments to increase funding to support Nursing Facilities factored.

- **CY 2023 Rate changes resulted in $1.9 Billion impact** - $8M of that for AWC, $368.7M for PAS rate increases, and $1.574 for Nursing Facilities' access to care and staff ratio adjustments.
- **Rate adjustments assume that AWC will result in less than 1% of agency cases transitioning to AWC, but 50% of consumer-directed cases transitioning (assumes people who value choice will continue to). These assumptions resulted in upward pressure for PAS costs in this program.**

Evaluation

For an applicant to be considered eligible:

- 75% of raw technical points available in technical submittal
- Financial information must demonstrate financial capacity to fulfill the good faith performance of the agreement.

For each zone, DHS must select for negotiations the applicants with the highest overall score.

The final technical scores will be determined by giving the maximum number of technical points available to the application with the highest raw technical score. The remaining applications will be rated by applying the formula located at RFP Scoring Formula.

Financial information will not be scored as part of the technical submittal. It will be reviewed only to determine an applicant's financial responsibility.

SDB and VBE participation submittals will not be scored, however, if an applicant fails to satisfy the SDB or VBE requirements described. DHS will reject the application.

DHS will not score the CPP submittal. Once an applicant has been selected for negotiations, DHS will review the CPP submittal.

PHA Focus Areas of Draft Agreement:

1. Promotion and support of FMS, including Agency With Choice
2. Development of a Registry for participant-directed DCWs
3. Care Plan assessment timelines expanded
4. RN requirement for bedbound patients
5. Direct Care Worker Coordinator role for MCOs
6. Increase in use of VBP Arrangements

RFA & Draft CHC Agreement

Link to solicitation
Link to RFP

General RFA Terms

- **Applications Due: March 15, 2024** *This 45 day timeline is shorter than anticipated (60 days).*
- **Implementation Date: January 1, 2025** *(subject to change)*
- The department anticipates awarding agreements to **three to five CHC-MCOs in each of the five CHC zones**.
- Full risk, capitated agreement.
- The **contract term is five years** and will have three one-year renewal options.
- Does not require a cost submittal. Rates are negotiated annually with DHS providing draft structure for year one to begin negotiations.
- Includes small diverse business (SDB) or veteran business enterprise (VBE) goals of 11 percent and three percent, respectively. Applicants must include separate SDB and VBE submittals for each zone in their application.
- **Protest Timeline:** Protests must be received by 4:00 p.m. on the seventh day following the date the Applicant knew or should have known of the facts giving rise to the protest; however, **no protest may be filed more than seven days after award.**
- The Applicant must **disclose any current or recent CAPs** or sanctions.
- **Readiness Review:** Prior to an Agreement, the Department must determine that the CHC-MCO successfully completed the Department's six-month Readiness Review for each CHC zone.
- **Performance Standards:** The Commonwealth developed a set of minimum Key Performance Standards; There are fifteen (15) CHC Waiver Assurance Performance Measures ("WPM"): two (2) for Administrative Authority; one (1) for Qualified Providers; five (5) for Person-Centered Service Plans ("PCSP"); and seven (7) for Health & Welfare. MCOs must meet 86% compliance with timely submission of data reporting for these areas.
- DHS provided itself flexibility within the RFA to implement **a pay-for-performance incentive to MCOs**. Under this policy, DHS could make incentives available to MCOs that help participants successfully complete the financial eligibility redetermination process with their local County Assistance Offices (CAOs).
- **CPP: Contractor Partnership Program**: The CPP was created by the Department to address workforce needs by connecting beneficiaries of Temporary Assistance for Needy Families ("TANF") to jobs. CPP requires entities who are awarded a contract or agreement with DHS to establish a hiring target that supports TANF beneficiaries in obtaining employment with the contractor, grantee, or subcontractors for jobs within their organizations.

FMS

- Participant direction must be offered first to participants who are eligible for HCBS (consistent with current agreement language). NEW language now requires the reason they are not picking self-directed services to be documented by the MCOs.
- Multiple references to SC responsibility to provide education on participant-direction.
- **FMS Standard of 95% customer satisfaction rate from active participants** based on Employer Satisfaction Surveys.
- Notably, page 47 notes that **"upon federal approval", Agency With Choice may be a FMS option.** Still refers to AWC provider as a single entity. Minimal additional information shared regarding Agency With Choice and the FMS addendum does not address Agency With Choice requirements at all.

- **New Direct Care Worker Referral and Matching System (Registry):** The CHC-MCO must jointly collaborate with all other contracted CHC-MCOs to contract with a single statewide vendor under the requirements described below, and each CHC-MCO must establish agreements and cooperate with this statewide entity. The vendor should be able to demonstrate it has successfully matched at least 35% of the direct care workers utilizing the system.
- The vendor should be able to demonstrate it has successfully matched at least 35% of the direct care workers utilizing the system.
- Adds new pre-service training for participant directed direct care workers (8 hours of training within first four months of hire):
    - First Aid & CPR
    - Home Health & Safety
    - Universal Precautions

Care Plan and Continuity of Care

- **Continuity of Care:** New language requires services remain as authorized until an assessment is completed when a participant transfers MCOs – former language had this at 60 days, new language removes 60 days, potentially shortening the timeframe to a reassessment. This could shorten the timeframe for reductions.
- New Language to **allow MCOs to complete assessment** sooner than one year if Participant transfers MCOs.
- As part of the Assessment process when a Participant is bedbound, CHC-MCOs must document the need for quarterly in person visits at a minimum, by an RN, LPN, or certified home health aide to assess wounds and catheters. The assessor must also gain an understanding of how the Participant gets repositioned and offer any necessary feedback or education to DCWs to ensure the Participants health and safety.
- **New Service Plan Requirements:**
    - Participant preferences for how often they would like to engage with their Service Coordinator (Participants must not be steered toward minimal quarterly contacts).
    - Participant communication preferences including how they would like to be identified, addressed and preferred method of communication.
    - Participant identified goals.
    - Health-related education needs and a plan to ensure understanding of health needs and treatment plan.
- New requirement to include **afterhours SC contact information** in PCSP that is shared with providers at the request of the Participant.
- **New response time for SCs:** Service Coordinators must respond to Participant outreach within two (2) business days, or sooner when an imminent risk to a participant's health and safety is involved.
- **Care Plan Detail Sharing:** If requested, the MCO must share minimum necessary service plan information with providers, consistent with HIPAA rules and regulations. If sufficient justification is demonstrated by a provider, that information may include the following:
    - Total number of authorized units per week (i.e., amount)
    - Service provision dates (i.e., service begin and end dates)
    - Preferred schedule (i.e., duration and frequency)
    - List of tasks detailing participant needs (i.e., ADLs/IADLs)
    - Service coordinator's name, phone, and email address

- Off-hours service coordination contact number
- Special conditions and instructions
- Unique circumstances (e.g., allergies, smoking, pets, children under 18 years of age, etc.)

- **Start of Services Requirement:** When new services are authorized or services are increased via inclusion on a Participant's PCSP, **the new service or increased service level must commence within seven (7) business days of the approval, unless the Participant requests a longer timeframe for the services to start.**
- **Case Loads for Supports Coordinators:** The maximum caseload ratio for Service Coordinators serving HCBS Participants is 1:60 (this is a decrease from current 1:70). The maximum caseload ratio for Service Coordinators serving Participants in nursing facilities is 1:225 (decrease from current 1:250).
- **Translation Services:** The CHC-MCO must require Network Providers to offer interpretation services and prohibit Network Providers from requiring that a Participant's family member be used for interpretation.
- The CHC-MCO must evaluate and mail a decision for each home/vehicle modification, pest eradication, or assistive technology request within sixty (60) business days of the date of request.

Fraud, Waste and Abuse

- **Fraud Waste and Abuse Reporting:** The CHC-MCO must inform all Network Providers of the Pennsylvania MA Provider Self Audit Protocol which allows Providers to voluntarily disclose overpayments or improper payments of MA funds. This includes, but is not limited to, inclusion in the Provider handbook. The CHC-MCO must provide written documentation that this action has been completed. The protocol is available on the Department's website at https://www.dhs.pa.gov/about/Fraud-And-Abuse/Pages/MA-ProviderSelf-Audit-Protocol.aspx4
- **Fraud Waste and Abuse** policies and procedures must contain:
  - An active method for verifying directly with Participants whether services billed by providers were received, as required by 42 CFR § 438.608(a)(5). Active verification requires the CHC-MCO to directly engage with consumers and develop a process to track both methods of verification and the results of verification attempts.
  - A process to recover overpayments or otherwise sanction Providers as required by 42 CFR §§438.608(a)(5) and 438.608(d)(1)(i-iv). iv. Provisions for payment suspension to a network provider for which the State determines that there is a credible allegation of fraud as required in 42 CFR §§455.23 and 438.608(a)(8)
  - The CHC-MCO must submit to the Department quarterly and annual statistical reports which relate to its Fraud, Waste and Abuse detection and sanctioning activities regarding Providers.
- **EVV:** Neither CHC-MCOs nor Providers can limit the locations for EVV as long as the locations are allowable by the program. EVV does not change the method and location for service delivery.

Value Based Payment Arrangements

- **VBP:** The MCO must enter into VBP Payment Arrangements with Providers that incorporate approved VBP Payment Strategies. The approved VBP Payment Strategies are tiered as:
  - Low risk (performance-based contracting)

    - Medium risk (shared savings, shared risk, bundled payments)
    - High risk (global payments)
- The **CHC-MCO must achieve the following percentages through VBP arrangements**:
    - Calendar year 2024 –twenty five percent (25%) of LTSS payments through a value-based payment arrangement (up from 7.5% in current agreement). A minimum of ten **percent (10%) of the total LTSS spend needs to be in Medium or High Financial Risk categories.**

Miscellaneous

- **PAS Rate:** The Department requires CHC-MCOs to pay for Personal Assistance Services at no less than the HCBS MA fee schedule rate.
- **Participant Advisory Committee:** The CHC-MCO must establish and maintain a PAC for each zone in which it operates. The PAC must include Participants, Network Providers, and direct care worker representatives to advise on the experiences and needs of Participants. Participants must comprise 50% of the PAC, must be reimbursed for their travel and should represent home care a facility care. Meetings must be at least quarterly.
- The CHC-MCO's **Provider Disputes and Provider Appeals policies and procedures** must include, at a minimum:
    - Informal and formal processes for settlement of Provider Disputes.
    - Acceptance and usage of this Agreement's definition of Provider Appeals and Provider Disputes.
    - Time frames for submission and resolution of Provider Disputes and Provider Appeals.
    - Processes to provide equitability for all Providers.
    - Establishment of a CHC-MCO Committee to process formal Provider Appeals, which must provide: – At least one-fourth (1/4th) of the membership of the Committee must be composed of Providers/peers. – Committee members who have the authority, training, and expertise to address and resolve Provider Dispute/Provider Appeal issues. – Access to data necessary to assist Committee members in making decisions. – Documentation of meetings and decisions of the Committee
- **Innovation:** The CHC-MCO must promote innovation in the CHC service delivery system, including innovation pursued by the CHC-MCO on its own initiative, as well as collaborative efforts with the Department, CMS, and local partners. Initial required target areas include:
    - Workforce innovation that improves the recruitment, retention, and skills of direct care workers, which may include but are not limited to direct or enhanced payment and other incentives to Providers, Participant-Directed employers, and direct care workers for education, training, and other initiatives designed to enable direct care workers to become a more functional member of the PCPT. Such initiatives may include but not be limited to:
        - Labor/management partnerships or employee/employer partnerships
        - Training programs that exceed DOH and DHS requirements for direct-care worker qualifications, including programs to address complex needs of Participants.
        - Pre-service orientation
        - Promotion of direct-care worker organizations and associations
        - Professional support, certifications, and career-ladder opportunities
        - Care team integration that engages front-line workers

        - Marketing for education and increased awareness of Participant-directed service options
- The Department added language in more than one area indicating their right to impose remediation for any CHC-MCO non-compliance with the CHC program requirements contained in this agreement.
- MCO Roles required for program oversight include a new role **of Direct Care Worker Workforce Development Coordinator** who oversees DCW recruitment and retention.
- Executive Order 2023-08 - Bolstering Service Delivery Through a Digital Experience Strategy calls for the enablement of an online service delivery system that would provide a **universal entryway to all Commonwealth programs, services, and resources** organized by users' needs and life experiences. More information about the Executive Order is available at the following. Applicants shall acknowledge and conform to the following six design principles and requirements when proposing solutions to applications.

This summary is being provided by the Pennsylvania Homecare Association with the intention of summarizing key language and terms that may impact providers from the recently released DRAFT CHC Agreement between the MCOs and the DHS. It is not meant to summarize all areas of the RFA and may not be all inclusive. Providers are encouraged to directly review the Draft Agreement online and any subsequent releases finalizing this document.

Changes to the OBRA Waiver Effective 1/1/25 (Amendment)

KEY – **Bold** = Recommended additions
Strikethrough = Recommended removal

#	Waiver Section	Current Approved Language	Recommended Revised Language	Reason for the Change
1.	Main Module: Additional Needed Information	N/A	**TELESERVICES** **Teleservices are the delivery of direct services using remote technology. The following direct services may be rendered via teleservices:** **• Cognitive Rehabilitation Therapy Services** **• Counseling Services** **Participants must have an informed choice to receive direct services in-person or via teleservices. Teleservices may only occur when the Individual Service Planning team determines that using remote technology is the most appropriate service delivery method to meet the participant's needs (including health and safety needs) and goals. This determination must be based on consideration of all of the following:** **• Service delivery complies with the requirements in the service definition, OLTL policies, and regulations.** **• Teleservices must be provided by means that allow for live two-way communication with the participant, no recording of the interaction shall be captured. Live video or audio transmission is only allowable to persons designated by the participant and designated staff employed by the provider responsible for direct service delivery. Providers can call participants over the phone as an incidental component of teleservices to check-in with participants as allowed in the service definition or in emergency circumstances when all other criteria are met. Monitoring of devices is not allowable under teleservices.** **• The provider has explained to the participant and everyone else residing in the home the impact that teleservices will have on their privacy.** o **The use of live video communication devices in bathrooms is strictly prohibited as part of teleservices.**	Adding Teleservice delivery to the waiver.

			o It is allowable for staff to provide live audio prompts needed by the participant in bathrooms and bedrooms as part of teleservices. The participant must be alerted prior to the activation of any audio communication device unless the participant turns on the audio communication device themselves. **o Live real time video communication between the participant and a staff person as part of teleservices may only occur in a participant's bedroom when all of the following are met:** **- The participant has chosen to receive teleservices in their bedroom due to a medical condition which makes it difficult or impossible for them to leave their bedroom to receive services in another room in the house or the participant would like privacy from others in the home (family, housemates, etc.) during the receipt of services;** **- The participant turns the video communication device on and off themselves or requests assistance in turning the video communication device on and off;** **- The participant does not share a bedroom with others; and** **- Service delivery via video communication will not be performed as part of any activity during which privacy would generally be expected (while a participant is in a state of undress, during sexual activities, etc.).** **o All live real time audio and video communication devices used to render teleservices in any part of the home or community must include indicators that let the participant know that the equipment is on and operating in audio or video mode.** **• How teleservices will support community integration.** **• How teleservices will promote improved health and welfare.** **• The request to use teleservices was initiated by a request from the participant and/or the family/representative when appropriate, and not the provider.** **• How the participant's need for in-person support during service provision will be met.** **• The provider, in conjunction with the Individual Service Planning team, has developed a back-up plan that will be implemented should there be a problem with the technology.**	

			The provider is responsible for ensuring that any technology used to render teleservices are HIPAA compliant and that the delivery of teleservices has been reviewed and accepted by the HIPAA compliance officer. The provider is also responsible for providing initial and ongoing training and support to the participant, and anyone designated by the participant, regarding the operation of the technology used during teleservices, including turning it on and off at-will.	
2.	Appendix C-1/C-3 Service Specifications Benefits Counseling	Benefits Counseling is a service designed to inform, and answer questions from, a participant about competitive integrated employment and how and whether it will result in increased economic self-sufficiency and/or net financial benefit through the use of various work incentives. This service provides an accurate, individualized assessment. The service provides information to the individual regarding the full array of available work incentives for essential benefit programs including SSI, SSDI, Medicaid, Medicare, housing subsidies, SNAP, etc. The service also will provide information and education to the participant regarding income reporting requirements for public benefit programs, including the Social Security Administration.	Benefits Counseling is a service designed to inform **participants** and answer **their** questions ~~from, a participant about~~ **regarding if working in** competitive integrated employment **(CIE) while using various work incentives** ~~and how and whether it~~ will result in increased economic self-sufficiency and/or net financial benefit ~~through the use of various work incentives~~. This service provides an accurate, individualized **financial and benefit** assessment **for participants interested in gaining and/or maintaining CIE**. **Additionally,** ~~The~~ **this** service provides information ~~to the individual~~ regarding ~~the full array of~~ **all** available work incentives for essential benefit programs including SSI, SSDI, Medicaid, Medicare, housing subsidies, SNAP, etc. The service also ~~will~~ provide**s** information ~~and education~~ to **educate** the participant regarding income reporting requirements for public benefit programs, including the Social Security Administration **(SSA)**.	Modify language for better readability.
3.	Appendix C-1/C-3 Service Specifications Benefits Counseling Provider Specifications	- A Certified Work Incentives Counselor certification that is accepted by the Social Security Administration for its Work Incentives Planning and Assistance program.	- A Certified Work Incentives Counselor **(CWIC)** certification that is accepted by the Social Security Administration for its Work Incentives Planning and Assistance program. **- A Work Incentives Professional Certification (WIP-C) that is accepted by the Social Security Administration (SSA) to provide benefits counseling services.**	Add WIP-C certification for providers of Benefits Counseling to expand the pool of individuals who may provide the service.
4.	Appendix C-1/C-3 Service Specifications	N/A	**CRT teleservices may be provided in accordance with the requirement in the Additional Needed Information Section of the Main Module.**	Adding Teleservice to Cognitive Rehabilitation Therapy Services.

	Cognitive Rehabilitation Services			
5.	Appendix C-1/C-3 Service Specifications Counseling Services	N/A	**Counseling teleservices may be provided in accordance with the requirement in the Additional Needed Information Section of the Main Module.**	Adding Teleservice to Counseling Services.
6.	Appendix C-1/C-3 Service Definition Employment Skills Development	Handicapped employment, as defined in Title 55, Chapter 2390, may not be funded through the waiver. Waiver funding is not available for the provision of Employment Skills Development (e.g., sheltered work performed in a facility) where participants are supervised in producing goods or performing services under contract to third parties.	Handicapped employment, as defined in Title 55, Chapter 2390, may not be funded through the waiver. Waiver funding is not available for the provision of Employment Skills Development (e.g., sheltered work performed in a facility) where participants are supervised in producing goods or performing services under contract to third parties **at subminimum wage and are not community integrated**.	Add text to emphasize that sheltered workshop employment is not funded through the waiver.
7.	Appendix C-1/C-3 Service Specifications Home Adaptations	Adaptations to a household are limited to the following: … Home Adaptations may only be funded through the waiver when the services are not covered by another responsible third-party, such as Medicare or private insurance. Supports Coordinators must assure that coverage of services provided under a responsible third-party continues until the plan limitations have been reached or a determination of non-coverage has been established prior to this service's inclusion in the service plan. … Home adaptations must be obtained at the lowest cost. Building a new room is excluded. Specialized Medical Equipment and Supplies is excluded.	Adaptations to a household are limited to the following **only when not covered by the MA State Plan**: … **The MA State Plan will cover home accessibility durable medical equipment, including but not limited to, wheelchair lifts, stair glides, ceiling lifts, and metal accessibility ramps, which are medically necessary to enter and exit the home or to support activities of daily living and meets the definition of 42 CFR Section 440.70(b)(3)(I-ii), along with installation of the equipment or appliance. Other home adaptations in this service specification are not covered in the State Plan.** Home Adaptations may only be funded through the waiver when the services are not covered by another responsible third-party, such as Medicare or private insurance. ~~Supports~~ **Service** Coordinators must assure that coverage of services provided under a responsible third-party continues until the plan limitations have been reached or a determination of non-coverage has been established prior to this service's inclusion in the service plan. …	Add language to better differentiate between Home Adaptations in the waiver and Home Accessibility Durable Medical Equipment covered by the State Plan. Aligned OBRA Home Adaptations service definition with Community HealthChoices (CHC) Home Adaptations service definition.

		… Rented property must meet the following: • there is a reasonable expectation that the participant will continue to live in the home; • written permission is secured from the property owner for the adaptation; • the landlord will not increase the rent because of the adaptation; • there is no expectation that waiver funds will be used to return the home to its original state. Except as permitted in accordance with requirements contained in Department guidance, policy and regulations, this service may not be provided on the same day and at the same time as services that contain elements integral to the delivery of this service. This service may not be included on the same service plan as Residential Habilitation**.**	**Depending on the complexity of the home adaptation, the independent evaluation by an occupational therapist or a physical therapist may be supplemented with an assessment by individuals holding the following certifications: Certified Environmental Access Consultant (C.E.A.C), Certified Living in Place Professional (CLIPP) or Executive Certificate in Home Modifications. Assessors with these certifications must have at least two years of experience assessing home adaptations for older adults or individuals with disabilities.** … Home adaptations must be obtained **in the least expensive, most cost-effective manner. Adaptations will not be approved if the home is in foreclosure, delinquent tax status, is not structurally sound, or the adaptation presents a safety concern based on applicable state and local building codes. Rent-to-purchase vertical lifts and stair glides may be rented provided the rental cost does not exceed the purchase price. When long-term use by the participant is expected or when the rental is anticipated to exceed the cost of purchase, the equipment will be purchased for the participant or a permanent home adaptation will be considered** ~~at the lowest cost~~. Building a new room **that adds to the total square footage of the home is excluded, except as noted below** ~~is excluded~~. Specialized Medical Equipment and Supplies is excluded. … ~~Rented property adaptions~~ **Adaptations at rental properties** must meet the following: • there is a reasonable expectation that the participant will continue to live in the home; • written permission is secured from the property owner for the adaptation;	

			• the landlord will not increase the rent because of the adaptation; • there is no expectation that waiver funds will be used to return the home to its original state. Except as permitted in accordance with requirements contained in Department guidance, policy and regulations, this service may not be provided on the same day and at the same time as services that contain elements integral to the delivery of this service. This service may not be **provided to participants receiving Residential Habilitation or residing in Assisted Living Residences, Domiciliary Care Homes or other provider owned and operated settings** ~~included on the same service plan as Residential Habilitation~~**.**	
8.	Appendix C-1/C-3 Service Specifications Personal Emergency Response System (PERS)	PERS is an electronic device which enables waiver participants to secure help in an emergency. The individual may also wear a portable "help" button to allow for mobility. The system is connected to the person's phone and programmed to signal a response center once a "help" button is activated. The response center is staffed by trained professionals, as specified. The PERS vendor must provide 24 hour staffing, by trained operators of the emergency response center, 365 days a year. ... Installation is covered one time per residential site. Stand-alone smoke detectors will not be billed under PERS. PERS covers the actual cost of the service and does not include any additional administrative costs.	**A Personal Emergency Response System (PERS)** is an electronic device **that transmits a signal to a central monitoring center to summon assistance in the event of an emergency.** ~~which enables waiver participants to secure help in an emergency~~. ~~The individual may also wear a portable "help" button to allow for mobility. The system is connected to the person's phone and programmed to signal a response center once a "help" button is activated. The response center is staffed by trained professionals, as specified. The PERS vendor must provide 24 hour staffing, by trained operators of the emergency response center, 365 days a year.~~ **The necessary components of a system are:** **1. An in-home medical communications transceiver.** **2. A remote, portable activator.** **3. A central monitoring center with backup systems which is staffed at all times.** **4. Current data files at the central monitoring station contain response protocols and personal, medical, and emergency information for each participant.** **A portable locator system is an electronic device that transmits a signal to a monitoring device. The system allows a participant to access assistance in the event of an emergency and allows law enforcement or the monitoring system provider to locate a participant who is unable to request help or to activate a system independently. A portable locator**	Aligned OBRA PERS service definition with CHC PERS service definition for consistency.

			system can be obtained as PERS only if the participant is unable to access assistance in an emergency situation due to the participant's age or disability. The required components of the portable locator system are: **1. A portable communications transceiver or transmitter to be worn or carried by the participant.** **2. Monitoring by the provider at a central location with response protocols and personal, medical, and emergency information for each participant as applicable.** ... **A unit of service is a one-time installation fee or a monthly monitoring fee. Maintenance and repair of PERS rental equipment is the responsibility of the provider. In addition, provider staff are responsible for training participants regarding the use of the system.** **PERS equipment shall include a variety of remote or other specialty activation devices from which the individual can choose in accordance with their specific needs. All PERS equipment shall have an internal battery that provides at least twenty-four hours of power without recharging and sends notification to the emergency response center when the battery's level is low. Equipment includes, but is not limited to:** **• Wearable waterproof activation devices; and** **• Devices that offer:** **– Voice-to-voice communication capability,** **– Visual indication of an alarm that may be appropriate if the consumer is hearing impaired, or** **– Audible indication of an alarm that may be appropriate if the consumer is visually impaired.** **PERS does not include the following:** **• Equipment such as a boundary alarm, a medication dispenser, a medication reminder, or any other equipment or home medical equipment or supplies, regardless of whether such equipment is connected to the PERS equipment.**	

			• **Stand-alone smoke or carbon monoxide detectors.** • **Remote Telecare monitoring services, i.e., Health Status Measuring and Monitoring and Activity and Sensor Monitoring.** • **Monthly telephone charges associated with the participant's phone service.** **When previously approved equipment has been damaged as a result of misuse, abuse or negligence, the Service Coordinator will make the determination around the cost-effectiveness of repairing and/or replacing damaged equipment or providing the participant with additional supports.** ... **The cost of training participants is included in the charges for installation or the monthly monitoring fee. The maximum units per calendar year shall be one initial installation fee and 12 months of monthly monitoring service. The provider may not charge any additional costs over and above the installation and monthly monitoring fees.** ~~Installation is covered one time per residential site.~~ ~~Stand-alone smoke detectors will not be billed under PERS.~~ ~~PERS covers the actual cost of the service and does not include any additional administrative costs.~~	
9.	Appendix C-1/C-3 Service Specifications PERS Provider Specifications		• **Organization must have capacity to provide 24-hour coverage by trained professionals, 365 days/year.**	All providers of PERS must have this capacity. This is not a new requirement but changes to the service description above necessitate this addition.

10.	Appendix C-1/C-3 Service Specifications Structured Day Habilitation	In addition to the general standards listed above, Individual Support Staff must: • Be at least 18 years of age • Have a high school diploma or GED and have a minimum of five (5) years' experience working with people with disabilities, or…	In addition to the general standards listed above, Individual Support Staff must: • Be at least 18 years of age • Have a high school diploma or GED and have a minimum of ~~five (5)~~ **two (2)** years' experience working with people with disabilities, or…	Change years of experience to 2 years to increase the pool of eligible workers to address workforce shortages.
11.	Appendix C-2-a	Criminal history clearances are obtained from the Pennsylvania State Police within 30 work days from the date that the employee/provider initiates services to the participant. . The Pennsylvania State Police access the Pennsylvania Crime Information Center (PCIC) and the National Crime Information Center (NCIC) for this information; results are typically available within 1-2 business days. A Federal Bureau of Investigation (FBI) federal criminal history record is required for applicants who have resided in Pennsylvania for less than two years.	**All applicants are required to obtain a report of criminal history from the Pennsylvania State Police (PSP)** ~~Criminal history clearances are obtained from the Pennsylvania State Police~~ within 30 work days from the date that the employee/provider initiates services to the participant. The Pennsylvania State Police access the Pennsylvania Crime Information Center (PCIC) and the National Crime Information Center (NCIC) for this information; results are typically available within 1-2 business days. **For applicants who have resided in Pennsylvania for less than two years, a fingerprint-based** Federal Bureau of Investigation (FBI) federal criminal history record is **also** required. ~~for applicants who have resided in Pennsylvania for less than two years.~~	Clarification of what clearances are needed.
12.	Appendix C-2-b	Clearances are required for all direct care workers and service providers, including service coordinators and contractors, providing services in homes where children reside. A child is defined as an individual under 18 years of age. The following three certifications must be obtained prior to providing services in homes where children reside: • Report of criminal history from the Pennsylvania State Police (PSP); • Fingerprint-based federal criminal history submitted through the Pennsylvania State Police or its authorized agent (FBI); and	Clearances are required for all direct care workers and service providers, including service coordinators and contractors, providing services in homes where children ~~reside~~ **are present**. A child is defined as an individual under 18 years of age. The following three certifications must be obtained prior to providing services in homes where children ~~reside~~ **are present**: • Report of criminal history from the Pennsylvania State Police (PSP); • Fingerprint-based federal criminal history submitted through the Pennsylvania State Police or its authorized agent (FBI); and • Child Abuse History Certification from the Department of Human Services (Child Abuse). …	Clarification of when child abuse clearances are needed for direct care workers.

		• Child Abuse History Certification from the Department of Human Services (Child Abuse). … For those workers required to have clearances (see above), written results are required prior to the employee/provider initiating services in the participant's home. Workers who are employed by waiver participants who have children residing in their homes must have child abuse clearances completed prior to hire so that participants can make an informed decision on whether to employ a worker who has been named as a perpetrator of founded or indicated child abuse.	For those workers required to have clearances (see above), written results are required prior to the employee/provider initiating services in the participant's home. Workers who are employed by waiver participants who have children ~~residing~~ **present** in their homes must have child abuse clearances completed prior to hire so that participants can make an informed decision on whether to employ a worker who has been named as a perpetrator of founded or indicated child abuse.	
13.	Appendix D-1-d	How responsibilities are assigned for implementing the plan:	How responsibilities are assigned for implementing the plan: … **If the provider develops a treatment or service plan for the participant, it must be incorporated into the overall ISP.** **Any modification of a participant's rights in a setting, under § 441.301(c)(4)(vi)(A) through (D), must be supported by a specific assessed need and justified in the ISP. The following requirements must be documented in the ISP:** **• Identify a specific and individualized assessed need.** **• Document the positive interventions and supports used prior to any modifications to the person-centered service plan.** **• Document less intrusive methods of meeting the need that have been tried but did not work.** **• Include a clear description of the condition that is directly proportionate to the specific assessed need.** **• Include regular collection and review of data to measure the ongoing effectiveness of the modification.** **• Include established time limits for periodic reviews to determine if the modification is still necessary or can be terminated.** **• Include the informed consent of the individual.**	Add language to reinforce that if a participant's rights in a setting need to be modified due to an assessed need it must be documented in the ISP and if a provider creates a treatment or service plan, that plan must be incorporated into the ISP. These items are in response to feedback from CMS during the HCB Settings Final Rule Heightened Scrutiny onsite visits.

			• Include an assurance that interventions and supports will cause no harm to the individual.	
14.	Appendix F-1: Opportunity to Request a Fair Hearing	If the participant files an appeal (written or oral) within 10 calendar days of the mailing date of the written notification from the Service Coordinator, the appealed Waiver service(s) are required to continue until a decision is rendered after the appeal hearing (55 Pa. Code § 275.4(a)(3)(v)(C)(I)). As noted above, the continuation language is included in the written notice that is sent to the participant by the Service Coordinator. The postmark of a mailed appeal will be used to determine if the 10 day requirement was met by the participant.	If the participant files an appeal (written or oral) within **15** ~~10~~ calendar days of the mailing date of the written notification from the Service Coordinator, the appealed Waiver service(s) are required to continue until a decision is rendered after the appeal hearing (55 Pa. Code § 275.4(a)(3)(v)(C)(I)). As noted above, the continuation language is included in the written notice that is sent to the participant by the Service Coordinator. The postmark of a mailed appeal will be used to determine if the **15** ~~10~~ day requirement was met by the participant.	Update the time frame to file appeals.
15.	Appendix F-3-c	Individuals calling the OLTL Participant HelpLine with a complaint/grievance are logged into the Enterprise Information System (EIM), a web-based database, and the information is then referred to the appropriate Bureau for resolution.	**When an individual calls** ~~Individuals calling~~ the OLTL Participant HelpLine with a complaint/grievance, **the calls are logged (complaints by the Case Management Unit and grievances into the Enterprise Information System (EIM), a web-based database)** ~~are logged into the Enterprise Information System (EIM), a web-based database,~~ and the information is then referred to the appropriate Bureau for resolution.	To be more specific how complaint/grievances are logged.
16.	Appendix G-1-b	The Office of Long-Term Living has initiated a comprehensive incident reporting and management process. Critical events are referred to as critical incidents and defined as an event that jeopardizes the participant's health and welfare. Two OLTL offices are involved in the oversight of the Incident Management process – the Bureau of Quality and Provider Management (BQPM) and the Bureau of Participant Operations (BPO).	The Office of Long-Term Living has initiated a comprehensive incident reporting and management process. Critical events are referred to as critical incidents and defined as an event that jeopardizes the participant's health and welfare. Two OLTL offices are involved in the oversight of the Incident Management process – **The Bureau of Quality Assurance and Program Analytics and the Bureau of Coordinated and Integrated Services (BCIS).** ~~the Bureau of Quality and Provider Management (BQPM) and the Bureau of Participant Operations (BPO).~~	Bureau names updated.
17.	Appendix G-1-b	Required reporters must report critical incidents within 48 hours of their occurrence or discovery. OLTL has initiated a mandatory electronic reporting system for reporting all critical incidents. The electronic reporting system, referred to as EIM, allows Service Coordinators and Direct Service providers to submit critical incidents through a web-based application where they are accessed by Service Coordinators, the CHC-MCOs and OLTL staff.	Required reporters must report critical incidents within 48 hours of their ~~occurrence or~~ discovery. OLTL has initiated a mandatory electronic reporting system for reporting all critical incidents. The electronic reporting system, referred to as EIM, allows Service Coordinators and ~~Direct Service~~ providers to submit critical incidents through a web-based application where they are accessed by Service Coordinators, the CHC-MCOs and OLTL staff.	Clarify that critical incidents must be reported with 48 hours of discovery.

18.	Appendix G-1-b	Incidents reported through the OLTL Participant HelpLine are entered into EIM by OLTL staff and the incidents are handled the same way as those reported directly through the web-based application. The following information is collected for each reported incident, regardless of how it is received: reporter information, participant demographics, OLTL program information, event type/details and description of the incident.	Incidents **are** reported **in** ~~through the OLTL Participant HelpLine are entered into~~ EIM by OLTL staff and the incidents are handled the same way as those reported directly through the web-based application. The following information is collected for each reported incident, regardless of how it is received: reporter information, participant demographics, OLTL program information, event type/details and description of the incident.	Clarification on how incidents are reported. Update Bureau name.
19.	Appendix G-1-d	The Service Coordinator is responsible for conducting an investigation of incidents The Service Coordination Entity has two (2) days to provide initial information to OLTL in cases involving sexual abuse, serious injury, serious bodily injury or suspicious death, and 30 days from the initial report to provide all the information regarding the incident to OLTL. PENNSYLVANIA HOMECARE ASSOCIATION

July 14, 2024

Juliet Marsala, Deputy Secretary
Office of Long-Term Living
555 Walnut Street, 6th Floor
Harrisburg, PA 17101

Dear Deputy Secretary Marsala:

The Pennsylvania Homecare Association (PHA) is a non-profit trade association representing more than 700 home health, home care (personal care), and hospice providers across the state of Pennsylvania. The association's mission is to support the provider community in the effort to bring care home. Home is the most preferred and cost-effective setting for care as we age. We appreciate this opportunity to provide feedback and commentary on the recently released Waiver Amendment for OBRA and Waiver Renewal for Community HealthChoices. Our hope is to be a thought partner and collaborator to the Department in our shared goal to bring care home.

Appendix C-2-B: Clearances for workers and providers when providing services in homes where children reside

While we wholeheartedly support measures to protect vulnerable populations, including children, we believe that expanding the requirements as indicated would have significant unintended consequences for our industry. The current proposal expands applicability from a when a child "resides" in a home to when a child is "present" in a home.

Clarification of "Presence" vs. "Residence" of a Child

We believe it is essential to better define the distinction between having a child "present" in a home versus a child "residing" in a home within the context of child abuse clearance requirements. The current ambiguity in these definitions can lead to inconsistent application of the rules and unnecessary burdens on homecare providers.

A child "present" in a home implies a temporary and possibly infrequent situation, such as visiting grandchildren or neighborhood children who may ring the client's doorbell and come in for a glass of water while a caregiver happens to be in the home. In contrast, a child "residing" in a home indicates a more permanent and consistent living arrangement, such as children who live in the home full-time with the recipient.

Without clear definitions, providers are likely to obtain child abuse clearances in situations where it is not practically necessary. This could result in a significant increase in the number of

clearances needed, causing delays in processing times and additional costs for providers without a corresponding increase in child safety.

Delays in Hiring and Its Impact on Access to Care

One of the primary concerns is a delay in the hiring process. Currently, obtaining child abuse clearances and FBI fingerprints is a multi-step process that can take weeks to complete. Consider the following challenges to this process:

1. Fingerprinting locations in rural areas can be upwards of 20 miles from a Direct Care Worker and result in expenditures on gas and travel to get there.
2. Many fingerprinting sites have multi-week wait times for appointment availability.
3. Fingerprint results are often sent to the home of the worker resulting in an exchange of information with the provider that further delays hiring and starts of care, especially for populations where availability of technology is limited.
4. Expanding these requirements to include all homecare providers serving a home where a child is present would exponentially increase the volume of clearance requests, thereby straining the existing system and causing further delays.
5. Child abuse clearance do not allow for provisional hiring, resulting in delays for hiring and delayed access to care for individuals where a child may be present in the home.

The homecare industry is already experiencing a workforce shortage, and any additional delays in the hiring process would exacerbate this issue. Delays in hiring not only impact our ability to provide timely care but also place additional stress on existing staff, who must cover for the vacancies. This could potentially compromise the quality of care provided to our clients, many of whom are elderly or have disabilities and rely on consistent and dependable support.

Additional Costs for Providers

Expanding the requirements for child abuse clearances would also result in significant additional costs for homecare providers. The fees associated with obtaining these clearances, along with the administrative burden of managing the clearance process, would place a financial strain on many providers, particularly smaller agencies operating on tight budgets. If this language persists, providers could be facing the below background checking costs for the majority of their workforce, a significant strain on resources and finances in an industry with a higher than average turnover rate:

1.	Criminal Background Check (e-patch):	$22
2.	Child Abuse Clearance:	$13
3.	FBI Fingerprint – Office of Children and Youth:	$25.25
4.	FBI Fingerprint – Department of Aging:	$25.25
5.	TB Testing	$50 (estimated)
6.	Medicaid Fraud Checks (annual cost for monthly)	$20 (estimated Clearing House Expense)
		$95.50

Furthermore, the cumulative costs of compliance, including the need for additional administrative staff to handle the increased volume of clearances, would divert resources away from direct client care. This could lead to higher service costs for consumers or force some providers to reduce the range or quality of services offered.

Recommendations

We recommend considering alternative approaches to achieve the goal of protecting vulnerable populations without imposing undue burdens on providers. These could include:

1. **Define "Present" for Clear Applicability:**

   A child is considered "present in the home" if there is a significant likelihood that a child would be physically on the premises for:

   - Regular visits that are common, predetermined, or known to occur by the participant and/or a representative
   - Occasional stays such as weekends, holidays, or school vacations where the child spends time on premises
   - A child resides in the home

2. **Require Determination in Person Centered Support Plan**

   To ensure consistency of applicability across all providers and models of care, we recommend that the presence of children in the home be determined and documented during the PCSP development. This would ensure clear applicability and a regular review (at minimum annual) to ensure that the topic is revisited regularly to reflect changes in the recipient's home environment. Providers would then consistently use the PCSP to indicate if clearances are required for that participant.

3. **Streamlined Processing**: Investing in technology and resources to streamline the clearance process, thereby reducing the time and administrative burden associated with obtaining clearances. This would include easier enrollments online (with clear indicators for type of FBI fingerprint) AND investing in additional IDEMIA locations, with an emphasis on rural locations.

4. **Financial Support**: If the language proceeds, we recommend:

   1. Funding background checks directly to providers AND/OR
   2. Including the cost of required background checks in rate setting methodologies, specifically in the current study being conducted by Mercer on behalf of the Office of Long-Term Living.

Appendix C-1/C-3: Service Specifications Chore Services

We would like to commend the recent addition of chore services as a benefit for recipients of the waiver. This thoughtful enhancement reflects a deep understanding of the diverse needs of those we serve. Chore services are crucial for maintaining a safe and healthy living environment, especially for individuals who struggle with home environments that are a health risk to themselves or their support staff due to physical, cognitive or financial limitations.

Provider Network Adequacy

However, we caution that this service may be challenging to utilize due to the lack of an Organized Health Care Delivery Service (OHCDS) option in the waiver. Commercial cleaning organizations are not accustomed to the administrative requirements of becoming and maintaining Medicaid Provider status. Furthermore, their cost structure is such that jobs are typically individually quoted to account for the size and severity of the project. Fee schedules, revalidations, Medicaid fraud checks for all staff, OLTL training for all staff and other administrative obstacles may create barriers to provider network adequacy for this critical service.

Recommendation

We recommend that OLTL create specific requirements for approval as a Chore Service provider so that current Medicaid Providers can consider adding this service to their current offerings. We feel that this approach would yield improved provider network adequacy and continuity of care for participants

Appendix D-1-d: Service Plan Development Process

We would like to commend the effort to drive efficiency in the development and delivery of the Person Centered Service Plan. Access to care is an important foundation of quality services, positive patient outcomes, and prevention of more costly care interventions.

Supports Coordination/Case Management Adequacy

Supports Coordinators and Case Managers play an important role in the development a Person Centered Service Plans and their distribution to the provider network. However, PHA and its members have frequently seen delays due to turnover in these critical positions, as well as high case loads that makes management of these tasks challenging.

Recommendation

The PHA recommends that the Department initiate a task force to identify the top challenges facing Supports Coordinators and Case Managers today in Pennsylvania so that this task force can compile recommendations on how to support this critical function better in the future. This may include consideration of caseloads, purpose of the role, reimbursement for the position, and technology/infrastructure needs to drive more efficient processes that can scale with our aging population.

Also, please keep in mind that while PCSPs may be completed in a shorter time frame, the above referenced expansion of the child abuse clearance language could result in significant delays to starting care, despite the shorter timeframe of PCSP completion.

Appendix H-1-a-i System Improvements

PHA supports the use and administration of the Consumer Assessment of Healthcare Providers and Systems (CAHPS) Survey. We recommend that survey results be transparent and shared with all provider communities on an ongoing basis, with the ability for individual providers to capture their organization specific results, if possible. We also would welcome the opportunity to discuss consumer survey opportunities administered by the association, or in collaboration with the association, that can support feedback in writing, via phone, or via text message.

Participant Direction

The CHC waiver renewal makes no changes to the descriptions and policies of participant-directed services. However, we note the significant increase in projected participants within the program. Such a dramatic increase would require policy and programmatic changes. PHA requests Department transparency and the opportunity for input in any programmatic changes influencing these projections.

Support for All Models of Care

The Pennsylvania Homecare Association advocates for choice in all aspects of participant care. Participants should have a right to a robust provider network, as well as a right to choose the model of care that they would like to receive their services through. However, the association has concerns that recent efforts to promote participant-direction conflict with the intended differences in how each model of care is administered and it thus threatens the foundation on which each model was built. If a model of care does not experience an increase in participant utilization, programmatic changes should consider addressing specific concerns within the existing model rather than to create an environment that disadvantages another model of care to rectify utilization in the other. In doing so, the Department could inadvertently and indirectly threaten choice.

PHA supports all efforts to improve quality within participant direction and the agency models of care and would appreciate the opportunity to further collaborate on how all models of care can be properly supported to drive choice, quality and utilization.

Workforce Development

PHA is disappointed that these changes to the Waiver do not address workforce development needs within the Commonwealth. Specifically, we would like to see the following considered for inclusion in the Waiver language:

1. Immediate rate increases for Personal Assistance Services, Respite Services and Nursing services to support the attraction of qualified staff and to meet the growing needs of this participant population.
2. Reimbursement rate study/reviews that occur regularly, but no less than every three years. Studies should encompass a robust market analysis across all regions

and industries, taking into account inflationary pressures. Rate considerations should align to state policy goals, such as promoting community-based care over institutional care, improving patient outcomes, and improvements in quality. Higher reimbursement rates not only elevate the pay for our critical Direct Care Workforce, but it support professionalism of the industry and advancement in participant quality of care and participant protections.

3. Grant opportunities for organizations, such as PHA, to pilot workforce job quality enhancements

The Pennsylvania Homecare Association and its provider organizations appreciate the opportunity for comment on these important Waiver changes. We would be honored to collaborate on any initiatives discussed herein in the coming month. Please do not hesitate to call on us for support.

Sincerely,

Mia Haney, CEO
Pennsylvania Homecare Association

PENNSYLVANIA DEPARTMENT OF HEALTH

2022 – PAHAN – 661 – 9-30- UPD

UPDATE: Work Restrictions for Healthcare Personnel with Exposure to COVID-19

DATE:	9/30/2022
TO:	Health Alert Network
FROM:	Denise Johnson, Acting Secretary of Health
SUBJECT:	**UPDATE: Work Restrictions for Healthcare Personnel with Exposure to COVID-19**
DISTRIBUTION:	Statewide
LOCATION:	n/a
STREET ADDRESS:	n/a
COUNTY:	n/a
MUNICIPALITY:	n/a
ZIP CODE:	n/a

This transmission is a Health Update: provides updated information regarding an incident or situation; unlikely to require immediate action.

HOSPITALS: PLEASE SHARE WITH ALL MEDICAL, PEDIATRIC, NURSING AND LABORATORY STAFF IN YOUR HOSPITAL**; EMS COUNCILS:** PLEASE DISTRIBUTE AS APPROPRIATE; **FQHCs:** PLEASE DISTRIBUTE AS APPROPRIATE **LOCAL HEALTH JURISDICTIONS**: PLEASE DISTRIBUTE AS APPROPRIATE; **PROFESSIONAL ORGANIZATIONS:** PLEASE DISTRIBUTE TO YOUR MEMBERSHIP; **LONG-TERM CARE FACILITIES:** PLEASE SHARE WITH ALL MEDICAL, INFECTION CONTROL, AND NURSING STAFF

This guidance replaces PA-HAN-621 and includes changes made by CDC on September 23, 2022.

This guidance pertains only to the healthcare personnel and their need for work restriction. For guidance on isolation and quarantine in the community, please refer to PA-HAN-619 or its successor.

Major additions and edits in this version include:

- Revised work restriction guidance. In most circumstances, asymptomatic HCP with higher-risk exposures **do not** require work restriction. However, they should receive a series of three viral tests on day 1, day 3, and day 5 after the exposure (day 0). Additionally, they should wear well-fitting source control and monitor for signs and symptoms of COVID-19 for 10 days.
- Updated recommendations for testing frequency to detect potential for variants with shorter incubation periods and to address the risk for false negative antigen tests in people without symptoms.
- Removed contingency and crisis strategies about earlier return to work for HCP with higher-risk exposures.

If you have additional questions about this guidance, please contact DOH at 1-877-PA-HEALTH (1-877-724-3258) or your local health department.

This guidance replaces PA-HAN-621 and includes the following sections:

1. Background
2. Definition of a higher-risk exposure for HCP
    a. Community-related exposure
    b. Household exposure
    c. Exposure in the healthcare setting while at work
3. Return to work criteria for HCP who were exposed to individuals with confirmed COVID-19

1. BACKGROUND

Because of their often extensive and close contact with vulnerable individuals in healthcare settings, a conservative approach to managing HCP with higher-risk exposure is recommended to prevent transmission from potentially contagious HCP to patients and residents, other HCP, and visitors. Occupational health programs should have a low threshold for evaluating any potential symptoms of COVID-19 and testing HCP.

This guidance describes the process for contact tracing and application of testing and work restrictions (if applicable) that should occur when capacity exists to perform these activities without compromising other critical infection prevention and control functions. If a healthcare facility is not performing contact tracing, testing, and work restrictions (if applicable) as outlined in this guidance, they must be operating according to the facility's emergency management plan.

This guidance is based on currently available data about COVID-19. Occupational health programs should use clinical judgement as well as the principles outlined in this guidance to assign risk level and determine the need for work restrictions.

2. DEFINITION OF A HIGHER-RISK EXPOSURE FOR HCP

The term **higher-risk exposure** has been used by CDC and the Department of Health to outline when work restriction might occur for HCP following exposure to COVID-19. **A higher-risk exposure includes any exposure to COVID-19 that meets the criteria outlined below for community-related exposure, for household exposure, or for higher-risk exposure in the healthcare setting while at work.**

a. Community-related exposure

As outlined in the CDC guidance for community-related exposure to COVID-19, persons who have had close contact (within 6 feet for a total of 15 minutes or more) with an infectious person with COVID-19 are considered exposed. Other activities of shorter duration may also be considered close contact, like providing care for a sick person, hugging, or kissing them, sharing dishware or utensils, and having been coughed or sneezed upon by an infectious person.

Note that when an HCP is exposed to COVID-19 within a healthcare setting as a *patient or visitor*, the criteria for community-related exposure apply.

b. Household exposure

An infectious person living in the home with an HCP represents an exposure to that HCP except in the unusual situation that the HCP was not in the home at any point during the infectious period (for example, HCP had been away on vacation or staying elsewhere). In most cases, the shared environment represents a level of risk consistent with higher-risk exposure, even if two persons in the home are not in direct contact with each other (e.g., as reported sometimes by roommates who work different shifts).

For HCP who share a household with someone who has COVID-19, the HCP's testing and work restriction period (if applicable) start from the last time they were exposed to the person with COVID-19. If the person with COVID-19 cannot fully isolate and exposure is ongoing, the HCP should extend their testing and work restriction. In that case, the day the person with COVID-19 is released from isolation would be day 0 for exposure.

c. Exposure in the healthcare setting while at work

Higher-risk exposures in the healthcare setting generally involve exposure of HCP eyes, nose, or mouth to material potentially containing SARS-CoV-2, particularly if these HCP were present in the room for an aerosol-generating procedure. Other exposures classified as lower-risk, including having body contact with the patient (e.g., rolling the patient) without gown or gloves, may impart some risk for transmission, particularly if hand hygiene is not performed and HCP then touch their eyes, nose, or mouth.

When classifying potential exposures, specific factors associated with these exposures (e.g., quality of ventilation, use of PPE and source control) should be evaluated on a case-by-case basis. These factors might raise or lower the level of risk; interventions, including restriction from work, can be adjusted based on the estimated risk for transmission.

For the purposes of this guidance, higher-risk exposures are classified as HCP who had prolonged[1] close contact[2] with a patient, visitor, or HCP with confirmed SARS-CoV-2 infection[3] and:

- HCP was not wearing a respirator (or if wearing a facemask, the person with SARS-CoV-2 infection was not wearing a cloth mask or facemask);[4]
- HCP was not wearing eye protection if the person with SARS-CoV-2 infection was not wearing a cloth mask or facemask; or
- HCP was not wearing all recommended PPE (i.e., gown, gloves, eye protection, respirator) while present in the room for an aerosol-generating procedure.

3. RETURN TO WORK CRITERIA FOR HCP WHO WHERE EXPOSED TO INDIVIDUALS WITH CONFIRMED COVID-19

In most circumstances, asymptomatic HCP with higher-risk exposures do not require work restriction. Examples of when work restriction may be considered are described below.

Following a higher-risk exposure HCP should:

- Have a series of three viral tests for SARS-CoV-2 infection.
    - Testing is recommended immediately (but not earlier than 24 hours after the exposure) and, if negative, again 48 hours after the first negative test and, if negative, again 48 hours after the second negative test. This will typically be at day 1 (where day of exposure is day 0), day 3, and day 5.
    - Due to challenges in interpreting the result, testing is generally not recommended for asymptomatic people who have recovered from SARS-CoV-2 infection in the prior 30 days. Testing should be considered for those who have recovered in the prior 31-90 days; however, an antigen test instead of NAAT is recommended. This is because some people may remain NAAT positive but not be infectious during this period.
- Wear well-fitting source control for 10 days following the exposure.
- Monitor themselves for fever or symptoms consistent with COVID-19, and not report to work when ill or if testing positive for SARS-CoV-2 infection.
    - Any HCP who develop fever or symptoms consistent with COVID-19 should immediately self-isolate and contact their established point of contact (e.g., occupational health program) to arrange for medical evaluation and testing.
- Follow additional recommended infection prevention and control practices as outlined by facility policy.

In addition to testing, source control, and monitoring recommendations listed above, examples of when work restriction may be considered for asymptomatic HCP following a higher-risk exposure include:

- HCP is unable to be tested or wear source control as recommended for the 10 days following their exposure;
- HCP is moderately to severely immunocompromised;
- HCP cares for or works on a unit with patients who are moderately to severely immunocompromised;
- HCP works on a unit experiencing ongoing SARS-CoV-2 transmission that is not controlled with initial interventions.

If work restriction is recommended, HCP could return to work after either of the following time periods:

- HCP can return to work after day 7 following the exposure (day 0) if they do not develop symptoms and all viral testing (at least three tests as described above) for HCP following a higher-risk exposure is negative.
- If viral testing is not performed, HCP can return to work after day 10 following the exposure (day 0) if they do not develop symptoms.

HCP with travel or community exposures should consult their occupational health program for guidance on need for work restrictions. In general, HCP who have had prolonged close contact with someone with SARS-CoV-2 in the community (e.g., household contacts) should be managed as described for higher-risk occupational exposures above.

Footnotes:

1. For this guidance an exposure of 15 minutes or more is considered prolonged. This could refer to a single 15-minute exposure to one infected individual or several briefer exposures to one or more infected individuals adding up to at least 15 minutes during a 24-hour period. However, the presence of extenuating factors (e.g., exposure in a confined space, performance of aerosol-generating procedure) could warrant more aggressive actions even if the cumulative duration is less than 15 minutes. For example, **any duration** should be considered prolonged if the exposure occurred during performance of an aerosol generating procedure.
2. For this guidance it is defined as: a) being within 6 feet of a person with confirmed SARS-CoV-2 infection or b) having unprotected direct contact with infectious secretions or excretions of the person with confirmed SARS-CoV-2 infection. Distances of more than 6 feet might also be of concern, particularly when exposures occur over long periods of time in indoor areas with poor ventilation.
3. Determining the time period when the patient, visitor, or HCP with confirmed SARS-CoV-2 infection could have been infectious:
    a. For individuals with confirmed COVID-19 who developed symptoms, consider the exposure window to be 2 days before symptom onset through the time period when the individual meets criteria for discontinuation of Transmission-Based Precautions
    b. For individuals with confirmed SARS-CoV-2 infection who never developed symptoms, determining the infectious period can be challenging. In these situations, collecting information about when the asymptomatic individual with SARS-CoV-2 infection may have been exposed could help inform the period when they were infectious.
        i. If the date of exposure cannot be determined, although the infectious period could be longer, it is reasonable to use a starting point of 2 days prior to the positive test through the time period when the individual meets criteria for discontinuation of Transmission-Based Precautions for contact tracing.
4. While respirators confer a higher level of protection than facemasks and are recommended when caring for patients with SARS-CoV-2 infection, facemasks still confer some level of protection to HCP, which was factored into this risk assessment if the patient was also wearing a cloth mask or facemask

Definitions:

Cloth mask: Textile (cloth) covers that are intended primarily for source control in the community. **They are not personal protective equipment (PPE) appropriate for use by healthcare personnel.** Guidance on design, use, and maintenance of cloth masks is available.

Facemask: OSHA defines facemasks as “a surgical, medical procedure, dental, or isolation mask that is FDA-cleared, authorized by an FDA EUA, or offered or distributed as described in an FDA enforcement policy. Facemasks may also be referred to as ‘medical procedure masks’.” Facemasks should be used according to product labeling and local, state, and federal requirements. FDA-cleared surgical masks are designed to protect against splashes and sprays and are prioritized for use when such exposures are

anticipated, including surgical procedures. Other facemasks, such as some procedure masks, which are typically used for isolation purposes, may not provide protection against splashes and sprays.

Healthcare Personnel (HCP): HCP include, but are not limited to, emergency medical service personnel, nurses, nursing assistants, physicians, technicians, therapists, phlebotomists, pharmacists, students and trainees, contractual staff not employed by the healthcare facility, and persons not directly involved in patient care, but who could be exposed to infectious agents that can be transmitted in the healthcare setting (e.g., clerical, dietary, environmental services, laundry, security, engineering and facilities management, administrative, billing, volunteer personnel). For this guidance, HCP does not include clinical laboratory personnel.

Immunocompromised: For the purposes of this guidance, moderate to severely immunocompromising conditions include, but might not be limited to, those defined in the CDC Interim Clinical Considerations for Use of COVID-19 Vaccines.

- Other factors, such as end-stage renal disease, may pose a much lower degree of immunocompromise and not clearly affect decisions about need for work restriction if the healthcare provider had close contact with someone with SARS-CoV-2 infection. However, people in this category should still consider continuing to practice physical distancing and use of source control while in a healthcare facility, even if they are up to date with vaccine as recommended by CDC.
- Ultimately, the degree of immunocompromise for the healthcare provider is determined by the treating provider, and preventive actions are tailored to each individual and situation.

Respirator: A respirator is a personal protective device that is worn on the face, covers at least the nose and mouth, and is used to reduce the wearer's risk of inhaling hazardous airborne particles (including dust particles and infectious agents), gases, or vapors. Respirators, including those intended for use in healthcare, are certified by the CDC/NIOSH.

If you have questions about this guidance, please contact DOH at 1-877-PA-HEALTH (1-877- 724-3258) or your local health department.

Categories of Health Alert messages:
Health Alert: conveys the highest level of importance; warrants immediate action or attention.
Health Advisory: provides important information for a specific incident or situation; may not require immediate action.
Health Update: provides updated information regarding an incident or situation; unlikely to require immediate action.

This information is current as of September 30, 2022 but may be modified in the future. We will continue to post updated information regarding the most common questions about this subject.

PENNSYLVANIA DEPARTMENT OF HEALTH
2022 – PAHAN – 662– 9-30-UPD
UPDATE: Return to Work for Healthcare Personnel with Confirmed or Suspected COVID-19

DATE:	9/30/2022
TO:	Health Alert Network
FROM:	Denise Johnson, Acting Secretary of Health
SUBJECT:	**UPDATE: Return to Work for Healthcare Personnel with Confirmed or Suspected COVID-19**
DISTRIBUTION:	Statewide
LOCATION:	n/a
STREET ADDRESS:	n/a
COUNTY:	n/a
MUNICIPALITY:	n/a
ZIP CODE:	n/a

This transmission is a "Health Update", provides updated information regarding an incident or situation; unlikely to require immediate action.

HOSPITALS: PLEASE SHARE WITH ALL MEDICAL, PEDIATRIC, NURSING AND LABORATORY STAFF IN YOUR HOSPITAL**; EMS COUNCILS:** PLEASE DISTRIBUTE AS APPROPRIATE; **FQHCs:** PLEASE DISTRIBUTE AS APPROPRIATE **LOCAL HEALTH JURISDICTIONS**: PLEASE DISTRIBUTE AS APPROPRIATE; **PROFESSIONAL ORGANIZATIONS:** PLEASE DISTRIBUTE TO YOUR MEMBERSHIP; **LONG-TERM CARE FACILITIES:** PLEASE SHARE WITH ALL MEDICAL, INFECTION CONTROL, AND NURSING STAFF IN YOUR FACILITY

This guidance replaces PA-HAN-622 and includes changes made by CDC on September 23, 2022. Major additions and edits in this version include:

Requirements for testing healthcare personnel (HCP) with symptoms of COVID-19 have been updated. In summary:

- If using NAAT (molecular), a single negative test is sufficient in most circumstances.
- If using an antigen test, a negative result should be confirmed by either a negative NAAT (molecular) or second negative antigen test taken 48 hours after the first negative test.

The section on Strategies to Mitigate Healthcare Personnel Staffing Shortages has been condensed, with the expectation that facilities will refer to the CDC guidance for additional details.

If you have additional questions about this guidance or would benefit from discussion to support infection prevention and control decisions in your facility, please contact DOH at **1-877-PA- HEALTH (1-877-724- 3258)** or your local health department.

The Pennsylvania Department of Health (DOH) is releasing the updated guidance for making decisions about return to work for healthcare personnel (HCP) with confirmed COVID-19, or who have suspected COVID-19 (e.g., developed symptoms of COVID-19 but did not get tested for COVID-19). These updates are consistent with those published by the CDC on September 23, 2022 and available for review at Interim Guidance for Managing Healthcare Personnel with SARS-CoV-2

Infection or Exposure to SARS-CoV-2. This HAN *replaces* PA-HAN-622. If you have questions about this guidance, please contact DOH at **1-877-PA-HEALTH (1-877-724-3258)** or your local health department.

1. EVALUATING HEALTHCARE PERSONNEL WITH SYMPTOMS OF SARS-COV-2 INFECTION

HCP with even mild symptoms of COVID-19 should be prioritized for viral testing with approved nucleic acid or antigen detection assays regardless of vaccination status.

When testing a person with symptoms of COVID-19, negative results from at least one viral test indicate that the person most likely does not have an active SARS-CoV-2 infection at the time the sample was collected.

- If using NAAT (molecular), a single negative test is sufficient in most circumstances. If a higher level of clinical suspicion for SARS-CoV-2 infection exists, consider maintaining work restrictions and confirming with a second negative NAAT.
- If using an antigen test, a negative result should be confirmed by either a negative NAAT (molecular) or second negative antigen test taken 48 hours after the first negative test.

For HCP who were suspected of having COVID-19 but following evaluation another diagnosis is suspected or confirmed, return to work decisions should be based on their other suspected or confirmed diagnoses.

2. RETURN TO WORK CRITERIA FOR HCP WITH SARS-CoV-2 INFECTION

The following are criteria to determine when HCP with SARS-CoV-2 infection could return to work regardless of vaccination status (boosted, vaccinated, or unvaccinated) and are influenced by severity of symptoms and presence of immunocompromising conditions. After returning to work, HCP should self-monitor for symptoms and seek re-evaluation from occupational health if symptoms recur or worsen. If symptoms recur (e.g., rebound) these HCP should be restricted from work and follow recommended practices to prevent transmission to others (e.g., use of well-fitting source control) until they again meet the healthcare criteria below to return to work unless an alternative diagnosis is identified.

HCP with mild to moderate illness who are not moderately to severely immunocompromised:

- Can return to work if at least 7 days have passed *since symptoms first appeared* AND a negative antigen* or NAAT (molecular) is obtained within 48 hours prior to returning to work OR 10 days have passed if testing is not performed or the HCP tests positive at day 5-7; **and**
- At least 24 hours have passed *since last* fever without the use of fever-reducing medications; **and**
- Symptoms (e.g., cough, shortness of breath) have improved.

* If using an antigen test, HCP should have a negative test obtained on day 5 and again 48 hours later.

HCP who were asymptomatic throughout their infection and are not moderately to severely immunocompromised:

- Can return to work if at least 7 days have passed since the date of their first positive viral test AND a negative antigen* or NAAT (molecular) is obtained within 48 hours prior to returning to work OR 10 days have passed if testing is not performed or the HCP tests positive at day 5-7.

* If using an antigen test, HCP should have a negative test obtained on day 5 and again 48 hours later.

HCP with severe to critical illness and are ***not*** *moderately to severely immunocompromised:*

- Can return to work if at least 10 days and up to 20 days have passed *since symptoms first appeared;* **and**
- At least 24 hours have passed *since last fever* without the use of fever-reducing medications; **and**
- Symptoms (e.g., cough, shortness of breath) have improved.

For HCP with severe to critical illness, the test-based strategy as described for moderately to severely immunocompromised HCP below can be used to inform the duration of isolation.

The exact criteria that determine which HCP will shed replication-competent virus for longer periods are not known. Disease severity factors and the presence of immunocompromising conditions should be considered when determining the appropriate duration for specific HCP. For a summary of the literature, refer to Ending Isolation and Precautions for People with COVID-19: Interim Guidance.

HCP who are *moderately to severely immunocompromised* may produce replication-competent virus beyond 20 days after symptom onset or, for those who were asymptomatic throughout their infection, the date of their first positive viral test.

- Use of a test-based strategy and consultation with an infectious disease specialist or other expert **and** an occupational health specialist is recommended to determine when these HCP may return to work.
- Criteria for the test-based strategy are:
  - *HCP who are symptomatic:*
    - Resolution of fever without the use of fever-reducing medications; **and**
    - Improvement in symptoms (e.g., cough, shortness of breath); **and**
    - Results are negative from at least two consecutive respiratory specimens collected ≥ 48 hours apart (total of two negative specimens) tested using an antigen test or NAAT.
  - *HCP who are not symptomatic:*
    - Results are negative from at least two consecutive respiratory specimens collected ≥ 48 hours apart (total of two negative specimens) tested using an antigen test or NAAT.

3. RETURN TO WORK PRACTICES

After returning to work, HCP should:

- Wear a facemask for source control at all times while in the healthcare facility until all symptoms are completely resolved or at baseline. After this period, these HCP should revert to their facility policy regarding universal source control during the pandemic.
  - A facemask for source control does not replace the need to wear an N95 or equivalent or higher-level respirator (or other recommended PPE) when indicated, including when caring for patients with suspected or confirmed SARS-CoV-2 infection.
  - Self-monitor for symptoms and seek re-evaluation from occupational health if respiratory symptoms recur or worsen.

- Ensure that recovered HCP wear all indicated PPE according to facility policy. The immunity of recovered persons to COVID-19 infection is not known, and a lack of proper PPE could expose HCP to other communicable diseases.

4. STRATEGIES TO MITIGATE HEALTHCARE PERSONNEL STAFFING SHORTAGES

Maintaining appropriate staffing in healthcare facilities is essential to providing a safe work environment for HCP and safe patient care. If community transmission levels rise, staffing shortages could occur due to HCP illness or the need to care for family members at home. Healthcare facilities must be prepared for potential staffing shortages and have plans and processes in place to mitigate these shortages. These plans and processes include communicating with HCP about actions the facility is taking to address shortages, maintaining patient and HCP safety, and providing resources to assist HCP with anxiety and stress.

If there are no longer enough staff to provide safe patient care, facilities should consider implementing CDC's Strategies to Mitigate Healthcare Personnel Staffing Shortages. Facility policy should include details provided in the CDC guidance; a summary is provided in Table 1 below. Contingency capacity strategies, followed by crisis capacity strategies, augment conventional strategies and are meant to be considered and implemented sequentially (i.e., implementing contingency strategies before crisis strategies).

Table 1. Summary of Strategies for Mitigating Staffing Shortages for HCP with SARS-COV-2 Infection

Conventional	Contingency	Crisis
10 days OR 7 days with negative test†, if asymptomatic or mild to moderate illness (with improving symptoms)	5 days with/without negative test§, if asymptomatic or mild to moderate illness (with improving symptoms)	No work restrictions, with prioritization considerations (e.g., types of patients they care for)

†Negative test result from test collected within 48 hours of returning to work. For calculating the day of the test, consider day of symptom onset (or first positive test if asymptomatic) as day 0. Either a NAAT (molecular) or antigen test may be used. If using an antigen test, HCP should have a negative test obtained on day 5 and again 48 hours later.

§Healthcare facilities may choose to confirm resolution of infection with a negative NAAT (molecular) or a series of 2 negative antigen tests taken 48 hours apart.

DEFINITIONS

Facemask: OSHA defines facemasks as "a surgical, medical procedure, dental, or isolation mask that is FDA-cleared, authorized by an FDA EUA, or offered or distributed as described in an FDA enforcement policy. Facemasks may also be referred to as "medical procedure masks." Facemasks should be used according to product labeling and local, state, and federal requirements. FDA-cleared surgical masks are designed to protect against splashes and sprays and are prioritized for use when such exposures are anticipated, including surgical procedures. Other facemasks, such as some procedure masks, which are typically used for isolation purposes, may not provide protection against splashes and sprays.

Fever: For the purpose of this guidance, fever is defined as subjective fever (feeling feverish) or a measured temperature of 100.0°F (37.8°C) or higher. Note that fever may be intermittent or may not

be present in some people, such as those who are elderly, immunocompromised, or taking certain fever-reducing medications (e.g., nonsteroidal anti-inflammatory drugs [NSAIDS]).

Healthcare Personnel (HCP): HCP include, but are not limited to, emergency medical service personnel, nurses, nursing assistants, physicians, technicians, therapists, phlebotomists, pharmacists, students and trainees, contractual staff not employed by the healthcare facility, and persons not directly involved in patient care, but who could be exposed to infectious agents that can be transmitted in the healthcare setting (e.g., clerical, dietary, environmental services, laundry, security, engineering and facilities management, administrative, billing, volunteer personnel). For this guidance, HCP does not include clinical laboratory personnel.

Immunocompromised
For the purposes of this guidance, moderate to severely immunocompromising conditions include, but might not be limited to, those defined in the CDC Interim Clinical Considerations for Use of COVID-19 Vaccines.

- Other factors, such as end-stage renal disease, may pose a much lower degree of immunocompromise and not clearly affect decisions about need for work restriction if the healthcare provider had close contact with someone with SARS-CoV-2 infection. However, people in this category should still consider continuing to practice physical distancing and use of source control while in a healthcare facility, even if they have received all COVID-19 vaccine doses, including booster dose, as recommended by CDC.
- Ultimately, the degree of immunocompromise for HCP is determined by the treating provider, and preventive actions are tailored to each individual and situation.

Respirator: A respirator is a personal protective device that is worn on the face, covers at least the nose and mouth, and is used to reduce the wearer's risk of inhaling hazardous airborne particles (including dust particles and infectious agents), gases, or vapors. Respirators, including those intended for use in healthcare, are certified by the CDC/NIOSH.

SARS-COV-2 ILLNESS SEVERITY CRITERIA (adapted from the NIH COVID-19 Treatment Guidelines):

Note: The studies used to inform this guidance did not clearly define "severe" or "critical" illness. This guidance has taken a conservative approach to define these categories. Although not developed to inform decisions about when HCP with SARS-CoV-2 infection may return to work, the definitions in the National Institutes of Health (NIH) COVID-19 Treatment Guidelines are one option for defining severity of illness categories. The highest level of illness severity experienced by the HCP at any point in their clinical course should be used when determining when they may return to work.

Mild Illness: Individuals who have any of the various signs and symptoms of COVID 19 (e.g., fever, cough, sore throat, malaise, headache, muscle pain) without shortness of breath, dyspnea, or abnormal chest imaging.

Moderate Illness: Individuals who have evidence of lower respiratory disease by clinical assessment or imaging and a saturation of oxygen (SpO2) ≥94% on room air at sea level.

Severe Illness: Individuals who have respiratory frequency >30 breaths per minute, SpO2 <94% on room air at sea level (or, for patients with chronic hypoxemia, a decrease from baseline of >3%), ratio of arterial partial pressure of oxygen to fraction of inspired oxygen (PaO2/FiO2) <300 mmHg, or lung infiltrates >50%.

Critical Illness: Individuals who have respiratory failure, septic shock, and/or multiple organ dysfunction.

Categories of Health Alert messages:
Health Alert: conveys the highest level of importance; warrants immediate action or attention.
Health Advisory: provides important information for a specific incident or situation; may not require immediate action.
Health Update: provides updated information regarding an incident or situation; unlikely to require immediate action.

This information is current as of September 30, 2022 but may be modified in the future. We will continue to post updated information regarding the most common questions about this subject.

BILLING CODE: 4510-27-P

DEPARTMENT OF LABOR

Wage and Hour Division

29 CFR Part 541

RIN 1235-AA39

Defining and Delimiting the Exemptions for Executive, Administrative, Professional, Outside Sales, and Computer Employees

AGENCY: Wage and Hour Division, Department of Labor.

ACTION: Final rule.

SUMMARY: The Department of Labor (Department) is updating and revising the regulations issued under the Fair Labor Standards Act implementing the exemptions from minimum wage and overtime pay requirements for executive, administrative, professional, outside sales, and computer employees. Significant revisions include increasing the standard salary level, increasing the highly compensated employee total annual compensation threshold, and adding to the regulations a mechanism that will allow for the timely and efficient updating of the salary and compensation thresholds, including an initial update on July 1, 2024, to reflect earnings growth. The Department is not finalizing in this rule its proposal to apply the standard salary level to the U.S. territories subject to the Federal minimum wage and to update the special salary levels for American Samoa and the motion picture industry.

DATES: The effective date for this final rule is July 1, 2024. Sections 541.600(a)(2) and 541.601(a)(2) are applicable beginning January 1, 2025.

Disclaimer: This final rule has been approved by the Office of Management and Budget's Office of Information and Regulatory Affairs and has been submitted to the Office of the Federal Register (OFR) for publication. It is currently pending placement on public inspection at the OFR and publication in the *Federal Register*. This version of the final rule may vary slightly from the published document if minor technical or formatting changes are made during the OFR review process. Only the version published in the *Federal Register* is the official version.

FOR FURTHER INFORMATION CONTACT: Daniel Navarrete, Acting Director, Division of Regulations, Legislation, and Interpretation, Wage and Hour Division, U.S. Department of Labor, Room S-3502, 200 Constitution Avenue, NW, Washington, DC 20210; telephone: (202) 693-0406 (this is not a toll-free number). Alternative formats are available upon request by calling 1-866-487-9243. If you are deaf, hard of hearing, or have a speech disability, please dial 7-1-1 to access telecommunications relay services.

Questions of interpretation or enforcement of the agency's existing regulations may be directed to the nearest Wage and Hour Division (WHD) district office. Locate the nearest office by calling the WHD's toll-free help line at (866) 4US–WAGE ((866) 487-9243) between 8 a.m. and 5 p.m. in your local time zone, or log onto WHD's website at https://www.dol.gov/agencies/whd/contact/local-offices for a nationwide listing of WHD district and area offices.

SUPPLEMENTARY INFORMATION

I. Executive Summary

The Fair Labor Standards Act (FLSA or Act) requires covered employers to pay employees a minimum wage and, for employees who work more than 40 hours in a week, overtime premium pay of at least 1.5 times the employee's regular rate of pay. Section 13(a)(1) of the FLSA, which was included in the original Act in 1938, exempts from the minimum wage and overtime pay requirements "any employee employed in a bona fide executive, administrative, or professional capacity[.]"[1] The exemption is commonly referred to as the "white-collar" or executive, administrative, or professional (EAP) exemption. The statute

[1] 29 U.S.C. 213(a)(1).

expressly gives the Secretary of Labor (Secretary) authority to define and delimit the terms of the exemption. Since 1940, the regulations implementing the EAP exemption have generally required that each of the following three tests must be met: (1) the employee must be paid a predetermined and fixed salary that is not subject to reduction because of variations in the quality or quantity of work performed (the salary basis test); (2) the amount of salary paid must meet a minimum specified amount (the salary level test); and (3) the employee's job duties must primarily involve executive, administrative, or professional duties as defined by the regulations (the duties test). The employer bears the burden of establishing the applicability of the exemption.[2] Job titles and job descriptions do not determine EAP exemption status, nor does merely paying an employee a salary.

Consistent with its broad authority under the Act, in this final rule the Department is setting compensation thresholds for the standard test and the highly compensated employee test that will work effectively with the respective duties tests to better identify who is employed in a bona fide EAP capacity for purposes of determining exemption status under the Act. Specifically, the Department is setting the standard salary level at the 35th percentile of weekly earnings of full-time salaried workers in the lowest-wage Census Region ($1,128 per week or $58,656 annually for a full-year worker)[3] and the highly compensated employee total annual

[2] *See, e.g.*, *Idaho Sheet Metal Works, Inc. v. Wirtz*, 383 U.S. 190, 209 (1966); *Walling v. Gen. Indus. Co.*, 330 U.S. 545, 547-48 (1947).

[3] In determining earnings percentiles in its part 541 rulemakings since 2004, the Department has consistently looked at nonhourly earnings for full-time workers from the Current Population Survey (CPS) Merged Outgoing Rotation Group (MORG) data collected by the U.S. Bureau of Labor Statistics (BLS). As explained in section VII.B.5.i, the Department considers data representing compensation paid to nonhourly workers to be an appropriate proxy for compensation paid to salaried workers, although for simplicity the Department uses the terms

compensation threshold at the annualized weekly earnings of the 85th percentile of full-time salaried workers nationally ($151,164). These compensation thresholds are firmly grounded in the authority that the FLSA grants to the Secretary to define and delimit the EAP exemption, a power the Secretary has exercised for 85 years.

The increase in the standard salary level to the 35th percentile of weekly earnings of full-time salaried workers in the lowest-wage Census Region better fulfills the Department's obligation under the statute to define and delimit who is employed in a bona fide EAP capacity. Upon reflection, the Department has determined that its rulemakings over the past 20 years, since the Department simplified the test for the EAP exemption in 2004 by replacing the historic two-test system for determining exemption status with the single standard test, have vacillated between two distinct approaches: One used in rules in 2004[4] and 2019,[5] that exempted lower-paid workers who historically had been entitled to overtime because they did not meet the more detailed duties requirements of the test that was in place from 1949 to 2004; and one used in a rule in 2016,[6] that restored overtime protection to lower-paid white-collar workers who performed significant amounts of nonexempt work but also removed from the exemption other lower-paid workers who historically were exempt because they met the prior more detailed

---

salaried and nonhourly interchangeably in this rule. The Department relied on CPS MORG data for calendar year 2022 to develop the NPRM, including to determine the proposed salary level. The Department is using the most recent full-year data available for this final rule, which is CPS MORG data for calendar year 2023. The new standard salary level of $1,128 per week is $12 to $30 less than the Department estimated in the NPRM. 88 FR 62152, 62152–53 n.3 (Sept. 8, 2023).

[4] 69 FR 22122 (April 23, 2004).

[5] 84 FR 51230 (Sept. 27, 2019).

[6] 81 FR 32391 (May 23, 2016).

duties test, an approach that received unfavorable treatment in litigation.[7] Having grappled with these different approaches to setting the standard salary level, this final rule retains the simplified standard test, the benefits of which were recognized in the Department's 2004, 2016, and 2019 rulemakings,[8] while, through a revised methodology, fully restoring the salary level's screening function and accounting for the switch from a two-test to a one-test system for defining the EAP exemption, and also separately updating the standard salary level to account for earnings growth since the 2019 rule.

The new standard salary level will, in combination with the standard duties test, better define and delimit which employees are employed in a bona fide EAP capacity. By setting a salary level above what the methodology used in 2004 and 2019 would produce using current data, the new standard salary level will ensure that, consistent with the Department's historical approach to the exemption, fewer lower-paid white-collar employees who perform significant amounts of nonexempt work are included in the exemption. At the same time, by setting the salary level below what the methodology used in 2016 would produce using current data, the new standard salary level will allow employers to continue to use the exemption for many lower-paid white-collar employees who were made exempt under the 2004 standard duties test. The combined result will be a more effective test for determining who is employed in a bona fide EAP capacity. The applicability date of the new standard salary level will be January 1, 2025. The Department is not finalizing its proposal to apply the standard salary level to the U.S.

[7] The Department never enforced the 2016 rule because it was invalidated by the U.S. District Court for the Eastern District of Texas. *See Nevada v. U.S. Department of Labor*, 275 F.Supp.3d 795 (E.D. Tex. 2017).
[8] *See* 84 FR 51243–45; 81 FR 32414, 32444–45; 69 FR 22126–28.

territories subject to the federal minimum wage and to update the special salary levels for American Samoa and the motion picture industry.[9]

The Department is also increasing the earnings threshold for the highly compensated employee (HCE) exemption, which was added to the regulations in 2004 and applies to certain highly compensated employees and combines a much higher annual compensation requirement with a minimal duties test. The HCE test's primary purpose is to serve as a streamlined alternative for very highly compensated employees because a very high level of compensation is a strong indicator of an employee's exempt status, thus eliminating the need for a detailed duties analysis.[10] The Department is increasing the HCE total annual compensation threshold to the annualized weekly earnings amount of the 85th percentile of full-time salaried workers nationally ($151,164). The new HCE threshold is high enough to reserve the test for those employees who are "at the very top of [the] economic ladder"[11] and will guard against the unintended exemption of workers who are not bona fide EAP employees, including those in high-income regions and industries. The applicability date of the new HCE total annual compensation threshold will be January 1, 2025.

In each of its part 541 rulemakings since 2004, the Department recognized the need to regularly update the earnings thresholds to ensure that they remain effective in helping

[9] The Department proposed in sections IV.B.1 and B.2 of the NPRM to apply the updated standard salary level to the four U.S. territories that are subject to the federal minimum wage—Puerto Rico, Guam, the U.S. Virgin Islands, and the Commonwealth of the Northern Mariana Islands (CNMI)—and to update the special salary levels for American Samoa and the motion picture industry in relation to the new standard salary level. The Department will address these aspects of its proposal in a future final rule.
[10] *See* 69 FR 22172–73.
[11] *Id.* at 22174.

differentiate between exempt and nonexempt employees. As the Department observed in these rulemakings, even a well-calibrated salary level that is not kept up to date becomes obsolete as wages for nonexempt workers increase over time.[12] Long intervals between rulemakings have resulted in eroded earnings thresholds based on outdated earnings data that were ill-equipped to help identify bona fide EAP employees.

To address this problem, in the 2004 and 2019 rules the Department expressed its commitment to regularly updating the salary levels.[13] In the 2016 rule, it included a regulatory provision to automatically update the salary levels.[14] Based on its long experience with updating the salary levels, the Department has determined that adopting a regulatory provision for updating the salary levels to reflect current earnings data, with an exception for pausing future updates under certain conditions, is the most viable and efficient way to ensure the EAP exemption earnings thresholds keep pace with changes in employee pay and thus remain effective in helping determine exemption status. This rule establishes a new updating mechanism. The initial update to the standard salary level and the HCE total annual compensation threshold will take place on July 1, 2024, and will use the methodologies in place at that time (*i.e.*, the 2019 rule methodologies), resulting in a $844 per week standard salary level and a $132,964 HCE total annual compensation threshold. Future updates to the standard salary level and HCE total annual compensation threshold with current earnings data will begin 3 years after the date of the initial update (July 1, 2027), and every 3 years thereafter, using the methodologies in place at the time of the updates. The Department anticipates that, by the time

[12] 84 FR 51250–51; 81 FR 32430; *see also* 69 FR 22164.
[13] 69 FR 22171; 84 FR 51251–52.
[14] 81 FR 32430.

the first triennial update under the updating mechanism occurs, assuming the Department has not engaged in further rulemaking, the new methodologies for the standard salary level and HCE total annual compensation requirement established by this final rule will have become effective and the triennial update will employ these new methodologies. The new updating mechanism will allow for the timely, predictable, and efficient updating of the earnings thresholds.

The Department estimates that in Year 1, approximately 1 million employees who earn at least $684 per week but less than $844 per week will be impacted by the initial update applying current wage data to the standard salary level methodology from the 2019 rule, and approximately 3 million employees who earn at least $844 per week but less than the new standard salary level of $1,128 per week will be impacted by the subsequent application of the new standard salary level. *See* Table 25. As explained in section V.B.4.ii, for 1.8 million of the affected employees (including the 1 million impacted by the initial update), this rule will restore overtime protections that they would have been entitled to under every rule prior to the 2019 rule. The Department also estimates that 292,900 employees who are currently exempt under the HCE test, but do not meet the standard test for exemption, will be affected by the proposed increase in the HCE total annual compensation level. Absent an employer increasing these employees' pay to at or above the new HCE level, the exemption status of these employees will turn on the standard duties test (which these employees do not meet) rather than the minimal duties test that applies to employees earning at or above the HCE threshold. The economic analysis quantifies the direct costs resulting from this rule: (1) regulatory familiarization costs; (2) adjustment costs; and (3) managerial costs. The Department estimates that total annualized direct employer costs over the first 10 years will be $803 million with a 7 percent discount rate.

This rule will also give employees higher earnings in the form of transfers of income from employers to employees. The Department estimates annualized transfers will be $1.5 billion, with a 7 percent discount rate.

II. Background

A. The FLSA

The FLSA generally requires covered employers to pay employees at least the federal minimum wage (currently $7.25 an hour) for all hours worked and overtime premium pay of at least one and one-half times the employee's regular rate of pay for all hours worked over 40 in a workweek.[15] However, section 13(a)(1) of the FLSA, codified at 29 U.S.C. 213(a)(1), provides an exemption from both minimum wage and overtime pay for "any employee employed in a bona fide executive, administrative, or professional capacity . . . or in the capacity of [an] outside salesman (as such terms are defined and delimited from time to time by regulations of the Secretary [of Labor], subject to the provisions of [the Administrative Procedure Act] . . .)." The FLSA does not define the terms "executive," "administrative," "professional," or "outside salesman," but rather directs the Secretary to define those terms through rulemaking. Pursuant to Congress's grant of rulemaking authority, since 1938 the Department has issued regulations at 29 CFR part 541 to define and delimit the scope of the section 13(a)(1) exemption.[16] Because Congress explicitly gave the Secretary authority to define and delimit the specific terms of the exemption, the regulations so issued have the binding effect of law.[17]

[17] *See Batterton v. Francis*, 432 U.S. 416, 425 n.9 (1977).

The exemption for executive, administrative, or professional employees was included in the original FLSA legislation passed in 1938.[18] It was modeled after similar provisions contained in the earlier National Industrial Recovery Act of 1933 and state law precedents.[19] As the Department has explained in prior rules, the EAP exemption is premised on two policy considerations. First, the type of work exempt employees perform is difficult to standardize to any time frame and cannot be easily spread to other workers after 40 hours in a week, making enforcement of the overtime provisions difficult and generally precluding the potential job expansion intended by the FLSA's time-and-a-half overtime premium.[20] Second, exempt workers typically earn salaries well above the minimum wage and are presumed to enjoy other privileges to compensate them for their long hours of work. These include, for example, above-average fringe benefits and better opportunities for advancement, setting them apart from nonexempt workers entitled to overtime pay.[21]

Section 13(a)(1) exempts covered EAP employees from both the FLSA's minimum wage and overtime requirements. However, because of their long hours of work, its most significant impact is its exemption of these employees from the Act's overtime protections, as discussed in section VII.C.4. An employer may employ such exempt employees for any number of hours in the workweek without paying an overtime premium. Some state laws have stricter standards to be exempt from state minimum wage and overtime protections than those which exist under

[18] *See* Fair Labor Standards Act of 1938, Pub. L. 75-718, 13(a)(1), 52 Stat. 1060, 1067 (June 25, 1938).
[19] *See* National Industrial Recovery Act, Pub. L. 73-67, ch. 90, title II, 206(2), 48 Stat 195, 204-5 (June 16, 1933).

[21] *See id*.

federal law, such as higher salary levels or more stringent duties tests. The FLSA does not preempt any such stricter state standards.[22] If a state establishes a higher standard than the provisions of the FLSA, the higher standard applies in that state.

B. Regulatory History

The Department's part 541 regulations have consistently looked to the duties performed by the employee and the salary paid by the employer in determining whether an individual is employed in a bona fide executive, administrative, or professional capacity. Since 1940, the Department's implementing regulations have generally required each of the following three prongs to be satisfied for the exemption to apply: (1) the employee must be paid a predetermined and fixed salary that is not subject to reduction because of variations in the quality or quantity of work performed (the salary basis test); (2) the amount of salary paid must meet a minimum specified amount (the salary level test); and (3) the employee's job duties must primarily involve executive, administrative, or professional duties as defined by the regulations (the duties test).

1. The Part 541 Regulations from 1938 to 2004

The Department's part 541 regulations have always included earnings criteria. From the first Part 541 regulations, there has been "wide agreement" that the amount paid to an employee is "a valuable and easily applied index to the 'bona fide' character of the employment for which [the] exemption is claimed[.]"[23] Because EAP employees "are denied the protection of the [A]ct[,]" they are "assumed [to] enjoy compensatory privileges" which distinguish them from

[22] *See* 29 U.S.C. 218(a).

[23] "Executive, Administrative, Professional . . . Outside Salesman" Redefined, Wage and Hour Division, U.S. Department of Labor, Report and Recommendations of the Presiding Officer [Harold Stein] at Hearings Preliminary to Redefinition (Oct. 10, 1940) (Stein Report) at 19.

nonexempt employees, including substantially higher pay.[24] Additionally, the Department has long recognized that the salary level test is a useful criterion for helping identify bona fide EAP employees and provides a practical guide for employers and employees, thus tending to reduce litigation and ensure that nonexempt employees receive the overtime protection to which they are entitled.[25] These benefits accrue to employees and employers alike, which is why, despite disagreement over the appropriate magnitude of the part 541 earnings thresholds, an "overwhelming majority" of stakeholders have supported the retention of such thresholds in prior part 541 rulemakings.[26]

The Department issued the first version of the part 541 regulations in October 1938.[27] The Department's initial regulations included a $30 per week compensation requirement for executive and administrative employees. It also included a duties test that prohibited employers from claiming the EAP exemption for employees who performed "[a] substantial amount of work of the same nature as that performed by nonexempt employees of the employer."[28]

The Department issued the first update to its part 541 regulations in October 1940,[29] following extensive public hearings.[30] Among other changes, the 1940 update newly applied the

[24] *Id.*; *see* Report of the Minimum Wage Study Commission, Volume IV, p. 236 ("Higher base pay, greater fringe benefits, improved promotion potential and greater job security have traditionally been considered as normal compensatory benefits received by EAP employees, which set them apart from non-EAP employees.").

salary level requirement to professional employees; added the salary basis requirement to the tests for executive, administrative, and professional employees; and introduced a 20 percent cap on the amount of nonexempt work that executive and professional employees could perform each workweek, replacing language which prohibited the performance of a "substantial amount" of nonexempt work.[31]

The Department conducted further hearings on the part 541 regulations in 1947[32] and issued revised regulations in December 1949.[33] The 1949 rulemaking updated the salary levels set in 1940 and introduced a second, less stringent duties test for higher paid executive, administrative, and professional employees.[34] Thus, beginning in 1949, the part 541 regulations contained two tests for the EAP exemption. These tests became known as the "long" test and the "short" test. The long test paired a lower earnings threshold with a more rigorous duties test that generally limited the performance of nonexempt work to no more than 20 percent of an employee's hours worked in a workweek. The short test paired a higher salary level and a less rigorous duties test, with no specified limit on the performance of nonexempt work. From 1958 until 2004, the regulations in place generally set the long test salary level at a level designed to exclude from exemption approximately the lowest-paid 10 percent of salaried white-collar employees who performed EAP duties in lower-wage areas and industries and set the short test salary level significantly higher.[35] The salary and duties components of each test complemented

each other, and the two tests worked in combination to determine whether an individual was employed in a bona fide EAP capacity. Lower-paid employees who met the long test salary level but did not meet the higher short test salary level were subject to the long duties test which ensured that these employees were employed in an EAP capacity by limiting the amount of time they could spend on nonexempt work. Employees who met the higher short test salary level were considered to be more likely to meet the requirements of the long duties test and thus were subject to a short-cut duties test for determining exemption status.

Additional changes to the regulations, including salary level updates, were made in 1954,[36] 1958,[37] 1961,[38] 1963,[39] 1967,[40] 1970,[41] 1973,[42] and 1975.[43] The Department revised the part 541 regulations twice in 1992 but did not update the salary thresholds at that time.[44] None of these updates changed the basic structure of the long and short tests.

The Department described the salary levels adopted in the 1975 rule as "interim rates," intended to "be in effect for an interim period pending the completion of a study [of worker

[44] The Department first created a limited exception from the salary basis test for public employees. 57 FR 37677 (Aug. 19, 1992). The Department also implemented a 1990 law requiring it to promulgate regulations permitting employees in certain computer-related occupations to qualify as exempt under section 13(a)(1) of the FLSA. 57 FR 46744 (Oct. 9, 1992); *see* Pub. L. 101-583, sec. 2, 104 Stat. 2871 (Nov. 15, 1990).

earnings] by the Bureau of Labor Statistics . . . in 1975."[45] However, those salary levels remained in effect until 2004. The utility of the salary levels in helping to define the EAP exemption decreased as wages rose during this period. In 1991, the federal minimum wage rose to $4.25 per hour,[46] which for a 40-hour workweek exceeded the lower long test salary level of $155 per week for executive and administrative employees and equaled the long test salary level of $170 per week for professional employees. In 1997, the federal minimum wage rose to $5.15 per hour,[47] which for a 40-hour workweek not only exceeded the long test salary levels, but also was close to the higher short test salary level of $250 per week.

2. Part 541 Regulations from 2004 to 2019

The Department published a final rule in April 2004 (the 2004 rule)[48] that updated the part 541 salary levels for the first time since 1975 and made several significant changes to the regulations. Most significantly, the Department eliminated the separate long and short tests and replaced them with a single standard test. The Department set the standard salary level at $455 per week, which was equivalent to the 20th percentile of weekly earnings of full-time salaried workers in the lowest-wage Census Region (the South) and in the retail industry nationally. The Department paired the new standard salary level test with a new standard duties test for executive, administrative, and professional employees, respectively, which was substantially equivalent to the short duties test used in the two-test system.[49]

[45] 40 FR 7091.
[46] *See* Pub. L. 101-157, sec. 2, 103 Stat. 938 (Nov. 17, 1989).
[47] *See* Pub. L. 104-188, sec. 2104(b), 110 Stat 1755 (Aug. 20, 1996).
[48] 69 FR 22122.
[49] *See id.* at 22192–93 (acknowledging "de minimis differences in the standard duties tests compared to the . . . short duties tests").

In the 2004 rule, the Department acknowledged that the switch to the single standard test for exemption was a significant change in the regulatory structure,[50] and noted that the shift to setting the salary level based on "the lowest 20 percent of salaried employees in the South, rather than the lowest 10 percent" of EAP employees was made, in part, "because of the proposed change from the 'short' and 'long' test structure[.]"[51] The Department asserted that elimination of the long duties test was warranted because "the relatively small number of employees currently earning from $155 to $250 per week, and thus tested for exemption under the 'long' duties test, will gain stronger protections under the increased minimum salary level which . . . guarantees overtime protection for all employees earning less than $455 per week[.]"[52] The Department acknowledged, however, that the new standard salary level was comparable to the lower long test salary level used in the two-test system (*i.e.*, if the Department's long test salary level methodology had been applied to contemporaneous data).[53] Thus, employees who would have been subject to the long duties test with its limit on the amount of time spent on nonexempt work if the two-test system had been updated were subject to the equivalent of the short duties test under the new standard test. For example, under the 2004 rule's standard test, an employee

[50] *See id.* at 22126–28.
[51] *Id.* at 22167.
[52] *Id.* at 22126.
[53] *Id.* at 22171. The Department last set the long and short test salary levels in 1975. Throughout this preamble, when the Department refers to the relationship of salary levels set in this rule and the 2004, 2016, and 2019 rules to equivalent long or short test salary levels, it is referring to salary levels based on contemporaneous (at the relevant point in time) data that, in the case of the long test salary level, would exclude the lowest-paid 10 percent of exempt EAP employees in low-wage industries and areas and, in the case of the short test salary level, would be 149 percent of a contemporaneous long test salary level. The short test salary ratio of 149 percent is the simple average of the 15 historical ratios of the short test salary level to the long test salary level. *See* 81 FR 32467 & n.149.

who earned just over the rule's standard salary threshold of $455 in weekly salary, and who met the standard duties test, was exempt even if they would not have met the previous long duties test because they spent more than 20 percent of their time performing nonexempt work. If the Department had instead retained the two-test system and updated the long test salary level to $455, that same employee would have been nonexempt because they would have been subject to the long test's more rigorous duties analysis due to their lower salary.

In the 2004 rule, the Department also created a new test for exemption for certain highly compensated employees.[54] The HCE test paired a minimal duties requirement—customarily and regularly performing at least one of the exempt duties or responsibilities of an EAP employee—with a high total annual compensation requirement of $100,000, a threshold that exceeded the annual earnings of approximately 93.7 percent of salaried workers nationwide.[55] The Department also ended the use of special salary levels for Puerto Rico and the U.S. Virgin Islands, as they had become subject to the federal minimum wage since the Department last updated the part 541 salary levels in 1975, and set a special salary level only for American Samoa, which remained not subject to the federal minimum wage.[56] The Department also expressed its intent "in the future to update the salary levels on a more regular basis, as it did prior to 1975."[57]

In May 2016, the Department issued a final rule (the 2016 rule) that retained the single-test system introduced in 2004 but increased the standard salary level and provided for regular updating. Specifically, the 2016 rule (1) increased the standard salary level from the 2004 salary

level of $455 to $913 per week, the 40th percentile of weekly earnings of full-time salaried workers in the lowest-wage Census Region (the South);[58] (2) increased the HCE test total annual compensation amount from $100,000 to $134,004 per year;[59] (3) increased the special salary level for EAP workers in American Samoa;[60] (4) allowed employers, for the first time, to credit nondiscretionary bonuses, incentive payments, and commissions paid at least quarterly towards up to 10 percent of the standard salary level;[61] and (5) added a mechanism to automatically update the part 541 earnings thresholds every 3 years.[62] The Department did not change any of the standard duties test criteria in the 2016 rule,[63] opting instead to adopt a standard salary level set at the low end of the historical range of short test salary levels used in the pre-2004 two-test system.[64] The 2016 rule was scheduled to take effect on December 1, 2016.

On November 22, 2016, the U.S. District Court for the Eastern District of Texas issued an order preliminarily enjoining the Department from implementing and enforcing the 2016 rule.[65] On August 31, 2017, the district court granted summary judgment to the plaintiff challengers, holding that the 2016 rule's salary level exceeded the Department's authority and invalidating the rule.[66] On October 30, 2017, the Department of Justice appealed to the U.S. Court of Appeals for the Fifth Circuit, which subsequently granted the Department's motion to

hold that appeal in abeyance while the Department undertook further rulemaking. Following an NPRM published on March 22, 2019,[67] the Department published a final rule on September 27, 2019 (the 2019 rule),[68] which formally rescinded and replaced the 2016 rule.

The 2019 rule (1) raised the standard salary level from the 2004 salary level of $455 to $684 per week, the equivalent of the 20th percentile of weekly earnings of full-time salaried workers in the lowest-wage Census Region (the South) and/or in the retail industry nationally; (2) increased the HCE total annual compensation threshold from $100,000 to $107,432, the equivalent of the 80th percentile of annual earnings of full-time salaried workers nationwide; (3) allowed employers to credit nondiscretionary bonuses and incentive payments (including commissions) paid at least annually to satisfy up to 10 percent of the standard salary level; and (4) established special salary levels for all U.S. territories.[69] The 2019 rule did not make changes to the standard duties test.[70] While using the same methodology used in the 2004 rule to set the salary threshold, the Department did not assert that this methodology constituted the outer limit for defining and delimiting the salary threshold. Rather, the Department reasoned the 2004 methodology was well-established, reasonable, would minimize uncertainty and potential legal challenge, and would address the concerns of the district court that the 2016 rule over-emphasized the salary level.[71] The Department acknowledged that the new standard salary level

[67] *See* 84 FR 10900 (March 22, 2019).
[68] *See* 84 FR 51230.
[69] The Department established special salary levels of $455 per week for Puerto Rico, Guam, the U.S. Virgin Islands, and the CNMI (effectively continuing the 2004 salary level); it also maintained the 2004 rule's $380 per week special salary level for employees in American Samoa. *Id*. at 51246.
[70] *See id.* at 51241–43.
[71] *See id.* at 51242.

was, unlike the salary level set in the 2004 rule, below the long test salary level used in the pre-2004 two-test system.[72] As in its 2004 rule, the Department "reaffirm[ed] its intent to update the standard salary level and HCE total annual compensation threshold more regularly in the future using notice-and-comment rulemaking."[73] The 2019 rule took effect on January 1, 2020.[74]

C. Overview of Existing Regulatory Requirements

The part 541 regulations contain specific criteria that define each category of exemption provided for in section 13(a)(1) for bona fide executive, administrative, professional, and outside sales employees, as well as teachers and academic administrative personnel. The regulations also define exempt computer employees under sections 13(a)(1) and 13(a)(17). The employer bears the burden of establishing the applicability of any exemption.[75] Job titles and job descriptions do not determine exemption status, nor does merely paying an employee a salary rather than an hourly rate.

As previously indicated, to satisfy the EAP exemption, employees must meet certain tests regarding their job duties[76] and generally must be paid on a salary basis at least the amount

[72] *Id.* at 51244.
[73] *Id.* at 51251.
[74] A lawsuit challenging the 2019 rule was filed in August 2022. The district court upheld the rule and an appeal of that decision was pending at the time the Department issued this final rule. *See Mayfield v. U.S. Department of Labor*, 2023 WL 6168251 (W.D. Tex. Sept. 20, 2023), *appeal docketed*, No. 23-50724 (5th Cir. Oct. 11, 2023).
[75] *See, e.g., Idaho Sheet Metal Works*, 383 U.S. at 209; *Walling*, 330 U.S. at 547–48.
[76] For a description of the duties that are required to be performed under the EAP exemption, *see* §§ 541.100 (executive employees); 541.200 (administrative employees); 541.300, 541.303–.304 (teachers and professional employees); 541.400 (computer employees); 541.500 (outside sales employees).

specified in the regulations.[77] Some employees, such as doctors, lawyers, teachers, and outside sales employees, are not subject to salary tests.[78] Others, such as academic administrative personnel and computer employees, are subject to special, contingent earning thresholds.[79] The standard salary level for the EAP exemption is currently $684 per week (equivalent to $35,568 per year), and the total annual compensation level for highly compensated employees under the HCE test is currently $107,432.[80] A special salary level of $455 per week currently applies to employees in Puerto Rico, Guam, the U.S. Virgin Islands, and the CNMI;[81] a special salary level of $380 per week applies to employees in American Samoa;[82] and employers can pay a special weekly "base rate" of $1,043 per week to employees in the motion picture producing industry.[83] Nondiscretionary bonuses and incentive payments (including commissions) paid on an annual or more frequent basis may be used to satisfy up to 10 percent of the standard or special salary levels.[84]

Under the HCE test, employees who currently receive at least $107,432 in total annual compensation are exempt from the FLSA's overtime requirements if they customarily and regularly perform at least one of the exempt duties or responsibilities of an executive,

---

[77] Alternatively, administrative and professional employees may be paid on a fee basis for a single job regardless of the time required for its completion as long as the hourly rate for work performed (*i.e.*, the fee payment divided by the number of hours worked) would total at least the weekly amount specified in the regulation if the employee worked 40 hours. *See* § 541.605.
[78] *See* §§ 541.303(d); 541.304(d); 541.500(c); 541.600(e). Such employees are also not subject to a fee basis test.
[79] *See* § 541.600(c)–(d).
[80] *See* §§ 541.600(a); 541.601(a)(1).

[84] § 541.602(a)(3).

administrative, or professional employee identified in the standard tests for exemption.[85] The HCE test applies only to employees whose primary duty includes performing office or non-manual work.[86] Employees considered exempt under the HCE test must currently receive at least the $684 per week standard salary portion of their pay on a salary or fee basis without regard to the payment of nondiscretionary bonuses and incentive payments.[87]

D. The Department's Proposal

On September 8, 2023, consistent with its statutory authority to define and delimit the EAP exemption, the Department published a Notice of Proposed Rulemaking (NPRM) to revise the part 541 regulations.[88] The Department proposed to increase the standard salary level to the 35th percentile of weekly earnings of full-time salaried workers in the lowest-wage Census Region (currently the South), equivalent to $1,059 per week based on earnings data used in the NPRM.[89] The Department also proposed to apply this updated standard salary level to the four U.S. territories that are subject to the federal minimum wage—Puerto Rico, Guam, the U.S. Virgin Islands, and the CNMI—and to update the special salary levels for American Samoa and the motion picture industry in relation to the new standard salary level.[90] The Department

[85] § 541.601.
[86] § 541.601(d).
[87] *See* § 541.601(b)(1); *see also* 84 FR 51249.
[88] *See* 88 FR 62152.
[89] The Department noted that the final rule would use the most recent earnings data available to set the standard salary level, which would change the dollar amount of the resulting threshold. *See* 88 FR 62152-53 n. 3.
[90] In this final rule the Department is not finalizing its proposal in section IV.B.1 and B.2 of the NPRM to apply the standard salary level to the U.S. territories subject to the federal minimum wage and to update the special salary levels for American Samoa and the motion picture industry. The Department will address these aspects of its proposal in a future final rule. While the Department is not finalizing its proposal, it is making nonsubstantive changes in provisions addressing the territories as a result of other changes in this final rule.

additionally proposed raising the HCE test's total annual compensation requirement to the annual equivalent of the 85th percentile of weekly earnings of full-time salaried workers nationally, equivalent to $143,988 per year based on earnings data used in the NPRM. Finally, the Department proposed a new mechanism to update the standard salary level and the HCE total annual compensation threshold every 3 years to ensure that they remain effective tests for exemption.

The public comment period for the NPRM concluded on November 7, 2023. The Department received approximately 33,300 comments in response to the NPRM during the 60-day comment period.[91] Comments came from a diverse array of stakeholders, including employees, employers, trade associations, small business owners, labor unions, advocacy groups, nonprofit organizations, law firms, academics, educational organizations and representatives, religious organizations, economists, members of Congress, state and local government officials, tribal representatives, and other interested members of the public. All timely received comments may be viewed on the https://www.regulations.gov website, docket ID WHD-2023-0001.

Commenter views on the merits of the NPRM varied widely. Some of the comments the Department received were general statements of support or opposition, while many others addressed the Department's proposal in considerable detail. As with previous part 541 rulemakings, a majority of the total comments came from comment campaigns using similar or identical template language. Such campaign comments expressed support or opposition to the proposed salary level, and sometimes addressed other issues including applying the salary level

[91] In regulations.gov, the number of comments received is listed as 33,310 and the number of posted comments is 26,280. This difference is because one commenter, WorkMoney, attached thousands of comments to their one submission.

to teachers,[92] and concerns from nonprofit agencies. However, the Department also received thousands of unique comments. Significant issues raised in the comments are discussed in this final rule. Comments germane to the need for this rulemaking are discussed in section III, comments about the NPRM's proposals are discussed in section V, and comments about the potential costs, benefits, and other impacts of this rulemaking are discussed in section VII. The Department has carefully considered the timely submitted comments about the Department's proposal.

The Department received a number of comments on topics that are beyond the scope of this rulemaking. A significant number of commenters (including a large comment campaign) urged the Department to newly apply the part 541 salary criteria to teachers. The Department did not solicit comment about the exemption criteria for teachers in the NPRM and, as many commenters on this issue recognized, addressing this issue would require a separate rulemaking. Other topics outside the scope of this rulemaking include, for example, a request that the Department extend the right to overtime pay to medical residents, create exemptions from the salary level test, allow employers to credit the value of board and lodging towards the salary level, clarify issues related to the fluctuating workweek method of calculating overtime pay, or create a "safe harbor" provision for restaurant franchisors. The Department is not addressing these issues in its final rule.

Several stakeholders such as Catholic Charities USA and the National Council of Nonprofits expressed concern about funding and reimbursement rates to meet potential new

[92] As noted above, teachers are among the employees for whom there is no salary level requirement under the part 541 regulations. *See* § 541.303(d).

overtime expenses. The Department appreciates the concerns conveyed in these comments and the challenges of adjusting public funding. As discussed in section V.B.4.iv, however, the Department's EAP regulations have never had special rules for nonprofit or charitable organizations and employees of these organizations are subject to the EAP exemption if they satisfy the same salary level, salary basis, and duties tests as other employees.

III. Need for Rulemaking

The goal of this rulemaking is to set effective earnings thresholds to help define and delimit the FLSA's EAP exemption. To achieve this goal, the Department is not only updating the single standard salary level to account for earnings growth since the 2019 rule, but also to build on the lessons learned in its most recent rulemakings to more effectively define and delimit employees employed in a bona fide EAP capacity. To this end, the Department is finalizing its proposed changes to the standard salary level and the HCE test's total annual compensation requirement methodologies. Additionally, to maintain the effectiveness of these tests, the Department is finalizing an updating mechanism that will update these earnings thresholds to reflect current wage data, initially on July 1, 2024 and every 3 years thereafter. The Department's response to commenter feedback on the specific proposals included in the NPRM is provided in section V. This section explains the need for the Department to update the part 541 earnings thresholds and addresses commenter feedback on whether the earnings thresholds established in the 2019 rule should be increased.

As the Department explained in the NPRM, there is a need for the Department to update the salary level to fully restore the salary level's screening function and to account for the shift to a one-test system in the 2004 rule, which broadened the exemption by placing the entire burden

of this shift on employees who historically were entitled to the FLSA's overtime protection because they performed substantial amounts of nonexempt work and earned between the long and short test salary levels, but became exempt because they passed the more lenient standard duties test. Since switching from a two-test to a one-test system for defining and delimiting the EAP exemption in 2004, the Department has followed different approaches to set the standard salary level. In 2004, the Department used a methodology that produced a salary level amount that was equivalent to the lower long test salary level under the two-test system.[93] This approach continued to perform the historical screening function of the long salary test—providing overtime protection to employees who earned less than the long test salary level. But it broadened the exemption to include employees earning between the long and short test salary levels who historically had not met the long duties test (and therefore were not considered bona fide EAP employees) and now became exempt if they met the less rigorous standard duties test.[94] The Department followed this same methodology to set the standard salary level in 2019, but applying the 2004 rule's methodology to contemporaneous data in 2019 resulted in a salary level that was lower than what would have been the equivalent of the long test salary level and thus did not fulfill the historical screening function for low-paid employees.[95] This broadened the EAP exemption even further by, for the first time, exempting a group of white-collar employees earning below the equivalent of the long test salary level.

[93] *See* 69 FR 22168–69.
[94] *Id.* at 22214.
[95] *See* 84 FR 51260 (Table 4) (showing that the salary level derived from the Department's long test methodology would have been $724 per week rather than the finalized $684 per week amount).

To address the concern that the 2004 rule did not provide overtime compensation for lower-salaried white-collar employees performing large amounts of nonexempt work, in 2016 the Department set the standard salary level using a methodology that produced a salary at the low end of the historical range of short test salary levels.[96] This approach restored overtime protection to lower-salaried white-collar employees who performed substantial amounts of nonexempt work, but it also made nonexempt some employees paid below the new salary level who performed only a limited amount of nonexempt work and would have been exempt under the long duties test.[97] In the challenge to the 2016 rule, the district court expressed concern that the 2016 rule conferred overtime eligibility based on salary level alone to a substantial number of employees who would otherwise be exempt.[98]

As explained in greater detail in section V.B, setting the standard salary level at the 35th percentile of weekly earnings of full-time salaried workers in the lowest-wage Census Region ($1,128 per week, $58,656 annually), which is below the midpoint between the long and short tests, will work effectively with the standard duties test to better define and delimit the EAP exemption, in part by more effectively accounting for the switch from a two-test to a one-test system, and will reasonably distribute the impact of the shift by ensuring overtime protection for some lower-salaried employees without excluding from exemption too many white-collar employees solely based on their salary level.[99] The new standard salary level will also account for earnings growth since the 2019 rule and fully restore the historical screening function of the

[99] *See* section V.A.3.

salary level test. At the same time, the duties test will continue to determine exemption status for a large majority of all salaried white-collar employees subject to the part 541 regulations.

As the Department has explained,[100] earnings thresholds in the part 541 regulations gradually lose their effectiveness as the salaries paid to nonexempt employees rise over time. These impacts grow in the absence of increases to the salary threshold that keep pace with wage growth. Moreover, the longer it takes for the Department to implement such increases, the larger the increases must be to restore earning thresholds to maintain their effectiveness. More than 4 years have passed since the 2019 final rule established the current earnings thresholds. In the intervening years, salaried workers in the U.S. economy have experienced a rapid growth in their nominal wages, such that the current $684 per week salary level now corresponds to approximately the 12th percentile of earnings of full-time salaried workers in the lowest-wage Census Region and retail nationally. The longer the Department waits to update these earnings thresholds, the less effective they become in helping define and delimit the EAP exemption. For example, applying the 2019 standard salary level methodology to current earnings data will result in a new threshold of $844 per week—a 23 percent ($160 per week) increase over the current $684 salary level. Earnings for full-time wage and salary workers nationally have increased even more rapidly, rising by 24 percent during this period.[101]

The Department is also increasing the HCE total annual compensation threshold to the annualized weekly earnings amount of the 85th percentile of full-time salaried workers

[100] *See, e.g.*, 84 FR 51250–51.

[101] Estimate based on the change in median usual weekly earnings of full-time wage and salary workers from Q3 2019 to Q4 2023. BLS, Median usual weekly earnings of full-time wage and salary workers by sex, quarterly averages, seasonally adjusted. https://www.bls.gov/news.release/wkyeng.t01.htm.

nationally ($151,164). Similar to the standard salary level, nominal wage growth among higher-wage workers has eroded the effectiveness of the HCE threshold; data shows that the $107,432 threshold now corresponds to the 70th percentile of annual earnings of full-time salaried workers nationwide. Reapplying the 2019 methodology (annualized weekly earnings of the 80th percentile of full-time salaried workers nationally) to current earnings data would result in a threshold of $132,964 per year—a 24 percent increase over the current threshold of $107,432. Increasing the HCE test's total annual compensation threshold equivalent to the 85th percentile of salaried worker earnings nationwide will result in an HCE threshold reserved for employees at the top of today's economic ladder and, unlike a lower threshold, not risk the unintended exemption of large numbers of employees in high-wage regions.

Finally, the Department is adopting a mechanism to regularly update the thresholds for earnings growth, which will ensure that the thresholds continue to work effectively to help identify EAP employees. As noted above, the history of the part 541 regulations shows multiple, significant gaps during which the salary levels were not updated and their effectiveness in helping to define the EAP exemption decreased as wages increased. While the Department has generally increased its part 541 earnings thresholds every 5 to 9 years in the 37 years between 1938 and 1975, more recent decades have included long periods without raising the salary level, resulting in significant erosion of the real value of the threshold levels followed by unpredictable increases. Routine updates of the earnings thresholds to reflect wage growth will bring certainty and stability to employers and employees alike.

The Department received many comments addressing the adequacy of the current salary and compensation thresholds set in the 2019 rule and the need for this rulemaking. Generally,

employees and affiliated commenters, including labor unions, worker advocacy groups, plaintiff-side law firms, and others, supported the rulemaking as an overdue effort to restore FLSA protections that have eroded in recent decades, though a number of commenters urged the Department to adopt higher threshold increases than those proposed in the NPRM. By contrast, most employers and affiliated stakeholders opposed the main aspects of the proposal, with many urging the Department to withdraw the NPRM altogether. Some employers supported the proposal, or stated that they would support, or not oppose, some change to the current thresholds.

Many commenters agreed with the Department's assessment that the current salary level is too low.[102] *See, e.g.*, Coalition of Gender Justice and Civil Rights Organizations; Coalition of State Attorneys General; Economic Policy Institute (EPI); Schuck Law LLC; Texas RioGrande Legal Aid; United Steel, Paper and Forestry, Rubber, Manufacturing, Energy, Allied Industrial and Service Workers International Union (United Steelworkers). Several commenters asserted that the current standard salary level "fails to provide a true incentive for employers to balance the additional hours they ask of their workers with the costs of . . . overtime pay[,]" which they stated in turn undermines the FLSA's policy goals of providing "extra pay for extra work . . . [and] spreading employment." *See, e.g.*, Center for Law and Social Policy (CLASP); Caring Across Generations; Family Values @ Work; Jobs to Move America; North Carolina Justice Center; Workplace Justice Project. Opining that the standard salary level "has been increased too infrequently – and by too little[,]" Business for a Fair Minimum Wage asserted that the "current outdated overtime threshold is ripe for abuse and fosters unfair pay, worker burnout, poorer

[102] Commenter views on the adequacy of the current HCE threshold are addressed in section V.C.

health and safety, and increased employee turnover." American Federation of Labor and Congress of Industrial Organizations (AFL-CIO) asserted that the $684 per week salary level is "so low that it risks becoming irrelevant[.]"

Finally, some supportive commenters provided reasons why, in their opinion, this rulemaking is timely. A joint comment submitted by 10 Democratic members of the House of Representatives asserted that "[o]vertime standards are long overdue for a meaningful update." *See also* AFL-CIO (asserting that setting the salary level below the long test level in the 2019 rule "led to the faster irrelevance of the current level"). The Coalition of State AGs commented that "[r]egardless of whether [the $684 per week standard salary] level was appropriate in 2019, economic trends in the intervening years have rendered that level obsolete . . . [as] $684 in January 2020 has the same buying power as $816.90 in September 2023." Sanford Heisler Sharp LLP (Sanford Heisler Sharp) invoked "the explosion of remote work since 2020" as support for the rulemaking, asserting that the significant increase in telework since 2020 has meant that employers are "no longer constrained by the practical limitation of the worker leaving the workplace."

Many employer trade associations that were neutral or opposed to the NPRM's specific proposals for increasing the compensation levels expressed openness or support for a rulemaking to change the existing part 541 earnings thresholds. *See, e.g.*, Alliance for Chemical Distribution; Growmark Comment Campaign (GROWMARK); National Cotton Ginners Association; National Golf Course Owners Association. Reporting on the results of a survey taken of its members, Society for Human Resource Management (SHRM) stated that its members "support a reasonable increase to the rule's minimum salary threshold . . . as only 4% of the total number of

respondents indicated that they would not support any increase." Independent Sector remarked that "a healthy and equitable nonprofit workforce requires an increase in the salary threshold beyond $35,568." *See also* North Carolina Center for Nonprofits ("The Center recognizes that a higher salary level threshold would benefit people served by nonprofits and many nonprofit employees, and we encourage the Department to move forward with a final rule that increases the [current] salary level threshold[.]"). National Association of Convenience Stores commented that it "acknowledges that the minimum salary level should be revisited occasionally, and it support[s] USDOL's approach in 2019 of doing so approximately every four years[.]" *See also* Retail Industry Leaders Association (RILA) ("We recognize that the DOL committed itself in 2019 to engage in more regular reviews of the salary threshold level for the [EAP] exemptions and that the DOL now is following up on that commitment.").

Other employer stakeholders disputed the need for this rulemaking. Many of these commenters, including the American Bus Association, Americans for Prosperity Foundation, Construction Industry Round Table, and National Restaurant Association, asserted that increases to the part 541 earnings thresholds were unnecessary at this time because the last update took effect on January 1, 2020. A number of commenters stated that prior salary level updates have occurred less frequently. *See, e.g.,* National Association of Manufacturers (NAM) (never less than 5 years); National Demolition Association (on average every 9 to 10 years); National Association of Wholesale Distributors (NAW) (historically 7 to 9 years). National Retail Federation (NRF) commented that "[t]here has been no increase of the federal minimum wage since 2019, and therefore, there is no need to adjust the minimum salary threshold." NRF further asserted that there was no need to increase the part 541 earnings thresholds because "market

forces have already increased the compensation of lower-level exempt employees" since 2019, echoing the sentiment from several individual employers that markets should determine employee wages rather than government regulation. *See also, e.g.*, Casa Del Mar Beachfront Suites (opposing changes to the regulations and stating that the wages it pays "are based on free enterprise and competitive business plans"); Individual Small Business Commenter (asking the Department to "let the market take care of the situation"). Numerous commenters also asserted that the Department should refrain from amending the part 541 regulations at this time due to current conditions in specific industries or the broader economy. *See, e.g.*, Asian American Hotel Owners Association, Inc.; American Hotel and Lodging Association (AHLA); College and University Professional Association for Human Resources (CUPA-HR); Food Marketing Institute (FMI); Indiana Chamber of Commerce; National Association of Home Builders (NAHB).

Finally, a small number of commenters opposed this rulemaking on the grounds that the Department lacks the legal authority to use any salary criteria to define and delimit the EAP exemption. *See, e.g.*, America First Policy Institute (AFPI); National Federation of Independent Business (NFIB); Pacific Legal Foundation.[103] However, the overwhelming majority of commenters did not oppose the use of salary criteria in the part 541 regulations or address the Department's authority, and a number of employer representatives expressed general support for the use of earnings thresholds. *See, e.g.*, AHLA ("[M]oving to a duties-only test would undoubtedly result in a more rigid duties test . . . [and] likely result in excessive burdens on the hospitality industry, including new and onerous recordkeeping requirements and increased

[103] *See* discussion in section V.A.

litigation costs."); National Restaurant Association ("[S]alary levels save investigators and employers time by giving them a quick, short-hand test[.]"); Transportation Intermediaries Association ("Implementing a duties-only test without considering salary would be overly complex[.]"). This sentiment is consistent with stakeholder feedback provided in earlier part 541 rulemakings.[104]

Having reviewed the comments received, the Department remains of the view that the earnings criteria in the part 541 regulations must be increased and disagrees with commenters that urged the Department to withdraw its proposal. In addition to updating the salary level to account for wage growth since 2019, an update is needed in part because the current standard salary level is too low to fully perform its screening role, as it is now significantly below the contemporary equivalent of the historical long test salary level ($942 per week).[105] Moreover, as the Department explained in the NPRM, there is a need for the Department to update the salary level to account for the shift to a one-test system in the 2004 rule, which broadened the exemption by placing the entire burden of this shift on employees who historically were entitled to the FLSA's overtime protection because they performed substantial amounts of nonexempt work and earned between the long and short test salary levels, but are now exempt because they pass the more lenient standard duties test. This effect would continue to grow over time in the absence of an increase to the current $684 per week standard salary level.

The Department disagrees with the criticism from some commenters that this rulemaking is premature due to the relative recency of the 2019 rule. In that rule, the Department

[104] *See supra* note 23.
[105] *See* sections V.B. and VII.C.8.

"reaffirm[ed] its intent to update the standard salary level and HCE total annual compensation threshold more regularly in the future" than it has in the past, noting that "long periods without updates . . . diminish the usefulness of the salary level test and cause future increases to be larger and more challenging for businesses to absorb."[106] Notably, the Department initially proposed in the 2019 NPRM to codify a commitment to update the part 541 earnings thresholds on a quadrennial basis (*i.e.*, once every 4 years) through notice and comment rulemaking.[107] While that proposed commitment was not adopted in the 2019 final rule, the Department reaffirmed the importance of, and its commitment to, regular updates in its 2019 final rule. The Department's 2019 final rule in no way suggested that increases to the part 541 earnings thresholds should occur only after some longer period of time.

Relatedly, the fact that employee salaries have grown substantially since 2019 underscores the need for this rulemaking. Commenter assertions to the contrary, including that the federal minimum wage has not increased since the salary level was last updated, misunderstand the purpose of the part 541 earnings thresholds, which are intended to assist in the identification of EAP employees based on the wages employees presently receive.[108] To the extent that employers have already been providing raises to exempt EAP workers since January 1, 2020 (the effective date of the 2019 final rule), as some commenters contended, those increases should be appropriately reflected in the earnings thresholds to ensure their effectiveness.

---

[106] 84 FR 51251–52.
[107] 84 FR 10914–15.
[108] The Department "is not authorized to set wages or salaries for executive, administrative, and professional employees . . . [and] improving the conditions of such employees is not the objective of the [part 541] regulations." Weiss Report at 11.

The Department is sensitive to commenter concerns about the potential impact of this rulemaking on affected employers. However, as discussed in greater detail in the regulatory impact analysis in section VII, the costs of this rule, while significant, are a necessary byproduct of ensuring a salary level that works effectively with the duties tests both now and in the future.

IV. Effective Date

The Department proposed that all aspects of the proposed rule would become effective 60 days after publication of the final rule. This proposed effective date was consistent with the 60 days mandated for a "major rule" under the Congressional Review Act and exceeded the 30-day minimum required under the Administrative Procedure Act (APA).[109] The Department recognized that the 60-day proposed effective date was shorter than the effective dates for the 2004, 2016, and 2019 rules, which were between approximately 90 and 180 days. The Department stated that a 60-day effective date was appropriate, however, in part because employers and employees are familiar with the procedures in the current regulations from the 2019 rulemaking and changed economic circumstances have caused a strong need to update the standard salary level. The Department also sought comments on whether to apply different effective dates to different provisions of the proposed rule. The Department is finalizing an effective date of July 1, 2024. The change to the standard salary level methodology and the change to the HCE total annual compensation methodology will have a delayed applicability date of January 1, 2025.[110] Accordingly, the standard salary level and HCE total annual compensation requirement will increase at the initial update on the effective date July 1, 2024 (to

[109] *See* 5 U.S.C. 801(a)(3)(A); 5 U.S.C. 553(d).
[110] The January 1, 2025 applicability date is six months after the effective date of the rule.

$844 and $132,964, respectively), again on the applicability date for the new methodologies on January 1, 2025 (to $1,128 and $151,164, respectively), and then every 3 years after the initial update on July 1 (using the methodology in effect at the time of each update).

The Department specifically asked for comments on whether the effective date for the increase of the standard salary level should be 60 days after publication as proposed or instead if the increase should be made effective at a later date, such as 6 months or 1 year after publication of the final rule. If the effective date were longer than 60 days, the Department sought comments on "whether it should initially adjust the salary level to reflect recent wage growth (for example, making an initial adjustment for wage growth 60 days after publication of a final rule and having the final rule standard salary level be effective 6 months or a year after publication)."[111] Were it to follow such an approach, the Department sought comments on the methodology it should use for an initial update, specifically "whether to implement an initial update to the standard salary level, effective 60 days after publication of a final rule, that uses the current salary level methodology (the 20th percentile of weekly earnings of full-time nonhourly workers in the lowest-wage Census Region and retail nationally) and applies it to the most recent data available[.]"[112]

[111] 88 FR 62180.

[112] *Id.* Commenters generally did not address the Department's suggestion that a delay in the effective date for the proposed standard salary level increase be combined with an initial update to the existing salary level to reflect wage growth. An individual commenter acknowledged the Department's suggestion but "defer[ed] to the economists and statisticians to comment as to whether, if the effective date is later than 60 days, the Department should initially adjust the salary level to reflect recent wage growth, and if so, the methodology for doing so." *See also* Ho-Chunk, Inc., a subsidiary of the Winnebago Tribe of Nebraska.

The Department did not specifically request comment on delaying the effective date of the proposed HCE compensation threshold beyond 60 days or on making an initial update using current data and the existing HCE compensation methodology if it were to delay the effective date of the new total annual compensation threshold. The Department stated that it believed a 60-day effective date was appropriate for the proposed increase to the HCE compensation threshold because only a relatively small number of employees earning between the current and proposed HCE compensation thresholds would not meet the standard duties test and be affected by the proposed change. The Department sought comment on the proposed effective date for the HCE compensation threshold.

Lastly, the Department proposed that the first automatic update to the new compensation levels be effective 3 years after the proposed 60-day effective date. The Department sought comments on whether the date for the first automatic update should be adjusted if it were to make an initial adjustment to any of the compensation levels.

Many commenters that objected to the proposed rule also objected to the proposed 60-day effective date should the Department go forward with a final rule. Commenters addressed their comments to the single 60-day effective date and generally did not suggest different effective dates for different provisions. Several commenters suggested effective dates between 90 and 180 days, which the NPRM noted was the range for recent rules. *See, e.g.*, HR Policy Association (minimum of 90 days); International Foodservice Distributors Association (IFDA) (minimum of 90 days); American Society of Travel Advisors (ASTA) (90 to 180 days); RILA (at least 120 days); NAIS/NBOA (at least 120 days). Several commenters suggested a 180-day effective date. *See, e.g.*, AASA/AESA/ASBO; CUPA-HR; LeadingAge; NRF. The National

Council of Young Men's Christian Associations of the United States of America (YMCA) suggested an effective date of at least 6 to 9 months. The United States Chamber of Commerce (Chamber), National Association of Convenience Stores, and NAFCU suggested an effective date of 12 months. Commenters including the U.S. Small Business Administration Office of Advocacy (SBA Advocacy), National Automobile Dealers Association, and Partnership to Protect Workplace Opportunity (PPWO) suggested an effective date of 12 to 18 months. Commenters including Seyfarth Shaw LLP (Seyfarth Shaw) and Credit Union National Association (CUNA) suggested an effective date of 150 days to align with the proposed notice period for future update amounts. A number of commenters suggested tying the effective date to the beginning of the next calendar year (January 1, 2025). *See, e.g.*, Seyfarth Shaw; SHRM; RILA; YMCA. Some commenters suggested a longer time period between the publication and effective date of the final rule for specific industries or types of employers. *See*, e.g., Boy Scouts of America (requesting at least 12 months of lead time for nonprofit employers); Small Business Majority (180 days for small businesses with fewer than 50 employees). A few commenters linked the need for a longer effective date with what they asserted was uncertainty as to the final salary amount caused by the Department's projections in footnote 3 of the NPRM, with NRF asserting that "[t]he brevity of the implementation period is particularly problematic given the Department's . . . lack of clarity about the dollar value of the proposed threshold." *See also* HR Policy Association; RILA.

Several commenters suggested phasing in any increase in the salary level, often in addition to an initial extension of the proposed effective date. Commenters advocating for a phase-in suggested a range of steps or timeframes. *See, e.g.*, ASTA (not less than 3 years);

Chamber (3 years in even or incrementally larger steps); North Carolina Center for Nonprofits ("multiple years"); National Council of Nonprofits (two or more steps); PPWO (a period of years), Safe Journeys (6 years); Washington Farm Labor Association ("multi-year"); YMCA (proportional increases over 5 years).

Most commenters supporting the Department's proposal did not specifically address the effective date for the Department's proposed changes. Commenters including American Federation of Teachers (AFT), National Partnership for Women & Families (National Partnership), and National Women's Law Center (NWLC) urged the Department to finalize the rule "without delay." American Federation of State, County, and Municipal Employees (AFSCME) specifically supported the 60-day effective date as proposed. A number of commenters in the home and community-based health services sector, that were generally supportive of the Department's intent but expressed concerns with its proposal, advocated for a longer effective date. ANCOR suggested a 2-year delayed effective date followed by a 3-to-5-year phase-in of the new salary level. *See also* Advancing States (18-month to 2-year effective date); National Association of State Directors of Developmental Disabilities Services (NASDDDS) (18- to 24-month effective date for providers of services to individuals with intellectual and developmental disabilities); United Cerebral Palsy (phase-in or transition period for the Department to work with the Centers for Medicare and Medicaid Services and the Administration for Community Living to minimize impact on access to services). BrightSpring Health Services urged the Department to delay the effective date for 2 years and to consider an enforcement delay for the sector as it did in 2016.

As discussed below, the Department believes it is important to update the standard salary level in part to account for substantial earnings growth since the Department last updated the salary level in the 2019 rule. It has been more than 4 years since the Department updated the salary level, and economic conditions have changed significantly since then as evidenced by the salary increase that would result by applying current data to the 2019 salary level methodology ($844 per week, an increase of $160 per week over the existing salary level). These economic conditions have also impacted employees subject to the HCE exemption. Applying current data to the 2019 HCE compensation methodology would result in an annual compensation threshold of $132,964 (an increase of $25,551 over the existing compensation threshold).

At the same time, the Department is also mindful of the desire expressed by multiple commenters to extend the effective date of the new standard salary and annual compensation methodologies from the proposed 60-day period to 6-to-12 months (or more). A longer effective date for the new standard salary level and HCE compensation methodologies would provide employers with more time to make adjustments after they are informed of the exact levels of the thresholds set in this final rule.

After considering the comments, the Department has determined that the final rule will be effective on July 1, 2024, but the new standard salary level methodology and the new HCE total annual compensation methodology will not be applicable until January 1, 2025. The Department is setting the effective date on July 1, 2024 rather than a set number of days after publication in the Federal Register because it will further administrability for employers to have the effective date coincide with the first of a month and some employers' budget years also begin on that

date.[113] While the rule will be effective on July 1, 2024, the Department is extending by an additional 6 months the time for employers to comply with the new standard salary level methodology and the HCE total annual compensation methodology. Accordingly, the applicability date for § 541.600(a)(2), which sets out the new standard salary level of the 35th percentile of weekly earnings of full-time nonhourly workers in the lowest-wage Census Region, and § 541.601(a)(2), which sets out the new HCE total annual compensation level of the annualized earnings amount of the 85th percentile of full-time nonhourly workers nationally, will be January 1, 2025. The Department decided to delay application of the new HCE total annual compensation methodology so that the new methodologies for both the standard salary level and the HCE compensation level take effect at the same time. The delayed applicability date will allow employers 6 additional months beyond the proposed 60-day effective date in which to evaluate employees who will be affected by the new standard salary level methodology and the new HCE compensation level methodology and make any adjustments.

New § 541.607, Regular updates to amounts of salary and compensation required, will be applicable on the effective date July 1, 2024. Because the current standard salary and HCE annual compensation levels have not been updated in more than 4 years, and economic conditions have changed markedly during that time, the first update will occur on that same date (§ 541.607(a)). Subsequent updates will occur every 3 years after this date starting on July 1, 2027 (§ 541.607(b)). As discussed in section V.A, regular updating of the standard salary and HCE annual compensation levels to reflect current wage data is imperative to ensure that they continue to work effectively in combination with the duties tests in defining bona fide EAP

[113] Future updates will occur every three years on July 1.

employees. In light of the approximately 8-month delay in applicability of the new standard salary and HCE total compensation methodologies, the initial update will use the current methodologies from the 2019 rule, which result in a salary level of $844 per week and an HCE total annual compensation threshold of $132,964. Accordingly, the requirement that an exempt employee be compensated on a salary basis at a salary level of at least $844 per week, set forth in § 541.600(a)(1), and that an employee receive total annual compensation of at least $132,964 per year to qualify for the HCE exemption, set forth in § 541.601(a)(1), will apply on July 1, 2024. The Department believes that this date for the initial update is appropriate because it will use methodologies that employers are familiar with. Subsequent triennial updates will apply the most recent four quarters of data to the standard salary and HCE total annual compensation levels in effect at the time of the updates. The Department anticipates that at the time of the first triennial update, the salary and compensation methodologies that are in effect will be the methodologies described in §§ 541.600(a)(2) and 541.601(a)(2) of this final rule. The Department notes that the standard salary and HCE compensation levels need to be updated regularly based on up-to-date earnings data to ensure that they continue to function effectively regardless of the methodology used to set the levels.

Except for the specific provisions discussed in this section that will become applicable on January 1, 2025, all other provisions of this final rule will be applicable on the effective date on July 1, 2024.

V. Discussion of Final Regulatory Revisions

Consistent with its statutory duty to define and delimit the EAP exemption, the Department is making several changes to the earnings thresholds provided in the part 541

regulations. As explained in greater detail below, the Department is setting the standard salary level at the 35th percentile of weekly earnings of full-time salaried workers in the lowest-wage Census Region (currently the South). The Department additionally is raising the HCE test's total annual compensation requirement to the annualized equivalent of the 85th percentile of weekly earnings of full-time salaried workers nationally. Finally, the Department is adopting a new mechanism to update the standard salary level and the HCE total annual compensation threshold, initially on July 1, 2024 and every 3 years thereafter to ensure that they remain effective tests for exemption. The Department is not making substantive changes to any provisions related to the salary basis or job duties tests.

The primary changes to the existing regulations are in §§ 541.5, 541.600, 541.601, and newly added § 541.607. In addition, the Department is making conforming changes throughout part 541 to update references to the applicable salary level requirements.[114] The discussion below begins with the new updating provision (§ 541.607), which will make an initial update to the salary and compensation thresholds on July 1, 2024, followed by discussion of changes to the standard salary level methodology (§ 541.600(a)(2)) and HCE total annual compensation

[114] The Department is also revising §§ 541.100, 541.200, and 541.300 to reflect that an executive, administrative, or professional employee must be compensated on a salary or fee basis at not less than the level set forth in § 541.600 (rather than referencing a specific salary level amount). Similarly, it is revising § 541.204 and § 541.400 to reflect that an employee employed in a bona fide administrative capacity and a computer employee may qualify for the section 13(a)(1) exemption if they are compensated on a salary or fee basis at not less than the level set forth in § 541.600 (rather than referencing a specific salary level amount). The Department is also updating cross-references to § 541.600(a) in §§ 541.602 and 541.605 to reference § 541.600(a)-(c). Finally, the Department is revising § 541.604, which explains the circumstances under which an employer may provide an exempt employee with additional compensation without violating the salary basis requirement, and § 541.605, which sets forth the conditions under which an administrative or professional employee may be compensated on a fee basis, with examples that reflect the new standard salary level amount of $1,128 per week.

threshold methodology (§ 541.601(a)(2)), which will become applicable on January 1, 2025. As noted in these sections, the Department intends for the changes in this final rule to be severable. Severability is addressed more fully at the end of the discussion of final revisions with a discussion of the new severability provision (§ 541.5).

A. Updating the Standard Salary Level and Total Annual Compensation Threshold

As the Department stated in the NPRM, it has long recognized the need to regularly update the earnings thresholds to ensure that they remain useful in helping differentiate between exempt and nonexempt white-collar employees. In each of its part 541 rulemakings since 2004, the Department has observed that a salary level that is not kept up to date becomes obsolete as wages for nonexempt workers increase over time.[115] Long intervals between rulemakings have resulted in eroded earnings thresholds based on outdated earnings data that were ill-equipped to help identify bona fide executive, administrative, and professional employees. This problem was most clearly illustrated by the stagnant salary levels in the regulations from 1975 to 2004, during which period increases in the federal minimum wage meant that by 1991, earnings of a worker paid the federal minimum wage exceeded the long test salary level for a 40-hour workweek and came close to equaling the short test salary level.[116]

The Department proposed in the NPRM a mechanism to regularly update the earnings thresholds to maintain their effectiveness. In a new § 541.607(a)(1) and (b)(1), the Department proposed to update the standard salary level and the HCE total annual compensation requirement every 3 years to reflect current earnings data. The Department proposed in § 541.607(a)(2) and

[115] 84 FR 51250–51; 81 FR 32430; 69 FR 22164. *See also*, 88 FR 62176.
[116] *See* section II.B.1.

(b)(2) to make the triennial updates using the methodologies proposed to set the thresholds in the NPRM—*i.e.*, the 35th percentile of weekly earnings of full-time nonhourly workers in the lowest-wage Census Region (currently the South) for the standard salary level and the annualized weekly earnings of the 85th percentile of full-time nonhourly workers nationally for the HCE total annual compensation requirement.[117] The NPRM also outlined in proposed § 541.607(c) the manner in which the Department would publish advance notice of the updated thresholds and included a pause mechanism in proposed § 541.607(d) that could be triggered to delay a scheduled update under certain circumstances.

The Department proposed to make the first update under its proposed updating mechanism 3 years after the effective date of the final rule. The effective date of the final rule was in turn proposed to be 60 days after publication and to apply to all aspects of the proposed rule, including the proposed methodologies for the standard salary level and the HCE total annual compensation threshold. As discussed in section IV, the Department specifically sought comments on whether the effective date for the proposed change to the standard salary level methodology (to the 35th percentile of weekly earnings of full-time salaried workers in the lowest-wage Census Region) should be 60 days after publication as proposed or if the change should be made effective at some later date, such as 6 months or 1 year after publication of the

[117] Observing that the proposed special salary level for American Samoa and the base rate for the motion picture industry are set in relation to the standard salary level, the Department also proposed that those earnings thresholds reset at the time the standard salary level was updated. The Department is not finalizing its proposal to apply the standard salary level to the U.S. territories subject to the federal minimum wage and to update the special salary levels for American Samoa and the motion picture industry. *See supra* note 9. Therefore, the updating mechanism finalized in this rule will not apply to the special salary levels at this time.

final rule.[118] If the effective date were longer than 60 days, the Department sought comments on "whether it should initially adjust the salary level to reflect recent wage growth (for example, making an initial adjustment for wage growth 60 days after publication of a final rule and having the final rule standard salary level be effective 6 months or a year after publication)."[119] The Department also sought comments on what methodology to use for the initial update, were it to follow such an approach. In particular, the Department invited comments on "whether to implement an initial update to the standard salary level, effective 60 days after publication of a final rule, that uses the current salary level methodology (the 20th percentile of weekly earnings of full-time nonhourly workers in the lowest-wage Census Region and retail nationally) and applies it to the most recent data available ($822 per week based on current data)."[120]

The Department received numerous comments on its proposed updating mechanism. Many organizations representing employee interests as well as some employers generally supported the updating mechanism, while most organizations representing employer interests opposed it. Many of the commenters opposing the proposed updating mechanism asserted that the Department lacked the authority to institute such a mechanism. After considering the comments received, the Department is finalizing the updating mechanism, with some modifications as discussed below, to keep the salary and compensation thresholds up to date with current data and maintain their effectiveness.

The first update under new § 541.607 will occur on July 1, 2024. As discussed in section IV, the new standard salary level and HCE total annual compensation threshold methodologies

[118] 88 FR 62180
[119] *Id.*
[120] *Id.*

will not be applicable until January 1, 2025 (a total of approximately 8 months after publication of this final rule). Accordingly, § 541.607(a) establishes an initial update on July 1, 2024 to the standard salary level and the HCE total annual compensation threshold using the methodologies in place at that time (*i.e.*, the 2019 rule methodologies), which results in a $844 per week standard salary level and a $132,964 HCE total annual compensation threshold. Section 541.607(b) further establishes future updates to the standard salary level and HCE total annual compensation threshold with current earnings data beginning 3 years after the date of the initial update, and every 3 years thereafter, using the methodologies in place at the time of the updates. The Department anticipates that by the time the first triennial update under the updating mechanism occurs on July 1, 2027, assuming the Department has not engaged in further rulemaking, the new methodologies for the standard salary level and HCE total annual compensation requirement established by this final rule will be effective and the triennial update would employ these new methodologies. In response to commenter concerns, the Department is also adding clarifying language from the NPRM preamble to the final regulatory text of the delay provision.

1. The Department's Authority to Adopt a Salary Level Test

The updating mechanism in new § 541.607 will maintain the effectiveness of the salary and compensation thresholds set in §§ 541.600 and 541.601 by adjusting them regularly to reflect current economic data. At the outset, a small number of commenters contended the Department lacked authority under section 13(a)(1) to even include a salary level test in the regulations, advocating for the Department to withdraw this rulemaking. *See, e.g.*, AFPI; Job Creators Network Foundation; NFIB; Pacific Legal Foundation. These commenters asserted that

the express terms of section 13(a)(1) do not permit the Department to include any compensation-based requirements.

The Department maintains its longstanding position that the Secretary's express authority to "define[]" and "delimit[]" the terms of the EAP exemption includes the authority to use a salary level test as one criterion for identifying employees who are employed in a "bona fide executive, administrative, or professional capacity." The Department has used a salary level test since the first part 541 regulations in 1938. From the FLSA's earliest days, stakeholders have generally favored the use of a salary test,[121] and the Department's authority to use a salary test has been repeatedly upheld,[122] including recently in *Mayfield v. U.S. Dept. of Labor*.[123] Despite numerous amendments to the FLSA over the past 85 years, Congress has not restricted the Department's use of the salary level tests in the regulations. Significant regulatory changes involving the salary requirements since 1938 include adding a separate salary level for professional employees in 1940, adopting a two-test system with separate short and long test salary levels in 1949, and creating a single standard salary level test and establishing a new HCE

[121] *See* Stein Report at 5, 19. As discussed in section V.B.4.i, the vast majority of employer commenters in this rulemaking, whether favoring no increase or a smaller increase, presumed the salary level test's continued existence and utility, with some, such as the National Restaurant Association, expressly referencing their support for the 2019 rule's salary level increase. Many commenters acknowledged the salary level's longstanding function of screening obviously nonexempt employees from the exemption. *See* section V.B.4.ii. Other commenters that opposed the proposal nonetheless cited benefits of having a salary level test, including helping to ensure that the EAP exemption is not abused, *see, e.g.*, AASA/AESA/ASBO, Bellevue University, and "sav[ing] investigators and employers time by giving them a quick, short-hand test[.]" *See* National Restaurant Association.

[122] *See, e.g.*, *Wirtz v. Miss. Publishers Corp.*, 364 F.2d 603, 608 (5th Cir. 1966); *Fanelli v. U.S. Gypsum Co.*, 141 F.2d 216, 218 (2d Cir. 1944); *Walling v. Yeakley*, 140 F.2d 830, 832–33 (10th Cir. 1944).

[123] 2023 WL 6168251 (W.D. Tex. Sept. 20, 2023), *appeal docketed*, No. 23-50724 (5th Cir. Oct. 11, 2023).

exemption test in 2004. These changes were all made through regulations issued pursuant to the Secretary's authority to define and delimit the exemption. Despite having amended the FLSA numerous times over the years, Congress has not amended section 13(a)(1) to alter these regulatory compensation requirements.

The FLSA gives the Secretary power to "define[]" and "delimit[]" the terms "bona fide executive, administrative, or professional capacity" through regulation. Congress thus "provided that employees should be exempt who fell within certain general classifications"—those employed in a bona fide executive, administrative, or professional capacity—and authorized the Secretary "to define and delimit those classifications by reasonable and rational specific criteria." [124] Therefore, the Department "is responsible not only for determining which employees are entitled to the exemption, but also for drawing the line beyond which the exemption is not applicable." [125]

2. Initial Update to the Standard Salary Level and Total Annual Compensation Threshold to Reflect the Change in Earnings Since the 2019 Rule

The Department received many comments regarding its proposed regulatory mechanism for updating the standard salary level and the HCE total annual compensation requirement to maintain their effectiveness. While commenters disagreed on how and when the salary and total annual compensation thresholds should be updated, commenters generally did not dispute that the earnings thresholds need to be periodically updated to reflect current economic conditions.

---

[124] *Walling*, 140 F.2d at 831-32; *see Ellis v. J.R.'s Country Stores, Inc.,* 779 F.3d 1184, 1199 (10th Cir. 2015) (approvingly quoting *Walling*); *see also Auer v. Robins,* 519 U.S. 452, 456 (1997) ("The FLSA grants the Secretary broad authority to 'defin[e] and delimi[t]' the scope of the exemption for executive, administrative, and professional employees.").
[125] Stein Report at 2.

Many commenters that opposed the proposed updating mechanism nonetheless agreed that the thresholds in the regulations need to be periodically updated. *See, e.g.*, ASTA; FMI; SBA Advocacy; SHRM; TechServe Alliance; World Floor Covering Association (WFCA).

In the context of addressing the Department's proposed standard salary level methodology, several commenters generally expressed support for—or in opposing the salary level suggested in the alternative—an increase to the salary level using the 2019 methodology. *See, e.g.*, Bellevue University; Center for Workplace Compliance (CWC); RILA; YMCA. CWC noted that the 2019 methodology is well-established and already familiar to employees and employers, and Bellevue University similarly stated that this methodology "has been previously field-tested on the U.S. economy[.]" As noted in section IV, commenters generally did not address applying the 2019 methodology through the updating mechanism.

The Department remains convinced that effective salary and compensation thresholds must use up-to-date earnings data. This position is long-standing. When the Department updated its salary level tests in 1949, for example, it explained that the "relative ineffectiveness of these tests in recent years is the result of changed economic conditions rather than any inherent weakness in the tests[,]" and that the "increase in wage rates and salary levels gradually weakened the effectiveness of the present salary tests as a dividing line between exempt and nonexempt employees."[126] The principle that effective tests for exemption must use up-to-date earnings data remains as true today as it was 75 years ago.

The Department's need to update the standard salary level and HCE total annual compensation requirement for current data in this rulemaking is distinct from its decision to

[126] Weiss Report at 8.

establish new methodologies for setting those thresholds. The current salary and compensation levels have been in place for more than 4 years and need to be updated to reflect current wage data to maintain their effectiveness.[127] Since the Department's last rulemaking in 2019, there has been significant change in salaried worker earnings.[128] The $684 standard salary level is far below what constitutes the 20th percentile of weekly earnings of full-time salaried workers in the South and/or in the retail industry nationally using current data, which greatly undermines the utility of the threshold as a means of helping distinguish exempt from nonexempt employees. The same is true for the HCE total annual compensation threshold. Updating the existing thresholds to reflect current earnings data is consistent with the intent the Department has expressed repeatedly in its past part 541 rulemakings, including in the 2019 rule, to periodically update the thresholds.

For these reasons, the Department is revising final § 541.607(a) to provide for an initial update to the standard salary level and HCE total annual compensation requirement with current earnings data on July 1, 2024. Specifically, the standard salary level will be updated to the 20th percentile of weekly earnings of full-time salaried workers in the South and/or in the retail industry nationally using the most recent data, resulting in a standard salary level of $844 per week. The HCE total annual compensation threshold will be updated to the 80th percentile of full-time salaried worker earnings nationwide using the most recent data, resulting in an annual compensation threshold of $132,964. The Department believes that the July 1, 2024 effective date provides sufficient time for employers to adjust to this initial update because the

[127] The standard salary level and HCE total annual compensation threshold in the 2019 rule were set using pooled data for July 2016 to June 2019, adjusted to reflect 2018/2019. 84 FR 51250.
[128] *See* section VII.

methodology used for the initial update to the standard salary level has been used since 2004 and is familiar to the regulated community. The size of the initial increase to the standard salary level, which is $160 per week, is also less (in nominal terms) than the $229 per week change that resulted from the 2019 rule.[129]

The initial update on July 1, 2024 and the change in the standard salary level and HCE total annual compensation methodologies on January 1, 2025 will result in two increases in the compensation thresholds within a 12-month period. The Department recognizes that for some employers both changes to the compensation thresholds may occur in the same budget year. Because both the amount of the initial update and the subsequent increase to the thresholds are set forth in this final rule, some employers may choose to make a single adjustment at the first date that encompasses both the initial update and the impending change to the standard salary level and the HCE total annual compensation threshold.[130]

The Department intends for the initial update of the standard salary level and the HCE total annual compensation requirement, using current earnings data applied to the 2019 rule methodologies, to be severable from future triennial updates to the thresholds under § 541.607(b), as well as from the revision to the methodologies for the standard salary level and the HCE total annual compensation threshold discussed in section V.B and section V.C. In implementing the initial update, the Department intends to account for changes in earnings since

[129] Consistent with the 2019 rule, the Department used pooled data for the most recent 3 years (2021, 2022, 2023), adjusting them to reflect 2023, for the initial updates to both the standard salary level and HCE total annual compensation threshold. *See* 84 FR 51250.

[130] Although the Department's approach is not a phase-in, the effect of increasing the salary level twice in 8 months is, from a timing perspective, not altogether different from the request from some commenters to phase in the salary level in more than one step. *See, e.g.*, Argentum & ASHA; Associated General Contractors; SBA Advocacy.

the 2019 rule. In changing the methodology for the standard salary level, the Department further intends to fully restore the salary level's historic screening function and account for the shift in the 2004 rule from a two-test to a one-test system for defining and delimiting the EAP exemption.[131] Lastly, in changing the methodology for the HCE total annual compensation threshold, the Department intends to ensure the HCE threshold's role as a streamlined alternative for those employees most likely to meet the standard duties test by excluding all but those employees "at the very top of [the] economic ladder[.]"[132] These are independent objectives of this rulemaking and the provisions implementing them can each stand alone. Therefore, the Department intends for the initial update to remain in force even if the methodologies for the standard salary level and/or the HCE total annual compensation threshold established by this final rule are stayed or do not take effect. Similarly, the Department intends for the initial update to remain in effect even if future triennial updates under § 541.607(b) are stayed or do not take effect.

The initial update will take effect approximately 60 days after the publication of the final rule, immediately coming out of this notice and comment rulemaking. As such, the notice procedures set forth in § 541.607(b)(3) will not apply. As discussed below, future triennial updates will be preceded by advance publication of a notice of the updated salary level and HCE total annual compensation threshold in the Federal Register. For the initial update, this final rule provides notice of the updated salary and compensation levels.[133]

---

[131] *See* section V.B.
[132] *See* section V.C.
[133] The NPRM included updating the 2019 rule standard salary level and HCE annual compensation threshold using 2022 data as a regulatory alternative, stating that applying the

3. Future Triennial Updates to Keep the Standard Salary Level and Total Annual Compensation Threshold Up to Date

As the Department previously explained, the earnings thresholds are only an effective indicator of exempt status if they are kept up to date. Left unchanged, the thresholds become substantially less effective in helping identify exempt EAP employees as wages for workers increase over time. To that end, the Department proposed to triennially update the standard salary level and HCE total annual compensation threshold by applying the most recent earnings data to the methodologies set forth in proposed § 541.600(a)(1) and § 541.601(a)(1), while any change to the methodologies used to set the standard salary level and HCE annual compensation threshold would be effectuated through future rulemaking.

The Department received many comments on its proposed triennial updating mechanism for keeping the thresholds up to date in the future, which are addressed below. The comments were sharply divided on this aspect of the NPRM. After considering the comments received, the Department concludes that establishing a mechanism for resetting the standard salary level and HCE total annual compensation requirement based on current earnings data, and on a regular 3-year schedule, will ensure that the thresholds remain effective into the future and thus better serve to help define and delimit the EAP exemption.

i. The Department's Authority to Update the Standard Salary Level and Total Annual Compensation Threshold with Current Data in the Future

The Department received many comments regarding its authority to update the earnings thresholds through the proposed triennial updating mechanism. A majority of the commenters

---

methodologies would result in a standard salary level of $822 per week and a HCE annual compensation threshold of $125,268. *See* 88 FR 62218.

opposing the updating mechanism challenged the Department's authority to adopt such a provision. Most commenters that supported the updating mechanism did not specifically discuss the Department's authority to institute such a mechanism. As to commenters supporting the proposed triennial updating mechanism that addressed the issue, they supported the Department's authority.

Commenters favoring automatic updating, such as AFL-CIO and EPI, agreed with the Department that just as the Department has authority to set salary thresholds for the EAP exemption, it also has authority to provide for regular updates to ensure the thresholds do not erode over time. Some supportive commenters further emphasized that future updates would make no change to the standard (*i.e.*, methodology) by which the Department implements the FLSA, but rather merely ensure that the standard accounts for current economic conditions. *See, e.g.*, Administrative Law Professors; Democracy Forward Foundation; EPI. The Administrative Law Professors similarly asserted that automatic adjustments to the earnings thresholds fall within the Secretary's authority to define and delimit "what it means to function in a 'bona fide executive, administrative, or professional capacity[.]'" Observing that even a so-called "static" salary threshold expressed in "non-indexed dollar terms" is constantly changing as a matter of economic value, the Administrative Law Professors asserted that "if a non-indexed salary threshold is lawful, as nobody seriously questions, so too is a standard pegged to income percentile." The Administrative Law Professors observed "it is arguably more rational" for the Department to "proffer a regulation that expressly accounts for the inevitably dynamic nature of every salary threshold . . . rather than to permit arbitrarily fluid macroeconomic conditions to dictate the threshold's true economic worth."

On the other hand, many commenters opposing the proposed updating mechanism asserted that the Department lacks statutory authority to update the thresholds in this manner. Some of these commenters contended that since the FLSA does not expressly authorize the Department to index the earnings thresholds unlike, for example, the Social Security Act or the Patient Protection and Affordable Care Act, it follows that the FLSA does not authorize the Department to automatically update the thresholds.[134] *See, e.g.*, CUPA-HR; International Dairy Foods Association (IDFA); PPWO; RILA; Seyfarth Shaw. Several commenters pointed out that Congress did not provide for automatic updating of any of the earnings requirements under the FLSA, such as the minimum wage under section 6, the tip credit wage under section 3(m), or the hourly wage for exempt computer employees under section 13(a)(17). *See, e.g.*, AFPI; FMI. Commenters including National Restaurant Association and PPWO further asserted that Congress never amended the FLSA to grant the Department explicit authority to index the salary level despite knowing that the Department has updated the salary level on an irregular schedule.

As the Department stated in the NPRM, the Department's authority to update the salary level tests for the EAP exemption by regularly resetting them based on existing methodologies is

[134] In contrast, the Administrative Law Professors highlighted that "[a]utomatic updating is a common feature of regulations pegged to monetary values, even when the relevant authorizing statutes make no specific reference to indexing or automatic adjustment." Some of the examples cited by the Administrative Law Professors to illustrate this point include: 79 FR 63317 (2014) (establishing automatic inflationary adjustments to the minimum amount set by the regulation to define "adverse credit history"); 76 FR 23110 (2011) (establishing automatic adjustments to the amount of "Denied Boarding Compensation" airlines must pay affected passengers); 88 FR 35150 (2023) (adopting once-every-five year inflation adjustments to the revenue threshold for defining a "small business"); and *Amusement & Music Operators Ass'n v. Copyright Royalty Tribunal*, 676 F.2d 1144 (7th Cir. 1982), cert. denied, 103 S. Ct. 210 (1982) (upholding a rule promulgated by the Copyright Royalty Tribunal establishing a $50 compulsory royalty fee to be paid by jukebox operators, and which would be subject to future inflationary adjustments).

grounded in section 13(a)(1), which expressly gives the Secretary broad authority to define and delimit the scope of the exemption. Using this broad authority, the Department established the first salary level tests by regulation in 1938. Despite numerous amendments to the FLSA over the past 85 years, Congress has not restricted the Department's use of the salary level tests. As just discussed, significant changes involving the salary requirements made through regulations issued pursuant to the Secretary's authority to define and delimit the exemption include adding a separate salary level for professional employees in 1940, adopting the two-test system in 1949, and switching to the single standard test and adding the new HCE test in 2004. Despite having amended the FLSA numerous times over the years, Congress has not amended section 13(a)(1) to alter these regulatory salary requirements.

Unlike the statutes some of the commenters referenced explicitly providing for indexing, or the statutory FLSA wage rates—*i.e.*, the minimum wage under section 6, the tip credit wage under section 3(m), or the hourly wage for exempt computer employees under section 13(a)(17)—the part 541 earnings thresholds are established in the regulations. Therefore, it is not surprising that the FLSA contains no specific reference to the indexing or automatic adjustments of these thresholds. The Department agrees with the Administrative Law Professors and other commenters that stated that the Department has the authority to establish a mechanism to automatically adjust the earnings thresholds to ensure their continued effectiveness, using a process established through notice and comment rulemaking, just as it has the authority to initially set them. The Department believes the updating mechanism in this final rule fulfills its statutory obligation to define and delimit the EAP exemptions by preventing the thresholds from becoming obsolete and providing predictability and clarity for the regulated community.

Many of the commenters opposed to the updating mechanism also asserted that automatically updating the earnings thresholds would violate the APA's rulemaking requirements expressly incorporated by reference in section 13(a)(1). *See, e.g.*, AFPI; FMI; National Club Association; and Wage and Hour Defense Institute. These and other commenters claimed that the Department cannot lawfully update the salary level without engaging in notice and comment rulemaking for each update. *See, e.g.*, AASA/AESA/ASBO; Competitive Enterprise Institute; CWC; RILA. IFDA, for example, asserted that notice and comment rulemaking needs to precede each future update so that stakeholders have the opportunity to comment on and adequately prepare for any changes that will affect them. AHLA commented that the proposal to update the thresholds triennially without a preceding opportunity for comment is "drastic and troublesome" and that "notice and comment will help ensure that the knowledge, expertise, and vital input of interested stakeholders will be considered before moving forward with increases."

Relatedly, AFPI, NRF, and SBA Advocacy asserted that automatic updating would violate the directive under section 13(a)(1) that the Department define and delimit the EAP exemption "from time to time" by regulations. NRF, for example, noted that Congress asked the Department to revisit the EAP exemptions from time to time "expecting the Department to use its deep knowledge of the U.S. economy in general, and labor market in particular, to establish appropriate parameters for the exemptions" and contended that by implementing automatic updates the Department evades that decision-making process. AFPI similarly asserted that the "directive, 'from time to time,' does not allow the Department to set it and forget it."

The Department disagrees with the assertion that triennial updates using the compensation methodologies adopted in the regulations improperly bypass the APA's—and

section 13(a)(1) by reference—requirements for notice and comment rulemaking. The Department is adopting an updating mechanism in this rulemaking after publishing a notice of the proposed rule and providing opportunity for stakeholders to comment in accordance with the APA's notice and comment requirements. The Department has received and considered numerous comments on the proposed updating mechanism. Future updates under the triennial updating mechanism would simply reset the thresholds by applying current data to a standard already established by notice and comment regulation, providing clarity for the regulated community as to future changes in the thresholds. Therefore, the Department disagrees with commenters that claimed that notice and comment rulemaking must precede each future update made through the updating mechanism even where the methodology for setting the compensation levels and the mechanism for updating those levels would remain unchanged.[135] The updating mechanism will not alter the Department's ability to engage in future rulemaking to change the updating mechanism or any other aspect of the part 541 regulations at any point.

The Department also disagrees with commenters that claimed section 13(a)(1)'s "time to time" language precludes the Department from adopting an updating mechanism. The updating

[135] Some commenters, such as Independent Electrical Contractors, RILA, and U-Haul, further asserted that automatic updates improperly bypass the requirements of the Regulatory Flexibility Act ("RFA") and executive orders requiring the Department to undertake a detailed economic and cost analysis. The Department disagrees. Pursuant to the RFA, the Department has included in this final rule as well as in the NPRM detailed estimates for the future costs of updates under the updating mechanism. *See* section VII and VIII; 88 FR 62224. Similarly, as relevant here, Executive Order 13563 directs agencies to take certain steps when promulgating regulations, including using the "best available techniques to quantify anticipated present and future benefits and costs as accurately as possible" and adopting regulations "through a process that involves public participation." 76 FR 3821 (Jan. 18, 2011). The current rulemaking fully satisfies all aspects of Executive Order 13563. *See* section VII; 88 FR 62182. The RFA and Executive Order 13563 do not require notice and comment rulemaking to precede future triennial updates made through the updating mechanism established in this rulemaking.

mechanism would only ensure the standard salary level and total annual compensation threshold remain at the percentiles established through rulemaking. This does not preclude the Department from engaging in future rulemaking "from time to time" if it determines that there is a need to change the underlying methodologies for setting the standard salary level or HCE total annual compensation threshold, the updating mechanism, or any other substantive change to part 541, as the Department did, for instance, in 1940, 1949, 1958 1975, 2004, 2016, and 2019.

Many commenters opposing the updating mechanism referenced the Department's prior statements to further support their assertion that the Department lacks authority to implement automatic updating. In particular, commenters pointed to the Department's decision not to institute an automatic updating mechanism in the 2004 rule and its statement that "the Department finds nothing in the legislative or regulatory history that would support indexing or automatic increases." *See, e.g.*, NAM; NFIB; SBA Advocacy. Others, like PPWO, further asserted that automatic updates are contrary to the Department's statement in the 2004 rule that "[t]he salary levels should be adjusted when wage survey data and other policy concerns support such a change."

As stated in the NPRM, the Department's decision not to institute an automatic updating mechanism in the 2004 and 2019 rulemakings in no way suggests that it lacks the authority to do so. In its 2004 rule, the Department stated that it found nothing in the legislative or regulatory history that would support indexing or automatic increases.[136] As the Department elaborated in its 2016 rulemaking, there was likewise no such authority prohibiting automatic updating.[137] The

[136] 69 FR 22171.
[137] *See* 81 FR 32432–33 (noting that "instituting an automatic updating mechanism . . . is an appropriate modernization and within the Department's authority.").

2004 rule did not discuss the Department's statutory authority to promulgate an updating mechanism through notice and comment rulemaking or explore in detail whether automatic updates to the salary levels posed a viable solution to problems created by lapses between rulemakings. As the Department explained in the 2016 rule, the Department's reference in the 2004 rule to automatic updating simply reflected the Department's conclusion at that time that an inflation-based updating mechanism, such as one based on changes in the prices of consumer goods, that unduly impacts low-wage regions and industries, would be inappropriate. Such concerns are not implicated here, where the mechanism will update the salary level to keep it at the same percentile of earnings of full-time salaried workers. As for concerns that the salary level should be updated only when wage data warrants it, the updating mechanism does just that—as the earnings thresholds will change only to the extent earnings data in the relevant data sets have changed, whether upward or downward as conditions dictate.

Similarly, the Department declined to adopt automatic updating in the 2019 rule because it "believe[d] that it is important to preserve the Department's flexibility to adapt to different types of circumstances,"[138] and not because it lacked authority to do so. While the Department decided not to institute an updating mechanism in its 2019 rule, it never said that it lacked the statutory authority to do so. Upon further consideration, the Department concludes that the best way to ensure the standard salary level and HCE total compensation threshold remain up to date is a triennial updating mechanism that maintains the Department's flexibility to adapt to different circumstances and change course as necessary.

[138] 84 FR 51252.

ii. Rationale for Continuing to Update the Standard Salary Level and Total Annual Compensation Threshold with Current Data in the Future

The Department explained in the NPRM that its proposed updating mechanism would allow for regular and more predictable updates to the earnings thresholds, which would benefit both employers and employees and would better fulfill the Department's statutory duty to define and delimit the EAP exemption by preventing the erosion of those levels over time. The Department noted that its regulatory history, marked in many instances by lengthy gaps between rulemakings, underscored the difficulty with updating the earnings thresholds as quickly and regularly as necessary to keep pace with changing employee earnings and to maintain the full effectiveness of the thresholds. Through the proposed updating mechanism, the Department explained it would be able to timely and efficiently update the standard salary level and the HCE total annual compensation requirement by using the same methodologies as initially proposed and adopted through notice and comment rulemaking to set the thresholds. The Department noted that updating the thresholds in this manner would prevent the more drastic and unpredictable increases associated with less frequent updates and ensure that future salary level increases occur at a known interval and in more gradual increments. The Department received many comments on the rationale for implementing the proposed triennial updating mechanism.

Several organizations representing employee interests as well as a handful of employers agreed with the Department that an updating mechanism would ensure the thresholds keep pace with wages and retain their usefulness. *See, e.g.*, Coalition of Gender Justice and Civil Rights Organizations; National Partnership; National Education Association (NEA); National Employment Lawyers Association (NELA); National Employment Law Project (NELP); Uncommon Goods; W.S. Badger Company. Nichols Kaster, PLLP (Nichols Kaster) noted the

updating mechanism protects the thresholds from becoming outdated and irrelevant, although it believed that annual updates would better reflect the economy. NELA commented that "indexing represents the only simple and accurate" way to preserve the real value of the standard salary level and the HCE total compensation threshold through time, although they contended that the proposed methodologies should be higher earnings percentiles.

Many commenters supportive of the updating mechanism also asserted that regular updates would provide greater predictability for employers and employees alike. *See, e.g.*, AFL-CIO; Center for WorkLife Law at University of California Law and Partner Organizations (Family Caregiving Coalition); Justice at Work; NEA. Small Business Majority expressed support for the proposed updating mechanism noting that smaller, predictable increases that are known well in advance—as opposed to "large and sudden" increases—would allow small business owners to be better prepared for any staffing or compensation changes they need to make. Nineteen Democratic Senators commented that an updating mechanism is the most effective way to provide consistency and stability for both workers and businesses. *See also, e.g.*, EPI; Washington State Department of Labor and Industries. CLASP similarly noted the proposed updating provision would enable employers to know exactly what to expect and when to expect it.

In contrast, many organizations representing employer interests disagreed with the Department's rationale for the proposed updating mechanism. Several of these commenters criticized the Department for stating that the updating mechanism is a more "viable and efficient" means of updating the thresholds by asserting that the Department is trying to avoid its obligation to engage in notice and comment rulemaking simply because such rulemaking is

resource-intensive. *See, e.g.*, IDFA; National Restaurant Association; PPWO. The Chamber similarly commented that the Department's history of long gaps in rulemaking is not an adequate justification for adopting what it characterized as "a historically unprecedented change."

Commenters including AHLA, FMI, the National Beer Wholesalers Association, and Seyfarth Shaw, asserted automatic updating would lead to uncertainty that would pose administrative and compliance burdens on employers. Some commenters, such as HR Policy Association and PPWO, asserted the proposed mechanism would make it difficult to ascertain exactly what the threshold will be every 3 years. Other commenters, including CUPA-HR, FMI, IDFA, and SHRM, asserted triennial updates would have a significant financial impact on employers as they would need to account for the cost of salaries or potential overtime as well as the cost of conducting reclassification analysis and implementing the necessary changes every 3 years. Some nonprofit organizations and providers of home and community-based health services expressed concern that future updates would be difficult for the nonprofit sector because of their funding sources. *See, e.g.*, Allegheny Children's Initiative; ANCOR.

Some commenters opposing the updating mechanism claimed automatic updates would hinder the Department from considering economic circumstances when making updates. Ten Republican Senators asserted automatic updates "blind the administration to critical considerations about the state of the economy and the workforce, including the unemployment rate, inflation, job vacancies, or whether employers are in a position to adjust to the increases without shedding jobs." Some commenters, including Illinois College, ISSA, and the Society of Independent Gasoline Marketers of America, expressed concern that the proposed mechanism could lead to updates happening at a time of economic downturn or a recession and could further

exacerbate those economic conditions. Others expressed concern that the updating mechanism would hinder future rulemaking to change the earnings thresholds. *See, e.g.*, Chamber; National Association of Convenience Stores.

The Department continues to believe that the updating mechanism will ensure the earnings thresholds keep pace with changes in earnings and remain useful in the future in helping to delineate EAP employees from non-EAP employees. Whereas a fixed salary level threshold becomes less effective over time as the data used to set it grows outdated, a fixed methodology remains relevant if applied to contemporaneous data. The Department agrees with the commenters that stated that the updating mechanism's triennial updates would provide greater certainty and predictability for the regulated community. Unlike irregular updates to the earnings thresholds, which may result in drastic changes to the thresholds, regular updates on a pre-determined interval and using an established methodology will produce more predictable and incremental changes. For this reason, the Department disagrees with the assertion by some commenters that regular updates will lead to unpredictable adjustments and ongoing uncertainty. The Department also disagrees with commenters like HR Policy Association that claimed the proposed mechanism will make it difficult to ascertain what exactly the threshold will be every 3 years. Through the updating mechanism, the Department will reset the standard salary level and total annual compensation threshold using the most recent, publicly available, U.S. Bureau of Labor Statistics (BLS) data on earnings for salaried workers. Therefore, stakeholders will be able to track where the thresholds would fall on a quarterly basis by looking at the BLS data[139] and can estimate the changes in the thresholds even before the Department publishes the notice with

[139] *See* https://www.bls.gov/cps/research/nonhourly/earnings-nonhourly-workers.htm.

the adjusted thresholds in the Federal Register. The Department believes that, compared to the irregular updates of the past, stakeholders will be better positioned to anticipate and prepare for future updates under the updating mechanism.

Moreover, the Department does not agree with the assertion that routine updates would lead to undue increases at a time of economic downturn or recession. If anything, the Department's new updating mechanism will ensure that the thresholds match the earnings data as they exist at the time of the update, whether by increasing or decreasing the earnings thresholds as warranted by the data. As discussed below, the Department's decision to deviate from the 2016 rule by adopting a mechanism for pausing future updates further guards against such concerns. Similarly, nothing about the updating mechanism precludes the Department from revisiting the standard salary level and HCE total annual compensation methodologies in the future when conditions warrant. Having considered the comments received, the Department remains convinced that an updating mechanism providing for regular updates on a triennial basis is the best means of ensuring that the salary and compensation tests continue to provide an effective means, in tandem with the duties tests, to distinguish between EAP and non-EAP employees.

iii. Specific Features of the Updating Mechanism

The Department received many comments regarding the various aspects of the proposed updating mechanism, including the updating frequency, methodology, notice period, and pause mechanism. The Department proposed in § 541.607(a) and (b) to update the earnings thresholds every 3 years by using the same methodology used in the regulations to set the thresholds. Specifically, proposed § 541.607(a)(2) and (b)(2) stated that the methodologies for setting the

standard salary level and HCE annual compensation threshold in the NPRM would be used for future updates.

Many commenters that supported the proposed updating mechanism expressed a preference for more frequent updates. *See, e.g.*, Coalition of State AGs; Jobs to Move America; NEA; NELP. Commenters including AFL-CIO, National Partnership, and Nichols Kaster asserted annual updates, compared to triennial updates, offered better predictability and would ensure that the salary threshold keeps pace with the changes in wages. EPI similarly observed that annual updates would ensure that the salary threshold more closely adheres to the chosen percentile "rather than slipping further and further behind in between triennial updates[.]"

Most commenters that opposed updating did not separately comment on the updating frequency, but some addressed it in the context of discussing the impact of the updating mechanism on employers. Many of these commenters claimed triennial updates would impose substantial financial and compliance burdens on employers as they would need to engage in reclassification analysis and implement necessary changes to adjust to the updated thresholds every 3 years. *See, e.g.*, ABC; CUPA-HR; HR Policy Association; NAM. Most of the commenters opposing the updating mechanism did not suggest an alternative updating frequency. Notwithstanding their objection to automatic updating, however, a few commenters, including AHLA, ASTA, WFCA, and YMCA, suggested a longer updating frequency ranging from 4 to 6 years.

The Department agrees with the commenters that stated annual updates would keep the salary level more up to date given that employee earnings are constantly changing. However, as stated in the NPRM, the Department is also mindful of the potential burden that possible changes

to the tests for exemption on an annual basis would impose on employers, including costs associated with evaluating the exemption status of employees on an annual basis. Conversely, the Department is not convinced by commenter claims that triennial updates would impose an undue financial and compliance burden on employers. Many of these commenters did not address the fact that the alternative to automatic updating is not a permanent fixed earnings threshold, but instead larger changes to the threshold that could occur during irregular future updates. Since the updating mechanism will change the thresholds regularly and incrementally, and based on actual earnings of salaried workers, the Department predicts that employers will be in a better position to be able to adjust to the changes resulting from triennial updates. The Department remains persuaded that triennial updates are frequent enough to ensure that the part 541 earnings thresholds are kept up to date—and continue to serve the purpose of helping to identify exempt employees—while not being overly burdensome for employers. The final rule, therefore, adopts an updating frequency of 3 years as proposed.

The comments regarding the method through which the Department's proposed updating mechanism would reset the salary and compensation thresholds were also divided. Commenters favoring routine updates also supported the proposal to update the thresholds using the fixed percentile approach—to keep the thresholds at the same percentile of earnings of full-time salaried worker as established by the regulations. NELA, for example, asserted that updating the thresholds using a fixed percentile of earnings "is the fairest way to maintain consistency in workers' FLSA eligibility in light of inevitable economic change." EPI similarly noted updating the thresholds through the proposed methodology ensures that the standard under the Department's rule "is simply preserved – neither strengthened nor weakened."

Commenters that opposed automatic updating opposed the proposed updating methodology. Several of these commenters reiterated an assertion from comments on the 2016 rulemaking that the proposed updating mechanism—tied to a fixed percentile—would result in the salary level being "ratcheted" upward over time due to the resulting actions of employers. *See, e.g.*, Chamber; NAM; NRF (including a report by Oxford Economics); SBA Advocacy. The commenters contended that in response to each automatic update, most employers would either reclassify employees earning below the new salary level to hourly status or raise the salaries of those employees to keep their exempt status. These responses, the commenters claimed, would skew the relevant data for future updates in favor of substantial increases because those employees who were reclassified as hourly would fall out of the data pool causing the data pool to be smaller and skew towards higher-paid workers. *See, e.g.*, Chamber; National Association of Convenience Stores; National Restaurant Association; NRF. While expressing a strong preference that automatic updates be abandoned altogether, some of the commenters concerned about this possible effect suggested that the Department adopt an updating mechanism tied to an inflation-related index. *See* Seyfarth Shaw; SHRM.

The Department notes that very similar comments concerning an alleged "ratcheting" effect were received during the 2016 rulemaking, which also proposed an updating mechanism based on earnings percentiles. In response to those comments, the Department examined historical data to determine the impact of its previous salary increase.[140] Specifically, the Department looked at the share of full-time white-collar workers paid on an hourly basis before and after the 2004 rule (January–March 2004; January–March 2005) both below and above the

[140] 81 FR 32441.

standard salary level. The Department found that following the 2004 rule, the share of full-time white-collar workers being paid hourly actually decreased marginally in the group below the standard salary level and increased slightly in the group above the standard salary level.[141]

The Department finds the claim that updating with a fixed percentile methodology would lead to the "ratcheting" upward of the thresholds to be unsubstantiated. The "ratcheting" claim is almost entirely based on the assumption that employers will respond to an automatically updated salary level by converting all or a large number of newly nonexempt workers to hourly status, thus removing them from the data set of full-time salaried workers. Yet none of the commenters advancing this claim presented any tangible data or evidence to support their assumption. Even those few commenters that provided economic analyses rested their views on the same unsubstantiated assumption that employers will generally reclassify newly nonexempt employees as hourly. *See, e.g.*, NRF (including a report by Oxford Economics); PPWO (quoting a study by Edgeworth Economics).[142] The results of the Department's close examination of the impact of the 2004 salary level increase provide no evidence that salary level increases due to regular triennial updating will result in employers converting significant numbers of affected EAP workers to hourly pay status and thus raising potential concerns about skewing future updates. Although many commenters made nearly identical ratcheting claims in this rulemaking, none of the commenters addressed the Department's analysis in response to those same claims in the 2016 rule.

[141] *See id.* at 32441, 32507–08.

[142] The Edgeworth Economic study that was quoted by PPWO and a few other commenters seemed to assume, without any support, that all affected workers or newly nonexempt workers who earn between $684 and $1,059 per week will be reclassified as hourly employees.

Having found no merit in the "ratcheting" claim, the Department declines to adopt the alternative methodologies suggested such as an updating mechanism tied to an inflation-related index. As noted in the NPRM, the fixed percentile approach, as opposed to other methods such as indexing the thresholds for inflation, eliminates the risk that future levels will deviate from the underlying salary setting methodology established through rulemaking. During the 2016 rule, the Department extensively considered whether to update the thresholds based on changes in the Consumer Price Index for All Urban Consumers (CPI-U)—a commonly used economic indicator for measuring inflation.[143] The Department chose to update the thresholds using the same methodology used to initially set them in that rulemaking (*i.e.*, a fixed percentile of weekly earnings of full-time salaried workers in the lowest-wage Census Region), observing that the objectives that justify setting the salary level using a fixed percentile methodology also supported updating the thresholds using the same methodology.[144] The Department is persuaded that updating the earnings thresholds by applying the same methodology used to originally set the levels instead of indexing them for inflation best ensures that the earnings thresholds continue to fulfill their objective of helping effectively differentiate between bona fide EAP employees and those who are entitled to overtime pay and work appropriately with the duties test.

New § 541.607 therefore establishes triennial updates of the standard salary level and the HCE total compensation threshold using the same methodologies used to set those thresholds. Assuming the Department has not engaged in further rulemaking, the Department anticipates the

[143] *See* 81 FR 32438–41.
[144] *See id*. at 32440.

second update under the updating mechanism—which will occur 3 years after the date of the initial update discussed in section V.A—will use the methodologies established by this final rule as those will become effective before the second update. Accordingly, the second update will reset the standard salary level to the 35th percentile of weekly earnings of full-time workers in the lowest-wage Census Region and will reset the HCE total annual compensation threshold to the annualized weekly earnings of the 85th percentile of full-time salaried workers nationally based on contemporaneous data at that time.

The Department further proposed to publish in the Federal Register a notice with the adjusted standard salary level and the HCE total annual compensation threshold at least 150 days before the date the adjusted thresholds are set to take effect and to publish the updated thresholds on WHD's website no later than their effective date. The Department proposed to update both thresholds using the most recent available 4 quarters of data, as published by BLS, preceding the publication of the Department's notice with the adjusted levels. The Department received fewer comments regarding these aspects of the proposal than on the updating mechanism itself.

Most commenters supporting the proposed updating mechanism did not separately comment on the 150-day notice period. Some commenters opposing automatic updates asserted that the 150-day notice period would not be adequate time to prepare for compliance with the new updated thresholds. *See, e.g.*, Association of Public and Land-grant Universities (APLU) (suggesting 180-day advance notice); Chamber (suggesting at least 1 year notice); National Association of Convenience Stores (same); The American Association of Advertising Agencies (The 4As) (same). Regarding the data set, EPI suggested the Department use the most recent quarter of data asserting that the salary threshold would be "suppressed" for 2 out of every 3

years if the Department adopts triennial updates. On the other hand, the National Association of Convenience Stores, while opposing automatic updating, recommended the Department use the most recent 6 quarters of data, or those quarters minus the 2 most recent, to account for changes it claimed employers may make preemptively to adjust to an upcoming update for budgetary reasons.

After considering the comments received, the Department is persuaded that a notice period of not less than 150 days provides sufficient time for employers to make the necessary adjustments to comply with the updated thresholds. This is especially true given that employers will be able to access the data set that will be used to make the adjustments as published by BLS and anticipate the extent of the adjustment even before the Department publishes the notice. A period substantially longer than 150 days would hinder the Department's ability to ensure that the thresholds that take effect are based on the most up-to-date data. Similarly, the Department believes that using the most recent available 4 quarters of data will account for the Department's goal that the thresholds reflect prevailing economic conditions while balancing the concerns of commenters that wanted a longer or shorter period for the data set. Therefore, the final rule establishes that for future updates under the updating mechanism, the Department will publish in the Federal Register a notice with the adjusted thresholds not fewer than 150 days before the date the new adjusted thresholds are set to take effect and will publish the updated thresholds on the WHD website no later than their effective date. The updates will be based on the most recent available 4 quarters of data as published by BLS.

Lastly, the Department's proposal included a provision providing for the delay of a scheduled update under the updating mechanism while the Department engages in notice and

comment rulemaking to change the earnings requirements and/or updating mechanism, where economic or other conditions merit. The Department explained that the delay would be triggered if the Department publishes an NPRM proposing to change the salary level methodology and/or modify the updating mechanism by the date on which it publishes the notice of the revised salary and compensation thresholds. In that instance, the notice with the adjusted thresholds must state that the scheduled update will be paused for 120 days from the day the update was set to occur while the Department engages in rulemaking, and that the pause will be lifted on the 121st day unless the Department finalizes a rule changing the salary level methodology and/or automatic updating mechanism by that time. In the event the Department does not issue a final rule by the prescribed deadline, the pause on the scheduled update will be lifted and the new thresholds will take effect on the 121st day after they were originally scheduled to take effect. The Department also explained the 120-day pause would not affect the date for the next scheduled triennial update given the relative shortness of the delay and so as not to disrupt the updating schedule. The next update, therefore, would occur 3 years from the date on which the delayed update would have originally been effective.

The Department received somewhat mixed comments regarding its proposed pausing mechanism. For example, notwithstanding their objection to automatic updating (and in some cases, certain aspects of the pause mechanism), some employer organizations such as CUNA, AHLA, and the National Association of Professional Insurance Agents commended the Department for recognizing that there may be circumstances that may require temporarily delaying a scheduled update. Some commenters that supported the updating proposal agreed. For example, the Coalition of State AGs described the delay provision as "a fail-safe mechanism"

that would provide the Department flexibility to adjust to changed circumstances as necessary. On the other hand, Sanford Heisler Sharp, while otherwise favoring the updating mechanism, objected to the pause feature asserting that it would "inject uncertainty into the administration of the threshold, undermining the stated purpose of the NPRM to simplify enforcement of overtime and minimum wage protections."

Some commenters took issue with the phrase "unforeseen economic or other conditions" in the NPRM's preamble which generally described the circumstances in which the Department may trigger the pause mechanism. AHLA, CUNA, and NAIS/NBOA asserted it is not clear what circumstances would constitute "unforeseen economic or other conditions." AFPI similarly pointed out the phrase was found only in the preamble and not in the proposed § 541.607. American Council of Engineering Companies expressed concern that the proposed pause mechanism does not provide sufficient flexibility for the Department to respond to unexpected economic conditions and recommended that the provision be modified to allow the Secretary "to suspend automatic updates if economic conditions warrant." RILA asserted the pause feature is an inflexible process asserting that if a catastrophic event were to occur within 150 days of the date of a scheduled update, the Department would have no flexibility or ability to delay or stop the update. A few commenters claimed that the 120-day pause period is not sufficient time to provide the Department the flexibility it needs to adjust to unforeseen circumstances or complete a rulemaking. *See, e.g.*, National Association of Convenience Stores; NRF.

Most of the comments objecting to or otherwise criticizing the pause mechanism seem to assume the only way the Department can alter a scheduled update or change any other aspect of the rule is through the updating mechanism's pause provision. That is not correct. Nothing in the

proposed updating mechanism limits the Department's ability to engage in future rulemaking to change any aspect of the part 541 regulations at any time. The pause mechanism offers the Department added flexibility—in addition to its ability to engage in rulemaking at any time to change the rule—by allowing it the ability to delay a scheduled update as it engages in rulemaking. As the Department noted in the NPRM, the pause mechanism offers the Department 270 days—150 days before, and 120 days after, the effective date for the scheduled update—to complete the rulemaking process. The Department can still engage in rulemaking outside of this period and through that rulemaking can stop or delay a scheduled update or change any other aspect of the part 541 regulations. This is true regardless of whether the Department adopts the delay provision. The Department believes that the pause provision will provide additional flexibility in the context of the triennial updates and will not impact the Department's normal rulemaking powers.

The Department recognizes that the phrase "unforeseen economic or other conditions" was not in proposed § 541.607 and agrees that the lack of this language in the regulatory text creates ambiguity about the standard for pausing a triennial update. Therefore, the Department is revising § 541.607(d) to include similar language. The Department believes this revision clarifies the standard for when the pause mechanism may be triggered but does not impinge on the Department's normal authority to engage in rulemaking for other reasons. The Department is disinclined to further define what circumstances would trigger the pause mechanism, as some commenters suggested. In proposing the pause mechanism, the Department was mindful of previous statements from stakeholders, and the Department's own prior statements, about the need to preserve flexibility to adapt to unanticipated circumstances. As an example, the

Department referenced the COVID pandemic and its widespread impact on workplaces. However, it is not feasible for the Department to outline every possible circumstance that could warrant a delay of a scheduled update. Doing so would unduly limit the Department's flexibility to adjust to truly unanticipated circumstances.

For these reasons, the Department has concluded that the proposed pause mechanism, with the modification noted above, provides the Department sufficient flexibility to adopt to unforeseen circumstances where necessary. Therefore, the new § 541.607(b)(4) establishes that the Department can trigger the pause, where unforeseen economic or other conditions warrant, by issuing an NPRM proposing to change the salary level methodology and/or modify the updating mechanism by the date on which it publishes the notice with the adjusted salary and compensation thresholds. Section 541.607(b)(4) further clarifies that the notice with the adjusted thresholds must state that the scheduled update will be paused for 120 days from the day the update was set to occur while the Department engages in rulemaking, and that the pause will be lifted on the 121st day unless the Department finalizes a rule changing the salary level methodology and/or automatic updating mechanism by that time.

Lastly, as discussed in more detail in section V.D, the Department intends for the triennial updates of the standard salary level and the HCE total annual compensation threshold using current earnings data to be severable from the revision to those methodologies discussed in section V.B and section V.C. In implementing routine triennial updates, the Department intends to ensure that the salary and compensation thresholds set in the regulations reflect changes in earnings data and continue to function effectively in helping identify exempt white-collar employees. As already noted, the Department has different objectives for changing the

methodologies for setting the standard salary level and HCE total annual compensation threshold. Specifically, in changing the methodology for the standard salary level, the Department intends to fully restore the salary level's historic screening function and account for the shift in the 2004 rule from a two-test to a one-test system for defining and delimiting the EAP exemption.[145] In changing the methodology for the HCE total annual compensation threshold, the Department intends to ensure the HCE threshold's role as a streamlined alternative for those employees most likely to meet the standard duties test by excluding all but those employees "at the very top of [the] economic ladder[.]"[146] These are independent objectives of this rulemaking and the provisions implementing them can each stand alone. Therefore, the Department intends for the triennial updates to remain in force even if the methodologies for the standard salary level and the HCE total annual compensation threshold established by this final rule are stayed or do not take effect. Similarly, the Department intends for the triennial updates under § 541.607(b) to remain in force even if the initial update for wage growth in § 541.607(a) is stayed or does not take effect.

B. Standard Salary Level

In its NPRM, the Department proposed to update the salary level by setting it equal to the 35th percentile of earnings of full-time salaried workers in the lowest-wage Census Region (the South), resulting in a proposed salary level of $1,059 per week ($55,068 for a full-year worker). The proposed salary level methodology built on lessons learned in the Department's most recent rulemakings to more effectively define and delimit employees employed in a bona fide EAP

[145] *See* section V.B.
[146] *See* section V.C.

capacity. Specifically, the Department's intent in the NPRM was to fully restore the salary level's screening function and account for the switch in the 2004 rule from a two-test system to a one-test system for defining the EAP exemption, while also updating the standard salary level for earnings growth since the 2019 rule.

The Department is finalizing the proposed standard salary level methodology and applying it to the most recent available earnings data, resulting in a salary level of $1,128 per week ($58,656 for a full-year worker). Setting the standard salary level at the 35th percentile of weekly earnings of full-time salaried workers in the lowest-wage Census Region will, in combination with the standard duties test, better define and delimit which employees are employed in a bona fide EAP capacity in a one-test system. Because the salary level is above the equivalent of the long test salary level, the final rule will (unlike the 2004 and 2019 rules) ensure that lower-paid white-collar employees who perform significant amounts of nonexempt work, and were historically considered by the Department not to be employed in a bona fide EAP capacity because they failed the long duties test, are not all included in the exemption. At the same time, by setting the salary level well below the equivalent of the short test salary level, the final rule will address potential concerns that the salary level test should not be determinative of EAP exemption status for too many white-collar employees. The combined result will be a more effective test for exemption. The final salary level will also reasonably distribute between employees and their employers what the Department now understands to be the impact of the 2004 shift from a two-test to a one-test system on employees earning between the long and short test salary levels.

1. History of the Salary Level

The FLSA became law in 1938 and the first version of the part 541 regulations, issued later that year, set a minimum compensation requirement of $30 per week for executive and administrative employees.[147] Since then, the Department has increased the salary levels eight times—in 1940, 1949, 1958, 1963, 1970, 1975, 2004, and 2019.

In 1940, the Department maintained the $30 per week salary level for executive employees but established a higher $200 per month salary level test for administrative and professional employees. In selecting these thresholds, the Department used salary surveys from Federal and state government agencies, experience gained under the National Industrial Recovery Act, and Federal government salaries to determine the salary level that was a reasonable "dividing line" between employees performing exempt and nonexempt work.[148]

In 1949, recognizing that the "increase in wage rates and salary levels" since 1940 had "gradually weakened the effectiveness of the present salary tests as a dividing line between exempt and nonexempt employees," the Department calculated the percentage increase in weekly earnings from 1940 to 1949, and then adopted new salary levels at a "figure slightly lower than might be indicated by the data" to protect small businesses.[149] In 1949, the Department also established a short test for exemption, which paired a higher salary level with a less rigorous duties test. The justification for this short test was that employees who met the higher salary level were more likely to meet all the requirements of the exemption (including the 20 percent limit on nonexempt work), and thus a "short-cut test of exemption . . . would facilitate

[147] 3 FR 2518.
[148] *See* Stein Report at 20–21, 31–32.
[149] Weiss Report at 8, 14.

the administration of the regulations without defeating the purposes of section 13(a)(1)."[150] Employees who met only the lower long test salary level, and not the higher short test salary level, were required to satisfy the long duties test, which included a limit on the amount of nonexempt work that an exempt employee could perform. The two-test system remained part of the Department's regulations until 2004. In 1958, the Department reiterated that salary is a "mark of [the] status" of an exempt employee and reinforced the importance of salary as an enforcement tool, adding that the Department had "found no satisfactory substitute for the salary tests."[151] To set the salary levels, the Department considered data collected during 1955 WHD investigations on the "actual salaries paid" to employees who "qualified for exemption" (*i.e.*, met the applicable salary and duties tests in place at the time) and set the salary levels at $80 per week for executives and $95 per week for administrative and professional employees.[152] The Department set the long test salary levels so that only a limited number of employees performing EAP duties (about 10 percent) in the lowest-wage regions and industries would fail to meet the new salary level and therefore become entitled to overtime pay.[153] In laying out this methodology, often referred to as the "Kantor" methodology and generally referenced in this rule as the "long test" methodology, the Department echoed its prior comments stating that the salary tests "simplify enforcement by providing a ready method of screening out the obviously nonexempt employees."[154]

[150] *Id*. at 22–23.
[151] Kantor Report at 2–3.
[152] *Id.* at 6, 9.
[153] *Id.* at 6–7.
[154] *Id.* at 2–3; *see* Weiss Report at 8.

The Department followed a similar methodology when determining the appropriate long test salary level in 1963, using data regarding salaries paid to exempt workers collected in a 1961 WHD survey.[155] The salary level for executive and administrative employees was increased to $100 per week, and the professional exemption salary level was increased to $115 per week.[156] The Department noted that these salary levels approximated the methodology used in 1958 to set the long test salary levels.[157]

The Department continued to use a similar methodology when it updated the salary levels in 1970. After examining data from 1968 WHD investigations, 1969 BLS wage data, and information provided in a report issued by the Department in 1969 that included salary data for executive, administrative, and professional employees,[158] the Department increased the long test salary level for executive and administrative employees to $125 per week and increased the long test salary level for professional employees to $140 per week.[159]

In 1975, instead of following the previous long test methodology, the Department set the long test salary levels "slightly below" the amount suggested by adjusting the 1970 salary levels for inflation based on increases in the Consumer Price Index.[160] The long test salary level for executive and administrative employees was set at $155, while the professional level was set at $170. The salary levels adopted were intended to be interim levels "pending the completion and analysis of a study by [BLS] covering a six-month period in 1975[,]" and were not meant to set a

[160] 40 FR 7091.

precedent for future salary level increases.[161] The envisioned process was never completed, however, and the "interim" salary levels remained unchanged for the next 29 years.

The short test salary level increased in tandem with the long test level throughout the various rulemakings between 1949 and 2004. Because the short test was designed to capture only those white-collar employees whose salary was high enough to indicate a stronger likelihood of being employed in a bona fide EAP capacity and thus warrant a less stringent duties requirement, the short test salary level was always set significantly higher than the long test salary level (approximately 130 percent to 180 percent of the long test level).

When the Department updated the part 541 regulations in 2004, it created a single standard test for exemption instead of retaining the two-test system from prior rulemakings. The Department set the new standard salary level at $455 per week and paired it with a duties test that was substantially equivalent to the less rigorous short duties test. The Department set a salary level that would exclude from exemption roughly the bottom 20 percent of full-time salaried employees in each of two subpopulations: (1) the South and (2) the retail industry nationally. In setting the salary level the Department looked to earnings data for all white-collar workers—exempt and nonexempt—and looked to a higher percentile than the long test methodology (10th percentile of exempt workers in low-wage industries and areas). The Department acknowledged, however, that the salary arrived at by this method was, at the time, equivalent to the salary derived from the long test method using contemporaneous data.[162]

---

[161] *Id*. at 7091–92.

[162] *See* 69 FR 22168. The 2004 rule looked to the 20th percentile of a data set of all full-time salaried workers and the long test methodology looked to the lowest paid 10 percent of exempt salaried workers. The two methodologies resulted in equivalent salary levels because exempt salaried workers generally have higher earnings than nonexempt salaried workers.

In the 2016 rule, the Department set the standard salary level equal to the 40th percentile of weekly earnings of full-time salaried workers in the lowest-wage Census Region (the South). This resulted in a standard salary level of $913 per week, which was at the low end of the historic range of short test salary levels. The Department explained that the increase in the standard salary level was needed because, in moving from a two-test to a one-test system, the 2004 rule exempted lower-salaried employees performing large amounts of nonexempt work who had historically been, and should continue to be, covered by the overtime compensation requirement.[163] Since the standard duties test was equivalent to the short duties test, the Department asserted that a salary level in the short test salary range—traditionally 130 to 180 percent of the long test salary level—was necessary to address this effect of the 2004 rule. As explained earlier, the U.S. District Court for the Eastern District of Texas held the 2016 rule invalid.

In the 2019 rule, the Department reapplied the methodology for setting the standard salary threshold from the 2004 rule, setting the salary level equal to the 20th percentile of weekly earnings of full-time salaried workers in the South and/or in the retail sector nationwide.[164] This methodology addressed concerns that had been raised that the 2016 methodology excluded too many employees from the exemption based on their salary alone and produced the current standard salary level of $684 per week (equivalent to $35,568 per year).[165] Unlike in 2004, however, where the 20th percentile of weekly earnings of full-time salaried workers in the South and retail nationally was essentially the same as the long test, in 2019 this methodology now

[163] 81 FR 32405.
[164] *See* 84 FR 51260 (Table 4).
[165] *Id*. at 51238.

produced a salary level amount that was lower than the equivalent of the long test salary level using contemporaneous data ($724 per week, $37,648 per year). Put another way, the salary level set in the 2019 rule was $40 per week below the long test level (used to validate the salary level in the 2004 rule) and $292 per week below the low end of the short test range (used to set the salary level in the 2016 rule).

2. Standard Salary Level Proposal

In its NPRM, the Department proposed to update the salary level by setting it equal to the 35th percentile of earnings of full-time salaried workers in the lowest-wage Census Region (the South), resulting in a proposed salary level of $1,059 per week ($55,068 for a full-year worker). The Department's proposal explained that fully restoring the salary level's screening function required setting a salary level at least equal to the long test salary level. The Department elaborated that prior to the 2019 rule (when the Department set the salary level $40 per week below the long test level), employees who earned below the long test salary level were screened from the EAP exemption by virtue of their pay—either by the long test salary level itself or, in the case of the 2004 rule, a standard salary level set equal to the long test salary level. The Department stated that the long test salary level provided what it believed should be the lowest boundary of the new salary level methodology because it would ensure the salary level's historic screening function was restored.

In selecting the proposed salary level methodology, the Department also considered the impact of its switch in 2004 to a one-test system for determining exemption status. The Department explained that a single-test system cannot fully replicate both the two-test system's heightened protection for employees performing substantial amounts of nonexempt work and its

increased efficiency for determining exemption status for employees who are highly likely to perform EAP duties. Rather than reinstate the long duties test with its limitation on nonexempt work, the Department examined earnings ventiles that would produce a salary level between the long and short test salary levels (which were, respectively, equivalent to between the 26th and 27th percentiles, and the 53rd percentile, of full-time salaried worker earnings in the lowest-wage Census Region). The Department explained that the long and short tests had served as the foundation for nearly all the Department's prior rulemakings, either directly under the two-test system, or indirectly as a means of evaluating the Department's salary level methodology under the one-test system, and therefore were useful parameters. The Department concluded that setting the salary level equal to the 35th percentile would, in combination with the standard duties test, more effectively identify in a one-test system who is employed in a bona fide EAP capacity in a manner that reasonably distributes among employees earning between the long and short test salary levels and their employers the impact of the Department's move to a one-test system.

After reviewing the comments received, the Department is finalizing its proposal to set the standard salary level equal to the 35th percentile of full-time salaried worker earnings in the lowest-wage Census Region (the South), which is below the midpoint of the long and short test salary levels. Applying this methodology to data for calendar year 2023 results in a salary level of $1,128 per week ($58,656 annually for a full-year worker). This approach will fully restore the salary level's function of screening obviously nonexempt workers from the EAP exemption, and account for the switch in the 2004 rule to a one-test system in a way that reasonably distributes the impact of this shift among employees earning between the long and short test

salary levels and their employers. The resulting salary level will work effectively with the standard duties test to better define who is employed in a bona fide EAP capacity.

3. Salary Level Test Function and Effects

For 85 years, the Department's regulations have consistently looked at both the duties performed by the employee and the salary paid by the employer in defining and delimiting who is a bona fide executive, administrative, or professional employee exempt from the FLSA's minimum wage and overtime protections. From 1949 to 2004, the Department determined EAP exemption status using a two-test system comprised of a long test (a lower salary level paired with a more rigorous duties test that limited performance of nonexempt work to no more than 20 percent for most employees) and a short test (a higher salary level paired with a less rigorous duties test that looked to the employee's primary duty and did not have a numerical limit on the amount of nonexempt work). The two-test system facilitated the determination of whether white-collar workers across the income spectrum were employed in a bona fide EAP capacity, and employees who met either test could be classified as EAP exempt.

In a two-test system, the long test salary level screens from the exemption the lowest-paid white-collar employees, thereby ensuring their right to overtime compensation. The Department has often referred to many of the employees who are screened from the exemption by virtue of their earning below the lower long test salary level as "'obviously nonexempt employees[.]'"[166] The long test salary level helped distinguish employees who were not employed in a bona fide EAP capacity because the Department found that employees who were screened from exemption

[166] *See id.* at 51237 (quoting Kantor Report at 2–3).

by the long test salary level generally did not meet the other requirements for exemption.[167] Since 1958, the long test salary level was generally set to exclude from exemption approximately the lowest-paid 10 percent of salaried white-collar employees who performed EAP duties in the lowest-wage regions and industries.[168] The long test salary level also served as a line delimiting the population of white-collar employees for whom the duties test determined their exemption status. In the two-test system, this duties analysis included an examination of the amount of nonexempt work performed by lower-salaried employees, which ensured that these employees were employed in an EAP capacity by limiting the amount of time they could spend on nonexempt work. The duties and salary level tests worked in tandem to properly define and delimit the exemption: lower-paid workers had to satisfy a more rigorous duties test with strict limits on nonexempt work, and higher-paid employees were subject to a less rigorous duties test because they were more likely to satisfy all the requirements of the exemption (including the limit on nonexempt work).[169]

Because employees who met the short test salary level were paid well above the long test salary level, the short test salary level did not perform the same function as the long test salary level of screening obviously nonexempt employees. Instead, the short test salary level was used to determine whether the full duties test or the short-cut duties test would be applied to determine EAP exemption status. The exemption status of employees paid more than the long and less than the short test salary levels was determined by applying the more rigorous long duties test that

[167] *See* Kantor Report at 2–3; Weiss Report at 8 ("In an overwhelming majority of cases, it has been found by careful inspection that personnel who did not meet the salary requirements would also not qualify under other sections of the regulations[.]").
[168] *See* 84 FR 51236.
[169] Weiss Report at 22–23.

ensured overtime protections for employees who performed substantial amounts of nonexempt work. The exemption status of employees paid at or above the higher short test salary level was determined by the less rigorous short duties test that looked to the employee's primary duty and did not cap the amount of nonexempt work an employee could perform. The short test thus provided a faster and more efficient duties test based on the Department's experience that employees paid at the higher short test salary level "almost invariably" met the more rigorous long duties test, including its 20 percent limit on nonexempt work, and therefore a shortened analysis of duties was a more efficient test for exemption status.[170]

In 2004, rather than updating the two-test system, the Department chose to establish a new, single-test system for determining exemption status. The new single standard test for exemption used a duties test that was substantially equivalent to the less rigorous short duties test in the two-test system.[171] Since the creation of the standard test, the Department has taken two different approaches to set the standard salary level that pairs with the standard duties test.

In 2004, as noted above, the Department set the new salary level roughly equivalent to the 20th percentile of weekly earnings of full-time salaried workers in the South and in the retail industry nationwide.[172] The Department acknowledged that the salary level ($455 per week) was, in fact, equivalent to the lower long test salary level amount under the two-test system using contemporaneous data.[173] Because it was equivalent to the long test salary level, the standard salary test continued to perform the same initial screening function as the long test salary level:

[170] *Id.*
[171] 69 FR 22214.
[172] *See id.* at 22168–69.
[173] *See id.*

employees who historically were entitled to overtime compensation because they earned below the long test salary level remained nonexempt under the new standard test.

Without a higher salary short test, however, all employees who met the standard salary level were subject to the same duties test. Since the single standard duties test was equivalent to the short duties test, some employees who previously did not meet the long duties test met the standard duties test. As a result, the shift from a two-test to a one-test system significantly broadened the EAP exemption because employees who historically had not been considered bona fide EAP employees were now defined as falling within the exemption and would not be eligible for overtime compensation. This broadening specifically impacted lower-paid, salaried white-collar employees who earned between the long and short test salary levels and performed substantial amounts of nonexempt work. Under the two-test system, these employees had been entitled to overtime compensation if their nonexempt duties exceeded the long test's strict 20 percent limit on such work. Under the 2004 standard test, these employees became exempt because they met both the low standard salary level and the less rigorous standard duties test, which does not have a numerical limit on the amount of nonexempt work.

The Department's discussion of the elimination of the long duties test in the 2004 rule focused primarily on the minimal role played by the long test at that time due to the erosion of the long salary level, and on the difficulties employers would face if they were again required to track time spent on nonexempt work when the dormancy of the long duties test meant that they had generally not been performing such tracking for many years.[174] While asserting that employees who were then subject to the long test would be better protected under the higher

[174] *See* 69 FR 22126-27.

salary level of the new standard test, the Department in the 2004 rule did not compare the protection lower salaried employees would receive under the standard test with the protection they would have received under an updated long test with a salary level based on contemporaneous data and the existing long duties test.

To address the concern that lower-salaried employees performing large amounts of nonexempt work historically were not considered bona fide EAP employees and thus should be entitled to overtime compensation, in 2016 the Department set the standard salary level at the 40th percentile of weekly earnings of full-time salaried workers in the lowest-wage Census Region (the South). This methodology produced a salary level ($913 per week) that was at the low end of the historical range of short test salary levels, which had traditionally been paired with the short duties test, and above the midpoint between the long and short test salary levels.[175] This approach restored overtime protection for employees performing substantial amounts of nonexempt work who earned between the long and short test salary levels, as they failed the new salary level test. However, this approach generated potential concerns that the salary level test should not be determinative of exemption status for too many individuals. Specifically, the 2016 rule's narrowing of the exemption prevented employers from using the exemption for employees who earned between the long test salary level and the low end of the short test salary range and would have met the more rigorous long duties test. Prior to 2004, employers could use the long test to exempt these employees, and under the 2004 rule these employees remained exempt under the one-test system. Thus, while the 2016 rule accounted for the absence of the long duties test by restoring overtime protections to employees earning between the long test salary level and the

[175] 81 FR 32405, 32467.

low end of the short test salary range who perform significant amounts of nonexempt work, it also made a group of employees who had been exempt under the two-test system newly nonexempt under the one-test system: employees earning between the long test level and the short test salary range who perform only limited nonexempt work.

In its 2019 rule, the Department determined that the 2016 rule had not sufficiently considered the impact of the increased standard salary level on employers' ability to use the exemption for this group of lower-paid employees who performed only limited amounts of nonexempt work.[176] The Department emphasized that "[f]or most . . . employees the exemption should turn on an analysis of their actual functions, not their salaries," and that the 2016 rule's effect of making nonexempt lower-paid, white-collar employees who traditionally were exempt under the long test "deviated from the Department's longstanding policy of setting a salary level that does not 'disqualify[] any substantial number of' bona fide executive, administrative, and professional employees from exemption."[177] To address these concerns, the Department simply returned to the 2004 rule's methodology for setting the salary threshold. Applying the 2004 method to the earnings data available in 2019 produced a standard salary level of $684 per week, which was below the equivalent of what the long test salary level would have been using contemporaneous data ($724 per week).[178] The 2019 rule was the first time the Department paired the standard duties test with a salary level that was not at least equivalent to the long test level.

[176] 84 FR 10908.
[177] *Id.* (quoting Kantor Report at 5).
[178] 84 FR 51260.

The 2019 rule, like the 2004 rule, exempted all employees who earned between the long and short test salary levels and performed too much nonexempt work to meet the long duties test, but passed the standard duties test (equivalent to the short duties test). The 2019 rule also for the first time permitted the exemption of a group of low-paid white-collar employees (those earning between $684 and $724 per week) who had always been protected by the salary level test's initial screening function—either under the long test or under the 2004 rule salary level that was equivalent to the long test salary level. The Department stated that the standard salary level's "fairly small difference" from the long test level did not justify using the long test methodology to set the salary level and emphasized that its approach preserved the salary level's principal function as a tool for screening from exemption obviously nonexempt employees.[179] In response to commenter concerns about the 2019 rule exempting employees who traditionally earned between the long and short test salary levels and received overtime compensation because they did not meet the long duties test, the Department cited the legal risks posed by the 2016 methodology (drawing on the district court's decisions as evidence) and explained that such employees were already exempt in the years leading up to 2004 because the Department's outdated salary levels had rendered the long test with its more rigorous duties requirement largely dormant.[180] As in the 2004 rule, the Department did not address the protection such lower salaried employees would have received had the Department updated the long test using contemporary data.

[179] *Id.* at 51244.
[180] *Id.* at 51243.

As explained in the NPRM, the Department's experience with a one-test system shows that it is less nuanced than the two-test system, which allowed for finer calibration in defining and delimiting the EAP exemption. In a two-test system, there are four variables (two salary levels and two duties tests) that can be adjusted to define and delimit the exemption. In a one-test system, there are only two variables (one salary level and one duties test) that can be adjusted, necessarily yielding less nuanced results. The loss in precision does not impact the lowest-paid white-collar employees, who were screened from exemption by the long test salary level, because they maintain their right to overtime pay so long as the standard salary level is set at least equivalent to the lower long test salary level—a condition that was met by the 2004 rule's salary level but not by the 2019 rule's salary level. Instead, the Department's experience shows that the shift from a two-test system to a one-test system impacts employees earning between the long and short test salary levels and, in turn, employers' ability to use the exemption for these employees.

In the two-test system, employees who earned between the long and short test salary levels and performed large amounts of nonexempt work were protected by the long duties test, while bona fide EAP employees in that earnings range who performed only limited amounts of nonexempt work were exempt. Meanwhile, the short test provided a time-saving short-cut test for higher-earning employees who would almost invariably pass the more rigorous, and thus more time consuming, long duties test. But the more rigorous long duties test, with its limitation on the amount of nonexempt work that could be performed, was always core to the two-test system, with the higher short test salary level and less rigorous short duties test serving as a time-

saving mechanism for employees who would likely have met the more rigorous long duties test.[181]

As explained in the NPRM, one way in a one-test system to ensure appropriate overtime protection to lower-salaried employees earning between the long and short test salary levels who were historically entitled to overtime compensation under the long test would be to reinstate the long duties test with its limitation on nonexempt work. A one-test system with a more rigorous duties test would appropriately emphasize the important role of duties in determining exemption status. However, the Department did not propose in this rulemaking to replace the standard duties test with the long duties test or to return to a two-test system with the long duties test. The Department has not had a one-test system with a limit on nonexempt work other than from 1940 to 1949,[182] when the Department replaced this approach with its two-test system, and the two-test system was replaced 20 years ago. Returning to the two-test system would eliminate the benefits of the current duties test, including having a single test with which employers and employees are familiar.

In light of these considerations, the Department's goal in this rulemaking is not only to update the single standard salary level to account for earnings growth since the 2019 rule through the use of the updating mechanism, but also to build on the lessons learned in its most recent rulemakings to more effectively define and delimit employees employed in a bona fide EAP capacity. Consistent with its broad authority under section 13(a)(1), the Department's aim is to

[181] Numerous employer organizations supported the Department's decision in 2004 to move to a one-test system. *See* 69 FR 22126-27. Commenters likewise opposed returning to the two-test structure in the 2016 and 2019 rulemakings. *See* 84 FR 10905; 81 FR 32444.
[182] *See* 5 FR 4077.

have a single salary level test that will work effectively with the standard duties test to better define who is employed in a bona fide EAP capacity and will both fully perform the salary level's initial screening function and account for the change to a single-test system.

4. Discussion of Comments and Final Standard Salary Level

i. Overall Commenter Feedback.

The Department received a significant number of comments in response to its proposal to set the standard salary level equal to the 35th percentile of weekly earnings of full-time salaried workers in the lowest-wage Census Region. Numerous commenters supported the Department's proposed salary level. Supporters included thousands of individual employees, writing separately or as part of comment campaigns, and many groups representing employees or employee interests. *See, e.g.*, American Association of Retired Persons (AARP); AFSCME; AFT; NEA; Restaurant Opportunities Center United; United Auto Workers Region 6; United Steelworkers; WorkMoney. Many other commenters, including advocacy groups, academics, and State officials also supported the Department's proposal. *See, e.g.*, Administrative Law Professors; CLASP; Coalition of Gender Justice and Civil Rights Organizations; Coalition of State AGs; Common Good Iowa; EPI; The Leadership Conference on Civil and Human Rights; National Partnership; NWLC. A number of supportive commenters urged the Department to set a higher salary level than the one it proposed. *See, e.g.*, AFL-CIO; Demos; Nichols Kaster; Sanford Heisler Sharp; SEIU; Winebrake & Santillo, LLC (Winebrake & Santillo). A minority of employers, including most notably a campaign of small business commenters, also supported the proposed salary level. *See, e.g.*, Business for a Fair Minimum Wage; Dr. Bronners; Firespring; Small Business Majority. Some members of Congress also commented in support of the proposed salary level.

See 19 Democratic Senators; 10 Democratic Representatives; U.S. Representative Maxwell Frost (D-FL).

Commenters that supported increasing the salary level often emphasized that the FLSA's minimum wage and overtime requirements are fundamental employee protections, intended to spread employment to more workers and provide extra compensation (above the statutory minimum) to employees who work more than 40 hours in a week. *See, e.g.*, AARP; AFL-CIO; Coalition of State AGs; NELA; NELP; Nichols Kaster; United Steelworkers. Some supportive commenters, including Sanford Heisler Sharp, Texas RioGrande Legal Aid, and Washington State Department of Labor and Industries, stressed that the EAP exemption was premised in part on the expectation that exempt employees received high salaries and other privileges to compensate for their long hours of work and lack of FLSA protections. Other commenters similarly stressed that the exemption is intended for employees who, based on the nature of their work and their compensation, have sufficient bargaining power not to need the Act's protections. *See, e.g.*, Business for a Fair Minimum Wage; CLASP; NELP; NWLC.

Supportive commenters often also emphasized that the salary level test has an important and longstanding role in helping define which employees are employed in a bona fide executive, administrative, or professional capacity. Some commenters, including AARP and NELA, stressed that the salary level provides an important "bright line" test for helping determine exemption status, and NWLC similarly stated that the salary level provides a "clear, objective, and straightforward" test that is "easy for employers to apply and for employees to understand[.]" NELP, quoting testimony from EPI at a 2015 Congressional hearing on this issue, stated that salary level tests have been used since the Department's earliest part 541 regulations

because the "'final and most effective check on the validity of the claim for exemption is the payment of a salary commensurate with the importance supposedly accorded the duties in question.'" The Coalition of State AGs stated that a salary level that is too low "no longer accurately delimits the boundaries of who is an EAP" employee.

The vast majority of employers and commenters supporting employer interests opposed the proposed salary level. As discussed in section III, many employer representatives opposed any salary level increase and urged the Department to withdraw its proposal. *See, e.g.*, AHLA; Americans for Prosperity; Chamber; CUPA-HR; FMI; NAM; National Restaurant Association; Oregon Restaurant and Lodging Association; PPWO; Wisconsin Bankers Association. Some Members of Congress also opposed the proposed salary level and urged that the proposal be withdrawn. *See* 10 Republican Senators; 16 Republican Representatives; U.S. Senator Mike Braun (R-IN). Some commenters opposed to the proposal, writing separately or as part of comment campaigns, expressed general opposition to the rule but did not specifically address what, if any, salary level increase they would support in a final rule. *See, e.g.*, American Dental Association; Humane Society of Manatee County; National Sporting Goods Association. Others that opposed or questioned any salary level change stated, in the alternative, what method they preferred if the Department updated the salary level in the final rule. Most such commenters favored applying the methodology that the Department used to set the salary level in its 2004 and 2019 rulemakings (the 20th percentile of earnings of full-time salaried workers in the South and in the retail industry nationally) or updating for inflation the current salary level, which was set using that methodology. *See, e.g.*, ABC; CWC; NAM; National Restaurant Association. A handful of employer commenters supported, or stated that they did not oppose, an increase based

on the 2004/2019 methodology (resulting in a salary level of $822 per week based on data used in the NPRM), citing, for example, that this approach promoted predictability, *see* RILA, and accounted for regional and industry-specific differences, *see* YMCA. *See also, e.g.*, SHRM; WFCA. Others supported or suggested a salary level that was higher, but below the Department's proposed level. *See, e.g.*, American Society of Association Executives; Ho-Chunk, Inc.; University System of Maryland.

Commenters that opposed the Department's proposal almost always objected to the size and/or timing of the proposed salary level increase rather than to the existence of the salary test itself. Most employer commenters, whether favoring no increase or a smaller increase, presumed the salary level test's continued existence and lawfulness, with some, such as National Restaurant Association, expressly referencing their support for the 2019 rule's salary level increase. As discussed in detail below, many commenters acknowledged the salary level's longstanding function of screening obviously nonexempt employees from the exemption. *See* section V.B.4.ii. Other commenters that opposed the proposal nonetheless cited benefits of having a salary level test, including helping to ensure that the EAP exemption is not abused, *see, e.g.*, AASA/AESA/ASBO, Bellevue University, and "sav[ing] investigators and employers time by giving them a quick, short-hand test[.]" *See* National Restaurant Association. APLU recognized "DOL's mission and responsibility to update the Fair Labor Standards Act overtime regulations and ensure a baseline of protections for our nation's workers, including periodic updates to the minimum salary threshold for overtime exemptions." In rather stark contrast, AFPI asserted that employee "[c]ompensation is no more helpful than would be a dress code test" in determining exemption status. AFPI was one of only a small number of commenters, as

previously discussed in section V.A.1, that asserted the Department lacks authority under section 13(a)(1) to adopt a salary level test. *See, e.g.*, Job Creators Network Foundation; NFIB; Pacific Legal Foundation.

As the Department stated in its 2019 rule, an employee's salary level "is a helpful indicator of the capacity in which an employee is employed, especially among lower-paid employees."[183] The amount an employee is paid is also a "valuable and easily applied index to the 'bona fide' character of employment for which exemption is claimed," as well as the principal "delimiting requirement . . . prevent[ing] abuse" of the exemption.[184] As the Department has explained, if an employee "is of sufficient importance . . . to be classified" as a bona fide executive employee, for example, and "thereby exempt from the protection of the [A]ct, the best single test of the employer's good faith in attributing importance to the employee's services is the amount [it] pays for them."[185] Employee compensation is a relevant indicator of exemption status given that, as many commenters observed, the EAP exemption is premised on the understanding that individuals who are employed in a bona fide executive, administrative, or professional capacity typically earn higher salaries and enjoy other privileges to compensate them for their long hours of work, setting them apart from nonexempt employees entitled to overtime pay.[186] Accordingly, the Department agrees with the overwhelming majority

[183] 84 FR 51239 (internal quotation marks omitted).
[184] Stein Report at 19, 24; *see also* 81 FR 32422.
[185] Stein Report at 19*; see also id.* at 26 ("[A] salary criterion constitutes the best and most easily applied test of the employer's good faith in claiming that the person whose exemption is desired is actually of such importance to the firm that he is properly describable as an employee employed in a bona fide administrative capacity.").
[186] *See* Report of the Minimum Wage Study Commission, Vol. IV, at 236, 240; *see also, e.g.*, Stein Report at 19 (explaining that the "term 'executive' implies a certain prestige, status, and importance" denoted by pay "substantially higher than" the federal minimum wage).

of commenters that, explicitly or implicitly, supported the salary level continuing to have a role in helping determine whether employees are employed in a bona fide executive, administrative, or professional capacity.[187]

The Department nonetheless recognizes that commenters had a wide range of views about the salary level test and that no salary level methodology can satisfy all stakeholders. As discussed below, competing commenter views were often grounded in differing opinions about the salary level test's role in defining the EAP exemption. Broadly speaking, commenters that opposed the proposal generally favored a far more limited role for the salary level test and emphasized perceived negative effects on employers of the proposed increase, while commenters that supported the proposal or urged the Department to set a higher salary level often deemed the proposal modest by historical standards and emphasized perceived positive effects on employees of the proposed increase. Against this backdrop, the Department has reviewed the comments received on its proposed methodology, with particular focus on feedback on the NPRM's rationale that the proposed methodology will better define and delimit the EAP exemption by fully restoring the salary level's screening function and accounting for the switch from a two-test to a one-test system.

ii. Fully Restoring the Salary Level's Screening Function

Some employer advocates that opposed the Department's proposal emphasized the salary level's limited function of screening obviously nonexempt employees from the EAP exemption.

[187] Consistent with its longstanding practice, the Department declines requests from commenters, including Defiance College, International Bancshares Corporation, Rachel Greszler, and WFCA, that suggested the Department adopt multiple salary level tests for different regions, industries, and/or small businesses, rather than a single salary level that applies to all entities nationwide. *See* 84 FR 51239; 81 FR 32411; 69 FR 22171.

See, e.g., Independent Community Bankers of America; IFDA; National Council of Farmer Cooperatives (NCFC); SHRM. Many employer representatives stated that the proposed salary level exceeded this purpose by excluding from the exemption too many employees who pass the duties test, particularly in low-wage regions and industries. *See, e.g.*, Chamber; NAW; PPWO; RILA; Seyfarth Shaw. AFPI quoted the statement in the Department's 2019 rule that any salary level increase must "have as its primary objective the drawing of a line separating exempt from nonexempt" employees, and the Chamber asserted that to the extent employee "protection or fairness" concerns motivated the proposed increase, such considerations exceed the Department's statutory authority.

Employer representatives that focused on the salary level's screening function often contrasted the Department's proposal with prior rules that they stated met this objective. CWC referenced the Department's 1958 and 2004 rules as such examples, while AHLA stated more broadly that the Department historically set a salary level that was "intentionally low" to screen out nonexempt employees, and that the Department's proposed methodology "is objectively not the low end of the salary range as that has been understood since 2004[.]" Other commenters similarly cited the 2004 and 2019 rules as fulfilling the salary level test's screening function, with National Restaurant Association, for example, emphasizing the salary level's screening function when explaining that the "2004 methodology's chief virtue is its consistency with historical practice." *See also, e.g.*, Bellevue University. Some commenters, including NCFC and PPWO, stated that the proposed salary level would change the salary level from a "screening device" to a "de facto sole test" for exemption, while others cautioned that the salary level set in

the 2016 rule was declared invalid for exceeding this screening function. *See also, e.g.*, Argentum & ASHA; NAM.

Though some employee representatives addressed the salary level's screening function, they generally emphasized other considerations that they believed justified setting a salary level equal to or higher than what the Department proposed. A number of commenters stated that, along with the duties test, the salary level "is intended to set a guardrail so that employers do not incorrectly classify lower-paid salaried employees as" exempt. *See, e.g.*, AFSCME; Family Values @ Work; North Carolina Justice Center; United Steelworkers; Yezbak Law Offices. Similarly alluding to the salary level's screening function, AFL-CIO emphasized that until 2019 the Department had never set the salary level below the long test level and that as a result more than half of the employees affected by the proposed salary level would have been nonexempt under every prior rule (because they earned below the long test or long test-equivalent salary level). EPI similarly stated that the 2019 rule set a salary level "that was even lower than what the long-test methodology would have yielded." *See also* Coalition of State AGs (referencing the salary level's screening function).

The Department has considered commenter feedback about the salary level test's screening function. The Department agrees with all commenters that emphasized the salary level test's function of screening obviously nonexempt employees from the exemption, a principle that, as the Department observed in the 2019 rule and in the NPRM, "has been at the heart of the Department's interpretation of the EAP exemption for over 75 years."[188] Fully effectuating the salary level's screening function is a key part of ensuring that the salary level sets an appropriate

[188] 88 FR 62165 (citing 84 FR 51241).

dividing line separating exempt and nonexempt employees. In response to the Chamber's concern about the motivations underlying the proposed salary level, the Department notes that while its proposal protects employees and promotes fairness (by helping ensure that only employees employed in a bona fide executive, administrative, or professional capacity are deprived of the FLSA's minimum wage and overtime protections), these beneficial effects are a byproduct of any higher salary level, not a basis for the proposed salary level.

As the Department explained in its NPRM, the concept of the salary level's screening function dates back to the two-test system, when the lower long test salary level provided "a ready method of screening out the obviously nonexempt employees, making an analysis of duties in such cases unnecessary."[189] When the Department updated the long test in 1958, it reaffirmed the long test salary's function as a screening tool.[190] When the Department moved to a one-test system in 2004, the standard salary test had to perform the initial screening function that the long test salary level performed in the two-test system. In the 2004 rule, the Department reaffirmed its historical statements emphasizing the salary level's critical screening function and, most significantly, used the long test salary level methodology to validate its new salary level of $455 per week.[191] The Department stressed in its final rule that both the 2004 rule standard salary level methodology and the long test salary level methodology "are capable of reaching exactly the same endpoint" and demonstrated that the two methods, in fact, produced equivalent salary

[189] Weiss Report at 8.
[190] Kantor Report at 2–3.
[191] 69 FR 22165–22166.

levels using contemporaneous data.[192] By setting a salary level equivalent to the long test level, the Department ensured that employees earning at levels that would have entitled them to overtime compensation under the two-test system because they earned below the long test salary level remained screened from the exemption by the new standard salary test, regardless of whether they met the less rigorous standard duties test. The Department rejected requests from commenters that supported a salary level that was $30 to $95 lower than the level the Department ultimately adopted,[193] thus maintaining the historic screening function by declining to set a salary level lower than the long test level.

In its 2019 rule, the Department reemphasized the salary level's screening function.[194] The Department distinguished the 2016 rule, which was invalidated because it "'untethered the salary level test from its historical justification' of '[s]etting a dividing line between nonexempt and potentially exempt employees' by screening out only those employees who, based on their compensation level, are unlikely to be bona fide executive, administrative, or professional employees."[195] In contrast, the Department explained, reapplying the 2004 methodology to contemporaneous data was likely to pass muster because the district court that invalidated the 2016 rule "endorsed the Department's historical approach to setting the salary level" and

[192] *See id.* at 22167–71 (showing that for all full-time salaried employees, $455 in weekly earnings corresponded to just over the 20th percentile in the South and the 20th percentile in retail, and that for employees performing EAP duties, $455 in weekly earnings corresponded to just over the 8th percentile in the South and the 10th percentile in retail). AFPI commented that in the 2003 NPRM the Department "acknowledged that 'equivalency to either the current long or short test salary levels is not appropriate' *because of* the switch to a one-test system." (quoting 68 FR 15560, 11570 (Mar. 31, 2003)). However, the Department shifted in its final rule and validated its chosen methodology using the long test salary level.
[193] *See* 69 FR 22164.
[194] 84 FR 51237.
[195] *Id.* at 51231 (quoting 84 FR 10901).

"explained that setting 'the minimum salary level as a floor to screen[] out the obviously nonexempt employees' is 'consistent with Congress's intent.'"[196]

In its NPRM, the Department explained that it needed to set a salary level at least equal to the long test—$925 per week, equating to between the 26th and 27th percentiles of weekly earnings of full-time salaried workers in the South—to fully restore the salary level's screening function. As noted above, employer commenters that emphasized the salary level's screening function generally viewed this function (which they often construed narrowly) as a justification for limiting the size of any potential salary increase. However, such commenters did not directly address the NPRM's explanation of the long test salary level's key role in the salary level's screening function or the relationship between the 2004/2019 methodology and the long test. Other commenters that endorsed the screening function as embodied in the 2004 rule did not grapple with the fact that in the 2019 rule, that methodology did not fully fulfill that function because it no longer arrived at the same endpoint as prior rules (*i.e.*, a long test or long-test equivalent salary level).

The Department's position remains that a core function of the salary level test is to screen from the EAP exemption employees who, based on their low pay, should receive the FLSA's overtime protections. For decades under the Department's two-test system, the long test salary level performed this screening function. In the 2004 rule, the Department used a different approach to reach the same outcome—setting a single salary level test that was equivalent to, and thus set the same line of demarcation as, the long test salary level. The Department deviated from this approach in 2019, setting a salary level that was $40 per week below the level produced

[196] *Id.* at 51241 (quoting 275 F. Supp.3d at 806).

using the long test methodology.[197] In doing so, the Department for the first time expanded the exemption to include employees who were paid below the equivalent of the long test salary level.

The Department reaffirms its position stated in the NPRM that the salary level test must equal at least the long test salary level in order to fulfill its historical screening function. From 1938 to 2019, all salaried white-collar employees paid below the long test salary level were entitled to the FLSA's protections, regardless of the duties they performed. This was true from 1938 to 1949 under the salary level test that became the long test;[198] from 1949 to 2004 under the long test; and from 2004 to 2019 under the standard salary level test that was set equivalent to the long test level—a key fact that commenters that opposed the Department's proposal generally did not address. Setting the salary level below the long test level as was done in the 2019 rule—because the 2004 methodology no longer matched the long test salary level based on contemporaneous data—departed from this history by enlarging the exemption to newly include employees who earned less than the long test salary level. As an initial step, the new salary level methodology must fully restore the salary level's screening function by ensuring that employees who were nonexempt because they earned less than the long test or long test-equivalent salary level are also nonexempt under the standard test. Achieving this objective requires a standard salary level amount at least equal to the long test level ($942 per week using current data, which equates to approximately the 25th percentile of full-time salaried worker earnings in the South).

As discussed in section V.B.5.iii, fully restoring the salary level's screening function would affect 1.8 million employees. These are currently exempt employees who earn between

[197] *Id.* at 51244.
[198] During this period the Department used a one-test system that paired a lower salary level with a more rigorous duties test. *See, e.g.*, 5 FR 4077.

$684 (the current salary level) and $942 per week (the long test level calculated using current data) and would become nonexempt absent intervening action by their employers. In every rule prior to 2019, employees who earned below the long test or long-test equivalent salary level have always been excluded from the exemption based on their salary alone—even if they passed the standard duties test or (prior to 2004) the more rigorous long duties test. The Department's approach does not, as commenters asserted, create an impermissible "de facto" salary-only test or make nonexempt too many employees who pass the duties test, and is compatible with the district court decision's emphasis on the salary level test's historic screening function.[199]

iii. Accounting for the Shift to a One-Test System

In addition to fully restoring the salary level test's screening function, the Department's proposed salary level methodology also accounted for the shift from a two-test to a one-test system for determining who is employed in a bona fide executive, administrative, or professional capacity. Commenters that supported the proposed salary level and specifically addressed this rationale agreed with it. A group of Administrative Law Professors stated that the Department's move to a one-test system in 2004 "significantly expanded the number of relatively low-income workers who might fall within the exemption . . . despite engaging in substantial nonexempt work[,]" and concluded that the Department's proposal was "reasonably geared" to restoring nonexempt status to this class of workers. The Coalition of State AGs similarly stated that the proposal "does more to take into account the shift to a one-test system in 2004 and establishes more of a middle ground between . . . the previous short- and long-test methodologies." They

[199] The district court was principally concerned with the 2016 rule exceeding the salary level's screening function and making too many employees nonexempt based on salary alone. *See Nevada* 275 F.Supp.3d at 806 & n.6.

elaborated that "the balance struck is a more appropriate one" because most salaried white-collar employees paid less than the proposed standard salary level do not meet the duties test, whereas a substantial majority of salaried white-collar employees earning above the proposed standard salary level meet the duties test. Some commenters asserted that this aspect of the Department's rationale supported setting a salary level higher than proposed. For example, AFL-CIO stated that the proposed salary level captures only "a portion of workers who have been wrongly excluded from nonexempt status since the 2004 elimination of the long and short test in favor of a single test," and Sanford Heisler Sharp stated that the proposal "does not go far enough towards meeting [the] goal" of "'ensur[ing] that fewer white-collar employees who perform significant amounts of nonexempt work and earn between the long and short test salary levels are included in the exemption.'"[200] NELA similarly urged the Department to adopt its 2016 methodology to more fully account for the shift to a one-test system.

Employer commenters that directly addressed the shift to a one-test system generally rejected the premise that any adjustment for this change was warranted or appropriate. Some commenters emphasized that the long test's limit on nonexempt work became inoperative in 1991 and/or that the Department fully accounted for the move to the standard duties test in its 2004 rule. *See* Bellevue University; Chamber; NAM; RILA. The National Association of Convenience Stores, which likewise emphasized that the short and long tests have not existed since 2004, stated that to "the extent the two-test system still has any limited relevancy to the current inquiry, it is that the salary level should be closer to what the pre-2004 long test would have produced" rather than "to what the pre-2004 'short' test would have produced" today. AFPI

[200] Quoting 88 FR at 62158.

asserted that "[a]ny salary level that excludes employees who are not 'obviously nonexempt' is invalid[,]" that the long test salary level is a "made-up concept[,]" and that the "'long test' and the 'short test' are terms [that have not been] considered since the Department's regulatory changes in 2004 . . . [and] should have no place in determining an appropriate increase to the minimum salary level for exemption today."[201]

The Department agrees with commenters that supported the NPRM's objective of updating the salary level in part to account for the move to a one-test system. As previously explained in detail in the NPRM and in section V.B.3 of this preamble, the Department traditionally considered employees earning between the long and short test salary levels to be employed in a bona fide EAP capacity only if they were not performing substantial amounts of nonexempt work. With the adoption of a duties test based on the less rigorous short duties test, the shift to a single-test system significantly decreased the examination of the amount of nonexempt work employees performed. Following this shift, the Department has taken two approaches to setting the salary level to pair with the standard duties test. The approach taken in the 2004 rule permitted the exemption of all employees earning above the long test salary level who met the standard duties test—including many employees who performed substantial amounts of nonexempt work and traditionally were protected by the long duties test. The approach taken in the 2016 rule was challenged and criticized as making employees earning between the long test salary level and the low end of the short test salary range nonexempt—

[201] NRF included an Oxford Economics report that questioned the Department's long test figure ($925 per week), and, observing that the long test methodology varied over time, stated that a "more reasonable" approach for replicating the long test would be to adjust the 1975 long test level for inflation (which it concluded would result in a salary level of $843 per week in 2022 dollars).

including employees who performed very little nonexempt work and would have been exempt under the long duties test.

The Department recognizes that a single-test system cannot fully replicate both the two-test system's heightened protection for employees performing substantial amounts of nonexempt work and its increased efficiency for determining exemption status for employees who are highly likely to perform EAP duties. Inevitably, any attempt to pair a single salary level with the current duties test will result in some employees who perform substantial amounts of nonexempt work being exempt, and some employees who perform almost exclusively exempt work being nonexempt.[202] But such a result is inherent in setting any salary level. The Department continues to believe that it can better identify which employees are employed in a bona fide EAP capacity by, in combination with the current duties test, using a salary level methodology that accounts for the shift to a one-test system, and that doing so will both restore overtime eligibility for many individuals who perform substantial amounts of nonexempt work and historically would have been protected by the long duties test, and address potential concerns that the salary level test should not be determinative of exemption status for too many individuals. Such a salary level will also more reasonably distribute between employees and their employers what the Department now understands to be the impact of the shift to a one-test system on employees earning between the long and short test salary levels.

[202] *See* Stein Report at 6 ("In some instances the rate selected will inevitably deny exemption to a few employees who might not unreasonably be exempted, but, conversely, in other instances it will undoubtedly permit the exemption of some persons who should properly be entitled to benefits of the act.").

The Department disagrees with commenters that disputed this aspect of the NPRM based on their view that the only valid salary level function is to screen from exemption obviously nonexempt employees. Section 13(a)(1)'s broad grant of statutory authority for the Department to define and delimit the EAP exemption provides the Department a degree of latitude in determining an appropriate salary level for identifying individuals who are employed in a bona fide EAP capacity. As discussed in section V.B.3, for decades, the short test salary level did not perform a screening function, but rather was used to determine whether the full duties test or the short-cut duties test would be applied to determine EAP exemption status. In a one-test system, the Department can change the duties test, the salary level, or both, to ensure that the test for exemption appropriately distinguishes bona fide EAP employees from nonexempt workers. As discussed at length in the NPRM,[203] while acknowledging that it could lessen the salary level test's role by returning to a duties test that explicitly limited the amount of nonexempt work that could be performed, the Department ultimately declined to propose changes to the duties test in this rulemaking. Given that decision, it is appropriate for the Department to choose to better define the EAP exemption by accounting for the shift to a one-test system, and to select a salary level methodology that excludes from exemption some employees who historically were nonexempt because of the more rigorous long duties test. The 2004 and 2019 rules' significant broadening of the statutory exemption (a fact employer commenters generally did not address) to permit all salaried employees earning between the long and short tests who passed the standard duties test to be exempt was not unlawful, but it leaves room for refinement. Section 13(a)(1)

[203] 88 FR 62164–65. Although some commenters addressed changes to the duties test, *see, e.g.*, AFL-CIO, AHLA, NELA, FMI, such changes are beyond the scope of the current rulemaking.

does not require the Department to forever maintain the regulatory choice it made 20 years ago to pair the current duties test with a salary level that places the entire burden of the move to a one-test system on employees who historically were entitled to the FLSA's overtime protection because they performed substantial amounts of nonexempt work and earned between the long and short test salary levels.

The Department continues to believe that the long and short tests provide useful parameters for determining the new salary level test methodology in this rulemaking. The Department disagrees with AFPI that variations in the long test methodology render it a "made-up concept" or that the long and short tests have "no place" in determining the new salary level. The long test salary level has played a crucial role in defining the EAP exemption for the better part of a century, either directly under the two-test system or indirectly under the one-test system. As the Department explained in detail in its 2004 rule, the long test salary level "regulatory history reveals a common methodology used, with some variations, to determine appropriate salary levels[,]" and (with the exception of the 1975 rule) beginning in 1958 "the Department set the [long test] salary levels to exclude approximately the lowest-paid 10 percent of exempt salaried employees" in low-wage areas and industries.[204] The Department "[u]se[d] this regulatory history as guidance" in its 2003 NPRM and, most importantly, validated its chosen methodology in the 2004 rule by showing that it produced the same salary level as the long test methodology—a critical fact employer representatives generally did not address in their comments.[205] While the Department agrees with AFPI and the Oxford Economics report that the

[204] 69 FR 22166.
[205] *See id.* at 22166–70; *see also* section V.B.3.

data set used to set the long test salary level was not exactly the same in each regulatory update, just as in 2004, minor historical variations do not deprive the long test of its usefulness in helping determine an appropriate salary level now. The Oxford Economics report's suggestion to calculate the long test by updating the 1975 long test salary level for inflation would not faithfully replicate the long test because it would produce a salary level below the 10th percentile of exempt workers in low-wage regions and industries and would conflict with the Department's historical practice of avoiding the use of inflation indicators in updating the salary level.[206]

The Department also disagrees with commenters who asserted that no adjustment is needed to account for the shift to a one-test system because the long test became largely dormant in 1991. In the 2004 rule, the Department acknowledged this dormancy resulting from its outdated salary levels and asserted that employees who were then subject to the long test would be better protected under the higher salary level of the new standard test.[207] But as previously explained, section V.B.3, in the 2004 rule the Department did not compare the overtime protection lower-salaried employees would receive under the standard test with the protection they would have received had the Department updated the long test with a salary level based on contemporaneous data and kept the existing long duties test. Instead, the Department's discussion of the elimination of the long duties test in the 2004 rule focused primarily on the minimal role played by the long test at that time due to the erosion of the long salary level, and on the difficulties employers would face if they were again required to track time spent on nonexempt

[206] *See, e.g.*, 84 FR 51245; 69 FR 22167.
[207] *See* 69 FR 22126.

work when the dormancy of the long duties test meant that they had generally not been performing such tracking for many years.[208]

The Department also disagrees with commenters that asserted that the 2004 rule fully accounted for the move to the standard duties test. Because the 2004 rule did not fully account for the lessened overtime protection for employees who would have been nonexempt under an updated long test (as just described), it created a group of employees with lessened protection under the standard test—those who earned between the long and short test salary levels. These employees were traditionally nonexempt because they failed the long duties test, but were exempt under the 2004 rule because they passed the more lenient standard duties test.[209] By setting the standard salary level equivalent to the long test salary, the 2004 rule in effect created a group of employees who bore the impact of the change from the two-test to the one-test system.

iv. Selecting the Salary Level Methodology

In its NPRM, the Department explained that fully restoring the salary level's screening function and accounting for the move to a one-test system supported setting the salary level at the 35th percentile of full-time salaried worker earnings in the lowest-wage Census Region (the South)—resulting in a proposed salary level of $1,059 per week. Commenters provided competing views on this proposed increase. Employers and employer representatives that

[208] *See id.* at 22126–27.

[209] The Chamber asserted that the Department's decision to adjust the salary level to account for the shift to a one-test system "fails to appreciate the continued importance of the 'primary duty' principles, the application of which includes an analysis of non-exempt work performed and its relation to the employee's exempt work." Although the Chamber is correct that the standard duties test accounts for nonexempt work, it does so in a less rigorous manner than the long duties test, resulting in some lower-paid white-collar employees who pass the standard duties test but (due to their nonexempt work) would have failed the long duties test.

opposed the proposed salary level often characterized it as "too much, too soon"—stating that an increase of 54.8 percent (or 69.3 percent, based on the $60,209 projected salary level figure included in footnote 3 of the NPRM)[210] less than 4 years after the most recent increase was unnecessary and unprecedented. *See, e.g.*, Air Conditioning Contractors of America; Americans for Prosperity; Joint Comment from Argentum and American Seniors Housing Association; CUPA-HR; International Sign Association; NRF. Some commenters, including American Association of Community Colleges and Associated Builders and Contractors, observed that, by contrast, prior salary level updates have ranged from 5 to 50 percent, and others commented that the proposed increase greatly exceeded the rate of inflation since the 2019 rule, *see* Independent Community Bankers of America, Ohio Township Association. Many employer organizations asserted that the Department was trying to resurrect a methodology akin to the invalidated 2016 rule and that, like that rule, the proposed salary level (which many stressed is a higher dollar figure than the level set in the 2016 rule) would unlawfully supplant the duties test. *See, e.g.*, Americans for Prosperity; National Restaurant Association; PPWO.

Commenters that opposed the proposed salary level were particularly concerned about the impact of this change on specific industries and on businesses in low-wage regions. Some commenters, such as the American Outdoors Association, CUPA-HR, NAHB, and SHRM, provided information from internal surveys to support how the proposal would negatively affect their members. SBA Advocacy similarly summarized concerns received from small businesses. *See also, e.g.*, NFIB. Some commenters emphasized the proposal's impact on particular

[210] Several commenters criticized the Department for providing projected salary level figures in footnote 3. *See, e.g.*, PPWO; NRF. NAM stated that footnote 3 was "inconsistent" with the Administrative Procedure Act.

occupations in their industries, including first-line supervisors, *see, e.g.*, AHLA, NAHB, and entry-level managers, *see, e.g.*, NAM, NRF. Emphasizing the proposed salary level's geographic impact, National Restaurant Association and PPWO warned that the proposal would exclude from exemption a high percentage of employees who pass the duties test in lower-wage regions, and could result in employees in the same job classification being treated differently based on where they live. A number of educational institutions opposed the proposed increase due to cost-related concerns specific to the educational sector. *See, e.g.*, American Association of Community Colleges; Association of Independent Colleges and Universities of Ohio; National Association of Independent Colleges and Universities. The National Association of Counties raised similar concerns about the impact of the increased salary level on local governments. Nonprofit sector feedback was more mixed, with the National Council of Nonprofits characterizing the industry response as one of "moral support" and "operational anxiety." Some nonprofit organizations opposed the proposal, *see, e.g.*, Children's Alliance of Kentucky, U.S. Public Interest Research Group (U.S. PIRG), some supported it, *see, e.g.*, CLASP, Justice at Work, and some agreed with the Department's intent but raised cost and other concerns, *see, e.g.*, Catholic Charities, Open Roads Bike Program.

Commenters had different suggestions for how the Department should account for such regional and industry-specific differences. For example, RILA urged the Department to include the retail industry in its data set, AFPI suggested setting the salary level equal to the 20th percentile of non-hourly employee earnings in the ten lowest-wage states, and Seyfarth Shaw recommended using the East South Central Census Division. The Chamber asked the Department to focus on data from the lowest-wage types of entities (such as small businesses,

small nonprofits or small public employers), in the lowest-wage industries, in rural areas, in the lowest-wage Census Region. The Chamber and National Association of Convenience Stores favored excluding nonexempt workers from the data set (and using a lower earnings percentile) and questioned the Department's use of Current Population Survey (CPS) Merged Outgoing Rotation Group (MORG) data for nonhourly earnings for full-time workers as a proxy for salaried worker earnings.

Commenters that supported increasing the salary level viewed the Department's proposal very differently than employer representatives. Whereas many employer representatives focused on specific regions or industries to assert that the proposed salary level was too high, supportive commenters focused on the national impact to assert that the salary level was appropriate or too low. Many supportive commenters considered it "modest." *See, e.g.*, AFSCME; CLASP; Family Caregiving Coalition; National Partnership. Others stated that the salary level "could have reasonably been significantly higher and still within historical precedent." *See, e.g.*, Common Good Iowa; Jobs to Move America; Louisiana Budget Project; Maine Center for Economic Policy; North Carolina Justice Center. The statistic most often cited to support that the proposal was conservative by historical standards was that whereas 62.8 percent of full-time salaried workers earned less than the short test salary level in 1975, 28.2 percent of full-time salaried workers earned less than the proposed standard salary level (and several of these commenters noted that only approximately 9 percent earned less than the current salary level). *See, e.g.*, EPI; National Center for Law and Economic Justice; Worker Justice Center of New York; Workplace Justice Project. AFL-CIO and others highlighted that the proposed salary level was 19 percent lower than the inflation-adjusted value of the 1975 short test salary level, and EPI stated that, on

average, the proposed salary level was 16 percent lower than inflation-adjusted short test salary levels set from 1949 and 1975. Some supportive commenters stressed that a significant salary level increase was needed in part to account for the 2004 rule's elimination of the long duties test, *see, e.g.*, EPI, NELP, while NWLC stated that the proposed methodology would "not eclipse the role of the duties test" and instead would "restore[] a reasonable balance between the strength of the duties test and the height of the salary threshold."

Some commenters advocated for a much higher salary level than the Department proposed, and a number of commenters specifically proposed alternate methodologies for the Department to adopt in the final rule. For example, NELA stated that the proposed level was "too low from a historical perspective" and, favoring "[b]older federal action[,]" asked the Department to (like in the 2016 rule) set the salary level equal to the 40th percentile of weekly earnings of full-time salaried workers in the lowest-wage Census Region (which would produce a salary level of $1,196 per week based on the data used in this final rule). Winebrake & Santillo similarly favored a return to that methodology. AFL-CIO supported setting the salary level higher—at the historical average short test salary level (which would result in a salary level of $1,404 per week based on current data). Other commenters sought a salary level that they stated would exclude from exemption the same proportion of full-time salaried workers as under the 1975 salary level test. For example, Demos urged the Department to set the salary level at the 55th percentile of weekly earnings of full-time salaried workers nationwide to meet this "high-water" mark, and Nick Hanauer supported a salary level of at least $83,000 to "restore the overtime threshold" to a time "when the American middle class was strongest[.]" Commenters that sought a higher salary level than the Department proposed often expressed their

disagreement with the district court's decision invalidating the 2016 rule. *See, e.g.*, NELA; Sanford Heisler Sharp; Winebrake & Santillo.

After considering the comments received, the Department is finalizing the salary level methodology as proposed, setting it equal to the 35th percentile of full-time salaried worker earnings in the lowest-wage Census Region (the South)—which produces a salary level of $1,128 per week using calendar year 2023 data. Consistent with the Department's responsibility to "not only … determin[e] which employees are entitled to the exemption, but also [to] draw[] the line beyond which the exemption is not applicable[,]"[211] this salary level will, in combination with the standard duties test, effectively calibrate the scope of the exemption for bona fide EAP employees and do so in a way that distributes across the population of white-collar employees earning between the long and short test salary levels the impact of the shift to a one-test system. As previously discussed, updating the salary level for wage growth since the 2019 rule produces a salary level of $844 per week, and fully restoring the salary level's historic screening function would result in a salary level of $942 per week, equivalent to the 25th percentile of full-time salaried worker earning in the South (*i.e.*, the long test level). Accordingly, the increase from the 25th percentile to the 35th percentile is to account for the shift to a one-test system.[212] The Department set the standard salary level at (or below) the long test level in the 2004 and 2019 rules and set it at the low end of the historic range of short test salary levels in the 2016 rule.

[211] Stein Report at 2.

[212] AFPI mistakenly asserts that the increase from the 20th percentile to the 35th percentile "is based entirely on the switch to a one-test system in 2004." The majority of the salary level increase (from $684 to $942) is to update the salary level for wage growth and fully restore the salary level's historic screening function, with less than half (the increase from the $942 to $1,128) made to account for the shift from the two-test system.

Setting the salary level at either the long test salary level or equivalent to a short test salary level in a one-test system with the standard duties test, however, results in either denying overtime protection to lower-paid employees who are performing large amounts of nonexempt work, and thus, would have been exempt under the Department's historical view of the EAP exemption, or in raising concerns that the salary level is determining the exemption status of too many employees. In contrast, an appropriately calibrated salary level between the long and short test salary levels better defines and delimits which employees are employed in a bona fide EAP capacity, and thus better fulfills the Department's duty to define and delimit the EAP exemption.

The Department's methodology established in this final rule uses the second-to-lowest of the earnings ventiles between the long test salary level (the 25th percentile of full-time salaried worker earnings in the lowest-wage Census Region) and the short test salary level (approximately the 51stth percentile of this data set). These ventiles are the 30th, 35th, 40th, 45th, and 50th percentiles of full-time salaried worker earnings in the lowest-wage Census Region. The Department continues to believe that its methodology produces a salary level high enough above the long test salary level to ensure overtime protection for some lower-paid employees who were traditionally entitled to overtime compensation under the two-test system by virtue of their performing large amounts of nonexempt work, and also low enough, as compared with higher salary levels, to significantly shrink the group of employees performing EAP duties who are excluded from the exemption by virtue of their salary alone. Whereas the 2004 and 2019 rules permitted the exemption of employees earning between the long and short test salary levels even if they performed significant amounts of nonexempt work, and the 2016 rule prevented employers from using the exemption for such employees earning below the short

test salary range even if they performed EAP duties, the methodology adopted in this final rule falls between these two methodologies and thus, as commenters including the Administrative Law Professors and Coalition of State AGs agreed, reasonably balances the effect of the switch to a one-test system in a way that better differentiates between those who are and are not employed in a bona fide EAP capacity. Of the 10.8 million salaried white-collar employees earning between the equivalent of the long and short test salary levels, approximately 40 percent earn between $942 (the equivalent of the long test salary level) and $1,128 (the new salary level) and would receive overtime protection by virtue of their salary, while approximately 60 percent earn between $1,128 and $1,404 (the equivalent of the short test salary level) and would have their exemption status turn on whether they meet the duties test. These and other statistics, discussed in section V.B.5.iii, demonstrate that the salary level will not "essentially eliminate[] the role of the duties test" as National Restaurant Association and others contended. *See also, e.g.*, AHLA; CWC.

Even though the Department's decision to select a salary level below the midpoint between the long and short tests means that the effect of the salary level on employees earning within this range and their employers is not exactly equal, a higher salary level could disrupt the reliance interests of employers who (due in part to the Department's failure to update the salary level tests between 1975 and 2004), have been able to use a lower salary level and more lenient duties test to determine exemption status since 1991. However, a significantly lower salary level akin to the long test salary level would avoid disrupting such reliance interests only by continuing to place the burden of the move to a one-test system entirely on employees who historically were entitled to the FLSA's overtime protections because they perform substantial

amounts of nonexempt work. The Department believes that employer reliance interests should inform where the salary level is set between the long and short test levels, and that its approach appropriately balances the impact of the move to a one-test system between employees' right to receive overtime compensation and employers' ability to use the exemption. Such balancing is fully in line with the Department's authority under the FLSA to "mak[e] certain by specific definition and delimitation" the "general phrases" "bona fide executive, administrative, or professional capacity." [213] This grant of authority confers discretion upon the Department to determine the boundaries of these general categories; any such line-drawing, as courts have recognized, will "necessarily" leave out some employees "who might fall within" these categories.[214]

The Department recognizes the tension between the methodology adopted in this final rule and some statements made in its 2016 and 2019 rules. The Department stated in its 2016 rule that the current duties test could not be effectively paired with a salary level below the short test salary range, and for this reason expressly rejected setting the salary level at the 35th percentile of weekly earnings of full-time salaried workers in the South.[215] But that rule, which would have prevented employers from using the EAP exemption for some employees who were considered exempt under the prior two-test system, was challenged in court, and a return to it would result in significant legal uncertainty for both workers and the regulated community. In the 2019 rule, the Department expressly rejected setting the salary level equal to the long test or higher.[216]

[213] *See Walling*, 140 F.2d at 831-32.
[214] *Id.* at 832.
[215] 81 FR 32410.
[216] *See* 84 FR 51244.

However, as noted above, the Department did not fully address in that rule the implications of the switch from a two-test to a single-test system. Having now grappled with those implications, the Department concludes that not only can it pair the current duties test with a salary between the long and short test salary levels, but that doing so appropriately recalibrates the salary level in a one-test system to ensure that it effectively identifies bona fide EAP employees.

In setting the salary level, the Department continues to believe that it is important to use a methodology that is transparent and easily understood. As in its prior rulemakings, the Department is setting the salary level using earnings data from a lower-salary regional data set (as opposed to nationwide data) to accommodate businesses for which salaries generally are lower due to geographic or industry-specific reasons.[217] Specifically, the Department is setting the salary level using the data set of full-time nonhourly[218] workers in the lowest-wage Census Region (the South). This approach promotes transparency because BLS routinely compiles this data. It also promotes regulatory simplification because the data set is not limited to exempt EAP employees and thus does not require the Department to model which employees pass the duties test.[219] In keeping with the Department's past practice, it is relying on up-to-date data to determine the salary level.[220] In the NPRM, the Department used 2022 salary data for estimating the salary level resulting from the proposed methodology, which was current at the time the

[217] *See id.* at 51238; 81 FR 32404.
[218] Consistent with recent rulemakings and the NPRM, *see* 88 FR 62188, 84 FR 51258, in determining earnings percentiles the Department looked at nonhourly earnings for full-time workers from the CPS MORG data collected by BLS.
[219] As discussed in the economic analysis, *see* section VII, this modeling is done using the Department's probability codes. *See* 84 FR 51244; 69 FR 22167.
[220] *See* 84 FR 51245; 81 FR 32405; 69 FR 22168.

Department developed its proposal. In this final rule, the Department is relying on calendar year 2023 salary data, as published by BLS, to set the salary level.[221]

Given the strong views expressed by commenters, including those opposing the proposal or favoring a higher salary level, the Department did not arrive lightly at its decision to finalize the salary level methodology as proposed. Commenter feedback often reflected competing vantage points for assessing the Department's proposal. Commenters that supported the Department's proposal or a higher salary level (most often, the 2016 rule methodology) often compared the proposed salary to short test salary levels, while commenters that opposed the proposed increase often stressed the size of the change from the current salary level. The Department agrees with supportive commenters that past salary levels should inform the current update, and agrees that statistics such as the percentage of salaried white-collar workers who earn below the salary level or statistics comparing the new salary level to inflation-adjusted prior levels, reinforce the reasonableness of the Department's approach. However, the Department is wary of comments urging a return to the 2016 rule methodology that do not account for subsequent court decisions and the Department's 2019 rulemaking. The Department also recognizes concerns from some commenters about the size of the salary level increase. But this metric is influenced by many factors and thus does not, in and of itself, establish whether a salary level sets an appropriate dividing line for determining whether an employee is employed in a bona fide EAP capacity. For example, the size of the current increase is influenced by factors including significant wage growth since the 2019 rule (simply adjusting the current salary level

[221] BLS currently publishes this data at https://www.bls.gov/cps/research/nonhourly/earnings-nonhourly-workers.htm.

methodology for wage growth would result in a roughly 23 percent increase); the Department for the first time updating a salary level that was set below the long test; and the Department adjusting the salary level to account for the move to a one-test system. While the 65 percent increase is greater in percentage terms than most prior updates, the Department does not consider this factor dispositive.[222]

The salary level methodology adopted in this final rule ($1,128 per week; $58,656 annually) produces a salary level that is lower than the two salary level estimates provided in footnote 3 of the NPRM ($59,284 and $60,209), which were based on a quarter of data. The Department disagrees with commenters that criticized the Department for providing projected salary level figures in its NPRM. These comments overlook that the NPRM proposed a methodology for updating the salary level test, not just a salary level figure. Providing commenters an estimate of the salary level that the proposed methodology could produce in a final rule based on updated data promoted rulemaking transparency and the opportunity for fully informed commenter feedback. That many commenters used the figures in footnote 3 in their comments, and the final salary level based on calendar year 2023 data is between the proposed salary level and the two estimates in the footnote, reinforces that footnote 3 in no way deprived commenters of the opportunity to meaningfully comment on the NPRM.

As previously discussed, most employer commenters that opposed the proposed salary level opposed any increase or at most supported a return to the 2004/2019 methodology, and so they did not address the NPRM's analysis examining where to set the salary level between the

[222] As discussed in section IV, in part to provide employers more time to adjust, the new methodology will not be applicable until January 1, 2025.

long and short test salary levels. The Department does not find these comments persuasive because they in effect sought a salary level below the long test level, which would not even fully restore the salary level's screening function, let alone account at all for the move to a one-test system. As for commenter concerns about the salary level's impact on low-wage regions and industries, the Department accounts for these concerns by setting the salary level using the lowest-wage Census Region. This aspect of the rulemaking differs from the 2016 rulemaking, where the Department proposed to set the salary level using a national data set and then, in response to commenters concerns, shifted to the lowest-wage Census Region in the final rule to account for low-wage regions and industries.[223] The Department used this past experience to account for the impact on low-wage regions and industries in developing the NPRM and, having done so, is again basing the salary level on the earnings of workers in the lowest-wage Census Region in this final rule.

The Department declines requests from some commenters to change the data set it used to set the salary level. Some asked the Department to add earnings data from a specific industry to the CPS earnings data. The Department is not altering the data set in this way because it believes that using earnings data from the lowest-wage Census Region produces a salary level that accounts for differences across industries and regional labor markets. The Department also is not altering the Census region data set so that it excludes all states with higher earnings, nor is the Department creating a new data set that includes only States with the lowest earnings. The Department's chosen approach is consistent with its practice since the 2004 rule of using the South, rather than a narrower geographic region, when setting the salary level. Restricting the

[223] *See* 81 FR 32408.

data set to the ten lowest-wage states or to the East South Central Region (made up of just four states, Alabama, Kentucky, Mississippi, and Tennessee) would give undue weight to low-wage areas and skew the salary level. The Chamber's suggestion to restrict the data set even further (by focusing on low-wage entities within low-wage industries within rural areas within the South) would even further compound this concern.

The purpose of the data set is not simply to produce the lowest possible salary level. The Department's approach directly accounts for low-wage areas while producing a salary level that is appropriate to apply nationwide. The Department also declines requests to limit its data set to exempt workers, instead continuing to set the salary level using earnings data for exempt and nonexempt workers—as it has done in every one of its rulemakings under the one-test system. As explained in the 2004 rule, the Department's chosen approach is preferable in part because restricting the data set to exempt employees requires "uncertain assumptions regarding which employees are actually exempt[.]"[224] The Department is also continuing to use data on nonhourly worker earnings as a proxy for compensation paid to salaried workers. Although some commenters challenged this approach, the Department is not aware of, and commenters did not provide, any statistically robust data source that more closely reflects salary as defined in the Department's regulations. Also, as discussed in section VII, the Department believes that relatively few nonhourly workers were paid by methods other than salaried.

In response to commenter opposition to the proposed salary level and the concerns described above, the Department considered setting the salary level equal to the 30th percentile of earnings of full-time salaried workers in the lowest-wage Census Region. The Department

[224] 69 FR 22167.

ultimately decided not to adopt this approach, however, because it would less effectively account for the shift to a one-test system. This methodology would set the salary level based on the lowest earnings ventile between the short and long test salary levels and produce a salary level that is only $77 above the long test level. As a result, for the population of white-collar workers earning between the long and short tests, only 18 percent would earn below the salary level (whereas 40 percent of this population earn below the new salary level). This approach thus would not sufficiently address the problem inherent in the 2004 methodology of including in the exemption employees who perform significant amounts of nonexempt work, including those earning salaries close to the long test salary level—where the Department would expect a higher proportion of workers to perform more nonexempt work.[225] In contrast, the Department's approach addresses these concerns in a manner that more reasonably distributes among employees earning between the long and short test salary levels and their employers the impact of the Department's move to a one-test system.

The Department disagrees with commenters that stated that the chosen methodology simply resurrects the 2016 methodology—which set the salary level equal to the 40th percentile of full-time salaried worker earnings in the lowest-wage Census Region. The fact that the new salary level is higher in nominal dollars than the level set in the 2016 rule ($913 per week) is

[225] The Department has repeatedly recognized that increasing salary level tends to correlate with the performance of bona fide EAP duties. *See* section V.B.1 (discussing role of long test and short test salary levels); section V.C (discussing the role of the HCE total annual compensation threshold). Thus, increasing overtime protection specifically for workers earning at the lower end of the range between the long test salary level and short test salary level—but not those earning at the higher end of that range—is an especially appropriate approach to balancing these concerns.

irrelevant because that level was calculated using 2015 data.[226] Applying the 2016 methodology to current data produces a salary level of $1,196 per week. Whereas under this rule an employee's salary level will be determinative of exemption status for 40 percent of the 10.8 million employees earning between the long and short test levels, under the 2016 methodology salary would be determinative for 55 percent of such employees. A salary level equivalent to the 40th percentile in the South would also result in 5.0 million affected workers. Although some of these workers earn below the long test level and would be nonexempt under either approach, this alternative approach would result in 949,000 more affected workers than the Department's chosen methodology. The Department's decision to deviate from the 2016 methodology is significant, as underscored by the fact that (as discussed in more detail below) a number of employee representatives urged the Department to adopt that methodology or a higher percentile.

The Department recognizes that many commenters found the proposed methodology conservative, or overly conservative, with some commenters urging the Department to select a methodology that produces a higher salary level. Repeating the 2016 rule methodology, as some commenters requested, by setting the salary level at the 40th percentile of weekly earnings of full-time salaried workers in the lowest-wage Census Region would further reduce the impact of the move to a one-test system on lower-paid white-collar employees who perform significant amounts of nonexempt work. As discussed above, commenters that supported the 2016 rule methodology provided statistics demonstrating that this approach yields a salary level within historical norms. The 40th percentile would produce a salary level ($1,196 per week) that is above the midpoint between the long and short test salary levels. As noted above, of the

[226] *See* 81 FR 32393.

approximately 10.8 million salaried white-collar employees who earn between the long and short test salary levels, approximately 55 percent earn between the long test salary level and $1,196 and would receive overtime protection by virtue of their salary, while approximately 45 percent earn between $1,196 and the short test salary level and would have their exemption status turn on whether they meet the duties test.

The Department believes this rule appropriately distributes the burden of the change from a two-test to one-test system between employees and employers. By contrast, the Department remains concerned that courts could find that adopting the 2016 rule methodology would make the salary level test determinative of overtime eligibility for too many employees. Setting the salary level equal to a higher percentile of weekly earnings (such as the 55th percentile as Demos recommended), would further amplify this concern. Setting the salary level based on a lower percentile of earnings will (compared to such higher levels) increase the number of employees for whom duties is determinative of exemption status, and in turn increase the ability of employers to use the exemption for more lower-paid employees who meet the EAP duties requirements. This outcome is consistent with the important role of the duties test in identifying bona fide EAP employees. EPI did not find the number of workers affected by a salary level increase to be an informative metric for assessing whether a threshold is appropriate and the Department agrees that this statistic has significant limitations. In particular, it is notable that although the standard salary level changes will result in 4.0 million affected workers (1.0 million from the initial update and 3.0 million from applying the new standard salary level),[227] only 2.2 million of these workers are due to the increase from the long test to the new methodology, while

[227] *See* Table 25.

1.8 million affected workers (or 45 percent) are a result of restoring the historic screening function of the long test salary level. By comparison, updating the salary level using the 2016 methodology and current data would result in 5.0 million affected workers. Although the number of affected workers for this rule is above the number of affected workers in the 2019 rule, the difference is necessary to fully restore the salary level's screening function and account for the shift to a one-test system, and the overall impact of this change on the workforce is relatively small (*see* section V.B), such that the new salary level is a proper exercise of the Department's authority to define and delimit the scope of the EAP exemption.

In declining to adopt the 2016 rule methodology, the Department is also responding to concerns that setting the salary level equal to the 40th percentile of weekly earnings of full-time salaried workers in the lowest-wage Census Region would foreclose employers from exempting any white-collar employees who earn less than that amount ($1,196 per week based on the data used in this final rule) and perform EAP duties, including those who were exempt under the long test and remained exempt when the Department established the one-test system in 2004 and set the salary level equivalent to the long test level.[228] Litigants challenging the 2016 rule emphasized this consequence of setting a salary level above the long test in a one-test system, and those arguments have contributed to the Department more fully attempting to account for the impact of the shift to a one-test system. Although some commenters favored a salary level equivalent to the short test level, such an approach would result in employers being unable to use the exemption for any employees who earn between the long and short test and have previously been exempt, either under the long test, or under the standard test set equal to the long test. In

[228] *See* 84 FR 51242.

contrast, the methodology in this final rule produces a salary level that is not only below any short test level, but also lower than the midpoint between the long and short test salary levels. This approach appropriately balances the goal of ensuring that employees earning above the long test salary level who perform substantial amounts of nonexempt work are not exempt with the goal of enabling employers to use the exemption for employees who do not perform substantial amounts of nonexempt work.

v. Salary Level Effects

In selecting the salary level methodology, the Department also considered commenter views that the proposed salary level would generate a range of repercussions. Many commenters that opposed the proposed salary level stated that it would cause widespread reclassification of currently exempt employees to nonexempt status and a corresponding decrease in flexible work arrangements, including remote work opportunities. *See, e.g.*, FMI; IFDA; National Lumber and Building Material Dealers Association; NRF. Others stated that employers would convert newly nonexempt employees from salaried to hourly status, which they contended would harm employee morale, *see, e.g.*, Independent Electrical Contractors, National Small Business Association, and create an undesirable "punch the clock" mentality, *see, e.g.*, North Carolina Center for Nonprofits, The 4A's. Some commenters that opposed the proposal stated that the rule would "harm the very workers the Department says it is trying to benefit," asserting, for example, that the proposal would result in reduced employee benefits and career advancement opportunities, and increased turnover. *See* Americans for Prosperity; *see also* PPWO. Other commenters expressed concern that the proposed increase would decrease employee productivity, *see, e.g.*, John. C. Campbell Folk School, decrease social services, *see, e.g.*, Social

Current, increase employer costs, prices, and inflation, *see, e.g.*, Chamber, and/or cause salary compression issues, *see, e.g.*, Seyfarth Shaw.

Commenters that supported the Department's proposed salary level or a higher salary level than proposed often highlighted what they viewed as positive effects of the proposed increase. Many emphasized that the updated salary level would make it more difficult to exempt lower-paid employees who they believed should be nonexempt, particularly low-level managers with many duties equivalent to non-managerial employees. *See, e.g.*, Coalition of Gender Justice and Civil Rights Organizations; NELP; Winebrake & Santillo. Restaurant Opportunities Center United stated that the current "low salary threshold discourages restaurant employees from taking managerial and supervisory positions, thereby gaining skills and experience that would enable them to advance their careers[.]" Sanford Heisler Sharp stated that the "need for monitoring and protecting white-collar workers' hours is critical today" because the significant increase in telework since 2020 has meant that employers are "no longer constrained by the practical limitation of the worker leaving the workplace." Other employee representatives explained that the rule would produce positive societal benefits such as increased economic security, *see, e.g.*, NELP, improved worker health due to decreased work hours, *see, e.g.*, SEIU, decreased poverty, *see, e.g.*, NEA, and disproportionate benefits for women, people of color, and workers with disabilities, *see, e.g.*, National Partnership.

Taken together, the above comments do not provide a compelling justification for deviating from the Department's proposed salary level methodology. The Department agrees that the salary level increase will result in some currently exempt employees becoming nonexempt and therefore receiving minimum wage and overtime protections. Employee reclassification is a

consequence of any salary level increase, and the number of reclassified employees will depend on how employers choose to respond to this rule for their employees who earn between the current and new salary levels. Moreover, there is no prohibition on paying nonexempt employees a salary as long as any overtime hours are appropriately compensated, and employers may therefore choose to continue to pay a salary to affected workers. Employers likewise have latitude to determine what flexible work arrangements to provide employees and, more broadly, need not structure their pay plans in a manner that results in the potentially adverse effects (such as decreased employee benefits) that some employers identified. Significantly, employees and employee representatives did not share employer commenter concerns about potential adverse consequences of the proposed salary level, let alone view them as a justification for deviating from the proposed salary level. This includes comments from individual employees. For example, an exempt manager for a small nonprofit organization stated that they "would love the opportunity to be reclassified to nonexempt and be compensated for time worked beyond 40 hours, or alternatively be given a raise if that level of flexibility is deemed necessary by my employer." As to potential consequences of the updated salary level on the economy more broadly, such implications are speculative and in dispute (as discussed in some detail in section VII), and do not provide a basis for a different salary level methodology.

iv. Other Issues

The Department also addresses some other issues stakeholders raised in their comments.

Many nonprofit organizations worried that the proposed salary level would disproportionately affect them, raising concerns related to, for example, their reliance on government grants, *see, e.g.*, Asclepius Initiative, Catholic Charities, National Council of

Nonprofits, and their inability to raise prices, *see, e.g.*, Advancing States, Independent Sector, YMCA. Some commenters asked the Department to exempt at least certain nonprofit organizations from the salary level test. *See, e.g.*, Oklahoma Wesleyan University; U.S. PIRG. Many nonprofit organization commenters opposed this idea. *See, e.g.*, A Second Chance; Delaware Alliance for Nonprofit Advancement; National Council for Nonprofits; North Carolina Center for Nonprofits. The Department recognizes and values the enormous contributions that nonprofit organizations make to the country. Nonprofit organizations provide services and programs that benefit many vulnerable individuals in a variety of facets of life, including services that benefit the vulnerable workers who the Department also works to protect by ensuring that their workplaces are fair, safe, and secure. However, the Department's EAP exemption regulations have never had special rules for nonprofit organizations; the employees of nonprofits have been subject to the EAP exemption if they satisfied the same salary level, salary basis, and duties tests as other employees.[229] Consistent with this history, the Department declines to exempt nonprofit organizations from the salary level test. As with other industries, as discussed above, the Department accounts for nonprofit industry concerns by setting the salary level using the lowest-wage Census Region.

A number of community-based service providers for people with intellectual and developmental disabilities urged the Department to work closely with other government agencies, including the Centers for Medicare and Medicaid Services (CMS) and the Administration for Community Living (ACL), to implement the Department's proposed changes in the context of Medicaid home and community-based services (HCBS). *See, e.g.*, ANCOR;

[229] *See* 81 FR 32398, 32421; *see also* 84 FR 51234.

BrightSpring Health Services; NASDDDS; United Cerebral Palsy Association. Some commenters specifically referenced a policy that was adopted by the Department related to the enforcement of the 2016 regulation for providers of Medicaid-funded services for individual with intellectual or developmental disabilities in residential homes or facilities with 15 or fewer beds.[230] *See, e.g.*, Chimes; The Arc of the United States. Consistent with its approach in the 2019 rule, the Department is not adopting a similar policy in this rulemaking. The Department believes following this approach is appropriate given that the initial update (to $844 per week) is less than salary level increase in the 2019 rule, and service providers will have approximately 8 months from publication of this rule to comply with the new salary level ($1,128 per week). Additionally, the Department intends (as many commenters requested) to issue technical assistance to help employers comply with the FLSA and will continue to coordinate (as other commenters requested) with ACL and CMS on supporting Medicaid-funded service providers impacted by this rule.

Some commenters asked the Department to permit employers to prorate the salary level for part-time employees. *See, e.g.*, NCFC; PPWO; Seyfarth Shaw; University System of Maryland. The Department has never prorated the salary level for part-time positions; considered and rejected similar requests in its 2004, 2016, and 2019 rules; and declines to establish a prorated salary level for part-time positions in this rule.[231] As the Department has previously explained, employees hired to work part time generally do not work in excess of 40 hours in a workweek, and overtime pay is not at issue for these employees. An employer may pay a

[230] *See* 81 FR 32390 (May 23, 2016).
[231] 84 FR 51239; 81 FR 32422; 69 FR 22171.

nonexempt employee a salary to work part time without violating the FLSA, so long as the salary equals at least the minimum wage when divided by the actual number of hours (40 or fewer) the employee worked.[232]

The Chamber objected to the Department's proposed change to the example provided in § 541.604(b), a salary basis test regulation establishing that an exempt employee may be paid on an hourly, daily, or shift basis if the employment arrangement "includes a guarantee of at least the minimum weekly required amount paid on a salary basis regardless of the number of hours, days or shifts worked, and a reasonable relationship exists between the guaranteed amount and the amount actually earned." The Department did not propose any substantive change to this regulation and only proposed to update the dollar amounts in light of the proposed increase in the standard salary level. The Department has again updated the figures in the regulation to account for the salary level change from the NPRM to the final rule. The updated numbers in this final rule produce the same ratios between actual and guaranteed earnings as example in the current regulations. The Department declines the Chamber's suggestion to change the numbers, which would change the ratio.

Some commenters urged the Department to increase the percentage of the salary level that employers could satisfy using nondiscretionary bonuses and incentive payments (including commissions). *See, e.g.*, FMI; National Automobile Dealers Association; National Golf Course Owners Association; TechServe Alliance. The Department did not propose any changes to how bonuses are counted toward the salary level requirement,[233] and declines to make any such

[232] *See* FLSA2008–1NA (Feb. 14, 2008).
[233] *See* 88 FR 62169.

changes in this final rule. Consistent with the current regulations, employers can satisfy up to 10 percent of the new salary level ($112.80 per week under this final rule) through the payment of nondiscretionary bonuses and incentive payments (including commissions) paid annually or more frequently.

5. Assessing the Impact of the Salary Level

i. The Department's Assessment of the Impact of the Proposed Salary Level

As stated in the NPRM, the Department sought to achieve three objectives in proposing to set the standard salary level at the 35th percentile of weekly earnings of full-time salaried workers in the lowest-wage Census Region: preserve the primary role that the duties test plays in determining EAP exemption status; fully restore the initial screening function of the salary level; and more effectively identify in a one-test system who is employed in a bona fide EAP capacity in a manner that reasonably distributes among employees earning between the long and short test salary levels and their employers the impact of the Department's move from a two-test to a one-test system.

In assessing whether the proposal met these objectives, the Department first considered the impact of its proposed salary level on salaried white-collar workers across the income spectrum. The Department noted that almost three-quarters of salaried white-collar workers earned above the proposed salary level, and therefore duties, rather than salary, would remain determinative of exemption status for a significant majority of white-collar workers. The Department also concluded that a minority of the smaller share of salaried white-collar workers who earn less than the proposed standard salary level would meet the duties test, whereas approximately three-quarters of the far-larger share of salaried white-collar workers who earn at

least the proposed standard salary level would meet the duties test. The Department noted that this supported that the proposed salary level would be an effective indicator of the capacity in which salaried white-collar workers are employed. The Department also examined the impact of the proposed salary level on currently exempt EAP workers—salaried white-collar employees who meet the standard duties test and earn at least $684 per week. The Department found that 1.8 million of the workers who would be affected by the proposed salary level earned less than the long test salary level and therefore would have been screened from the exemption under every prior rule issued by the Department except for the 2019 rule, thus confirming that the proposed standard salary level would play a relatively modest role in determining EAP exemption status.

ii. Comments Received

The Department received relatively few comments directly addressing its estimates of the impact of the proposed salary level or the metrics it identified to assess those impacts. As previously discussed, some commenters representing employer interests stated that the proposal would exclude too many workers from the exemption based on their earnings. *See, e.g.*, Chamber; PPWO; Seyfarth Shaw. However, commenters that expressed such views generally did not challenge the Department's analysis of the impact of its proposed salary level on all salaried white-collar workers,[234] nor did they generally address the Department's conclusion that under the proposed standard salary level, duties would be determinative of exemption status for a

[234] Some commenters asserted that the proposed salary level would make nonexempt too many workers in lower-wage regions and industries. *See, e.g.*, AHLA; CUPA-HR; NAHB; National Restaurant Association. As discussed above, the Department has accounted for low-wage industries and regions by using earnings data from the lowest-wage Census Region to set the salary level.

large majority of full-time salaried white-collar workers.[235] As noted in section V.B, employer advocates that opposed the Department's proposed salary level instead often emphasized the salary level's function of screening obviously nonexempt employees from the exemption, albeit asserting that the proposed salary level would exceed its screening function, *see, e.g.*, PPWO, RILA, SHRM, whereas worker advocates often favored a greater role for the salary level than employer representatives, *see, e.g.,* AFSCME, EPI, Family Values @ Work.

AFPI challenged the Department's estimate of the number of workers who earn between the proposed salary level and the long test salary level, which it claimed is a "made-up number."[236] Some commenters representing employer interests stated that the Department underestimated the number of currently exempt workers who would be impacted by its proposed salary level. *See, e.g.*, AFPI; NAM; NRF (including a report by Oxford Economics); Rachel Greszler; Seyfarth Shaw. The Oxford Economics report claimed that up to 7.2 million workers could be affected by the proposed salary level; AFPI asserted that approximately "7.5 million

[235] AFPI objected to the Department's use of nonhourly workers' earnings to estimate the impact of the proposed salary level on salaried workers. *See also* Chamber; National Association of Convenience Stores. The Department disagrees with the suggestion that data on compensation paid to full-time nonhourly workers is not representative of the earnings of full-time salaried workers. The Department used the same approach in the 2004, 2016, and 2019 rules. *See* 84 FR 51258; 81 FR 32414; 69 FR 22197. As explained in greater detail below, *see* section VII, while the CPS MORG data on full-time nonhourly workers on which the Department has relied includes workers paid on a salary basis along with workers paid on other bases, such as on a piece-rate or day-rate basis, the Department's analysis of data from the Panel Study of Income Dynamics (PSID) shows that relatively few nonhourly workers were paid by methods other than salaried.

[236] NRF included a report from Oxford Economics which stated that a more reasonable methodology for modeling the long test salary level would be to update the 1975 long test level for inflation. As discussed in section V.B, the Department disagrees with Oxford Economics' suggestion, which would conflict with the Department's historical practice of avoiding the use of inflation indicators in updating the salary level.

employees would be non-exempt for the first time based on salary alone"; and Rachel Greszler stated that the correct figure is as high as 12.3 million workers. NAM stated that the Department "underestimated the impact," though it did not elaborate. Some of these commenters also challenged the probability codes the Department used to estimate the number of workers who meet the duties test. *See, e.g.*, AFPI; Rachel Greszler.

On the other hand, AFL-CIO, the Coalition of State AGs, and EPI relied on the Department's estimates in their comments. For instance, the Coalition of State AGs observed that "'most salaried white-collar employees paid less than the proposed standard salary level do not meet the duties test, whereas a substantial majority of salaried white-collar employees earning above the proposed standard salary level meet the duties test,'" quoting the NPRM, in opining that the proposed salary level struck a more appropriate balance between the long and short test salary levels than the 2004 and 2019 rules. In asserting that the proposed salary level, although "too low[,]" would restore overtime protections to lower-paid workers "who were wrongly classified as exempt[,]" AFL-CIO referenced the Department's estimate that the proposed salary level would be "restorative for more than half of the workers it affects" since "these employees would have been entitled to overtime in every rule prior to the 2019 rule." EPI noted that the 3.4 million workers that the Department estimated would be affected by the proposed salary level, plus the approximately 248,000 workers who would be affected by the proposed change in the total compensation threshold for the HCE test, discussed below, together constituted "just 2.6% of workers subject to [the] FLSA . . . and just 2.3% of all workers." As discussed in section V.B, numerous commenters representing workers also pointed to additional data points which, they stated, show that the Department's proposed salary level would fulfill a

relatively limited role in determining exemption status, particularly by historical standards. For instance, multiple commenters stated that approximately 28.2 percent of all full-time salaried workers earn below the proposed salary level, whereas in 1975 approximately 62.8 percent of full-time salaried workers earned below the short test salary level. *See, e.g.*, AFL-CIO; EPI; NELP; NWLC.

iii. Assessing the Impact of the New Salary Level

As discussed in section V.B, the Department is finalizing its proposal to set the standard salary level equal to the 35th percentile of earnings of full-time salaried workers in the lowest-wage Census Region, which, based on the most recent earnings data, produces a salary level of $1,128 per week. The Department has analyzed the impact of the new salary level, applying generally the same metrics that it applied in the NPRM. Upon consideration of the comments received, the Department concludes that this salary level meets the objectives it sought to achieve in undertaking this rulemaking: preserving the primary role of an analysis of employee duties in determining EAP exemption status; fully restoring the initial screening function of the salary level; and more effectively identifying in a one-test system who is employed in a bona fide EAP capacity in a manner that reasonably distributes among employees earning between the long and short test salary levels and their employers the impact of the Department's move from a two-test to a one-test system.

The Department intentionally chose a salary level methodology that will ensure that EAP exemption status for the great majority of white-collar employees will continue to depend on their duties. Consistent with the NPRM, the Department thus began by analyzing the impact of the new salary level on all full-time white-collar salaried workers. The Department continues to

believe that an analysis of how the new salary level will impact all full-time salaried white-collar workers is necessary to put the salary level and its relation to an examination of duties in the appropriate context, as this is the universe of workers who could potentially be impacted by an increase in the standard salary level. As noted above, commenters representing employers did not directly challenge this aspect of the Department's analysis. And many commenters representing workers effectively endorsed this approach in stating that the proportion of full-time salaried workers who earn less than the proposed salary level shows the relatively modest impact of the proposed salary level in determining EAP exempt status, in comparison to an examination of duties. *See, e.g.*, AFL-CIO; EPI; NELP; NWLC.[237]

The Department's analysis confirms that the number of full-time salaried white-collar workers who will be excluded from the EAP exemption due to the Department's salary level is greatly exceeded by the far-larger population of full-time salaried white-collar workers for whom duties will continue to determine their exemption status. As illustrated in Figure A below, of the approximately 45.4 million full-time salaried white-collar workers in the United States subject to the FLSA,[238] about 12.7 million earn below the new salary level of $1,128 per week, and about 32.7 million earn above the salary level.[239] Thus, approximately 28 percent of full-time salaried

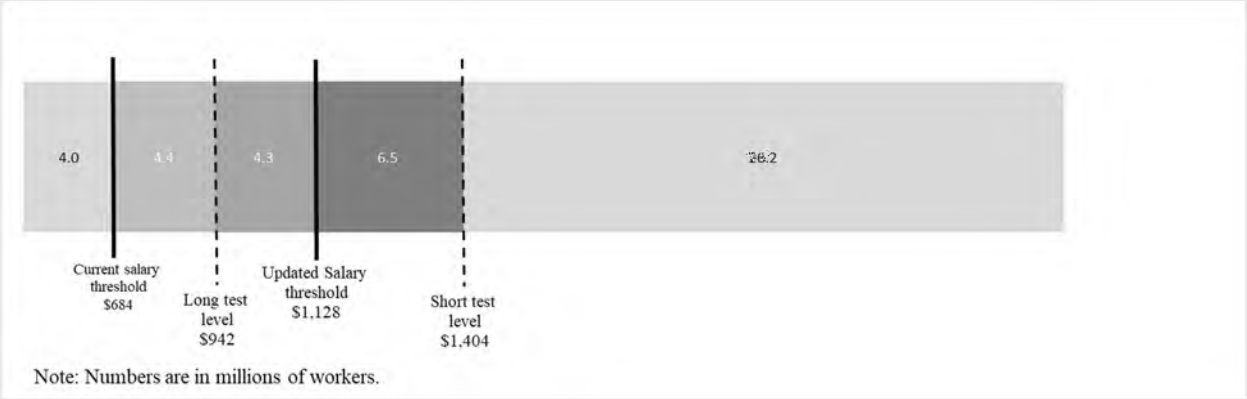
[237] As discussed further below, the Department does not believe, as some commenters representing workers suggested, that the proportion of full-time salaried workers who earned below the short test salary level in 1975 is the most appropriate comparator for the population of workers who earn below the new salary level.

[238] Excluded from this number are workers in named occupations and those exempt under another non-EAP overtime exemption. The exemption status of these groups will not be impacted by a change in the standard salary level. Commenters did not address the Department's exclusion of these workers from its analysis of the impact of the proposed salary level.

[239] This estimate is conservative, as it excludes 8.1 million white-collar workers employed as teachers, attorneys, and physicians, for whom there is no salary level requirement under the part

white-collar workers (most of whom, as discussed below, do not perform EAP duties) earn below the new salary level, whereas approximately 72 percent of full-time salaried white-collar workers earn above the salary level and would have their exemption status turn on their job duties.

Figure A: Distribution of Full-Time Salaried White-Collar Workers by Weekly Earnings



Scrutinizing these figures more closely reinforces the continued importance of the duties test under the final rule. Of the approximately 12.7 million full-time salaried white-collar workers who earn below the new salary level of $1,128 per week, about 8.3 million earn below the long test salary level of $942 per week. With the exception of the 2019 rule when the Department set the salary level slightly lower, the Department has always set salary levels that screened from exemption workers earning below the long test salary level. As discussed in section V.B, the long test salary level is a key parameter for determining an appropriate salary

541 regulations and whose exemption status is therefore always determined by their duties. If these workers in "named occupations" are included, the percentage of salaried full-time white-collar employees for whom exemption status would depend on duties, rather than salary, increases to 76 percent. *See* §§ 541.303–304.

level.[240] The number of full-time salaried white-collar workers for whom salary would be determinative of their nonexempt status and who earn at least the long test salary level—4.3 million—is over seven times smaller than the number of full-time salaried white-collar workers for whom job duties would continue to be determinative of their exemption status because they earn at least the new salary level—32.7 million.

In analyzing how the Department's new salary level will impact all salaried white-collar workers, the Department also considered the extent to which full-time salaried white-collar workers across the income distribution perform EAP duties. As the Department stated in the NPRM and the 2019 rule, the salary level has historically served as "a helpful indicator of the capacity in which an employee is employed, especially among lower-paid employees; however, the salary level should not eclipse the duties test.[241] In considering the extent to which full-time salaried white-collar workers perform EAP duties, the Department uses probability estimates of passing the standard duties test, as it did in the NPRM.[242]

The Department's analysis shows that the new salary level is a helpful indicator of whether salaried workers perform EAP duties, since a minority of full-time salaried white-collar workers who earn less than the salary level meet the standard duties test, whereas a large majority of such workers who earn more than the salary level meet the standard duties test. As illustrated in Figure B, of the 12.7 million full-time salaried white-collar workers who earn less

[240] The Department calculated the value of the long test salary level using the same methodology it used in the NPRM, updated for current earnings data: the 10th percentile of earnings of likely exempt workers in low-wage industries and regions. As explained in section V.B, any minor historical variations in the long test methodology do not deprive it of its usefulness in helping determine an appropriate salary level now.
[241] 88 FR 62171;84 FR 51239, 51237.
[242] *See* section VII.

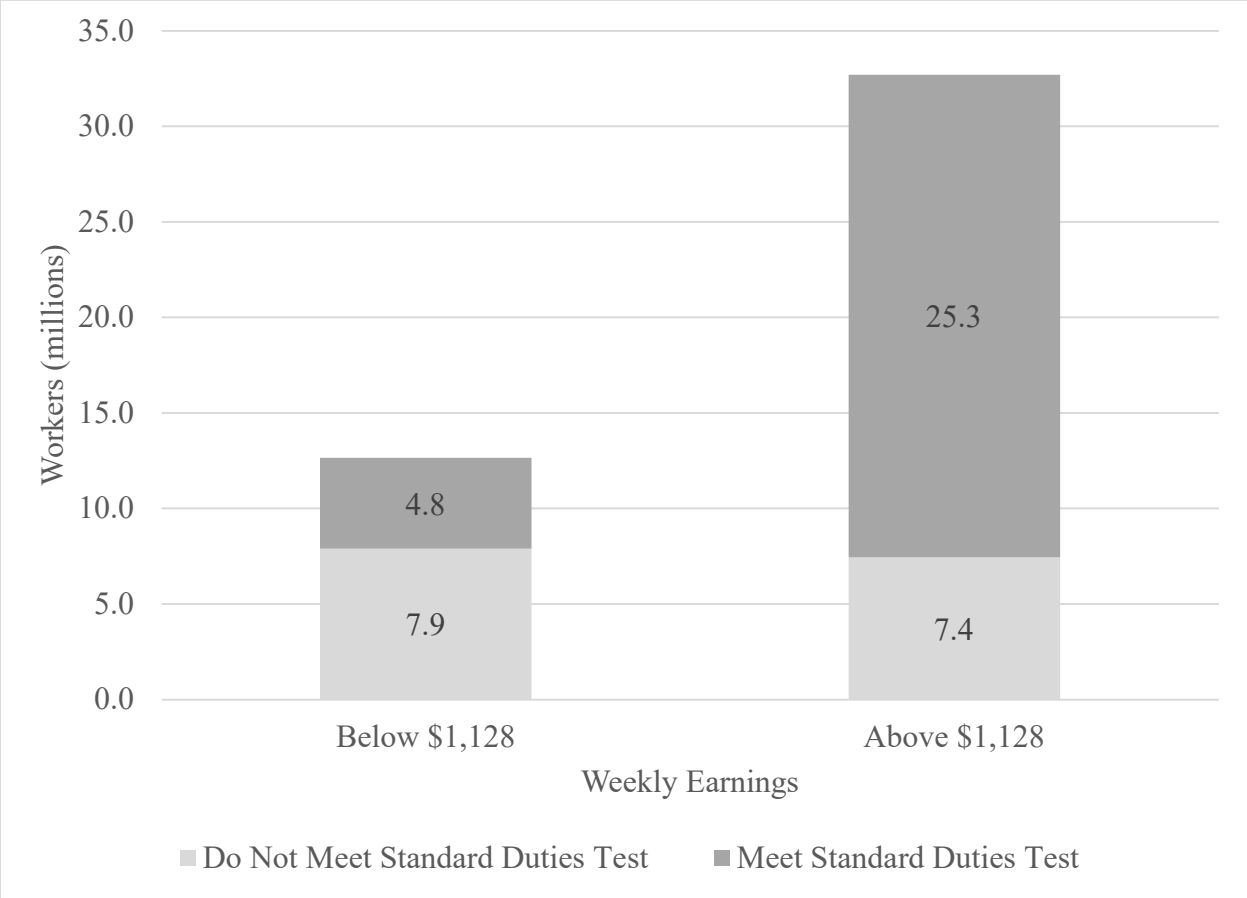
than $1,128 per week, the Department estimates that only 38 percent—about 4.8 million workers—meet the standard duties test. In contrast, of the 32.7 million full-time salaried white-collar workers who earn at least $1,128 per week, a large majority—77 percent, or about 25.3 million workers—meet the standard duties test.[243] The number of full-time salaried white-collar workers who meet the standard duties test and earn below the salary level is thus over five times smaller than the number of full-time salaried white-collar workers who meet the standard duties test and earn at least the salary level amount.[244] And 84 percent of all full-time salaried white-collar workers who meet the standard duties test—25.3 million out of a total of approximately 30.0 million—earn at least the new salary level.[245]

Figure B: Salaried White-Collar Workers Earning Above and Below the Standard Salary Level Who Meet or Do Not Meet the Standard Duties Test

[243] While a significant majority of full-time salaried white-collar workers who earn above the new salary level meet the duties test, helping confirm its appropriateness as an indicator of the capacity in which individuals are employed, a large number of full-time salaried white-collar workers who earn above the salary level—7.4 million—do not meet the duties test. A comparable number of salaried white-collar workers who earned above the proposed salary level did not meet the duties test, as EPI and AFI-CIO noted in their comments. PPWO's statement that "[t]he Department seem[ed] to be setting the salary level at a point at which all employees above the line would be exempt" is thus incorrect. The Department agrees with EPI that the fact that a large number of salaried white-collar workers who earn above the salary level will be nonexempt because they do not meet the duties test underscores the importance of an examination of duties under this rule. These 7.4 million workers will continue to be entitled to overtime because of their duties, not their salaries. Notably, this population is significantly larger than the population of workers who will become nonexempt under the new salary level. Rather than indicating that the salary level must be set higher, as AFL-CIO suggested, this fact indicates that this rule meets the Department's objective of preserving a primary role for an examination of duties.

[244] As noted above, *see supra* note 239, these figures exclude salaried white-collar workers who are not subject to the part 541 salary criteria.

[245] Note that these numbers refer only to salaried white-collar workers at all salary levels who meet the standard duties test, including workers who are nonexempt because they earn below the current standard salary level.



The Department disagrees with commenters that challenged its use of its probability codes to determine whether a worker meets the duties test in light of changes in occupational codes and the duties test since the probability codes were first developed. The Department has used the probability codes to estimate the number of workers who meet the duties test in its last three EAP rules.[246] As noted in section VII, although the probability codes were developed 25 years ago, the standard duties test is not substantively different from the former short duties tests reflected in the probability codes,[247] and the Department used occupational crosswalks to map the occupational codes on which the probability codes were originally based onto the 2018

[246] *See* 84 FR 51258-59; 81 FR 32458; 69 FR 22198.
[247] *See* 69 FR 22214.

Census occupational codes, which are used in the most recent CPS MORG data.[248] Additionally, the Department verified the continued appropriateness of the probability codes in 2016 through a review of the O*NET database,[249] which confirmed that the probability codes reflected current occupational duties.[250] The Department's probability codes remain reliable and appropriate indicators for evaluating whether workers meet the standard duties test.

Consistent with the NRPM, the Department next examined how the new salary level will impact salaried white-collar workers earning between the historic long and short test thresholds. As discussed in section V.B, the long and short test salary levels are important parameters for assessing the appropriateness of the salary level. Under the final rule, duties will continue to be determinative of exemption status for a majority of white-collar workers earning between these thresholds. As illustrated in Figure C, of the approximately 10.8 million salaried white-collar workers who earn between the long test salary level of $942 per week and the short test salary level of $1,404 per week, about 40 percent (4.3 million) earn below the new salary level, and about 60 percent (6.5 million) earn at or above the new salary level. Moreover, of the 4.3 million workers earning between the long test and the new standard salary level, almost half do not meet the standard duties test.[251]

---

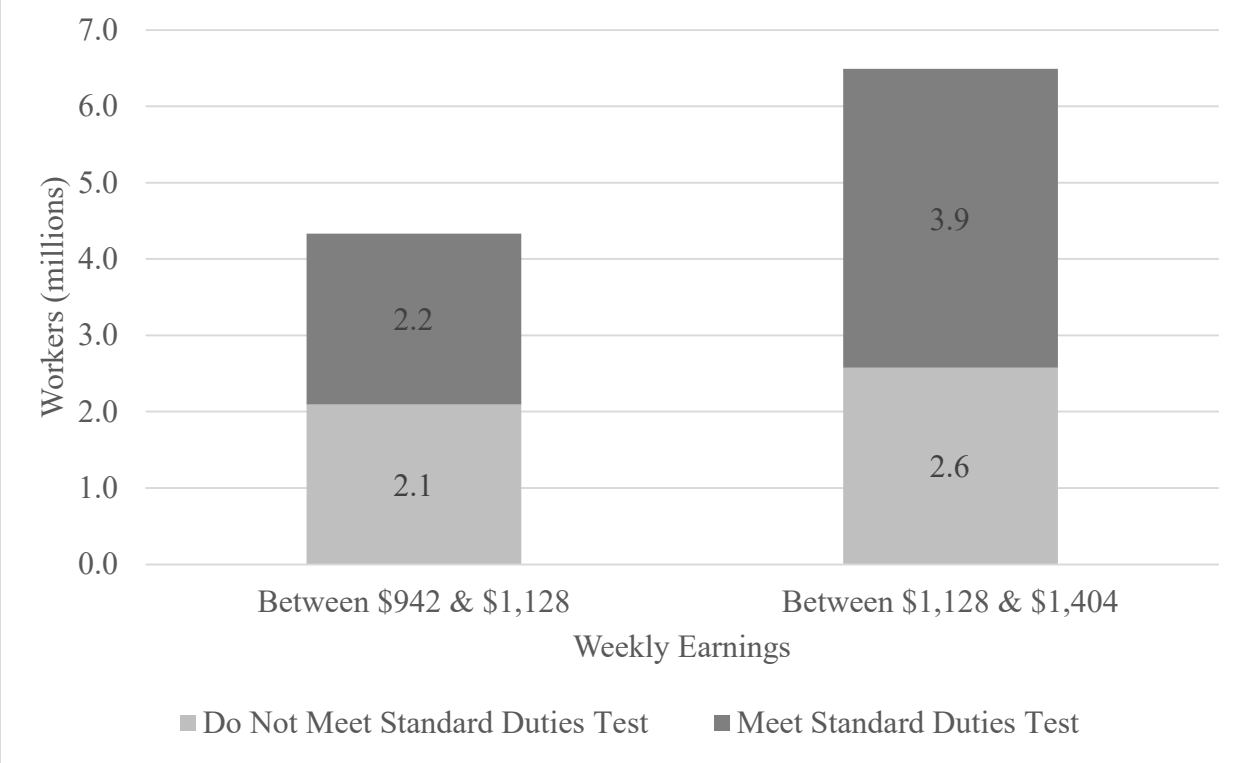
[248] *See* section VII.

[249] The O*NET database contains hundreds of standardized and occupation-specific descriptors. *See* https://www.onetcenter.org.

[250] *See* 81 FR 32459.

[251] As discussed further below, about 2.1 million of the approximately 4.3 million salaried white-collar workers who earn between the long test salary threshold and the Department's new salary level (about 48 percent of these workers) do not meet the standard duties test. Thus, in effect, only 21 percent of salaried white-collar workers who earn between the long and short test salary levels—2.2 million out of a total of 10.8 million—have their exemption status determined solely by the new standard salary level.

Figure C: Salaried White-Collar Workers Between the Long and Short Test Salary Levels Who Meet or Do Not Meet the Standard Duties Test



Commenters representing workers pointed to the proportion of full-time salaried workers who earned below the short test salary level in 1975, as compared to the proportion of full-time salaried workers who earned below the proposed salary level, in stating that the Department could or should set the salary level higher than the proposed salary level. *See, e.g.*, AFL-CIO; EPI; NELP; NWLC. As emphasized above, the Department agrees that the short test and long test salary levels are key parameters for assessing the appropriateness of a salary level in a one-test system. It is also useful to put any salary level in historical context.

However, the Department notes that under the two-test system, employers could also use the long test, which paired a lower salary level with a more rigorous duties test. Accordingly, a segment of the workers who earned below the short test salary level in 1975—those who earned between the short and long test salary levels and performed limited amounts of nonexempt work—were still exempt from overtime under the long test even though they earned below the short test salary level. As explained in section V.B.4, the Department has elected to set the salary level well below the short test salary level in part because setting it in the short test salary range would prevent employers from using the EAP exemption for this entire population of historically exempt workers.

Lastly, the Department also looked at the impact of the new salary level on currently exempt employees—those salaried white-collar workers who meet the standard duties test and earn at least $684 per week. As with every prior rulemaking to increase the part 541 salary levels, a relatively small percentage of currently exempt workers will become nonexempt. Of the approximately 45.4 million salaried white-collar workers in the United States, approximately 29.3 million currently qualify for the EAP exemption.[252] Of these 29.3 million presently exempt workers, just 4.0 million earn at or above the current $684 per week standard salary level but less than $1,128 per week and will, without some intervening action by their employers, become entitled to overtime protection as a result of the combined effect of the initial update and the

[252] Note that the 29.3 million worker figure only refers to workers who meet the standard EAP exemption and thus differs from the population of potentially affected EAP workers identified in the economic analysis (29.7 million), which includes workers who qualify only for the HCE exemption. As noted above, this is a conservative estimate because there are also 8.1 million workers in the "named occupations" who, under the Department's regulations, are exempt based on their duties alone.

subsequent application of the new standard salary level in this rule. A test for exemption that includes a salary level component will necessarily result in a number of workers who earned at or above the prior salary level and pass the duties test becoming nonexempt when the salary level is increased. As the Department has consistently found since 1938, salary is an important indicator of whether an individual is employed in a bona fide EAP capacity and therefore a key element in defining the exemption.

As the Department explained in its analysis of the impact of the proposed salary level, the new salary level will impact the exemption status of two distinct and important, but relatively small, groups of lower-paid EAP workers. First, the new salary level will restore overtime protections to 1.8 million currently exempt workers who meet the standard duties test but earn less than the equivalent of the long test salary level ($942 per week). Such employees were excluded from the EAP exemption under every rule prior to 2019, either by the long test salary level itself, or under the 2004 rule standard salary level, which was set equivalent to the long test salary level. Fully restoring the salary level's initial screening function requires a salary level that will ensure all employees who earn below the long test level are excluded from the exemption.

Second, the new salary level will result in overtime protections for an additional 2.2 million currently exempt workers who meet the standard duties test and earn between the long test salary level ($942 per week) and the final salary level. As explained earlier, the Department is setting the standard salary level above the long test level to account for the shift to a one-test system in a manner that reasonably distributes the impact of this switch. The final rule will limit the number of affected workers by setting a standard salary level below the midpoint between the

long and short test salary levels and by using earnings data from the lowest-wage Census Region (the South).

Even among the 4.0 million workers affected by the combination of the initial update and the subsequent application of the new standard salary level in this rule, the fact that a large share of these workers earn below the long test level underscores the modest role of the final salary level. Beyond the 1.8 million workers earning less than the long test salary level—to whom the final rule will simply restore overtime protections that they had under every rule prior to 2019—the increase in the salary level will affect the exemption status of 2.2 million workers. This group makes up about 8 percent of all currently exempt, salaried white-collar workers and just under 5 percent of all salaried white-collar workers.[253] The salary level methodology adopted in this rule will thus maintain the "useful, but limited, role" of the salary level in defining and delimiting the EAP exemption.[254]

Finally, the Department does not agree with commenters that stated that it underestimated the number of affected workers in the NPRM. Commenters that asserted the number of affected workers could be much higher generally referenced estimates of the number of workers earning between the current salary level and the proposed salary level, regardless of whether they passed the duties test, and then posited that up to that many workers (e.g., 7.2 million, 7.5 million, or 12.3 million) could be affected. *See* AFPI; NRF; Rachel Greszler. The position that all workers earning below the new salary level, regardless of their duties, will be affected by the new salary

[253] The 4.0 million workers affected by the new salary level represent only 13.8 percent of the 29.3 million salaried white-collar workers who currently qualify for the standard EAP exemption.
[254] *See* 88 FR 62173; 84 FR 51238.

level fails to account for the fact that that millions of these workers are already nonexempt because they fail the duties test. The exemption status of workers who fail the duties test will not be affected by this rule.

Determining the workers who will be affected by a change in the salary level requires an examination of workers' earnings and their duties. Consistent with the NPRM, the Department determined the populations of currently exempt workers who will be affected by the salary level by applying its probability codes. For the reasons discussed earlier in this section and in section VII below, the Department's probability codes are reliable and appropriate indicators of whether an employee meets the standard duties test. The Department has consistently applied this methodology in all its recent part 541 rules.[255] Though some commenters criticized the Department's method for calculating the affected worker figure, they did not offer an alternate methodology for determining which workers pass the current duties test, let alone one as robust and proven as the Department's probability codes.

C. Highly Compensated Employees

In the 2004 rule, the Department created the HCE test for certain highly compensated employees. Combining a much higher compensation requirement with a minimal duties test, the HCE test is based on the rationale that employees who earn at least a certain amount annually—an amount substantially higher than the annual equivalent of the weekly standard salary level—will almost invariably pass the standard duties test.[256] The HCE test's primary purpose is

[255] *See* 84 FR 51258–59; 81 FR 32458; 69 FR 22198.

[256] 84 FR 51249; *see also* § 541.601(c) ("A high level of compensation is a strong indicator of an employee's exempt status, thus eliminating the need for a detailed analysis of the employee's job duties.").

therefore to serve as a streamlined alternative for very highly compensated employees because a very high level of compensation is a strong indicator of an employee's exempt status, thus eliminating the need for a detailed duties analysis.[257]

As outlined in § 541.601, to be exempt under the HCE test, an employee must earn at least the amount specified in the regulations in total annual compensation—presently $107,432 per year.[258] Of this HCE threshold amount, no less than the full standard salary level amount must be paid on a salary or fee basis.[259] Finally, the employee must "customarily and regularly perform[] any one or more of the exempt duties or responsibilities of an executive, administrative, or professional employee[.]"[260] The HCE test applies only to employees whose primary duty includes performing office or non-manual work.[261]

Employees qualifying for exemption under the HCE test must receive at least the standard salary level per week on a salary or fee basis, while the remainder of the employee's total annual compensation may include commissions, nondiscretionary bonuses, and other nondiscretionary compensation.[262] Total annual compensation does not include board, lodging, or other facilities, and does not include payments for medical insurance, life insurance,

[258] § 541.601(a)(1).
[259] § 541.601(b)(1). Although § 541.602(a)(3) allows employers to use nondiscretionary bonuses, incentives, and commissions to satisfy up to 10 percent of the weekly standard salary level when applying the standard salary and duties tests, the Department's regulation at § 541.601(b)(1) does not permit employers to use such payments to satisfy the weekly standard salary level requirement for HCE workers. *See* 84 FR 51249.
[260] § 541.601(c).
[261] § 541.601(d).
[262] § 541.601(b)(1). The criteria for determining if an employee is paid on a "salary basis" are identical under the standard exemption criteria and the HCE test. *See Helix Energy Solutions,* 143 S.Ct. at 683.

retirement plans, or other fringe benefits. An employer is permitted to make a final "catch-up" payment during the last pay period or within 1 month after the end of the 52-week period to bring an employee's compensation up to the required level.

As stated in the NPRM, the Department continues to believe that the HCE test is a useful alternative to the standard salary level and duties tests for highly compensated employees. However, as with the standard salary level, the HCE total annual compensation level must be updated to ensure that it remains a meaningful and appropriate standard to pair with the minimal HCE duties test. To maintain the HCE test's role as a streamlined alternative for those employees most likely to meet the standard duties test, the HCE total annual compensation level must be high enough to exclude all but those employees "at the very top of [the] economic ladder[.]"[263] The proposal noted that when it was created in 2004, the HCE test featured a $100,000 threshold that exceeded the annual earnings of approximately 93.7 percent of salaried workers nationwide.[264] More recently in the 2019 rule, the Department set the HCE test threshold so it would be equivalent to the annual earnings of the 80th percentile of full-time salaried workers nationwide. At the time of the NPRM, however, the $107,432 per year HCE threshold covered only 72 percent of full-time salaried workers nationwide.[265]

The Department proposed to update the HCE test by setting the total compensation amount equal to the annualized weekly earnings of the 85th percentile of full-time salaried workers nationwide. Based on earnings data used in the NPRM, this proposed methodology resulted in a proposed HCE threshold of $143,988, of which at least $1,059 per week (the

[263] 69 FR 22174.
[264] *See* 88 FR 62159.
[265] *Id*.

proposed standard salary level) would have to be paid on a salary or fee basis.[266] The Department noted that its proposed methodology would produce an HCE threshold that was higher than under the methodology adopted in the 2019 final rule (which set the HCE threshold equal to the annualized weekly earnings of the 80th percentile of full-time salaried workers nationwide),[267] but lower than under the 2004 rule (which covered 93.7 percent of salaried workers nationwide) and the method adopted in the 2016 rule (which would have covered 90 percent of salaried workers nationwide).[268] In justifying the proposed HCE threshold, the Department explained in the NPRM that it was concerned that repeating the 2019 rule's methodology now would not produce a threshold high enough to reserve the HCE test for employees at the top of today's economic ladder and could risk the unintended exemption of large numbers of employees in high-wage regions.[269]

The Department is finalizing its proposal to increase the HCE total compensation threshold to the 85th percentile of annualized weekly earnings of full-time salaried workers nationwide. Applying this methodology to calendar year 2023 earnings data results in a total compensation threshold of $151,164 per year. This approach will guard against the unintended exemption of workers who are not bona fide executive, administrative, or professional employees, including those in higher-income regions and industries.

---

[266] It is the Department's intent that the increase in the HCE total annual compensation threshold is independent of, and severable from, the increase in the standard salary level to the 35th percentile of weekly earnings of full-time salaried employees in the lowest-wage Census Region (the South) and the updating provision, pursuant to which the HCE total annual compensation threshold will be regularly updated to reflect current earnings.
[267] *See* 84 FR 51250.
[268] *See* 69 FR 22169–70 (Tables 3 and 4); 81 FR 32429.
[269] 88 FR 62176.

As in prior rulemakings, the Department received significantly less feedback from commenters on the proposed increase to the HCE threshold than on the proposed increase to the standard salary level. Most commenters did not address the issue. Among the comments that addressed the proposed HCE threshold, stakeholder sentiment was split; employee representatives generally supported the proposed increase or asked for a higher increase, while most employer representatives favored a smaller increase or no increase at all.

A number of commenters expressed support for the proposed increase to the HCE threshold. *See, e.g.*, AFT; AFL-CIO; Coalition of State AGs. For example, the Coalition of State AGs asserted that "[s]ignificant inflation since the 2019 rule became effective in January 2020 has eroded the purchasing power of the HCE salary level" and remarked that the HCE threshold "could arguably be made even higher than the proposed level, particularly for high-cost, high-wage states[.]" The National Partnership described the proposed HCE threshold as "in line with historic and economic precedent," while the AFT commented that the proposed HCE threshold "will ensure [that] workers in the health care sector, and workers who provide a wide range of services and expertise for state and local governments, are not completely excluded from possibly qualifying for overtime."

A handful of commenters advocated for the adoption of a higher HCE threshold than proposed. Noting that the HCE threshold originally exceeded the earnings of 93.7 percent of all salaried employees nationwide when it was introduced in 2004, Sanford Heisler Sharp asserted that the Department's proposal to set the HCE threshold at the 85th percentile "introduces a substantial risk of harming employees who truly need overtime protections." NELA and Nichols Kaster urged the Department to repeat the approach it took in the 2016 rule, which set the HCE

threshold equal to the 90th percentile of salaried earnings nationwide. Invoking the FLSA's policy goal of spreading employment, NELA also opined that "an overly permissive HCE [test] will result in fewer 'highly compensated' jobs available for workers aspiring to climb the economic ladder to benefit themselves and their families."

Employer stakeholders that addressed the HCE threshold opposed the Department's proposed increase, with many commenters disputing that the current HCE threshold should be increased at all. *See, e.g.*, ABC; AHLA; Argentum & ASHA; NAW; Visiting Angels. A number of commenters that opposed the proposed HCE threshold asserted that it would be administratively burdensome to reevaluate the exemption status of employees who earn between the current and proposed HCE thresholds. *See, e.g.*, HR Policy Association; NAM; NCFC. PPWO commented that "[e]mployers will be faced with the task of reviewing the basis on which each employee was accorded exempt status, including employees for whom the exempt status decision was made a decade ago and who may be among the most highly paid employees in the company."

Other employer-side stakeholders opposed the proposed HCE threshold but indicated (either in the alternative or outright) that they would be open to a smaller increase. Several commenters stated an increase to the HCE threshold using the 80th percentile methodology applied in the 2019 rule would be preferable. *See, e.g.*, CWC; LeadingAge; RILA; *see also* Chamber (asserting that the NPRM "does not address whatsoever why the 80th percentile [methodology] would be insufficient"). National Restaurant Association asserted that if the Department changes the HCE threshold, it "should calculate any new HCE highly compensated level by using data from the South Census Region, rather than on a nationwide basis, to ensure

that the HCE exemption is at least within reach of some employers in the lowest-wage regions in the country." WFCA similarly recommended that the Department set the HCE threshold at the 85th percentile of salaried earnings in lowest-wage Census Region or, alternatively, use the 80th percentile of national data for full-time salaried workers (*i.e.*, the 2019 rule's approach).

Having considered the comments received, the Department is finalizing its proposal to increase the HCE threshold to the 85th percentile of annualized weekly earnings of full-time salaried earnings nationwide. This results in a new HCE threshold of $151,164 per year, using calendar year 2023 earnings data, of which at least $1,128 per week (the standard salary level) must be paid on a salary or fee basis.[270]

As an initial matter, the Department maintains that the current HCE threshold must be increased. In nominal terms, the current $107,432 HCE threshold is only 7 percent higher than the $100,000 HCE threshold that was introduced in 2004 and, as multiple commenters noted, it has failed to keep up with wage growth over the last 20 years. According to 2023 earnings data, the current HCE threshold ($107,432) now covers just 70 percent of full-time salaried workers nationwide, less than the 80 percent of such workers that it covered when it was set in 2019. This coverage would continue to decrease in the absence of an increase, which is needed to reserve the HCE test for employees "at the very top of today's economic ladder,"[271] as the Department originally intended. Inaction could risk the unintended exemption of employees in higher-income regions and industries who clearly are outside of the scope of the exemption.[272]

[270] As discussed in section IV, the increase in the HCE threshold and the standard salary level using the new methodologies will be applicable on January 1, 2025.
[271] 69 FR 22174.
[272] *Id*.

The Department concludes that increasing the HCE threshold to the 85th percentile of annualized weekly earnings of full-time salaried workers nationwide will ensure that the threshold is sufficiently high to provide a meaningful and appropriate complement to the minimal HCE duties test, and that nearly all of the highly paid white-collar workers earning above this threshold "would satisfy any duties test."[273] The Department considered keeping the 2019 rule's methodology for the HCE threshold (*i.e.*, the 80th percentile of earnings of full-time salaried employees nationwide) and applying it to current earnings data. However, the Department reaffirms its determination from the NPRM that this methodology is not appropriate because it does not produce a threshold high enough to reserve the HCE test for employees who would almost invariably pass the standard duties test. The Department agrees with commenters that stated that setting the HCE threshold at the annualized weekly earnings of the 85th percentile of full-time salaried workers nationwide will guard against the unintended exemption of workers who are not bona fide executive, administrative, or professional employees, including those in higher-income regions and industries.

The Department disagrees that the new HCE threshold is too high. Adjusting for wage growth, the proposed HCE threshold is significantly lower than the original HCE threshold that was introduced in 2004 (which surpassed the earnings of 93.7 percent of full-time salaried workers). Going forward, employers with employees affected by the increased HCE threshold can still use the standard exemption criteria to take advantage of the EAP exemption. The HCE test is a streamlined alternative to the standard exemption criteria for a select class of employees

[273] 84 FR 51250 (internal citation omitted).

who are so highly paid that they will almost invariably pass the standard duties test.[274] By design, the HCE test is reserved for employees "at the very top of today's economic ladder" who would satisfy "any duties test" in "virtually every" case.[275] This exclusivity is necessary because of the risk that the HCE test poses to salaried employees in high-income regions and industries who are not bona fide EAP employees, which the Department acknowledged when the HCE test was created in 2004.[276]

Although the Department has previously acknowledged that the HCE test may exempt some employees who fail the standard duties test and would otherwise be entitled to overtime pay, such outcomes should be "rare," involving employees whose pay is high enough that their exemption "would not defeat the objectives of section 13(a)(1) of the Act."[277] The only way to ensure that the HCE test serves its intended purpose—*i.e.*, serving as an efficient, streamlined test for employees who would "almost invariably" meet the standard duties test—is for the test to include an earnings threshold high enough to exclude nearly all employees whose EAP status may be questionable. The exemption status of such employees should be determined by the standard exemption criteria.

The Department acknowledges that some commenters requested the adoption of a higher HCE threshold, closer in magnitude to the original $100,000 HCE threshold that was adopted in

[274] *See* § 541.601(c) ("A high level of compensation is a strong indicator of an employee's exempt status, thus eliminating the need for a detailed analysis of the employee's job duties."); *see also* 84 FR 51249.
[275] 69 FR 22174.
[276] *See id*. (explaining the need to avoid the unintended exemption of employees "such as secretaries in New York City or Los Angeles . . . who clearly are outside the scope of the exemptions and are entitled to the FLSA's minimum wage and overtime pay protections.").
[277] *See* 84 FR 51249.

2004. As noted above, the original HCE threshold exceeded the earnings of over 93 percent of salaried white-collar workers when it was adopted. Germane to these comments, the Department considered repeating the approach it took in the 2016 final rule and proposed in the 2019 NPRM of setting the HCE threshold at the annualized weekly earnings of the 90th percentile of full-time salaried workers nationwide, which would result in a threshold of $179,972 per year. As noted in the NPRM, however, the Department is concerned that an HCE threshold set at $179,972 could unduly restrict the use of the HCE test for employers in lower-wage regions and industries.[278] While the new HCE threshold does not exclude from the HCE test as high a percentage of full-time salaried employees as the HCE threshold initially adopted in 2004, it excludes a sufficiently large percentage (*i.e.*, 85 percent of full-time salaried employees nationwide) to guard against the unintended exemption of employees in higher-income regions and industries who are not bona fide EAP employees.

For all of the reasons provided above, the Department adopts its proposal to set the HCE threshold equal to the annualized weekly earnings of the 85th percentile of full-time salaried workers ($151,164). This new level will be applicable on January 1, 2025.

D. Severability

1. The Department's Proposal

The Department proposed to add a severability provision to its part 541 regulations at § 541.5. Proposed § 541.5 stated that if any provision of this part is held to be invalid or unenforceable by its terms, or as applied to any person or circumstance, or stayed pending further agency action, the Department intended that the provision be given the fullest effect

[278] *See* 88 FR 62176*; see also* 84 FR 51250.

permitted by law, unless the provision is held to be completely invalid or unenforceable, in which case, the Department intended the provision to be severable and not to affect the remaining provisions.

The Department illustrated the intended effect of proposed § 541.5 with some examples. The Department noted that it was its intent that the proposed updating mechanism be effective even if the proposed increase in the standard salary level were invalidated. It was also the Department's intent that the proposed increase in the HCE total annual compensation threshold be effective even if the increase in the standard salary level were invalidated. And it was the Department's intent that the proposed increases in the standard salary level and HCE annual total compensation requirement apply even if the updating mechanism was determined to be invalid.[279]

The Department is finalizing § 541.5, Severability, as proposed, with that addition of clarifying language as discussed below.

2. Discussion of Comments and Final Rule

Most commenters did not address proposed § 541.5. Of the few commenters that did address the Department's severability proposal, the Administrative Law Professors and NELP supported the inclusion of a severability provision in the final rule.

[279] The Department also stated that it was the Department's intent that its proposal to apply the standard salary level to the U.S territories subject to the Federal minimum wage remain in effect even if the proposed change to the standard salary level were invalidated. As discussed above, *see supra* note 9, at this time the Department is not finalizing in this final rule its proposal to apply the standard salary level to the U.S. territories subject to the Federal minimum wage and to update the special salary levels for American Samoa and the motion picture producing industry.

In expressing their support, the Administrative Law Professors provided the most in-depth discussion of the Department's proposed severability provision. The Administrative Law Professors explained that a provision of a rule is severable where the agency intends for the remainder of the rule to be effective, even if the provision is invalidated, and the rule would be workable absent the provision, citing precedent from the U.S. Supreme Court and the U.S. Court of Appeals for the District of Columbia Circuit.[280] The professors noted that the Department "clearly state[d] [its] intention" in proposed § 541.5 that the updating mechanism in proposed § 541.607 "be effective even if the proposed increase in the standard salary level is invalidated." They further noted that the Department "expresse[d] the same intention with regard to the implementation of the HCE total annual compensation requirement whether or not the standard salary level is invalidated" and "the application of the Department's proposed 2023 earnings thresholds, whether or not automatic updating is upheld."

The Administrative Law Professors observed that the Department's inclusion of a severability provision in the NPRM was consistent with guidance from the Administrative Conference of the United States (ACUS), which advised agencies in a 2018 report[281] to address severability in the text and preamble of both the NPRM and the final rule where the agency intends the provisions of a rule to be severable and anticipates that the rule may be challenged in court. The professors suggested that the Department further explain in the final rule how the rule "would remain workable" if any of its provisions were declared invalid. As an example, the

[280] *See K-Mart Corp. v. Cartier*, 486 U.S. 281, 294 (1988); *Davis Cnty. Solid Waste Mgmt. v. EPA*, 108 F.3d 1454, 1459-60 (D.C. Cir. 1997).
[281] *See* Admin. Conf. of the U.S., Recommendation 2018-2, *Severability in Agency Rulemaking*, 83 FR 30683, 30685 (June 29, 2018).

professors suggested stating explicitly that invalidation of the updating provision "would have no bearing on the rationality or administrability of the standard salary and HCE salary thresholds" as set in the rule. They further noted that in the event of the invalidation of either the standard salary level or the HCE compensation threshold, the updating provision could function independently because "updating would simply take as the 2023 baseline the thresholds left in place from the 2019 rule." The Administrative Law Professors made clear that expanding the explanation of "the independent workability of any of the rule's provisions" should not be seen as an indication of legal vulnerability but instead as merely an acknowledgement of the possibility of legal challenge.

NELP also supported the proposed severability provision, noting the "vital importance" of the proposed rule to millions of workers. Specifically, NELP stated that if any provision of the rule "is deemed legally questionable, only that provision should be stayed while litigation proceeds."

A small number of commenters representing employer interests specifically opposed the proposed severability provision or criticized the Department's severability proposal. Indiana Chamber of Commerce and U-Haul Holding Company (U-Haul) stated that the proposed severability provision was an acknowledgement of the legal vulnerability of the Department's proposed updating section. The YMCA stated that the Department failed to explain the need for, or appropriateness of, the proposed severability provision, and RILA asserted that the Department failed to explain how the proposed rule would function if any of its provisions were declared invalid. The Chamber and the National Association of Convenience Stores asserted that the Department should withdraw the severability provision.

The Chamber further asserted that, pursuant to the district court decision invalidating the 2016 rule, "the automatic increase provision in the Proposed Rule cannot survive if the increase to the minimum salary level is struck down." The Department does not read the court's decision as substantively examining the validity of the 2016 rule's automatic updating provision or analyzing whether that provision was severable from the remainder of the rule. And importantly, the 2016 rule did not contain a severability provision or discuss the Department's intent regarding severability of the provisions of that rule. In contrast, the Department's current NPRM included a severability provision and a detailed discussion of the Department's intent that specifically addressed severability of the updating provision. As the Administrative Law Professors noted, as proposed, the updating provision was not dependent on the proposed increases to the standard salary level and the HCE compensation threshold. If either of the new thresholds were vacated, the updating provision would simply use the existing methodologies set in the 2019 rule as the baseline for the update (*i.e.*, the Department would apply those methodologies triennially to update the earnings thresholds as established in § 541.607). This is a significant change from the 2016 updating provision, which would have updated the standard salary level and HCE total compensation requirement based on the specific methodologies set in that rule and facially could not function if those methodologies were invalidated.[282]

Upon consideration of the comments received, the Department is finalizing the severability provision in § 541.5 as proposed, with an additional sentence to further clarify its intent. The Department intends that each of this rule's provisions be considered separate and severable and operate independently from one another. The Department is revising § 541.5 to

[282] *See* 81 FR 32251.

state this explicitly. In this regard, the Department intends that if any application of a provision is stayed, enjoined, or invalidated, the provision be construed to continue to give the maximum effect to the provision permitted by law. In the event any provision within a section of the rule is stayed, enjoined, or invalidated, the Department intends that all remaining provisions within that section, plus all other sections, remain effective and operative. And in the event any whole section of the rule is stayed, enjoined, or invalidated, the Department intends that all remaining sections remain effective and operative.

It is the Department's position that the provisions and sections of the rule can function sensibly in the event that any specific provisions, sections, or applications are invalidated, enjoined, or stayed. To begin, the new standard salary level set forth in § 541.600(a)(2) of $1,128 per week—the 35th percentile of weekly nonhourly earnings in the lowest-wage Census Region—can function sensibly, even if, for instance, the rule's new updating section or the revision to the HCE total compensation requirement are stayed, enjoined, or invalidated. The revision to the standard salary level under the new methodology operates independently of and does not depend on either the new updating section or the revision to the HCE total compensation requirement. If, for instance, the triennial updating of the standard salary level were invalidated, the new salary level of $1,128 would still go into effect, and it would remain $1,128 per week until the Department conducts further rulemaking. The new standard salary level of $1,128 per week would also still take effect if the initial update to the standard salary level were invalidated.[283] And the new standard salary level would still go into effect and

[283] As noted in section IV, the initial update to the standard salary level and HCE total annual compensation requirement are applicable July 1, 2024, whereas the new standard salary level and HCE total annual compensation requirement are applicable 6 months later on January 1, 2025.

function sensibly if the revision to the HCE total compensation requirement were invalidated as well. Notably, in such an event, the total annual compensation an employee would need to receive to qualify for the HCE test would remain at the existing level;[284] however, the employee's total annual compensation would need to include at least $1,128 per week paid on a salary or fee basis. As discussed in section V.B, the revised standard salary level will work effectively with the standard duties test to better define who is employed in a bona fide EAP capacity by restoring the initial screening function that the salary level long fulfilled and adjusting the salary level to account for the change to a single-test system. Finalizing the new standard salary level will thus accomplish several of the key objectives the Department is seeking to achieve in undertaking this rulemaking, even if all or part of the updating section or the revisions to the HCE total compensation requirement do not also go into effect.

The revised HCE total compensation requirement of $151,164 per year set forth in § 541.601(a)(1)—the 85th percentile of annualized weekly earnings of full-time nonhourly workers nationally—can also function sensibly, even if the other provisions of this final rule are stayed, enjoined, or invalidated. The revision to the HCE total compensation requirement under the new methodology operates independently of, and does not depend on, either the new updating provision or the revision to the standard salary level. Accordingly, if, for instance, the triennial updating of the HCE total compensation requirement were invalidated, the new HCE total compensation requirement of $151,164 per year would still become effective, and the HCE total compensation requirement would remain at that amount until the Department undertakes

[284] Under these circumstances, the HCE total annual compensation requirement would be $132,964 per year or, if the initial update to the earnings thresholds under this rule did not go into effect, the current HCE total annual compensation requirement of $107,432 per year.

further rulemaking. If the initial update to the HCE total compensation requirement were invalidated, the revised HCE total compensation requirement would still go into effect, too. And the revised HCE total compensation requirement would still go into effect and function sensibly if the revision to the standard salary level were invalidated. In such an event, an employee would need to be paid the new total annual compensation amount of $151,164 per year to qualify as exempt under the HCE test, though the total annual compensation would need to include only the existing standard salary level[285] per week paid on a salary or fee basis. As noted in section V.C, the HCE test was intended to be limited to those highly paid employees who would almost invariably meet the standard duties test. The revision to the HCE total compensation requirement would restore it to a level that is high enough to avoid the unintended exemption of large numbers of employees in high-wage regions but not so high as to unduly restrict the use of the HCE test in lower-wage regions and industries, even if the revisions to the standard salary level and all or part of the updating provision do not go into effect.

The new updating section can also function sensibly, independent of the other provisions of this final rule. As explained in section V, the updating section provides in § 541.607(a) and (b) that the Department will update the standard salary level and HCE total compensation requirement, respectively, initially on July 1, 2024 and every 3 years thereafter, to reflect current earnings data, in accordance with the methodology used to set each threshold. Both the triennial updating of the earnings thresholds for exemption and the initial update to these thresholds can function sensibly on their own.

[285] Under these circumstances, the standard salary level would be $844 per week or, if the initial update to the earnings thresholds under this rule did not go into effect, the current standard salary level of $684 per week.

The triennial updating of the earnings thresholds for exemption can function sensibly, even if the new standard salary level and new HCE total compensation requirement are stayed, enjoined, or invalidated, as the triennial updates are based on the methodology used to set each threshold that is in place at the time of the update. If all the provisions of this rule do go into effect (and assuming the Department has not engaged in further rulemaking), as discussed in section V.A, the triennial updates to the standard salary level and HCE total compensation threshold will be based on the new methodologies established in this rule: the 35th percentile of weekly nonhourly earnings in the lowest-wage Census Region and the 85th percentile of annualized weekly earnings of full-time nonhourly workers nationally, respectively. However, the updating provision does not depend on the revisions to the standard salary level and HCE methodologies also going into effect. If, for instance, both the new standard salary level and HCE total compensation requirement were invalidated, the updating provision would, as the Administrative Law Professors noted, use the existing methodologies set in the 2019 rule as the baseline for the each triennial update: the 20th percentile of weekly earnings of full-time nonhourly workers in the lowest-wage Census Region and/or retail nationally, in the case of the standard salary level, and the 80th percentile of annualized weekly earnings of full-time nonhourly workers nationally, in the case of the HCE test. The updating section thus ensures that the standard salary level and HCE total compensation requirement continue to reflect current earnings—among the key objectives the Department is seeking to achieve in undertaking this rulemaking, *see* section V.A—even if the new methodologies for setting these earnings thresholds do not go into effect.

The initial update of the earnings thresholds for exemption can function sensibly as well, even if this rule's other revisions do not go into effect, as the baseline for the initial update to each threshold is the current methodology established in 2019. Accordingly, if, for instance, the new standard salary level, new HCE total compensation requirement, and the triennial updating provision were invalidated, the standard salary level and HCE total compensation requirement would still be updated on July 1, 2024 to $844 per week and $132,964 per year, respectively. In undertaking this rulemaking, the Department sought (among other objectives) to account for the considerable earnings growth that has taken place since it last updated the earnings thresholds for exemption.[286] The initial updating of the standard salary level and HCE total compensation requirement ensures these thresholds reflect earnings growth since the Department's 2019 rule, even if the new methodologies for setting the standard salary level and the HCE total compensation requirement and the future triennial updates to these earnings thresholds do not go into effect.

In sum, the Department has taken care to draft this final rule such that its provisions function independently and is including a severability section, § 541.5, to make clear that all the rule's provisions are separate and severable and should be given the fullest possible effect. As the Administrative Law Professors observed, this discussion of severability is not an acknowledgement of the legal vulnerability of any particular provision. However, since some commenters have indicated that they may challenge all or part of this rule, *see e.g.*, AFPI, Chamber, NFIB, and the 2016 and 2019 rules were both subject to legal challenge, the Department, consistent with ACUS guidance, makes explicit in the regulatory text that it

[286] *See* section V.A.2.

considers the provisions of this rule to be severable and explains here how the various provisions of the rule can operate sensibly in the event another provision of the rule is stayed, enjoined, or declared invalid.

VI. Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (PRA), 44 U.S.C. 3501 *et seq.*, and its attendant regulations, 5 CFR part 1320, require the Department to consider the agency's need for its information collections, the information collections' practical utility, the impact of paperwork and other information collection burdens imposed on the public, and how to minimize those burdens. Under the PRA, an agency may not collect or sponsor an information collection requirement unless it displays a currently valid Office of Management and Budget (OMB) control number.[287]

OMB has assigned control number 1235-0021 to the information collection that gathers information from complainants alleging violations of the labor standards that WHD administers and enforces, and OMB has assigned control number 1235-0018 to the information collection, Records to be kept by Employers—Fair Labor Standards Act. In accordance with the PRA, the Department solicited public comments on the proposed burden changes to the information collection under control number 1235-0021 and the proposed burden changes to the information collection under OMB control number 1235-0018.[288] Because OMB control number 1235-0021 was encumbered by a different rulemaking at the time of submission of the NPRM to OMB, the Department at that time created a duplicate ICR of 1235-0021 under OMB control number 1235-

[287] *See* 5 CFR 1320.8(b)(3)(vi).
[288] *See* 88 FR 62181.

0NEW to allow the public to comment on the proposed estimates. The Department submitted a contemporaneous request for OMB review of the proposed revisions to the existing information collection and the duplicate ICR in accordance with 44 U.S.C. 3507(d). On October 12, 2023, OMB issued a notice that assigned the duplicate information collection control number 1235-0035 and indicated the Department should address comments received during the NPRM comment period and resubmit for approval at the time of the final rule. Also on October 12, 2023, OMB issued a notice that continued the previous approval of the information collection under 1235-0018 under the existing terms of clearance and advised the Department to address any comments received during the NPRM comment period and resubmit at the time of the final rule.

Circumstances Necessitating this Collection: This rulemaking revises 29 CFR part 541 and affects provisions that could be considered to entail collections of information including (1) the complaint process under which employees may file a complaint with the Department to investigate potential violations of the laws administered by the Department, including the FLSA; and (2) disclosure and recordkeeping requirements for covered employers under the FLSA. This rulemaking does not impose new information collection requirements. Rather, burdens under the existing requirements would increase due to the changes in the universe of employees for whom employers are required to maintain records. The changes adopted in this rulemaking may also cause an initial increase in burden if more employees file complaints with WHD to collect back wages under the overtime pay requirements.

Information and technology: There is no particular order or form of records prescribed by the regulations. A respondent may meet the requirements of this final rule using paper or

electronic means. WHD, to reduce burden caused by the filing of complaints that are not actionable by the agency, uses a complaint filing process in which complainants discuss their concerns with WHD professional staff. This process allows agency staff to refer complainants raising concerns that are not actionable under federal wage and hour laws and regulations to an agency that may be able to assist.

Public comments: The Department invited public comment on its analysis that the rule would create a slight increase in the paperwork burden associated with the complaint ICR 1235–0021 (submitted as a duplicate ICR at the NPRM stage under control number 1235-0NEW and later assigned by OMB as 1235-0035) and on the burden associated with ICR 1235–0018, Records to be kept by employers—Fair Labor Standards Act. The Department did not receive comments on the ICRs themselves or any comments submitted regarding the PRA analysis in particular, including the methodology. No comments were received with respect to the complaint ICR (1235-0021). However, commenters addressed aspects of the information collections while commenting on the text of the proposed rule as it relates the records ICR (1235-0018).

For example, Horizon Health Services commented that "[r]equiring supervisors to record their hours worked and request overtime, as needed, would [be] a disruption to business operations by adding a significant administrative burden." The University of Dayton agreed that a change would require additional administrative burden stating, "new training and systems would need to be put in place for newly nonexempt employees to record their time and for their supervisors to track and approve their time. They would have to become accustomed to tracking their hours, being sure not to work unbudgeted hours and overtime unless approved, and so forth." Others, like Argentum & ASHA and Oklahoma Wesleyan University, similarly expressed

concerns about the costs associated with having newly nonexempt employees record their time. SBA Advocacy stated that "DOL should consider" that "small entities face vast administrative and operational costs to schedule and track employee hours to minimize overtime costs." In addition, some commenters expressed concern that the Department's cost estimates related to recordkeeping were too low, given among other things that employers would need to adjust their recordkeeping and payroll systems for newly overtime-eligible employees. *See, e.g.*, NFIB; PPWO; Seyfarth Shaw. The National Roofing Contractors Association stated that it "is concerned the proposed regulation would result in dramatically increased labor costs and additional paperwork burdens for employers, while also reducing workplace flexibility and compensation for many workers."

In response to these comments, the Department observes that most employers currently have both exempt and nonexempt workers and therefore have systems already in place for employers to track hours. Additionally, commenters did not offer alternatives for estimates or make suggestions regarding the methodology for calculating the PRA burdens. The actual recordkeeping requirements are not changing in the final rule. However, the pool of workers for whom employers will be required to make and maintain records has increased under the final rule, and as a result the burden hours have increased. Included in this PRA section are the regulatory familiarization costs for this final rule. However, this is a duplication of the regulatory familiarization costs contained in section VII, economic impact analysis.

The Department plans to submit these ICR's to OMB upon publication of the final rule. The agency will publish a notice in the FEDERAL REGISTER to inform the public of OMB's decision.

Total burden for the subject information collections, including the burdens that will be unaffected by this final rule and any changes, is summarized as follows:

Type of review: Revision to currently approved information collections.

Agency: Wage and Hour Division, Department of Labor.

Title: Employment Information Form.

OMB Control Number: 1235–0021.

Affected public: Private sector, businesses or other for-profits and Individuals or Households.

Estimated number of respondents: 29,160 (2,150 from this rulemaking).

Estimated number of responses: 29,160 (2,150 from this rulemaking).

Frequency of response: On occasion.

Estimated annual burden hours: 9,720 (717 burden hours due to this rulemaking).

Capital/Start-up costs: $0 ($0 from this rulemaking).

Title: Records to be kept by Employers—Fair Labor Standards Act.

Type of review: Revision to currently approved information collections.

Agency: Wage and Hour Division, Department of Labor.

OMB Control Number: 1235–0018.

Affected public: Private sector, businesses or other for-profits and Individuals or Households.

Estimated number of respondents: 4,068,419 (0 from this rulemaking).

Estimated number of responses: 42,725,207 (10,320,000 from this rulemaking).

Frequency of response: on occasion.

Estimated annual burden hours: 1,157,993 (344,000 from this rulemaking).

Capital/Start-up costs: $0 ($0 from this rulemaking).

VII. Analysis Conducted in Accordance with Executive Order 12866, Regulatory Planning and Review, and Executive Order 13563, Improving Regulation and Regulatory Review

Under Executive Order 12866, OMB's Office of Information and Regulatory Affairs (OIRA) determines whether a regulatory action is significant and, therefore, subject to the requirements of the Executive Order and OMB review. As amended by Executive Order 14094, section 3(f) of Executive Order 12866 defines a "significant regulatory action" as a regulatory action that is likely to result in a rule that may: (1) have an annual effect on the economy of $200 million or more; or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, territorial, or tribal governments or communities; (2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency; (3) materially alter the budgetary impact of entitlements, grants, user fees or loan programs or the rights and obligations of recipients thereof; or (4) raise legal or policy issues for which centralized review would meaningfully further the President's priorities or the principles set forth in the Executive Order. OIRA has determined that this rule is a "significant regulatory action" within the scope of section 3(f)(1) of Executive Order 12866.

Executive Order 13563 directs agencies to, among other things, propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs; that it is tailored to impose the least burden on society, consistent with obtaining the regulatory objectives; and

that, in choosing among alternative regulatory approaches, the agency has selected those approaches that maximize net benefits. Executive Order 13563 recognizes that some costs and benefits are difficult to quantify and provides that, when appropriate and permitted by law, agencies may consider and discuss qualitatively values that are difficult or impossible to quantify, including equity, human dignity, fairness, and distributive impacts. The analysis below outlines the impacts that the Department of Labor (Department) anticipates may result from this rule and was prepared pursuant to the above-mentioned executive orders.

A. Introduction

1. Background

The Fair Labor Standards Act (FLSA or Act) requires covered employers to (1) pay employees who are covered and not exempt from the Act's requirements not less than the Federal minimum wage for all hours worked and overtime premium pay at a rate of not less than one and one-half times the employee's regular rate of pay for all hours worked over 40 in a workweek, and (2) make, keep, and preserve records of their employees and of the wages, hours, and other conditions and practices of employment.

The FLSA provides a number of exemptions from the Act's minimum wage and overtime pay provisions, including one for bona fide executive, administrative, and professional (EAP) employees. The exemption applies to employees employed in a bona fide executive, administrative, or professional capacity, as those terms are "defined and delimited" by the Department.[289] The Department's regulations implementing these "white-collar" exemptions are codified at 29 CFR part 541. Since 1940, the regulations implementing the exemption have

[289] 29 U.S.C. 213(a)(1).

generally required each of the following three tests to be met: (1) the employee must be paid a predetermined and fixed salary that is not subject to reduction because of variations in the quality or quantity of work performed (the salary basis test); (2) the amount of salary paid must meet a minimum specified amount (the salary level test); and (3) the employee's job duties must primarily involve executive, administrative, or professional duties as defined by the regulations (the duties test).

The Department has updated the salary level test many times since its implementation in 1938. Table 1 presents the weekly salary levels associated with the EAP exemptions since 1938, organized by exemption and long/short/standard duties tests. From 1949 to 2004, the Department determined exemption status using a two-test system comprised of a long test (a lower salary level paired with a more rigorous duties test that limited performance of nonexempt work to no more than 20 percent for most employees) and a short test (a higher salary level paired with a less rigorous primary duties requirement that did not have a numerical limit on the amount of nonexempt work). In 2004, rather than update the two-test system, the Department chose to establish a new single-test system for determining exemption status, setting the standard salary level test at $455 a week, which was equivalent to the long test salary level, and pairing it with a standard duties test that was substantially equivalent to the more lenient short duties test. Because the single standard duties test was equivalent to the short duties test, employees who met the long test salary level and previously passed either the more rigorous long, or less rigorous short, duties test passed the standard duties test. The Department also added a new highly compensated employee (HCE) test, which used a very minimal duties test and a very high total compensation test set at $100,000 per year (*see* section II.B.2 for further discussion). In

2016, to address the concern that the standard test exempted lower-paid salaried employees performing large amounts of nonexempt work who had previously been protected by the more rigorous long duties test, the Department published a final rule setting the standard salary level at $913 per week, which was equivalent to the low end of the historic range of short test salary levels, and the HCE annual compensation level at $134,004. This approach restored overtime protection for employees performing substantial amounts of nonexempt work who earned between the long test salary level and the low end of the short test salary range, as they failed the new standard salary level test. As previously discussed, the U.S. District Court for Eastern District of Texas held the 2016 rule invalid. In 2019, in part to address the concern raised in the litigation that the approach taken in the 2016 rulemaking would have prevented employers from using the exemption for employees who earned between the long test salary level and the low end of the short test salary range and met the more rigorous long duties test, the Department returned to the methodology used in the 2004 rule and set the salary level at the 20th percentile of weekly earnings of full-time salaried workers in the South and in the retail industry nationally. Applying this method to the earnings data available in 2019 produced a standard salary level that was below the long test salary level. The current earnings thresholds, as published in 2019, are $684 a week for the standard salary test and $107,432 per year for the HCE test.

Table 1: Historical Weekly Salary Levels for the EAP Exemptions

Date Enacted	Long Duties Test			Short Duties Test
	Executive	Administrative	Professional	
1938	$30*	$30	-	-
1940	$30	$200 (per month)	$200 (per month)	-
1949	$55	$75	$75	$100
1958	$80	$95	$95	$125
1963	$100	$100	$115	$150
1970	$125	$125	$140	$200

1975	$155	$155	$170	$250
Standard Duties Test				
2004	$455			
2019	$684			

*Unless otherwise specified, all figures are dollars per week

2. Need for Rulemaking

The goal of this rulemaking is to set effective earnings thresholds to help define and delimit the FLSA's EAP exemption. To this end, the Department is finalizing its proposed change to the standard salary level. Specifically, the Department is adjusting the standard salary level by setting it equal to the 35th percentile of weekly earnings of full-time salaried workers in the lowest-wage Census Region (currently the South), based on the most recent year of Current Population Survey (CPS) data at the time of drafting.[290] Using the Bureau of Labor Statistics (BLS) 2023 data on percentiles of usual weekly earnings of nonhourly full-time workers, the standard salary level will be set at $1,128 per week.[291] Additionally, to maintain the effectiveness of this test, the Department is finalizing an updating mechanism that will update the earnings thresholds to reflect current wage data initially on July 1, 2024 and every 3 years thereafter.

The Department's new standard salary level will, in combination with the standard duties test, better define and delimit which employees are employed in a bona fide EAP capacity in a one-test system. As explained in greater detail in sections III and V.B, setting the standard salary

[290] The Department uses the terms *salaried* and *nonhourly* interchangeably in this rule because, consistent with its 2004, 2016, and 2019 rules, the Department considered data representing compensation paid to nonhourly workers to be an appropriate proxy for compensation paid to salaried workers. The Department also notes that the terms *employee* and *worker* are used interchangeably throughout this analysis.

[291] BLS publishes quarterly and annual estimates of percentile earnings values beginning with 2022 data at https://www.bls.gov/cps/research/nonhourly/earnings-nonhourly-workers.htm.

level at or below the long test salary level, as the 2004 and 2019 rules did, results in the exemption of lower-salaried employees who traditionally were entitled to overtime protection under the long test either because of their low salary or because they perform large amounts of nonexempt work, in effect significantly broadening the exemption compared to the two-test system. Setting the salary level at the low end of the historic range of short test salary levels, as the 2016 rule did, would have restored overtime protections to those employees who perform substantial amounts of nonexempt work and earned between the long test salary level and the low end of the short test salary range. However, it also would have resulted in denying employers the use of the exemption for lower-salaried employees who traditionally were not entitled to overtime compensation under the long test, which raised concerns that the Department was in effect narrowing the exemption. By setting a salary level above the equivalent of the long test salary level (using current data), the final rule will restore the right to overtime pay for salaried white-collar employees who prior to the 2019 rule were always considered nonexempt if they earned below the long test (or long test-equivalent) salary level. And it will ensure that fewer lower paid white-collar employees who perform significant amounts of nonexempt work are included in the exemption. At the same time, by setting it well below the equivalent of the short test salary level (using current data), the rule will allow employers to continue to use the exemption for many lower paid white-collar employees who were made exempt under the 2004 standard duties test. The new salary level will also more reasonably distribute between employees and their employers what the Department now understands to be the impact of the shift from a two-test to a one-test system on employees earning between the long and short test salary levels.

As the Department has previously noted, the amount paid to an employee is "a valuable and easily applied index to the 'bona fide' character of the employment for which exemption is claimed, as well as the "principal[]" "delimiting requirement . . .prevent[ing] abuse" of the exemption.[292] Additionally, the salary level test facilitates application of the exemption by saving employees and employers from having to apply the more time-consuming duties analysis to a large group of employees who will not pass it. For these reasons, the salary level test has been a key part of how the Department defines and delimits the EAP exemption since the beginning of its rulemaking on the EAP exemption.[293] At the same time, the salary test's role in defining and delimiting the scope of the EAP exemption must allow for appropriate examination of employee duties.[294] Under the final rule, duties will continue to determine the exemption status for most salaried white-collar employees.

The Department also will adjust the HCE total annual compensation requirement to the annualized weekly earnings of the 85th percentile of full-time salaried workers nationally ($151,164 using 2023 data). Though not as high a percentile as the HCE threshold initially adopted in 2004, which covered 93.7 percent of all full-time salaried workers,[295] the Department's new HCE threshold will ensure it continues to serve its intended function, because the HCE total annual compensation level will be high enough to exclude all but those employees at the very top of the economic ladder.

[292] Stein Report at 19, 24; *see also* 81 FR 32422.
[293] *See* 84 FR 51237.
[294] *See* 84 FR 51238.
[295] *See* 69 FR 22169 (Table 3).

In this final rule, the Department is not finalizing its proposal in section IV.B.1 and B.2 of the NPRM to apply the standard salary level to the U.S. territories subject to the federal minimum wage and to update the special salary levels for American Samoa and the motion picture industry.[296]

In its three most recent part 541 rulemakings, the Department has expressed its commitment to keeping the earnings thresholds up to date to ensure that they remain effective in helping differentiate between exempt and nonexempt employees. Long intervals between rulemakings have resulted in eroded earnings thresholds based on outdated earnings data that were ill-equipped to help identify bona fide EAP employees. In contrast, routine updates of the earnings thresholds to reflect wage growth will bring certainty and stability to employers and employees alike. Based on its long experience with updating the salary levels, the Department has determined that adopting a regulatory provision for regularly updating the salary levels, with an exception for pausing future updates under certain conditions, is the most viable and efficient way to ensure the EAP exemption earnings thresholds keep pace with changes in employee pay and thus remain effective in helping determine exemption status. Accordingly, in addition to the salary level changes discussed above, the Department is including in this rule a mechanism for updating the salary and compensation levels to reflect current wage data initially on July 1, 2024 and every 3 years thereafter. As explained in greater detail in section V.A, employees and employers alike will benefit from the certainty and stability of regularly scheduled updates.

[296] The Department will address these aspects of its proposal in a future final rule. While the Department is not finalizing its proposal, it is making nonsubstantive changes in provisions addressing the territories as a result of other changes in this final rule.

3. Summary of Affected Workers, Costs, Benefits, and Transfers

The Department estimated the number of affected workers and quantified costs and transfer payments associated with this final rule using pooled CPS Merged Outgoing Rotation Group (MORG) data. *See* section VII.B.2. The Department estimates in the first year after implementation, there will be 4.3 million affected workers.[297] This includes 4.0 million workers (1.0 million at the first update and 3.0 million when the new salary level is applied) who meet the standard duties test and earn at least $684 per week but less than $1,128 per week and will either become eligible for overtime or have their salary increased to at least $1,128 per week (Table 2).[298] An estimated 292,900 workers will be affected by the increase in the HCE compensation test from $107,432 per year to $151,164 per year. In Year 10, with triennial updating of the standard salary and HCE thresholds, the Department projects that 5.0 million workers will be affected by the change in the standard salary level test and 1.0 million workers will be affected by the change in the HCE total annual compensation test.[299]

[297] The term "affected workers" refers to the population of potentially affected EAP workers who either pass the standard duties test and earn at least $684 but less than the new salary level of $1,128 per week or pass only the HCE duties test and earn at least $107,432 but less than the new HCE compensation level of $151,164 per year.

[298] Here and elsewhere in this analysis, numbers are reported at varying levels of aggregation, and are generally rounded to a single decimal point. However, calculations are performed using exact numbers. Therefore, some numbers may not match the reported totals or the calculations shown due to rounding of components.

[299] In later years, earnings growth will cause some initially affected workers to no longer be affected because their earnings will exceed the new salary or compensation threshold. This occurs both in update years (i.e., triennially) and non-update years but will occur to a much greater degree in non-update years. Additionally, some workers will become newly affected because their earnings will reach at least $684 per week, and in the absence of this rule they would lose their overtime protections. To estimate the total number of affected workers over time, the Department accounts for both of these effects.

This analysis quantifies three direct costs to employers: (1) regulatory familiarization costs; (2) adjustment costs; and (3) managerial costs (*see* section VII.C.3). Total annualized direct employer costs over the first 10 years were estimated to be $802.9 million, assuming a 7 percent discount rate.[300] This rule will also transfer income from employers to employees in the form of increased wages. The Department estimated annualized transfers will be $1.5 billion. Most of these transfers will be attributable to wages paid under the FLSA's overtime provision; a smaller share will be attributable to the FLSA's minimum wage requirement. These transfers also account for employers who may choose to increase the salary of some affected workers to at least the new threshold so that they can continue to use the EAP exemption.

The Department also provides a qualitative discussion of the potential benefits and unquantified transfers of this rule, including strengthened overtime protections for some workers, increased worker productivity, increased personal time for workers, and reduced reliance on social assistance programs. *See* section VII.C.5.

Table 2: Summary of Affected Workers, Regulatory Costs, and Transfers - Standard and HCE Salary Levels

Impact	Year 1	Future Years [a]		Annualized Value	
		Year 2	Year 10	3% Real Discount Rate	7% Real Discount Rate
Affected Workers (1,000s)					
Standard	4,045	3,783	4,978	[b]	[b]
HCE	293	323	1,015	[b]	[b]
Total	4,337	4,106	5,993	[b]	[b]
Costs and Transfers (Millions in $2022) [c]					

[300] Hereafter, unless otherwise specified, annualized values will be presented using the 7 percent real discount rate.

Direct employer costs	$1,436.2	$641.5	$906.1	$794.0	$802.9
Transfers [d]	$1,509.2	$1,094.3	$2,490.1	$1,565.2	$1,534.1

[a] These cost and transfer figures represent a range over the nine-year span.
[b] Not annualized.
[c] Costs and transfers for affected workers passing the standard and HCE tests are combined.
[d] This is the net transfer from employers to workers. There may also be transfers of hours and income from some workers to others.

B. Number of Affected EAP Workers

1. Overview

This section explains the methodology used to estimate the number of workers who will be affected by the final rule. The pool of potentially affected workers is workers who are currently EAP exempt. In this final rule, as in previous rules, the Department estimated the current number of EAP exempt workers because there is no data source that identifies workers as EAP exempt. Employers are not required to report EAP exempt workers to any central data collection agency or as part of any employee or establishment survey. The methodology described in this final rule is consistent with the approach the Department used in the 2004, 2016, and 2019 final rules.[301] To estimate the number of workers who will be affected by the rule, the new standard salary level and the new HCE total annual compensation threshold are applied to the earnings of current EAP exempt workers.

[301] *See* 69 FR 22196–209; 81 FR 32453–60; 84 FR 51255–60. Where the proposal follows the methodology used to determine affected workers in the 2004, 2016, and 2019 final rules, citations to these rules are not always included.

2. Data

All estimates of numbers of workers used in this analysis were based on data from the CPS MORG, which is sponsored jointly by the U.S. Census Bureau and BLS.[302] The CPS is a large, nationally representative sample. Households are surveyed for 4 months, excluded from the survey for 8 months, surveyed for an additional 4 months, then permanently dropped from the sample. During the last month of each rotation in the sample (month 4 and month 16), employed respondents complete a supplementary questionnaire in addition to the regular survey.[303] The data in this supplement contain the detailed information on earnings necessary to estimate a worker's exemption status. Responses are based on the reference week, which is always the week that includes the 12th day of the month.

Although the CPS MORG is a large-scale survey, administered to approximately 15,000 households monthly representing the entire nation, it is still possible to have relatively few observations when looking at subsets of employees, such as workers in a specific occupation employed in a specific industry, or workers in a specific geographic location. To increase the sample size, the Department pooled 3 years of CPS MORG data (2021-2023). Earnings for each observation from 2021 and 2022 were inflated to 2023 dollars using the Consumer Price Index

[302] In 2015, RAND released results from a survey conducted to estimate EAP exempt workers. However, this survey does not have the variables or sample size necessary for the Department to base its regulatory impact analysis (RIA) on this analysis. Rohwedder, S. and Wenger, J.B. (2015). The Fair Labor Standards Act: Worker Misclassification and the Hours and Earnings Effects of Expanded Coverage. RAND Labor and Population.

[303] This is the outgoing rotation group (ORG); however, this analysis uses the data merged over 12 months and thus it is referred to as MORG.

for All Urban Consumers (CPI-U).[304] The weight of each observation was adjusted so that the total number of potentially affected EAP workers in the pooled sample remained the same as the number for the 2023 CPS MORG. Thus, the pooled CPS MORG sample uses roughly three times as many observations to represent the same total number of workers in 2023. The additional observations allow the Department to better characterize certain attributes of the potentially affected labor force. This pooled dataset is used to estimate all impacts of the final rule.

Some assumptions and adjustments were necessary to use these data as the basis for the analysis. For example, the Department eliminated workers who reported that their weekly hours vary and who provided no additional information on hours worked. This was done because the Department cannot estimate effects for these workers since it is unknown whether they work overtime and therefore unknown whether there would be any need to pay for overtime if their status changed from exempt to nonexempt. The Department reweighted the rest of the sample to account for this change (*i.e.*, to keep the same total employment estimates).[305] This adjustment assumes that the distribution of hours worked by workers whose hours do not vary is

[304] Previous rulemakings also adjusted salaries in the pooled data using the CPI-U, but the Department recognizes that the relationship between wage growth and inflation between 2021 and 2023 may not be consistent. During the pandemic, large employment losses in low-wage industries resulted in stronger wage growth at the aggregate level. In part of the 2021–2023 period, high inflation outpaced overall wage growth. Given these mixed effects, the Department decided to continue its prior practice of adjusting these observations using CPI-U.

[305] The Department also reweighted for workers reporting zero earnings. In addition, the Department eliminated, without reweighting, workers who reported both usually working zero hours and working zero hours in the past week.

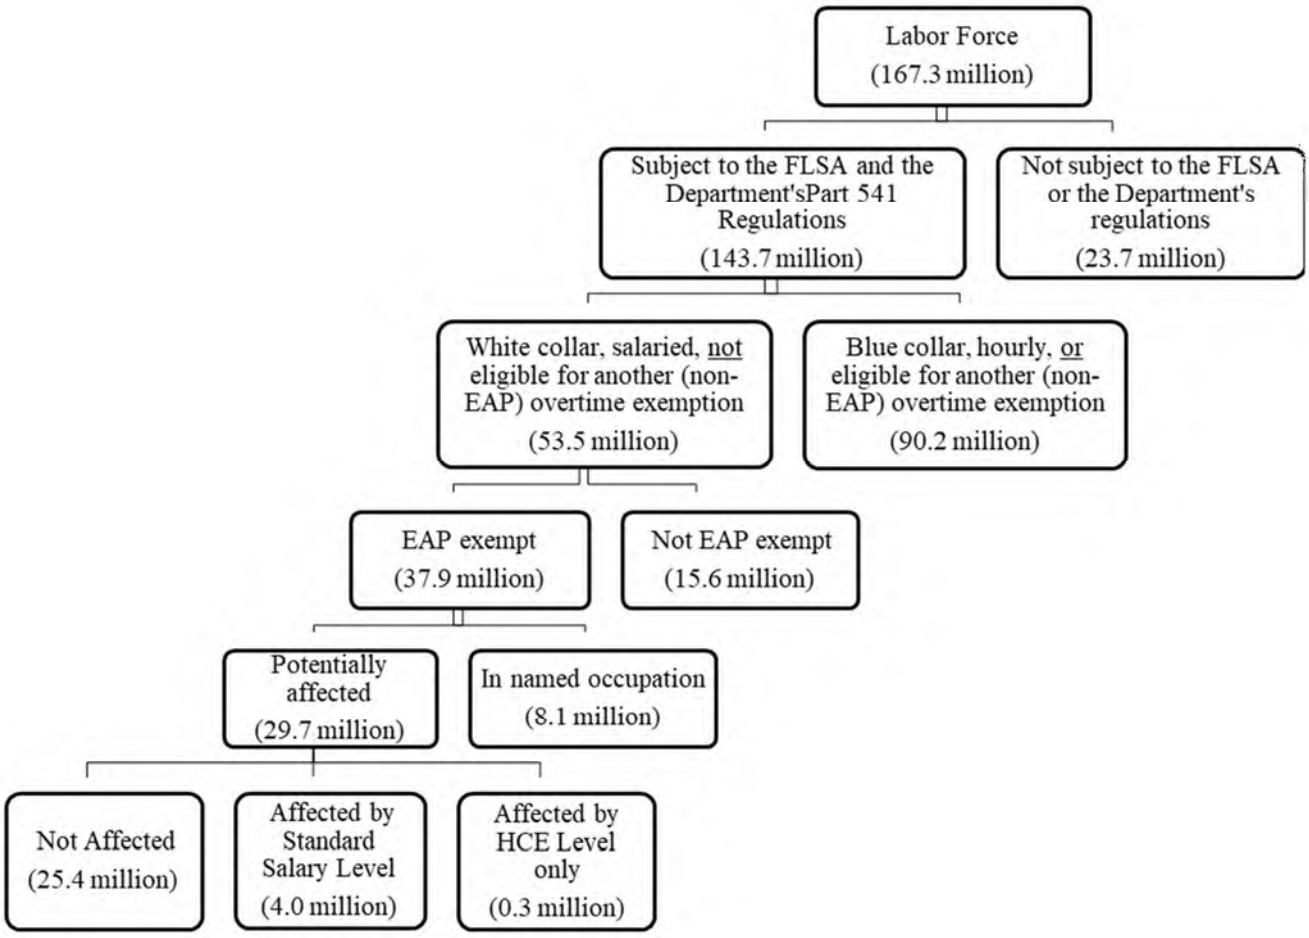
representative of hours worked by workers whose hours vary. The Department believes that without more information, this is an appropriate assumption.[306]

3. Number of Workers Subject to the FLSA and the Department's Part 541 Regulations

As a starting point for the analysis, based on the CPS MORG data, the Department estimates that there would be 167.3 million wage and salary workers in Year 1. Figure 1 illustrates how the Department analyzed the U.S. civilian workforce through successive stages to estimate the number of affected workers.

Figure 1: Flow Chart of FLSA Exemptions and Estimated Number of Affected Workers

[306] This is justifiable because demographic and employment characteristics are similar across these two populations (*e.g.*, age, gender, education, distribution across industries, share paid nonhourly). The share of all workers who stated that their hours vary (but provided no additional information) is 4.4 percent. To the extent these excluded workers are exempt, if they tend to work more overtime than other workers, then transfer payments and costs may be underestimated. Conversely, if they work fewer overtime hours, then transfer payments and costs may be overestimated.



Note: The NPRM referred to the group in the top box as "Wage and salary workers." Because the estimate in this box includes the unemployed, it has been renamed to "Labor Force" for accuracy.

The Department first excluded workers who are unemployed, not subject to its regulations, or not covered by the FLSA from the overall total number of wage and salary workers. Excluded workers include military personnel, unpaid volunteers, self-employed individuals, clergy and other religious workers, and Federal employees (with a few exceptions described below).

Many of these workers are excluded from the CPS MORG, including members of the military on active duty and unpaid volunteers. Self-employed and unpaid workers are included in

the CPS MORG, but have no earnings data reported and thus are excluded from the analysis. The Department identified religious workers by their occupation codes: 'clergy' (Census occupational code 2040), 'directors, religious activities and education' (2050), and 'religious workers, all other' (2060). Most employees of the Federal Government are covered by the FLSA but not the Department's part 541 regulations because the Office of Personnel Management (OPM) regulates their entitlement to minimum wage and overtime pay.[307] Exceptions exist for U.S. Postal Service employees, Tennessee Valley Authority employees, and Library of Congress employees.[308] The analysis identified and included these covered Federal workers using occupation and/or industry codes and removed other Federal employees.[309]

The FLSA also does not cover employees of firms that have annual revenue of less than $500,000 and who are not engaged in interstate commerce. The Department does not exclude them from the analysis, however, because there is no data set that would adequately inform an estimate of the size of this worker population, although the Department believes it is a small percentage of workers. The 2004, 2016, and 2019 final rules similarly did not adjust for these workers.

Of the 167.3 million wage and salary workers in the United States, the Department estimates that 143.7 million are covered by the FLSA and subject to the Department's regulations

[307] *See* 29 U.S.C. 204(f). Federal workers are identified in the CPS MORG with the class of worker variable PEIO1COW.
[308] *See id.*
[309] Postal Service employees were identified with the Census industry classification for postal service (6370). Tennessee Valley Authority employees were identified as Federal workers employed in the electric power generation, transmission, and distribution industry (570) and in Kentucky, Tennessee, Mississippi, Alabama, Georgia, North Carolina, or Virginia. Library of Congress employees were identified as Federal workers under Census industry 'libraries and archives' (6770) and residing in Washington DC.

(85.9 percent). The remaining 23.7 million workers are excluded from FLSA coverage for the reasons described above.

4. Number of Workers Who Are White-Collar, Salaried, Not Eligible for Another (Non-EAP) Overtime Exemption

After limiting the analysis to workers covered by the FLSA and subject to the Department's part 541 regulations, several other groups of workers were identified and excluded from further analysis since this final rule is unlikely to affect them. These include blue-collar workers,[310] workers paid on an hourly basis, and workers who are exempt under certain other (non-EAP) exemptions.

The Department excluded a total of 90.2 million workers from the analysis for one or more of these reasons, which often overlapped (*e.g.*, many blue-collar workers are also paid hourly). For example, the Department estimated that there are 49.1 million blue-collar workers. These workers were identified in the CPS MORG data following the methodology from the U.S. Government Accountability Office's (GAO) 1999 white-collar exemptions report[311] and the Department's 2004, 2016, and 2019 regulatory impact analyses.[312] Supervisors in traditionally blue-collar industries were classified as white-collar workers because their duties are generally managerial or administrative, and therefore they were not excluded as blue-collar workers. Using

[310] "The section 13(a)(1) exemptions and the regulations in [Part 541] do not apply to manual laborers or other 'blue collar' workers who perform work involving repetitive operations with their hands, physical skill and energy." § 541.3(a).
[311] GAO/HEHS. (1999). Fair Labor Standards Act: White Collar Exemptions in the Modern Work Place. GAO/HEHS-99-164, 40-41, https://www.gao.gov/assets/230/228036.pdf.
[312] *See* 69 FR 22240–44.

the CPS variable indicating a respondent's hourly wage status, the Department determined that 80.3 million workers were paid on an hourly basis in 2023.[313]

Also excluded from further analysis were workers who are exempt under certain other (non-EAP) exemptions. Although some of these workers may also be exempt under the EAP exemptions, they would independently remain exempt from the FLSA's minimum wage and/or overtime pay provisions based on the non-EAP exemptions. The Department excluded an estimated 3.7 million workers, including some agricultural and transportation workers, from further analysis because they are subject to another (non-EAP) overtime exemption. *See* Appendix A: Methodology for Estimating Exemption Status, contained in the rulemaking docket, for details on how this population was identified.

Agricultural and transportation workers are two of the largest groups of workers excluded from the population of potentially affected EAP workers in the current analysis, and with some exceptions, they were similarly excluded in other recent rulemakings. The 2004 rule excluded all workers in agricultural industries from the analysis,[314] while more recent analyses only excluded agricultural workers from specified occupational-industry combinations since not all workers in agricultural industries qualify for the agricultural overtime pay exemptions. This final rule followed the more recent analyses and only excluded agricultural workers in certain occupation-industry combinations.[315] The exclusion of transportation workers matched the method for the 2004, 2016, and 2019 final rules.[316] Transportation workers are defined as those who are subject

[313] CPS MORG variable PEERNHRY.
[314] 69 FR 22197.
[315] 84 FR 51257; 81 FR 32456, n.114.
[316] 84 FR 51257; 81 FR 32456–57; 69 FR 22197.

to the following FLSA exemptions: section 13(b)(1), section 13(b)(2), section 13(b)(3), section 13(b)(6), or section 13(b)(10). The Department excluded 1.0 million agricultural workers and 2.1 million transportation workers from the analysis.

In addition, the Department excluded another 22,700 workers who qualify for one or more other FLSA minimum wage and overtime exemptions (and are not either blue-collar or hourly). The criteria for determining exemption status for these workers are detailed in Appendix A.

After excluding workers not subject to the Department's FLSA regulations and workers who are unlikely to be affected by this final rule (*i.e.*, blue-collar workers, workers paid hourly, workers who are subject to another (non-EAP) overtime exemption), the Department estimated there are 53.5 million salaried white-collar workers for whom employers might claim either the standard EAP exemption or the HCE exemption.

5. Number of Current EAP Exempt Workers

To determine the number of workers for whom employers might currently claim the EAP exemption, the standard EAP test and HCE test were applied. Both tests include earnings thresholds and duties tests. Aside from workers in named occupations (which are not subject to an earnings requirement and are discussed in the next subsection), to be exempt under the standard EAP test, the employee generally must:

- be paid a predetermined and fixed salary that is not subject to reduction because of variations in the quality or quantity of work performed (the salary basis test);[317]

[317] Some computer employees may be exempt even if they are not paid on a salary basis. Hourly computer employees who earn at least $27.63 per hour and perform certain duties are exempt

- earn at least a designated salary amount (the standard salary level test, currently $684 per week); and
- primarily perform exempt work, as defined by the regulations (the standard duties test).

The HCE test allows certain highly paid employees to qualify for exemption if they customarily and regularly perform one or more exempt job duties (the HCE duties test). The current HCE annual compensation level is $107,432, including at least $684 per week paid on a salary or fee basis.

i. Salary Basis

The Department included only nonhourly workers in the analysis based on CPS data.[318] For this NPRM, the Department considered data representing compensation paid to nonhourly workers to be an appropriate proxy for compensation paid to salaried workers. The Department notes that it made the same assumption regarding nonhourly workers in the 2004, 2016, and 2019 final rules.[319]

The CPS population of "nonhourly" workers includes salaried workers along with those who are paid a piece rate, day rate, or largely on bonuses or commissions. Data in the CPS are not available to distinguish between salaried workers and these other nonhourly workers.

---

under section 13(a)(17) of the FLSA. These workers are considered part of the EAP exemptions but were excluded from the analysis because they are paid hourly and will not be affected by this rule (these workers were similarly excluded in the 2004, 2016, and 2019 analyses). Salaried computer workers are exempt if they meet the salary and duties tests applicable to the EAP exemptions and are included in the analysis since they will be impacted by this rule. Additionally, administrative and professional employees may be paid on a fee basis, as opposed to a salary basis. § 541.605(a). Although the CPS MORG does not identify workers paid on a fee basis, they are considered nonhourly workers in the CPS and consequently are correctly classified as "salaried" (as was done in previous rules).

[318] The CPS variable PEERNHRY identifies workers as either hourly or nonhourly.

[319] *See* 69 FR 22197; 81 FR 32414; 84 FR 51258.

However, the Panel Study of Income Dynamics (PSID) provides additional information on how nonhourly workers are paid.[320] In the PSID, respondents are asked how they are paid on their main job and are also asked for more detail if their response is other than salaried or hourly. Possible responses include piecework, commission, self-employed/farmer/profits, and by the job/day/mile. The Department analyzed the PSID data and found that relatively few nonhourly workers were paid by methods other than salaried. The Department is not aware of any statistically robust source that more closely reflects salary as defined in its regulations.

ii. Salary Level

Weekly earnings are available in the CPS MORG data, which allowed the Department to estimate how many nonhourly workers pass the compensation thresholds.[321] However, the CPS earnings variable does not perfectly reflect the Department's definition of earnings. First, the CPS includes all nondiscretionary bonuses and commissions if they are part of usual weekly earnings. However, the regulation allows nondiscretionary bonuses and commissions to satisfy up to 10 percent of the standard salary level. This discrepancy between the earnings variable used and the regulatory definition of salary may cause a slight overestimation or underestimation of the number of workers estimated to meet the standard salary level and HCE compensation tests.[322] Second, CPS earnings data include overtime pay. The Department notes that employers

[320] University of Michigan, Institute for Social Research. 2019 PSID. Data available at: https://simba.isr.umich.edu/data/data.aspx.

[321] The CPS MORG variable PRERNWA, which measures weekly earnings, is used to identify weekly salary.

[322] In some instances, this may include too much nondiscretionary bonuses and commissions (*i.e.*, when it is more than 10 percent of usual earnings). But in other instances, it may not include enough nondiscretionary bonuses and commissions (*i.e.*, when the respondent does not count them as usual earnings).

may factor into an employee's salary a premium for expected overtime hours worked. To the extent they do so, that premium would be reflected accurately in the data. Third, the earnings measure includes tips and discretionary commissions which do not qualify towards the required salary. The Department believes tips are an uncommon form of payment for these white-collar workers. Discretionary commissions tend to be paid irregularly and hence are unlikely to be counted as "usual earnings." Additionally, as noted above, most salaried workers do not receive commissions.

Lastly, the CPS annual earnings variable is topcoded at $150,000 through the March 2023 data.[323] Topcoding refers to how data sets handle observations at the top of the distribution and is performed to protect the confidentiality of data provided by CPS respondents. For the CPS annual earnings variable, workers earning above $2,884.61 ($150,000 ÷ 52 weeks) per week are reported as earning $2,884.61 per week. The Department imputed earnings for topcoded workers in the CPS data to adequately estimate impacts.[324]

iii. Duties

The CPS MORG data do not capture information about job duties. Therefore, the Department used probability estimates of passing the duties test by occupational title to estimate the number of workers passing the duties test. This is the same methodology used in recent part 541 rulemakings, and the Department believes it continues to be the best available methodology.

[323] Beginning in the April 2023 data, the CPS data are topcoded independently each month and represent the average earnings of the top 3 percent of earnings reported. *See* https://www.census.gov/content/dam/Census/programs-surveys/cps/updated-2022-cps-puf-changes.pdf for additional details.

[324] The Department used the standard Pareto distribution approach to impute earnings above the topcoded value as described in Armour, P. and Burkhauser, R (2013). Using the Pareto Distribution to Improve Estimates of Topcoded Earnings. Center for Economic Studies (CES).

The probabilities of passing the duties test are from an analysis performed by WHD in 1998 in response to a request from the GAO. Because WHD enforces the FLSA's overtime requirements and regularly assesses workers' exempt status, WHD was uniquely qualified to provide the analysis. The analysis was originally published in the GAO's 1999 white-collar exemptions report.[325]

WHD examined 499 occupational codes and determined that 251 occupational codes likely included EAP exempt workers.[326] For each, WHD assigned one of four probability codes reflecting the estimated likelihood, expressed as ranges, that a worker in that occupation would perform duties required to meet the EAP duties tests (Table 3). All occupations and their associated probability codes are listed in Appendix A. Just as in the 2004, 2016, and 2019 final rules, the Department has supplemented this analysis to account for the HCE exemption. The Department modified the four probability codes to reflect probabilities of passing the HCE duties test based on its analysis of the provisions of the highly compensated test relative to the standard duties test. To illustrate, WHD assigned exempt probability code 4 to the occupation "first-line supervisors/managers of construction trades and extraction workers" (Census code 6200), which indicates that a worker in this occupation has a 0 to 10 percent likelihood of meeting the standard EAP duties test. However, if that worker earned at least $100,000 annually (now $107,432

[325] Fair Labor Standards Act: White Collar Exemptions in the Modern Work Place, *supra* note 311, at 40-41.

[326] WHD excluded nine that were not relevant to the analysis for various reasons. For example, one code was assigned to unemployed persons whose last job was in the Armed Forces, some codes were assigned to workers who are not FLSA covered, others had no observations.

annually), they were assigned a 15 percent probability of passing the more lenient HCE duties test.[327]

Table 3: Probability Worker in Category Passes the Duties Tests

Probability Code	The Standard EAP Test		The HCE Test	
	Lower Bound	Upper Bound	Lower Bound	Upper Bound
0	0%	0%	0%	0%
1	90%	100%	100%	100%
2	50%	90%	94%	96%
3	10%	50%	58.4%	60%
4	0%	10%	15%	15%

The occupations identified in GAO's 1999 report map to an earlier occupational classification scheme (the 1990 Census occupational codes).[328] For this final rule, the Department used occupational crosswalks to map the previous occupational codes to the 2018 Census occupational codes, which are used in the CPS MORG 2021 through 2023 data. If a new occupation comprises more than one previous occupation, then the new occupation's probability code is the weighted average of the previous occupations' probability codes, rounded to the closest probability code.

These codes provide information on the likelihood that an employee met the duties tests, but they do not identify which workers in the CPS MORG met the duties test. For example, for every ten public relations managers, between five and nine are assumed to meet the standard

[327] The HCE duties test is used in conjunction with the HCE total annual compensation requirement to determine eligibility for the HCE exemption. It is much less stringent than the standard and short duties tests to reflect that very highly paid employees are much more likely to be properly classified as exempt.

[328] Census occupation codes were also updated in 2002 and 2010. References to occupational codes in this analysis refer to the 2002 Census occupational codes. Crosswalks and methodology available at: https://www.census.gov/topics/employment/industry-occupation/guidance/code-lists.html.

duties test (based on probability category 2). However, it is unknown which of these ten workers are exempt; therefore, for the purposes of producing an estimate, the Department must assign a status to these workers. Exemption status could be randomly assigned with equal probability, but this would ignore the earnings of the worker as a factor in determining the probability of exemption. The probability of qualifying for the exemption increases with earnings because higher paid workers are more likely to perform the required duties.[329]

The Department estimated the probability of qualifying for the standard exemption for each worker as a function of both earnings and the occupation's exempt probability category using a gamma distribution.[330] Based on these revised probabilities, each worker was assigned exempt or nonexempt status based on a random draw from a binomial distribution using the worker's revised probability as the probability of success. Thus, if this method is applied to ten workers who each have a 60 percent probability of being exempt, six workers would be expected to be designated as exempt.[331] For details, *see* Appendix A (in the rulemaking docket).

---

[329] For the standard exemption, the relationship between earnings and exemption status is not linear and is better represented with a gamma distribution. For the HCE exemption, the relationship between earnings and exemption can be well represented with a linear function because the relationship is linear at high salary levels (as determined by the Department in the 2004 rule). Therefore, the gamma model and the linear model would produce similar results for highly compensated workers. *See* 69 FR 22204–08, 22215–16.

[330] The gamma distribution was chosen because, during the 2004 revision, this non-linear distribution best fit the data compared to the other non-linear distributions considered (*i.e.*, normal and lognormal). A gamma distribution is a general type of statistical distribution that is based on two parameters that control the scale (alpha) and shape (in this context, called the rate parameter, beta).

[331] A binominal distribution is frequently used for a dichotomous variable where there are two possible outcomes; for example, whether one owns a home (outcome of 1) or does not own a home (outcome of 0). Taking a random draw from a binomial distribution results in either a zero or a one based on a probability of "success" (outcome of 1). This methodology assigns exempt status to the appropriate share of workers without biasing the results with manual assignment.

As previously discussed in section V.B.5, some commenters challenged the Department's use of its probability codes to determine whether a worker meets the duties test. The Department acknowledges that the probability codes used to determine the share of workers in an occupation who are EAP exempt are 25 years old. However, the Department believes the probability codes continue to estimate exemption status accurately given the fact that the standard duties test is not substantively different from the former short duties tests reflected in the codes. For the 2016 rulemaking, the Department reviewed O*NET[332] to determine the extent to which the 1998 probability codes reflected current occupational duties. The Department's review of O*NET verified the continued appropriateness of the 1998 probability codes.[333] The 2019 final rule also used these probability codes and likewise found that these codes are the best available methodology to accurately estimate exemption status.[334]

The Department estimates that of the existing 53.5 million salaried white-collar workers considered in the analysis, 37.9 million currently qualify for the EAP exemption.

6. Potentially Affected Exempt EAP Workers

The Department excluded some of the current EAP exempt workers from further analysis because the final rule will not affect them. Specifically, the Department excluded workers in named occupations who are not required to pass the salary requirements (although they must still pass a duties test) and therefore whose exemption status does not depend on their earnings. These occupations include physicians (identified with Census occupation codes 3010, 3040, 3060,

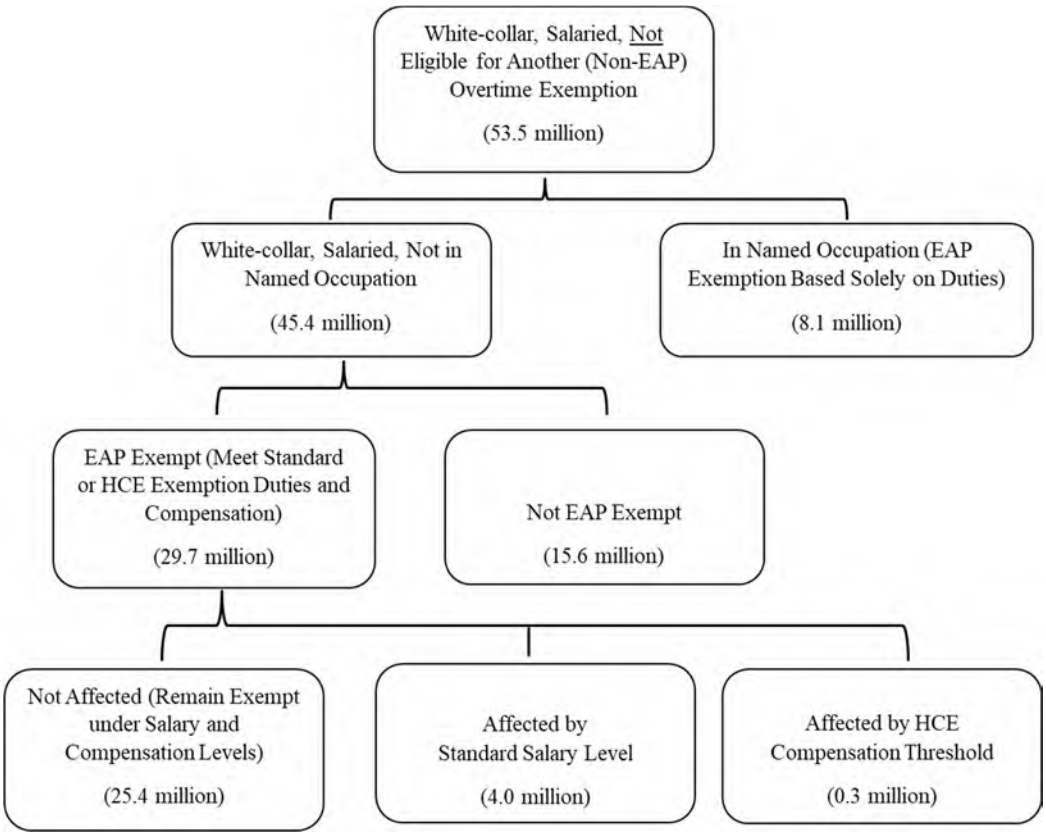
[332] The O*NET database contains hundreds of standardized and occupation-specific descriptors. *See* https://www.onetcenter.org.
[333] 81 FR 32459.
[334] 84 FR 51259.

3120), lawyers (2100), teachers (occupations 2200–2550 and industries 7860 or 7870), academic administrative personnel (school counselors (occupation 2000 and industries 7860 or 7870) and educational administrators (occupation 0230 and industries 7860 or 7870)), and outside sales workers (a subset of occupation 4950). Out of the 37.9 million workers who were EAP exempt, 8.1 million, or 21.4 percent, were expected to be in named occupations. Thus, the changes to the standard salary level and HCE compensation tests would not affect these workers. The 29.7 million EAP exempt workers remaining in the analysis are referred to in this final rule as "potentially affected" (17.8 percent of all workers).

Based on analysis of the occupational codes and CPS earnings data (described above), the Department has concluded there are 29.7 million potentially affected EAP workers.[335]

Figure 2: Exemption Status and Number of Affected Workers

[335] Of these workers, approximately 16.5 million pass only the standard test, 12.8 million pass both the standard and the HCE tests, and 446,600 pass only the HCE test.



As shown in Figure 2 above, 8.1 million of the 53.5 million salaried white-collar workers are in named occupations and will not be affected by a change in the earnings requirements. The Department also estimates that of the remaining 45.4 million salaried white-collar workers, about 12.7 million earn below the Department's new standard salary level of $1,128 per week and about 32.7 million earn above the Department's new salary level. Thus, approximately 28 percent of salaried white-collar employees earn below the new salary level, whereas approximately 72 percent of salaried white-collar employees earn above the salary level and will have their exemption status turn on their job duties.

7. Number of Affected EAP Workers

The Department estimated that the increase in the standard salary level from $684 per week to $1,128 per week will affect 4.0 million workers in Year 1 (of these 4.0 million affected

employees, 1.8 million earn less than the long test salary level ($942)).[336] The Department estimated that the increase in the HCE annual compensation level from $107,432 to $151,164 will impact 292,900 workers (Figure 3).[337] In total, the Department expects that 4.3 million workers out of the 29.7 million potentially affected workers will be affected in Year 1. This estimate of 4.3 million affected workers represents only approximately 10 percent of all salaried white-collar workers who are not in named occupations (45.4 million).

As illustrated in Figure 1 above, this final rule affects a specific and small portion of all employed workers. In particular, the number of affected workers is 2.6% of total employed workers in 2023 and represents about 8 percent of all white-collar salaried workers (including workers in named occupations). While Figure 1 provides a snapshot of the impacts of this rule in the context of the broader labor market of 2023, it may also be helpful to understand how the labor market has grown since the Department first introduced a one-test system in 2004. Broadly, since 2004 the size of the labor force and the white-collar workforce has grown considerably. Between 2004 and 2023, total employment grew by 21.8 million, with employment increasing by nearly 10 million since 2016 and 3.5 million since 2019.[338] Over this period, the size of the white-collar workforce has also increased considerably. In 2004, the total number of white-collar

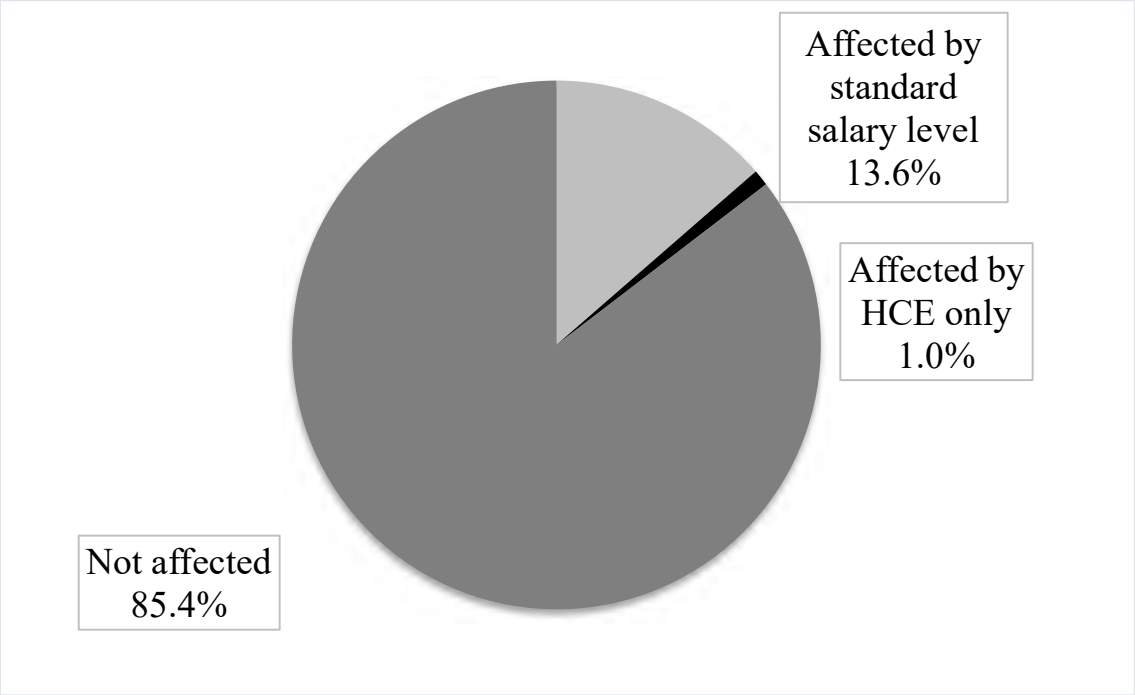
[336] *See* section VII.C.8 (Alternative 2). As discussed in section V.B, such employees were always excluded from the EAP exemption prior to 2019, either by the long test salary level itself, or under the 2004 rule salary level, which was equivalent to the long test salary level. The remaining 2.2 million of these affected employees earn between the long test salary level and the Department's new standard salary level.

[337] This group includes workers who may currently be nonexempt under more protective state EAP laws and regulations, such as some workers in Alaska, California, Colorado, Maine, New York, Washington, and Wisconsin.

[338] Employment status of the civilian noninstitutional population, 1953 to date. BLS Current Population Survey. https://www.bls.gov/cps/cpsaat01.htm

workers who were subject to the Part 541 regulations, including the salary level test, was 31.7 million. By 2016 it had reached 37.4 million; in 2019 it was 39.8 million; and in 2023 it was nearly 45.4 million.

Figure 3: Pie Chart of Potentially Affected Employees and Their Affected Status



Several commenters stated that the Department's estimates of affected workers were incorrect because of the application of the probability codes. For example, NCFC stated that "the Department's impact calculations rely on outdated and flawed data" because the "Department's predictions as to the probability of employees passing the duties test are based on a 1999 study . . . which itself relied upon information provided by DOL in the 1990s—more than three decades ago." AFPI further added that since the Department's probability codes were developed, "occupational codes have changed; the Part 541 duties tests have changed; and litigation has resulted in thousands of court decisions finding employees to be exempt or non-exempt."

Similarly, NRF included a report by Oxford Economics stating that there have been numerous economics changes since 1998, "includ[ing] increases in automation, virtual work, computerized scheduling, and the effects of a global pandemic."[339] The Oxford Economics report also stated that "if the relationship between salaried [status] and EAP exemption status is tighter than the [Department] . . . assumes," the number of affected workers could be as high as 7.2 million. AFPI asserted that approximately "7.5 million employees would be non-exempt for the first time based on salary alone[.]" Rachel Greszler stated that the correct figure is as high as 12.3 million workers.

The Department disagrees with commenters that challenged its use of its probability codes. The Department has used its probability codes to estimate the number of workers who meet the duties test in its 2004, 2016, and 2019 rules. The Department reiterates that these codes have been updated and mapped onto current occupational codes, as explained above. As also noted above, the standard duties test is not substantively different from the former short duties tests reflected in the codes. In consequence, the probability codes remain relevant and are currently the most accurate way to estimate the probability of a worker satisfying the duties test. Furthermore, while several occupations have changed over time, modifications affecting specific occupations would only affect the validity of these probability codes if they systematically

[339] The Oxford Economics report also noted that there has been a 6-percent rise in "the share of salaried workers in the economy . . . since 1998." However, any increase in the number of salaried workers does not have any bearing on the validity of the probability codes, which the Department uses to estimate whether a worker passes the duties test. Being paid on a salary basis is one of the three tests for exemption, *see* § 541.602(a), and is distinct from the duties test. Accordingly, the Department only applies the probability codes to nonhourly workers—whom, as discussed above, the Department considers to be an appropriate proxy for workers paid on a salary basis.

affected an occupation's probability of performing exempt tasks. In contrast, other changes, such as employees performing remotely the job duties they once performed in-person, do not affect the validity of these probabilities. Additionally, the probability codes can still effectively predict whether employees in new industries will meet the duties test insofar as these occupations existed in other industries. Finally, as previously noted, the Department used the O*NET database to confirm the appropriateness of the probability codes in 2016. Commenters did not provide a basis for concluding that the Department's 2016 evaluation is obsolete or that the probability codes no longer provide the most reasonable basis for estimating the population of affected workers.

The Department also does not agree with commenters that stated that it underestimated the number of affected workers in the NPRM. As discussed above, *see* section V.B.5.iii, commenters that asserted the number of affected workers could be much higher generally referenced estimates of the number of workers earning between the current salary level and the proposed salary level, regardless of whether they passed the duties test, and then posited that up to that many workers (e.g., 7.2 million, 7.5 million, or 12.3 million) could be affected. The position that all workers earning below the new salary level, regardless of their duties, will be affected by the new salary level fails to account for the fact that that millions of these workers are already nonexempt because they do not meet the duties test.

C. Effects of Revised Salary and Compensation Levels

1. Overview and Summary of Quantified Effects

The Department is setting the standard salary level using the 35th percentile of earnings of full-time salaried workers in the lowest-wage Census region (currently the South) and setting

the HCE compensation level at the annualized weekly earnings of the 85th percentile of full-time salaried workers nationwide. In both cases the Department used 2023 CPS data to calculate the levels.[340]

Transfers both from employers to employees and between employees, and direct employer costs, will depend on how employers respond to this rulemaking. Employer response is expected to vary by the characteristics of the affected EAP workers. Assumptions related to employer responses are discussed below.

Table 4 presents the estimated number of affected workers, costs, and transfers associated with increasing the standard salary and HCE compensation levels. The Department estimated that the direct employer costs of this rule will total $1.4 billion in the first year, with 10-year annualized direct costs of $802.9 million per year using a 7 percent discount rate.

In addition to these direct costs, this rule will transfer income from employers to employees. Estimated Year 1 transfers will equal $1.5 billion, with annualized transfers of $1.5 billion per year using the 7 percent real discount rates and $1.6 billion using the 3 percent discount rate. Potential employer costs due to reduced profits and additional hiring were not quantified but are discussed in section VII.C.3.v. These estimates encompass in Year 1 both the impact of the initial update to the earnings thresholds and the change in those thresholds that will become applicable 6 months later.[341]

---

[340] Full-time is defined as 35 or more hours per week.

[341] The Department estimates the initial update to the standard salary level will result in 959,000 affected workers earning between $684 and $844 per week. The Department estimates the adjustment and managerial costs for this update will be $202.3 million and transfers will be $204.3 million. For the initial update to the HCE total annual compensation threshold, the Department estimates that the update will result in 223,000 affected workers, $58.7 million in adjustment and managerial costs, and $164.5 million in transfer payments.

Table 4: Summary of Affected Workers and Regulatory Costs and Transfers

Impact [a]	Year 1	Future Years [b]		Annualized Value	
		Year 2	Year 10	3% Real Discount Rate	7% Real Discount Rate
Affected Workers (1,000s)					
Standard	4,045	3,783	4,978	[c]	[c]
HCE	293	323	1,015	[c]	[c]
Total	4,337	4,106	5,993	[c]	[c]
Direct Employer Costs (Millions in $2023)					
Regulatory familiarization	$451.6	$0.0	$68.9	$71.8	$79.3
Adjustment [c]	$299.1	$9.4	$20.9	$44.6	$50.0
Managerial	$685.5	$632.1	$816.3	$677.6	$673.6
Total direct costs [d]	$1,436.2	$641.5	$906.1	$794.0	$802.9
Transfers from Employers to Workers (Millions in $2023) [e]					
Due to minimum wage	$87.5	$46.5	$22.6	$43.2	$44.8
Due to overtime pay	$1,421.7	$1,047.8	$2,467.5	$1,522.0	$1,489.3
Total transfers [f]	$1,509.2	$1,094.3	$2,490.1	$1,565.2	$1,534.1

[a] Additional costs and benefits of the rule that could not be quantified or monetized are discussed in the text.

[b] These costs/transfers represent a range over the nine-year span.

[c] Not annualized.

[d] Adjustment costs occur in all years when there are newly affected workers. Adjustment costs may occur in years without updated earnings thresholds because some workers' projected earnings are estimated using negative earnings growth.

[e] Components may not add to total due to rounding.

[f] This is the net transfer from employers to workers. There may also be transfers between workers.

2. Characteristics of Affected EAP Workers

Table 5 presents the number of affected EAP workers, the mean number of overtime hours they work per week, and their average weekly earnings. The Department considered two types of overtime workers in this analysis: regular overtime workers and occasional overtime

workers.[342] Regular overtime workers typically worked more than 40 hours per week. Occasional overtime workers typically worked 40 hours or less per week, but they worked more than 40 hours in the week they were surveyed. The Department considered these two populations separately in the analysis because labor market responses to overtime pay requirements may differ for these two types of workers.

The 4.0 million workers affected by the combined effect of the initial update and the subsequent application of the new standard salary level work on average 1.6 usual hours of overtime per week and earn on average $948 per week.[343] However, most of these workers (about 86 percent) usually do not work overtime. The 14 percent of affected workers who usually work overtime average 11.1 hours of overtime per week. In a representative week, roughly 135,000 (or 3.3 percent) of the 4.0 million affected workers occasionally work overtime; they averaged 8.5 hours of overtime in the weeks they worked overtime.[344] Finally, 20,000 (or 0.5 percent) of all workers affected by the increase in the standard salary level earn less than the minimum wage. [345]

---

[342] Regular overtime workers were identified in the CPS MORG with variable PEHRUSL1. Occasional overtime workers were identified with variables PEHRUSL1 and PEHRACT1.
[343] CPS defines "usual hours" as hours worked 50 percent or more of the time.
[344] This group represents the number of workers with occasional overtime hours in the week the CPS MORG survey was conducted. Because the survey week is a representative week, the Department believes the prevalence of occasional overtime in the survey week and the characteristics of these workers are representative of other weeks (even though a different group of workers would be identified as occasional overtime workers in a different week).
[345] A small proportion (0.5 percent) of all affected EAP workers earn implicit hourly wages that are less than the applicable minimum wage (the higher of the state or Federal minimum wage). The implicit hourly wage is calculated as total weekly earnings divided by total weekly hours worked. For example, workers earning the $684 per week standard salary level would earn less than the Federal minimum wage if they work 95 or more hours in a week ($684 ÷ 95 hours = $7.20 per hour).

The 292,900 workers affected by the change in the HCE compensation level average 2.9 hours of overtime per week and earn an average of $2,397 per week ($124,668 per year). About 73 percent of these workers do not usually work overtime, while the 27 percent who usually work overtime average 11.0 hours of overtime per week. Among the 2.6 percent who occasionally work overtime, they averaged 8.2 hours in the weeks that they worked overtime.

Although most affected workers who typically do not work overtime will be unlikely to experience significant changes in their daily work routine, those who regularly work overtime may experience significant changes. Moreover, affected EAP workers who routinely work overtime and earn less than the minimum wage will be most likely to experience significant changes. Impacts on employee hours and earnings are discussed further in section VII.C.4.

Table 5: Number of Affected EAP Workers, Mean Overtime Hours, and Mean Weekly Earnings, Year 1

Type of Affected EAP Worker	Affected EAP Workers [a]		Mean Overtime Hours	Mean Usual Weekly Earnings
	Number (1,000s)	% of Total		
Standard Salary Level				
All affected EAP workers	4,045	100%	1.6	$948
Earn less than the minimum wage [b]	20	0.5%	25.8	$828
Regularly work overtime	575	14.2%	11.1	$959
Occasionally work overtime [c]	135	3.3%	8.5	$955
HCE Compensation Level				
All affected EAP workers	293	100%	2.9	$2,397
Earn less than the minimum wage [b]	--	--	--	--
Regularly work overtime	78	26.7%	11.0	$2,406
Occasionally work overtime [c]	8	2.6%	8.2	$2,392

Note: Pooled CPS data for 2021–2023 adjusted to reflect 2023.
[a] Estimated number of workers exempt under the EAP exemptions who will be entitled to overtime protection under the updated salary levels (if their weekly earnings do not increase to the new salary levels).
[b] The applicable minimum wage is the higher of the Federal minimum wage and the state minimum wage. These workers all regularly work overtime and are also included in that row. HCE workers will not be affected by the minimum wage provision.

[c] Workers who do not usually work overtime but did in the CPS reference week. Mean overtime hours are actual overtime hours in the reference week. Other workers may occasionally work overtime in other weeks.

This section characterizes the population of affected workers by industry, occupation, employer type, location of residence, and demographics. The Department chose to provide as much detail as possible while maintaining adequate sample sizes.

Table 6 presents the distribution of affected EAP workers by industry and occupation, using Census industry and occupation codes. The industry with the most affected EAP workers is professional and business services (827,000), while the industry with the highest percentage of EAP workers affected is leisure and hospitality (about 24 percent). The occupational category with the most affected EAP workers is management, business, and financial (2.0 million), while the occupation category with the highest percentage of EAP workers affected is farming, fishing, and forestry (about 45 percent).

Potentially affected workers in private-sector nonprofits are more likely to be affected than workers in private-sector for-profit firms (18.9 percent compared with 13.6 percent). However, as discussed in section VII.B.3, the estimates of workers subject to the FLSA include workers employed by enterprises that are not subject to the FLSA under the law's enterprise coverage requirements because there is no data set that would adequately inform an estimate of the size of this worker population in order to exclude them from these estimates. Although failing to exclude workers who work for non-covered enterprises would only affect a small percentage of workers generally, it may have a larger effect (and result in a larger overestimate) for workers in nonprofits because when determining FLSA enterprise coverage only revenue derived from business operations, not charitable activities, is included.

Table 6: Estimated Number of Workers and Whether They Will be Affected by the New Earnings Thresholds, by Industry and Occupation, Year 1

Industry / Occupation / Nonprofit	Workers subject to FLSA (Millions)	Potentially Affected EAP Workers (Millions) [a]	Not-Affected (Millions) [b]	Affected (Millions) [c]	Affected as Share of Potentially Affected

Note: Pooled CPS data for 2021–2023 adjusted to reflect 2023.
[a] Exempt workers who are white-collar, salaried, not eligible for another (non-EAP) overtime exemption, and not in a named occupation.
[b] Workers who continue to be exempt after the increases in the salary levels (assuming affected workers earning below the new salary level do not have their weekly earnings increased to the new level).
[c] Estimated number of workers exempt under the EAP exemptions who will be entitled to overtime protection under the updated salary levels (if their weekly earnings do not increase to the new salary levels).
[d] Census industry and occupation categories.

Table 7 presents the distribution of affected EAP workers based on Census Regions and Divisions, and metropolitan statistical area (MSA) status. The region with the most affected workers will be the South (1.9 million), but the South's percentage of potentially affected workers who are estimated to be affected is relatively small (17.9 percent). Although 90 percent of affected EAP workers will reside in MSAs (3.92 of 4.34 million), so do a corresponding 88 percent of all workers subject to the FLSA.[346]

Employers in low-wage industries, regions, and in non-metropolitan areas may be more affected because they typically pay lower wages and salaries. The Department believes the salary level included in this rule is appropriate for these lower-wage sectors, in part because the

[346] Identified with CPS MORG variable GTMETSTA.

methodology uses earnings data from the lowest-wage census region. Moreover, the duties test will continue to determine exemption status for the vast majority of workers in low-wage regions and industries under the rule. For example, as displayed in Table 7, 82.1 percent of potentially affected EAP workers in the South Census Region earn more than the new salary levels and thus will not be affected by the rule (8.59 ÷ 10.46). Effects by region and industry are considered in section VII.C.7.

Table 7: Estimated Number of Workers and Whether They Will be Affected by the New Earnings Thresholds, by Region, Division, and MSA Status, Year 1

Region / Division / Metropolitan Status	Workers subject to FLSA (Millions)	Potentially Affected EAP Workers (Millions) [a]	Not-Affected (Millions) [b]	Affected (Millions) [c]	Affected as Share of Potentially Affected

By Metropolitan Status					
Metropolitan	126.89	27.91	23.98	3.92	14.1%
Non-metropolitan	15.74	1.70	1.32	0.38	22.3%
Not identified	1.05	0.14	0.11	0.03	23.8%

Note: Pooled CPS data for 2021–2023 adjusted to reflect 2023.

[a] Exempt workers who are white-collar, salaried, not eligible for another (non-EAP) overtime exemption, and not in a named occupation.
[b] Workers who continue to be exempt after the increases in the salary levels (assuming affected workers earning below the new salary level do not have their weekly earnings increased to the new level).
[c] Estimated number of workers exempt under the EAP exemptions who will be entitled to overtime protection under the updated salary levels (if their weekly earnings do not increase to the new salary levels).

Table 8 presents the distribution of affected EAP workers by demographics. Potentially affected women, Black workers, Hispanic workers, young workers, and workers with less education are all more likely to be affected than other worker types. This is because EAP exempt workers with these characteristics are more likely to earn within the affected standard salary range than EAP exempt workers without these characteristics. For example, of potentially affected workers, women tend to have lower salaries and are therefore more likely to be in the affected range. Median weekly earnings for potentially affected women are $1,709 compared to $2,108 for men.

Among potentially affected workers, certain demographic groups—women, Black workers, Hispanic workers, young workers, and workers with less education—have an increased likelihood of being affected by this rulemaking, even though workers in these demographic groups are less likely to be EAP exempt in the first place. Therefore, as a share of all workers, not just potentially affected workers, workers in these demographic groups may not be more likely to be affected. For example, when looking at potentially affected workers, 21.7 percent of potentially affected Black workers are affected, while only 14.5 percent of potentially affected white workers are affected. However, when looking at total workers, about the same shares of

total Black and total white workers would be affected (2.9 percent of Black workers and 3.0 percent of white workers).

Table 8: Estimated Number of Workers and Whether They Will be Affected by the New Earnings Thresholds, by Demographics, Year 1

Demographic	Workers subject to FLSA (Millions)	Potentially Affected EAP Workers (Millions) [a]	Not-Affected (Millions) [b]	Affected (Millions) [c]	Affected as Share of All Workers	Affected as Share of Potentially Affected

[b] Workers who continue to be exempt after the increases in the salary level (assuming affected workers' weekly earnings do not increase to the new salary level).
[c] Estimated number of workers exempt under the EAP exemptions who would be entitled to overtime protection under the updated salary levels (if their weekly earnings do not increase to the new salary level).

3. Costs

i. Summary

The Department quantified three direct costs to employers in this analysis: (1) regulatory familiarization costs; (2) adjustment costs; and (3) managerial costs. These are the same costs quantified in the 2016 and 2019 rulemakings. The Department estimated that in Year 1, regulatory familiarization costs will be $451.6 million, adjustment costs will be $299.1 million, and managerial costs will be $685.5 million (Table 9). Total direct employer costs in Year 1 will be $1.4 billion. Recurring costs are projected in section VII.C.10. The Department discusses costs that are not quantified in section VII.C.3.v.

Table 9: Summary of Year 1 Direct Employer Costs (Millions)

Direct Employer Costs	Standard Salary Level	HCE Compensation Level	Total
Regulatory familiarization [a]	--	--	$451.6
Adjustment	$279.0	$20.1	$299.1
Managerial	$626.3	$59.2	$685.5
Total direct costs	$905.4	$79.2	$1,436.2

[a] Regulatory familiarization costs are assessed jointly for the change in the standard salary level and the HCE compensation level.

ii. Regulatory Familiarization Costs

This rulemaking will impose direct costs on firms by requiring them to review the regulation. To estimate these "regulatory familiarization costs," three pieces of information must be estimated: (1) the number of affected establishments; (2) a wage level for the employees reviewing the rule; and (3) the amount of time spent reviewing the rule. The Department generally used the same methodology for calculating regulatory familiarization costs that it used in the NPRM and recent rulemakings.

Regulatory familiarization costs can be calculated at an establishment level or at a firm level. The Department assumed that regulatory familiarization occurs at a decentralized level and used the number of establishments in its cost estimate; this results in a higher estimate than would result from using the number of firms. The most recent data on private sector establishments and firms at the time this rule was drafted are from the 2021 Statistics of U.S. Businesses (SUSB), which reports 8.15 million establishments with paid employees.[347] Additionally, there were an estimated 90,126 state and local governments in 2017, the most recent data available.[348] The Department thus estimated 8.24 million entities (the term "entities" is used to refer to the combination of establishments and governments).

The Department assumes that all entities will incur some regulatory familiarization costs, even if they do not employ exempt workers, because all entities will need to confirm whether this rulemaking affects their employees. Entities with more affected EAP workers will likely spend more time reviewing the regulation than entities with fewer or no affected EAP workers

[347] Statistics of U.S. Businesses 2021, https://www.census.gov/programs-surveys/susb.html.
[348] 2017 Census of Governments. Table 1, https://www.census.gov/data/tables/2017/econ/gus/2017-governments.html.

(since a more careful reading of the regulation will probably follow the initial decision that the entity is affected). However, the Department did not know the distribution of affected EAP workers across entities, so it used an average cost per entity.

The Department believes an average of 1 hour per entity is appropriate because the regulated community is likely to be familiar with the content of this rulemaking. EAP exemptions have existed in one form or another since 1938, and a final rule was published as recently as 2019. Furthermore, employers who use the exemptions must apply them every time they hire an employee whom they seek to classify as exempt. Thus, employers should be familiar with the exemptions. The most significant changes in this rulemaking are setting a new standard salary level and a new HCE compensation level for exempt workers and establishing a mechanism for keeping these thresholds up to date. The changed regulatory text is only a few pages, and the Department will provide summaries and other compliance assistance materials that will help inform employers that are implementing the final rule. The Department thus believes, consistent with its approach in the 2016 and 2019 rules, that 1 hour is an appropriate average estimate for the time each entity will spend reviewing the changes made by this rulemaking. Additionally, the estimated 1 hour for regulatory familiarization represents an assumption about the average for all entities in the U.S., even those without any affected or exempt workers, which are unlikely to spend much time reviewing the rulemaking. Some businesses, of course, will spend more than 1 hour, and some will spend less.

The Department's analysis assumes that compensation, benefits, and job analysis specialists (SOC 13-1141) with a median wage of $32.59 per hour will review the rulemaking.[349,]

[349] OEWS 2022. Available at: https://www.bls.gov/oes/current/oes131141.htm.

[350] The Department also assumed that benefits are paid at a rate of 45 percent of the base wage[351] and overhead costs are paid at a rate of 17 percent of the base wage,[352] resulting in an hourly rate of $54.82 in 2023 dollars.[353] The Department thus estimates regulatory familiarization costs in Year 1 would be $451.6 million ($54.82 per hour × 1 hour × 8.24 million entities).

The Department also conducted a sensitivity analysis. First, as previously noted, the Department used the number of establishments rather than the number of firms, which results in a higher estimate of the regulatory familiarization cost. Using the number of firms, 6.4 million, would result in a reduced regulatory familiarization cost estimate of $350.0 million in Year 1.

Some commenters representing employer interests stated that rule familiarization costs are underestimated. *See, e.g.*, ABC; IEC; Job Creators Network Foundation; NSBA; SBA Office of Advocacy. For instance, ABC commented that "compliance with the proposal will not be as simple as reviewing the salary level and making a one-time decision" and that "82% of recently surveyed ABC members . . . responded that reviewing the final rule would take three hours or longer, with 47% saying it would take five hours or more."

---

[350] Previous related rulemakings used the CPS to estimate wage rates. The Department is using OEWS data now to conform with standard practice for the Department's economic analyses.
[351] The benefits-earnings ratio is derived from BLS's Employer Costs for Employee Compensation (ECEC) data using variables CMU1020000000000D and CMU1030000000000D. This fringe benefit rate includes some fixed costs such as health insurance. As of when this final rule was drafted, 2023 ECEC data were available only through the third quarter, so the Department continued to use the 2022 full-year data to calculate the benefits share.
[352] The Department believes that the overhead costs associated with this rulemaking are small because existing systems maintained by employers to track currently hourly employees can be used for newly overtime-eligible workers. However, acknowledging that there might be additional overhead costs, the Department has included an overhead rate of 17 percent.
[353] The 2022 fully-loaded hourly wage was adjusted to 2023 using the CPI-U.

While the Department acknowledges that some employers will spend more than an hour reviewing the rule, the estimate of 1 hour for rule familiarization is an assumption about the average representing all establishments, even those without any affected or exempt workers. Those establishments will likely not need to spend any time reviewing the rule. Employers in industries with more affected workers may spend more time reviewing the rule, but across all industries, the Department believes that 1 hour continues to be appropriate. The Department used the same 1 hour estimate in its 2016 and 2019 rules,[354] and the Department did not receive comments with concrete data that is representative across all industries from which to conclude that its average estimate of one hour is incorrect. The Department continues to believe that businesses are already familiar with this rulemaking. The EAP exemptions have existed for a long time, and recent rules were published in 2016 and 2019. This rulemaking sets a new standard salary level and a new HCE compensation level for exempt workers and establishes a mechanism for keeping these thresholds up to date. However, this rulemaking does not fundamentally change the existing method for determining whether an employee qualifies for the EAP exemption. To the extent commenters' familiarization cost concerns related to time needed to comply with the rule, these costs are addressed separately under the Department's managerial and adjustment cost estimates. As for concerns relating to the hourly wage rate used to calculate rule familiarization costs, the Department notes that it relies on the standard occupation used in previous WHD and DOL rulemakings.

[354] 81 FR 32474; 84 FR 51266.

iii. Adjustment Costs

This rulemaking will also impose direct costs on establishments by requiring them to evaluate the exemption status of employees, update and adapt overtime policies, notify employees of policy changes, and adjust their payroll systems. For each affected worker who works overtime, an employer will need to decide whether they will increase their salary, adjust their hours, or some combination of the two. The Department believes the size of these "adjustment costs" will depend on the number of affected EAP workers and will occur in any year when exemption status is changed for any workers. To estimate adjustment costs, three pieces of information must be estimated: (1) a wage level for the employees making the adjustments; (2) the amount of time spent making the adjustments; and (3) the estimated number of newly affected EAP workers. The Department again estimated that the average wage with benefits and overhead costs for a mid-level human resource worker is $54.82 per hour (as explained above).

The Department estimated that it will take establishments an average of 75 minutes per affected worker to make the necessary adjustments. This is the same time estimate as used in the 2016 and 2019 rulemakings, as well as in the NPRM. Little applicable data were identified from which to estimate the amount of time required to make these adjustments. The estimated number of affected EAP workers in Year 1 due to the change in the standard salary level to $1,128 per week and the HCE level to $151,164 per year is 4.3 million (as discussed in section VII.B.7). However, because the compensation thresholds will undergo an initial update on July 1, 2024 and then an increase using the new methodologies 6 months later, employers may have

additional adjustment costs when the standard salary level is initially updated to $844 per week and the HCE level is initially updated to $132,964.

Some employers may make two adjustments for affected workers – one at the initial update to the standard salary level and then again with the salary level adjustment 6 months later. To estimate the costs associated with multiple adjustments, the Department assumed that at the initial update, some employers could experience additional adjustment costs for the affected workers who will have their weekly earnings increased to $844 per week. In order to estimate the number of affected workers who would have their weekly earnings increased to $844 per week, the Department looked at EAP exempt workers earning at least $684 per week but less than $844 per week. Using the methodology laid out in the transfer analysis in section VII.C.4.iii, the Department then estimated the share of these workers who regularly work overtime and would remain exempt, because it is less expensive for the employer to pay the updated salary level than to pay overtime (described in that section as Type 4 workers). The Department estimated that there would be 27,692 workers who earn between $684 and $844 and would have their earnings increased at the initial update. The Department does not have data to determine how many employers would increase earnings twice for workers earnings between $684 and $844. For these workers, unless they are working large numbers of overtime hours, it is likely to be more economically beneficial for employers to make other changes in response to the rule instead of increasing their salary to $1,128 a week, such as limiting overtime hours worked. Despite this, in case there are limited cases in which workers do have their earnings increased twice, the Department has included these additional adjustment costs in the total adjustment cost estimate.

Therefore, total estimated Year 1 adjustment costs would be $299.1 million ($54.82 × 1.25 hours × (4,337,469 + 27,692 workers)).

The Department used a time estimate per affected worker, rather than per establishment, because the distribution of affected workers across establishments is unknown. However, it may be helpful to present the total time estimate per establishment based on a range of affected workers. If an establishment has five affected workers, the time estimate for adjustment costs is 6.25 hours. If an establishment has 25 affected workers, the time estimate for adjustment costs is 31.25 hours. And if an establishment has 50 affected workers, the time estimate for adjustment costs is 62.5 hours.

A reduction in the cost to employers of determining employees' exemption status may partially offset adjustment costs. Currently, to determine whether an employee is exempt, employers must apply the duties test to salaried workers who earn $684 or more per week. However, under the final rule, firms will no longer be required to apply the duties test to the 8.7 million employees earning above the current standard salary level of $684 and less than the new standard salary level of $1,128. While this will be a clear cost savings to employers for these employees, the Department did not estimate the potential size of this cost savings.

Some commenters representing employer interests stated that the Department underestimated adjustment costs. *See, e.g.*, NAHB; NSBA; PPWO. NAHB, for instance, stated that "the Department's economic analysis," including its estimate of "75 minutes per affected worker for adjustment," "dramatically understate[d] the . . . cost burden on employers," and PPWO stated that adjustment costs (and regulatory familiarization and managerial costs) were "all dramatically understated." SBA Advocacy and Seyfarth Shaw asserted that the Department

underestimated adjustment costs for small businesses, with both commenters stating that smaller employers would be more likely than larger ones to hire outside assistance to make needed adjustments. *See also* NFIB ("The NPRM underestimates compliance costs for small businesses[.]"). Some commenters asserted that the Department failed to account for adjustment costs that employers would need to incur beyond the first year the rule is in effect, such as costs associated with determining whether an employee remains exempt, reclassifying newly-exempt employees as hourly, and making other adjustments to time and attendance systems, given that the earnings thresholds for exemption will be updated on a triennial basis. *See* PPWO; The 4As. Additionally, some commenters expressed particular concern with adjustment costs stemming from the proposed increase in the HCE compensation level, noting that for workers who were previously exempt under the HCE test but earn below the proposed HCE compensation level, employers would need to evaluate the worker's duties to determine whether they remain exempt under the standard test. *See, e.g.,* HR Policy Association; NAM; PPWO. NAM stated that "[a]cross the manufacturing sector, the change in the HCE threshold may be as difficult and consequential as the proposed increases to the standard salary threshold."

The Department is retaining its estimate of adjustment costs as 75 minutes per affected worker in the final rule. This estimate is consistent with the Department's estimate in the 2016 and 2019 rules.[355] The Department notes that the 75-minute-per-worker average time estimate is an assumption about the average across all workers, and it believes this estimate takes into account adjustment time for workers affected by the new standard salary level and the smaller portion of workers affected by the new HCE total compensation threshold. This estimate

[355] *See* 84 FR 51267; 81 FR 32475.

assumes that the time is focused on analyzing more complicated situations. For example, employers are likely to incur relatively low adjustment costs for some workers, such as the 69 percent of affected workers who work no overtime (described below as Type 1 workers). This leaves more time for employers to spend on adjustment costs for the 31 percent of affected workers who work overtime either occasionally or regularly. To demonstrate, if the aggregate time spent on adjustments (75 min × 4.37 million workers) was spread out over only workers who work overtime, then the time estimate is 4.0 hours per worker. Lastly, the Department did not receive any comments with data providing a different estimate for the Department to rely on.

Contrary to commenters that stated that the Department failed to take into account adjustment costs beyond the first year the rule is in effect, the Department's estimated adjustment costs include costs in all years for newly affected workers. The Department limits adjustment costs in projected years to newly affected workers because there is no need to "adjust" for workers who are already overtime eligible (due to a prior adjustment of the salary level) when the salary level is updated again. Table 26 provides adjustment (and other) cost projections in future years due to the updating mechanism.

iv. Managerial Costs

If an employee becomes nonexempt due to the changes in the salary levels, then firms may incur ongoing managerial costs because the employer may spend more time developing work schedules and closely monitoring an employee's hours to minimize or avoid paying that employee overtime. For example, the manager of a newly nonexempt worker may have to assess whether the marginal benefit of scheduling the worker for more than 40 hours exceeds the marginal cost of paying the overtime premium. Additionally, the manager may have to spend

more time monitoring the employee's work and productivity since the marginal cost of employing the worker per hour has increased. Unlike regulatory familiarization and adjustment costs, which occur primarily in Year 1, managerial costs are incurred more uniformly every year.

The Department applied managerial costs to workers who (1) become nonexempt, overtime-protected and (2) either regularly work overtime or occasionally work overtime, but on a predictable basis—an estimated 911,000 workers (*see* Table 13 and accompanying explanation). Consistent with its approach in its 2019 rule and the NPRM, the Department assumed that management would spend an additional ten minutes per week scheduling and monitoring each affected worker expected to become nonexempt, overtime-eligible as a result of this rule, and whose hours would be adjusted.

As discussed in detail below, most affected workers do not currently work overtime, and there is no reason to expect their hours worked to change when their status changes from exempt to nonexempt. For that group of workers, management will have little or no need to increase their monitoring of hours worked; therefore, these workers are not included in the managerial cost calculation. Under these assumptions, the additional managerial hours worked per week will be 151,800 hours ((10 minutes ÷ 60 minutes) × 911,000 workers).

The median hourly wage in 2022 for a manager was $51.62.[356] Together with a 45 percent benefits rate and a 17 percent overhead cost, this totals $86.82 per hour in 2023

[356] OEWS 2022. Available at: https://www.bls.gov/oes/current/oes110000.htm. This may be an overestimate of the wage rate for managers who monitor workers' hours because (1) it includes very highly paid employees such as CEOs, and (2) some lower-level supervisors are not counted as managers in the data.

dollars.[357] Thus, the estimated Year 1 managerial costs total $685.5 million (151,835 hours per week × 52 weeks[358] × $86.82/hour). Although the exact magnitude will vary each year with the number of affected EAP workers, the Department anticipates that employers would incur managerial costs annually.

Some commenters expressed concerns that the regulation will increase managerial costs, with some specifically asserting that the Department's estimate was too low, *see, e.g.*, PPWO, SBA Advocacy, NCFC, IEC. Commenter concerns with managerial costs were often tied to the additional costs they asserted would result from tracking the work hours of newly nonexempt employees. *See, e.g.*, 16 Republication Representatives; APLU. Commenters specifically asserted tracking hours of currently exempt employees would increase human resources paperwork and technology costs for their companies. *See, e.g.*, The Chamber of Commerce for Greater Philadelphia; John C. Campbell Folk School.

The Department continues to believe that 10 minutes per worker per week is an appropriate managerial cost estimate. Currently, EAP exempt employees account for about 24 percent of total employment; as such, the Department expects that many employers of EAP exempt workers also employ nonexempt workers. Those employers already have in place recordkeeping systems and standard operating procedures for ensuring employees only work

[357] The benefits ratio is derived from BLS' 2022 Employer Costs for Employee Compensation data using variables CMU1020000000000D and CMU1030000000000D. The fully-loaded hourly wage rate was inflated to 2023 dollars using the BLS CPI-U.

[358] Fifty-two weeks may be an overestimate of the amount of time that an employer would incur management costs in Year 1. For affected workers who earn below $1,128, but at least $844, their employers may not incur additional managerial costs until January 1, 2025 if they decide to wait to make changes in response to the rule. Therefore, these managerial costs would not occur for the full 52 weeks of the year. Because the Department does not know when employers would make changes in response to the rule, this estimate of 52 weeks is used for the entire population.

overtime under employer-prescribed circumstances. Thus, such systems generally do not need to be created or acquired for managing formerly exempt EAP employees. The Department also notes that under the FLSA recordkeeping regulations in part 516, employers determine how to make and keep an accurate record of hours worked by employees. For example, employers may tell their workers to write their own time records and any timekeeping plan is acceptable if it is complete and accurate. Additionally, if the nonexempt employee works a fixed schedule, *e.g.*, 9:00 a.m. – 5:30 p.m. Monday – Friday, the employer may keep a record showing the exact schedule of daily and weekly hours and merely indicate exceptions to that schedule.[359] The Department believes its estimate, which tracks the approach taken in its 2019 rule, accurately predicts management costs, including costs firms may incur for monitoring and managing the hours of formerly exempt employees.

v. Other Potential Costs

In addition to the costs discussed above, commenters raised other potential costs that could not be quantified. These potential costs are discussed qualitatively below.

(a) Reduced Scheduling Flexibility

Several commenters claim that this rule would restrict employee workplace flexibility, such as remote work and flexible scheduling. *See, e.g.*, HR Policy Association; NAM; NRF; SBA; Chamber. For example, the Chamber stated, "workers will lose their ability to work from home and the flexibility that they have enjoyed in salaried positions, particularly since the COVID-19 pandemic changed the face of the American workplace in 2020." However,

[359] *See* Fact Sheet #21: Recordkeeping Requirements under the Fair Labor Standards Act, available at: https://www.dol.gov/agencies/whd/fact-sheets/21-flsa-recordkeeping.

commenters did not provide any specific evidence to support this claim. The Department notes that even those workers that are paid on an hourly basis can still take advantage of workplace flexibilities such as remote work. According to the CPS data, of all workers who reported working at home any time in the past week, 74.2 percent of them were categorized as hourly workers.

To the extent that some employers spend more time monitoring nonexempt workers' hours than exempt workers' hours, some employers could respond to this rule by limiting the ability of newly nonexempt workers to adjust their schedules. However, employers can continue to offer flexible schedules and require workers to monitor their own hours and to follow the employers' timekeeping rules. Additionally, some exempt workers already monitor their hours for billing purposes and so monitoring their hours as newly nonexempt workers should not be unduly burdensome. A study by Lonnie Golden found, using data from the General Social Survey (GSS), that "[i]n general, salaried workers at the lower (less than $50,000) income levels don't have noticeably greater levels of work flexibility that they would 'lose' if they become more like their hourly counterparts."[360] Because there is little data or literature on these potential costs, the Department did not quantify potential costs regarding scheduling flexibility.

Organizations such as the American Beverage Licensees and educational institutions in CUPA-HR and APLU, also asserted that the rule would reduce employer flexibility to allocate work hours based on schedules that include non-traditional work hours. The Hinton Rural Life Center said that the rule would make it financially unfeasible for nonexempt employees to attend

[360] Golden, L. (2014). Flexibility and Overtime Among Hourly and Salaried Workers. Economic Policy Institute. https://papers.ssrn.com/sol3/papers.cfm?abstract_id=2597174.

specific activities such as "overnight training sessions or marketing events." NCFC stated that because of the increased attention that must be paid to the hours worked by nonexempt employees, they are likely to be at a competitive disadvantage with exempt employees in the same role. Under this assumption, they asserted that "many training opportunities" would now require additional compensation if "those opportunities would put the nonexempt employee into an overtime situation," and therefore "access to those opportunities may be limited" for nonexempt employees. The Department notes that if an employer believes that training opportunities are sufficiently important, it can ensure employees attend the trainings during their 40-hour workweek or pay the overtime premium where training attendance causes the employee to work over 40 hours in a workweek. Given this, and because there is no data and literature to quantify any potential costs to workers, the Department did not quantify these costs.

(b) Preference for Salaried Status

Many commenters contended that the employers of some of the workers who will become nonexempt as a result of the rule could change their pay basis to hourly status despite the employee preferring to remain salaried. *See, e.g.*, AHLA; NSBA; SIGMA. Some commenters, such as SIGMA, stated that conversion of employees to hourly status that will negatively affect morale, as employees may perceive the change as a demotion or a loss of status because of, among other reasons, the lost flexibility associated with salaried status. Conversely, commenters such as the Coalition of State AGs and the Family Caregiving Coalition asserted that the proposed rule would increase employee satisfaction and retention, improve work-life balance, reduce stress and health problems, and make jobs more attractive to qualified applicants primarily because employees will now be compensated for hours worked beyond a standard

workweek. Notably, a strong majority of the individual commenters who said they would be personally affected by the proposed rule expressed support for the rule.

If a worker does prefer to be salaried rather than hourly, then the employer changing them from salaried to hourly may impact the worker. However, the Department believes that for most employees their feelings of importance and worth come not from their FLSA exemption status, but from the increased pay, flexibility, fringe benefits, and job responsibilities that traditionally have accompanied exempt status, and that these factors are not incompatible with overtime eligibility. And while research has shown that salaried workers (who are not synonymous with exempt workers, but whose status is correlated with exempt status) are more likely than hourly workers to receive certain benefits, as discussed below, such research generally does not control for differences between salaried and hourly workers such as education, job title, or earnings.

(c) Reduction in Employer-Provided Benefits

Several commenters stated that in response to the proposed salary level employers would likely decrease employee benefits. *See, e.g.*, PPWO; Rachel Greszler. These and similar comments were mostly general statements, often listing types of benefits employees may lose. Others stated that employees would lose benefits due to being reclassified as hourly workers. *See, e.g.*, Independent Women's Forum (IWF); NRF. Some commenters stated that these employees would have reductions in their ability to earn bonuses or other types of incentive payments, but these commenters generally did not discuss the net impact on these employees' earnings. *See, e.g.*, NRF. These comments did not provide information that would allow the Department to estimate the purported impact of the final rule on employee benefits.

Research has shown that salaried workers are more likely than hourly workers to receive benefits such as paid vacation time and health insurance[361] and are more satisfied with their benefits.[362] However, this literature generally does not control for differences between salaried and hourly workers such as education, job title, or earnings; therefore, this correlation is not necessarily attributable to hourly status.

If workers become nonexempt and the employer chooses to pay them on an hourly rather than salary basis, this may result in the employer reducing the workers' benefits. These newly nonexempt workers may continue to be paid a salary, as long as that salary is equivalent to a base wage at least equal to the minimum wage rate for every hour worked, and the employee receives a 50 percent premium on that employee's regular rate for any overtime hours each week.[363] Similarly, employers may continue to provide these workers with the same level of benefits as before, whether paid on an hourly or salary basis. Lastly, the nature of the market mechanism may be such that employers cannot reduce benefits without risking workers leaving, resulting in turnover costs to employers. The Department did not quantify potential costs regarding reduction in workers' benefits.

(d) Increased Prices

Several commenters such as AAHOA, the Chamber, CUPA-HR, Indiana Chamber of Commerce, NAHB, and the National Association of Wholesaler-Distributors stated that the

[361] Lambert, S. J. (2007). Making a Difference for Hourly Employees. In A. Booth, & A. C. Crouter, Work-Life Policies that Make a Real Difference for Individuals, Families, and Communities. Washington, D.C.: Urban Institute Press.
[362] Balkin, D. B., & Griffeth, R. W. (1993). The Determinants of Employee Benefits Satisfaction. Journal of Business and Psychology, 7(3), 323-339.
[363] 29 CFR 778.113–114.

regulation will result in increased prices due to increased employee salaries and other costs to employers. Some of these commenters assert that employers increasing their workers' salaries to maintain their exempt status would induce a general price increase if anticipated wage increases do not result in productivity increases. *See, e.g.*, Chamber; NAW. NAHB conducted a survey among its members about the proposal, and 50 percent of survey respondents stated that finalizing the salary level as proposed would lead them to raise home prices, while 25 percent of respondents stated that the change would make some projects unprofitable.

The Department acknowledges that, as discussed in the transfers section below, businesses may be able to help mitigate increased labor costs following this rulemaking by rebalancing the hours that employees are working. Businesses that are unable to rebalance these hours and do incur increased labor costs might pass along these increased labor costs to consumers through higher prices for goods and services. However, because costs and transfers will be, on average, small relative to payroll and revenues, the Department does not expect the rule to have a significant effect on prices. The Department estimated that, on average, costs and transfers make up less than 0.04 percent of payroll and 0.006 percent of revenues, although for specific industries and firms this percentage may be larger (*see* Table 24). Therefore, any potential change in prices related to costs and transfers from this rulemaking would be modest, and the Department notes that commenter predictions (such as those in the NAHB survey described above) reflect speculation about what will occur in the future and thus may not reflect actual economic responses by employers. Further, any significant price increases would not represent a separate category of effects from those estimated in this economic analysis. Rather,

such price increases (where they occur) would be the channel through which consumers, rather than employers or employees, bear rule-induced costs (including transfers).

While economic theory suggests that an increase in labor costs in excess of productivity gains would lead to increases in prices, much of the empirical literature has found that wage inflation does not predict price inflation.[364] For example, Peneva et al. (2015) explore the relationship between labor costs and price inflation between 1965 and 2012, finding that the influence of labor costs on prices has decreased over the past several decades and have made a relatively small contribution to price inflation in recent years.[365]

(e) Reduced Services

Some commenters expressed concern that, by reducing the number of exempt employees, this rulemaking will negatively impact the amount or quality of services that employers can provide. *See, e.g.*, ANCOR; Boy Scouts of America; Catholic Charities USA; YMCA. The National Association of Counties raised similar concerns with respect to county governments. A number of colleges, universities, and other higher-education stakeholders, such as APLU and CUPA-HR, similarly asserted that the proposed rule would negatively affect support services for students. The Department appreciates that employers in some industries have less flexibility than

[364] Church, J.D. and Akin, B. (2017). "Examining price transmission across labor compensation costs, consumer prices, and finished-goods prices," *Monthly Labor Review*, U.S. Bureau of Labor Statistics; Emery, K. & Chang, C. (1996). Do Wages Help Predict Inflation?, Federal Reserve Bank of Dallas, Economic Review First Quarter 1996. https://www.dallasfed.org/~/media/documents/research/er/1996/er9601a.pdf; Jonsson, M. & Palmqvist, S. (2004). Do Higher Wages Cause Inflation? Sveriges Riksbank Working Paper Series 159. http://archive.riksbank.se/Upload/WorkingPapers/WP_159.pdf.

[365] Pevena, E. V. and Rudd, J. B. (2015). "The Passthrough of Labor Costs to Price Inflation," Finance and Economics Discussion Series 2015-042. Washington: Board of Governors of the Federal Reserve System. https://dx.doi.org/10.17016/FEDS.2015.042.

others to account for new labor costs and that the services provided by such employers could be negatively affected. However, the Department believes the effect of the rule on public services will be small. The Department acknowledges that some newly nonexempt employees who currently work overtime providing public services may see a reduction in hours as an effect of the rulemaking. But if the services are in demand, the Department believes additional workers may be hired, as funding availability allows, to make up some of these hours, and productivity increases may offset some reduction in services. In addition, the Department expects some employers will adjust base wages downward to some degree so that even after paying the overtime premium, overall pay and hours of work for many employees will be relatively minimally impacted. Additionally, many nonprofits are noncovered enterprises because when determining enterprise coverage only revenue derived from business operations, not charitable activities, is included.

(f) Reduced Profits

Some commenters asserted that the rule would lead to decreased profits. *See e.g.,* Quad Cities Chamber of Commerce, ESEI, DT-Trak Consulting. The Department acknowledges that the increased employer costs and transfer payments as a result of this rule may reduce the profits of business firms, although (1) some firms may offset some of these costs and transfers by making payroll adjustments, and (2) some firms may mitigate their reduced profits due to these costs and transfers through increased prices. Because costs and transfers are, on average, small relative to payroll revenues, the Department does not expect this rulemaking to have a significant effect on profits.

(g) Hiring Costs

To the extent that firms respond to this rule by reducing overtime hours, they may do so by spreading hours to other workers, including current workers employed for fewer than 40 hours per week by that employer, current workers who remain exempt, and newly hired workers. If new workers are hired to absorb these transferred hours, then the associated hiring costs would be a cost of this rule. (However, new employees would likely only be hired if their wages, onboarding costs, and training costs are less than the cost of overtime pay for the newly nonexempt workers.) The Department does not know how many new employees would be hired and thus did not estimate this cost.

(h) Hours-Related Worker Effects

Some employer representatives highlighted the possibility that some workers might work more hours as a consequence of this rulemaking. For example, Construction Industry Roundtable commented that employers responding to the increased salary level might "require the remaining exempt employees to absorb some of the duties of the newly non-exempt employees—which would be viewed as an unfair burden by the remaining exempt employees who are at or near capacity already." *See also* SIGMA (providing similar statements).

The Department acknowledges that for some affected workers, if their employers respond to the rule by increasing their salary to keep their exemption status, the change may also be accompanied by an increase in assigned hours. Additionally, some employers might respond to this regulation by reducing the overtime hours of affected workers and transferring those hours to other workers who remain exempt. The Department believes that while some workers may see an

increase in hours, others may see their hours decline (discussed further in the Benefits section below).

(i) Wage Compression

Some commenters contended that the update to the salary threshold in this rule would lead to wage compression. For example, PPWO stated that the Department did not account for this potential cost, stating, "Where employees below the proposed salary minimum have their salaries raised to meet the new minimum, employees above the new minimum will likewise need to have their salaries raised to account for the relative value of the work being performed." *See also, e.g.,* Seyfarth Shaw.

However, as discussed in section VII.C.4.iii.f., the Department estimates that only 2.2 percent of affected workers will have their earnings increased to the updated salary level. Thus, in the overwhelming majority of cases wage compression concerns should not arise. The Department recognizes that there may be some cases in which employers that raise the pay of affected employees to the new salary level will also choose to increase the earnings of more highly paid employees to avoid wage compression, but the Department does not have data to estimate this impact.

4. Transfers

i. Overview

Transfer payments occur when income is redistributed from one party to another. The Department has quantified two transfers from employers to employees that will result from the rule: (1) transfers to ensure compliance with the FLSA minimum wage provision; and (2) transfers to ensure compliance with the FLSA overtime pay provision. Transfers in Year 1 due to the minimum wage provision were estimated to be $87.5 million. The increase in the HCE

compensation level does not affect minimum wage transfers because workers eligible for the HCE exemption earn well above the minimum wage. The Department estimates that transfers due to the applicability of the FLSA's overtime pay provision will be $1.4 billion: $1.2 billion from the increased standard salary level and $255.6 million from the increased HCE compensation level. Total Year 1 transfers are estimated at $1.5 billion (Table 10).

Table 10: Total Annual Change in Earnings for Affected EAP Workers by Provision, Year 1 (Millions)

Provision	Total	Standard Salary Level	HCE Compensation Level
Total	$1,509.2	$1,253.6	$255.6
Minimum wage only	$87.5	$87.5	--
Overtime pay only [a]	$1,421.7	$1,166.1	$255.6

Because the overtime premium depends on the employee's regular rate of pay, the estimates of minimum wage transfers and overtime transfers are linked. This can be considered a two-step approach. The Department first identified affected EAP workers with an implicit regular hourly wage lower than the minimum wage, and then calculated the wage increase necessary to reach the minimum wage. Then, the Department estimated overtime payments.

ii. Transfers Due to the Minimum Wage Provision

For this analysis, the hourly rate of pay was calculated as usual weekly earnings divided by usual weekly hours worked. To earn less than the Federal or most state minimum wages, this set of workers must work many hours per week. For example, a worker paid $684 per week must work 94.3 hours per week to earn less than the Federal minimum wage of $7.25 per hour ($684 ÷

$7.25 = 94.3).[366] The applicable minimum wage is the higher of the Federal minimum wage and the state minimum wage as of January 1, 2023. Most affected EAP workers already receive at least the minimum wage; only an estimated 0.5 percent (19,900 in total) earn an implicit hourly rate of pay less than the Federal minimum wage. The Department estimated transfers due to payment of the minimum wage by calculating the change in earnings if wages rose to the minimum wage for workers who become nonexempt.[367]

In response to an increase in the regular rate of pay to the minimum wage, employers may reduce the workers' hours. In theory, since the quantity of labor hours demanded is inversely related to wages, a higher mandated wage would, all things being equal, result in fewer hours of labor demanded. However, the weight of the empirical evidence finds that increases in the minimum wage that are similar in magnitude to what would be caused by this regulatory provision have caused little or no significant job loss.[368] Thus, in the case of this regulation, the Department believes that any disemployment effect due to the minimum wage provision will be negligible. This is partially due to the small number of workers affected by this provision.

---

[366] The Federal minimum wage has not increased since 2009. Workers in states with minimum wages higher than the Federal minimum wage could earn less than the state minimum wage working fewer hours.

[367] Because these workers' hourly wages will be set at the minimum wage after this rule, their employers will not be able to adjust their wages downward to offset part of the cost of paying the overtime pay premium (which will be discussed in the following section). Therefore, these workers will generally receive larger transfers attributed to the overtime pay provision than other workers.

[368] Wolfson, Paul J. and Belman, Dale, 15 Years of Research on U.S. Employment and the Minimum Wage (December 10, 2016). Tuck School of Business Working Paper No. 2705499. https://papers.ssrn.com/sol3/papers.cfm?abstract_id=2705499. Dube, Arindrajit, Impacts of Minimum Wages: Review of the International Evidence (November 2019). https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/844350/impacts_of_minimum_wages_review_of_the_international_evidence_Arindrajit_Dube_web.pdf.

According to the Wolfson and Belman (2016) meta-analysis cited above, the consensus range for labor demand elasticity was -0.05 to -0.12. However for Year 1 of this analysis, the Department estimated the potential disemployment effects (*i.e.*, the estimated reduction in hours) of the transfer attributed to the minimum wage by multiplying the percent change in the regular rate of pay by a labor demand elasticity of −0.2 (years 2 – 10 use a long run elasticity of −0.4).[369, 370] The Department chose this labor demand elasticity because it was used in the 2019 final rule and is consistent with the labor demand elasticity estimates used when estimating other transfers further below.

At the new standard salary level, the Department estimated that 19,900 affected EAP workers will, on average, see an hourly wage increase of $1.57, work 2.1 fewer hours per week and receive an increase in weekly earnings of $84.73 as a result of coverage by the minimum wage provisions (Table 11). The total change in weekly earnings due to the payment of the minimum wage was estimated to be $1.7 million per week ($84.73 × 19,900) or $87.5 million in Year 1.

Table 11: Minimum Wage Only: Mean Hourly Wages, Usual Weekly Hours and Weekly Earnings for Affected EAP Workers, Year 1

Time Period	Hourly Wage [a]	Usual Weekly Hours	Usual Weekly Earnings	Total Weekly Transfer (1,000s)
Before rule	$12.85	65.8	$827.66	--
After rule	$14.42	63.6	$912.39	--
Change	$1.57	-2.1	$84.73	$1,683

Note: Pooled data for 2021 – 2023 adjusted to reflect 2023.

[369] Labor demand elasticity is the percentage change in labor hours demanded in response to a one percent change in wages.

[370] This elasticity estimate represents a short run demand elasticity for general labor, and is based on the Department's analysis of Lichter, A., Peichl, A. & Siegloch, A. (2014). The Own-Wage Elasticity of Labor Demand: A Meta-Regression Analysis. IZA DP No. 7958.

[a] The applicable minimum wage is the higher of the Federal minimum wage and the state minimum wage.

iii. Transfers Due to the Overtime Pay Provision

(a) Introduction

The FLSA requires covered employers to pay an overtime premium to nonexempt covered workers who work in excess of 40 hours per week. For workers who become nonexempt, the rulemaking will result in a transfer of income to the affected workers, increasing the marginal cost of labor, which employers may try to offset by adjusting the wages and/or hours of affected workers. The size of the transfer will depend largely on how employers choose to respond to the updated salary levels. Employers may respond by: (1) paying overtime premiums to affected workers; (2) reducing overtime hours of affected workers and potentially transferring some of these hours to other workers; (3) reducing the regular rate of pay for affected workers working overtime (provided that the reduced rates still exceed the minimum wage); (4) increasing affected workers' salaries to the updated salary or compensation level to preserve their exempt status; or (5) using some combination of these responses. How employers will respond depends on many factors, including the relative costs of each of these alternatives. In turn, the relative costs of each of these alternatives are a function of workers' earnings and hours worked.

(b) Literature on Employer Adjustments

Two conceptual models are useful for thinking about how employers may respond to when certain employees become eligible for overtime: (1) the "fixed-wage" or "labor demand"

model, and (2) the "fixed-job" or "employment contract" model.[371] These models make different assumptions about the demand for overtime hours and the structure of the employment agreement, which result in different implications for predicting employer responses.

The fixed-wage model assumes that the standard hourly wage is independent of the statutory overtime premium. Under the fixed-wage model, a transition of workers from overtime exempt to overtime nonexempt would cause a reduction in overtime hours for affected workers, an increase in the prevalence of a 40-hour workweek among affected workers, and an increase in the earnings of affected workers who continue to work overtime.

In contrast, the fixed-job model assumes that the standard hourly wage is affected by the statutory overtime premium. Thus, employers can neutralize any transition of workers from overtime exempt to overtime nonexempt by reducing the standard hourly wage of affected workers so that their weekly earnings and hours worked are unchanged, except when minimum wage laws prevent employers from lowering the standard hourly wage below the minimum wage. Under the fixed-job model, a transition of workers from overtime exempt to overtime nonexempt would have different effects on minimum-wage workers and above-minimum-wage workers. Similar to the fixed-wage model, minimum-wage workers would experience a reduction in overtime hours, an increase in the prevalence of a 40-hour workweek at a given employer (though not necessarily overall), and an increase in earnings for the portion of minimum-wage workers who continue to work overtime for a given employer. Unlike the fixed-wage model, however, above-minimum-wage workers would experience no change.

---

[371] *See* Trejo, S.J. (1991). The Effects of Overtime Pay Regulation on Worker Compensation. American Economic Review, 81(4), 719–740, and Barkume, A. (2010). The Structure of Labor Costs with Overtime Work in U.S. Jobs. Industrial and Labor Relations Review, 64(1), 128-142.

The Department conducted a literature review to evaluate studies of how labor markets adjust to a change in the requirement to pay overtime. These studies are generally supportive of the fixed-job model of labor market adjustment, in that wages adjust to offset the requirement to pay an overtime premium as predicted by the fixed-job model, but do not adjust enough to completely offset the overtime premium as predicted by the model.

As in the 2016 and 2019 rules, the Department believes the two most important papers in this literature are the studies by Trejo (1991) and Barkume (2010). Analyzing the economic effects of the overtime pay provisions of the FLSA, Trejo (1991) found "the data analyzed here suggest the wage adjustments occur to mitigate the purely demand-driven effects predicted by the fixed-wage model, but these adjustments are not large enough to neutralize the overtime pay regulations completely." Trejo noted, "In accordance with the fixed job model, the overtime law appears to have a greater impact on minimum-wage workers." He also stated, "[T]he finding that overtime-pay coverage status systematically influences the hours-of-work distribution for nonminimum-wage workers is supportive of the fixed-wage model. No significant differences in weekly earnings were discovered between the covered and non-covered sectors, which is consistent with the fixed-job model." However, "overtime pay compliance is higher for union than for nonunion workers, a result that is more easily reconciled with the fixed wage model." Trejo's findings are supportive of the fixed-wage model whose adjustment is incomplete largely due to the minimum-wage requirement.[372]

[372] Trejo, S. J. (1991). The Effects of Overtime Pay Regulation on Worker Compensation. American Economic Review, 81(4), 719-740.

A second paper by Trejo (2003) took a different approach to testing the consistency of the fixed-wage adjustment models with overtime coverage and data on hours worked.[373] In this paper, he examined time-series data on employee hours by industry. After controlling for underlying trends in hours worked over 20 years, he found changes in overtime coverage had no impact on the prevalence of overtime hours worked. This result supports the fixed-job model. Unlike the 1991 paper, however, he did not examine impacts of overtime coverage on employees' weekly or hourly earnings, so this finding in support of the fixed-job model only analyzes one implication of the model.

Barkume (2010) built on the analytic method used in Trejo (1991).[374] However, Barkume observed that Trejo did not account for "quasi-fixed" employment costs (*e.g.*, benefits) that do not vary with hours worked, and therefore affect employers' decisions on overtime hours worked. After incorporating these quasi-fixed costs in the model, Barkume found results consistent with those of Trejo (1991): "though wage rates in otherwise similar jobs declined with greater overtime hours, they were not enough to prevent the FLSA overtime provisions from increasing labor costs." Barkume also determined that the 1991 model did not account for evidence that in the absence of regulation some employers may voluntarily pay workers some overtime premium to entice them to work longer hours, to compensate workers for unexpected changes in their schedules, or as a result of collective bargaining. Barkume found that how much

[373] Trejo, S. J. (2003). Does the Statutory Overtime Premium Discourage Long Workweeks? Industrial and Labor Relations Review, 56(3), 375-392.
[374] Barkume, A. (2010). The Structure of Labor Costs with Overtime Work in U.S. Jobs. Industrial and Labor Relations Review, 64(1), 128-142.

wages and hours worked adjusted in response to the overtime pay requirement depended on what overtime pay would be in absence of regulation.

In addition, Bell and Hart (2003) examined the standard hourly wage, average hourly earnings (including overtime), the overtime premium, and overtime hours worked in Britain.[375] Unlike the United States, Britain does not have national labor laws regulating overtime compensation. Bell and Hart found that after accounting for overtime, average hourly earnings are generally uniform in an industry because firms paying below-market level straight-time wages tend to pay above-market overtime premiums and firms paying above-market level straight-time wages tend to pay below-market overtime premiums. Bell and Hart concluded "this is consistent with a model in which workers and firms enter into an implicit contract that specifies total hours at a constant, market-determined, hourly wage rate. Their research is also consistent with studies showing that employers may pay overtime premiums either in the absence of a regulatory mandate (*e.g.*, Britain), or when the mandate exists but the requirements are not met (*e.g.*, United States).[376]

On balance, consistent with its 2016 and 2019 rulemakings, the Department finds strong support for the fixed-job model as the best approximation for the likely effects of a transition of above-minimum-wage workers from overtime exempt to overtime nonexempt and the fixed-wage model as the best approximation of the likely effects of a transition of minimum-wage workers from overtime exempt to overtime nonexempt. In addition, the studies suggest that

[375] Bell, D. N. F. and Hart, R. A. (2003). Wages, Hours, and Overtime Premia: Evidence from the British Labor Market, Industrial and Labor Relations Review, 56(3), 470-480.
[376] Hart, R. A. and Yue, M. (2000). Why Do Firms Pay an Overtime Premium? IZA Discussion Paper No. 163.

although observed wage adjustment patterns are consistent with the fixed-job model, this evidence also suggests that the actual wage adjustment might, especially in the short run, be less than 100 percent as predicted by the fixed-job model. Thus, the hybrid model used in this analysis may be described as an incomplete fixed-job adjustment model.

To determine the magnitude of the adjustment, the Department accounted for the following findings. Earlier research had demonstrated that in the absence of regulation some employers may voluntarily pay workers some overtime premium to entice them to work longer hours, to compensate workers for unexpected changes in their schedules, or as a result of collective bargaining.[377] Barkume (2010) found that the measured adjustment of wages and hours to overtime premium requirements depended on what overtime premium might be paid in absence of any requirement to do so. Thus, when Barkume assumed that workers would receive an average voluntary overtime pay premium of 28 percent in the absence of an overtime pay regulation, which is the average overtime premium that Bell and Hart (2003) found British employers paid in the absence of any overtime regulations, the straight-time hourly wage adjusted downward by 80 percent of the amount that would occur with the fixed-job model.[378] When Barkume assumed workers would receive no voluntary overtime pay premium in the absence of an overtime pay regulation, the results were more consistent with Trejo's (1991) findings that the adjustment was a smaller percentage. The Department modeled an adjustment

[377] Barzel, Y. (1973). The Determination of Daily Hours and Wages. The Quarterly Journal of Economics, 87(2), 220–238, demonstrated that modest fluctuations in labor demand could justify substantial overtime premiums in the employment contract model. Hart, R. A. and Yue, M. (2000). Why Do Firms Pay an Overtime Premium? IZA Discussion Paper No. 163, showed that establishing an overtime premium in an employment contract can reduce inefficiencies.
[378] Barkume, A. (2010). The Structure of Labor Costs with Overtime Work in U.S. Jobs. Industrial and Labor Relations Review, 64(1), 128-142.

process between these two findings. Although it seemed reasonable that some premium was paid for overtime in the absence of regulation, Barkume's assumption of a 28 percent initial overtime premium is likely too high for the salaried workers potentially affected by a change in the salary and compensation level requirements for the EAP exemptions because this assumption is based on a study of workers in Britain. British workers were likely paid a larger voluntary overtime premium than American workers because Britain did not have a required overtime pay regulation and so collective bargaining played a larger role in implementing overtime pay.[379] In the sections that follow, the Department uses a method between these two papers to model transfers.

(c) Comments Regarding Transfers

Many commenters representing employer interests indicated that employers would respond to the changes proposed in the NPRM by making a variety of adjustments to wages, hours worked, or both. Some commenters responded with results from surveys of their constituents. Although these surveys may be helpful as background information, they generally cannot be used in a quantitative analysis due to issues such as insufficient or uncertain sample sizes, missing sampling methodology, and missing magnitudes. For example, NAHB referenced results from a survey of an unknown number of its members, asserting that 38 percent of respondents indicated they would respond to the proposed increase in the salary level by "[m]inimiz[ing] overtime hours." The Department agrees that firms may reduce the hours of some workers and has included this in the quantitative analysis below; however, the modeling

[379] Bell, D. N. F. and Hart, R. A. (2003). Wages, Hours, and Overtime Premia: Evidence from the British Labor Market, Industrial and Labor Relations Review, 56(3), 470-480.

question is to what degree employers will adjust hours.[380] As discussed below, the Department estimates that employers will reduce hours for Type 2B and Type 3 workers, which together make up 21% of all affected workers. The Department's model is based on worker-specific adjustments and does not assume that a firm would respond the same way for all affected workers that they employ. Moreover, such surveys were often sector-specific, making it difficult to extrapolate economy-wide trends, because the distribution of affected workers varies across sectors. Also, these surveys were often based not on actual economic responses, but rather on expressions of intentions. *See, e.g.*, AHLA; ANCOR; NAIS and NBOA; NDA.

Despite the inability to incorporate these survey results into the analysis, select results are presented here. For instance, according to AHLA, of the members it surveyed, "70% anticipat[ed] reclassifying workers, 60% anticipat[ed] reducing hours and career development opportunities to reduce potential overtime costs, and 51% anticipat[ed] position consolidation." ANCOR found that "approximately 61 percent of [its constituents] would employ a mitigation strategy of converting currently exempt salaried workers to hourly workers," "[f]ifty-six percent . . . would increase the salary of full-time exempt workers to meet the projected threshold," "49 percent . . . would prohibit or significantly restrict" permitted overtime, and "33 percent indicated the necessity of reducing salaried full-time employees." NAIS and NBOA stated that 13 percent of schools that responded to its survey said they would "raise salaries of those exempt

[380] Illustrating the limitations of commenter-provided surveys for this quantitative analysis, the responses to NAHB's survey have inconsistencies that make them hard to interpret. For example, concerning the 2019 rule, NAHB reported that 94 percent of respondents stated that the rule's increase in the salary level to $35,568 did not affect anyone on their payroll. Nevertheless, of the same respondents, 20% stated that they responded to the 2019 rule by minimizing overtime hours and 18% stated that they raised salaries above the threshold.

employees who do not meet the new threshold," 27 percent said they would "convert employees to non-exempt and limit hours where possible," 11 percent said they would "convert employees to non-exempt and pay overtime if hours worked are over 40 in a week" and "47% of schools said they will enact some combination of the available options." NAHB stated that, if the proposed salary threshold were implemented, 38 percent of respondents reported they would "[m]inimize overtime hours," as noted above; 24 percent would "[r]aise salaries above the threshold"; and 9 percent would "[r]educe salaries to compensate for overtime" (among other changes). And NDA stated that 66 percent of respondents "said they would have to reclassify exempt employees as hourly employees and restructure jobs if DOL raised the minimum salary threshold" as proposed in the NPRM.

Regarding the transfer calculations in the NPRM, SBA Advocacy expressed concern about the Department's estimates that affected small business establishments would have, on average, $360 to $2,683 in additional payroll costs in the first year of the proposed rule. SBA Advocacy stated that "an Arkansas restaurant with four locations stated it would cost almost $200,000 to increase manager salaries to make them compliant," and that "small amusement businesses reported estimated salary increases for their businesses" ranging from $57,000 to $250,000. It also provided hypothetical examples of potential salary increases that restaurants in two states would need to make to comply with the proposed rule based on various assumptions, including different salaries and amounts of overtime performed. These anecdotal reports and hypothetical examples do not have any information on the actual amount of overtime work being performed by newly nonexempt workers at these businesses. The Department expects that businesses that would be faced with large increases in payroll costs if they were to increase

salaries to the new threshold would instead find other responses more economically beneficial, such as limiting the number of overtime hours worked by workers who become nonexempt or paying such workers the overtime premium for hours in excess of 40 per week. Furthermore, this comment does not explain what methodological approach the Department should use to estimate transfers; what error(s), if any, the Department made in its transfer estimate in its NPRM; or how much the Department underestimated such transfers.

Some commenters indicated that employers may follow the fixed-job model rather than the incomplete fixed-job model used by the Department in the NPRM. *See, e.g.,* AFPI; Americans for Prosperity. AFPI, for instance, stated that "[r]esearch shows employers primarily respond to expanded overtime eligibility by reducing base earnings to reflect expected overtime—leaving total earnings unchanged." Americans for Prosperity similarly asserted that "[o]ver time, the natural response of business enterprises of all types to the higher wage costs occasioned by the proposed rule will be an adjustment in base pay and fringe benefits lower so that total compensation (base pay, benefits, overtime) does not rise."[381]

The Oxford Economics report included with NRF's comment pointed to a study by Quach (2022),[382] which analyzed the effects of the rescinded 2016 rule and the 2019 rule, along

[381] In support, AFPI and Americans for Prosperity both cited to reports regarding the NPRM for the 2016 rule. *See* James Sherk, *Salaried Overtime Requirements: Employers Will Offset Them with Lower Pay,* Heritage Foundation Backgrounder No. 3031, July 2, 2015. https://thf_media.s3.amazonaws.com/2015/pdf/BG3031.pdf (cited by AFPI); Donald J. with the impact of state-level increases to the overtime exemption threshold. According to Oxford Economics, "Quach finds evidence that overtime coverage decreases employment and increases earnings polarization" and "strong evidence of employee reclassifications from salaried to hourly status[.]" The Department notes that the revised 2024 version of the working paper did not find that increasing overtime exemption thresholds decreases employment. In fact, when summarizing his findings, he says, "I estimate that expansions in overtime coverage actually have little effect on employment." He also notes, "while the DOL accurately predicted that average weekly earnings would rise, they calculated an income effect of only 0.7%, whereas I show that earnings increased by nearly twice that amount for salaried workers." While the Department also reviewed the 2022 study, as discussed further below, it has not incorporated this study into its analysis as it has multiple limitations, including a reliance on a non-representative selection of employers, which makes it inappropriate as a model of aggregate effects across the economy. The Oxford Economics report also claimed that the Department's analysis in the NPRM demonstrated "a tendency to assume that which workers are paid on a salaried basis is determined by an exogenous occupational structure and to ignore the role that the DOL's overtime regulations themselves play in determining this."

The Department's review of the literature cited above supports a result between the fixed-job model and the fixed-wage model and thus the results were modeled accordingly. Specifically, the Department believes the incomplete fixed-job model is most appropriate and consistent with

---

The Department believes that Oxford Economics was citing to the 2022 version of the paper, which is Quach, S. (2022). The Labor Market Effects of Expanding Overtime Coverage. https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3608506.

the literature. Therefore, the analysis has not been changed. The Department further notes that its estimates of transfers are informed by its projection that employers will respond to the final rule in many ways. If, for example, an employer simply pays each affected employee the overtime premium for each hour worked in excess of 40 hours per week, without making any adjustments to wages, hours, or duties, such an approach would maximize transfers from employers to employees. However, as discussed above, the Department believes that employers will respond to the final rule by adjusting wages, hours, and duties to minimize the cost of the rule. Accordingly, the actual amount of transfers will fall well short of the transfers that would result if employers simply paid each affected employee overtime premiums without adjusting wages, hours, or duties.

(d) Identifying Types of Affected Workers

The Department identified four types of workers whose work characteristics affect how it modeled employers' responses to the changes in both the standard salary level and HCE compensation level:

- Type 1: Workers who do not work overtime.
- Type 2: Workers who do not regularly work overtime but occasionally work overtime.
- Type 3: Workers who regularly work overtime and become overtime eligible (nonexempt).
- Type 4: Workers who regularly work overtime and remain exempt, because it is less expensive for the employer to pay the updated salary level than to pay overtime and incur additional managerial costs.

The Department began by identifying the number of workers in each type. After modeling employer adjustments, it estimated transfer payments. Type 3 and Type 4 workers were identified as those who regularly work overtime (CPS variable PEHRUSL1 greater than 40). To distinguish Type 3 workers from Type 4 workers, the Department first estimated each worker's weekly earnings if they became nonexempt, to which it added weekly managerial costs for each affected worker of $14.47 ($86.82 per hour × (10 minutes ÷ 60 minutes)).[383] Then, the Department identified as Type 4 those workers whose expected nonexempt earnings plus weekly managerial costs exceeds the updated standard salary level, and, conversely, as Type 3 those whose expected nonexempt earnings plus weekly managerial costs are less than the new standard salary. The Department assumed that firms will include incremental managerial costs in their determination of whether to treat an affected employee as a Type 3 or Type 4 worker because those costs are only incurred if the employee is a Type 3 worker.

Identifying Type 2 workers involved two steps. First, using CPS MORG data, the Department identified those who do not usually work overtime but did work overtime in the survey week (the week referred to in the CPS questionnaire, variable PEHRACT1 greater than 40). Next, the Department supplemented the CPS data with data from the Survey of Income and Program Participation (SIPP) to look at likelihood of working some overtime during the year. Based on 2021 data, the most recent available, the Department found that 31.3 percent of non-hourly workers worked overtime at some point in a year. Therefore, the Department classified a share of workers who reported they do not usually work overtime, and did not work overtime in the reference week, as Type 2 workers such that a total of approximately 31.3 percent of affected

[383] *See* section VII.C.3.iv (managerial costs).

workers were Type 2, 3, or 4. Type 2 workers are subdivided into Types 2A and 2B later in the analysis (Table 12).

Table 12: Types of Affected Workers

Type of Worker	Percent of Total
Type 1	69%
Type 2A	8%
Type 2B	8%
Type 3	13%
Type 4	2%

Note: Pooled CPS data for 2021-2023 adjusted to reflect 2023.
*Type 1: Workers who do not work overtime and gain overtime protection.
*Type 2: Workers who work occasional overtime and gain overtime protection.
- Type 2A: Those who work unexpected overtime hours.
- Type 2B: Those who work expected overtime.

*Type 3: Workers who work regular overtime and gain overtime protection.
*Type 4: Workers who work regular overtime and remain exempt (*i.e.*, earnings increase to the updated salary or compensation level).

(e) Modeling Changes in Wages and Hours

The incomplete fixed-job model predicts that employers will adjust wages of regular overtime workers but not to the full extent indicated by the fixed-job model, and thus some employees will receive a small increase in weekly earnings due to overtime pay coverage. The Department used the average of two estimates of the incomplete fixed-job model adjustments to model impacts of this rule:[384]

[384] Both studies considered a population that included hourly workers. Evidence is not available on how the adjustment towards the fixed-job model differs between salaried and hourly workers. The fixed-job model may be more likely to hold for salaried workers than for hourly workers since salaried workers directly observe their weekly total earnings, not their implicit equivalent hourly wage. Thus, applying the partial adjustment to the fixed-job model as estimated by these studies may overestimate the transfers from employers to salaried workers.

- Trejo's (1991) estimate that the overtime-induced wage change is 40 percent of the adjustment toward the amount predicted by the fixed-job model, assuming an initial zero overtime pay premium, and
- Barkume's (2010) estimate that the wage change is 80 percent of the predicted adjustment assuming an initial 28 percent overtime pay premium.

This is approximately equivalent to assuming that salaried overtime workers implicitly receive the equivalent of a 14 percent overtime premium in the absence of regulation (the midpoint between 0 and 28 percent).

Modeling changes in hourly wages, hours, and earnings for Type 1 and Type 4 workers was relatively straightforward. Type 1 affected EAP workers will become overtime-eligible, but because they do not work overtime, they will see no change in their wages, hours, or weekly earnings. Type 4 workers will remain exempt because their earnings will be raised to at least the updated EAP level (either the standard salary level or HCE compensation level). These workers' earnings will increase by the difference between their current earnings and the amount necessary to satisfy the new salary or compensation level. It is possible employers will increase these workers' hours in response to paying them a higher salary, but the Department did not have enough information to model this potential change.[385]

Modeling changes in wages, hours, and earnings for Type 2 and Type 3 workers was more complex. The Department distinguished those who regularly work overtime (Type 3

[385] Cherry, Monica, "Are Salaried Workers Compensated for Overtime Hours?" Journal of Labor Research 25(3): 485–494, September 2004, found that exempt full-time salaried employees earn more when they work more hours, but her results do not lend themselves to the quantification of the effect on hours of an increase in earnings.

workers) from those who occasionally work overtime (Type 2 workers) because employer adjustment to the rule may differ accordingly. Employers are more likely to adjust hours worked and wages for regular overtime workers because their hours are predictable. Conversely, in response to a transient, perhaps unpredicted, shift in market demand for the good or service such employers provide, employers are more likely to pay for occasional overtime rather than adjust hours worked and pay.

The Department treated Type 2 affected workers in two ways due to the uncertainty of the nature of these occasional overtime hours. The Department assumed that 50 percent of these occasional overtime workers worked unexpected overtime hours (Type 2A) and the other 50 percent worked expected overtime (Type 2B). Workers were randomly assigned to these two groups. Workers with expected occasional overtime hours were treated like Type 3 affected workers (incomplete fixed-job model adjustments). Workers with unexpected occasional overtime hours were assumed to receive a 50 percent pay premium for the overtime hours worked and receive no change in base wage or hours (full overtime premium model).[386] When modeling Type 2 workers' hour and wage adjustments, the Department treated those identified as Type 2 using the CPS data as representative of all Type 2 workers.[387] The Department estimated employer adjustments and transfers assuming that the patterns observed in the CPS reference

[386] The Department uses the term "full overtime premium" to describe the adjustment process as modeled. The full overtime premium model is a special case of the general fixed-wage model in that the Department assumes the demand for labor under these circumstances is completely inelastic. That is, employers make no changes to employees' hours in response to these temporary, unanticipated changes in demand.

[387] As explained in the previous section, to estimate the population of Type 2 workers, the Department supplemented workers who report working overtime in the CPS reference week with some workers who do not work overtime in the reference week to reflect the fact that different workers work occasional overtime in different weeks.

week are representative of an average week in the year. Thus, the Department assumes total transfers for the year are equal to 52 times the transfers estimated for a representative week for which the Department has CPS data. However, these transfers are spread over a larger group including those who occasionally work overtime but did not do so in the CPS reference week.[388]

Since employers will pay more for the same number of labor hours, for Type 2 and Type 3 EAP workers, the quantity of labor hours demanded by employers will decrease. The reduction in hours is calculated using the elasticity of labor demand with respect to wages. The Department used a short-term demand elasticity of −0.20 to estimate the percentage decrease in hours worked in Year 1 and a long-term elasticity of −0.4 to estimate the percentage decrease in hours worked in Years 2–10. These elasticity estimates are based on the Department's analysis of Lichter et al. (2014).[389, 390] Brown and Hamermesh (2019) estimated the elasticity of overtime hours for EAP-exempt workers.[391] This estimate is based on a difference-in-differences in hours for two groups

[388] If a different week was chosen as the survey week, then some of these workers would not have worked overtime. However, because the data are representative of both the population and all twelve months in a year, the Department believes the share of Type 2 workers identified in the CPS data in the given week is representative of an average week in the year.

[389] Lichter, A., Peichl, A. & Siegloch, A. (2014). The Own-Wage Elasticity of Labor Demand: A Meta-Regression Analysis. IZA DP No. 7958.

[390] Some researchers have estimated larger impacts on the number of overtime hours worked. For example, Hamermesh and Trejo (2000) conclude the price elasticity of demand for overtime hours is at least -0.5. The Department decided to use a general measure of elasticity applied to the average change in wages since the increase in the overtime wage is somewhat offset by a decrease in the non-overtime wage as indicated in the fixed-job model.
Hamermesh, D. and S. Trejo. (2000)). The Demand for Hours of Labor: Direct Evidence from California. The Review of Economics and Statistics, 82(1), 38–47.

[391] Brown, Charles C., and Daniel S. Hamermesh. (2019). "Wages and Hours Laws: What Do We Know? What Can Be Done?" RSF: The Russell Sage Foundation Journal of the Social Sciences 5(5): 68–87. DOI: 10.7758/RSF.2019.5.5.04.

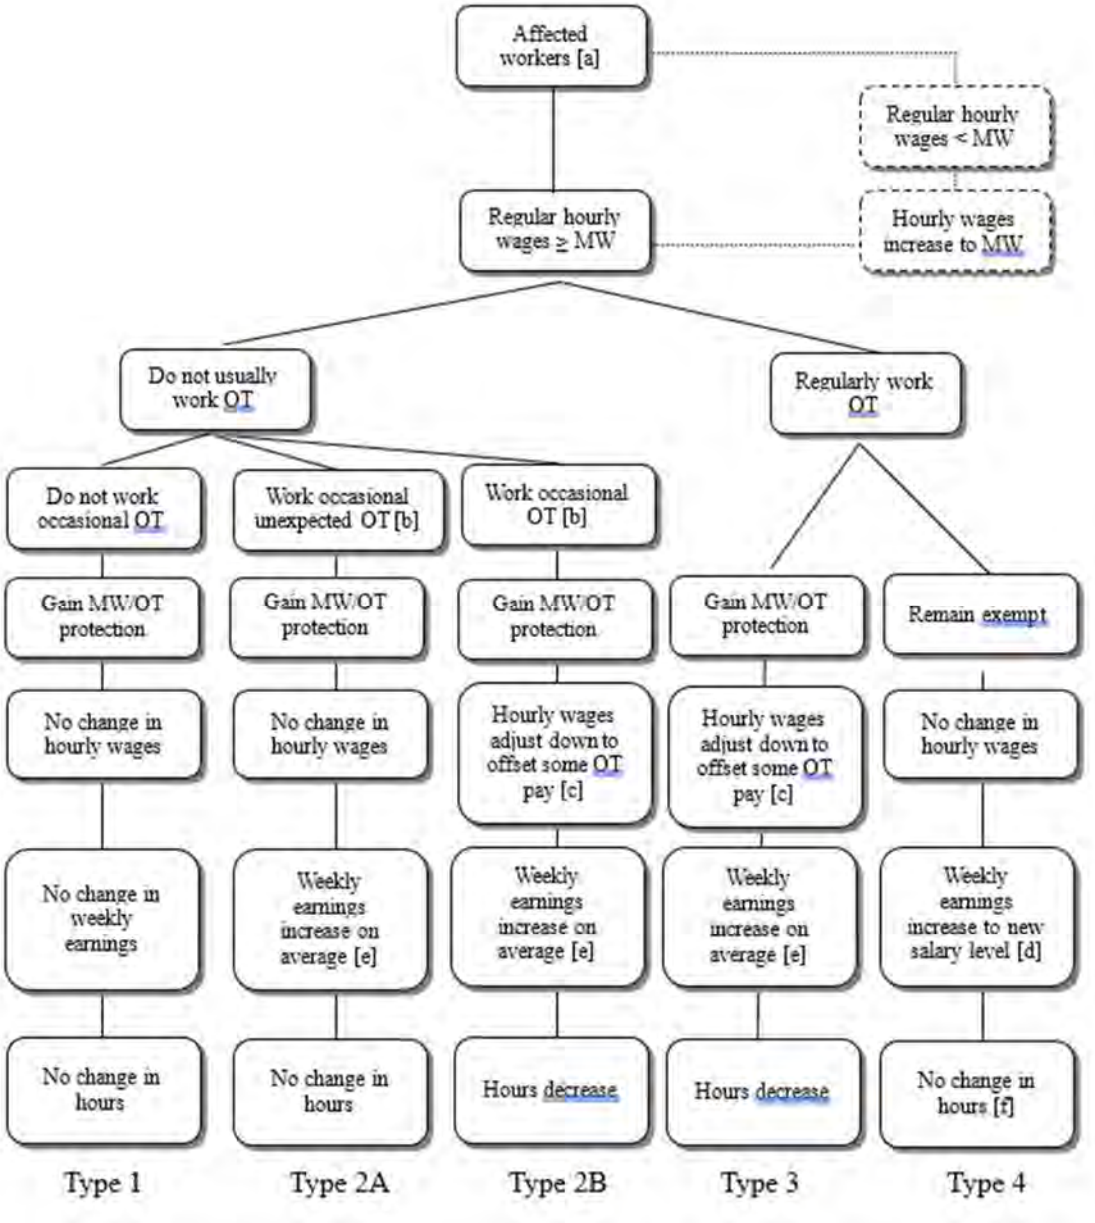
of workers between two time periods. However, some groups of workers are incorrectly defined, so the Department has not used these estimates.[392]

For Type 3 affected workers, and the 50 percent of Type 2 affected workers who worked expected overtime, the Department estimated adjusted total hours worked after making wage adjustments using the incomplete fixed-job model. To estimate adjusted hours worked, the Department set the percent change in total hours worked equal to the percent change in average wages multiplied by the wage elasticity of labor demand.[393] Figure 4 is a flow chart summarizing the four types of affected EAP workers. Also shown are the effects on exempt status, weekly earnings, and hours worked for each type of affected worker.

[392] For example, the authors defined the "non-exempt 1987-1989" group as workers earning above $223 but below $455 during this period. Because the salary level for the long test was $155 or $170 and was $250 for the short test, *see* section VII.A.1 (Table 1), some of these workers would be exempt.

[393] In this equation, the only unknown is adjusted total hours worked. Since adjusted total hours worked is in the denominator of the left side of the equation and is also in the numerator of the right side of the equation, solving for adjusted total hours worked requires solving a quadratic equation.

Figure 4: Flow Chart of the Rule's Effect on Earnings and Hours Worked



[a] Those who are exempt under the current EAP exemptions and will gain minimum wage and overtime protection or receive a raise to the increased salary or compensation level.
[b] The Department used two methods to identify occasional overtime workers. The first includes workers who report they usually work 40 hours or fewer per week (identified with variable PEHRUSL1 in CPS MORG), but in the reference week worked more than 40 hours (variable PEHRACT1 in CPS MORG). The second includes reclassifying some additional workers who usually work 40 hours or fewer per week, and in the reference week worked 40

hours or fewer, to match the proportion of workers measured in other data sets who work overtime at any point in the year.
[c] The amount wages are adjusted downwards depends on whether the fixed-job model or the fixed-wage model holds. The Department's primary method uses a combination of the two. Employers reduce the regular hourly wage rate somewhat in response to overtime pay requirements, but the wage is not reduced enough to keep total compensation constant.
[d] Based on hourly wage and weekly hours it is more cost efficient for the employer to increase the worker's weekly salary to the updated salary level than to pay overtime pay.
[e] On average, the Department's modeling of regulatory effects yields a result in which employees' overall weekly earnings will increase despite a small decrease in average hours worked. In some limited cases, employers might decrease employees' hours enough to cause those employees' weekly earnings to decrease.
[f] The Department assumed hours would not change; however, it is possible employers will increase these workers' hours in response to paying them a higher salary or to avoid paying overtime premiums to newly nonexempt coworkers.

(f) Estimated Number of and Effects on Affected EAP Workers

The Department estimated the rule will affect 4.3 million workers (Table 13), of which 3.0 million are Type 1 workers (68.7 percent of all affected EAP workers), 704,000 were estimated to be Type 2 workers (16.2 percent), 558,800 were Type 3 workers (12.9 percent), and 94,100 were estimated to be Type 4 workers (2.2 percent).

Table 13: Affected EAP Workers by Type (1,000s), Year 1

EAP Test	Total	No Overtime (T1)	Occasional Overtime (T2)	Regular Overtime	
				Newly Nonexempt (T3)	Remain Exempt (T4)
Standard salary level	4,044.6	2,778.7	691.3	486.7	87.9
HCE compensation level	292.9	201.4	13.2	72.1	6.2
Total	4,337.5	2,980.2	704.4	558.8	94.1

Note: Pooled CPS data for 2021 – 2023 adjusted to reflect 2023.
*Type 1: Workers who do not work overtime and gain overtime protection.
*Type 2: Workers who work occasional overtime and gain overtime protection.
*Type 3: Workers who work regular overtime and gain overtime protection.
*Type 4: Workers who work regular overtime and remain exempt (*i.e.*, earnings increase to the updated salary level).

The rule will affect some affected workers' hourly wages, hours, and weekly earnings. Predicted changes in implicit wage rates are outlined in Table 14, changes in hours in Table 15, and changes in weekly earnings in Table 16. How these will change depends on the type of worker, but on average the Department projects that weekly earnings will be unchanged or increase while hours worked will be unchanged or decrease.

Type 1 workers will have no change in wages, hours, or earnings due to the overtime pay provision because these workers do not work overtime.[394]

For Type 2A workers, the Department assumed employers will be unable to adjust the hours or regular rate of pay for these occasional overtime workers whose overtime is irregularly scheduled and unpredictable. These workers will receive a 50 percent premium on their regular hourly wage for each hour worked in excess of 40 hours per week, and so average weekly earnings would increase.[395]

For Type 3 workers and Type 2B workers (the 50 percent of Type 2 workers who regularly work occasional overtime, an estimated 969,100 workers), the Department used the incomplete fixed-job model to estimate changes in the regular rate of pay. These workers will see a decrease in their average regular hourly wage and a small decrease in hours. However, because

[394] It is possible that these workers may experience an increase in hours and weekly earnings because of transfers of hours from other newly nonexempt workers who do usually work overtime. Due to the high level of uncertainty in employers' responses regarding the transfer of hours, the Department did not have credible evidence to support an estimation of the number of hours transferred to other workers.

[395] Type 2 workers will not see increases in regular earnings to the new salary or compensation levels (as Type 4 workers do) even if their new earnings in this week exceed those new levels. This is because the estimated new earnings only reflect their earnings in those weeks when overtime is worked; their earnings in typical weeks when they do not work overtime do not exceed the salary or compensation level.

these workers will receive a 50 percent premium on their regular hourly wage for each hour worked in excess of 40 hours per week, their average weekly earnings will increase. The reduction in hours is relatively small and is due to a decrease in labor demand from the increase in the average hourly wage as predicted by the incomplete fixed-job model (Table 15).

Type 4 workers' implicit hourly rates of pay and weekly earnings will increase to meet the updated standard salary level or HCE annual compensation level. Type 4 workers' hours may increase to offset the additional earnings, but due to lack of data, the Department assumed hours would not change.

Table 14: Average Regular Rate of Pay by Type of Affected EAP Worker, Year 1

Time Period	Total	No Overtime (T1)	Occasional Overtime (T2)	Regular Overtime

Note: Pooled CPS data for 2021 – 2023 adjusted to reflect 2023.
[a] The mean of the hourly wage multiplied by the mean of the hours does not necessarily equal the mean of the weekly earnings because the product of two averages is not necessarily equal to the average of the product.

*Type 1: Workers who do not work overtime and gain overtime protection.
*Type 2: Workers who work occasional overtime and gain overtime protection.
*Type 3: Workers who work regular overtime and gain overtime protection.
*Type 4: Workers who work regular overtime and remain exempt (*i.e.*, earnings increase to the updated salary level).

At the new standard salary level, the average weekly earnings of affected workers will increase $5.96 (0.6 percent), from $947.71 to $953.67. Multiplying the average change of $5.96 by the 4.0 million EAP workers affected by the combination of the initial update and the subsequent application of the new standard salary level and 52 weeks equals an increase in earnings of $1.3 billion in the first year. For workers affected by the change in the HCE compensation level, average weekly earnings will increase by $16.79. When multiplied by 292,900 affected workers and 52 weeks, the national increase will be $255.6 million in the first year. Thus, total Year 1 transfer payments attributable to this rule will equal $1.5 billion.

The Department is only aware of one paper that modeled the impacts of the 2019 rule's increases in the salary and compensation levels. Quach (2024)[396] used administrative payroll data from May 2008 to July 2021 to estimate the impacts of the rescinded 2016 rule and the 2019 rule on employment, earnings, and salary status.[397] The paper has not been published in a peer-reviewed journal and has significant limitations, including that its use of administrative payroll

[397] The Department notes that the effective date of the 2019 final rule was in January 2020, so using data from this month may not fully capture the effects of the 2019 rule.

data from ADP means that the findings are not representative as ADP customers do not represent a random sample of the workplace.

In terms of its findings, concerning employment, the author found that expansions in overtime coverage actually had little effect on employment. He also found that average weekly earnings rose by about 1.4% for salaried workers, and found no evidence that firms reduced base pays in response to changes in the overtime threshold. Concerning salary status, he found that approximately 2.6% of affected workers are re-classified from salaried to hourly status. The Department has not adjusted its methodology in response to this paper given the concerns listed above.

Additionally, it can be informative to look at papers which predict the impact of rulemakings. For example, Rohwedder and Wenger (2015) analyzed the effects of increasing the standard salary level from the then baseline level of $455 per week.[398] They compared hourly and salaried workers in the CPS using quantile treatment effects. This methodology estimates the effect of a worker becoming nonexempt by comparing similar workers who are hourly and salaried. They found no statistically significant change in hours or wages on average. However, their point estimates, averaged across all affected workers, show small increases in earnings and decreases in hours, similar to the Department's analysis. For example, using a salary level of $750, they estimated weekly earnings may increase between $2 and $22 and weekly hours may decrease by approximately 0.4 hours.

iv. Potential Transfers Not Quantified

This rule could lead to additional transfers that the Department is unable to quantify. For example, in response to this rule, some employers may decrease the hours of newly nonexempt workers who usually work overtime. These hours may be transferred to other workers, such as non-overtime workers and exempt workers who are not affected by the rule. Depending on how these hours are transferred, it could lead to either a reduction or increase in earnings for other workers. Employers may also offset increased labor costs by reducing bonuses or benefits instead of reducing base wages or hours worked. If this occurs, an employee's overall compensation may not be affected.

The rule could also reduce reliance on social assistance programs for some workers who may receive a transfer of income resulting from this rule. For low-income workers, this transfer could result in a reduced need for social assistance programs such as Medicaid, the Earned Income Tax Credit (EITC), the Supplemental Nutrition Assistance Program (SNAP), the Temporary Assistance for Needy Families (TANF) program, the Special Supplemental Nutrition Program for Women, Infants, and Children (WIC), and free or reduced-priced school meals. A worker earning the current salary level of $684 per week earns $35,568 annually, which is roughly equivalent to the Federal poverty level for a family of five and makes the family eligible for multiple social assistance programs.[399] Thus, transferring income to these workers could reduce eligibility for government social assistance programs. This could lead to an increase or a reduction in a family's total resources, depending on the relative size of the increase in earnings

[399] Department of Health and Human Services (2023). Federal Poverty Level. https://www.healthcare.gov/glossary/Federal-poverty-level-fpl/.

and the value of the decrease in assistance. Regardless, reduced eligibility for social assistance programs would reduce government expenditures at the Federal, State, and/or local level.

5. Benefits and Cost Savings

The Department expects that this rule could lead to multiple benefits, which were discussed qualitatively in the NPRM. These potential benefits and commenter feedback about them are addressed below.

The revised salary level will strengthen the overtime protection of salaried, white-collar employees who do not pass the standard duties test and who earn between the current salary standard salary level and the new standard salary level. These employees are nonexempt but, because they satisfy the current salary level threshold, employers must apply the duties test to determine their exemption status. At the new salary level, the number of white-collar salaried employees who earn between the current and the new salary levels and fail the duties test would decrease by 4.7 million. Because these nonexempt employees no longer meet the salary level, employers will be able to determine their exemption status based solely on the salary test. If any of these employers previously spent significant time evaluating the duties of these workers to determine exemption status, the change to determining exemption status based on the salary level could lead to some cost savings. Also, as many commenters observed, the new salary level will strengthen the right to overtime pay for nonexempt workers who earn between the current and new standard salary levels. *See, e.g.*, Coalition of State AGs; Coalition of Gender Justice and Civil Rights Organizations; Washington Dept. of Labor & Industries. Similarly, to the extent that some of these 4.7 million employees are currently misclassified as exempt, the new salary level

will make it more clear for workers and employers that such workers are not EAP exempt.[400] Thus, this aspect of the rule is responsive to commenter concerns that the current salary level is too low to prevent the misclassification of salaried employees who fail the duties test. *See e.g.*, AFSCME*;* EPI; NELP; Sanford Heisler Sharp.

Commenters disagreed over whether the proposed rule would improve or hinder the productivity of affected workers. Some commenters, such as the AFL-CIO, agreed with the analysis provided in the NPRM that this rulemaking could increase productivity "by reducing turnover, incentivizing workers to work harder, and increasing marginal productivity as fewer hours are worked." In contrast, a number of employer representatives asserted that the rule would hinder worker productivity. For example, PPWO asserted that affected workers who become nonexempt "will now need to account for their time in a way they have not had to previously, and in a way that their exempt co-workers do not." *See also, e.g.*, AFPI.

The Department continues to believe that the rule could potentially lead to increased worker productivity if workers receive an increase in compensation. Increased productivity could occur through numerous channels, such as employee retention and level of effort. A strand

[400] *See* Rohwedder, S. and Wenger, J.B. (2015). The Fair Labor Standards Act: Worker Misclassification and the Hours and Earnings Effects of Expanded Coverage. RAND Labor and Population. RAND conducted a survey to identify the number of workers who may have failed the standards duties test and yet are classified as EAP exempt. The survey, a special module to the American Life Panel, asked respondents: (1) their hours worked, (2) whether they are paid on an hourly or salary basis, (3) their typical earnings, (4) whether they perform certain job responsibilities that are treated as proxies for whether they would justify exempt status, and (5) whether they receive any overtime pay. Using these data, Rohwedder and Wenger found that "11.5 percent of salaried workers were classified as exempt by their employer although they did not meet the criteria for being so." This survey was conducted when the salary level was $455. The exact percentage may no longer be applicable, but the concern that in some instances the duties test may be misapplied remains.

of economic research, commonly referred to as "efficiency wage" theory, considers how an increase in compensation may be met with greater productivity.[401] Efficiency wages may elicit greater effort on the part of workers, making them more effective on the job.[402] Other research on increases in the minimum wage have demonstrated a positive relationship between increased compensation and worker productivity. For example, Kim and Jang (2019) showed that wage raises increase productivity for up to two years after the wage increase.[403] They found that in both full and limited-service restaurants productivity increased due to improved worker morale after a wage increase. Additionally, research demonstrates a correlation between increased earnings and reduced employee turnover.[404, 405] Reducing turnover, in turn, may increase productivity because longer-tenured employees have more firm-specific skills and knowledge and thus could be more productive and require less supervision and training.[406] Reduced turnover could also reduce firms' hiring and training costs. As a result, even though marginal

labor costs rise, they may rise by less than the amount of the wage change because the higher wages may be offset by increased productivity and reduced hiring costs for firms.

This rulemaking could also result in an increase in personal time for some affected workers. Worker advocacy organizations and individual commenters asserted that employees would generally enjoy more personal time as a consequence of the rule. For example, SEIU commented that "[w]hen workers are exempted from overtime pay protections, it disincentivizes employers from being efficient with [employees'] time." Due to the increase in marginal cost for overtime hours for newly overtime-eligible workers, employers could demand fewer hours from some of the workers affected by this rulemaking. If these workers' pay remains the same, they could benefit from increased personal time and improved work-life balance. Empirical evidence shows that workers in the United States typically work more than workers in other comparatively wealthy countries.[407] Workers in executive, administrative, and professional occupations tend to work longer hours.[408] They also have the highest percentage of workers who would prefer to work fewer hours compared to other occupational categories.[409] Therefore, the Department believes that this rule may result in reduced time spent working overtime for a group of workers, some of whom may prefer such an outcome.

6. Sensitivity Analysis of Transfer Payments

Because the Department cannot predict employers' precise reactions to the rule, the Department calculated bounds on the size of the estimated transfers from employers to workers, relative to the primary estimates in this RIA. For the upper bound, the Department assumed that the full overtime premium model is more likely to occur than in the primary model. For the lower bound, the Department assumed that the complete fixed-job model is more likely to occur than in the primary model. Based on these assumptions, estimated transfers may range from $631.1 million to $2.9 billion, with the primary estimate equal to $1.5 billion.

For a reasonable upper bound on transfer payments, the Department assumed that all occasional overtime workers and half of regular overtime workers would receive the full overtime premium (*i.e.*, such workers will work the same number of hours but be paid 1.5 times their implicit initial hourly wage for all overtime hours) (Table 17). The full overtime premium model is a special case of the fixed-wage model where there is no change in hours. For the other half of regular overtime workers, the Department assumed in the upper-bound method that they would have their implicit hourly wage adjusted as predicted by the incomplete fixed-job model (wage rates fall and hours are reduced but total earnings continue to increase, as in the primary method). In the primary model, the Department assumed that only 50 percent of occasional overtime workers and no regular overtime workers would receive the full overtime premium.

The plausible lower bound on transfer payments also depends on whether employees work regular overtime or occasional overtime. For those who regularly work overtime hours and half of those who work occasional overtime, the Department assumed the employees' wages

would fully adjust as predicted by the fixed-job model.[410] For the other half of employees with occasional overtime hours, the lower bound assumes they would be paid one and one-half times their implicit hourly wage for overtime hours worked (full overtime premium).

Table 17: Summary of the Assumptions Used to Calculate the Lower Estimate, Primary Estimate, and Upper Estimate of Transfers

Lower Transfer Estimate	Primary Estimate	Upper Transfer Estimate
Occasional Overtime Workers (Type 2)		
50% fixed-job model 50% full overtime premium	50% incomplete fixed-job model 50% full overtime premium	100% full overtime premium
Regular Overtime Workers (Type 3)		
100% fixed-job model	100% incomplete fixed-job model	50% incomplete fixed-job model 50% full overtime premium

* Full overtime premium model: Regular rate of pay equals the implicit hourly wage prior to the regulation (with no adjustments); workers are paid 1.5 times this base wage for the same number of overtime hours worked prior to the regulation.
* Fixed-job model: Base wages are set at the higher of: (1) a rate such that total earnings and hours remain the same before and after the regulation; thus the base wage falls, and workers are paid 1.5 times the new base wage for overtime hours (the fixed-job model) or (2) the minimum wage.
* Incomplete fixed-job model: Regular rates of pay are partially adjusted to the wage implied by the fixed-job model.

7. Effects by Regions and Industries

This section compares the number of affected workers, costs, and transfers across regions and industries. Although impacts will be more pronounced in some regions or industries, the Department has concluded that in no region or industry are the costs overly burdensome. The proportion of total costs and transfers in each region will be fairly consistent with the proportion

[410] The straight-time wage adjusts to a level that keeps weekly earnings constant when overtime hours are paid at 1.5 times the straight-time wage. In cases where adjusting the straight-time wage results in a wage less than the minimum wage, the straight-time wage is set to the minimum wage.

of total workers in each region. Affected workers are overrepresented in some industries, but costs and transfers will still be manageable as a share of payroll and of total revenue (*See* Table 21 for regions and Table 24 for industries).

The Department also compared costs and transfers relative to total payrolls and revenues. This provides a common method of assessing the relative effects of the rule on different regions or industries, and the magnitude of adjustments the rule may require on the part of enterprises in each region or industry. The relative costs and transfers expressed as a percentage of payroll are particularly useful measures of the relative size of adjustment faced by organizations in a region or industry because they benchmark against the cost category directly associated with the labor force. Average estimated costs and transfers from this rule are very small relative to current payroll or current revenue—less than a tenth of a percent of payroll and of revenue in each region and in each industry.

Salaries vary across the U.S. geographically. To ensure the new standard salary level would not be too high in any region of the country, the Department has used only wages in the lowest-wage region, the South[411], to set the salary level. However, because wages are lower in the South and the Midwest[412] than the Northeast[413] and the West[414], impacts may be larger in

[411] The South Census region is comprised of the following states: Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia.
[412] The Midwest Census region is comprised of the following states: Kansas, Illinois, Indiana, Iowa, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin.
[413] The Northeast Census region is comprised of the following states: Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont.
[414] The West Census region is comprised of the following states: Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, Wyoming.

these two lower-wage regions. This section considers impacts across the four Census regions to ensure the impacts in the lower-wage regions would be manageable. The South has by far the most affected workers (1.9 million), though it also has the most workers of any Census region (Table 18). As a share of potentially affected workers in the region, the South will have somewhat more affected workers relative to other regions (17.9 percent are affected compared with 11.0 to 15.4 percent in other regions). However, as a share of all workers in the region, the South will not be particularly affected relative to other regions (3.5 percent are affected compared with 2.3 to 3.0 percent in other regions).

Table 18: Potentially Affected and Affected Workers, by Region, Year 1

Region	Workers Subject to FLSA (Millions)	Potentially Affected Workers (Millions) [a]	Affected Workers (Millions) [b]	Affected Workers as a Precent of Potentially Affected Workers	Affected Workers as a Percent of All Workers
All	143.7	29.7	4.3	14.6%	3.0%
Northeast	25.5	6.0	0.7	12.3%	2.9%
Midwest	31.1	6.1	0.9	15.4%	3.0%
South	53.2	10.5	1.9	17.9%	3.5%
West	33.8	7.2	0.8	11.0%	2.3%

Note: Pooled CPS data for 2021-2023 adjusted to reflect 2023.
[a] EAP exempt workers who are white-collar, salaried, not eligible for another (non-EAP) overtime exemption, and not in a named occupation.
[b] Currently EAP exempt workers who will be entitled to overtime protection under the updated earnings levels or whose weekly earnings will increase to the new earnings levels to remain exempt.

Total transfers in the first year were estimated to be $1.5 billion (Table 19). As expected, the transfers in the South will be the largest portion because the largest number of affected workers would be in the South. However, transfers per affected worker will be less in the South

than in other Census regions. Annual transfers per affected worker will be $291 in the South, and between $346 and $462 in other regions.

Table 19: Annual Transfers by Region, Year 1

Region	Total Annual Change in Earnings (Millions)	Annual Transfer Per Affected Worker	Annual Transfers per Entity	Percent of Total Transfers by Region
All	$1,509.2	$348	$183	100.0%
Northeast	$256.4	$346	$172	17.0%
Midwest	$343.6	$368	$202	22.8%
South	$543.6	$291	$181	36.0%
West	$365.6	$462	$178	24.2%

Note: Pooled CPS data for 2021-2023 adjusted to reflect 2023.

Table 20: Annual Costs by Region, Year 1

Region	Total Direct Costs (Millions)	Total Direct Costs per Entity	Percent of Total Direct Costs by Region
All	$1,436.2	$174	100.0%
Northeast	$240.7	$162	16.8%
Midwest	$323.5	$190	22.5%
South	$581.7	$194	40.5%
West	$1,436.2	$174	100.0%

Note: Pooled CPS data for 2021-2023 adjusted to reflect 2023.

Direct employer costs are composed of regulatory familiarization costs, adjustment costs, and managerial costs. The Department estimates that total direct employer costs will be the highest in the South ($581.7 million) and lowest in the Northeast ($240.7 million). Transfers and direct employer costs in each region, as a percentage of the total transfers and direct costs, would range from 16.9 percent in the Northeast to 38.2 percent in the South. These proportions are almost the same as the proportions of the total workforce in each region: 17.8 percent in the

Northeast and 37.0 percent in the South. Costs and transfers per establishment would be slightly higher in the Midwest ($392) than on average, but still small (Table 21).

Another way to compare the relative effects of this rule by region is to consider the transfers and costs as a proportion of payroll and revenues (Table 21).[415] Nationally, employer costs and transfers will be approximately 0.031 percent of payroll. By region, direct employer costs and transfers as a percent of payroll will be approximately the same (between 0.025 and 0.036 percent of payroll). Employer costs and transfers as a percent of revenue will be 0.006 percent nationally and range between 0.005 and 0.006 percent in each region.

Table 21: Annual Transfers and Costs as Percent of Payroll and of Revenue by Region, Year 1

Region	Transfers and Costs per Entity	Payroll (Billions) [a]	Revenue (Billions) [a]	Costs and Transfers	
				As Percent of Payroll	As Percent of Revenue
All	$358	$9,471	$50,655	0.031%	0.006%
Northeast	$334	$2,010	$9,902	0.025%	0.005%
Midwest	$392	$1,947	$11,276	0.034%	0.006%
South	$375	$3,137	$17,812	0.036%	0.006%
West	$320	$2,377	$11,666	0.028%	0.006%

[a] Payroll and revenue data exclude the Federal Government.

Sources: Costs and transfers based on pooled CPS data for 2021-2023 adjusted to reflect 2023. Private sector payroll and revenue data from 2017 SUSB. State and local payroll and revenue data from State and Local Government Finances 2020. Inflated to $2023 using GDP deflator.

Impacts may be more pronounced in some industries. In particular, lower-wage industries where more workers may earn between $684 and the new salary level may be impacted more. Additionally, industries where EAP workers are more prevalent may experience larger impacts.

[415] The Department uses 2017 data here because although payroll data are available for more recent years, the most recent revenue data are for 2017.

To gauge the effect of the rule on industries, the Department estimated affected workers, costs, and transfers for the 13 major industry groups. The Department also compared estimates of combined costs and transfers as a percent of payroll and revenue across industries.

Table 22 presents the number of affected workers by industry. The industry with the most affected workers is professional and business services (827,400). The industry with the largest share of workers affected is financial activities (5.7 percent). This is because the financial activities industry is heavily composed of salaried white-collar workers. As a share of potentially affected workers, the industry with the highest share affected is leisure and hospitality (24.3 percent), followed by agriculture, forestry, fishing, & hunting (22.8 percent).

Table 22: Potentially Affected and Affected Workers, by Industry, Year 1

Industry	Workers Subject to FLSA (1,000s)	Potentially Affected Workers (1,000s) [a]	Affected Workers (1,000s) [b]	Affected Workers as a Percent of Potentially Affected Workers	Affected Workers as a Percent of All Workers
All	143,677.6	29,746.7	4,337.5	14.6%	3.0%
Agriculture, forestry, fishing, & hunting	1,312.6	58.5	13.3	22.8%	1.0%
Mining	587.4	156.6	18.5	11.8%	3.1%
Construction	9,305.3	1,266.9	184.6	14.6%	2.0%
Manufacturing	15,521.5	4,062.0	350.6	8.6%	2.3%
Wholesale trade	3,164.1	852.5	112.3	13.2%	3.5%
Retail trade	15,649.0	1,966.1	377.4	19.2%	2.4%
Transportation & utilities	8,902.5	1,072.9	152.9	14.3%	1.7%
Information	2,711.7	1,082.4	132.4	12.2%	4.9%
Financial activities	9,925.6	4,349.8	564.5	13.0%	5.7%
Professional & business services	17,462.0	7,126.2	827.4	11.6%	4.7%

Education	14,294.5	1,202.7	244.1	20.3%	1.7%
Healthcare & social services	21,025.7	3,745.2	740.2	19.8%	3.5%
Leisure & hospitality	12,529.3	940.3	228.5	24.3%	1.8%
Other services	5,532.2	761.7	163.5	21.5%	3.0%
Public administration	5,754.2	1,103.0	227.2	20.6%	3.9%

Note: Pooled CPS data for 2021-2023 adjusted to reflect 2023.
[a] EAP exempt workers who are white-collar, salaried, not eligible for another (non-EAP) overtime exemption, and not in a named occupation.
[b] Currently EAP exempt workers who will be entitled to overtime protection under the updated earnings levels or whose weekly earnings will increase to the new earnings levels to remain exempt.

Both transfers and costs will be the largest in the professional and business services industry because this industry is large and heavily composed of salaried white-collar workers (Table 23). Combined, in Year 1, these total $564.7 million and represent 19.2 percent of nationwide transfers and costs. Transfers and costs are also large in the healthcare and social services industry, at least partially due to the large size of this industry. However, transfers per affected worker will be relatively low in this industry, $229 in the first year compared with $348 nationally. A third industry with relatively large total transfers and costs is the retail trade industry.

Table 23: Annual Transfers and Costs by Industry, Year 1

Industry	Transfers (Millions)	Transfer Per Affected Worker	Direct Costs (Millions) [a]	Transfers and Costs (Millions)	Percent of Total Transfers and Costs by Industry
All	$1,509.2	$348	$1,435.7	$2,944.9	100.0%

Sources: Pooled CPS data for 2021-2023 adjusted to reflect 2023.

[a] Regulatory familiarization costs exclude 10,440 establishments whose industry is "not classified."

To measure the impact on businesses, a comparison of transfers and costs to payroll, revenue, or profit is more helpful than looking at the absolute size of transfers and costs per industry. As a percent of payroll, transfers and costs would be highest in agriculture, forestry, fishing, and hunting; retail trade; leisure and hospitality; and education (Table 24). However, the magnitude of the relative shares will be small, representing less than 0.1 percent of payroll costs in all industries. The Department's estimates of transfers and costs as a percent of revenue by industry also indicated a very small effect of less than 0.03 percent of revenues in any industry. The industries with the largest transfers and costs as a percent of revenue will be education; leisure and hospitality; and professional and business services. Table 24 illustrates that the

differences in costs and transfers relative to revenues will be quite small across industry groupings.

The overall magnitude of costs and transfers as a percentage of profits represents less than 1.0 percent of overall profits in each industry.[416, 417] By industry, the value of total costs and transfers as a percent of profits ranges from a low of 0.02 percent (wholesale trade) to a high of 0.62 percent (agriculture, forestry, fishing, and hunting). Benchmarking against profits is potentially helpful in the sense that it provides a measure of the rule's effect against returns to investment. However, this metric must be interpreted carefully as it does not account for differences across industries in risk-adjusted rates of return which are not readily available for this analysis. The ratio of costs and transfers to profits also does not reflect differences in the firm-level adjustment to profit impacts reflecting cross-industry variation in market structure.[418]

Table 24: Annual Transfers, Total Costs, and Transfers and Costs as Percent of Payroll, Revenue, and Profit by Industry, Year 1

Industry	Costs and Transfers per Entity	Payroll (Billions) [a]	Revenue (Billions) [a]	Costs and Transfers As Percent of:		
				Payroll [a]	Revenue [a]	Profit [a]

[416] Internal Revenue Service. (2023). SOI Tax Stats - Corporation Income Tax Returns Complete Report (Publication 16). Available at: https://www.irs.gov/statistics/soi-tax-stats-corporation-income-tax-returns-complete-report-publication-16.

[417] Table 1 of the IRS report provides total receipts, net income, and deficits by industry. For each industry, the Department calculated the profit-to-revenue ratio as net income (column (7)) less any deficit (column (8)) divided by total receipts (column (3)). Profits were then calculated as revenues multiplied by profit-to-revenue ratios. Profits could not be used directly because they are limited to only active corporations.

[418] In particular, a basic model of competitive product markets would predict that highly competitive industries with lower rates of return would adjust to increases in the marginal cost of labor arising from the rule through an overall, industry-level increase in prices and a reduction in quantity demanded based on the relative elasticities of supply and demand. Alternatively, more concentrated markets with higher rates of return would be more likely to adjust through some combination of price increases and profit reductions based on elasticities as well as interfirm pricing responses.

All	$357.9	$9,470.5	$50,655.8	0.031%	0.006%	0.060%

Sources: Pooled CPS data for 2021-2023 adjusted to reflect 2023. Private sector payroll and revenue data from 2017 SUSB. State and local payroll and revenue data from State and Local Government Finances 2020 are used for the Public Administration industry. Profit-to-revenue data from the Internal Revenue Service 2019. Inflated to $2023 using GDP deflator.

[a] Payroll and revenue data exclude the Federal Government. Profit-to-revenue data limited to active corporations. Regulatory familiarization costs, payrolls, and revenues exclude 10,440 establishments whose industry is "not classified." Because transfer payments include all workers, the estimates of costs and transfers as a share of payroll or revenue are slightly overestimated.

[b] Profits were negative in this industry in this year.

[c] Profit is not applicable for public administration.

8. Regulatory Alternatives

The Department considered a range of alternatives before selecting its methods for setting the standard salary level and the HCE compensation level. As seen in Table 25, the Department has calculated the salary/compensation levels, the number of affected workers, and the associated costs and transfers for these alternative levels.

The Department is increasing the standard salary level using earnings for the 35th percentile of full-time salaried workers in the South Census Region, $1,128 per week. The alternative methods considered for setting the standard salary level are:

- Alternative 1: 2004/2019 method – $844 per week – 20th percentile of earnings of nonhourly full-time workers in the South Census region and/or in the retail industry nationally.
- Alternative 2: Kantor long test method – $942 per week – 10th percentile of earnings of likely exempt workers.
- Alternative 3: 2016 method – $1,196 per week – 40th percentile of earnings of nonhourly full-time workers in the South Census region
- Alternative 4: Kantor short test method – $1,404 per week – Kantor long test level multiplied by 149 percent (the historical average relationship between the long and short test levels).

The Department considered using the 2004 methodology (the 20th percentile of full-time salaried white-collar workers in the lowest-wage Census region (currently the South) and/or in retail nationally), which is currently $844 per week ($43,888 per year). This is also the

methodology that the Department used in the 2019 rule.[419] However, the salary level produced by the 2004 methodology is below the current equivalent long test salary level ($942 per week), which the Department considers to be a key parameter for determining an appropriate salary level.

The Department also considered setting the standard salary level at the long test level ($942 per week or $48,984 per year). Doing so would ensure the initial screening function of the salary level by restoring overtime protections to those employees who were consistently excluded from the EAP exemption under each iteration of the regulations prior to 2019, either by the long test salary level itself, or under the 2004 rule salary level, which was set equivalent to the long test salary level.[420] However, as explained above, setting the standard salary level at the long test level would not address the impact of the change from a two-test to a one-test system.

The Department also considered setting the standard salary level at the 40th earnings percentile of salaried white-collar workers in the lowest-wage Census Region (currently the South) ($1,196 per week or $62,192 per year). However, the Department is concerned that this approach could be seen by courts as making salary level determinative of exemption status for too large a portion of employees, as this salary level would make the salary paid by the employer determinative of exemption status for more than half (55 percent) of white-collar employees who earn between the long and short test salary levels. The Department is also concerned that this approach would generate the same concerns that led to the district court decision invalidating the 2016 rule (which adopted the same methodology).

[419] 84 FR 51260.
[420] *See* section V.B.4.ii.

Finally, the Department considered setting the standard salary level at the current equivalent of the short test salary level ($1,404 per week or $73,008 per year). This would ensure that all employees who earn between the long and short test salary levels and perform substantial amounts of nonexempt work would be entitled to overtime compensation. However, by making exemption status for all employees who earn between the long and short test levels depend on the salary paid by the employer, this approach would prevent employers from being able to use the EAP exemption for employees earning between these salary levels who do not perform substantial amounts of nonexempt work and thus were historically exempt under the long test.

As described above, the Department is setting the HCE compensation level using earnings for the 85th percentile of all full-time salaried workers nationally, $151,164 per year. The Department also evaluated the following alternative methods to set the HCE compensation levels:

- HCE alternative 1: 2019 method[421] – $132,964 annually – 80th percentile of earnings of nonhourly full-time workers nationally.
- HCE alternative 2: 2016 method[422] – $179,972 annually – 90th percentile of earnings of nonhourly full-time workers nationally.

The Department believes that HCE alternative 1 does not produce a threshold high enough to reserve the HCE test for employees who would "almost invariably pass the standard duties test." The Department also considered setting the HCE threshold at the 90th percentile; however, the Department is concerned that the resulting level ($179,972) would restrict the use

[421] *See* 84 FR 51250.
[422] *See* 81 FR 32429.

of the HCE exemption for employers in low-wage regions and industries. The Department believes its proposal to adjust the HCE total annual compensation threshold to reflect the 85th percentile of earnings of nonhourly full-time workers nationally strikes the appropriate balance and ensures that the HCE test continues to serve its intended function as a streamlined alternative for employees who are highly likely to pass the standard duties test.

Table 25: Updated Standard Salary and HCE Compensation Levels and Alternatives, Affected EAP Workers, Costs, and Transfers, Year 1

Alternative	Salary Level	Affected EAP Workers (1,000s)	Year 1 Effects (Millions)	
			Adj. & Managerial Costs	Transfers
Standard Salary Level (Weekly)				
Alt. #1: 2004/2019 method [a]	$844	959	$202.3	$204.3
Alt #2: Kantor long test [b]	$942	1,806	$385.9	$432.0
Final rule: 35th pct South [c]	$1,128	4,045	$905.4	$1,253.6
Alt. #3: 2016 method - 40th pct South [d]	$1,196	4,993	$1,116.1	$1,642.9
Alt. #4: Kantor short test [e]	$1,404	7,961	$1,860.0	$3,035.1
HCE Compensation Level (Annually)				
HCE alt. #1: 2019 method - 80th pct [f]	$132,964	223	$58.7	$164.5
Final rule: 85th pct [g]	$151,164	293	$79.2	$255.6
HCE alt. #2: 2016 method - 90th pct [h]	$179,972	340	$97.6	$359.2

Note: Regulatory familiarization costs are excluded because they do not vary based on the selected values of the salary levels. Additionally, they cannot be disaggregated by exemption type (i.e., standard versus HCE). The Department did not receive comments on how to refine familiarization cost estimates in a manner that distinguishes among regulatory alternatives.

9. Triennial Updates to the Standard Salary and Annual Compensation Thresholds

Between updates to the standard salary and HCE compensation levels, nominal wages typically increase, resulting in an increase in the number of workers qualifying for the EAP exemption, even if there has been no change in their real earnings. Thus, workers whom Congress intended to be covered by the minimum wage and overtime pay provisions of the FLSA may lose those protections. The mechanism the Department established in this rulemaking for updating the salary and compensation levels allows these thresholds to keep pace with changes in earnings and continue to serve as an effective dividing line between potentially exempt and nonexempt workers. Furthermore, the updating mechanism will provide employers more certainty in knowing that these levels will change by smaller amounts on a regular basis, rather than the more disruptive increases caused by much larger changes after longer, uncertain increments of time. This will allow firms to better predict short- and long-term costs and employment needs. In addition to the changes being made to the standard salary level and HCE compensation threshold, the Department is including in this rule a mechanism for updating the

salary and compensation levels initially on July 1, 2024 and every 3 years thereafter to reflect current earnings.

i. Initial Update

As discussed in section IV, the new standard salary level and HCE total annual compensation threshold methodologies do not become applicable until approximately 8 months after publication of this final rule. Therefore, the initial update on July 1, 2024 will use the methodologies in place at the time of the update (i.e., the 2019 rule methodologies), which results in a $844 per week standard salary level and a $132,964 HCE total annual compensation threshold. Consistent with the 2019 rule, the Department used pooled CPS data for the most recent 3 years (2021, 2022, 2023), adjusted to reflect 2023, for the initial updates to the standard salary and annual compensation thresholds.

As previously discussed, the Department's affected worker, cost, and transfer estimates for Year 1 have accounted for the initial update and the new standard salary and annual compensation thresholds that become applicable 6 months after the initial update. Just looking at the initial update, the Department estimated the initial update to the standard salary level will affect workers who earn between $684 and $844 per week. The Department estimates that this update will result in 959,000 affected workers. Of these affected workers, 68.7 percent of them do not work overtime. The Department estimated the Year 1 adjustment and managerial costs for just this update would be $202.3 million and transfer payments would be $204.3 million. For the initial update to the HCE total annual compensation threshold, the Department estimated that just the update would result in 223,000 affected workers, $58.7 million in adjustment and managerial costs, and $164.5 million in transfer payments in Year 1.

ii. Future Updates

The Department is establishing future updates to the standard salary level and HCE total annual compensation threshold with current earnings data beginning 3 years after the date of the initial update, and every 3 years thereafter, using the methodologies in place at the time of the updates. For purposes of this analysis, the Department assumes that the future triennial updates to the standard salary level will be based on the same methodology that the Department used to set the new standard salary level in this rule: the 35th percentile of weekly earnings of full-time salaried workers in the lowest-wage Census Region (currently the South). Likewise, the Department assumes that future triennial updates to the HCE total annual compensation level will be based on the same methodology the Department used to set this earnings threshold in this rulemaking: the annualized weekly earnings of 85th percentile of full-time salaried workers nationally.

As previously discussed, future triennial updates will set the earnings thresholds using the most recent available 4 quarters of CPS data preceding the Department's notice with the updated thresholds. To estimate future thresholds in years when the salary and compensation levels will be updated, the Department used the historic geometric growth rate between 2012 and 2022 in (1) the 35th earnings percentile of full-time salaried workers in the South for the standard salary level and (2) the annualized weekly earnings of the 85th percentile of full-time salaried workers nationally for the HCE compensation level. For example, between 2012 and 2022, the annual growth rate in the 35th percentile of full-time salaried workers in the South has increased by 3.17 percent. To estimate the first future triennial update salary level of $1,239, the Department multiplied $1,128 by 1.0317 to the power of three. Figure 5 shows the projected future triennial

update levels for the first 10 years. Note that these projections are illustrative estimates based on past wage growth; the actual level at the time of the update will depend on the wage growth that occurs between now and the update date. Figure 6 shows the standard salary levels in both nominal and 2023 dollars.

Figure 5: Projected Future Salary and Compensation Levels, Nominal Dollars

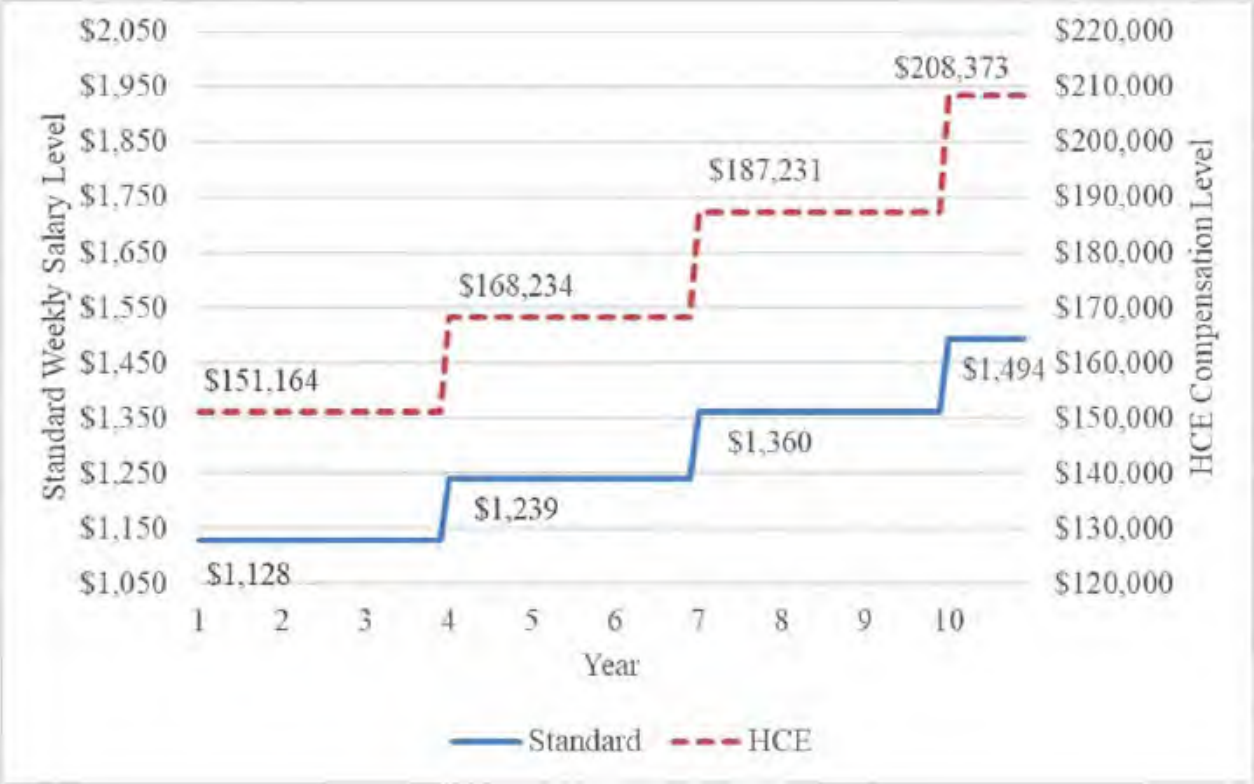

Figure 6: Projected Future Standard Salary Levels, Nominal and Real (Constant 2023 Dollars)

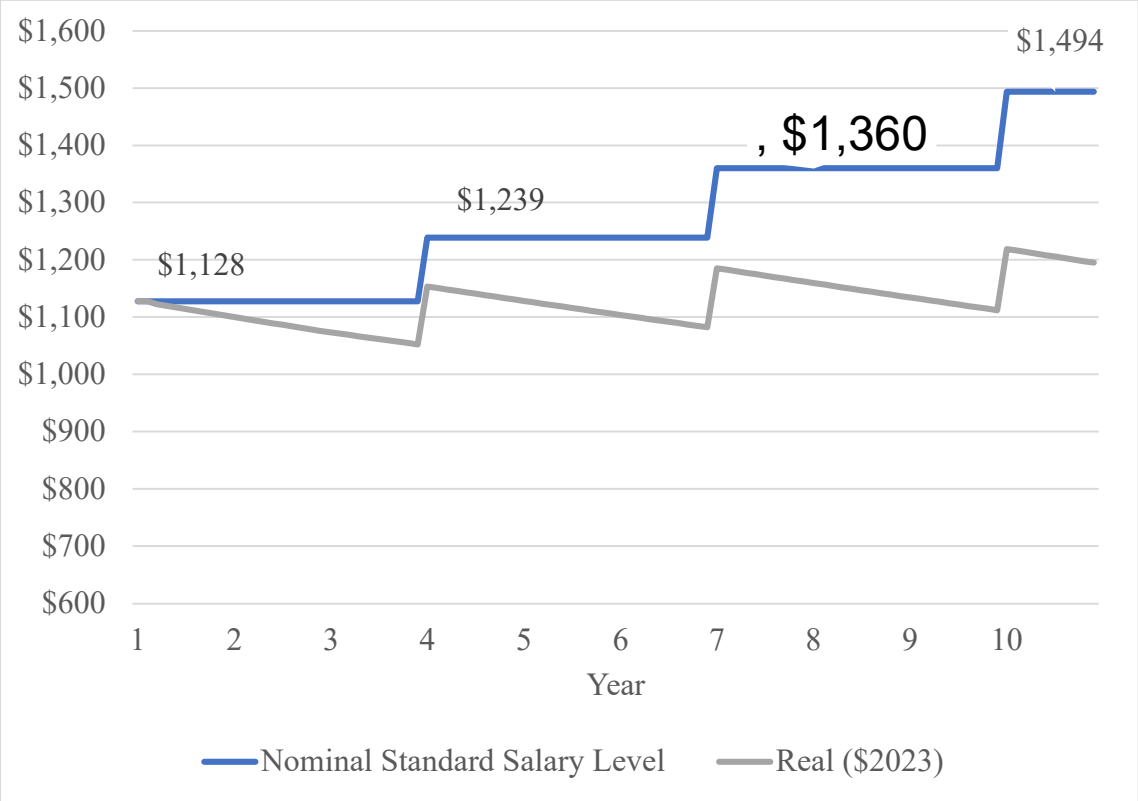

iii. Concerns with Use of Fixed Earnings Percentile as Updating Methodology

As discussed in detail in section V.A.3.iii, some commenters expressed concern that triennially updating the salary level using a fixed percentile of earnings would result in the salary levels growing at too quick a rate. *See, e.g.*, Chamber; National Lumber and Building Material Dealers Association; NRF; Seyfarth Shaw.

These commenters stated that updating the standard salary level using a fixed percentile of earnings of full-time salaried workers will cause some or all of the newly nonexempt workers to be converted to hourly status and thus removed from the data set, and earnings at the 35th percentile of salaried workers will quickly rise solely due to the exclusion of these hourly workers (an effect some commenters referred to as "ratcheting"). Commenters asserted that this

may cause growth in the 35th percentile of full-time salaried workers to no longer reflect prevailing economic conditions.

Claims that an updating mechanism using the fixed percentile approach will lead to the rapid escalation of the salary level are based primarily on the assumption that employers will respond to this rulemaking by converting newly nonexempt workers to hourly pay status. However, the Department believes these concerns are overstated because many affected EAP workers who are reclassified as nonexempt are likely to remain salaried as: (1) An analysis of the 2004 rule's salary level update did not indicate significant numbers of workers were converted to hourly pay; and (2) an analysis of updates in California's higher EAP exemption salary level (under state law) did not indicate significant numbers of workers were reclassified as hourly. In any event, the Department's modeling of the impact of updating shows that any potential "ratcheting" effect that may occur would be small, largely because newly nonexempt workers compose a small percentage of the pool of full-time nonhourly workers in the dataset used to establish the salary level.

The analyses discussed below are based on CPS MORG data. As acknowledged in the NPRM and above in section VII.B.5.i, salary status for CPS respondents cannot definitively be determined because workers who indicate they are paid on a salary basis or on some basis other than hourly are all classified as "nonhourly." To consider the possibility this biases our results, the Department looked at the Panel Study of Income Dynamics (PSID). The PSID provides additional information concerning salaried versus other nonhourly workers. In the PSID, respondents are asked how they are paid on their main job and are asked for more detail if their

response is in some way other than salaried or hourly.[423] The available responses include piecework, commission, self-employed/farmer/profits, and by the job/day/mile. None of these options are ones to which employers are likely to change their salaried workers. The share of workers who are not paid on either an hourly or salaried basis is relatively small, about 10 percent of workers in the PSID. Accordingly, grouping nonhourly workers with salaried workers does not negate the following comparisons and conclusions based on CPS data.

(a) Workers May Remain Salaried Even if Nonexempt

The Department disagrees with commenters that suggested that employers will likely (or automatically) convert large numbers of newly nonexempt employees to hourly pay status. In some instances such conversion may occur; for example, if an employee regularly works overtime and the employer is able to adjust his or her regular rate. However, for the majority of affected employees, there will be no incentive for employers to convert them to hourly pay because they do not work more than 40 hours in a workweek. Also, employers may have other incentives to maintain workers' salaried status; for example, they may offer salaried positions to attract talent. Some commenters representing employer interests highlighted that employees value job characteristics associated with salaried pay—such as earnings predictability—and so employers may pay nonexempt employees on a salary basis to preserve these benefits. Using the CPS MORG data pooled for 2021-2023 and projected to 2023, the Department estimated that 29.4 percent of white-collar workers earning below $684 per week are nonhourly; based on findings from the PSID, the Department believes most of these nonhourly workers are salaried.

[423] University of Michigan, Institute for Social Research. 2019 PSID. Data available at: https://simba.isr.umich.edu/data/data.aspx.

This data shows that even for some current nonexempt workers, employers are choosing to keep them as salaried instead of hourly. Furthermore, some nonhourly workers above the current salary threshold fail the duties test, and are therefore nonexempt, which is further evidence that employers already employ nonexempt workers who are paid on a salary basis.

(b) Previous Salary Level Updates Did Not Indicate a Significant Number of Workers Being Converted to Hourly

The "ratcheting" concerns raised in the comments are very similar to comments on this alleged effect that were received during the 2016 rulemaking. In that rule the Department analyzed employer responses to the 2004 rule and to a series of revisions to California's salary level test for exemption under state law in order to better estimate whether workers who become nonexempt are more likely to be paid on an hourly basis.[424] These analyses allow the identification of potential regulatory impact while controlling for time trends and a broad range of other relevant factors (education, occupation, industry, geographic location, etc.).

In the 2016 rule the Department analyzed the effect of the Federal 2004 salary level increase from $250 per week (short test salary level) to $455 (standard salary level) on the share of full-time, white-collar workers paid hourly. The analysis considered two types of differences: pre- versus post-rulemaking; and workers exempt before, but not after the rule compared to workers exempt both before and after the rule. As noted in the discussion of this analysis in the 2016 rule, if the salary level increase in the 2004 rule led employers to convert significant numbers of workers to hourly status (as commenters assert will result from the current rulemaking), then the Department would have expected to see a notable increase in the share of

[424] *See* 81 FR 32441, 32507.

workers earning just below the new threshold at the time ($455) who are paid hourly relative to the share of workers earning just above the new threshold who are paid hourly. Instead, the Department found that between the first quarter of 2004 and the first quarter of 2005, the share of full-time white-collar workers who are paid hourly decreased marginally in the group of potentially affected workers (those earning $250 to $455), whereas in the group earning above the salary level (those earning more than $455 but less than $600) it increased by 2.6 percentage points. These results do not suggest that the 2004 salary level increase caused an increase in the share of workers paid hourly below the new threshold, and thus provide no evidence that salary level increases due to triennial updates will result in employers converting significant numbers of affected EAP workers to hourly pay status.

The Department did not replicate this analysis for the salary level increase in the 2019 final rule, because it would require comparing a quarter in 2019 before the effective date of the rule with a quarter in 2020 after the effective date. The economic effects of the COVID-19 pandemic would make it impossible to isolate the impact of the 2019 rule.

In the 2016 rule the Department also analyzed the effect of changes to California statutes that set exempt salary levels at a level equal to twice the state minimum wage for 40 hours worked per week. The analysis considered two types of differences: pre- versus post-rulemaking; workers exempt before, but not after the rule compared to workers exempt both before and after the rule; and California workers versus workers in other states where the salary level was not increased. The analysis of two updates found that the share of full-time white-collar workers in California being paid hourly decreased from 73.4 percent to 73.1 percent compared to an increase of 66.2 percent to 67.5 percent in states where the salary level did not change after the

2007-2008 update, while there was an increase from 72.0 percent to 74.0 percent in California compared to an increase of 68.2 to 69.4 percent in other states after the 2014 update.

The Department found no evidence that changes in the salary level for exemption resulted in a statistically significant increase in the percent of full-time white-collar workers paid on an hourly basis following either the 2004 rule or the California salary level updates.

(c) The Department's Modeling of Possible "Ratcheting" Indicates Effect Would Be Negligible

In a study referenced by PPWO, Edgeworth Economics estimated the impact that an updating mechanism using the fixed percentile approach would have on the salary level. They found that "the DOL's automatic update mechanism would increase the salary threshold by approximately 9.1% to the current 40th percentile [which Edgeworth Economics estimated was equivalent to the 35th percentile of the resulting distribution after workers are reclassified] within three years even if there was not ANY wage growth." Their estimate was based on the assumption that all affected workers in the South Census Region who earn between $684 and $1,059 per week and who are expected to pass the duties test, which they estimate to be 1.4 million, would be reclassified to hourly employees, thus falling out of the distribution of workers that are part of the 35th percentile in the Census Region. However, as discussed above, the Department has found no evidence that previous changes in the salary level for exemption have resulted in a statistically significant increase in the percent of full-time white-collar workers paid on an hourly basis.

NRF submitted a 2023 study by Oxford Economics that also considered how converting salaried workers to hourly status could influence future triennial updates. The Oxford study states that DOL's updating methodology "suffers from the same technical flaw as its NPRM

analysis of the effects of the proposed regulation suffers from: the failure to model newly nonexempt affected workers losing salaried status." The study presents a visual analysis showing a share of workers who earn below the overtime threshold losing their salaried status, and a higher threshold for 2027 after this rule than in the scenario where there is no change to the standard salary level. Like Edgeworth Economics, Oxford Economics erroneously assumes that a large share of all affected workers will lose their salaried status. As discussed previously, the Department has found no evidence that previous changes in the salary level for exemption have resulted in a statistically significant increase in the percent of full-time white-collar workers paid on an hourly basis.

In 2016, the Department conducted a similar analysis, using what the Department believes are more realistic assumptions, and found a significantly smaller potential impact. The Department considered which affected workers are most likely to be converted from salaried to hourly pay as a result of that rulemaking. Type 4 workers, those whose salaries are increased to the new standard salary level, remain exempt and their method of pay will not change. Type 3 workers, who regularly work overtime and become nonexempt, and Type 2 workers, those who occasionally work overtime and become nonexempt, are the most likely to have their pay status changed. Type 1 workers (who, at the time, made up more than 60 percent of the affected workers) were assumed to not work overtime, and employers thus have little incentive to convert them to hourly pay. For this analysis, the Department assumed all Type 2 and Type 3 workers were converted to hourly status to generate a realistic upper bound of the magnitude of any possible ratcheting effect. The Department estimated that in 2026, after three updates over 10 years, the salary level as set in the final rule (based on weekly earnings of full-time salaried

workers in the South) could be approximately 2.5 percent higher than expected due to this effect. This figure is significantly smaller than the estimates provided by the commenters. Furthermore, the Department believes its estimate is an overestimate because it assumed employers convert all Type 2 and Type 3 workers to hourly status, which, for the reasons discussed above and in section V.A.3.iii of the preamble, the Department believes is a highly unlikely outcome. The Department did not replicate this analysis for the salary level increase in the 2019 final rule, because the economic effects of the COVID-19 pandemic make it difficult to compare periods before and after the effective date of the 2019 final rule and isolate the effect of the rule.

10. Projections

The Department estimated that in Year 1, 4.3 million EAP workers will be affected, with about 292,900 of these attributable to the revised HCE compensation level (Table 26). In Year 10, the number of affected EAP workers was estimated to equal 6.0 million with 1.0 million attributable to the updated HCE compensation level. Average annualized costs are $802.9 million and transfers are $1.5 billion using a 7 percent real discount rate. These projections involved several steps.

1. Use past growth in the earnings distribution to estimate future salary and compensation levels (*see* section VII.C.9).
2. Predict workers' earnings, absent a change in the salary levels.
3. Compare workers' predicted earnings to the predicted salary and compensation levels to estimate affected workers.
4. Project future employment levels.

5. Estimate employer adjustments to hours and pay.

6. Calculate costs and transfers.

Figure 7: 10-Year Projected Number of Affected Workers

Annualized (7% real discount rate)	--	$79.3	$50.0	$673.6	$802.9	$44.8	$1,489.3	$1,534.1

[a] Regulatory familiarization costs occur in years when the salary and compensation levels are updated. Adjustment costs occur in all years when there are newly affected workers.

The Department calculated workers' earnings in future years by applying the historical wage growth rate in the workers' industry-occupation to current earnings. The wage growth rate was calculated as the geometric growth rate in median wages using CPS MORG data for occupation-industry categories from 2011-2023.[425] The geometric growth rate is the constant annual growth rate that when compounded (applied to the first year's wage, then to the resulting second year's wage, etc.) yields the last historical year's wage. This rate only depends on the wage values in the first and last year.[426]

The geometric wage growth rates per industry-occupation combination were also calculated from the BLS' Occupational Employment and Wage Statistics (OEWS) survey for 2012 to 2022. In occupation-industry categories where the CPS MORG data had an insufficient number of observations to reliably calculate median wages, the Department used the growth rate in median wages calculated from the OEWS data.[427] Any remaining occupation-industry

[425] To maximize the number of observations used in calculating the median wage for each occupation-industry category, 3 years of data were pooled for each of the endpoint years. Specifically, data from 2011, 2012, and 2013 (converted to 2012 dollars) were used to calculate the 2012 median wage and data from 2021, 2022, and 2023 (converted to 2022 dollars) were used to calculate the 2022 median wage.

[426] The geometric growth rate may be a flawed measure if either or both of the endpoint years were atypical; however, in this instance these values seem typical. An alternative method would be to use the time series of median wage data to estimate the linear trend in the values and continue this to project future median wages. This method may be preferred if either or both of the endpoint years are outliers, since the trend will be less influenced by them. However, the linear trend may be flawed if there are outliers in the interim years. The Department chose to use the geometric mean because individual year fluctuations are difficult to predict and applying the geometric growth rate to each year provides a better estimate of the long-term growth in wages.

[427] To lessen small sample bias in the estimation of the median growth rate, this rate was only calculated using CPS MORG data when these data contained at least 10 observations in each time period.

combinations without sufficient data in either data source were assigned the median of the growth rates in median wages from the CPS MORG data.

The Department compared workers' counter-factual earnings (*i.e.*, absent the rulemaking) to the predicted salary levels. If the counter-factual earnings are below the relevant salary level (*i.e.*, standard or HCE) then the worker is considered affected. In other words, in each year affected EAP workers were identified as those who would be exempt absent the rule change (*e.g.*, would earn at least $684 if exempt under standard salary level) but have projected earnings in the future year that are less than the relevant salary level. The projected number of affected workers also includes workers who were not EAP exempt in the base year but will become exempt in the absence of this rule in Years 2 through 10. For example, a worker who passes the standard duties test may earn less than $684 in Year 1 but between $684 and the new salary level in subsequent years; such a worker will be counted as an affected worker in those subsequent years. Additionally, the number of affected workers is not limited to newly affected workers. Workers who are affected in a given year may remain affected in subsequent years (*e.g.*, because they earn between $684 and $1,128 in years 1, 2, and 3), and continue to be counted as affected.

The projected number of affected workers also accounts for anticipated employment growth. Employment growth was estimated as the geometric annual growth rate based on the 10-year employment projection from BLS' National Employment Matrix (NEM) for 2022 to 2032 within an occupation-industry category.[428, 429] The Department applied these growth rates to the

[428] Bureau of Labor Statistics, Employment Projections Program. 2022-32 National Employment Matrix. https://www.bls.gov/emp/ind-occ-matrix/matrix.xlsx.

[429] An alternative method is to spread the total change in the level of employment over the ten years evenly (constant change in the number employed). The Department believes that on

sample weights of the workers to estimate increased employment levels over time. This is because the Department cannot introduce new observations to the CPS MORG data to represent the newly employed.

For workers newly affected in Year 2 through Year 10, employers' wage and hour adjustments due to the rulemaking are generally estimated as described in section VII.C.4. The only difference is the hours adjustment now uses a long-run elasticity of labor demand of -0.4.[430] Employer adjustments are made in the first year the worker is affected and then applied to all future years in which the worker continues to be affected (unless the worker switches to a Type 4 worker). Workers' earnings in predicted years are earnings post employer adjustments, with overtime pay, and with ongoing wage growth based on historical growth rates (as described above).

The Department quantified three types of direct employer costs in the 10-year projections: (1) regulatory familiarization costs; (2) adjustment costs; and (3) managerial costs. Section VII.C.3 provides details on the methodology for estimating these costs. This section only discusses the aspects specific to projections. Projected costs and transfers were deflated to 2023 dollars using the Congressional Budget Office's projections for the CPI-U.[431]

Regulatory familiarization costs occur in years when the salary and compensation levels are updated. Thus, in addition to Year 1, some regulatory familiarization costs are expected to

---

average employment is more likely to grow at a constant percentage rate rather than by a constant level (a decreasing percentage rate).

[430] Based on the Department's analysis of the following paper:
Lichter, A., Peichl, A. & Siegloch, A. (2014). The Own-Wage Elasticity of Labor Demand: A Meta-Regression Analysis. IZA DP No. 7958.

[431] Congressional Budget Office. 2023. The Budget and Economic Outlook: 2023 To 2033. *See* https://www.cbo.gov/system/files/2023-02/58848-Outlook.pdf.

occur in Year 4, Year 7, and Year 10. The Department assumed 10 minutes per establishment for time to access and read the published notice in the *Federal Register* with the updated standard salary level and HCE compensation level. This average time estimate is low because the majority of establishments will not have newly affected workers, and while some firms may spend more than 10 minutes to read the new rule, many firms will spend no time. The time estimate has been increased from 5 minutes in the 2016 rulemaking. In each of these 3 years regulatory familiarization costs are between $68.9 and $73.1 million. Although start-up firms must become familiar with the FLSA, the difference between the time necessary for familiarization with the current part 541 exemptions and those exemptions as modified by this rulemaking is essentially zero. Therefore, projected regulatory familiarization costs for new entrants over the next 9 years are zero (although these new entrants will incur regulatory familiarization costs in years when the salary and compensation levels are updated).

Adjustment costs are a function of the number of newly affected EAP workers and would occur in any year in which workers are newly affected. Adjustment costs would be largest in Year 1, of moderate size in update years, and smaller in other years. Management costs would recur each year for all affected EAP workers whose hours are adjusted. Therefore, managerial costs increase in update years and then modestly decrease between updates since earnings growth will cause some workers to no longer be affected in those years.

The Department projected transfers from employers to employees due to the minimum wage provision and the overtime pay provision. Transfers to workers from employers due to the minimum wage provision would decline from $87.5 million in Year 1 to $22.6 million in Year 10

as increased earnings over time move workers' regular rates of pay above the minimum wage.[432] Transfers due to overtime pay should grow slightly over time because the number of affected workers would increase, although transfers fall in years between updates. Transfers to workers from employers due to the overtime pay provision would increase from $1.4 billion in Year 1 to $2.5 billion in Year 10.

The Department compared projected impacts with and without updating (Table 27). Projections without updating are shown so impacts of the initial increase and subsequent increases can be disaggregated. With triennial updating, the number of affected EAP workers would increase from 4.3 million to 6.0 million over 10 years. Conversely, in the absence of updating, the number of affected EAP workers is projected to decline from 4.3 million in Year 1 to 2.6 million in Year 10. As shown in Figure 9, the number of affected workers decreases from year to year between updates as the real value of the salary and compensation levels decrease, and then increases in update years.

Regarding costs, regulatory familiarization costs are lower without updating because, in the absence of updating, employers would not need to familiarize themselves with updated salary and compensation levels every 3 years. Adjustment costs and managerial costs are a function of the number of affected EAP workers and so will be higher with updating. Average annualized direct costs will be $802.9 million with updating and $615.6 million without updating. Transfers are also a function of the number of affected workers and hence are lower without updating.

[432] State minimum wages above the Federal level as of January 1, 2023 were incorporated and used for projected years. Increases in minimum wages were not projected. If state or Federal minimum wages increase over the next 10 years, then estimated projected minimum wage transfers would be underestimated.

Disclaimer: This final rule has been approved by the Office of Management and Budget's Office of Information and Regulatory Affairs and has been submitted to the Office of the Federal Register (OFR) for publication. It is currently pending placement on public inspection at the OFR and publication in the *Federal Register*. This version of the final rule may vary slightly from the published document if minor technical or formatting changes are made during the OFR review process. Only the version published in the *Federal Register* is the official version.

Average annualized transfers with a 7 percent real discount rate will be $1.5 billion with updating and $990 million without updating. Table 27 shows aggregated costs and transfers over the 10-year horizon.

Figure 9: 10-Year Projected Number of Affected Workers, with and without Updating

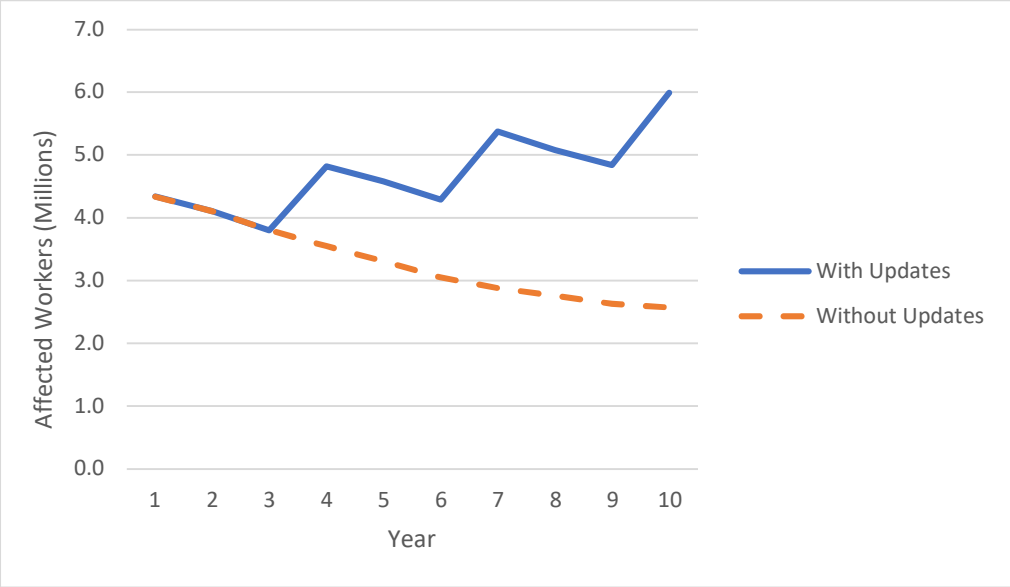

Table 27: Comparison of Projected Costs and Transfers with and without Updating

Year	Affected EAP Workers (Millions)		Costs (Millions $2023)		Transfers (Millions $2023)	
	With Updates	Without Updates	With Updates	Without Updates	With Updates	Without Updates
Year 1	4.3	4.3	$1,436.2	$1,436.2	$1,509.2	$1,509.2

Annualized (7% real discount rate)	--	--	$802.9	$615.6	$1,534.1	$989.5

VIII. Final Regulatory Flexibility Analysis (FRFA)

The Regulatory Flexibility Act of 1980 (RFA) as amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA), hereafter jointly referred to as the RFA, requires that an agency prepare an initial regulatory flexibility analysis (IRFA) when proposing, and a final regulatory flexibility analysis (FRFA) when issuing, regulations that will have a significant economic impact on a substantial number of small entities. The Department has determined that this rulemaking is economically significant. This section (1) provides an overview of the objectives of this rule; (2) estimates the number of affected small entities and employees; (3) discusses reporting, recordkeeping, and other compliance requirements; (4) presents the steps the Department took to minimize the significant economic impact on small entities; and (5) declares that it is unaware of any relevant Federal rules that may duplicate, overlap, or conflict with this rule.

A. Objectives of, and need for, the Final Rule

The FLSA requires covered employers to (1) pay employees who are covered and not exempt from the Act's requirements not less than the Federal minimum wage for all hours worked and overtime premium pay at a rate of not less than one and one-half times the

employee's regular rate of pay for all hours worked over 40 in a workweek, and (2) make, keep, and preserve records of the persons employed by the employer and of the wages, hours, and other conditions and practices of employment. The FLSA provides exemptions from the Act's minimum wage and overtime pay provisions, including one for bona fide executive, administrative, and professional (EAP) employees, as those terms are "defined and delimited" by the Department.[433] The Department's regulations implementing this white-collar exemption are codified at 29 CFR part 541.

To qualify for the EAP exemption under the Department's regulations, the employee generally must meet three criteria: (1) the employee must be paid a predetermined and fixed salary that is not subject to reduction because of variations in the quality or quantity of work performed (the salary basis test); (2) the amount of salary paid must meet a minimum specified amount (the salary level test); and (3) the employee's job duties must primarily involve executive, administrative, or professional duties as defined by the regulations (the duties test). In 2004, the Department revised its regulations to include a highly compensated employee test with a higher salary threshold and a minimal duties test.[434] The Department has periodically updated the regulations governing the white-collar exemptions since the FLSA's enactment in 1938. Most recently, the 2019 rule updated the standard salary level test to $684 per week and the HCE compensation level to $107,432 annually.

The goal of this rulemaking is to set effective earnings thresholds to help define and delimit the FLSA's EAP exemption. To this end, the Department is finalizing its proposed change

[433] 29 U.S.C. 213(a)(1).
[434] § 541.601.

to the salary level. Specifically, the Department is adjusting the salary level by setting it equal to the 35th percentile of weekly earnings of full-time salaried workers in the lowest-wage Census Region (currently the South), based on the most recent year (2023) of Current Population Survey (CPS) data at the time of drafting. Using BLS 2023 data on percentiles of usual weekly earnings of nonhourly full-time workers, the standard salary level will be set at $1,128 per week. Additionally, to maintain the effectiveness of this test, the Department is finalizing an updating mechanism that will update the earnings thresholds to reflect current wage data on July 1, 2024 and every 3 years thereafter.

The Department's new salary level will, in combination with the standard duties test, better define and delimit which employees are employed in a bona fide EAP capacity in a one-test system. As explained in greater detail in sections III and V.B, setting the standard salary level at or below the long test salary level, as the 2004 and 2019 rules did, results in the exemption of lower-salaried employees who traditionally were entitled to overtime protection under the long test either because of their low salary or because they perform large amounts of nonexempt work, in effect significantly broadening the exemption compared to the two-test system. Setting the salary level at the low end of the historic range of short test salary levels, as the 2016 rule did, would have restored overtime protections to those employees who perform substantial amounts of nonexempt work and earned between the long test salary level and the low end of the short test salary range. However, it would also have resulted in denying employers the use of the exemption for lower-salaried employees who traditionally were not entitled to overtime compensation under the long test, which raised concerns that the Department was in effect narrowing the exemption. By setting a salary level above the equivalent of the long test salary

level (using current data), the final rule will restore the right to overtime pay for salaried white-collar employees who prior to the 2019 rule were always considered nonexempt if they earned below the long test (or long test-equivalent) salary level. And it will ensure that fewer lower paid white-collar employees who perform significant amounts of nonexempt work are included in the exemption. At the same time, by setting it well below the equivalent of the short test salary level (using current data), the rule will allow employers to continue to use the exemption for many lower paid white-collar employees who were made exempt under the 2004 standard duties test. The new salary level will also more reasonably distribute between employees and their employers what the Department now understands to be the impact of the shift from a two-test to a one-test system on employees earning between the long and short test salary levels.

As the Department has previously noted, the amount paid to an employee is "a valuable and easily applied index to the 'bona fide' character of the employment for which the exemption is claimed," as well as the "principal[]" "delimiting requirement" "prevent[ing] abuse" of the exemption .[435] Additionally, the salary level test facilitates application of the exemption by saving employees and employers from having to apply the more time-consuming duties analysis to a large group of employees who will not pass it. For these reasons, the salary level test has been a key part of how the Department defines and delimits the EAP exemption since the beginning of its rulemaking on the EAP exemption.[436] At the same time, the salary test's role in defining and delimiting the scope of the EAP exemption must allow for appropriate examination of employee

[435] Stein Report at 19, 24; *see also* 81 FR 32422.
[436] *See* 84 FR 51237.

duties.[437] Under the final rule, duties will continue to determine the exemption status for most salaried white-collar employees.

The Department is also adjusting the HCE total annual compensation requirement to the annualized weekly earnings for the 85th percentile of full-time salaried workers nationally ($151,164 using 2023 data). Though not as high a percentile as the HCE threshold initially adopted in 2004, which covered 93.7 percent of all full-time salaried workers,[438] the Department's new HCE threshold will ensure it continues to serve its intended function, because the HCE total annual compensation level will be high enough to exclude all but those employees at the very top of the economic ladder.

In its three most recent part 541 rulemakings, the Department has expressed its commitment to keeping the earnings thresholds up to date to ensure that they remain effective in helping differentiate between exempt and nonexempt employees. Long intervals between rulemakings have resulted in eroded earnings thresholds based on outdated earnings data that were ill-equipped to help identify bona fide EAP employees. In contrast, routine updates to the part 541 earnings thresholds to reflect wage growth will bring certainty and stability to employers and employees alike. Based on its long experience with updating the salary levels, the Department has determined that adopting a regulatory provision for regularly updating the salary levels, with an exception for pausing future updates under certain conditions, is the most viable and efficient way to ensure the EAP exemption earnings thresholds keep pace with changes in employee pay and thus remain effective in helping determine exemption status. Accordingly, the

[437] *See id.* at 51238.
[438] *See* 69 FR 22169 (Table 3).

Department is including in this rule a mechanism for updating the salary and compensation levels, to reflect current wage data, on July 1, 2024 and every 3 years thereafter. As explained in greater detail in section V.A, employees and employers alike will benefit from the certainty and stability of regularly scheduled updates.

B. Response to Comment Filed by the Chief Counsel for Advocacy of the Small Business Administration

SBA Advocacy expressed similar concerns as those expressed by other small business commenters, based upon its meetings, roundtables, and other discussions regarding the NPRM. SBA Advocacy stated that it was concerned that the IRFA underestimated the compliance costs of the rule, the proposed rule would add to the current difficult business environment, the proposed rule would have significant impacts on small nonprofits, the IRFA did not account for non-financial costs to small entities and employees, and the IRFA did not consider less burdensome alternatives. SBA Advocacy recommended that the Department issue a supplemental RFA to reanalyze small entity impacts, adopt a lower standard salary level, update the standard salary level every four years through notice and comment rulemaking, publish a small entity compliance guide, provide more time for compliance, and add provisions to help small nonprofits comply. SBA Advocacy's comments and the Department's response to those comments are discussed in detail below.

SBA Advocacy reported that participants at its roundtables estimated first year costs would be much higher than the estimates in the IRFA, from $20,000 to over $200,000 in compliance costs per small entity. SBA Advocacy asserted that small businesses may have to hire outside staff to interpret and implement the rule and face high administrative and operational costs to schedule and track employee hours to minimize overtime costs. SBA Advocacy also

stated that participants at their roundtables reported much higher payroll costs than the estimates provided by the Department in the IRFA. Advocacy further stated that the IRFA failed to estimate compliance costs by small entity size and revenue by presenting average impacts by industry.

The assumptions small businesses used to estimate first-year compliance costs ranging from $20,000 to $200,000 per entity were not described. However, the Department clearly outlined its methodology and assumptions used to estimate regulatory familiarization, adjustment, and management costs that it expects businesses, including small businesses, might incur. The Department disagrees that it underestimated small entity costs in the IRFA. First, this rulemaking is narrow in scope as it only makes changes relating to earnings thresholds in the part 541 regulations. The Department published final rules changing the salary thresholds in 2016 and 2019. The Department therefore expects that most businesses will not require significant time to become familiar with these regulations, or that they will require significant time from outside consultants. Furthermore, the Department expects that small entities will rely upon compliance assistance materials provided by the Department, including the small entity compliance guide that will be published, or industry associations to become familiar with the final rule.

Second, the Department estimates businesses will require an average of 75 minutes per employee to choose how to make adjustments for affected employees. The Department expects that employers will most likely need to spend little to no time making adjustments for many affected workers, such as the almost 70 percent of the employees who do not work overtime (Type 1 employees) and those whose salaries are well below the new standard salary level or only occasionally work overtime. If, for example, decisions can be quickly made for half of a

business' affected employees, then that leaves two hours or more per employee for employers to consider how to respond with regard to employees requiring more consideration.

Third, the Department believes that most, if not all, entities have at least some nonexempt employees and, therefore, already have policies and systems in place for monitoring and recording their hours. The Department believes that applying those same policies and systems to the workers whose exemption status changes will, on average, not require more than 10 minutes per week per worker who works overtime in managerial time cost, as employers will rely on policies such as a policy against working overtime without express approval or a standard weekly schedule of assigned hours. The Department notes that nearly 70 percent of affected employees do not work overtime, and another 17 percent who do work overtime average about an hour of overtime per week; less than 15 percent of currently exempt employees average 10 or more hours of overtime per week. The Department therefore disagrees with SBA Advocacy that small entities will "face vast administrative and operational costs to schedule and track employee hours to minimize overtime costs." Consistent with the approach taken in calculating managerial costs in the 2019 rule,[439] the Department believes that an average of 10 additional minutes per week managing the hours of each newly exempt worker who works overtime is appropriate.

SBA Advocacy bases its claim that the Department underestimated payroll costs on reports from "[r]oundtable participants" of "much higher payroll costs," pointing to four businesses—"an Arkansas restaurant with four locations" and three "small amusement businesses"—which claimed they would need to increase manager salaries from $57,000 to $250,000 to comply with the rule. SBA Advocacy also provided hypothetical scenarios of

[439] *See* 84 FR 51267.

potential salary increases that restaurant employers with currently exempt employees would need to incur to comply with the proposed rule based on various assumptions. As discussed in section VII.C.4.iii.c, these anecdotal reports and hypothetical examples do not have any information on the actual amount of overtime work being performed by employees who could become newly nonexempt under the new salary level. The Department expects that businesses that would be faced with large increases in payroll costs if they were to increase salaries to the new threshold would instead find other responses more economically feasible, such as limiting the number of overtime hours worked by nonexempt workers.

Moreover, as explained above, the majority of affected workers who work no overtime or minimal overtime will likely receive little additional pay as a result of the rule. While some employers might have to pay the overtime premium, when combined with the 85 percent of affected employees who will receive little or no overtime pay premium because they work little or no overtime, the average pay raise over all affected employees and their employers will be much smaller than the examples presented in SBA Advocacy's comment.

SBA Advocacy stated that small firms have expressed the sentiment that they would have to fire and not promote employees and limit hours worked as a result of the rule, after recent inflation, supply chain disruptions, shutdowns and tight labor markets that followed the COVID-19 pandemic. The Department acknowledges that the economic climate has been difficult to navigate since the start of 2020. However, most indications are that the economy has been returning to long run growth patterns with subsiding inflation. For example, a report by Van

Nostrand and Sinclair (2023)[440] from the U.S. Department of the Treasury indicates that the United States has seen a strong GDP recovery and was on track during 2023 to recover to levels predicted before the pandemic. Similarly, reflecting improvements in inflation and personal incomes, the Survey of Consumers from the University of Michigan reported that consumer sentiment in January 2024 grew by 13 percent and reached its highest level since July 2021.[441] To the extent that labor markets remain tight, that might be a reflection of significant, potentially long-run changes in factors such as long run labor force participation rates.[442] Regardless, workers affected by this rule compose a relatively small part of the overall labor market and the increase in wages should be relatively small (*see e.g.*, estimated transfers per worker, Table 23). While small businesses may be more affected by labor market turmoil, the overall size of the impact of this rule on the economy would indicate that it is unlikely that the rule will have a significant impact on this market turmoil.

SBA Advocacy also stated that it believes that the Department underestimated the impact of the proposed rule on small nonprofit organizations, citing examples of small nonprofits that estimate costs above the one to three percent of revenue threshold, a measure for determining the economic impact on small entities from SBA Advocacy's RFA compliance guide. The Department disagrees that it underestimated the impact of this rule on small nonprofits. First,

many nonprofits are non-covered enterprises because when determining enterprise coverage, only revenue derived from business operations, not charitable activities, is included. However, as discussed in section VII.B.3, the Department nonetheless included workers employed by enterprises that do not meet the enterprise coverage requirements in its estimate of workers subject to the FLSA, since there is no data set that would adequately inform an estimate of the size of this worker population in order to exclude them from these estimates. [443] Second, for the reasons stated above, the Department believes that expected costs and payroll impacts of the rule cited by SBA Advocacy and other commenters are overestimates, and that the Department's estimates are more accurate reflections of costs and impacts. The Department finds that even if all employees at a small entity, whether for-profit or nonprofit, are exempt—an unlikely scenario—then cost and increased payroll combined comprise about one percent of payroll per affected small entity, and therefore an even smaller percentage of revenues. *See* Table 32. SBA Advocacy cited concerns about the rule's effect on seasonal businesses raised by a representative from America Outdoors Association, which asserted that many affected employees in seasonal recreational businesses work nontraditional work schedules that would make it difficult to reclassify them as hourly workers, as well as a concern raised by a representative of the Independent Community Bankers Association of America that the rule could cause its members to reduce services in "rural or less profitable areas." The Department reiterates that employers do not need to reclassify nonexempt workers as hourly employees; they merely need to pay an

[443] Although not excluding such entities and associated workers only affects a small percentage of workers generally, it may have a larger effect (and result in a larger overestimate) for nonprofits, because revenue from charitable activities is not included when determining enterprise coverage. *See* section VII.B.3.

overtime premium for hours worked over 40 in a workweek. While there will be affected workers in the finance sector, the Department believes that costs and transfers for small entities in the finance sector will be manageable as a share of payroll and of total revenue.[444]

SBA Advocacy further stated that the IRFA "does not consider the non-financial consequences to reclassify workers, such as the effect on worker flexibility, worker morale, and loss of benefits and career advancement." The Department addresses these and other possible impacts that cannot be quantified in sections V.B.4.v and VII.C.3.v. In addition, the Department believes that while individual experiences vary, the rule will benefit employees in a variety of ways (*e.g.*, through increased earnings and an increase in personal time for some affected workers).

Exempt workers may enjoy more scheduling flexibility because their hours are less likely to be monitored than nonexempt workers. If so, the final rule could impose costs on newly nonexempt, overtime-eligible workers by, for example, limiting their ability to adjust their schedules to meet personal and family obligations. However, employers can continue to offer flexible schedules and require workers to monitor their own hours and to follow the employers' timekeeping rules. Additionally, some exempt workers already monitor their hours for billing purposes. For these reasons, and because there is little data or literature on these costs, the Department did not quantify potential costs regarding scheduling flexibility. Further, a study by Lonnie Golden[445] using data from the General Social Survey (GSS) found that "[i]n general, salaried workers at the lower (less than $50,000) income levels don't have noticeably greater

[444] *See* Table 32.

[445] Golden, L. (2014). Flexibility and Overtime Among Hourly and Salaried Workers. Economic Policy Institute. https://papers.ssrn.com/sol3/papers.cfm?abstract_id=2597174.

levels of work flexibility that they would 'lose' if they became more like their hourly counterparts."

Some of the workers who become nonexempt as a result of the final rule and whose pay is changed by their employer from salaried to hourly status may have preferred to remain salaried. As noted above in section VII.C.3.v, research has shown that salaried workers are more likely than hourly workers to receive benefits such as paid vacation time and health insurance,[446] and are more satisfied with their benefits.[447] Additionally, when employer demand for labor decreases, hourly workers tend to see their hours cut before salaried workers, making earnings for hourly workers less predictable.[448] However, this literature generally does not control for differences between salaried and hourly workers such as education, job title, or earnings; therefore, this correlation is not necessarily attributable to hourly status.

If workers are reclassified as hourly, and hourly workers have fewer benefits than salaried workers, reclassification could reduce workers' benefits. But the Department notes that these newly nonexempt workers may continue to be paid a salary, as long as that salary is equivalent to a base wage at least equal to the minimum wage rate for every hour worked, and the employee receives a 50 percent premium on that base wage for any overtime hours each week. Similarly,

---

[448] Lambert, S. J., & Henly, J. R. (2009). Scheduling in Hourly Jobs: Promising Practices for the Twenty-First Century Economy. The Mobility Agenda. Lambert, S. J. (2007). Making a Difference for Hourly Employees. In A. Booth, & A. C. Crouter, Work-Life Policies that Make a Real Difference for Individuals, Families, and Communities. Washington, D.C.: Urban Institute Press.

employers may continue to provide these workers with the same level of benefits as previously, whether paid on an hourly or salary basis. While reducing benefits may be one way for employers to offset payroll increases associated with this rule, as shown below, the Department estimates that costs and payroll increases for small, affected firms are less than 0.9 percent of payroll and less than 0.2 percent of estimated revenues. Therefore, the Department does anticipate that it will be necessarily for a significant number of employers to reduce employee benefits.

Finally, it is unclear why career advancement will be inhibited. As noted above, *see* section VII.C.3.v., nothing in this rule requires employers to limit advancement opportunities for newly nonexempt workers. The Department notes that if an employer believes that career advancement opportunities such as training are sufficiently important, it can ensure employees attend the trainings during their 40-hour workweek or pay the overtime premium where training attendance causes the employee to work over 40 hours in a workweek.

SBA Advocacy stated that the IRFA was incomplete "because it d[id] not analyze any regulatory alternatives that would minimize the impact of the rule for small businesses, such as lower salary levels." However, the Department considered several regulatory alternatives in the NPRM, describing both the alternatives it considered, which included lower (and higher) thresholds for the standard salary level and HCE total compensation requirement, and why it chose the earnings thresholds it proposed.[449] And it has considered and analyzed multiple

[449] *See* 88 FR 62217.

regulatory alternatives, including lower (and higher) thresholds for the standard salary and HCE total compensation requirement, in this final rule as well.[450]

SBA Advocacy recommended that the Department issue a Supplemental Regulatory Flexibility Analysis to be published in the *Federal Register* for public comment addressing compliance costs in and after the first year, compliance costs by different sized small entities, the current business environment, impacts to small nonprofits, the non-financial consequences of the rule, and the impacts of adopting alternative salary thresholds on different sizes of small businesses. The Department disagrees with SBA Advocacy that this rulemaking should be delayed for this reason. The Department provided a fully robust and transparent analysis of estimated impacts on small entities in its IRFA, relying on largely the same methods and assumptions the Department employed in drafting the IFRA in its 2019 rulemaking.

As the Department stated in the IRFA, it is difficult to directly evaluate compliance cost impacts by entity size due to lack of data concerning the distribution of affected workers by entity size. There are fewer affected workers than there are small entities. Therefore, many small entities will employ zero affected workers; small entities that do employ affected workers may employ one affected worker, or have nearly all workers affected, and anywhere in between. The number of small entities that employ affected workers will be inversely related to the number of affected employees per entity; if small entities only employ one affected worker, more entities will be affected, and vice versa.

Therefore, the Department evaluated a range of potential impacts from lowest to highest depending on whether one or all employees are affected. Furthermore, the Department evaluated

[450] *See* section VII.C.8.

the impact of regulatory compliance costs plus increased wages as a percent of payroll. Payroll is largely proportionate to the number of employees at the firm; if one entity has 10 times as many employees as another, its payroll is likely to be 10 times larger. Similarly, if an entity has 10 times more affected employees than another firm, then it will likely incur 10 times more compliance cost and wage impacts. Finally, firms hire more workers to increase production and sales, so entity revenues will be a multiple of payroll, although that multiple might vary by industry. If compliance costs and increased wages comprise 2 percent of payroll, those costs will comprise less than 2 percent of revenues. Thus, regardless of the size of the small entity, regulatory impacts should fall within the range calculated by the Department.

The Department shows in Table 34 that with the exception of the accommodation and the food services and drinking places industries, if all employees at an entity are affected by the rule, compliance cost and increased wages comprise less than 1.5 percent of payroll and substantially less than 1 percent of revenues per affected small entity. Although compliance costs and increased wages might comprise 3.55 percent of payroll in the food services and drinking places industry, that is about 1.10 percent of revenues. Performing this analysis for different sized firms should not appreciably change these results.

SBA Advocacy also recommended adopting a lower standard salary level that considers the significant small business impacts of the rule. The comment proposed two alternatives: retain the current standard salary threshold, or "adjust[] the standard salary threshold by a particular industry sector that will experience the greatest economic costs," noting that the 2019 standard salary level was based on earnings in both the lowest-wage Census region and the retail industry.

The comment also stated that small entities at SBA Advocacy's roundtable recommended a gradual or phased increase in the standard salary threshold.

Although SBA Advocacy disagreed with the standard salary level selected by the Department, the salary level accounts for regions and industries likely to be most affected by the rule. As discussed above,[451] the Department is setting the final rule standard salary level using the lowest-wage Census Region, instead of a national level, ensuring the salary level is not driven by earnings in high- or even middle-wage regions of the country. The Department believes that using earnings data from the lowest-wage Census Region produces a salary level that accounts for differences across industries and regional labor markets. The Department thus believes that the standard salary level is appropriate for small businesses.

Consistent with the history of the part 541 regulations, the Department also declines to create a lower salary level requirement for employees employed at small entities, or to exclude such employees from the salary level test. As the Department has previously noted, while "the FLSA itself does provide special treatment for small entities under some of its exemptions . . . the FLSA's statutory exemption for white-collar employees in section 13(a)(1) contains no special provision based on size of business."[452] In the 86-year history of the part 541 regulations defining the EAP exemption, the salary level requirements have never varied according to the size or revenue of the employer.[453]

---

[451] *See* sections V.B.4.iv, VII.C.2.
[452] *See* 81 FR 32526; 69 FR 22238.
[453] *See* Stein Report at 5–6 (rejecting proposals to set varying regional salary levels); *see also* 69 FR 22238 (stating that implementing differing salary levels based on business size industry-by-industry "would present the same insurmountable challenges" as adopting regional or population-based salary levels).

SBA Advocacy recommended that updates to the standard salary threshold be made once every 4 years through a proposed rule with a notice and comment process for each update, as opposed to updating the standard salary level every three years through the proposed updating mechanism. The comment conveyed skepticism regarding the lawfulness of the Department's proposed updating mechanism asserting that the FLSA requires the Department to periodically issue regulations to set the standard salary level. The comment also expressed concern that the updating provision would drive wage inflation for salaried workers because employers may raise the salaries of their newly nonexempt workers to keep them exempt or move them to hourly work to comply with the rule, thereby causing "a self-perpetuating threshold, as the salary level of the 35th percentile would grow each iteration or three years." The comment reported small businesses at Advocacy's roundtable opposed the proposed updating mechanism "because it creates steep and unpredictable changes to the EAP exemption and uncertainty for employers[,]" and asserted that small entities have highlighted the administrative burdens of reclassifying workers and tracking employee hours. The comment also mentioned the concern from small construction and professional services businesses about difficulties setting price structures on long term federal and private contracts.

The Department disagrees with SBA Advocacy's skepticism regarding the lawfulness of the updating mechanism. As explained in section V.A.3.i, the Department is adopting an updating mechanism in this rulemaking after publishing a notice of the proposed rule and providing opportunity for stakeholders to comment in accordance with the appropriate notice and comment requirements. The Department has received and considered numerous comments on the proposed updating mechanism. Future updates under the triennial updating mechanism would simply reset

the thresholds by applying current data to a standard already established by regulation. Therefore, the Department disagrees with the assertion that a notice and comment rulemaking must precede each future update made through the updating mechanism even where the methodology for setting the compensation levels and the mechanism for updating those levels would remain unchanged.

The Department also disagrees with the concern that the updating mechanism would result in rapid increases to the salary level solely because of employers' actions in response to the rule. This assertion is akin to the ones made by a number of other commenters that the updating mechanism tied to a fixed percentile would lead to the salary level being ratcheted upward over time due to the resulting actions of employers. As explained in detail in sections V.A.3.iii and VII.C.9, there is nothing to substantiate this assertion. On the contrary, the Department's analyses shows that employers' actions in response to the rule will not have the asserted impact on future updates. Rather, the updating mechanism will only ensure that the salary level continues to reflect prevailing economic conditions.

The Department also finds unpersuasive the assertion that the updating mechanism will lead to unpredictable changes and uncertainty for employers. Unlike irregular updates to the earnings thresholds, which may result in drastic changes to the thresholds, regular updates on a pre-determined interval and using an established methodology will produce more predictable and incremental changes. Through the updating mechanism, the Department will reset the standard salary level and total annual compensation threshold using the most recent, publicly available, BLS data on earnings for salaried workers. Therefore, employers will be able to track where the thresholds would fall on a quarterly basis by looking at the BLS data and can estimate the

changes in the thresholds even before the Department publishes the notice with the adjusted thresholds in the Federal Register. The Department believes that, compared to the irregular updates of the past, employers will be better positioned to anticipate and prepare for future updates under the updating mechanism.

SBA Advocacy also referenced that the Department must publish a small entity compliance guide for this rule. Pursuant to its obligations under section 212 of SBREFA, the Department will publish a small entity compliance guide for this rule.

SBA Advocacy recommended the Department add provisions to help small nonprofits comply with the rule, due to difficulties renegotiating government grants and contracts. As explained in section II.D, issues directly related to the public financing available for certain employers that might be affected by this final rule are beyond the Department's authority to address. However, the Department intends to issue technical assistance to help employers comply with the FLSA.

Finally, SBA Advocacy recommended an extended effective date for the rule of at least 1 year or 18 months, as small entities indicated needing "more time to understand and evaluate the rule, and possibly reclassify their workforce and budget for expenditures." As discussed in section IV, having considered commenter feedback in response to the NPRM, the Department has determined that a delayed applicability date is appropriate for the new standard salary level and the HCE total annual compensation threshold. Specifically, the new $1,128 per week standard salary level and $151,164 per year HCE total annual compensation threshold will not be applicable until approximately 8 months after publication of this final rule in the Federal Register. The Department will initially update those thresholds on July 1, 2024, by reapplying

the methodologies used to set those thresholds in the 2019 rule, resulting in an initial salary level of $844 per week and an initial HCE total annual compensation threshold of $132,964 per year. Those initial thresholds will remain in effect until the higher thresholds become applicable.

C. Significant Issues Raised by Public Comments in Response to the Initial Regulatory Flexibility Analysis

Many of the issues raised by small businesses in the public comments received on the proposed rule are described in the preamble and RIA above, which are incorporated herein. Nevertheless, significant issues raised by representatives of small businesses are also addressed here.

Most of the comments received concerning small businesses centered on the burden that the proposed salary level would impose on small entities. Many such commenters emphasized that rule-related costs would detrimentally impact small businesses. *See, e.g.*, Amusement and Music Operators Association; Independent Women's Forum; NSBA. Some commenters specifically asserted that the Department underestimated compliance costs for small entities under the proposed rule. *See, e.g.*, ABC; The 4A's. For example, NFIB contended that the rule could cost small businesses more than large businesses because, among other reasons, small businesses often have fewer resources (such as administrative staff members, experienced human resources personnel, or regular access to legal counsel). Sixteen Members of the U.S. House of Representatives cited rule-related costs, combined with burdens facing small businesses, in urging the Department to withdraw its proposal. A number of small businesses specifically raised concerns about the impact of the proposed salary level on small entities in low-wage regions and industries. *See, e.g.*, Nebraska Bankers Association; National Restaurant Association. Other commenters, including the Job Creators Network Foundation, expressed concern that the rule

would adversely impact small businesses by increasing inflation. Some small businesses, raising these and similar concerns, urged the Department to set a special salary level or create an exemption for small businesses. *See, e.g.*, Bowling Proprietors Association of America; WFCA. Opposition was not uniform, however, as some small businesses supported the proposed rule. *See, e.g.* A Few Cool Hardware Stores; BA Auto Care; Well-Paid Maids.

For the reasons previously discussed in detail, the Department believes its cost estimates are appropriate and do not provide a basis for changing the methodology used to set the salary level or for abandoning this rulemaking altogether. The Department does not agree with those commenters who asserted that the proposal would be ruinous for small businesses. As shown later in this section, Department's upper bound estimate of the impact of this rule per small establishment (which assumed all employees in a small firm are affected by the new rule) shows that costs and payroll increases for small affected firms were less than 0.9 percent of payroll and less than 0.2 percent of estimated revenues. While the affect in some industries will be somewhat larger, these figures reinforce that this rule will not be unduly burdensome for small businesses. In addition, the Department believes that most, if not all, small businesses, like larger businesses, employ a mix of exempt and overtime-protected workers. As such, to the extent cost concerns are tied in part to small businesses reclassifying some employees who become nonexempt as hourly as a result of this rule, many employers will already have policies and systems in place for scheduling workers and monitoring overtime hours worked and the corresponding overtime premium pay. Such established procedures, and experience gained through fairly recent rulemakings to increase the earnings thresholds, may help mitigate concerns related to small businesses requiring substantial assistance from outside professionals to comply with this final

rule. Additionally, the Department intends to publish compliance assistance materials, including a small entity compliance guide. Industry associations also typically become familiar with rulemakings such as this one and often provide compliance assistance to association members. As to inflationary concerns, as previously discussed, the Department does not expect its rule to lead to increased inflation on a national level.

The Department recognizes that many small employers operate in low-paying regions or industries, and the Department has historically accounted for small employers when setting the salary level.[454] This final rule is no exception, as the Department is setting the salary level using the lowest-wage Census Region. The Department declines to adopt special exceptions or lower salary levels for small businesses. As stated above and as the Department has emphasized in past rules, "'the FLSA's statutory exemption for white-collar employees in section 13(a)(1) contains no special provision based on size of business.'"[455] In the 86-year history of the part 541 regulations defining the EAP exemption, the Department has never adopted special salary levels for small businesses. The Department continues to believe that implementing differing salary levels based on business size industry-by-industry would be inadvisable because, among other reasons, it "would present the same insurmountable challenges" as adopting regional or population-based salary levels.[456]

The Department received many comments in response to its proposed mechanism to update the standard salary and HCE total annual compensation requirements. As discussed in

[454] *See, e.g.*, Weiss Report at 14–15 (setting the long test salary level for executive employees "slightly lower than might be indicated by the data" in part to avoid excluding "large numbers of the executives of small establishments from the exemption").
[455] *See* 81 FR 32526 (quoting 69 FR 22238).
[456] 69 FR 22238.

section V.A.3.i, some commenters asserted that the proposed updating mechanism would violate the RFA. Commenters, including Independent Electrical Contracts, RILA, and Seyfarth Shaw, commented that the RFA required the Department "to undertake a detailed economic and cost analysis" and that Department's proposed updating mechanism would bypass these requirements. The RFA requires a regulatory flexibility analysis to accompany any agency final rule promulgated under 5 U.S.C. 553.[457] In accordance with this requirement, this section estimates the costs of future triennial updates using the fixed percentile method. The RFA only requires that such analyses accompany rulemaking, and commenters did not cite any RFA provision that would require the Department to conduct a new regulatory flexibility analysis before each scheduled update to the salary and annual compensation thresholds.

Several commenters addressed the potential effects that the proposed updating mechanism could have on small entities. Small Business Majority expressed support for the proposed updating mechanism, asserting that "[s]maller, predictable increases that are known well in advance will allow small business owners to be better prepared for any staffing or compensation changes they need to make." Business for a Fair Minimum Wage—whose members include many small business owners—commented that the proposed updating mechanism would keep the thresholds up to date and predictable for employers. In contrast, NFIB asserted that "triennial updates would result in instability in labor and administrative costs for small businesses in perpetuity" as small businesses would have to reconsider the classifications given to their employees every 3 years. The 4As similarly asserted that the updating mechanism imposes substantial ongoing expense on small agencies noting that "[l]ike

[457] *See* 5 U.S.C. 603–604.

many small businesses, small agencies often outsource legal, payroll, and some HR functions to outside professionals." ASTA expressed concern that "small business owners with limited resources to engage outside help, would have difficulty keeping abreast of salary level increases and could inadvertently find themselves out of compliance."

As previously explained, the Department believes the updating mechanism adopted by this final rule will ensure greater certainty and predictability for the regulated community. For all future triennial updates, the Department will publish a notice with the revised salary and annual compensation thresholds not fewer than 150 days before the new thresholds are set to take effect. Moreover, businesses will be able to estimate the changes in the thresholds by looking at BLS data even before the Department publishes the notice with the adjusted thresholds. The Department believes that, compared to the irregular updates of the past, employers will be better positioned to anticipate and prepare for future updates under the updating mechanism. As noted in section V.A.3.ii, the alternative to Department's updating mechanism is not a permanent fixed earnings threshold, but instead larger changes to the threshold that would occur during irregular future updates. Since the updating mechanism will change the thresholds regularly and incrementally, and based on actual earnings of salaried workers, the Department predicts that employers will be in a better position to be able to adjust to the changes resulting from triennial updates.

The Department believes that the updating mechanism will ensure that the earnings thresholds for the EAP exemption will remain effective and up to date over time. The updating mechanism should benefit employers of all sizes going forward by avoiding the uncertainty and disruptiveness of larger increases that would likely occur as a result of irregular updates.

D. Estimate of the Number of Affected Small Entities

1. Definition of Small Entity

The RFA defines a "small entity" as (1) a small not-for-profit organization, (2) a small governmental jurisdiction, or (3) a small business. The Department used the entity size standards defined by SBA and in effect as of 2019, to classify entities as small or large.[458] The most recent size standards were released in 2022 and use the 2022 NAICS. However, because the data used by the Department to estimate the number of small entities uses the 2017 NAICS, the Department used the 2019 entity size standards instead of the 2022 standards.[459]

SBA establishes standards for 6-digit NAICS industry codes, and standard size cutoffs are typically based on either the average number of employees or average annual receipts. However, some exceptions exist, the most notable being that depository institutions (including credit unions, commercial banks, and non-commercial banks) are classified by total assets and small governmental jurisdictions are defined as areas with populations of less than 50,000.[460]

2. Number of Small Entities and Employees

The primary data source used to estimate the number of small entities and employment in these entities is the Statistics of U.S. Businesses (SUSB). Alternative sources were used for

[458] *See* https://data.sba.gov/dataset/small-business-size-standards/resource/d89a5f17-ab8e-4698-9031-dfeb34d0a773.
[459] The SBA size standard changes in 2022 primarily adjusted the standards to the 2022 NAICS, these changes were not substantive. https://www.govinfo.gov/content/pkg/FR-2022-09-29/pdf/2022-20513.pdf.
[460] *See* https://advocacy.sba.gov/resources/the-regulatory-flexibility-act/rfa-data-resources-for-federal-agencies/ for details.

industries with asset thresholds (credit unions,[461] commercial banks and savings institutions,[462] agriculture[463]), and public administration.[464] The Department used 2017 data, when possible, to align with the use of 2017 SUSB data. Private households are excluded from the analysis due to lack of data.

For each industry, the SUSB 2017 tabulates employment, establishment, and firm counts by both enterprise employment size (*e.g.*, 0-4 employees, 5-9 employees) and receipt size (*e.g.*, less than $100,000, $100,000-$499,999).[465] Although more recent SUSB data are available, these data do not disaggregate entities by revenue sizes. The Department combined these data with the SBA size standards to estimate the proportion of firms and establishments in each industry that are considered small, and the proportion of workers employed by a small entity. The Department classified all firms and establishments and their employees in categories below the SBA cutoff as small.[466] If a cutoff fell in the middle of a category, the Department assumed a uniform

[463] United States Department of Agriculture. (2019). 2017 Census of Agriculture: United States Summary and State Data: Volume 1, Geographic Area Series, Part 51. Available at: https://www.nass.usda.gov/Publications/AgCensus/2017/Full_Report/Volume_1,_Chapter_1_US/usv1.pdf.
[464] Census of Governments. 2017. Available at: https://www.census.gov/data/tables/2017/econ/gus/2017-governments.html.
[465] The SUSB defines employment as of March 12th.
[466] The Department's estimates of the numbers of affected small entities and affected workers who are employees of small entities includes entities not covered by the FLSA and thus are likely overestimates. The Department had no credible way to estimate which enterprises with annual revenues below $500,000 also did not engage in interstate commerce and hence are not subject to the FLSA.

distribution of employees across that bracket to determine what proportion of establishments should be classified as small.[467] The estimated share of establishments that were small in 2017 was applied to the more recent 2021 SUSB data on the number of small establishments to determine the number of small entities.[468]

The Department also estimated the number of small establishments and their employees by employer type (nonprofit, for-profit, government). This calculation is similar to the calculation of the number of establishments by industry but with different data. Instead of using data by industry, the Department used SUSB data by Legal Form of Organization for nonprofit and for-profit establishments. The estimated share of establishments that were calculated as small with the 2017 data was then applied to the 2021 SUSB counts. For governments, the Department used the number of governments reported in the 2017 Census of Governments.[469]

Table 28 presents the estimated number of establishments/governments and small establishments/governments in the U.S. (hereafter, referred to as "entities").[470] The numbers in the following tables are for Year 1; projected impacts are considered later. The Department found

[467] The Department assumed that the small entity share of credit card issuing and other depository credit intermediation institutions (which were not separately represented in FDIC asset data), is similar to that of commercial banking and savings institutions.
[468] Statistics of U.S. Businesses 2021, https://www.census.gov/programs-surveys/susb.html.
[469] Census of Governments 2017. Available at https://www.census.gov/programs-surveys/cog.html.
[470] SUSB reports data by "enterprise" size designations (a business organization consisting of one or more domestic establishments that were specified under common ownership or control). However, the number of enterprises is not reported for the size designations. Instead, SUSB reports the number of "establishments" (individual plants, regardless of ownership) and "firms" (a collection of establishments with a single owner within a given state and industry) associated with enterprises size categories. Therefore, numbers in this analysis are for the number of establishments associated with small enterprises, which may exceed the number of small enterprises. The Department based the analysis on the number of establishments rather than firms for a more conservative estimate (potential overestimate) of the number of small businesses.

that of the 8.2 million entities, 80 percent (6.6 million) are small by SBA standards. These small entities employ 55.3 million workers, about 37 percent of workers (excluding self-employed, unpaid workers, and members of the armed forces). They also account for roughly 35 percent of total payroll ($3.7 trillion of $10.7 trillion).[471]

Although the Department used 6-digit NAICS to determine the number of small entities and the associated number of employees, the following tables aggregate findings to 27 industry categories. This was the most detailed level available while maintaining adequate sample sizes.[472] The Department started with the 51-industry breakdown and aggregated where necessary to obtain adequate sample sizes.

Table 28: Number of Entities and Employees by SBA Size Standards, by Industry and Employer Type

Industry / Employer Type	Entities (1,000s)		Workers (1,000s) [a]		Annual Payroll (Billions)	
	Total	Small	Total	Small Business Employed	Total	Small
Total	8,238.7	6,588.6	147,798.7	55,279.6	$10,660.7	$3,743.6
Industry [b]						
Agriculture, forestry, fishing, and hunting	23.3	19.3	1,349.6	702.6	$66.0	$34.7
Mining	23.0	18.5	587.9	276.3	$62.3	$28.6
Construction	780.3	752.7	9,345.8	5,617.2	$646.7	$390.4
Manufacturing - durable goods	174.6	159.8	10,032.5	4,634.0	$824.9	$368.6
Manufacturing - non-durable goods	108.4	96.6	5,580.1	2,674.4	$435.0	$195.1

[471] Since information is not available on employer size in the CPS MORG, respondents were randomly assigned as working in a small business based on the SUSB probability of employment in a small business by detailed Census industry. Annual payroll was estimated based on the CPS weekly earnings of workers by industry size.

[472] The Department required at least 15 affected workers (*i.e.*, observations) in small entities in Year 1.

Wholesale trade	390.8	301.3	3,169.5	1,308.9	$250.8	$100.9
Retail trade	1,036.9	661.3	15,698.4	4,878.2	$815.6	$264.4
Transportation and warehousing	279.1	220.1	7,539.4	1,795.4	$476.5	$112.3
Utilities	19.9	8.0	1,463.3	309.9	$142.3	$27.2
Information	162.0	93.9	2,720.8	702.5	$283.3	$69.2
Finance	297.4	137.5	4,859.8	875.2	$533.1	$99.5
Insurance	181.5	139.9	2,801.6	641.1	$254.1	$58.0
Real estate and rental and leasing	456.2	353.3	2,359.8	1,212.3	$181.8	$93.5
Professional and technical services	962.5	858.7	12,003.4	5,320.8	$1,389.8	$598.3
Management, administrative and waste management services	499.5	411.0	5,622.8	2,406.6	$310.7	$121.8
Educational services	111.5	98.9	14,383.5	3,701.4	$998.1	$239.4
Hospitals	7.5	1.5	7,832.2	277.4	$649.1	$22.6
Health care services, except hospitals	751.4	579.3	10,476.2	4,565.8	$672.5	$288.7
Social assistance	188.7	152.8	3,121.3	1,739.0	$153.9	$82.7
Arts, entertainment, and recreation	156.1	142.3	2,656.0	1,296.1	$138.7	$66.7
Accommodation	70.8	59.4	1,190.0	466.8	$57.9	$22.6
Food services and drinking places	675.1	524.8	8,750.2	4,952.0	$294.8	$167.6
Repair and maintenance	220.0	202.3	1,736.5	1,253.6	$95.9	$68.8
Personal and laundry services	254.4	226.7	1,644.1	1,286.4	$71.7	$55.5
Membership associations and organizations	307.0	294.8	2,038.9	1,395.3	$143.6	$96.1

Public administration [c]	90.1	65.7	8,211.2	990.3	$692.2	$70.6
Employer Type						
Nonprofit, private	597.3	504.5	10,692.3	4,029.0	$796.6	$264.3
For profit, private	7,551.3	5,874.3	114,570.7	47,910.7	$8,169.1	$3,257.6
Government (state and local)	90.1	65.7	18,284.5	3,339.9	$1,296.3	$221.7

Note: Establishment data are from SUSB 2021; worker and payroll data from pooled CPS MORG data for 2021-2023 adjusted to reflect 2023.

[a] Excludes the self-employed, unpaid workers, and workers in private households.

[b] Summation across industries may not add to the totals reported due to suppressed values and some entities not reporting an industry.

[c] Entity number represents the total number of governments, including state and local. Data from Census of Governments, 2017.

Estimates are not limited to entities subject to the FLSA because the Department cannot estimate which enterprises do not meet the enterprise coverage requirements because of data limitations. Although not excluding such entities and associated workers only affects a small percentage of workers generally, it may have a larger effect (and result in a larger overestimate) for non-profits, because revenue from charitable activities is not included when determining enterprise coverage.

3. Number of Affected Small Entities and Employees

The calculation of the number of affected EAP workers was explained in detail in section VII.B. Here, the Department focuses on how these workers were allocated to either small or large entities. To estimate the probability that an exempt EAP worker in the CPS data is employed by a small entity, the Department assumed this probability is equal to the proportion of all workers employed by small entities in the corresponding industry. That is, if 50 percent of

workers in an industry are employed in small entities, then on average small entities are expected to employ one out of every two exempt EAP workers in this industry.[473] The Department applied these probabilities to the population of exempt EAP workers to find the number of workers (total exempt EAP workers and total affected by the rule) that small entities employ. No data are available to determine whether small businesses (or small businesses in specific industries) are more or less likely than non-small businesses to employ exempt EAP workers or affected EAP workers. Therefore, the best assumption available is to assign the same rates to all small and non-small businesses.[474, 475]

The Department estimated that small entities employ 1.6 million of the 4.3 million affected workers (36.3 percent) (Table 29). This composes 2.8 percent of the 55.3 million workers that small entities employ. The sectors with the highest total number of affected workers employed by small entities are professional and technical services (281,000); health care services, except hospitals (140,000); and retail trade (125,000). The sectors with the largest percent of workers employed by small entities who are affected include: insurance (7.0 percent);

[473] The Department used CPS microdata to estimate the number of affected workers. This was done individually for each observation in the relevant sample by randomly assigning them a small business status based on the best available estimate of the probability of a worker to be employed in a small business in their respective industry.

[474] A strand of literature indicates that small businesses tend to pay lower wages than larger businesses. This may imply that workers in small businesses are more likely to be affected than workers in large businesses; however, the literature does not make clear what the appropriate alternative rate for small businesses should be.

[475] Workers are designated as employed in a small business based on their industry of employment. The share of workers considered small in nonprofit, for profit, and government entities is therefore the weighted average of the shares for the industries that compose these categories.

membership associations and organizations (5.7 percent); and professional and technical services

(5.3 percent).

Table 29: Number of Affected Workers Employed by Small Entities, by Industry and Employer Type

Industry	Workers (1,000s)		Affected Workers (1,000s) [a]	
	Total	Small Business Employed	Total	Small Business Employed
Total	147,798.7	55,279.6	4,337.5	1,574.1
Industry				
Agriculture, forestry, fishing, and hunting	1,349.6	702.6	13.3	6.4
Mining	587.9	276.3	18.5	8.8
Construction	9,345.8	5,617.2	184.6	112.1
Manufacturing - durable goods	10,032.5	4,634.0	232.9	121.8
Manufacturing - non-durable goods	5,580.1	2,674.4	117.7	58.9
Wholesale trade	3,169.5	1,308.9	112.3	50.9
Retail trade	15,698.4	4,878.2	377.4	124.5
Transportation and warehousing	7,539.4	1,795.4	113.1	30.0
Utilities	1,463.3	309.9	39.8	7.5

Finance	4,859.8	875.2	276.4	43.6
Insurance	2,801.6	641.1	198.6	45.1
Real estate and rental and leasing	2,359.8	1,212.3	89.4	51.3
Professional and technical services	12,003.4	5,320.8	676.3	280.7
Management, administrative and waste management services	5,622.8	2,406.6	151.1	47.5
Educational services	14,383.5	3,701.4	244.1	53.4
Hospitals	7,832.2	277.4	238.9	11.4
Health care services, except hospitals	10,476.2	4,565.8	347.0	140.1
Social assistance	3,121.3	1,739.0	154.2	91.4
Arts, entertainment, and recreation	2,656.0	1,296.1	118.3	64.6

Accommodation	1,190.0	466.8	26.6	12.3
Food services and drinking places	8,750.2	4,952.0	83.6	42.0
Repair and maintenance	1,736.5	1,253.6	21.5	16.1
Personal and laundry services	1,644.1	1,286.4	23.4	14.3
Membership associations and organizations	2,038.9	1,395.3	117.8	79.4
Public administration	8,211.2	990.3	227.2	25.2
Employer Type				
Nonprofit, private	10,692.3	4,029.0	461.3	201.3
For profit, private	114,570.7	47,910.7	3,392.5	1,310.8
Government (state and local)	18,284.5	3,339.9	483.6	62.1

Note: Worker data are from pooled CPS MORG data for 2021-2023 adjusted to reflect 2023.
[a] Estimation of affected workers employed by small entities was done at the most detailed industry level available. Therefore, at the more aggregated industry level shown in this table, the ratio of small business employed to total employed does not equal the ratio of affected small business employed to total affected for each industry, nor does it equal the ratio for the national total because relative industry size, employment, and small business employment differs from industry to industry.

Because no information is available on how affected workers would be distributed among small entities, the Department estimated a range of effects. At one end of this range, the Department assumed that each small entity employs no more than one affected worker, meaning that at most 1.6 million of the 6.6 million small entities will employ an affected worker. Thus, these assumptions provide an upper-end estimate of the number of affected small entities. (However, it provides a lower-end estimate of the effect per small entity because costs are spread over a larger number of entities; the impacts experienced by an entity would increase as the share of its workers that are affected increases.) For the purpose of estimating a lower-range number of affected small entities, the Department used the average size of a small entity as the typical size of an affected small entity, and assumed all workers are affected. This can be considered an

approximation of all employees at an entity affected.[476] The average number of employees in a small entity is the number of workers that small entities employ divided by the total number of small establishments in that industry. The number of affected employees at small businesses is then divided by this average number of employees to calculate 208,300 affected small entities.

Table 30 summarizes the estimated number of affected workers that small entities employ and the expected range for the number of affected small entities by industry. The Department estimated that the rule will affect 1.6 million workers who are employed by somewhere between 208,300 and 1.6 million small entities; this comprises from 3.2 percent to 23.9 percent of all small entities. It also means that from 5.0 million to 6.4 million small entities would incur no more than minimal regulatory familiarization costs (*i.e.*, 6.6 million minus 1.6 million equals 5.0 million; 6.6 million minus 208,300 equals 6.4 million, using rounded values). The table also presents the average number of affected employees per establishment using the method in which all employees at the establishment would be affected. For the other method, by definition, there would always be one affected employee per establishment. Also displayed is the average payroll per small establishment by industry (based on both affected and non-affected small entities), calculated by dividing total payroll of small businesses by the number of small businesses (Table 28) (applicable to both methods).

[476] This is not the true lower bound estimate of the number of affected entities. Strictly speaking, a true lower bound estimate of the number of affected small entities would be calculated by assuming all employees in the largest small entity are affected. For example, if the SBA standard is that entities with 500 employees are "small," and 1,350 affected workers are employed by small entities in that industry, then the smallest number of entities that could be affected in that industry (the true lower bound) would be three. However, because such an outcome appears implausible, the Department determined a more reasonable lower estimate would be based on average establishment size.

Table 30: Number of Small Affected Entities and Employees by Industry and Employer Type

Industry	Affected Workers in Small Entities (1,000s)	Number of Small Affected Entities (1,000s) [a]		Per Entity	
		One Affected Employee per Entity [b]	All Employees at Entity Affected [c]	Affected Employees [a]	Average Annual Payroll ($1,000s)
Total	1,574.1	1,574.1	208.3	7.6	$568.2
Industry					
Agriculture, forestry, fishing, and hunting	6.4	6.4	0.2	36.4	$1,796.9
Mining	8.8	8.8	0.6	15.0	$1,546.6
Construction	112.1	112.1	15.0	7.463	$518.6
Manufacturing - durable goods	121.8	121.8	4.2	29.0	$2,306.3
Manufacturing - non-durable goods	58.9	58.9	2.1	27.7	$2,020.1
Wholesale trade	50.9	50.9	11.7	4.3	$334.9

Personal and laundry services	14.3	14.3	2.5	5.7	$244.8
Membership associations and organizations	79.4	79.4	16.8	4.7	$325.8
Public administration [e]	25.2	25.2	1.7	15.1	$1,075.1
Employer Type					
Nonprofit, private	201.3	201.3	25.2	8.0	$523.9
For profit, private	1,310.8	1,310.8	160.7	8.2	$554.5
Government (state and local)	62.1	62.1	1.2	50.8	$3,373.6

Note: Establishment data are from SUSB 2021; worker and payroll data from pooled CPS MORG data for 2021-2023 adjusted to reflect 2023.

[a] Estimation of both affected small entity employees and affected small entities was done at the most detailed industry level available. Therefore, the ratio of affected small entities employees to total small entity employees for each industry may not match the ratio of small affected entities to total small entities at the more aggregated industry level presented in the table, nor will it equal the ratio at the national level because relative industry size, employment, and small business employment differs from industry to industry.

[b] This method may overestimate the number of affected entities and therefore the ratio of affected workers to affected entities may be greater than 1-to-1. However, the Department addresses this issue by also calculating effects based on the assumption that 100 percent of workers at an entity are affected.

[c] For example, on average, a small entity in the construction industry employs 7.5 workers (5.6 million employees divided by 752,700 small entities). This method assumes if an entity is affected then all 7.5 workers are affected. Therefore, in the construction industry this method estimates there are 15,000 small affected entities (112,100 affected small entity workers divided by 7.5).

[d] Number of entities is smaller than number of affected employees; thus, total number of entities is ,reported.

[e] Entity number represents the total number of state and local governments.

4. Impacts to Affected Small Entities

For small entities, the Department estimated various types of effects, including regulatory familiarization costs, adjustment costs, managerial costs, and payroll increases borne by employers. The Department estimated a range for the number of affected small entities and the impacts they incur. While the upper and lower bounds are likely over- and under-estimates, respectively, of effects per small entity, the Department believes that this range of costs and payroll increases provides the most accurate characterization of the effects of the rule on small employers.[477] Furthermore, the smaller estimate of the number of affected entities (*i.e.*, where all employees at each affected employer are assumed to be affected) will result in the largest costs and payroll increases per entity as a percent of establishment payroll and revenue, and the Department expects that many, if not most, entities will incur smaller costs, payroll increases, and effects relative to entity size.

Parameters that are used in the small business cost analysis for Year 1 are provided in Table 31, along with summary data of the impacts.[478]

Table 31: Overview of Parameters used for Costs to Small Businesses and the Impacts on Small Businesses

Small Business Costs	Cost
Direct and Payroll Costs	
Average total cost per affected entity [a]	$4,544
Range of total costs per affected entity [a]	$1,767-$57,218
Average percent of revenue per affected entity	0.16%
Average percent of payroll per affected entity	0.80%
Direct Costs	

[477] As noted previously, these are not the true lower and upper bounds. The values presented are the highest and lowest estimates the Department believes are plausible.
[478] *See* section VII.C.3 for a more fulsome discussion on these costs.

Regulatory familiarization	
Time (first year)	1 hour per entity
Time (update years)	10 minutes per entity
Hourly wage	$54.82
Adjustment	
Time (first year affected)	75 minutes per newly affected worker
Hourly wage	$54.82
Managerial	
Time (weekly)	10 minutes per affected worker whose hours change
Hourly wage	$86.82
Payroll Increases	
Average payroll increase per affected entity [a]	$2,773
Range of payroll increases per affected entity [a]	$674-$15,532

[a] Using the methodology where all employees at an affected small firm are affected. This assumption generates upper-end estimates. Lower-end cost estimates are significantly smaller.

The Department expects total direct employer costs will range from $368.7 million to $443.6 million for affected small entities (*i.e.*, those with affected employees) in the first year (an average cost of between $282 to $1,771 per entity) (Table 32). Small entities that do not employ affected workers will incur $274.9 million to $349.7 million in regulatory familiarization costs (an average cost of $54.82 per entity). The three industries with the highest costs (professional and technical services; health care services, except hospitals; and retail trade) account for about 35 percent of the costs. Hospitals are expected to incur the largest cost per establishment ($42,900 using the method where all employees are affected), although the costs are not expected to exceed 0.3 percent of payroll. The food services and drinking places industry is expected to experience the largest effect as a share of payroll (estimated direct costs compose 0.69 percent of average entity payroll).

Table 32: Year 1 Small Establishment Direct Costs, Total and per Establishment, by Industry and Employer Type

Industry	Direct Cost to Small Entities in Year 1 [a]					
	One Affected Employee			All Employees Affected		
	Total (Millions) [a]	Cost per Affected Entity	Percent of Annual Payroll	Total (Millions) [b]	Cost per Affected Entity	Percent of Annual Payroll
Total	$443.6	$282	0.05%	$368.7	$1,771	0.31%
Industry						
Agriculture, forestry, fishing, and hunting	$1.8	$281	0.02%	$1.5	$8,292	0.46%
Mining	$2.5	$281	0.02%	$2.0	$3,443	0.22%
Construction	$31.6	$282	0.05%	$26.3	$1,751	0.34%
Manufacturing - durable goods	$34.3	$282	0.01%	$27.9	$6,631	0.29%
Manufacturing - non-durable goods	$16.7	$283	0.01%	$13.5	$6,367	0.32%
Wholesale trade	$14.3	$281	0.08%	$12.2	$1,039	0.31%
Retail trade	$35.1	$282	0.07%	$29.2	$1,731	0.43%
Transportation and warehousing	$8.5	$282	0.06%	$7.0	$1,912	0.37%
Utilities	$2.1	$281	0.01%	$1.7	$8,876	0.26%
Information	$9.8	$281	0.04%	$8.1	$1,750	0.24%
Finance	$12.3	$281	0.04%	$10.3	$1,496	0.21%
Insurance	$12.7	$281	0.07%	$10.8	$1,093	0.26%
Real estate and rental and leasing	$14.5	$283	0.11%	$12.5	$839	0.32%
Professional and technical services	$79.1	$282	0.04%	$66.2	$1,460	0.21%
Management, administrative and waste management services	$13.5	$284	0.10%	$11.3	$1,394	0.47%

Educational services	$15.0	$281	0.01%	$12.2	$8,531	0.35%
Hospitals	$3.2	$281	0.00%	$2.6	$42,885	0.28%
Health care services, except hospitals	$39.5	$282	0.06%	$32.8	$1,842	0.37%
Social assistance	$25.7	$281	0.05%	$21.1	$2,633	0.49%
Arts, entertainment, and recreation	$18.2	$282	0.06%	$15.0	$2,120	0.45%
Accommodation	$3.5	$281	0.07%	$2.9	$1,834	0.48%
Food services and drinking places	$11.9	$282	0.09%	$9.8	$2,203	0.69%
Repair and maintenance	$4.5	$281	0.08%	$3.8	$1,459	0.43%
Personal and laundry services	$4.0	$282	0.12%	$3.4	$1,343	0.55%
Membership associations and organizations	$22.4	$282	0.09%	$18.9	$1,129	0.35%
Public administration	$7.1	$281	0.03%	$5.8	$3,471	0.32%
Employer Type						
Nonprofit, private	$54.4	$270	0.05%	$44.8	$1,777	0.34%
For profit, private	$394.4	$301	0.05%	$331.4	$2,062	0.37%
Government (state and local)	$17.5	$283	0.01%	$14.2	$11,633	0.34%

Note: Pooled CPS data for 2021-2023 adjusted to reflect 2023.

[a] Direct costs include regulatory familiarization, adjustment, and managerial costs.

[b] The range of costs per entity depends on the number of affected entities. The minimum assumes that each affected entity has one affected worker (therefore, the number of affected entities is equal to the number of affected workers). The maximum assumes the share of workers in small entities who are affected is also the share of small entity entities that are affected.

It is possible that the costs of the rule may be disproportionately large for small entities, especially because small entities often have limited human resources personnel on staff. However, the Department expects that small entities would rely on compliance assistance

materials provided by the Department or industry associations to become familiar with the final rule. Additionally, the Department notes that the rule is narrow in scope because the changes all relate to the salary component of the part 541 regulations. Finally, the Department believes that most entities have at least some nonexempt employees and, therefore, already have policies and systems in place for monitoring and recording their hours. The Department believes that applying those same policies and systems to the workers whose exemption status changes will not be an unreasonable burden on small businesses.

Average weekly earnings for affected EAP workers in small entities are expected to increase by about $7.06 per week per affected worker, using the incomplete fixed-job model[479] described in section VII.C.4.iii.[480] This would lead to $577.5 million in additional annual wage payments to employees in small entities (less than 0.5 percent of aggregate affected establishment payroll; Table 33). The largest payroll increases per establishment are expected in utilities (up to $15,500 per entity); hospitals (up to $14,300 per entity); and manufacturing - durable goods (up to $13,000 per entity). However, average payroll increases per entity would exceed one percent of average annual payroll in only two sectors: food services and drinking places (2.9 percent) and accommodation (1.1 percent).

Table 33: Year 1 Small Establishment Payroll Increases, Total and per Establishment, by Industry and Employer Type

[479] The incomplete fixed-job model reflects the Department's determination that an appropriate estimate of the impact on the implicit hourly rate of pay for regular overtime workers should be determined using the average of Barkume's and Trejo's two estimates of the incomplete fixed-job model adjustments: a wage change that is 40 percent of the adjustment toward the amount predicted by the fixed-job model, assuming an initial zero overtime pay premium, and a wage change that is 80 percent of the adjustment assuming an initial 28 percent overtime pay premium.
[480] This is an average increase for all affected workers (both standard test and HCE), and reconciles to the weighted average of individual salary changes discussed in the Transfers section.

Industry	Increased Payroll for Small Entities in Year 1 [a]				
	Total (Millions)	One Affected Employee		All Employees Affected	
		Per Entity	Percent of Annual Payroll	Per Entity	Percent of Annual Payroll
Total	$577.5	$367	0.06%	$2,773	0.49%

Government (state and local)	$18.8	$302	0.01%	$15,371	0.46%

Note: Pooled CPS data for 2021-2023 adjusted to reflect 2023.

[a] Aggregate change in total annual payroll experienced by small entities under the updated salary levels after labor market adjustments. This amount represents the total amount of (wage) transfers from employers to employees.

Table 34 presents estimated first year direct costs and payroll increases combined per entity and the costs and payroll increases as a percent of average entity payroll. The Department presents only the results for the upper bound scenario where all workers employed by the entity are affected. Combined costs and payroll increases per establishment range from $1,800 in insurance to $57,200 in hospitals. Combined costs and payroll increases compose more than two percent of average annual payroll in one sector, food services and drinking places (3.6 percent).

However, comparing costs and payroll increases to payrolls overstates the effects on entities because payroll represents only a fraction of the financial resources available to an establishment. The Department approximated revenue per affected small establishment by calculating the ratio of small business revenues to payroll by industry from the 2017 SUSB data

then multiplying that ratio by average small entity payroll.[481] Using this approximation of annual revenues as a benchmark, only one sector will have costs and payroll increases amounting to greater than one percent of revenues, food services and drinking places (1.1 percent).

Table 34: Year 1 Small Establishment Direct Costs and Payroll Increases, Total and per Entity, by Industry and Employer Type, Using All Employees in Entity Affected Method

Industry	Costs and Payroll Increases for Small Affected Entities, All Employees Affected			
	Total (Millions)	Per Entity [a]	Percent of Annual Payroll	Percent of Estimated Revenues [b]
Total	$946.3	$4,544	0.80%	0.16%
Industry				
Agriculture, forestry, fishing, and hunting	$2.7	$15,381	0.86%	0.17%
Mining	$4.3	$7,271	0.47%	0.07%
Construction	$69.9	$4,655	0.90%	0.21%
Manufacturing - durable goods	$82.6	$19,659	0.85%	0.18%
Manufacturing - non-durable goods	$35.4	$16,658	0.82%	0.11%
Wholesale trade	$37.1	$3,162	0.94%	0.07%
Retail trade	$95.4	$5,652	1.41%	0.14%
Transportation and warehousing	$21.1	$5,726	1.12%	0.26%
Utilities	$4.7	$24,409	0.71%	0.05%
Information	$12.2	$2,621	0.36%	0.11%
Finance	$22.2	$3,242	0.45%	0.13%
Insurance	$17.4	$1,767	0.43%	0.09%
Real estate and rental and leasing	$38.2	$2,554	0.97%	0.21%
Professional and technical services	$182.9	$4,038	0.58%	0.23%
Management, administrative and waste management services	$25.4	$3,127	1.06%	0.43%
Educational services	$24.2	$16,965	0.70%	0.29%
Hospitals	$3.5	$57,218	0.37%	0.16%

[481] The Department used this estimate of revenue, instead of small business revenue reported directly from the 2017 SUSB so revenue aligned with payrolls in 2023.

Health care services, except hospitals	$63.4	$3,564	0.72%	0.30%
Social assistance	$33.4	$4,167	0.77%	0.36%
Arts, entertainment, and recreation	$43.8	$6,179	1.32%	0.43%
Accommodation	$9.4	$6,023	1.59%	0.38%
Food services and drinking places	$50.5	$11,339	3.55%	1.11%
Repair and maintenance	$12.5	$4,800	1.41%	0.40%
Personal and laundry services	$5.5	$2,184	0.89%	0.31%
Membership associations and organizations	$38.3	$2,284	0.70%	0.17%
Public administration	$10.4	$6,201	0.58%	0.14%
Employer Type				
Nonprofit, private	$94.40	$3,570	1.00%	0.30%
For profit, private	$585.30	$3,532	1.00%	0.20%
Government (state and local)	$12.20	$9,264	0.60%	0.20%

Note: Pooled CPS data for 2021-2023 adjusted to reflect 2023.
[a] Total direct costs and transfers for small entities in which all employees are affected. Impacts to small entities in which one employee is affected will be a fraction of the impacts presented in this table.
[b] Revenues estimated by calculating the ratio of estimated small business revenues to payroll from the 2017 SUSB, and multiplying by payroll per small entity. For the public administration sector, the ratio was calculated using revenues and payroll from the 2017 Census of Governments.

5. Projected Effects to Affected Small Entities in Year 2 through Year 10

To determine how small businesses would be affected in future years, the Department projected costs to small businesses for 9 years after Year 1 of the rule. Projected employment and earnings were calculated using the same methodology described in section VII.B.3. Affected employees in small firms follow a similar pattern to affected workers in all entities: the number decreases gradually between automatic update years, and then increases. There are 1.6 million affected workers in small entities in Year 1 and 2.2 million in Year 10. Table 35 reports affected workers in these 2 years only.

Table 35: Projected Number of Affected Workers in Small Entities, by Industry

Industry	Affected Workers in Small entities (1,000s)	
	Year 1	Year 10
Total	1,574.1	2,171.7
Agriculture, forestry, fishing, and hunting	6.4	8.8
Mining	8.8	10.6
Construction	112.1	159.7
Manufacturing - durable goods	121.8	169.8
Manufacturing - non-durable goods	58.9	79.7
Wholesale trade	50.9	70.5
Retail trade	124.5	148.4
Transportation and warehousing	30.0	47.1
Utilities	7.5	13.3
Information	34.8	40.7
Finance	43.6	58.7
Insurance	45.1	58.6
Real estate and rental and leasing	51.3	81.0
Professional and technical services	280.7	394.5
Management, administrative and waste management services	47.5	56.8
Educational services	53.4	80.9
Hospitals	11.4	16.3
Health care services, except hospitals	140.1	205.0
Social assistance	91.4	136.0
Arts, entertainment, and recreation	64.6	99.6
Accommodation	12.3	12.4
Food services and drinking places	42.0	52.4
Repair and maintenance	16.1	20.5
Personal and laundry services	14.3	17.5
Membership associations and organizations	79.4	98.7
Public administration	25.2	34.2

Note: Worker data are from Pooled CPS data for 2021-2023 adjusted to reflect 2023.

Direct costs and payroll increases for small entities vary by year but generally decrease between updates as the real value of the salary and compensation levels decrease and the number

of affected workers consequently decreases. In updating years, costs will increase due to newly affected workers and some regulatory familiarization costs. Direct costs and payroll increases for small businesses will increase in Year 10 (an automatic update year) compared to Year 1, $946 million in Year 1 and $1.3 billion in Year 10 (Table 36 and Figure 10).

Table 36: Projected Direct Costs and Payroll Increases for Affected Small Entities, by Industry, Using All Employees in Entity Affected Method

Industry	Costs and Payroll Increases for Small Affected Entities, All Employees Affected (Millions $2023)	
	Year 1	Year 10
Total	$946.3	$1,263.5
Agriculture, forestry, fishing, and hunting	$2.7	$5.8
Mining	$4.3	$4.2
Construction	$69.9	$102.7
Manufacturing - durable goods	$82.6	$113.3
Manufacturing - non-durable goods	$35.4	$44.5
Wholesale trade	$37.1	$67.7
Retail trade	$95.4	$97.3
Transportation and warehousing	$21.1	$35.1
Utilities	$4.7	$5.5
Information	$12.2	$14.3
Finance	$22.2	$26.6
Insurance	$17.4	$16.7
Real estate and rental and leasing	$38.2	$54.7

Social assistance	$33.4	$41.3
Arts, entertainment, and recreation	$43.8	$65.3
Accommodation	$9.4	$7.9
Food services and drinking places	$50.5	$59.4
Repair and maintenance	$12.5	$16.9

Personal and laundry services	$5.5	$10.1
Membership associations and organizations	$38.3	$53.3
Public administration	$10.4	$11.7

Note: Pooled CPS data for 2021-2023 adjusted to reflect 2023.

Figure 10: 10-Year Projected Number of Affected Workers in Small Entities, and Associated Costs and Payroll Increases

E. Projected Reporting, Recordkeeping, and Other Compliance Requirements of the Rule

The FLSA sets minimum wage, overtime pay, and recordkeeping requirements for employment subject to its provisions. Unless exempt, covered employees must be paid at least the minimum wage and not less than one and one-half times their regular rates of pay for overtime hours worked.

Pursuant to section 11(c) of the FLSA, the Department's regulations at part 516 require covered employers to maintain certain records about their employees. Bona fide EAP workers

are subject to some of these recordkeeping requirements but are exempt from others related to pay and hours worked.[482] Thus, although this rulemaking does not introduce any new recordkeeping requirements, employers will need to keep some additional records for affected employees who become newly nonexempt if they do not presently record such information. As indicated in this analysis, this rule expands minimum wage and overtime pay coverage to 4.3 million affected EAP workers, of which 1.6 million are employed by a small entity. This will result in an increase in employer burden and was estimated in the PRA portion (section VI) of this rule.

F. Steps the Agency Has Taken to Minimize the Significant Economic Impact on Small Entities

This section describes the steps the agency has taken to minimize the economic impact on small entities, consistent with the stated objectives of the FLSA. It includes a statement of the factual, policy, and legal reasons for the selected standard and HCE levels adopted in the rule and why alternatives were rejected.

In this rule, the Department sets the standard salary level equal to the 35th percentile of earnings of full-time salaried workers in the lowest-wage Census Region (currently the South). Based on 2023 data, this results in a salary level of $1,128 per week. This approach will fully restore the salary level's screening function and, by setting the salary level above the long test salary level, ensure that fewer lower paid white-collar employees who perform significant amounts of nonexempt work are included in the exemption. At the same time, by setting it below the short test salary level, the new salary level allows employers to continue to use the exemption

[482] *See* 29 CFR 516.3 (providing that employers need not maintain the records required by 29 CFR 516.2(a)(6) through (10) for their EAP workers).

for many lower paid white-collar employees who were made exempt under the 2004 standard duties test. Thus, the Department believes that the new salary level will also more reasonably distribute between employees and their employers the impact of the shift from a two-test to a one-test system on employees earning between the long and short test salary levels. As in prior rulemakings, the Department is not establishing multiple salary levels based on region, industry, employer size, or any other factor, which stakeholders have generally agreed would significantly complicate the regulations.[483] Instead, the Department is setting the standard salary level using earnings data from the lowest-wage Census Region, in part to accommodate small employers and employers in low-wage industries.[484]

The Department is setting the HCE total annual compensation level equal to the 85th percentile of earnings of full-time salaried workers nationally ($151,164 annually based on 2023 data). The Department believes that this level avoids costs associated with evaluating, under the standard duties test, the exemption statuses of large numbers of highly-paid white-collar employees, many of whom would have remained exempt even under that test, while providing a meaningful and appropriate complement to the more lenient HCE duties test. While the threshold is higher than the HCE level adopted in the 2019 rule (which was set equal to the 80th percentile of earnings for salaried workers nationwide), the HCE threshold in this rule is lower than the HCE percentile adopted in the 2004 and 2016 rules, which covered 93.7 and 90 percent of salaried workers nationwide respectively. The Department further believes that nearly all of the highly-paid white-collar workers earning above this threshold "would satisfy any duties test."[485]

[484] *See* 84 FR 51238; 81 FR 32527; 69 FR 22237.
[485] *See* 84 FR 51250 (internal citation omitted).

1. Differing Compliance and Reporting Requirements for Small Entities

This rule provides no differing compliance requirements and reporting requirements for small entities. The Department strives to minimize respondent recordkeeping burden by requiring no specific form or order of records under the FLSA and its corresponding regulations. Moreover, employers normally maintain the records under usual or customary business practices.

2. Least Burdensome Option or Explanation Required

The Department believes it has chosen the most effective option that updates and clarifies the rule and results in the least burden. Among the options considered by the Department, the least restrictive option was using the 2004 methodology (the 20th percentile of weekly earnings of full-time nonhourly workers in the lowest-wage Census region, currently the South, and in retail nationally) to set the standard salary level, which was also the methodology used in the 2019 rule. As noted above, however, the salary level produced by the 2004 methodology is below the long test salary level, which the Department considers to be a key parameter for determining an appropriate salary level in a one-test system using the current standard duties test. Using the 2004 methodology thus does not address the Department's concerns discussed above under Objectives of, and Need for, the Rule.

Pursuant to section 603(c) of the RFA, the following alternatives are to be addressed:

i. Differing Compliance or Reporting Requirements That Take into Account the Resources Available to Small Entities.

The FLSA creates a level playing field for businesses by setting a floor below which employers may not pay their employees. To establish differing compliance or reporting requirements for small businesses would undermine this important purpose of the FLSA. The Department makes available a variety of resources to employers for understanding their

obligations and achieving compliance. Therefore, the Department is not implementing differing compliance or reporting requirements for small businesses.

ii. The Clarification, Consolidation, or Simplification of Compliance and Reporting Requirements for Small Entities.

This rule imposes no new reporting requirements. The Department makes available a variety of resources to employers for understanding their obligations and achieving compliance.

iii. The Use of Performance Rather than Design Standards.

Under this rule, employers may achieve compliance through a variety of means. Employers may elect to continue to claim the EAP exemption for affected employees by adjusting salary levels, hiring additional workers, spreading overtime hours to other employees, or compensating employees for overtime hours worked. The Department makes available a variety of resources to employers for understanding their obligations and achieving compliance.

iv. An Exemption from Coverage of the Rule, or any Part Thereof, for Such Small Entities.

Creating an exemption from coverage of this rulemaking for businesses with as many as 500 employees, those defined as small businesses under SBA's size standards, is inconsistent with the FLSA, which applies to all employers that satisfy the enterprise coverage threshold or employ individually covered employees, regardless of employer size.[486]

IX. Unfunded Mandates Reform Act Analysis

The Unfunded Mandates Reform Act of 1995 (UMRA),[487] requires agencies to prepare a written statement for rulemaking that includes any Federal mandate that may result in increased expenditures by state, local, and tribal governments, in the aggregate, or by the private sector, of

[486] *See* 29 U.S.C. 203(s).
[487] 2 U.S.C. 1501 *et seq.*

$200 million ($100 million in 1995 dollars adjusted for inflation to 2023) or more in at least one year. This statement must (1) identify the authorizing legislation; (2) present the estimated costs and benefits of the rule and, to the extent that such estimates are feasible and relevant, present its estimated effects on the national economy; (3) summarize and evaluate state, local, and tribal government input; and (4) identify reasonable alternatives and select, or explain the non-selection, of the least costly, most cost-effective, or least burdensome alternative. This rule contains unfunded mandates as described below.

A. Authorizing Legislation

This final rule is issued pursuant to section 13(a)(1) of the FLSA, 29 U.S.C. 213(a)(1). The section exempts from the FLSA's minimum wage and overtime pay requirements "any employee employed in a bona fide executive, administrative, or professional capacity (including any employee employed in the capacity of academic administrative personnel or teacher in elementary or secondary schools), or in the capacity of outside salesman (as such terms are defined and delimited from time to time by regulations of the Secretary, subject to the provisions of [the Administrative Procedure Act]. . .)."[488] The requirements of the exemption are contained in part 541 of the Department's regulations. Section 3(e) of the FLSA[489] defines "employee" to include most individuals employed by a state, political subdivision of a state, or interstate governmental agency. Section 3(x) of the FLSA[490] also defines public agencies to include the government of a state or political subdivision thereof, or any interstate governmental agency.

[488] 29 U.S.C. 213(a)(1).
[489] 29 U.S.C. 203(e).
[490] 29 U.S.C. 203(x).

B. Costs and Benefits

For purposes of the UMRA, this rule includes a Federal mandate that is expected to result in increased expenditures by the private sector of more than $200 million in at least one year and result in increased expenditures by state, local and tribal governments, in the aggregate, of $200 million or more in at least one year. Based on the economic impact analysis of this final rule, the Department determined that Year 1 costs for state and local governments would total $197.7 million, of which $98.9 million are direct employer costs and $98.8 million are payroll increases (Table 37). In subsequent years, state and local governments may experience payroll increases of as much as $183.7 million (in year 10 of the rule).

The Department estimates that the final rule will result in Year 1 costs to the private sector of approximately $2.7 billion, of which $1.3 billion are direct employer costs and $1.4 billion are payroll increases.

Table 37: Summary of Year 1 Impacts by Type of Employer

Impact	Total	Private	Government [a]
Affected EAP Workers (1,000s)			
Number	4,337	3,854	475
Direct Employer Costs (Millions)			
Regulatory familiarization	$451.6	$446.7	$4.9
Adjustment	$299.1	$265.9	$32.6
Managerial	$685.5	$622.8	$61.4
Total direct costs	$1,436.2	$1,335.3	$98.9
Payroll Increases (Millions)			
From employers to workers	$1,509.2	$1,402.7	$98.8
Direct Employer Costs & Payroll Increases (Millions)			
From employers	$2,945.4	$2,738.0	$197.7

[a] Includes only state, local, and tribal governments.

UMRA requires agencies to estimate the effect of a regulation on the national economy if, at its discretion, such estimates are reasonably feasible and the effect is relevant and material.[491] However, OMB guidance on this requirement notes that such macroeconomic effects tend to be measurable in nationwide econometric models only if the economic effect of the regulation reaches 0.25 percent to 0.5 percent of GDP, or in the range of $68.4 billion to $136.8 billion (using 2023 GDP). A regulation with a smaller aggregate effect is not likely to have a measurable effect in macro-economic terms unless it is highly focused on a particular geographic region or economic sector, which is not the case with this rule.

The Department's RIA estimates that the total first-year costs (direct employer costs and payroll increases from employers to workers) of the final rule would be approximately $2.7 billion for private employers and $197.7 million for state and local governments. Given OMB's guidance, the Department has determined that a full macro-economic analysis is not likely to show any measurable effect on the economy. Therefore, these costs are compared to payroll costs and revenue to demonstrate the feasibility of adapting to these new rules.

Total first-year state and local government costs compose 0.02 percent of state and local government payrolls.[492] First-year state and local government costs compose 0.004 percent of state and local government revenues (projected 2023 revenues were estimated to be $5.0 trillion).[493] Effects of this magnitude will not result in significant disruptions to typical state and

[491] 2 U.S.C. 1532(a)(4).
[492] 2020 state and local government payrolls were $1.1 trillion, inflated to 2023 payroll costs of $1.2 trillion using the GDP deflator. State and Local Government Finances 2020. Available at https://www.census.gov/data/datasets/2020/econ/local/public-use-datasets.html.
[493] 2020 state and local revenues were $4.3 trillion, inflated to 2023 dollars using the GDP deflator. State and Local Government Finances 2020. Available at https://www.census.gov/data/datasets/2020/econ/local/public-use-datasets.html.

local governments. The $197.7 million in state and local government costs constitutes an average of approximately $2,200 for each of the approximately 90,126 state and local entities. The Department considers these costs to be quite small both in absolute terms and in relation to payroll and revenue.

Total first-year private sector costs compose 0.034 percent of private sector payrolls nationwide.[494] Total private sector first-year costs compose 0.006 percent of national private sector revenues (revenues in 2023 are projected to be $45.3 trillion).[495] The Department concludes that effects of this magnitude are affordable and will not result in significant disruptions to typical firms in any of the major industry categories.

C. Summary of State, Local, and Tribal Government Input

Prior to issuing the NPRM, the Department held a series of stakeholder listening sessions between March 8, 2022, and June 3, 2022 to gather input on its part 541 regulations. Stakeholders invited to participate in these listening sessions included representatives from labor unions; worker advocate groups; industry associations; small business associations; state and local governments; tribal governments; non-profits; and representatives from specific industries such as K-12 education, higher education, healthcare, retail, restaurant, manufacturing, and wholesale. Stakeholders were invited to share their input on issues including the appropriate EAP salary level, the costs and benefits of increasing the salary level to employers and employees, the methodology for updating the salary level and frequency of updates, and whether changes to the

[494] Private sector payroll costs are projected to be $8.1 trillion in 2023 based on private sector payroll costs of $6.6 trillion in 2017, inflated to 2023 dollars using the GDP deflator. 2017 Economic Census of the United States.

[495] Private sector revenues in 2017 were $37.0 trillion using the 2017 Economic Census of the United States. This was inflated to 2023 dollars using the GDP deflator.

duties test are warranted. A listening session was held specifically for state and local governments on April 1, 2022, and a session for tribal governments was held on May 12, 2022. The input received at these listening sessions aided the Department in drafting its rule.

The Department received mixed feedback on the proposed rule from state, local, and tribal government commenters. Some state and local government stakeholders voiced strong support for the proposed rule. For example, the Coalition of State AGs supported the proposal, stating that the current salary level is too low and that the proposed updating mechanism "is important for employers in our respective states to have predictability in their labor costs." The Washington State Department of Labor & Industries noted that it implemented a state EAP salary level through administrative rulemaking which is currently $1,302.40 per week ($67,724.80 annually), stating that "the State of Washington considered many of the same factors" as the Department to set its salary level. Commenting on behalf of 1.4 million members who are state and local government employees, AFSCME described the proposed salary level as "a modest increase that will nevertheless benefit millions of workers."

Other state and local government stakeholders voiced opposition to the proposed rule. The National Association of Counties asserted that the proposed threshold increases would have a disproportionate impact on small and rural county governments, emphasizing that practical and legal constraints limit the ability of county governments to raise revenues to account for added labor costs. Similarly, Ohio Township Association commented that "[if] townships [do] not wish to raise taxes or residents reject a property tax levy for such purpose, the township will be forced to cut or eliminate services." *See also* Pennsylvania State Association of Township Supervisors (providing similar feedback). The Mississippi State Personnel Board asserted that the proposed

rule could jeopardize Mississippi's use of telework to recruit and retain certain employees for the state government.

The Department received one comment from a tribal government stakeholder—Ho-Chuck Inc., a subsidiary of the Winnebago Tribe of Nebraska. Explaining that it operates various establishments in the gaming and retail industries, Ho-Chuck Inc. expressed concern about the magnitude of the Department's proposed increase to the standard salary level and of the NPRM's proposed 60-day effective date. Ho-Chuck Inc. requested the Department to consider a smaller increase, such as a 25 percent increase to the current $684 per week salary level (i.e., $855 per week), with "staggered increases over a period of 3 to 5 years to the higher amount."

As discussed in this final rule,[496] the Department agrees with commenters such as the Coalition of State AGs that the updating mechanism's triennial updates to the earnings thresholds for exemption will provide greater certainty and predictability for the regulated community. The Department appreciates that some employers, such as state, local, and tribal governments, may have less flexibility than others to account for new labor costs, as well as that employers in low-wage industries, regions, and in non-metropolitan areas may be more affected because they typically pay lower wages and salaries. However, the Department believes that costs and transfers associated with this rule will be manageable for and will not result in significant disruptions to state, local, and tribal governments. The Department is setting the standard salary level using earnings data from the lowest-wage Census Region, in part to accommodate small employers and employers in low-wage sectors and regions. As discussed earlier in this section, the Department estimates that total first-year costs for state and local governments comprise 0.02

[496] *See* sections V.A.3, VII.C.

percent of state and local government payrolls and 0.004 percent of state and local government revenues. Moreover, as discussed in this final rule,[497] the Department has determined, upon consideration of commenter feedback, that a delayed applicability date is appropriate for the new standard salary level and the HCE total annual compensation threshold. Specifically, the new $1,128 per week standard salary level and $151,164 per year HCE total annual compensation threshold will not be applicable until January 1, 2025.

D. Least Burdensome Option or Explanation Required

This final rule has described the Department's consideration of various options throughout the preamble (*see* section V.B.4.iv) and economic impact analysis (*see* section VII.C.8). The Department believes that it has chosen the least burdensome but still cost-effective methodology to update the salary level consistent with the Department's statutory obligation to define and delimit the scope of the EAP exemption. Although some alternative options considered would set the standard salary level at a rate lower than the finalized level, that outcome would not necessarily be the most cost-effective or least-burdensome. A salary level equal to or below the long test level would result in the exemption of lower-salaried employees who traditionally were entitled to overtime protection under the long test either because of their low salary or because they perform large amounts of nonexempt work. This approach would also effectively place the burden of the move from a two-test system to a one-test system on employees who historically were nonexempt because they earned between the long and short test salary levels but did not meet the long duties test.

[497] *See* section IV.

Selecting a standard salary level in a one-test system inevitably affects the impact of providing overtime protection to employees paid between the long and short test salary levels. Too low of a salary level shifts the impact of the move to a one-test system to employees by exempting lower-salaried employees who perform large amounts of nonexempt work. However, too high a salary level shifts the impact of the move to a one-test system to employers by denying them the use of the exemption for lower-salaried employees who traditionally were exempt under the long duties test, thereby increasing their labor costs. The Department has determined that setting the standard salary level equivalent to the earnings of the 35th percentile of full-time salaried workers in the lowest-wage Census Region will more effectively identify in a one-test system who is employed in a bona fide EAP capacity in a manner that reasonably distributes among employees earning between the long and short test salary levels and their employers the impact of the Department's move from a two-test to a one-test system. The Department believes that the final rule reduces burden on employers of nonexempt workers who earn between the current and finalized standard salary level. Currently, employers must rely on the duties test to determine the exemption status of these workers. Under this final rule, the exemption status of these workers will be determined based on the simpler salary level test.

The Department is also adopting a mechanism to regularly update the standard salary level and HCE total compensation requirement for wage growth, which will ensure that the thresholds continue to work efficiently to help identify EAP employees. As noted above, the history of the part 541 regulations shows multiple, significant gaps during which the earnings thresholds were not updated and their effectiveness in helping to define the EAP exemption

decreased as wages increased. Routine updates of the earnings thresholds to reflect wage growth will bring certainty and stability to employers and employees alike.

X. Executive Order 13132, Federalism

The Department has reviewed this rule in accordance with Executive Order 13132 regarding federalism and determined that it does not have federalism implications. The proposed rule would not have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government.

XI. Executive Order 13175, Indian Tribal Governments

This rule will not have tribal implications under Executive Order 13175 that would require a tribal summary impact statement. The rule would not have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

List of Subjects

29 CFR Part 541

Labor, Minimum wages, Overtime pay, Salaries, Teachers, Wages.

For the reasons set out in the preamble, the Wage and Hour Division, Department of Labor amends Title 29 CFR chapter V, as follows:

PART 541—DEFINING AND DELIMITING THE EXEMPTIONS FOR EXECUTIVE, ADMINISTRATIVE, PROFESSIONAL, COMPUTER AND OUTSIDE SALES EMPLOYEES

1. The authority citation for part 541 continues to read as follows:

Authority: 29 U.S.C. 213; Pub. L. 101-583, 104 Stat. 2871; Reorganization Plan No. 6 of 1950 (3 CFR, 1945-53 Comp., p. 1004); Secretary's Order 01-2014 (Dec. 19, 2014), 79 FR 77527 (Dec. 24, 2014).

2. Add § 541.5 to read as follows:

§ 541.5 Severability.

The provisions of this part are separate and severable and operate independently from one another. If any provision of this part is held to be invalid or unenforceable by its terms, or as applied to any person or circumstance, or stayed pending further agency action, the provision must be construed so as to continue to give the maximum effect to the provision permitted by law, unless such holding be one of utter invalidity or unenforceability, in which event the provision will be severable from part 541 and will not affect the remainder thereof.

3. Amend § 541.100, by revising paragraph (a)(1) to read as follows:

§ 541.100 General rule for executive employees.

(a) * * *

(1) Compensated on a salary basis at not less than the level set forth in § 541.600;

* * * * *

4. Amend § 541.200, by revising paragraph (a)(1) to read as follows:

§ 541.200 General rule for administrative employees.

(a) * * *

(1) Compensated on a salary or fee basis at not less than the level set forth in § 541.600;

* * * * *

5. Amend § 541.204, by revising paragraph (a)(1) to read as follows:

§ 541.204 Educational establishments.

(a) * * *

(1) Compensated on a salary or fee basis at not less than the level set forth in § 541.600; or on a salary basis which is at least equal to the entrance salary for teachers in the educational establishment by which employed; and

* * * * *

6. Amend § 541.300, by revising paragraph (a)(1) to read as follows:

§ 541.300 General rule for professional employees.

(a) * * *

(1) Compensated on a salary or fee basis at not less than the level set forth in § 541.600; and

* * * * *

7. Amend § 541.400, by revising the first sentence of paragraph (b) to read as follows:

§ 541.400 General rule for computer employees.

* * * * *

(b) The section 13(a)(1) exemption applies to any computer employee who is compensated on a salary or fee basis at not less than the level set forth in § 541.600. * * *

* * * * *

8. Revise § 541.600 to read as follows:

§ 541.600 Amount of salary required.

(a) *Standard salary level*. To qualify as an exempt executive, administrative, or professional employee under section 13(a)(1) of the Act, an employee must be compensated on a salary basis at a rate per week of not less than the amount set forth in paragraphs (a)(1) through (3) of this section, exclusive of board, lodging or other facilities, unless paragraph (b) or (c) of this section applies. Administrative and professional employees may also be paid on a fee basis, as defined in § 541.605.

(1) Beginning on July 1, 2024, $844 per week (the 20th percentile of weekly earnings of full-time nonhourly workers in the lowest-wage Census Region and/or retail industry nationally).

(2) Beginning on January 1, 2025, $1,128 per week (the 35th percentile of weekly earnings of full-time nonhourly workers in the lowest-wage Census Region).

(3) As of July 1, 2027, the level calculated pursuant to § 541.607(b)(1).

(b) *Commonwealth of the Northern Mariana Islands, Guam, Puerto Rico, U.S. Virgin Islands.* To qualify as an exempt executive, administrative, or professional employee under section 13(a)(1) of the Act, an employee in the Commonwealth of the Northern Mariana Islands, Guam, Puerto Rico, or the U.S. Virgin Islands employed by employers other than the Federal Government must be compensated on a salary basis at a rate of not less than $455 per week, exclusive of board, lodging or other facilities. Administrative and professional employees may also be paid on a fee basis, as defined in § 541.605.

(c) *American Samoa*. To qualify as an exempt executive, administrative, or professional employee under section 13(a)(1) of the Act, an employee in American Samoa employed by employers other than the Federal Government must be compensated on a salary basis at a rate of not less than $380 per week, exclusive of board, lodging or other facilities. Administrative and professional employees may also be paid on a fee basis, as defined in § 541.605.

(d) *Frequency of payment*. The salary level requirement may be translated into equivalent amounts for periods longer than one week. For example, the $1,128 per week requirement described in paragraph (a)(2) of this section would be met if the employee is compensated biweekly on a salary basis of not less than $2,256, semimonthly on a salary basis of not less than $2,444, or monthly on a salary basis of not less than $4,888. However, the shortest period of payment that will meet this compensation requirement is one week.

(e) *Alternative salary level for academic administrative employees*. In the case of academic administrative employees, the salary level requirement also may be met by compensation on a salary basis at a rate at least equal to the entrance salary for teachers in the educational establishment by which the employee is employed, as provided in § 541.204(a)(1).

(f) *Hourly rate for computer employees*. In the case of computer employees, the compensation requirement also may be met by compensation on an hourly basis at a rate not less than $27.63 an hour, as provided in § 541.400(b).

(g) *Exceptions to the standard salary criteria*. In the case of professional employees, the compensation requirements in this section shall not apply to employees engaged as teachers (*see* § 541.303); employees who hold a valid license or certificate permitting the practice of law or medicine or any of their branches and are actually engaged in the practice thereof (*see*

§ 541.304); or to employees who hold the requisite academic degree for the general practice of medicine and are engaged in an internship or resident program pursuant to the practice of the profession (*see* § 541.304). In the case of medical occupations, the exception from the salary or fee requirement does not apply to pharmacists, nurses, therapists, technologists, sanitarians, dietitians, social workers, psychologists, psychometrists, or other professions which service the medical profession.

9. Amend § 541.601 by revising paragraph (a), the first sentence of paragraph (b)(1), and paragraph (b)(2) to read as follows:

§ 541.601 Highly compensated employees.

(a) An employee shall be exempt under section 13(a)(1) of the Act if the employee receives total annual compensation of not less than the amount set forth in paragraph (a)(1) through (4) of this section, and the employee customarily and regularly performs any one or more of the exempt duties or responsibilities of an executive, administrative, or professional employee identified in subpart B, C, or D of this part:

(1) Beginning on July 1, 2024, $132,964 per year (the annualized earnings amount of the 80th percentile of full-time nonhourly workers nationally).

(2) Beginning on January 1, 2025, $151,164 per year (the annualized earnings amount of the 85th percentile of full-time nonhourly workers nationally).

(3) As of July 1, 2027, the total annual compensation level calculated pursuant to § 541.607(b)(2).

(4) Where the annual period covers periods during which multiple total annual compensation levels apply, the amount of total annual compensation due will be determined on a proportional basis.

(b)(1) Total annual compensation must include at least a weekly amount equal to that required by § 541.600(a)(1) through (3) paid on a salary or fee basis as set forth in §§ 541.602 and 541.605, except that § 541.602(a)(3) shall not apply to highly compensated employees. * * *

(2) If an employee's total annual compensation does not total at least the amount set forth in paragraph (a) of this section by the last pay period of the 52-week period, the employer may, during the last pay period or within one month after the end of the 52-week period, make one final payment sufficient to achieve the required level. For example, for a 52-week period beginning January 1, 2025, an employee may earn $135,000 in base salary, and the employer may anticipate based upon past sales that the employee also will earn $20,000 in commissions. However, due to poor sales in the final quarter of the year, the employee only earns $14,000 in commissions. In this situation, the employer may within one month after the end of the year make a payment of at least $2,164 to the employee. Any such final payment made after the end of the 52-week period may count only toward the prior year's total annual compensation and not toward the total annual compensation in the year it was paid. If the employer fails to make such a payment, the employee does not qualify as a highly compensated employee, but may still qualify as exempt under subpart B, C, or D of this part.

* * * * *

10. Amend § 541.602 by revising the first sentence of paragraph (a)(3) and the first sentence of paragraph (a)(3)(i) to read as follows:

§ 541.602 Salary basis.

* * * * *

(a)(3) Up to ten percent of the salary amount required by § 541.600(a) through (c) may be satisfied by the payment of nondiscretionary bonuses, incentives, and commissions, that are paid annually or more frequently. * * *

(i) If by the last pay period of the 52-week period the sum of the employee's weekly salary plus nondiscretionary bonus, incentive, and commission payments received is less than 52 times the weekly salary amount required by § 541.600(a) through (c), the employer may make one final payment sufficient to achieve the required level no later than the next pay period after the end of the year. * * *

* * * * *

11. Amend § 541.604 by

a. Revising the second, third, and fourth sentences of paragraph (a) and;

b. Revising the third sentence in paragraph (b).

The revisions and additions read as follows:

§ 541.604 Minimum guarantee plus extras.

(a) * * * Thus, for example under the salary requirement described in § 541.600(a)(2), an exempt employee guaranteed at least $1,128 each week paid on a salary basis may also receive additional compensation of a one percent commission on sales. An exempt employee also may receive a percentage of the sales or profits of the employer if the employment arrangement also includes a guarantee of at least $1,128 each week paid on a salary basis. Similarly, the exemption is not lost if an exempt employee who is guaranteed at least $1,128 each week paid on a salary

basis also receives additional compensation based on hours worked for work beyond the normal workweek. * * *

(b) * * * Thus, for example under the salary requirement described in § 541.600(a)(2), an exempt employee guaranteed compensation of at least $1,210 for any week in which the employee performs any work, and who normally works four or five shifts each week, may be paid $350 per shift without violating the $1,128 per week salary basis requirement. * * *

12. Amend § 541.605 by revising paragraph (b) to read as follows:

§ 541.605 Fee basis.

* * * * *

(b) To determine whether the fee payment meets the minimum amount of salary required for exemption under these regulations, the amount paid to the employee will be tested by determining the time worked on the job and whether the fee payment is at a rate that would amount to at least the minimum salary per week, as required by §§ 541.600(a) through (c) and 541.602(a), if the employee worked 40 hours. Thus, for example under the salary requirement described in § 541.600(a)(2), an artist paid $600 for a picture that took 20 hours to complete meets the $1,128 minimum salary requirement for exemption since earnings at this rate would yield the artist $1,200 if 40 hours were worked.

13. Add § 541.607 to read as follows:

§ 541.607 Regular updates to amounts of salary and compensation required.

(a) *Initial update*—(1) *Standard salary level*. Beginning on July 1, 2024, the amount required to be paid per week to an exempt employee on a salary or fee basis, as applicable, pursuant to § 541.600(a)(1) will be not less than $844.

(2) *Highly compensated employees*. Beginning on July 1, 2024, the amount required to be paid in total annual compensation to an exempt highly compensated employee pursuant to § 541.601(a)(1) will be not less than $132,964.

(b) *Future updates*—(1) *Standard salary level.* (i) As of July 1, 2027, and every 3 years thereafter, the amount required to be paid to an exempt employee on a salary or fee basis, as applicable, pursuant to § 541.600(a) will be updated to reflect current earnings data.

(ii) The Secretary will determine the future update amounts by applying the methodology in effect under § 541.600(a) at the time the Secretary issues the notice required by paragraph (b)(3) of this section to current earnings data.

(2) *Highly compensated employees.* (i) As of July 1, 2027, and every 3 years thereafter, the amount required to be paid in total annual compensation to an exempt highly compensated employee pursuant to § 541.601(a) will be updated to reflect current earnings data.

(ii) The Secretary will determine the future update amounts by applying the methodology used to determine the total annual compensation amount in effect under § 541.601(a) at the time the Secretary issues the notice required by paragraph (b)(3) of this section to current earnings data.

(3) *Notice.* (i) Not fewer than 150 days before each future update of the earnings requirements under paragraphs (b)(1) and (2) of this section, the Secretary will publish a notice in the *Federal Register* stating the updated amounts based on the most recent available 4 quarters of CPS MORG data, or its successor publication, as published by the Bureau of Labor Statistics.

(ii) No later than the effective date of the updated earnings requirements, the Wage and Hour Division will publish on its website the updated amounts for employees paid pursuant to this part.

(4) *Delay of updates.* A future update to the earnings thresholds under this section is delayed from taking effect for a period of 120 days if the Secretary has separately published a notice of proposed rulemaking in the *Federal Register*, not fewer than 150 days before the date the update is set to take effect, proposing changes to the earnings threshold(s) and/or updating mechanism due to unforeseen economic or other conditions. The Secretary must state in the notice issued pursuant to paragraph (b)(3)(i) of this section that the scheduled update is delayed in accordance with this paragraph (b)(4). If the Secretary does not issue a final rule affecting the scheduled update to the earnings thresholds by the end of the 120-day extension period, the updated amounts published in accordance with paragraph (b)(3) of this section will take effect upon the expiration of the 120-day period. The 120-day delay of a scheduled update under this paragraph will not change the effective dates for future updates of the earnings requirements under this section.

Signed this 11th day of April, 2024.

WAGE AND HOUR DIVISION
UNITED STATES DEPARTMENT OF LABOR

Fact Sheet 13: Employee or Independent Contractor Classification Under the Fair Labor Standards Act (FLSA)

Revised March 2024

Is a Worker an Employee or an Independent Contractor?

The Department has issued regulations addressing how to analyze whether a worker is an employee or an independent contractor under the FLSA (29 CFR part 795, effective March 11, 2024). Employees receive the protections of the FLSA. Independent contractors are in business for themselves and therefore are not covered by the FLSA.

For a worker to be protected by the minimum wage and overtime pay requirements of the FLSA, the worker must be an "employee" of the employer, meaning that there is an employment relationship between the worker and employer. Independent contractors do not have these protections. Whether a worker is an employee or an independent contractor under the FLSA is determined by looking at the economic realities of the worker's relationship with the employer. If the economic realities show that the worker is economically dependent on the employer for work, then the worker is an employee. If the economic realities show that the worker is in business for themself, then the worker is an independent contractor. The economic realities of the entire working relationship are looked at to decide whether a worker is an employee or an independent contractor. Employment under the FLSA is not determined by technical concepts or common law standards of control; it is broader than the common law standard often applied to determine employment status under other Federal laws.

What Is the Economic Reality Test?

The economic reality test uses multiple factors to see if an employment relationship exists under the FLSA (29 CFR 795.110). The goal of the test is to decide if the worker is economically dependent on the employer for work or is instead in business for themse
All factors should be considered. No single factor determines a worker's status, and no one factor or combination of factors are more important than the other factors. Instead, the totality of the circumstances of the working relationship should be considere

The following factors, discussed more below, should guide the assessment of whether a worker is an employee under the FLSA or an independent contractor in business for themself:

1. Opportunity for profit or loss depending on managerial skill,
2. Investments by the worker and the employer,
3. Permanence of the work relationship,
4. Nature and degree of control,
5. Whether the work performed is integral to the employer's business, and
6. Skill and initiative.

Additional factors may be considered as well if they are relevant to whether the worker is in business for themself or is economically dependent on the employer for work. There are certain facts, however, that are not relevant to whether an employment relationship exists. What the worker is called is not relevant—a worker may be an employee under the FLSA regardless of the title or label they are given. A worker who is paid off the books or receives a 1099 is not necessarily an independent contractor and agreeing verbally or in writing to be classified as an independent contractor—including by signing an independent

contractor agreement—does not make a worker an independent contractor under the FLSA. Additionally, such facts as the place where work is performed, whether a worker is licensed by State/local government, and the time or mode of pay do not determine whether a worker is an employee or an independent contractor under the FLSA.

Economic Reality Test Factors

1. **Opportunity for profit or loss depending on managerial skill.** This factor primarily looks at whether a worker can earn profits or suffer losses through their own independent effort and decision making. Relevant facts include whether the worker negotiates their pay, decides to accept or decline work, hires their own workers, purchases material and equipment, or engages in other efforts to expand a business or secure more work, such as marketing or advertising. Taking such actions or having a real opportunity to take such actions but making a business decision not to (for example, because the potential profit to be gained may not justify the expense that would be incurred), indicates that the worker is an independent contractor. Not taking such actions or having only a theoretical opportunity to take such actions (for example, the worker must get approval from the employer), indicates that the worker is an employee. A worker who decides to work more hours or take on more jobs when paid a fixed rate per hour, day, or job is generally not exercising managerial skill like an independent contractor even if those decisions may lead to more earnings.

   Examples: Opportunity for Profit or Loss Depending on Managerial Skill

   - A worker for a landscaping company performs assignments only as decided by the company for its corporate clients. The worker does not independently choose assignments, ask for additional work from other clients, advertise the landscaping services, or try to reduce costs. The worker regularly agrees to work additional hours to earn more money. In this example, the worker does not exercise managerial skill that affects their profit or loss. Rather, their earnings may change based on the work available and their willingness to work more. Because of this lack of managerial skill affecting their opportunity for profit or loss, these facts indicate employee status under the opportunity for profit or loss factor.
   - In contrast, a worker provides landscaping services directly to corporate clients. The worker produces their own advertising, negotiates contracts, decides which jobs to perform and when to perform them, and decides when and whether to hire helpers to assist with the work. This worker exercises managerial skill that affects their opportunity for profit or loss. These facts indicate independent contractor status under the opportunity for profit or loss factor.
2. **Investments by the worker and the employer.** This factor primarily looks at whether the worker makes investments that are capital or entrepreneurial in nature. Investments by a worker that support the growth of a business, including by increasing the number of clients, reducing costs, extending market reach, or increasing sales, weigh in favor of independent contractor status. A lack of such capital or entrepreneurial investments weighs in favor of employee status. Costs to a worker of tools for a specific job and costs that the employer imposes on the worker are not capital or entrepreneurial investments that indicate independent contractor status. In addition to considering the nature of any investments by the worker, the worker's investments should be compared to the employer's investments in its overall business. The worker's investments do not need to be equal to the employer's and should not be compared only in dollar amounts or size. The focus should be on whether the worker makes similar types of investments as the employer (even if on a smaller scale) or investments of the type that would allow the worker to operate independently in the worker's industry or field. Such investments by the worke in comparison to the employer weigh in favor of independent contractor status, while a lack of investments that support an independent business indicate employee status.

   Examples: Investments by the Worker and the Employer

   - A graphic designer provides design services for a commercial design firm. The firm provides software, a computer, office space, and all the equipment and supplies for the worker. The company invests in marketing and finding clients and maintains a central office from which to manage services. The worker occasionally uses their own preferred drafting tools for certain jobs. In this scenario, the worker's relatively minor investment in supplies is not capital in nature and does little to further a business beyond completing specific jobs. These facts indicate employee status under the investment factor.
   - A graphic designer occasionally completes specialty design projects for the same commercial design firm. The graphic designer purchases their own design software, computer, drafting tools, and rents their own space. The graphic designer also spends money to market their services. These types of investments support an independent business and are capital in nature (e.g., they allow the worker to do more work and find new clients). These facts indicate independent contractor status under the investment factor.

3. **Degree of permanence of the work relationship.** This factor primarily looks at the nature and length of the work relationship. Work that is sporadic or project-based with a fixed ending date (or regularly occurring fixed periods of work), where the worker may make a business decision to take on multiple different jobs indicates independent contractor status. Work that is continuous, does not have a fixed ending date, or may be the worker's only work relationship indicates employee status. The lack of a long working relationship does not necessarily suggest that the worker is an independent contractor unless it is because of the worker's business decision. Short-term jobs for multiple employers may be due to the seasonal or temporary nature of the work or industry, and not the worker's business decision to market their services to multiple entities, and therefore may indicate employee status.

   Examples: Degree of Permanence of the Work Relationship

   - A cook has prepared meals for an entertainment venue continuously for several years. The cook prepares meals as decided by the venue, depending on the size and specifics of the event. The cook only prepares food for the entertainment venue, which has regularly scheduled events each week. The relationship between the cook and the venue is characterized by a high degree of permanence and exclusivity as the cook does not cook for other venues. These facts indicate employee status under the permanence factor.
   - A cook has prepared specialty meals occasionally for an entertainment venue over the past three years for certain events. The cook markets their meal preparation services to multiple venues and private individuals and turns down work from the entertainment venue for any reason, including because the cook is too busy with other meal preparation jobs. The cook has a sporadic or project-based nonexclusive relationship with the entertainment venue. These facts indicate independent contractor status under the permanence factor.

4. **Nature and degree of control.** This factor primarily looks at the level of control the potential employer has over the performance of the work and the economic aspects of the working relationship. Relevant facts include whether the potential employer: controls hiring, firing, scheduling, prices, or pay rates; supervises the performance of the work (including via technological means); has the right to supervise or discipline workers; and takes actions that limit the worker's ability to work for others. Where the potential employer maintains more control over these aspects of the work relationship, this factor weighs in favor of employee status, and where the potential employer maintains less control over these aspects of the work relationship, this factor weighs in favor of independent contractor status. Control that is for the sole purpose of complying with a specific, applicable federal, state, tribal, or local regulation, rather than the employer's own internal policies or customer standards, does not weigh in favor of an employment relationship.

   Examples: Nature and Degree of Control

   - A registered nurse provides nursing care for Alpha House, a nursing home. The nursing home sets the work schedule with input from staff regarding their preferences and determines the staff assignments. Alpha House's policies prohibit nurses from working for other nursing homes while employed with Alpha House to protect its residents. In addition, the nursing staff are supervised by regular check-ins with managers, but nurses generally perform their work without direct supervision. While nurses at Alpha House work without close supervision and can express preferences for their schedule, Alpha House maintains control over when and where a nurse can work and whether a nurse can work for another nursing home. These facts indicate employee status under the control factor.
   - Another registered nurse provides specialty movement therapy to residents at Beta House. The nurse maintains a website and was contacted by Beta House to assist its residents. The nurse provides the movement therapy for residents on a schedule agreed upon between the nurse and the resident, without direction or supervision from Beta House, and sets the price for services on the website. In addition, the nurse provides therapy sessions to residents at Beta House as well as other nursing homes in the community at the same time. These facts—that the nurse markets their specialized services to obtain work for multiple clients, is not supervised by Beta House, sets their own prices, and has the flexibility to select a work schedule—indicate independent contractor status under the control factor.

5. **Extent to which the work performed is an integral part of the employer's business.** This factor primarily looks at whether the work is critical, necessary, or central to the potential employer's principal business, which indicates employee status. Where the work performed by the worker is not critical, necessary, or central to the potential employer's principal business, this indicates independent contractor status. This factor does not depend on whether any individual worker in particular is an integral part of the business, but rather whether the work they perform is an integral part of the business.

   Examples: Extent to Which the Work Performed is an Integral Part of the Employer's Business

   - A large farm grows tomatoes that it sells to distributors. The farm pays workers to pick the tomatoes during the harvest season. Because a necessary part of a tomato farm is picking the tomatoes, the tomato pickers are integral to the

company's business. These facts indicate employee status under the integral factor.

- Alternatively, the same farm pays an accountant to provide non-payroll accounting support, including filing its annual tax return. This accounting support is not critical, necessary, or central to the principal business of the farm (farming tomatoes), thus the accountant's work is not integral to the business. Therefore, these facts indicate independent contractor status under the integral factor.

6. **Skill and initiative.** This factor primarily looks at whether the worker uses their own specialized skills together with business planning and effort to perform the work and support or grow a business. The fact that a worker does not use specialized skills (for example, the worker relies on the employer to provide training for the job) indicates that the worker is an employee. Additionally, both employees and independent contractors can be skilled, so the fact that a worker is skilled does not indicate one status or the other. The focus should be on whether the worker uses their skills in connection with business initiative. If the worker does, that indicates independent contractor status; if the worker does not, that indicates employee status.

   Examples: Skill and Initiative

   - A highly skilled welder provides welding services for a construction firm. The welder does not make any independent decisions at the job site beyond what it takes to do the work assigned. The welder does not determine the sequence of work, order additional materials, think about bidding for the next job, or use their welding skills to obtain additional jobs, and is told what work to perform and where to do it. In this scenario, the welder, although highly skilled technically, is not using those skills in a manner that evidences business-like initiative. These facts indicate employee status under the skill and initiative factor.
   - A highly skilled welder provides a specialty welding service, such as custom aluminum welding, for a variety of area construction companies. The welder uses these skills for marketing purposes, to generate new business, and to obtain work from multiple companies. The welder is not only technically skilled, but also uses and markets those skills in a manner that evidences business-like initiative. These facts indicate independent contractor status under the skill and initiative factor.

Additional factors may be considered if they assist in assessing whether the worker is in business for themself or is economically dependent on the employer for work.

Requirements

When an employer-employee relationship exists and the employee is performing work that is covered under the FLSA, the employee must be paid not less than the federal minimum wage ($7.25 per hour) and overtime pay that is not less than one and one-half the regular rate of pay for all hours worked over 40 per week unless a relevant exemption applies. The FLSA also has recordkeeping requirements, retaliation protections, and child labor provisions which regulate the employment of minors under the age of eighteen.

WAGE AND HOUR DIVISION
UNITED STATES DEPARTMENT OF LABOR

Fact Sheet #22: Hours Worked Under the Fair Labor Standards Act (FLSA)

Revised July 2008

This fact sheet provides general information concerning what constitutes compensable time under the FLSA. The Act requires that employees must receive at least the minimum wage and may not be employed for more than 40 hours in a week without receiving at least one and one-half times their regular rates of pay for the overtime hours. The amount employees should receive cannot be determined without knowing the number of hours worked.

Definition of "Employ"

By statutory definition the term "employ" includes "to suffer or permit to work." The workweek ordinarily includes all time during which an employee is necessarily required to be on the employer's premises, on duty or at a prescribed work place. "Workday", in general, means the period between the time on any particular day when such employee commences his/her "principal activity" and the time on that day at which he/she ceases such principal activity or activities. The workday may therefore be longer than the employee's scheduled shift, hours, tour of duty, or production line time.

Application of Principles

Employees "Suffered or Permitted" to work: Work not requested but suffered or permitted to be performed is work time that must be paid for by the employer. For example, an employee may voluntarily continue to work at the end of the shift to finish an assigned task or to correct errors. The reason is immaterial. The hours are work time and are compensable.

Waiting Time:

Whether waiting time is hours worked under the Act depends upon the particular circumstances. Generally, the facts may show that the employee was engaged to wait (which is work time) or the facts may show that the employee was waiting to be engaged (which is not work time). For example, a secretary who reads a book while waiting for dictation or a fireman who plays checkers while waiting for an alarm is working during such periods of inactivity. These employees have been "engaged to wait."

On-Call Time:

An employee who is required to remain on call on the employer's premises is working while "on call." An employee who is required to remain on call at home, or who is allowed to leave a message where he/she can be reached, is not working (in most cases) while on call. Additional constraints on the employee's freedom could require this time to be compensated.

Rest and Meal Periods:

Rest periods of short duration, usually 20 minutes or less, are common in industry (and promote the efficiency of the employee) and are customarily paid for as working time. These short periods must be counted as hours worked. Unauthorized extensions of authorized work breaks need not be counted as hours worked when the employer has expressly and unambiguously communicated to the employee that the authorized break may only last for a specific length of time, that any extension of the break is contrary to the employer's rules, and any extension of the break will be punished. Bona fide meal periods (typically 30 minutes or more) generally need not be compensated as work time. The employee must be completely relieved from duty for the purpose of eating regular meals. The employee is not relieved if he/she is required to perform any duties, whether active or inactive, while eating.

Sleeping Time and Certain Other Activities:

An employee who is required to be on duty for less than 24 hours is working even though he/she is permitted to sleep or engage in other personal activities when not busy. An employee required to be on duty for 24 hours or more may agree with the employer to exclude from hours worked bona fide regularly scheduled sleeping periods of not more than 8 hours, provided adequate sleeping facilities are furnished by the employer and the employee can usually enjoy an uninterrupted night's sleep. No reduction is permitted unless at least 5 hours of sleep is taken.

Lectures, Meetings and Training Programs:

Attendance at lectures, meetings, training programs and similar activities need not be counted as working time only if four criteria are met, namely: it is outside normal hours, it is voluntary, not job related, and no other work is concurrently performed.

Travel Time:

The principles which apply in determining whether time spent in travel is compensable time depends upon the kind of travel involved.

Home to Work Travel:

An employee who travels from home before the regular workday and returns to his/her home at the end of the workday is engaged in ordinary home to work travel, which is not work time.

Home to Work on a Special One Day Assignment in Another City:

An employee who regularly works at a fixed location in one city is given a special one day assignment in another city and returns home the same day. The time spent in traveling to and returning from the other city is work time, except that the employer may deduct/not count that time the employee would normally spend commuting to the regular work site.

Travel That is All in a Day's Work:

Time spent by an employee in travel as part of their principal activity, such as travel from job site to job site during the workday, is work time and must be counted as hours worked.

Travel Away from Home Community:

Travel that keeps an employee away from home overnight is travel away from home. Travel away from home is clearly work time when it cuts across the employee's workday. The time is not only hours worked on regular working days during normal working hours but also during corresponding hours on nonworking days. As an enforcement policy the Division will not consider as work time that time spent in travel away from home outside of regular working hours as a passenger on an airplane, train, boat, bus, or automobile.

Typical Problems

Problems arise when employers fail to recognize and count certain hours worked as compensable hours. For example, an employee who remains at his/her desk while eating lunch and regularly answers the telephone and refers callers is working. This time must be counted and paid as compensable hours worked because the employee has not been completely relieved from duty.

WAGE AND HOUR DIVISION
UNITED STATES DEPARTMENT OF LABOR

Fact Sheet #53 – The Health Care Industry and Hours Worked

Revised July 2009

The Fair Labor Standards Act (FLSA) requires covered employers to pay non exempt employees at least the federal minimum wage of $7.25 per hour effective July 24, 2009, for all hours worked and overtime pay for hours worked over 40 in a workweek. The FLSA is administered by the Wage and Hour Division of the U.S. Department of Labor.

Hospitals and other institutions "primarily engaged in the care of the sick, the aged, or the mentally ill" are covered employers under Section 3(s)(1)(B) of the FLSA. Thus, hospitals, residential care establishments, skilled nursing facilities, nursing facilities, assisted living facilities, residential care facilities and intermediate care facilities for intellectually and developmentally disabled individuals must comply with the minimum wage, overtime and youth employment requirements of the FLSA.

Summary

This fact sheet provides guidance regarding common FLSA violations found by the Wage and Hour Division during investigations in the health care industry relating to the failure to pay employees for all hours worked. Nonexempt employees must be paid for all hours worked in a workweek. In general, " hours worked" includes all time an employee must be on duty, on the employer premises, or at any other prescribed place of work. Also included is any additional time the employee is "suffered or permitted" to work. The FLSA requires employers to pay for hours actually worked, but there is no requirement for payment of holidays, vacation, sick or personal time.

The failure to properly count and pay for all hours that an employee works may result in a minimum wage violation if the employee's hourly rate falls below the required federal minimum wage when his or her total compensation is divided by all hours worked. More likely, the failure to count all hours worked will result in an overtime violation because employers have not fully accounted for hours worked in excess of 40 during the workweek.

Rounding Hours Worked

Some employers track employee hours worked in 15 minute increments, and the FLSA allows an employer to round employee time to the nearest quarter hour. However, an employer may violate the FLSA minimum wage and overtime pay requirements if the employer always rounds down. Employee time from 1 to 7 minutes may be rounded down, and thus not counted as hours worked, but employee time from 8 to 14 minutes must be rounded up and counted as a quarter hour of work time. See Regulations 29 CFR 785.48(b).

Example #1:

An intermediate care facility docks employees by a full quarter hour (15 minutes) when they start work more than seven minutes after the start of their scheduled shift. Does this practice comply with the FLSA requirements? Yes, as long as the employees' time is rounded up a full quarter hour when the employee starts working from 8 to 14 minutes before their shift or if the employee works from 8 to 14 minutes beyond the scheduled end of their shift.

Example #2:

An employee's schedule is 7 a.m. to 3:30 p.m. with a thirty minute unpaid lunch break. The employee receives overtime compensation after 40 hours in a workweek. The employee clocks in 10 minutes early every day and clocks out 7 minutes late each day. The employer follows the standard rounding rules. Is the employee entitled to overtime compensation? Yes. If the employer rounds back a quarter hour each morning to 6:45 a.m. and rounds back each evening to 3:30 p.m., the employee will show a total of 41.25 hours worked during that workweek. The employee will be entitled to additional overtime compensation for the 1.25 hours over 40.

Example #3:

An employer only records and pays for time if employees work in full 15 minute increments. An employee paid $10 per hour is scheduled to work 8 hours a day Monday through Friday, for a total of 40 hours a week. The employee always clocks out 12 minutes after the end of her shift. The employee is paid $400 per week. Does this comply with the FLSA? No, the employer has violated the overtime requirements. The employee worked an hour each week (12 minutes times 5) that was not compensated. The employer has not violated the minimum wage requirement because the employee was paid $9.75 per hour ($400 divided by 41 hours). However, the employer owes the employee for one hour of overtime each week.

Travel Time

Time spent by an employee in travel as part of his principal activity, such as travel from jobsite to jobsite during the workday, must be considered as hours worked. An employee who travels from home before the regular workday and returns home at the end of the workday is engaged in ordinary home-to-work travel. This is not considered hours worked. See Regulations 29 CFR 785.33.

Example #4:

A licensed practical nurse (LPN) works at an assisted living facility which has a "sister facility" 20 miles away. There have been times that the LPN has been asked to fill in for someone at the other facility after she completes her shift at her normal work site. It takes her 30 minutes to drive to the other facility. The travel time is not recorded on her time sheet. Is this a violation of the FLSA? Yes. The travel time must be considered part of the hours worked.

Training and Seminars

Attendance at lectures, meetings, training programs and similar activities are viewed as working time ***unless all of the following criteria are met***:

- Attendance is outside of the employee's regular working hours;
- Attendance is in fact voluntary;
- The course, lecture, or meeting is not directly related to the employee's job; and
- The employee does not perform any productive work during such attendance.

See Regulations 29 CFR 785.27.

Example #5:

A residential care facility offers specialized training on caring for Alzheimer residents. There are two workshops: one in the evening for the day shift and one during the day for the evening shift. All employees are required to attend. Is this compensable time? Yes, because the training is not voluntary and is related to the employees' jobs.

Example #6:

The administrator of a nursing home says specialized patient care training is voluntary, but the nursing supervisors expect all employees on their units to attend and schedule times for each employee to go. Is the time considered hours worked? Yes, the time would be considered hours worked. When the nursing supervisors expect all unit employees to attend and schedule their times, it is not truly voluntary.

Example #7:

The dishwasher decides to go to the Alzheimer's training session after his shift. Must the administrator pay for the dishwasher's time spent at the training session? No, because all four criteria above are met. It is not considered hours worked.

Example #8:

The administrator provides a Tai Chi course to residents and allows employees to attend during their off-duty hours. Do employees have to be paid for the time they attend this course? No, the employees do not have to be paid because attendance is voluntary and the other three criteria are met.

Meal Breaks

Bona-fide meal periods (typically 30 minutes or more) are not work time, and an employer does not have to pay for them. However, the employees must be completely relieved from duty. When choosing to automatically deduct 30-minutes per shift, the employer must ensure that the employees are receiving the full meal break. See Regulations 29 CFR 785.19.

Example #9:

A skilled nursing facility automatically deducts one-half hour for meal breaks each shift. Upon hiring, the employer notifies employees of the policy and of their responsibility to take a meal break. Does this practice comply with the FLSA? Yes, but the employer is still responsible for ensuring that the employees take the 30-minute meal break without interruption.

Example #10:

An hourly paid registered nurse works at a nursing home which allows a 30-minute meal break. Residents frequently interrupt her meal break with requests for assistance. Must she be paid for these frequently interrupted meal breaks? Yes, if employees' meals are interrupted to the extent that meal period is predominately for the benefit of the employer, the employees should be paid for the full 30-minutes.

Other Breaks

Rest periods of short duration, generally running from 5 minutes to about 20 minutes, are common in industry. They promote the efficiency of the employee and are customarily paid for as work time. It is immaterial with respect to compensability of such breaks whether the employee drinks coffee, smokes, goes to the rest room, etc. See Regulations 29 CFR 785.18.

Example #11:

Many third shift nursing home employees who smoke prefer to take three ten-minute unpaid smoke breaks instead of their 30-minute unpaid meal break. Is it okay for them to substitute the smoke breaks for their meal break? No, the employee must be compensated for the smoke breaks.

On-Call Time An employee who is required to remain on call on the employer's premises or so close to the premises that the employee cannot use the time effectively for his or her own purpose is considered working while on-call. An employee who is required to carry a cell phone, or a beeper, or who is allowed to leave a message where he or she can be reached is not working (in most cases) while on-call. Additional constraints on the employee's freedom could require this time to be compensated. See Regulations 29 CFR 785.17.

Example #12:

An assisted living facility has four LPN wellness coordinators who are paid hourly. They rotate being on-call each week. They are required to carry a cell phone and be within 45 minutes of the facility when they are on-call. They are not paid for all time spent carrying the cell phone but are paid for time spent responding to calls and time when they have returned to work at the assisted living facility. Does this comply with the FLSA? Yes.

Unauthorized Hours Worked

Employees must be paid for work “suffered or permitted” by the employer even if the employer does not specifically authorize the work. If the employer knows or has reason to believe that the employee is continuing to work, the time is considered hours worked. See Regulation 29 CFR 785.11.

Example #13:

A residential care facility pays its nurses an hourly rate. Sometimes the residential care facility is short staffed and the nurses stay beyond their scheduled shift to work on patients’ charts. This results in the nurses working overtime. The director of nursing knows additional time is being worked, but believes no overtime is due because the nurses did not obtain prior authorization to work the additional hours as required by company policy. Is this correct? No. The nurses must be paid time-and-one-half for all FLSA overtime hours worked.

Example #14:

An hourly paid office clerk is working on a skilled nursing home’s quarterly budget reports. Rather than stay late in the office, she takes work home and finishes the work in the evening. She does not record the hours she works at home. The office manager knows the clerk is working at home, but since she does not ask for pay, assumes she is doing it “on her own.” Should the clerk’s time working at home be counted? Yes. The clerk was “suffered and permitted” to work, so her time must be considered hours worked even thought she worked at home and the time was unscheduled. See Regulations 29 CFR 785.12.

Where to Obtain Additional Information

FEDERAL TRADE COMMISSION

16 CFR Parts 910 and 912

RIN 3084–AB74

Non-Compete Clause Rule

AGENCY: Federal Trade Commission.

ACTION: Final rule.

SUMMARY: Pursuant to the Federal Trade Commission Act (''FTC Act''), the Federal Trade Commission (''Commission'') is issuing the Non-Compete Clause Rule (''the final rule''). The final rule provides that it is an unfair method of competition for persons to, among other things, enter into non-compete clauses (''non-competes'') with workers on or after the final rule's effective date. With respect to existing non-competes—*i.e.,* non-competes entered into before the effective date—the final rule adopts a different approach for senior executives than for other workers. For senior executives, existing non-competes can remain in force, while existing non-competes with other workers are not enforceable after the effective date.

DATES: The final rule is effective September 4, 2024.

FOR FURTHER INFORMATION CONTACT: Benjamin Cady or Karuna Patel, Office of Policy Planning, 202–326–2939 (Cady), 202–326–2510 (Patel), Federal Trade Commission, 600 Pennsylvania Avenue NW, Mail Stop CC–6316, Washington, DC 20580.

SUPPLEMENTARY INFORMATION:

I. Background

A. Summary of the Final Rule's Provisions

The Commission proposed the Non-Compete Clause Rule on January 19, 2023 pursuant to sections 5 and 6(g) of the FTC Act.[1] Based on the Commission's expertise and after careful review and consideration of the entire rulemaking record—including empirical research on how non-competes affect competition and over 26,000 public comments—the Commission adopts this final rule addressing non-competes.

The final rule provides that it is an unfair method of competition—and therefore a violation of section 5—for employers to, *inter alia,* enter into non-compete clauses with workers on or after the final rule's effective date.[2] The Commission thus adopts a comprehensive ban on new non-competes with all workers.

With respect to existing non-competes, *i.e.,* non-competes entered into before the final rule's effective date, the Commission adopts a different approach for senior executives[3] than for other workers. Existing non-competes with senior executives can remain in force; the final rule does not cover such agreements.[4] The final rule allows existing non-competes with senior executives to remain in force because this subset of workers is less likely to be subject to the kind of acute, ongoing harms currently being suffered by other workers subject to existing non-competes and because commenters raised credible concerns about the practical impacts of extinguishing existing non-competes for senior executives. For workers who are not senior executives, existing non-competes are no longer enforceable after the final rule's effective date.[5] Employers must provide such workers with existing non-competes notice that they are no longer enforceable.[6] To facilitate compliance and minimize burden, the final rule includes model language that satisfies this notice requirement.[7]

The final rule contains separate provisions defining unfair methods of competition for the two subcategories of workers. Specifically, the final rule provides that, with respect to a worker other than a senior executive, it is an unfair method of competition for a person to enter into or attempt to enter into a non-compete clause; to enforce or attempt to enforce a non-compete clause; or to represent that the worker is subject to a non-compete clause.[8] The Commission describes the basis for its finding that these practices are unfair methods of competition in Parts IV.B.1 through IV.B.3.

The final rule provides that, with respect to a senior executive, it is an unfair method of competition for a person to enter into or attempt to enter into a non-compete clause; to enforce or attempt to enforce a non-compete clause entered into after the effective date; or to represent that the senior executive is subject to a non-compete clause, where the non-compete clause was entered into after the effective date.[9] The Commission describes the basis for its finding that these practices are unfair methods of competition in Part IV.C.2.

The final rule defines ''non-compete clause'' as ''a term or condition of employment that prohibits a worker from, penalizes a worker for, or functions to prevent a worker from (1) seeking or accepting work in the United States with a different person where such work would begin after the conclusion of the employment that includes the term or condition; or (2) operating a business in the United States after the conclusion of the employment that includes the term or condition.'' [10] The final rule further provides that, for purposes of the final rule, ''term or condition of employment'' includes, but is not limited to, a contractual term or workplace policy, whether written or oral.[11] The final rule further defines ''employment'' as ''work for a person.'' [12]

The final rule defines ''worker'' as ''a natural person who works or who previously worked, whether paid or unpaid, without regard to the worker's title or the worker's status under any other State or Federal laws, including, but not limited to, whether the worker is an employee, independent contractor, extern, intern, volunteer, apprentice, or a sole proprietor who provides a service to a person.'' [13] The definition further states that the term ''worker'' includes a natural person who works for a franchisee or franchisor, but does not include a franchisee in the context of a franchisee-franchisor relationship.[14]

The final rule does not apply to non-competes entered into by a person pursuant to a bona fide sale of a business entity.[15] In addition, the final rule does not apply where a cause of action related to a non-compete accrued prior to the effective date.[16] The final rule further provides that it is not an unfair method of competition to enforce or attempt to enforce a non-compete or to make representations about a non-compete where a person has a good-faith basis to believe that the final rule is inapplicable.[17]

The final rule does not limit or affect enforcement of State laws that restrict non-competes where the State laws do not conflict with the final rule, but it preempts State laws that conflict with the final rule.[18] Furthermore, the final

rule includes a severability clause clarifying the Commission's intent that, if a reviewing court were to hold any part of any provision or application of the final rule invalid or unenforceable—including, for example, an aspect of the terms or conditions defined as non-competes, one or more of the particular restrictions on non-competes, or the standards for or application to one or more category of workers—the remainder of the final rule shall remain in effect.[19] The final rule has an effective date of September 4, 2024.[20]

B. Context for the Rulemaking

1. Growing Concerns Regarding the Harmful Effects of Non-Competes

The purpose of this rulemaking is to address conduct that harms fair competition. Concern about non-competes dates back centuries, and the evidence of harms has increased substantially in recent years. However, the existing case-by-case and State-by-State approaches to non-competes have proven insufficient to address the tendency of non-competes to harm competitive conditions in labor, product, and service markets.

The ability of employers[21] to enforce non-competes has always been restricted, based on public policy concerns that courts have recognized for centuries. For example, in *Mitchel* v. *Reynolds* (1711), an English case that provided the foundation for American common law on non-competes,[22] the court noted that workers were vulnerable to exploitation through non-competes and that non-competes threatened a worker's ability to practice a trade and earn a living.[23] These concerns have persisted. Today, non-competes between employers and workers are generally subject to greater scrutiny under State common law than other employment terms ''because they are often the product of unequal bargaining power and because the employee is likely to give scant attention to the hardship he may later suffer through loss of his livelihood.''[24] For these reasons, State courts often characterize non-competes as ''disfavored.''[25]

Furthermore, as ''contract[s] . . . in restraint of trade,''[26] non-competes have always been subject to our nation's antitrust laws.[27] As early as 1911, in the formative antitrust case of *United States* v. *American Tobacco Co.,* the Supreme Court held that several tobacco companies violated both section 1 and section 2 of the Sherman Act because of the ''constantly recurring'' use of non-competes, among other practices.[28]

Concerns about non-competes have increased substantially in recent years in light of empirical research showing that they tend to harm competitive conditions in labor, product, and service markets. Changes in State laws governing non-competes[29] in recent decades have allowed researchers to better isolate the effects of non-competes, giving rise to a body of empirical research documenting these harms. This research has shown that the use of non-competes by employers tends to negatively affect competition in labor markets, suppressing earnings for workers across the labor force—including even workers not subject to non-competes.[30] This research has also shown that non-competes tend to negatively affect competition in product and service markets, suppressing new business formation and innovation.[31]

Alongside this large body of empirical work, news reports revealed that employers subject even middle-income and low-wage workers to non-competes on a widespread basis.[32] Workers came forward to recount how—by blocking them from taking a better job or starting their own business, and subjecting them to threats and litigation from their employers—non-competes derailed their careers, destroyed their finances, and upended their lives.[33]

Yet despite the mounting empirical and qualitative evidence confirming these harms and the efforts of many States to ban them, non-competes remain prevalent in the U.S. economy. Based on the available evidence, the Commission estimates that approximately one in five American workers—or approximately 30 million workers—is subject to a non-compete.[34] The evidence also indicates that employers frequently use non-competes even when they are unenforceable under State law.[35] This suggests that employers may believe workers are unaware of their legal rights; that employers may be seeking to take advantage of workers' lack of knowledge of their legal rights; or that workers are unable to enforce their rights through case-by-case litigation.[36] In addition, the ability of States to regulate non-competes effectively is constrained by employers' use of choice-of-law provisions, significant variation in how courts apply choice-of-law rules in disputes over non-competes, and the increasingly interstate nature of work. As the public comments attest, this patchwork of laws and legal uncertainty has become extremely burdensome for both employers and workers.[37]

As concern about the harmful effects of non-competes increased, the Commission began exploring the potential for Federal rulemaking on non-competes. In 2018 and 2019, the Commission held several hearings on twenty-first century competition and consumer protection issues, including ''the use of non-competition agreements

[19] § 910.5.

[20] § 910.6.

[21] For ease of reference, the Commission uses the term ''employer'' in this Supplementary Information to refer to a person for whom a worker works. The text of part 910 does not use the term ''employer.''

[22] Harlan Blake, *Employee Agreements Not to Compete,* 73 Harv. L. Rev. 625, 629–31 (1960).

[23] The *Mitchel* court expressed concern that non-competes threaten ''the loss of [the worker's] livelihood, and the subsistence of his family.'' *Mitchel* v. *Reynolds,* 1 P. Wms. 181, 190 (Q.B. 1711). The court likewise emphasized ''the great abuses these voluntary restraints'' are subject to—for example, ''from masters, who are apt to give their apprentices much vexation'' by using ''many indirect practices to procure such bonds from them, lest they should prejudice them in their custom, when they come to set up for themselves.'' *Id.*

and the conditions under which their use may be inconsistent with the antitrust laws.'' [38] In January 2020, the Commission held a public workshop on non-competes. The speakers and panelists who participated in the workshop—and the hundreds of public comments the Commission received in response to the workshop—addressed a wide range of issues, including statutory and judicial treatment of non-competes; the economic literature regarding the effects of non-competes; and whether the Commission should initiate a Federal rulemaking on non-competes.[39] The Commission also sought public comment on non-competes as part of an August 2021 solicitation for public comment on contract terms that may harm competition and a December 2021 public workshop on competition in labor markets.[40] The Commission has also addressed non-competes in connection with its merger review work.[41]

In 2021, the Commission initiated investigations into the use of non-competes. In 2023, the Commission secured final consent orders settling charges that certain firms engaged in an unfair method of competition in violation of section 5 because their use of non-competes tended to impede rivals' access to the restricted employees' labor, harming workers, consumers, and competitive conditions.[42]

The Commission also secured a final consent order settling charges that another firm violated section 5 by using non-competes with its employees.[43] The Commission's complaint alleged the firm's imposition of non-competes took advantage of the unequal bargaining power between the firm and its employees, including low-wage security guard employees, and thus reduced workers' job mobility; limited competition for workers' services; and ultimately deprived workers of higher wages and more favorable working conditions.[44]

Based on the feedback obtained from years of extensive public outreach and fact-gathering, in January 2023, the Commission published a notice of proposed rulemaking (NPRM) concerning non-competes.[45] The proposed rule would have categorically banned employers from using non-competes with all workers and required rescission of all existing non-competes.[46]

In response to the NPRM, the Commission received over 26,000 public comments.[47] The comments reflected a diverse cross-section of the U.S. The Commission received comments from employers and workers in a wide range of industries and from every State; [48] from small, medium, and large businesses; and from workers with wide-ranging income levels.[49] The Commission also received comments from representatives of different industries through trade and professional groups as well as from academics and researchers. Federal, State, and local governmental representatives also submitted public comments.

Among these comments, over 25,000 expressed support for the Commission's proposal to categorically ban non-competes. Among the public commenters were thousands of workers who described how non-competes prevented them from taking a better job or starting a competing business, as well as numerous small businesses who struggled to hire talented workers. Commenters stated that non-competes have suppressed their wages, harmed working conditions, negatively affected their quality of life, reduced the quality of the product or service their company provided, prevented their business from growing and thriving, and created a climate of fear that deters competitive activity. The following examples are illustrative of the comments the Commission received: [50]

- I currently work in sales for an asphalt company in Michigan. The company had me sign a two year non-compete agreement to not work for any other asphalt company within 50 miles if I decide to resign. After two years with the company I have been disheartened at how poorly customers are being treated and how often product quality is sub-par. I would love to start my own business because I see this as an opportunity to provide a better service at a lower cost. However, the non-compete agreement stands in the way even though there are no trade secrets and too many customers in this market.[51]
- [I] signed a non-compete clause for power-washing out of duress. My boss said that if I didn't sign before the end of the week, not to come in the next week. . . . I'd like to start my own business but I would have to find another job and wait 5 years. All I know is power-washing and these business owners all want me to sign a non-compete clause. It's one big circle of wealthy business owners keeping the little man down. Essentially, non-compete clauses limit an employee's opportunity to excel in whatever skill or trade they're familiar with. In the land of the free, we should be free to start a business not limited by greedy business owners.[52]
- In October 2020, I started working as a bartender at a company called [REDACTED] for $10 an hour. On my first day, I

[46] *Id.* at 3482–83.

[47] The public comments are available online. *See Regulations.gov,* Non-Compete Clause Rule (NPRM), FTC–2023–0007, *https://www.regulations.gov/docket/FTC-2023-0007/comments.* The Commission cannot quantify the number of individuals or entities represented by the comments. The number of comments undercounts the number of individuals or entities represented by the comments because many comments, including comments from different types of organizations, jointly represent the opinions or interests of many.

[48] This reflects information provided by commenters. Commenters self-identify their State and are not required to include geographic information.

[49] Though most commenters identifying as workers did not provide information regarding their income or compensation levels, many provided information about their particular jobs or industries from which the Commission was able to infer a broad range of income levels based on occupational data from the Bureau of Labor Statistics (''BLS''). BLS wage data for each year can be found at Occupational Employment and Wage Statistics, *Tables Created by BLS, https://www.bls.gov/oes/tables.htm* (hereinafter ''BLS Occupational Employment and Wage Statistics''). The Commission used data from the May 2022 National XLS table, generally for private ownership.

[50] To be clear, the Commission does not rely on any particular individual comment submission for its findings, but rather provides here (and throughout this final rule) examples of comments that were illustrative of themes that spanned many comments. The Commission's findings are based on consideration of the totality of the evidence, including its review of the empirical literature, its review of the full comment record, and its expertise in identifying practices that harm competition.

[51] Individual commenter, FTC–2023–0007–2215. Comment excerpts have been cleaned up for grammar, spelling, and punctuation.

[52] Individual commenter, FTC–2023–0007–12689.

unknowingly signed a 2-year non-compete, slipped between other paperwork while my boss rushed me, and downplayed its importance. . . . At [REDACTED], I was sexually harassed and emotionally abused. I needed money, so I searched for a new job while remaining at [REDACTED] for one year. I was eventually offered a bartending job at a family-owned bar with better wages, conditions, and opportunities. Upon resigning, I was threatened with a non-compete I didn't know existed. Still, I couldn't take it anymore, so believing it was an unenforceable scare tactic, I took the new job, thinking our legal system wouldn't allow a massive company with over 20 locations to sue a young entry-level worker with no degree. In December 2021, I was sued for $30,000 in ''considerable and irreparable damages'' for violating the non-compete. . . .[53]

• I am a physician in a rural underserved area of Appalachia. . . . ''[N]on-compete'' clauses have become ubiquitous in the healthcare industry. With hospital systems merging, providers with aggressive non compete clauses must abandon the community that they serve if they chose to leave their employer. . . . Healthcare providers feel trapped in their current employment situation, leading to significant burnout that can shorten their career longevity. Many are forced to retire early or take a prolonged pause in their career when they have no other recourse to combat their employer.[54]

• I am a practicing physician who signed an employment contract containing a noncompete agreement in 2012, entering into this agreement with an organization that no longer exists. My original employer merged with, and was made subsidiary to, a new organization that is run under religious principles in conflict with my own. . . . I would have never signed such an agreement with my new employer, yet I am bound to this organization under threat of legal coercion. To be clear, the forced compromise of my religious principles does direct harm to me. My only recourse to this coercion is to give up medical practice anywhere covered by my current medical license, which is injurious to the patients in my care, and to myself.[55]

• I am the owner of a small-midsize freight brokerage, and non-competes of large brokerages have time and time again constrained talent from my business. Countless employees of [a] mega brokerage . . . have left and applied for our company and we must turn them away. These are skilled brokers that are serving the market and their clients well due to THEIR skillsets. . . . These non-competes affect not just me but the clients they work with as these skilled brokers are forced out of the entire logistics market for an entire year and possibly a lifetime when they pick up a new career in a different field because of these aggressive non-competes. . . .[56]

• I was laid off from my company in 2008 due to the economy, not to any fault of my own. However, when I was offered a job at another company, my former company threatened them and my offer was rescinded. I was unable to find gainful employment for months, despite opportunities in my field, and had to utilize unemployment when I otherwise would not have needed it. To find work, I ultimately had to switch fields, start part time somewhere, and just continue to work my way up. All of this because I was laid off to no fault of my own.[57]

• I was terminated by a large hospital organization suddenly with a thriving, full Pediatric practice. . . . My lawyer and I believe the non-compete does not apply in my circumstances and that the noncompete is overly broad, restrictive and harmful to the public (my patients). I started seeing my patients mostly gratuitously in their homes so they would not go without the care they wanted and needed . . . The judge awarded the order and I was told I cannot talk to patients on the phone, text patients, zoom visits or provide any pediatric care within my non-compete area. Patients are angry and panicked. I'm worried every day about my patients and how I can continue to care for them. . . . Patients have a right to choose and keep their doctor. The trust built between a patient and his doctor is crucial to keeping a patient healthy. It's not a relationship that can or should be replaced. . . . Patients should always come first and that is not happening.[58]

• When I first graduated veterinary school I signed a noncompete clause that was for 7 years. I tried to negotiate it to a more reasonable time period but the employer wouldn't budge. There weren't many job openings for new graduates at the time and I had student loans to pay back so I signed it. . . . I moved back home to a small town and took a job that required a 10-radial-mile, 2-year noncompete (this is currently considered ''reasonable/standard'' in my industry). Unfortunately since it's a rural area the 10 miles blocked me out of the locations of all other veterinary clinics in the county and I had to commute an hour each way to work in the next metropolitan area. This put a lot of stress on my family since I have young children. Some days I didn't even get to see them when they were awake.[59]

• I work for a large electronic health records company . . . that is known for hiring staff right out of college, myself included. I was impressed with their starting salary and well-advertised benefits, so I was quick to accept their offer. After accepting their offer, I was surprised to receive a contract outlining a strict non-compete agreement . . . I feel disappointed that this information was not made apparent to me prior to my acceptance of the position, and now I feel stuck in a job that I've quickly discovered is not a good long-term fit for me. I am certain that many other recent graduates often find themselves in a similar position—they accept shiny offers from a workplace, not knowing whether the company and position will be the right fit for them, and find themselves trapped by such contracts as mine.[60]

• Non competes are awful. I am being sued right now for going into business on my own in Boston, Massachusetts, by my former employer who says I signed a non-compete in 2003, 20 years ago. . . . I am fighting them in court. Hopefully I will prevail. . . . [The] corporation I worked for is a billion-dollar corporation. And they just keep trying scare tactics to make me back down. They went as far as trying to get a preliminary injunction ordered against me. And the judge refused but I still have to spend $1,000 an hour to defend myself.[61]

• I have been working in the field of multi-media in the DC/Baltimore region since the early 2000s. . . . I was 26 when I first became employed, and at that time a requirement was that I sign a non-compete agreement. . . . This means I can't be an entrepreneur- which kills any opportunities for me to grow something of my own- which could potentially provide jobs for others in the future. So what this non-compete does is basically enables businesses to be small monopolies. I could literally have a new lease on my career if non competes were abolished. As of now, when I think of working someplace else I have to consider changing careers altogether.[62]

• A former employer had me sign a non-compete when I started employment at an internship in college. It was a part-time position of 20 hours of work as an electrical engineer, while I finished university. After university, I worked for this employer another 4 years full time, but then found a better job in another state. It was not a competitor, but a customer of my former employer. My former employer waited till the day after my 4-week notice to tell me that I had signed a non-compete agreement and that it [barred] me from working for any competitor, customer or any potential customer up to 5 years after leaving the company with no geographic limitations. This was effectively the entire semi-conductor industry and put my entire career at risk.[63]

• Non-competes serve little more purpose than to codify and entrench inefficiencies. I have seen this firsthand in the context of a sophisticated management consulting environment where company owners provided ever less support in terms of contributing to projects or even to sales of new business while still feeling secure through agreements that substantially limited anyone from working in the relevant industry for two years on a global basis after leaving. . . . The reality is that there are innumerable retention mechanisms (such as good working conditions, compensation, culture, management, growth trajectory and/or strategy) that can contribute to loyal employees without the need for non-competes.[64]

The Commission has undertaken careful review of the public comments

and the entirety of the rulemaking record. Based on this record and the Commission's experience and expertise in competition matters, the Commission issues this final rule pursuant to its authority under sections 5 and 6(g) of the FTC Act.

2. Prevalence of Non-Competes

Based on its own data analysis, studies published by economists, and the comment record, the Commission finds that non-competes are in widespread use throughout the economy and pervasive across industries and demographic groups, albeit with some differences in the magnitude of the prevalence based on industries and demographics. The Commission estimates that approximately one in five American workers—or approximately 30 million workers—is subject to a non-compete.[65]

As described in Part II.F, the inquiry as to whether conduct is an unfair method of competition under section 5 focuses on the nature and tendency of the conduct, not whether or to what degree the conduct caused actual harm.[66] Although a finding that non-competes are prevalent is not necessary to support the Commission's determination that the use of non-competes by employers is an unfair method of competition, the Commission finds that non-competes are prevalent and in widespread use throughout the economy, which is why researchers have observed such significant negative actual effects from non-competes on competitive conditions in labor markets and markets for products and services.[67]

A 2014 survey of workers finds that 18% of respondents work under a non-compete and 38% of respondents have worked under one at some point in their lives.[68] This study has the broadest and likely the most representative coverage of the U.S. labor force among the prevalence studies discussed here.[69] This study reports robust results contradicting the prior assumptions of some that non-competes were, in most cases, bespoke agreements with sophisticated and highly-paid workers. It finds that, among workers without a bachelor's degree, 14% of respondents reported working under a non-compete at the time surveyed and 35% reported having worked under one at some point in their lives.[70] For workers earning less than $40,000 per year, 13% of respondents were working under a non-compete and 33% worked under one at some point in their lives.[71] Furthermore, this survey finds that 53% of workers covered by non-competes are hourly workers.[72] The survey suggests that a large share of workers subject to non-competes are relatively low-earning workers. In addition, a survey from the Federal Reserve Board of Governors found that 11.4% of workers have non-competes, including workers with relatively low earnings and low levels of education. The survey finds some degree of geographic heterogeneity, though it finds that large numbers of workers in all regions of the country have non-competes (including 7.0% of workers in States which broadly do not enforce non-competes).[73]

Furthermore, a survey of workers conducted in 2017 estimates that 24.2% of workers are subject to a non-compete.[74] This survey also finds that non-competes are often used together with other restrictive employment agreements, including non-disclosure agreements (''NDAs'') and non-recruitment and non-solicitation agreements.[75] A methodological limitation of this survey is that it is a convenience sample of individuals who visited *Payscale.com* during the time period of the survey and is therefore unlikely to be fully representative of the U.S. working population. While weighting based on demographics helps, it does not fully mitigate this concern.

Additionally, a 2017 survey of business establishments with 50 or more employees estimates that 49% of such establishments use non-competes for at least some of their employees, and 32% of such establishments use non-competes for all of their employees.[76]

Other estimates of non-compete use cover subsets of the U.S. labor force. One 2022 study is based on National Longitudinal Survey of Youth (NLSY) data.[77] The NLSY is an often-used labor survey conducted by the Bureau of Labor Statistics (''BLS'') that consists of a nationally representative sample of 8,984 men and women born from 1980–84 and living in the U.S. at the time of the initial survey in 1997; it is a subset of the workforce by age of worker.[78] The 2022 study using NLSY data reports prevalence of non-competes to be 18%, in line with the number estimated based on the 2014 survey of workers directed solely at calculating the prevalence of non-competes.[79]

Non-competes are pervasive across occupations. For example, a survey of independent hair salon owners finds that 30% of hair stylists worked under a non-compete in 2015.[80] A survey of electrical and electronic engineers finds that 43% of respondents signed a non-compete.[81] A different study finds that 45% of physicians worked under a non-compete in 2007.[82] One study published in 2021 finds that 62% of CEOs worked under a non-compete between 1992 and 2014.[83] Another, published in 2023, supports that finding and reflects an upward trend in the use of non-competes among executives—specifically, the proportion of executives working under a non-compete rose from ''57% in the early 1990s to 67% in the mid-2010s.'' [84] The 2014 survey reports industry-specific rates ranging from 9% in the Agriculture and Hunting category to 32% in the

[65] This is likely a conservative estimate. Surveys of workers likely underreport the share of workers subject to non-competes, since many workers may not know they are subject to a non-compete. *See, e.g.,* Alexander J.S. Information category.[85] The Balasubramaian et al. survey reports industry-specific rates ranging from 12% in the Arts, Entertainment, and Recreation category to 30% in the Professional, Scientific, and Technical category.[86] The same survey also reports occupation-specific rates ranging from 8% in the Community and Social Services category to 32% in the Computer and Mathematical category.[87]

In addition, commenters presented survey data on the prevalence of non-competes in various occupations and industries. The Commission does not rely on these surveys to support its finding that non-competes are in widespread use throughout the economy. Because the Commission lacked access to a detailed description of the methodology for these surveys (unlike for the surveys described previously), the Commission cannot evaluate how credible their research designs are. However, they generally confirm the Commission's finding that non-competes are in widespread use throughout the economy and pervasive across industries and demographic groups.

For example, commenters reported that 33% of practitioners in the applied behavioral analysis field reported being subject to a non-compete,[88] along with 68% of cardiologists,[89] 42% of colorectal surgeons,[90] 72% of members of the American Association of Hip and Knee Surgeons,[91] and 31% of wireless telecommunications retail workers.[92] Other commenters cited a 2019 study finding that 29% of businesses where the average wage is below $13 per hour use non-competes for all their workers.[93]

Several trade organizations included information in their comments about the percentage of their members that use non-competes for at least some of their workers, based on surveys of their membership. For the National Association of Wholesaler-Distributors, this figure was 80%;[94] for the Independent Lubricant Manufacturing Association, 69%;[95] for the Michigan Chamber of Commerce, 73%;[96] for the Gas and Welding Distributors Association, 80%;[97] and for the National Association of Manufacturers, 70%.[98] One industry organization said its survey found that 57% of respondents require workers earning over $150,000 to sign non-competes.[99] A survey by the Authors Guild finds that 19.2% of respondents reported that non-competes prevented them from publishing a similar or competing book.[100] The HR Policy Association stated that 75% of respondents indicated they use non-competes for less than 10% of their workers, and nearly one third indicated they use non-competes for less than 1% of their workers.[101] The association stated that its survey covered 3 million workers and argued that its survey finding less usage of non-competes was more representative than studies cited in the NPRM.[102] However, the commenter did not provide the data underlying its claims. The Retail Industry Leaders Association stated that a recent survey of its members indicated that, among members that use non-competes, the majority do so with less than 1% of their workforce and an additional quarter use non-competes with less than 10% of their workforce.[103] Additionally, a commenter referenced a survey of small business owners finding that 48% use non-competes for their own business.[104]

Several commenters misrepresented the Commission's finding related to prevalence as based on ''a single study from 2021'' (Starr, Prescott, and Bishara, 2021), which relied on survey data from 2014. The Commission's finding is not based on a single study. The NLSY study reaches similar conclusions about the prevalence of non-competes across the economy,[105] and the occupation-specific studies indicate that non-competes are pervasive in various occupations.[106] Furthermore, despite its methodological limitations, the data submitted by commenters generally comport with the estimates reported in the academic literature. One commenter stated the respondents to the Starr, Prescott, and Bishara survey were not necessarily representative of the population. The Commission believes that the weighting of the data sufficiently addresses this concern.

Another commenter argued that individuals may misunderstand contracts that they have signed, leading them to mistakenly believe they are bound by a non-compete. The Commission does not find this to be a plausible explanation for the high numbers of workers, businesses, and trade associations that report that non-competes are prevalent.

The Commission appreciates the additional estimates provided by commenters. The comments broadly corroborate the Commission's finding that non-competes are used across the workforce, with some heterogeneity in the magnitude of the prevalence. The

Commission finds that this heterogeneity is insufficient to warrant industry-specific exclusions from coverage under the final rule in part because employers' use of non-competes is prevalent across labor markets and for the reasons discussed in Part V.D regarding requests for exclusions.

II. Legal Authority

A. The History of the Commission and Section 5 of the FTC Act

The FTC Act was enacted in 1914.[107] Section 5 of that Act ''declared'' that ''unfair methods of competition in commerce'' are ''unlawful,'' and it ''empowered and directed'' the Commission ''to prevent'' entities subject to its jurisdiction from ''using'' such methods.[108] Congress removed certain enumerated industries, activities, or entities—such as banks [109]—from the Commission's jurisdiction but otherwise envisioned a Commission whose purview would cover commerce across the national economy.

The term '''unfair methods of competition' . . . was an expression new in the law'' when it first appeared in the FTC Act.[110] Congress purposely introduced this phrase to distinguish the Commission's authority from the definition of ''unfair competition'' at common law. Because the ''meaning which the common law had given to ['unfair competition'] was . . . too narrow,'' Congress adopted ''the broader and more flexible phrase 'unfair methods of competition.' '' [111] Using this new phrase also made clear that Congress designed section 5 to extend beyond the reach of other antitrust laws—most notably, the Sherman Act—whose text did not include the term ''unfair methods of competition.'' [112] In particular, Congress wanted the Commission to apply a standard that would reach conduct not captured by other antitrust laws and the rule of reason, which courts applied when interpreting the Sherman Act, making it ''impossible to predict with any certainty'' whether courts would condemn the many ''practices that seriously interfere with competition.'' [113] Allowing the Commission to prevent unfair methods of competition would also help the Commission achieve a core purpose of the Act: to stop ''trade restraints in their incipiency'' before they grew into violations of other antitrust laws.[114]

By design, the new phrase ''unfair methods of competition'' did ''not 'admit of precise definition.' '' [115] Congress intentionally gave the Commission flexibility to adapt to changing circumstances.[116] The Supreme Court has affirmed the more inclusive scope of section 5 on numerous occasions [117] and has affirmed the Commission's power under the Act to condemn coercive and otherwise unfair practices that have a tendency to stifle or impair competition.[118] Federal appellate courts have likewise consistently held that the Commission's authority under section 5 extends beyond ''the letter'' of other antitrust laws.[119]

Congress further expanded the Commission's jurisdiction over time. Congress extended the Commission's authority in 1938 by adding the further prohibition on ''unfair or deceptive acts or practices.'' [120] And in 1975, Congress amended the phrase ''in commerce'' in section 5 to ''in or affecting commerce,'' a change that was ''specifically designed to expand the Commission's jurisdiction . . . to make it coextensive with the constitutional power of Congress under the Commerce Clause.'' [121]

Congress gave careful thought to the structure of the FTC as an independent agency entrusted with this considerable responsibility. The Commission would consist of five members, no more than three of whom could be part of the same political party, who would serve for terms of seven years.[122] The Commission would draw on trained expert staff to develop the body of law regarding what constitutes unfair methods of competition (and, later, unfair and deceptive practices),[123] both through acting as ''a quasi judicial body'' [124] that determines whether conduct is an unfair method of competition in adjudications and through authority to promulgate legislative rules delineating conduct that constitutes an unfair method of competition. Recognizing that the Commission is an expert agency in making such determinations about anticompetitive conduct, courts reviewing Commission determinations as to what practices constitute an unfair method of competition have given the Commission's decisions ''great weight.'' [125]

The FTC Act today reflects a careful balance from Congress. Congress has directed the Commission to proceed

---

[107] Federal Trade Commission Act of 1914, Public Law 63–203, 38 Stat. 717, 719 (hereinafter ''FTC Act of 1914'').

[108] FTC Act of 1914, 38 Stat. at 719. Section 5 is codified as amended at 15 U.S.C. 45. Congress later amended the term ''in commerce'' to ''in or affecting commerce.'' The Supreme Court has explained that this amended phrase makes section 5 of the FTC Act ''coextensive with the constitutional power of Congress under the Commerce Clause.'' *United States* v. *Am. Bldg. Maintenance Indus.,* 422 U.S. 271, 277 n.6 (1975). For simplicity, this statement of basis and purpose often refers to ''unfair methods of competition'' without the commerce requirement, but the Commission acknowledges that it has power to prevent only such methods that are in or affect commerce as that term is defined in the Act. *See* 15 U.S.C. 44.

[109] *See* 15 U.S.C. 45(a)(2).

against a broader range of anticompetitive conduct than other antitrust laws like the Sherman and Clayton Acts can reach. On the other hand, Congress has never established a private right of action under section 5,[126] nor has it authorized the Commission to recover civil penalties or other monetary relief from parties who engage in unfair methods of competition.[127] Instead, the Commission may either pursue an adjudication under section 5(b) or seek an injunction in Federal court under section 13(b) against a party that has engaged in an unfair method of competition.[128] As explained below, it may also promulgate rules prohibiting unfair methods of competition. The Commission cannot obtain civil penalties or other monetary relief against parties for using an unfair method of competition, although it can obtain civil penalties in court if a party is ordered to cease and desist from a violation and fails to do so.[129]

B. The Commission's Authority To Promulgate the Rule

Alongside section 5, Congress adopted section 6(g) of the Act, in which it authorized the Commission to ''make rules and regulations for the purpose of carrying out the provisions of'' the FTC Act, which include the Act's prohibition of unfair methods of competition.[130] The plain text of section 5 and section 6(g), taken together, empower the Commission to promulgate rules for the purpose of preventing unfair methods of competition. That includes legislative rules defining certain conduct as an unfair method of competition.

The Commission has exercised its authority under section 6(g) to promulgate legislative rules on many occasions stretching back more than half a century. Between 1963 and 1978,[131] the Commission relied on section 6(g) to promulgate the following rules: (1) a rule declaring it an unfair method of competition (''UMC'') and an unfair or deceptive act or practice (''UDAP'') to mislead consumers about the size of sleeping bags by representing that the ''cut size'' represents the finished size; [132] (2) a rule declaring it a UMC and UDAP to use the word ''automatic'' or similar words to describe household electric sewing machines; [133] (3) a rule declaring it a UMC and UDAP to misrepresent nonprismatic instruments as prismatic; [134] (4) a rule declaring it a UMC and UDAP to advertise or market dry cell batteries as ''leakproof;'' [135] (5) a rule declaring it a UMC and UDAP to misrepresent the ''cut size'' as the finished size of tablecloths and similar products; [136] (6) a rule declaring it a UMC and UDAP to misrepresent that belts are made of leather if they are made of other materials; [137] (7) a rule declaring it a UMC and UDAP to represent used lubricating oil as new; [138] (8) a rule declaring it a UDAP to fail to disclose certain health warnings in cigarette advertising and on cigarette packaging (''Cigarette Rule''); [139] (9) a rule declaring it a UMC and UDAP to fail to disclose certain features of light bulbs on packaging; [140] (10) a rule declaring it a UMC and UDAP to misrepresent the actual size of the viewable picture area on a TV; [141] (11) a rule declaring a presumption of a violation of section 2(d) and (e) of the amended Clayton Act for certain advertising and promotional practices in the men's and boy's clothing industry; [142] (12) a rule declaring it a UMC and UDAP to fail to make certain disclosures about the handling of glass fiber products and contact with certain products containing glass fiber; [143] (13) a rule declaring it a UMC and UDAP to make certain misrepresentations about transistors in radios; [144] (14) a rule declaring it a UDAP to fail to disclose certain effects about inhaling certain aerosol sprays; [145] (15) a rule declaring it a UMC and UDAP to misrepresent the length or size of extension ladders; [146] (16) a rule declaring it a UDAP to make certain misrepresentations, or fail to disclose certain information, about games of chance; [147] (17) a rule declaring it a UMC and UDAP to mail unsolicited credit cards; [148] (18) a rule declaring it a UMC and UDAP to fail to disclose the minimum octane number on gasoline pumps (''Octane Rule''); [149] (19) a rule declaring it a UMC and UDAP to sell finished articles of clothing without a permanent tag or label disclosing care and maintenance

[126] *See, e.g., Holloway* v. *Bristol-Myers Corp.,* 485 F.2d 986, 988–89 (D.C. Cir. 1973); *Liu* v. *Amerco,* 677 F.3d 489, 492 (1st Cir. 2012).

[127] Congress has authorized the FTC to seek civil monetary remedies against parties who engage in unfair or deceptive acts or practices under some circumstances. *See* 15 U.S.C. 45(m); 15 U.S.C. 57b.

[128] *See* 15 U.S.C. 45(b); 15 U.S.C. 53(b).

[129] *See* 15 U.S.C. 45(l).

[130] 15 U.S.C. 46(g).

[131] As explained in more detail later in this Part, Congress added section 18 to the FTC Act in 1975, and that section provides the process the Commission must go through to promulgate rules defining unfair or deceptive acts or practices. *See* Magnuson-Moss Warranty—Federal Trade Commission Improvement Act, Public Law 93–637, 88 Stat. 2183 (Jan. 4, 1975) (hereinafter ''Magnuson-Moss Act''); 15 U.S.C. 57a. Congress provided, however, that ''[a]ny proposed rule under section 6(g) . . . with respect to which presentation of data, views, and arguments was substantially completed before'' section 18 was enacted ''may be promulgated in the same manner and with the same validity as such rule could have been promulgated had'' section 18 ''not been enacted.'' 88 Stat. 2198; 15 U.S.C. 57a note. This list therefore includes a handful of rules promulgated under section 6(g) but after 1975 because those rules were substantially completed before section 18's enactment.

[132] Advertising and Labeling as to Size of Sleeping Bags, 28 FR 10900 (Oct. 11, 1963), *repealed by* 60 FR 65528 (Dec. 20, 1995).

[133] Misuse of ''Automatic'' or Terms of Similar Import as Descriptive of Household Electric Sewing Machines, 30 FR 8900 (Jul. 15, 1965), *repealed by* 55 FR 23900 (June 13, 1990).

[134] Deception as to Nonprismatic and Partially Prismatic Instruments Being Prismatic Binoculars, 29 FR 7316 (Jun. 5, 1964), *repealed by* 60 FR 65529 (Dec. 20, 1995).

[135] Deceptive Use of ''Leakproof,'' ''Guaranteed Leakproof,'' etc., as Descriptive of Dry Cell Batteries, 29 FR 6535 (May 20, 1964), *repealed by* 62 FR 61225 (Nov. 17, 1997).

[136] Deceptive Advertising and Labeling as to Size of Tablecloths and Related Products, 29 FR 11261 (Aug. 5, 1964), *repealed by* 60 FR 65530 (Dec. 20, 1995).

[137] Misbranding and Deception as to Leather Content of Waist Belts, 29 FR 8166 (Jun. 27, 1964), *repealed by* 61 FR 25560 (May 22, 1996).

[138] Deceptive Advertising and Labeling of Previously Used Lubricating Oil, 29 FR 11650 (Aug. 14, 1964), *repealed by* 61 FR 55095 (Oct. 24, 1996).

[139] Unfair or Deceptive Advertising and Labeling of Cigarettes in Relation to the Health Hazards of Smoking, 29 FR 8324 (July 2, 1964), *repealed by* 30 FR 9485 (July 29, 1965). As explained in more detail herein, Congress superseded this rule with legislation.

[140] Incandescent Lamp (Light Bulb) Industry, 35 FR 11784 (Jul. 23, 1970), *repealed by* 61 FR 33308 (Jun. 27, 1996).

[141] Deceptive Advertising as to Sizes of Viewable Pictures Shown by Television Receiving Sets, 31 FR 3342 (Mar. 3, 1966), *repealed by* 83 FR 50484 (Oct. 9, 2018).

[142] Discriminatory Practices in Men's and Boys' Tailored Clothing Industry, 32 FR 15584 (Nov. 9, 1967), *repealed by* 59 FR 8527 (Feb. 23, 1994).

[143] Failure to Disclose that Skin Irritation May Result from Washing or Handling Glass Fiber Curtains and Draperies and Glass Fiber Curtain and Drapery Fabrics, 32 FR 11023 (Jul. 28, 1967), *repealed by* 60 FR 65532 (Dec. 20, 1995).

[144] Deception as to Transistor Count of Radio Receiving Sets, Including Transceivers, 33 FR 8446 (Jun. 7, 1968), *repealed by* 55 FR 25090 (Jun. 20, 1990).

[145] Failure to Disclose the Lethal Effects of Inhaling Quick-Freeze Aerosol Spray Products Used for Frosting Cocktail Glasses, 34 FR 2417 (Feb. 20, 1969), *repealed by* 60 FR 66071 (Dec. 21, 1995).

[146] Deceptive Advertising and Labeling as to Length of Extension Ladders, 34 FR 929 (Jan. 22, 1969), *repealed by* 60 FR 65533 (Dec. 20, 1995).

[147] Games of Chance in the Food Retailing and Gasoline Industries, 34 FR 13302 (Aug. 16, 1969), *repealed by* 61 FR 68143 (Dec. 27, 1996).

[148] Unsolicited Mailing of Credit Cards, 35 FR 4614 (Mar. 17, 1970), *repealed by* 36 FR 45 (Jan. 5, 1971). This rule was rescinded in response to an amendment to the Truth in Lending Act that prohibited similar conduct. *See* Public Law 91–508, 84 Stat. 1126 (1970).

[149] Posting of Minimum Octane Numbers on Gasoline Dispensing Pumps, 36 FR 23871 (Dec. 16, 1971), *repealed by* 43 FR 43022 (Sept. 22, 1978). This rule was superseded by the Petroleum Marketing Practices Act, Public Law 95–297, 92 Stat. 333 (June 19, 1978). A similar regulation was promulgated under that law at 16 CFR part 306.

instructions;[150] (20) a rule declaring a UMC and UDAP for a grocery store to offer products for sale at a stated price if those products will not be readily available to consumers (''Unavailability Rule'');[151] (21) a rule declaring it a UMC and UDAP for a seller to fail to make certain disclosures in connection with a negative option plan (''Negative Options Rule'');[152] (22) a rule declaring it a UDAP for door-to-door sellers to fail to furnish certain information to buyers;[153] (23) a rule declaring it a UMC and UDAP to fail to make certain disclosures about sound power amplification for home entertainment products;[154] (24) a rule declaring it a UDAP for sellers failing to include certain contract provisions preserving claims and defenses in consumer credit contracts (''Holder Rule'');[155] (25) a rule declaring it a UMC or UDAP to solicit mail order merchandise from a buyer unless the seller can ship the merchandise within 30 days (''Mail Order Rule'');[156] and (26) a rule declaring it a UDAP for a franchisor to fail to furnish a franchisee with certain information.[157]

Some of these rules attracted significant attention. For instance, the Commission began the rulemaking process to require warnings on cigarette packages just one week after the Surgeon General's ''landmark report'' that determined smoking is a health hazard,[158] and that rule was front-page news.[159] Following a lobbying campaign by the tobacco industry,[160] Congress supplanted the Commission's regulation with the Cigarette Labeling and Advertising Act but did not disturb the Commission's rulemaking authority.[161] The Unavailability Rule was likewise front-page news upon its release in 1971, and Congress left it intact.[162]

In *National Petroleum Refiners Association* v. *FTC* (''*Petroleum Refiners*''), the D.C. Circuit expressly upheld the Octane Rule as a proper exercise of the Commission's power under section 6(g) to make rules regulating both unfair methods of competition and unfair or deceptive acts or practices.[163] After construing ''the words of the statute creating the Commission and delineating its powers,'' the court held ''that under the terms of its governing statute . . . and under Section 6(g) . . . the Federal Trade Commission is authorized to promulgate rules defining the meaning of the statutory standards of the illegality the Commission is empowered to prevent.''[164] That interpretation was also ''reinforced by the construction courts have given similar provisions in the authorizing statutes of other administrative agencies.''[165] The Seventh Circuit later agreed with the D.C. Circuit's decision and ''incorporate[d] [it] by reference'' when rejecting a challenge to the Mail Order Rule.[166]

Following such rulemakings and the D.C. Circuit's confirmation of the Commission's rulemaking power in *Petroleum Refiners,* Congress in 1975 enacted a new section 18 of the FTC Act. This new section introduced special procedures, beyond those required under the Administrative Procedure Act, for promulgating rules for unfair or deceptive acts or practices, and it eliminated the Commission's authority to issue such rules under section 6(g).[167] But Congress pointedly chose not to restrict the Commission's authority to promulgate rules regulating unfair methods of competition under section 6(g). That choice was deliberate. While considering this legislation, Congress knew that the Commission had promulgated rules regulating unfair methods of competition and that the D.C. Circuit in *Petroleum Refiners* had confirmed the Commission's authority to do so.[168] And Congress expressly considered—but rejected—an amendment to the FTC Act under which ''[t]he FTC would have been prohibited from prescribing rules with respect to unfair competitive practices.''[169]

Instead, the enacted section 18 confirmed the Commission's authority to make rules under section 6(g). The law expressly preserved ''any authority of the Commission to prescribe rules (including interpretive rules), and general statements of policy, with respect to unfair methods of competition in or affecting commerce.''[170] Congress also made clear that Section 18 ''shall not affect the validity of any rule which was promulgated under section 6(g).''[171] And it provided that ''[a]ny proposed rule under section 6(g)'' with certain components that were ''substantially completed before'' section 18's enactment ''may be promulgated in the same manner and with the same validity as such rule could have been promulgated had this section not been enacted.''[172] Among the substantially completed rules at the time was the Mail Order Rule, which proposed to define—and upon promulgation did define—certain conduct as both an unfair method of competition and an unfair or deceptive act or practice.[173] The 1975 legislation thus expressly permitted the Commission to promulgate a rule under section 6(g) that defined an unfair method of competition and evinces Congress's

intent to leave in place the Commission's authority to promulgate such rules under section 6(g). As the Seventh Circuit later put it, ''Congress . . . considered the controversy surrounding the Commission's substantive rulemaking power under Section 6(g) to have been settled by the *Octane Rating* case.'' [174]

Congress again confirmed the Commission's authority to promulgate rules regulating unfair methods of competition under section 6(g) when it enacted section 22 of the FTC Act as part of the Federal Trade Commission Improvements Act of 1980.[175] Section 22 imposes certain procedural requirements the Commission must follow when it promulgates any ''rule.'' Section 22(a) defines ''rule'' as ''any rule promulgated by the Commission under section 6 or section 18'' while *excluding* from that definition ''interpretive rules, rules involving Commission management or personnel, general statements of policy, or rules relating to Commission organization, procedure, or practice.'' [176] Thus, by its terms, section 22(a) demonstrates the 1980 Congress's understanding that the Commission maintained authority to promulgate rules under section 6 that are not merely ''interpretive rules, rules involving Commission management or personnel, general statements of policy, or rules relating to Commission organization, procedure, or practice.'' [177] Section 22 envisions rules that will have the force of law as legislative rules and defines ''rule'' based on whether it may ''have an annual effect on the national economy of $100,000,000 or more,'' ''cause a substantial change in the cost or price of goods or services,'' or ''have a significant impact upon'' persons and consumers.[178] Section 22(b) of the Act similarly contemplates authority to make legislative rules by imposing regulatory analysis obligations on any rules that the Commission promulgates under section 6.[179] The specific obligations in section 22(b), such as the requirement for the Commission to conduct a cost-benefit analysis, assume that section 6(g) authorizes substantive and economically significant rules.

Both the 1975 and 1980 amendments to the FTC Act thus indicate that Congress understood the Commission possessed rulemaking power under section 6(g) and chose to leave that authority in place.[180] As the Supreme Court has observed, ''[t]he long time failure of Congress to alter'' a statutory provision, like section 6(g) here, ''after it had been judicially construed, and the enactment by Congress of legislation which implicitly recognizes the judicial construction as effective, is persuasive of legislative recognition that the judicial construction is the correct one.'' [181] That is especially true when, as here, ''the matter has been fully brought to the attention of the public and the Congress, the latter has not seen fit to change the statute.'' [182] Were there any doubt that the 1914 Congress granted the Commission the authority to make rules under section 6(g) to prevent unfair methods of competition, the Congresses of 1975 and 1980 eliminated such doubt by ratifying the D.C. Circuit's decision holding that the Commission has such authority.

C. Comments and Responses Regarding the Commission's Legal Authority

The Commission received many comments supporting, discussing, or questioning its authority to promulgate the final rule. Numerous commenters supported that the Commission has such authority, including, among others, legal scholars and businesses.[183] In addition, hundreds of small businesses—hailing from 45 States and the District of Columbia—joined a comment by the Small Business Majority supporting the final rule.[184]

Commenters questioning the Commission's authority typically advanced one of three arguments. First, some commenters claimed the FTC Act does not grant the Commission authority to promulgate the rule. Second, some commenters contended that the validity of non-competes is a major question that Congress has not given the Commission the authority to address. And third, some commenters argued that Congress had impermissibly delegated to the Commission authority to promulgate nationwide rules governing methods of competition. A smaller number of comments asserted other, miscellaneous reasons the Commission allegedly lacked authority to promulgate the rule. The Commission has considered these comments and disagrees for the reasons explained below.

1. The Commission's Authority Under the FTC Act

The Commission received numerous comments claiming that it lacks authority under the FTC Act to promulgate rules prohibiting unfair methods of competition. The Commission disagrees. Congress expressly granted the Commission authority to promulgate such rules in the original FTC Act of 1914, Congress enacted legislation in 1975 expressly preserving that authority,[185] and it imposed requirements in 1980 that presumed that authority.

The Commission is not persuaded by commenters' arguments in opposition to its authority. For instance, some commenters argued that Congress's choice to exclude certain industries from the Commission's jurisdiction indicates that Congress did not intend to give the Commission power to pass rules that affect commerce across the national economy.[186] But Congress expressly ''empowered and directed'' the Commission to prevent unfair methods of competition throughout the economy,[187] in any activities ''in or affecting commerce,'' subject only to limited exceptions. The final rule will apply only to the extent that the Commission has jurisdiction under the FTC Act. The Act does not limit the Commission's authority to pursue, for example, industry-specific rulemaking. Where Congress wished to limit the scope of the Commission's authority over particular entities or activities, it did so expressly, demonstrating its intent to give the Commission broad enforcement authority over activities in or affecting commerce outside the scope of the enumerated exceptions.[188] That section 22 of the FTC Act requires the Commission to perform a regulatory analysis for amendments to rules based on, *inter alia,* ''their annual effect on the

[178] *Id.*

[179] 15 U.S.C. 57b–3(b).

[180] Congress has also amended section 6 since the D.C. Circuit decided *Petroleum Refiners,* but it left section 6(g) untouched. *See* Public Law 109–455, 120 Stat. 3372 (2006).

[181] *Apex Hosiery Co.* v. *Leader,* 310 U.S. 469, 488 (1940).

[182] *Id.* at 489.

[183] *See, e.g.,* Comment of Lev Menand et al., FTC–2023–0007–20871; Comment of Peter Shane et al., FTC–2023–0007–21024; Comment of Yelp, FTC–2023–0007–20974; Comment of Veeva Systems, FTC–2023–0007–18078.

[184] Comment of Sm. Bus. Majority, FTC–2023–0007–21022.

[185] Some commenters argued that the 1975 Magnuson-Moss Act, which created additional procedures the Commission must use to promulgate rules regulating unfair or deceptive acts or practices, implies that the Commission entirely lacks authority to promulgate rules regulating unfair methods of competition. The Commission disagrees with these comments and notes the effect of the 1975 legislation, which preserved the Commission's existing rulemaking authority.

[186] *E.g.,* Comment of Fed'n of Am. Hosps., FTC–2023–0007–21034.

[187] 15 U.S.C. 45(a)(2).

[188] 15 U.S.C. 45(a)(2), (3).

national economy'' confirms the same.[189]

Other commenters argued that the Commission is relying on vague or ancillary provisions for its authority and invoked the familiar refrain that Congress ''does not . . . hide elephants in mouseholes.'' [190] None of the provisions on which the Commission is relying are either vague or ancillary. As explained earlier, preventing unfair methods of competition is at the core of the Commission's mandate, the plain text of the Act gives the Commission rulemaking authority to carry out that mandate, and the Commission has exercised this rulemaking authority before.[191] The D.C. Circuit and Seventh Circuits have upheld that exercise of authority, and Congress preserved this authority in subsequent amendments to the Act following the D.C. Circuit's decision.[192]

Additional commenters cited select legislative history from the 1914 FTC Act to suggest the Commission lacks authority to promulgate rules regulating competition.[193] ''[T]here is no reason to resort to legislative history'' when, as here, the text of the statute speaks plainly.[194] Even if that were not the case, however, the legislative history does not unambiguously compel a different conclusion. Faced with similar arguments to those raised by commenters here, in *National Petroleum Refiners,* the D.C. Circuit conducted an exhaustive review of the 1914 FTC Act and concluded ''the legislative history of section 5 and Section 6(g) is ambiguous'' and ''certainly does not compel the conclusion that the Commission was not meant to exercise the power to make substantive rules with binding effect[.]'' [195] As the D.C. Circuit explained, even individual statements by some Congresspeople that might suggest otherwise,[196] when properly contextualized, ''can be read to support substantive rule-making of the kind asserted by the'' Commission.[197]

Statements from the enactment of the 1975 Magnuson Moss Act, which added section 18 to the FTC Act, confirm the Commission's authority to promulgate rules under section 6(g). That legislative history reveals Congress in 1975 made a considered decision to reject an effort to overturn the D.C. Circuit's interpretation of the FTC Act and instead confirmed that section 6(g) authorizes the Commission to promulgate legislative rules concerning unfair methods of competition.[198] More importantly, these sorts of individual statements cannot trump the plain text of the Act that Congress passed,[199] which gave the Commission the authority ''to make rules and regulations for the purpose of carrying out the provisions'' of the FTC Act. Indeed, even if the legislative history were to be selectively read to cut against the Commission's authority, the Commission would still conclude that section 6(g) confers authority to promulgate this final rule because the plain text of the statute (including both the original 1914 Act and subsequent enacted amendments to the FTC Act) unambiguously confers that authority.

In short, neither the legislative history of the FTC Act, nor any of the other arguments commenters raised about the Commission's rulemaking authority overcome the plain meaning of the Act or Congress's ratification of the Commission's power to make rules preventing unfair methods of competition, as discussed in Part II.B.[200]

The Commission acknowledges that individual members of the Commission have, at times, disclaimed the Commission's authority to promulgate rules regulating unfair methods of competition.[201] The statement of an individual Commissioner does not reflect the views of or bind ''[t]he Commission itself,'' which has concluded—just as it did when it issued such rules in the past—that it does possess such authority.[202] In any event, the Commission has reviewed these statements, along with the many comments it received, and does not believe any of the arguments raised in support of that position overcome the plain meaning of the FTC Act provisions.

2. Major Questions Doctrine

Many commenters assert that the Commission lacks the authority to adopt the final rule based on the major questions doctrine. That doctrine, as the Supreme Court recently explained in *West Virginia* v. *EPA,* ''teaches that there are extraordinary cases . . . in which the history and the breadth of the authority that the agency has asserted, and the economic and political significance of that assertion, provide a reason to hesitate before concluding that Congress meant to confer such authority.'' [203] In such cases, ''something more than a merely plausible textual basis for the agency action is necessary. The agency instead must point to clear congressional authorization for the power it claims.'' [204] Having considered the factors that the Supreme Court has used to identify major questions, the Commission concludes that the final rule does not implicate the major questions doctrine. And even if that doctrine did apply, the Commission concludes that Congress provided clear authorization for the Commission to promulgate this rule.[205]

[203] *W. Va.* v. *EPA,* 597 U.S. 697, 721 (2022) (cleaned up).

[204] *Id.* at 723 (cleaned up).

[205] The Commission notes that some commenters either implicitly or explicitly focused on the Commission's rulemaking authority, as opposed to the Commission's authority to define non-competes as an unfair method of competition, as a major question. The Commission has already addressed

The agency authority underlying this final rule rests on firm historical footing. There is nothing novel about the Commission's assertion of authority to promulgate legislative rules under section 6(g).[206] As explained in Part II.B, the Commission has used this authority for more than 60 years to promulgate many rules defining unfair methods of competition and/or unfair or deceptive acts or practices.[207] The Commission's use of this power sometimes garnered significant attention, such as when it made national news by requiring cigarette warnings in the immediate wake of the Surgeon General's groundbreaking report on the health effects of smoking.[208] And the Commission's rulemaking authority was long ago ''addressed''—and affirmed—''by a court.'' [209] Moreover, after that high-profile rulemaking and judicial affirmation, Congress considered—and twice reaffirmed—the Commission's authority to issue legislative rules defining unfair methods of competition under section 6(g).[210] Indeed, even when Congress decided to displace the FTC's Cigarette Rule with legislation, it left the Commission's rulemaking authority in place.[211] Likewise, when Congress added procedural steps the Commission must take when promulgating rules concerning unfair or deceptive acts or practices, it expressly allowed the Commission to complete certain ongoing rulemakings, including one that relied on section 6(g) to define an unfair method of competition.[212] This is not a situation where Congress ''conspicuously and repeatedly'' declined to grant the agency the claimed power.[213]

Nor does the substance of the rule represent any departure from the Commission's past practices. Since its establishment in 1914, the Commission has had the authority to determine whether given practices constitute unfair methods of competition. Rather than trying to define all the many and varied practices that are unfair, Congress empowered the Commission to respond to changing market conditions and to bring specialized expertise to bear when making unfairness determinations.[214] As noted in Part I.B, the Commission has previously secured consent orders premised on the use of non-competes being an unfair method of competition,[215] and there is little question that the Commission has the authority to determine that non-competes are unfair methods of competition through adjudication.[216] Indeed, one commenter who asserted the rule would violate the major questions doctrine expressly agreed that the Commission could determine that a specific non-compete is an unfair method of competition through case-by-case adjudication.[217] The Commission is making the same kind of determination here through rulemaking rather than adjudication.[218] And because the rulemaking process allows all interested parties a chance to weigh in, this process ''may actually be fairer to parties than total reliance on case-by-case adjudication.'' [219] This is thus not a situation where the agency's action would fundamentally change the nature of the regulatory scheme. Determining whether a practice is an ''unfair method of competition'' under section 5 has been a core task of the Commission for more than a century—and, indeed, goes to the heart of its mandate.

Additionally, non-competes have already been the subject of FTC scrutiny and enforcement actions, so subjecting them to rulemaking is a more incremental—and thus less significant—step than it would be for an agency to wade into an area not currently subject to its enforcement authority. And the present rulemaking is consistent with both Congress's intent for the Commission and the Commission's prior practice. Congress ''empowered and directed'' the Commission ''to prevent persons, partnerships, or corporations'' within the Commission's jurisdiction ''from using unfair methods of competition in or affecting commerce.'' [220] Following that directive, the Commission has previously used its section 6(g) authority to promulgate rules that reach industries across the economy. For example, the Mail Order Rule placed restrictions on any sale conducted by mail,[221] and the Negative Option Rule requires certain disclosures for some negative option plans. These rules—promulgated nearly 50 or more years ago—applied across the industries within the FTC's jurisdiction, yet no court has held that they exceeded the Commission's authority.[222] Indeed, the Seventh Circuit upheld the Mail Order Rule as a valid exercise of that authority.[223]

Congress itself recognized that the Commission's authority will sometimes affect firms across the economy. Indeed, addressing unfair methods of competition and unfair and deceptive practices across industries (other than the industries, activities, or entities Congress expressly exempted) is the core of the Commission's mandate—and the Commission has long pursued that mandate through both rulemaking [224] and adjudication.[225] Congress imposed

the source of its rulemaking authority, *see* Part II.B. But to be clear, the Commission concludes that neither its rulemaking authority under section 6(g) nor its authority to use that power to define non-competes as an unfair method of competition implicates the major questions doctrine, and that even assuming either did, Congress has provided express statutory authority for both.

[224] *See* Part II.B.

[225] The Commission's adjudicatory power, like its rulemaking power, stretches across the national economy. For instance, the Commission has found companies in a variety of industries participated in price-fixing conspiracies that violated section 5 and ordered them to cease and desist from such practices following an adjudication. *See, e.g., Eugene Dietzgen Co.* v. *FTC,* 142 F.2d 321 (7th Cir. 1944) (scientific instruments); *U.S. Maltsters Ass'n* v. *FTC,* 152 F.2d 161 (7th Cir. 1945) (malt manufacturers); *Keasbey & Mattison Co.* v. *FTC,* 159 F.2d 940 (6th Cir. 1947) (asbestos insulation); *Allied Paper Mills* v. *FTC,* 168 F.2d 600 (7th Cir. 1948) (book paper manufacturers); *Bond Crown & Cork. Co.* v. *FTC,* 176 F.2d 974 (4th Cir. 1949) (bottle cap manufacturers). Price-fixing is just one example. The Commission's adjudicatory power also supported a cease-and-desist order concerning a food manufacturer's resale practices more than 100 years ago. *FTC* v. *Beech-Nut Packing,* 257 U.S. 441 (1922). And it supported a cease-and-desist order

Continued

certain requirements in section 22 on any amendment to a Commission rule promulgated under section 6 (or section 18) that would have certain substantial effects on the national economy, the price of goods or services, or regulated entities and consumers.[226] Congress thus anticipated—and intended—that the Commission's rulemaking power carried the potential to affect the economy in considerable ways, and Congress already considered and specified the necessary steps and checks to ensure the Commission's exercise of that power is appropriate. For all these reasons, the final rule does not involve a ''major question'' as the Supreme Court has used that term.

Even if the final rule does present a major question, the final rule passes muster because the FTC Act provides clear authorization for the Commission's action. In cases involving major questions, courts expect Congress to ''speak clearly'' if it wishes to assign the disputed power.[227] Congress did so when it ''declared unlawful'' in the FTC Act ''[u]nfair methods of competition'' and empowered the Commission ''to make rules and regulations for the purpose of carrying out the provisions of th[e] Act.'' [228] Congress ''[i]n large measure'' left ''the task of defining 'unfair methods of competition' . . . to the Commission.'' [229] That is precisely what the Commission has done here, for the reasons elaborated in Part IV. Finally, there is no doubt that the Commission has expertise in the field (competition) it is regulating here.[230] For these reasons, even if the final rule involves a major question, Congress has clearly delegated to the Commission the authority to address that question.

3. Non-Delegation Doctrine

Some commenters also objected that Congress violated the non-delegation doctrine by empowering the Commission to promulgate rules regulating unfair methods of competition. The Commission disagrees. The non-delegation doctrine provides that ''Congress generally cannot delegate its legislative power to another Branch.'' [231] But the Constitution does not ''prevent Congress from obtaining the assistance of its coordinate Branches.'' [232] ''So long as Congress shall lay down by legislative act an intelligible principle to which the person or body authorized to [exercise the delegated authority] is directed to conform, such legislative action is not a forbidden delegation of legislative power.'' [233] Applying this rule, the Supreme Court has ''over and over upheld even very broad delegations'' including those directing agencies ''to regulate in 'the public interest,' . . . to set 'fair and equitable' prices and 'just and reasonable' rates,'' and ''to issue whatever air quality standards are 'requisite to protect the public health.' '' [234] ''The Supreme Court has'' also ''explained that the general policy and boundaries of a delegation 'need not be tested in isolation' '' and ''[i]nstead, the statutory language may derive content from the 'purpose of the Act, its factual background and the statutory context in which they appear.' '' [235]

Here, Congress ''declared unlawful'' any ''unfair methods of competition in or affecting commerce'' and ''empowered and directed'' the Commission ''to prevent'' entities within its jurisdiction ''from using unfair methods of competition.'' [236] Congress also instructed the Commission to ''make rules and regulations for the purpose of carrying out the provisions'' of the FTC Act.[237] Congress's stated purpose and policy in section 5 provides the Commission with an intelligible principle to guide its section 6(g) rulemaking authority.[238]

Were there any doubt, the Supreme Court has laid it to rest in *A.L.A. Schechter Poultry Corp.* v. *United States.*[239] *Schechter Poultry* marked one of two occasions ''in this country's history'' that the Supreme Court ''found a delegation excessive,'' and ''in each case . . . Congress had failed to articulate *any* policy or standard to confine discretion.'' [240] The Court offered the FTC Act, however, as a counterexample of proper Congressional delegation. The Court recognized that the phrase ''unfair methods of competition'' in the FTC Act was ''an expression new in the law'' without ''precise definition,'' but that Congress had empowered the Commission to ''determine[ ] in particular instances, upon evidence, in the light of particular competitive conditions and of what is found to be a specific and substantial public interest'' whether a method of competition is unfair.[241] The FTC Act stood in contrast, the Court explained, to the National Industrial Recovery Act (''NIRA''), which the Court held included an unconstitutional delegation.[242]

The Commission recognizes that *Schechter Poultry* approved of the FTC Act's adjudicatory process for determining unfair methods of competition without commenting on the Act's rulemaking provision. But the ''unfair method of competition'' authority the Court approvingly cited in *Schechter Poultry* is the same intelligible principle the Commission is applying in this rulemaking. And just as the adjudication process provides for a ''formal complaint, for notice and hearing, for appropriate findings of fact supported by adequate evidence, and for judicial review,'' [243] the APA rulemaking process provides for a public notice of proposed rulemaking, the opportunity to ''submi[t] . . . written data, views, or arguments,'' agency consideration of those comments, and judicial review.[244] If Congress may permissibly delegate the

within the past few years enjoining a pharmaceutical company from entering into reverse payment settlement schemes. *Impax Labs., Inc.* v. *FTC,* 994 F.3d 484 (5th Cir. 2021). In the century between, the Commission has found section 5 violations based on false advertising, monopoly maintenance, exclusive dealing, and more in diverse sectors throughout the country.

authority to determine through adjudication whether a given practice is an unfair method of competition, it may also permit the Commission to do the same through rulemaking.[245]

For these reasons, the Commission concludes that its authority to promulgate rules regulating unfair methods of competition is not an impermissible delegation of legislative authority.

4. Other Challenges to the Commission's Authority

Finally, a handful of comments raised other, miscellaneous arguments contending that the Commission lacks authority to promulgate the rule. The Commission has reviewed and considered these comments and concludes they do not undercut the Commission's authority to promulgate the final rule.

The Commission received several comments about the Commerce Clause. That clause allows Congress ''to regulate Commerce with foreign Nations, and among the several States, and with the Indian tribes.'' [246] Consistent with that clause, the FTC Act empowers the Commission to prevent unfair methods of competition ''in or affecting commerce,'' which the Act also defines consistently with the Constitution.[247] One commenter wrote to support the rule and emphasized that non-competes restrict the free flow of interstate commerce. Others argued that the proposed rule would violate the Commerce Clause by regulating local commerce. The Commission has considered these comments and concludes that it may promulgate the final rule consistent with the Commerce Clause. The final rule extends to the full extent of the FTC's jurisdiction, which in turn extends no further than the Commerce Clause permits. As the Supreme Court has explained, the phrase ''in or affecting commerce'' in section 5 of the FTC Act is ''coextensive with the constitutional power of Congress under the Commerce Clause.'' [248] In this final rule, the Commission finds the use of non-competes by employers substantially affects commerce as that term is defined in the FTC Act. The final rule is therefore a lawful exercise of Congress's delegated power.[249]

Relatedly, one commenter objected that the rule would violate the Tenth Amendment, which provides that ''[t]he powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.'' [250] But as just explained, the Constitution grants Congress the power to regulate interstate commerce, and pursuant to that power Congress granted the Commission authority to prevent unfair methods of competition in or affecting commerce. The Commission is not intruding on any power reserved to the States.

Some commenters objected that the rule infringes on the right to contract. One of these commenters acknowledged that the Constitution's Contracts Clause does not apply to the Federal government.[251] Regardless, even assuming the Constitution protects a right to contract that can be asserted against a Federal regulation, that right sounds in substantive due process, and the Commission must offer only a rational basis for the rule.[252] As relevant here, the final rule advances the Commission's congressional mandate to prevent unfair methods of competition and will promote competition and further innovation among its many benefits.[253] There is a rational relationship between regulating non-competes and these legitimate government purposes.

One commenter argued that the proposed rule was unconstitutionally vague. This commenter's objection focused on the proposed provision governing *de facto* non-competes. The Commission is not adopting that proposed language in the final rule. Instead, the Commission has clarified the scope of its definition of non-compete clause. Whether a specific clause falls within the scope of the final rule will necessarily depend on the precise language of the agreement at issue, but the text of the final rule provides regulated parties with sufficient notice of what the law demands to satisfy any due process vagueness concerns.

D. Compliance With the Administrative Procedure Act (''APA'')

Some commenters also contended that the Commission has not complied with the Administrative Procedure Act (''APA'').[254] At a high level, the APA requires prior public notice, an opportunity to comment, and consideration of those comments before an agency can promulgate a legislative rule.[255] The Commission has engaged in that process, which has led to this final rule and the accompanying explanation. Some comments failed to recognize the NPRM was a preliminary step that did not fossilize the Commission's consideration of arguments or weighing of evidence. Moreover, the APA ''limits causes of action under the APA to final agency action.'' [256] It is this final rule, not the NPRM, that constitutes final agency action. Before adopting this final rule, the Commission reviewed and considered all comments received. In many instances, the Commission has made changes relative to the proposed rule to address concerns that commenters raised. In all cases, however, the Commission has complied with the APA.

E. The Commission's Jurisdiction Under the FTC Act

The Commission's jurisdiction derives from the FTC Act. Employers that are outside the Commission's jurisdiction under the FTC Act are not subject to the final rule. The Commission clarifies in the definition of person in § 910.1, that the rule applies only to those within the Commission's jurisdiction. Some commenters sought a more detailed accounting of the

[254] This includes, for example, a commenter who argued that the NPRM was not the product of reasoned decision-making, asserting that the Commission had failed to consider key aspects of the rule or misconstrued evidence; commenters who argued that the rule was arbitrary and capricious for failing to consider less restrictive alternatives; commenters who argued that the NPRM failed to consider State policy or that the Commission would be acting arbitrarily by not passing a uniform rule; and commenters who argued that the Commission had failed to consider reliance interests. The Commission has addressed the concerns underlying these comments in other parts of this statement of basis and purpose.

Commission's jurisdiction under the FTC Act. The Commission addresses those comments in this section. Comments seeking an exclusion for entities within the Commission's jurisdiction are addressed in Parts V.D.3 and V.D.4.

1. Generally

Certain entities that would otherwise be subject to the final rule may fall outside the FTC's jurisdiction under the FTC Act. The FTC Act exempts certain entities or activities from the Commission's enforcement jurisdiction, which otherwise applies to ''persons, partnerships, or corporations.'' [257] For example, the Act exempts ''banks'' and ''persons, partnerships, or corporations insofar as they are subject to the Packers and Stockyards Act.'' [258] And the Act excludes from its definition of ''corporation'' any entity that is not ''organized to carry on business for its own profit or that of its members.'' [259] The NPRM explained that, where an employer is exempt from coverage under the FTC Act, the employer would not be subject to the rule.[260] The NPRM also explained State and local government entities—as well as some private entities—may not be subject to the rule when engaging in activity protected by the State action doctrine.[261] Some commenters stated that the Commission should restate, clarify, interpret, or limit the reach of its authority under the FTC Act in the rule.

In response, the Commission explains that the final rule extends to covered persons that are within the Commission's jurisdiction. The Commission does not believe restating or further specifying each jurisdictional limit in the final rule's text is necessary; the FTC Act defines the limits of the Commission's jurisdiction and those limits govern this rule. Moreover, the Commission cannot here provide guidance that applies to every fact and circumstance. Whether an entity falls under the Commission's jurisdiction can be a fact-specific determination. An attempt by the Commission to capture all potential interpretations of the laws governing exclusions from the FTC Act may create confusion rather than clarity. In response to commenters who asked the Commission to affirm that the final rule does not bind agencies that regulate firms outside the Commission's jurisdiction under the FTC Act, the Commission affirms that the Commission applies the final rule only to entities that are covered by the FTC Act.[262]

A State government agency commenter suggested that the Commission explicitly exempt State and local governments from the rule. The commenter pointed to conflicts-of-interest policies used by some State agencies to preclude former employees from working on related projects or jobs in the private sector, which the commenter stated do not implicate the policy concerns the FTC seeks to address in the rule. The commenter also noted the complexity of when the Commission's jurisdiction might extend to State and local governments. The Commission clarifies in the definition of ''person'' in § 910.1 that the final rule applies only to a legal entity within the Commission's jurisdiction. The Commission also explains in Part III.E that the definition of ''person'' is coextensive with the Commission's authority to issue civil investigative demands. Nothing in this rule changes the extent of the Commission's jurisdiction over State and local governments. The Commission declines to specify all circumstances under which a governmental entity or quasi-governmental entity would or would not be subject to the Commission's jurisdiction and, thus, this final rule. In any event, with respect to the government ethics policies referenced by the commenter, to the extent the commenter is referring to traditional ''cooling off'' policies that preclude former government employees from working on discrete, specific projects that fell within the scope of their former official governmental position to address ethical concerns, such policies would not meet the definition of ''non-compete clause'' in § 910.1 because they do not prohibit, penalize or function to prevent a worker from switching jobs or starting a new business.

2. Jurisdiction Over Entities Claiming Nonprofit Status Under the FTC Act or the Internal Revenue Code

Commenters from the healthcare industry argued that the Commission should restate, clarify, interpret, or limit the reach of its authority under the FTC Act specifically for the healthcare industry. They pointed to the prevalence of healthcare organizations registered under section 501(c) of the Internal Revenue Code claiming tax-exempt status as nonprofits. Commenters contended that these organizations are categorically outside the Commission's authority under the FTC Act. In fact, under existing law, these organizations are not categorically beyond the Commission's jurisdiction. To dispel this misunderstanding, the Commission summarizes the existing law pertaining to its jurisdiction over non-profits.

a. Comments Received

Business and trade industry commenters from the healthcare industry, including, for example, hospitals, physician practices, and surgery centers, focused on whether the Commission has jurisdiction over nonprofit organizations registered under section 501(c)(3) of the Internal Revenue Code in light of the FTC Act's definition of ''corporation.'' Section 501(c)(3) exempts from taxation certain religious, charitable, scientific, educational, and other corporations, ''no part of the net earnings of which inure[] to the benefit of any private shareholder or individual.'' [263] An entity is a ''corporation'' under the FTC Act only if it is ''organized to carry on business for its own profit or that of its members.'' [264] Several industry commenters argued the Commission does not have jurisdiction over entities that claim tax-exempt status as nonprofits because they are, by definition, not ''organized to carry on business for [their] own profit or that of [their] members.'' The Commission presumes that commenters self-identifying as or referring to ''nonprofits,'' ''not-for-profits,'' or other similar terms without further explanation are referencing entities claiming tax-exempt status under section 501(c)(3) or other provisions of the Internal Revenue Code. Some commenters contended that, to avoid confusion, the rule should state it does

[258] 15 U.S.C. 45(a)(2).

[259] 15 U.S.C. 44.

[260] NPRM at 3510.

[261] *Id.* (citing *Parker* v. *Brown,* 317 U.S. 341, 350–51 (1943)).

[262] For example, a few community bank commenters expressed concern that because the Federal Deposit Insurance Corporation (''FDIC'') can enforce the FTC Act against banks, the rule could be applied by the FDIC to banks. The FTC Act is the Commission's organic statute, and interpretive authority of the FTC Act rests with the Commission. Whether other agencies enforce section 5 or apply the rule to entities under their own jurisdiction is a question for those agencies. At the same time, as discussed in this Part II.E.1, the Commission applies and enforces the rule only to the extent of its jurisdiction.

[263] 26 U.S.C. 501(c)(3). Other, less frequently invoked paragraphs of section 501(c) also identify corporations and organizations that qualify for tax-exempt status. The distinctions between these entities and those claiming tax-exempt status under 501(c)(3) are analyzed under the same standard.

[264] 15 U.S.C. 44.

not apply to entities claiming tax-exempt status as non-profits. At least one commenter stated that the Commission should clarify whether and how the rule would apply to healthcare entities claiming tax-exempt status as nonprofits and then reopen the comment period. One commenter sought clarification on how ownership interest in a for-profit entity or joint venture with a for-profit partner by an entity that claims tax-exempt status as a nonprofit would affect the rule's applicability.

b. The Final Rule

The final rule applies to the full scope of the Commission's jurisdiction. Many of the comments about nonprofits erroneously assume that the FTC's jurisdiction does not capture any entity claiming tax-exempt status as a nonprofit. Given these comments, the Commission summarizes Commission precedent and judicial decisions construing the scope of the Commission's jurisdiction as it relates to entities that claim tax-exempt status as nonprofits and to other entities that may or may not be organized to carry on business for their own profit or the profit of their members.

Congress empowered the Commission to ''prevent persons, partnerships, or corporations'' from engaging in unfair methods of competition.[265] To fall within the definition of ''corporation'' under the FTC Act, an entity must be ''organized to carry on business for its own profit or that of its members.'' [266] These FTC Act provisions, taken together, have been interpreted in Commission precedent [267] and judicial decisions [268] to mean that the Commission lacks jurisdiction to prevent section 5 violations by a corporation not organized to carry on business for its own profit or that of its members.

The Commission stresses, however, that both judicial decisions and Commission precedent recognize that not all entities claiming tax-exempt status as nonprofits fall outside the Commission's jurisdiction. As the Eighth Circuit has explained, ''Congress took pains in drafting § 4 [15 U.S.C. 44] to authorize the Commission to regulate so-called nonprofit corporations, associations and all other entities if they are in fact profit-making enterprises.'' [269] The Commission applies a two-part test to determine whether a corporation is organized for profit and thus within the Commission's jurisdiction. As the Commission has explained, ''[t]he not-for profit jurisdictional exemption under Section 4 requires both that there be an adequate nexus between an organization's activities and its alleged public purposes and that its net proceeds be properly devoted to recognized public, rather than private, interests.'' [270] Alternatively stated, the Commission looks to both ''the source of the income, *i.e.,* to whether the corporation is organized for and actually engaged in business for only charitable purposes, and to the destination of the income, *i.e.,* to whether either the corporation or its members derive a profit.'' [271] This test reflects the Eighth Circuit's analysis in *Community Blood Bank of Kansas City Area, Inc.* v. *FTC* and ''the analogous body of federal law which governs treatment of not-for-profit organizations under the Internal Revenue Code.'' [272] Under this test, a corporation's ''tax-exempt status is certainly one factor to be considered,'' but that status ''does not obviate the relevance of further inquiry into a [corporation's] operations and goals.'' [273]

Merely claiming tax-exempt status in tax filings is not dispositive. At the same time, if the Internal Revenue Service (''IRS'') concludes that an entity does not qualify for tax-exempt status, such a finding would be meaningful to the Commission's analysis of whether the same entity is a corporation under the FTC Act. Administrative proceedings and judicial decisions involving the Commission or the IRS [274] have identified numerous private benefits that, if offered, could render an entity a corporation organized for its own profit or that of its members under the FTC Act, bringing it within the Commission's jurisdiction. For instance, the Commission has exercised jurisdiction in a section 5 enforcement action over a physician-hospital organization because the organization engaged in business on behalf of for-profit physician members.[275] That organization, which consisted of over 100 private physicians and one non-profit hospital, claimed tax-exempt status as a nonprofit.[276] Similarly, the Commission has exercised jurisdiction over an independent physician association claiming tax-exempt status as a nonprofit. The association consisted of private, independent physicians and private, small group practices.[277] That association was organized for the pecuniary benefit of its for-profit members because it ''contract[ed] with payers, on behalf of its [for-profit] physician members, for the provision of physician services for a fee.'' [278] Under IRS precedent in the context of purportedly tax-exempt nonprofit hospitals and other related entities that partner with for-profit entities, where the purportedly nonprofit entity ''has ceded effective control'' to a for-profit partner, ''conferring impermissible private benefit,'' the entity loses tax-exempt status.[279] The IRS has also rejected claims of nonprofit tax-exempt status for entities that pay unreasonable compensation, including percentage-based compensation, to founders, board members, their families, or other insiders.[280]

These examples are illustrative. As has been the case for decades, under Commission precedent and judicial

[265] 15 U.S.C. 45(a)(2). The Commission focuses on coverage as ''corporations'' in this section.

decisions construing the scope of the Commission's jurisdiction, any entity satisfying the two-prong test falls within the Commission's jurisdiction. Such entities would thus be bound by the final rule.[281]

F. The Legal Standard for Unfair Methods of Competition Under Section 5

In section 5 of the FTC Act, ''unfair methods of competition in or affecting commerce'' are ''declared unlawful.'' [282] In enacting section 5, Congress intentionally did not mirror either the common law or the text or judicial interpretations of the Sherman Act, but instead adopted this new term.[283] As the Supreme Court has confirmed, this different term reflects a distinct standard.[284] Under section 5, the Commission assesses two elements: (1) whether the conduct is a method of competition, as opposed to a condition of the marketplace, and (2) whether it is unfair, meaning that it goes beyond competition on the merits. The latter inquiry has two components: (a) whether the conduct has indicia of unfairness and (b) whether the conduct tends to negatively affect competitive conditions. These two components are weighed according to a sliding scale.

Indicia of unfairness include the extent to which the conduct may be coercive, exploitative, collusive, abusive, deceptive, predatory, or involve the use of economic power of a similar nature.[285] Indicia of unfairness may also be present if the conduct is otherwise restrictive or exclusionary, depending on the circumstances, such as the nature of the commercial setting and the current and potential future effects of the conduct.[286] Notably, section 5 does not limit indicia of unfairness to conduct that benefits one or more firms and necessarily disadvantages others. Instead, restrictive and exclusionary conduct may also be unlawful where it benefits specific firms while tending to negatively affect competitive conditions.[287]

The second prong, whether conduct tends to negatively affect competitive conditions, focuses on the nature and tendency of the conduct. It does not turn on whether the conduct directly caused actual harm in the specific instance at issue and therefore does not require a detailed economic analysis or current anticompetitive effects.[288] Instead, the inquiry examines whether the conduct has a tendency to negatively affect competitive conditions, including by raising prices, reducing output, limiting choice, lowering quality, reducing innovation, impairing or excluding other market participants, reducing the likelihood of potential or nascent competition, reducing labor mobility, suppressing worker compensation or degrading working conditions for workers. These concerns may arise when the conduct is examined in the aggregate along with the conduct of others engaging in the same or similar conduct.[289] Section 5 does not require a separate showing of market power or market definition.[290] Nor does section 5 import the rule-of-reason analysis applied under other antitrust laws, including in some Sherman Act cases.[291]

The Commission weighs the two elements—indicia of unfairness and tendency to negatively affect competitive conditions—on a sliding scale. Where the indicia of unfairness are clear, conduct may be an unfair method of competition with only a limited showing of a tendency to negatively affect competitive conditions.[292] For example, conduct that is coercive and exploitative evinces facial unfairness and weighs heavily as clear indicia of unfairness.[293] Where indicia of unfairness are less clear, conduct may still violate section 5 where it tends to negatively affect

---

[281] The Commission cannot predict precisely how many entities claiming nonprofit tax-exempt status may be subject to the final rule. The Commission finds that the benefits of the final rule justify implementing it no matter how many nonprofit entities claiming tax-exempt status it ultimately reaches—including under the unlikely assumption that it does not reach any of them.

[282] 15 U.S.C. 45(a)(1).

[283] The Clayton Antitrust Act (38 Stat. 730, ch. 323, Pub. L. 63–212, Oct. 15, 1914) was signed into law weeks after the FTC Act of 1914, 38 Stat. 717.

[284] *See FTC* v. *Ind. Fed'n of Dentists,* 476 U.S. 447, 454 (1986); *FTC* v. *Sperry & Hutchinson,* 405 U.S. 233, 243–44 (1972); *FTC* v. *Brown Shoe Co.,* 384 U.S. 316, 321 (1966); *FTC* v. *Motion Picture Advert. Serv.,* 344 U.S. 392, 394–95 (1953); *FTC* v. *R.F. Keppel & Bro.,* 291 U.S. 304, 309–10 (1934). While some commenters argued the Commission should apply the rule of reason in this rule, as outlined in Parts II.A, II.B, II.C, and II.F, neither the text of section 5, the Supreme Court and other courts' interpretation of section 5, nor the legislative history support the conclusion that the Commission should apply the rule of reason to determine whether conduct violates section 5 as an unfair method of competition. The Commission outlines the legal standard for finding certain uses of non-competes to be unfair methods of competition in the final rule in this Part II.F.

[285] *See e.g., Sperry & Hutchinson Co.,* 405 U.S. at 243 (holding section 5 reaches conduct shown to exploit consumers, citing *R.F. Keppel & Bro.,* 291 U.S. at 313); *Atl. Refin. Co.* v. *FTC,* 381 U.S. 357, 369 (1965) (holding that the ''utilization of economic power in one market to curtail competition in another . . . . bolstered by actual threats and coercive practices'' was an unfair method of competition); *FTC* v. *Texaco,* 393 U.S. 223, 228–29 (1968) (finding that use of ''dominant economic power . . . in a manner which tended to foreclose competition'' is an unfair method of competition); *E.I. du Pont de Nemours* v. *FTC (Ethyl),* 729 F.2d 128, 137, 140 (2d Cir. 1984) (finding that unfair methods of competition includes practices that are ''collusive, coercive, predatory, restrictive or deceitful'' as well as ''exclusionary'').

[286] *See, e.g., Motion Picture Advert. Serv. Co.,* 344 U.S. at 395–96; *Luria Bros. & Co.* v. *FTC,* 389 F.2d 847, 860–61 (3d Cir. 1968). As the Supreme Court has made clear, the inquiry into the nature of the commercial setting does not, however, require market definition or proof of market power. *See, e.g., Atl. Refin. Co.,* 381 U.S. at 371 (finding it ''unnecessary to embark upon a full scale economic analysis of competitive effect''). On November 10, 2022, the Commission issued a policy statement describing the key principles of general applicability concerning whether conduct is an unfair method of competition under section 5. FTC, *Policy Statement Regarding the Scope of Unfair Methods of Competition Under Section 5 of the Federal Trade Commission Act* (Nov. 10, 2022) (hereinafter ''FTC Policy Statement''). The FTC Policy Statement cites a number of cases explaining that section 5 does not require market definition or proof of market power. *Id.* at 10.

[287] *See, e.g., Brown Shoe Co.,* 384 U.S. at 320 (''Thus the question . . . is whether the Federal Trade Commission can declare it to be an unfair practice for Brown, the second largest manufacturer of shoes in the Nation, to pay a valuable consideration to hundreds of retail shoe purchasers in order to secure a contractual promise from them that they will deal primarily with Brown and will not purchase conflicting lines of shoes from Brown's competitors. We hold that the Commission has power to find, on the record here, such an anticompetitive practice unfair . . . .'')

[288] *Atl. Refin. Co.,* 381 U.S. at 371 (It is ''unnecessary to embark upon a full scale economic analysis of competitive effect.''); *Texaco,* 393 U.S. at 230 (''It is enough that the Commission found that the practice in question unfairly burdened competition for a not insignificant volume of commerce.''); *Union Circulation Co.* v. *FTC,* 241 F.2d 652, 657 (2d Cir. 1957) (''The agreements should be struck down if their reasonable tendency, as distinguished from actual past effect, is to injure or obstruct competition. Under the Federal Trade Commission Act, industry agreements and practices have been enjoined without an actual showing of injury to competition . . . .''). *See also Sperry & Hutchinson Co.,* 405 U.S. at 244 (''[U]nfair competitive practices [are] not limited to those likely to have anticompetitive consequences after the manner of the antitrust laws.''); *Ethyl,* 729 F.2d at 138 (finding that evidence of actual harm is not required); *In re Coca-Cola Co.,* 117 F.T.C. 795, 915 n.25 (1994) (rejecting argument that section 5 violation requires showing of ''anticompetitive effects'').

[289] *Motion Picture Advert. Serv. Co.,* 344 U.S. at 395; *Union Circulation Co.,* 241 F.2d at 658 (''The tendency of the 'no-switching' agreements is to discourage labor mobility, and thereby the magazine-selling industry may well become static in its composition to the obvious advantage of the large, well-established signatory agencies and to the disadvantage of infant organizations.'').

[291] *See* Part II.A.

[292] *See, e.g., Ethyl,* 729 F.2d at 137–39; FTC Policy Statement, *supra* note 286, at 9.

[293] *See e.g., Sperry & Hutchinson Co.,* 405 U.S. at 243; *Ethyl,* 729 F.2d at 139, 140 (finding that unfair methods of competition include practices that are ''collusive, coercive, predatory, restrictive, or deceitful'' as well as ''exclusionary''); FTC Policy Statement, *supra* note 286, at 7, 9.

competitive conditions, but a stronger showing of such tendency is required.

In many cases the Commission (and courts) have held conduct to constitute an unfair method of competition by pointing to clear indicia of unfairness, including coercive or exploitative conduct, without conducting a detailed economic analysis of its effects. In *Atlantic Refining Co.* v. *FTC* and *FTC* v. *Texaco, Inc.,* the Supreme Court held that the Commission established an unfair method of competition where an oil company used its economic power over its gas stations to coerce them into buying certain tires, batteries, or accessories only from firms that paid the oil company a commission.[294] The Court determined in *Atlantic Refining* that ''a full-scale economic analysis of competitive effect'' was not required and the Commission needed only to show that the conduct burdened ''a not insubstantial portion of commerce.'' [295] The Court reiterated this standard in *Texaco* holding that, even though the impact was less harmful than the conduct in *Atlantic Refining,* ''the anticompetitive tendencies of [the challenged] system are clear, and . . . the Commission was properly fulfilling the task that Congress assigned it in halting this practice in its incipiency.'' [296] As the Court observed, ''[t]he Commission is not required to show that a practice it condemns has totally eliminated competition.'' [297] In *FTC* v. *R.F. Keppel & Brother, Inc.,* the Supreme Court held that the Commission established an unfair method of competition where a manufacturer exploited the inability of children to protect themselves in the marketplace by marketing inferior goods to them through use of a gambling scheme.[298] The Court considered the extent of the practice and concluded ''[the practice] is successful in diverting trade from competitors'' without engaging in a full-scale economic analysis.[299]

In other cases, the Commission (and courts) have held exclusionary or restrictive conduct was an unfair method of competition based on evidence of the conduct's tendency to negatively affect competitive conditions without focusing on the indicia of unfairness, including whether the conduct is coercive or exploitative. But an evidentiary showing or detailed economic analysis that such conduct generated actual anticompetitive effects or would do so in the future still was not required. For example, in *Union Circulation Company* v. *FTC,* the Second Circuit held the Commission established an unfair method of competition where a group of door-to-door subscription solicitation agencies agreed not to hire workers who were previously employed by another signatory agency.[300] The court looked to whether the ''reasonably foreseeable effect'' of the agencies' conduct would be to ''impair or diminish competition between existing [competitors]'' or prevent potential new rivals.[301] In finding the conduct was an unfair method of competition, the court concluded that ''[t]he tendency of the . . . agreements is to discourage labor mobility, and thereby the magazine-selling industry may well become static in its composition to the obvious advantage of the large, well established signatory agencies and to the disadvantage of infant organizations.'' [302] In *FTC* v. *Brown Shoe Co.,* the Supreme Court held that an exclusive dealing arrangement under which the Brown Shoe Company offered shoe retailers ''a valuable consideration . . . to secure a contractual promise from them that they will deal primarily with Brown and will not purchase conflicting lines of shoes from Brown's competitors'' violated section 5 consistent with the Commission's authority ''to arrest trade restraints in their incipiency.'' [303] Of course, evidence of actual adverse effects on competition meets the requirement to show a tendency to negatively affect competitive conditions. For example, in *FTC* v. *Motion Picture Advertising Service Co.,* the Supreme Court held that an exclusive dealing arrangement violated section 5 where there was ''substantial evidence'' that the contracts ''unreasonably restrain competition.'' [304]

Respondents in unfair method of competition cases sometimes assert purported justifications as an affirmative defense. Some courts have declined to consider justifications altogether. However, where defendants raise justifications as an affirmative defense, the Commission and courts have consistently held that pecuniary benefit to the party responsible for the conduct in question is not cognizable as a justification.[305] Additionally, to the extent justifications are asserted, they must be legally cognizable,[306] non-pretextual,[307] and any restriction used to bring about the benefit must be narrowly tailored to limit any adverse impact on competitive conditions.[308]

III. Section 910.1: Definitions

Section 910.1 sets forth definitions of several terms used in the final rule.

A. Definition of ''Business Entity''

The Commission adopts the definition of ''business entity'' as proposed.

1. Proposed Definition

The Commission proposed to define ''business entity'' as ''a partnership, corporation, association, limited liability company, or other legal entity, or a division or subsidiary thereof.'' [309] The term ''business entity'' was used in two places: (1) in proposed § 910.3, which contained an exception for certain non-competes entered into in the context of a sale of a business by a substantial owner of, or substantial member or substantial partner in, the business entity,[310] and (2) in proposed § 910.1(e), which defined ''substantial owner, substantial member, or substantial partner'' as an owner, member, or partner holding at least a 25% ownership interest in a business entity.

The Commission explained in the NPRM that it proposed including divisions and subsidiaries in the definition of ''business entity'' to apply the sale-of-a-business exception where a person is selling a division or subsidiary of a business entity.[311] The Commission stated the primary rationale for the sale-of-business exception—to help protect the value of a business acquired by a buyer—also applies where a person is selling a division or subsidiary of a business entity.[312]

2. Comments Received

Two commenters specifically addressed the definition of business entity. One commenter suggested a new definition using a functional test that the commenter asserted would prevent employers from structuring their businesses as several smaller legal entities in order to fall within the sale-of-a-business exception. Another commenter also suggested that the definition be amended to explicitly include ''general partnerships'' and trusts.

3. The Final Rule

The Commission adopts the definition of ''business entity'' as proposed. The Commission declines to adopt a functional test for the definition of ''business entity.'' As described in greater detail in Part V.A, the sale-of-a-business exception in the final rule does not contain a 25% ownership threshold, so employers will not have an incentive to structure their businesses as several smaller legal entities in order to fall within the sale-of-a-business exception. The Commission also believes replacing the current bright-line definition of ''business entity'' with a functional test would make it more difficult for workers and employers to know whether a given non-compete is enforceable in the context of the sale of a business. The Commission concludes adding the terms ''general partnerships'' and ''trusts'' to the definition is unnecessary, because the phrase ''other legal entity'' already includes those entity types.

B. Definition of ''Employment''

The Commission proposed to define ''employment'' as ''work for an employer, as the term employer is defined in § 910.1(c).'' [313] That provision defined ''employer'' as ''a person, as defined in 15 U.S.C. 57b–1(a)(6) [section 20 of the FTC Act], that hires or contracts with a worker to work for the person.'' [314] Section 20 defines ''person'' as ''any natural person, partnership, corporation, association, or other legal entity, including any person acting under color or authority of State law.'' The Commission intended the proposed definition of ''employer'' to clarify that an employment relationship exists, for purposes of the final rule, regardless of whether an employment relationship exists under another law, such as a Federal or State labor law.[315] The final rule clarifies the definitions to better reflect that intent.

While commenters generally did not address the proposed definition of ''employment,'' many commenters expressed concern that the proposed definition of ''employer'' would exclude workers hired by one entity to work for another, such as workers hired through a staffing agency. To avoid excluding such workers, and consistent with the Commission's intent to cover workers irrespective of whether they are classified as in an ''employer-employee'' relationship under other State and Federal laws, the final rule defines ''employment'' as ''work for a person'' and makes corresponding changes to the definition of ''employer,'' described in Part III.C. This definition of ''employment'' better clarifies that an employment relationship exists, for purposes of the final rule, regardless of whether an employment relationship exists under another law, such as a Federal or State labor law.

C. Proposed Definition of ''Employer''

The Commission proposed to define employer as a ''person, as defined in 15 U.S.C. 57b–1(a)(6) [section 20 of the FTC Act], that hires or contracts with a worker to work for the person.'' [316] Section 20 defines ''person'' as ''any natural person, partnership, corporation, association, or other legal entity, including any person acting under color or authority of State law.'' [317] The Commission clarified in the NPRM that a person meeting the definition of an employer under proposed § 910.1(c) would be an employer regardless of whether the person meets another legal definition of employer, such as a definition in Federal or State labor law.[318] In response to concerns raised by commenters, the final rule does not adopt a definition of ''employer.''

1. Comments Received

Several commenters expressed support for the proposed definition of ''employer.'' A few commenters suggested changes to the definition of ''employer'' to maximize the final rule's coverage and close potential loopholes. Worker and employer advocates noted the proposed definition appeared to exclude certain persons who are commonly understood to be a worker's employer because it assumed that a worker's employer is the same legal entity that hired or contracted with the worker. These commenters contended the proposed definition would not cover arrangements such as when a worker is employed through a contractual relationship with a professional employer organization or staffing agency; under a short-term ''loan-out arrangement,'' during which a worker hired by one employer may work for another employer; under contract with a parent, subsidiary, or affiliate of the business who hired them; or by persons or entities who share common control over the worker's work. A few of these commenters also stated that the proposed definition creates a loophole allowing evasion of the rule through third-party hiring. Most commenters that addressed this issue suggested listing one or more such arrangements in the definition of ''employer'' to

(D.C. Cir. 2005); 2000 Collaboration Guidelines, sec. 3.36b. *See also Union Circulation Co.* v. *FTC,* 241 F.2d 652, 658 (2d Cir. 1957) (''The agreements here went beyond what was necessary to curtail and eliminate fraudulent practices.'').

ensure these kinds of arrangements are covered.

One worker advocacy group argued the term ''hires or contracts'' in the proposed definition of ''employer'' is in tension with the Commission's stated intent to broadly cover all workers, including externs, interns, and volunteers. This commenter suggested the definition of ''employer'' incorporate language from the Fair Labor Standards Act (''FLSA'') definition of ''employ,'' which includes to ''suffer or permit to work.'' [319] The commenter suggested this language because of its breadth, noting the language originated in State laws designed to reach businesses that use third parties to illegally hire and supervise children.

One industry trade organization argued that, to minimize inconsistencies with the FLSA, the Commission should incorporate the FLSA's definition of ''employer.''

2. Final Rule

After considering the comments, the Commission has revised the definitions of ''non-compete clause'' and ''worker'' as described in Parts III.D and III.G. These revisions make the definition of ''employer'' unnecessary, so the Commission is not finalizing a definition of ''employer.''

These revisions clarify that the final rule covers all workers regardless of whether they work for the same person that hired or contracted with them to work. As explained in Part III.D, in the definition of ''non-compete clause,'' the Commission has revised the phrase ''contractual term between an employer and a worker'' to read ''term or condition of employment'' and has revised the phrase ''after the conclusion of the worker's employment with the employer'' to read ''after the conclusion of the employment that includes the term or condition.'' Furthermore, as explained in Part III.G, in the definition of ''worker,'' the Commission has revised the phrase ''a natural person who works, whether paid or unpaid, for an employer'' to read ''a natural person who works or who previously worked, whether paid or unpaid.''

The Commission is adopting this more general language, rather than listing the exact kinds of contractual arrangements and entities (*e.g.,* staffing agencies, affiliates, joint employers, etc.) to avoid unnecessary or confusing terminology, evasion of the final rule through complex employment relationships, and the need to specify myriad fact-specific scenarios. The language is designed to capture indirect employment relationships as a general matter without regard to the label used.

D. Definition of ''Non-Compete Clause''

Based on the comments received, the Commission adopts a slightly modified definition of ''non-compete clause'' in § 910.1. Section 910.1 defines a ''non-compete clause'' as a term or condition of employment that prohibits a worker from, penalizes a worker for, or functions to prevent a worker from (A) seeking or accepting work in the United States with a different person where such work would begin after the conclusion of the employment that includes the term or condition; or (B) operating a business in the United States after the conclusion of the employment that includes the term or condition. Section 910.1 further provides that, for purposes of the final rule, ''term or condition of employment ''includes, but is not limited to, a contractual term or workplace policy, whether written or oral.'' Similar to the proposed rule, the final rule applies to terms and conditions that expressly prohibit a worker from seeking or accepting other work or starting a business after their employment ends, as well as agreements that penalize or effectively prevent a worker from doing the same.

1. Proposed Definition

The Commission's proposed definition of ''non-compete clause'' consisted of proposed § 910.1(b)(1) and (b)(2). Proposed § 910.1(b)(1) would have defined ''non-compete clause'' as ''a contractual term between an employer and a worker that prevents the worker from seeking or accepting employment with a person, or operating a business, after the conclusion of the worker's employment with the employer.'' Proposed § 910.1(b)(2) would have provided that the definition in proposed § 910.1(b)(1) includes ''a contractual term that is a *de facto* non-compete clause because it has the effect of prohibiting the worker from seeking or accepting employment with a person or operating a business after the conclusion of the worker's employment with the employer.''

The Commission explained that the proposed definition of non-compete clause would be limited to non-competes between employers and workers and would not apply to other types of non-competes, for example, non-competes between two businesses.[320] The Commission further explained the definition would be limited to post-employment restraints (*i.e.,* restrictions on what the worker may do after the conclusion of the worker's employment) and would not apply to concurrent-employment restraints (*i.e.,* restrictions on what the worker may do during the worker's employment).[321]

In the NPRM, the Commission noted that, rather than expressly prohibiting a worker from competing against their employer, some non-competes require workers to pay damages if they compete against their employer. The Commission explained that courts generally view these contractual terms as non-competes and that proposed § 910.1(b)(1) encompassed them.[322]

The Commission also expressed concern that workplace policies—for example, a term in an employee handbook stating that workers are prohibited from working for certain types of firms or in certain fields after their employment ends—could have the same effects as a contractual non-compete even if they are not enforceable, because workers may believe they are bound by the policy. The Commission sought comment on whether the term ''non-compete clause'' should expressly include a provision in a workplace policy.[323]

The Commission stated that proposed § 910.1(b)(1) was a generally accepted definition of non-compete clause that covers both express non-competes and terms purporting to bind a worker that have the same functional effect as non-competes.[324] The Commission stated that the definition would generally not apply to other types of restrictive employment agreements that do not altogether prevent a worker from seeking or accepting other work or starting a business after their employment ends and do not generally prevent other employers from competing for that worker's labor.[325] At the same time, the Commission expressed concern about unusually restrictive employment agreements that, while not formally triggered by seeking or accepting other work or starting a business after their employment ends, nevertheless restrain such an unusually large scope of activity that they have the same functional effect as non-competes.[326] The Commission noted judicial opinions finding some such

[319] 29 U.S.C. 203(g).

[320] NPRM at 3509.

[324] *Id.* at 3509.

[325] *Id.*

[326] *Id.*

restrictive employment agreements to be *de facto* non-competes.[327]

Proposed § 910.1(b)(2) accordingly sought to clarify that the definition in proposed § 910.1(b)(1) includes contractual terms that are *de facto* non-competes because they have the effect of prohibiting the worker from seeking or accepting employment with a person or operating a business after the conclusion of the worker's employment with the employer. It then provided two illustrative, non-exhaustive examples of contractual terms that may be such functional non-competes: (1) an NDA between an employer and a worker written so broadly that it effectively precludes the worker from working in the same field after the conclusion of the worker's employment with the employer; and (2) a training-repayment agreement (''TRAP'') that requires the worker to pay the employer or a third-party entity for training costs if the worker's employment terminates within a specified time period, where the required payment is not reasonably related to the costs the employer incurred to train the worker.[328]

2. Coverage of the Definition

a. Comments Received

Most of the comments on the definition of ''non-compete clause'' addressed whether, and under what circumstances, the rule should apply to functional non-competes.[329] Many commenters that generally supported the NPRM agreed the definition of non-compete clause should cover other restrictive employment agreements when they function as non-competes. These commenters argued that, when restraints on labor mobility are banned, companies switch to functionally equivalent restraints. Some commenters asked the Commission to adopt a broader definition of functional non-competes or to expand the rule to ban additional types of restrictive employment agreements altogether. A few commenters asked the Commission to broaden proposed § 910.1(b)(1) and (2) by replacing the terms ''prevent'' and ''prohibit'' with ''restrains'' and ''limits.''

In contrast, many commenters who generally opposed the NPRM stated that proposed § 910.1(b)(2) was overinclusive. Many such commenters also asserted the definition was vague and could lead to confusion and significant litigation. Several comments suggested clarifications, such as including additional examples of functional non-competes; creating safe harbors for certain restrictive employment covenants; replacing proposed § 910.1(b)(2) with a standard based on antitrust law's ''quick look'' test; [330] or revising the provision to focus on the ''primary purpose'' of a restrictive employment covenant. Several commenters argued the Commission failed to cite evidence that functional non-competes are anti-competitive. Other commenters expressed concern that prohibiting functional non-competes would undermine the rule's intent to permit less restrictive alternatives to non-competes.

At least one commenter argued that proposed § 910.1(b)(2) should be removed because it was redundant, as the proposed definition of non-compete clause in proposed § 910.1(b)(1) already captured any term that prevents an employee from seeking alternative employment, without regard to how the term is labeled. Some commenters who generally supported the NPRM also expressed concern that ambiguity in proposed § 910.1(b)(2) could enable employers to intimidate workers by suggesting that restrictive employment agreements used to evade a final rule are not non-competes under the functional test. Other commenters who generally supported the rule asked for greater specificity in proposed § 910.1(b)(2) to prevent adverse judicial interpretations that could undermine the effectiveness of the rule.

Many commenters addressed issues specific to other types of restrictive employment agreements, including NDAs (also sometimes referred to as confidentiality agreements), TRAPs, non-solicitation agreements, and garden leave and severance agreements.

With respect to NDAs, some commenters stated that the Commission rightly identified overbroad NDAs as a potential method of evasion of the rule and supported the Commission's recognition of overbroad NDAs as functional non-competes. In contrast, some commenters contended that by covering functional non-competes, the proposed rule would limit their ability to use NDAs. Some commenters argued that providing that overbroad NDAs may be functional non-competes would be inconsistent with the proposed rule's separate preliminary finding that NDAs are less restrictive alternatives to non-competes. Similarly, some commenters contended that a functional test may frustrate employers' ability to use NDAs to protect legitimate trade secrets or to enjoin a former worker employed with a competitor under the Defend Trade Secrets Act of 2016, in part because they would be concerned about potential legal liability. Some commenters contended that the example of an overbroad NDA in proposed § 910.1(b)(2) would discourage the use of NDAs, including the use of narrowly tailored NDAs, and undermine confidence in their enforceability. Some commenters stated that reference to cases, including *Brown* v. *TGS Management Co.*[331] and similar cases, represent outliers that are likely to cause more confusion than clarity.

Other commenters addressed the proposed definition's application to TRAPs, which are agreements in which the worker agrees to pay the employer for purported training expenses if the worker leaves their job before a certain date. Several commenters asked the Commission to ban all forms of TRAPs. These commenters argued that employers are increasingly adopting TRAPs and that abusive TRAPs are pervasive throughout the economy. Some commenters asserted millions of workers are likely bound by TRAPs. Commenters stated TRAPs may impose penalties that are disproportionate to the value of training workers received or require the worker to pay alleged training expenses for on-the-job training. Some commenters contended TRAPs may be even more harmful than non-competes, because while non-competes prohibit or prevent workers from seeking or accepting other work or starting a business after they leave their job, TRAPs can prevent workers from leaving their job for any reason.

Some commenters expressed concern that the example in proposed § 910.1(b)(2)(ii) of a TRAP that was a functional non-compete was too narrow, and that the Commission should not imply that TRAPs with penalties that *are* reasonably related to an employer's training expenses cannot be functional

[327] *Wegmann* v. *London,* 648 F.2d 1072, 1073 (5th Cir. 1981) (holding that liquidated damages provisions in a partnership agreement were *de facto* non-compete clauses ''given the prohibitive magnitudes of liquidated damages they specify''); *Brown* v. *TGS Mgmt. Co., LLC,* 57 Cal. App. 5th 303, 306, 319 (Cal. Ct. App. 2020) (holding that an NDA that defined ''confidential information'' ''so broadly as to prevent [the plaintiff] in perpetuity from doing any work in the securities field'' operated as a *de facto* non-compete clause and therefore could not be enforced under California law, which generally prohibits enforcement of non-compete clauses).

[328] NPRM, proposed § 910.1(b)(2).

[329] While the NPRM generally used the term ''*de facto* non-competes,'' the final rule uses the term ''functional non-competes.'' The Commission believes this term more clearly conveys that certain terms are considered non-competes under the final rule where they function to prevent workers from seeking or accepting other work or starting a business after their employment ends.

[330] *See, e.g., Cal. Dental Ass'n* v. *FTC,* 526 U.S. 756, 770–71 (1999).

[331] *See supra* note 327 and accompanying text.

non-competes. One commenter asked the Commission to adopt the standard for TRAPs in the Uniform Restrictive Employment Agreement Act.[332] Another commenter suggested that the Commission ban TRAPs below an income threshold of $75,000. Another commenter asked the Commission to clarify that costs that are inherent in any employer-employee relationship—such as time spent by a supervisor training a new employee how to perform routine business procedures typical for their position or role—should not be considered costs that are ''reasonably related to the costs'' of training.

At least one commenter urged the Commission to treat as functional non-competes other employment terms similar to TRAPs such as equipment loans, where employers provide employees with a loan to purchase equipment that the worker needs in order to perform their job, and damages provisions containing open-ended costs related to the employee's departure—including hiring and training replacements or vague harms such as reputational damages, loss of good will or lost profits. In contrast, some commenters argued that TRAPs should be excluded from coverage under proposed § 910.1(b)(2) because they are not unfair or anti-competitive.

Regarding non-solicitation agreements—which prohibit a worker from soliciting former clients or customers of the employer—a few commenters expressed concern that overbroad non-solicitation agreements may be permitted because they were not listed in the regulatory text for proposed § 910.1(b)(2) as examples of functional non-competes (although the Commission described them in the preamble to the proposed rule as restrictive employment agreements that may fall within the definition of non-compete clause if they restrain such an unusually large scope of activity that they are *de facto* non-compete clauses).[333] These commenters asked the Commission to revise proposed § 910.1(b)(2) to expressly cover non-solicitation agreements that prohibit workers from doing business with prospective or actual customers to an extent that would effectively preclude them from continuing to work in the same field or that prevent a worker from doing business with their former employer's client where the client solicits the worker directly. Other commenters, however, expressed concern that the proposed rule could undermine employers' confidence in the enforceability of non-solicitation agreements and asked that the final rule clarify that non-solicitation agreements are generally not prohibited, or exclude them altogether.

Some comments addressed no-hire clauses, which bar former workers from hiring their former colleagues. One employment lawyer stated that these are less restrictive than non-compete clauses. Other commenters stated that no-hire clauses can still limit careers or make it hard for new businesses to find staff. Some commenters expressed concerns with no-business or non-dealing clauses, which bar former workers from doing business with former clients or customers even if the clients or customers sought them out. These commenters stated such agreements limit the options of clients and customers.

Many commenters raised questions about forfeiture-for-competition clauses, which they stated are often a component of deferred compensation arrangements for executives. Commenters stated that deferred compensation plans often include forfeiture clauses, or contingencies on receiving the promised compensation, to incentivize their recipients to act in ways that benefit the employer. These commenters stated that agreements not to compete for a period of time after employment ends are a common feature of forfeiture clauses. Some commenters stated that such forfeiture-for-competition clauses are non-competes and have the same negative effects as non-competes because they are contingent on competition—they require workers to give up bonus pay or other post-employment benefits if they work for a competing employer or start a competing business, and they keep other employers from being able to hire those workers. Other commenters stated forfeiture-for-competition clauses are a common and important component of deferred compensation arrangements for highly compensated employees and senior executives.[334] Other commenters argued the clauses allow workers to choose between receiving the deferred compensation and forfeiting it if they choose to work for a competitor, and thus they are not non-competes. Other commenters urged the Commission to either clarify that forfeiture-for-competition clauses are not non-competes or to carve them out explicitly.

Many commenters also addressed the application of the rule to garden leave agreements. In using the term ''garden leave,'' commenters seemed to be referring to a number of different types of agreements. Some commenters referred to garden leave agreements as those in which, before a worker left their job, they remained employed and received full pay for a specified period of time but their access to co-workers and company facilities was restricted. In contrast, other commenters considered ''garden leave'' an arrangement to make payments to a worker after their employment concluded. Commenters used different terminology to refer to these kinds of agreements, including severance pay, partial pay, and full pay akin to administrative leave, in exchange for an agreement not to compete. Some commenters argued it is coercive for a worker to sign a non-compete in exchange for severance pay and argued garden leave arrangements are non-competes because they limit a worker's options to work for a competitor. Some commenters asked the Commission to adopt a durational limit for garden leave. At least one commenter also urged the Commission to clarify that an employer cannot unilaterally terminate garden leave.

Other commenters requested clarification that garden leave was not a non-compete on the basis that garden leave does not create a legal obligation on the part of the worker to refrain from competing. Some commenters requested a specific exclusion for garden-leave arrangements. They argued that by forcing employers to pay workers, garden leave would reduce the overuse of non-competes. One talent industry commenter argued that the rule should expressly allow for ''fee tails,'' which require talent agents to pay a portion of future commissions to former employers.

b. The Final Rule

After considering the comments, the Commission has slightly modified the definition of non-compete clause to clarify its scope. In the final rule, § 910.1 defines ''non-compete clause'' as a term or condition of employment that either ''prohibits'' a worker from, ''penalizes'' a worker for, or ''functions to prevent'' a worker from (A) seeking or accepting work in the United States with a different person where such work would begin after the conclusion of the employment that includes the term or condition; or (B) operating a business in the United States after the conclusion of the employment that includes the term or condition.

[332] *See* ULC, *Uniform Restrictive Employment Agreement Act* (2021), sec. 14.

[333] NPRM at 3509.

[334] Commenters also provided purported business justifications for forfeiture-for-competition clauses, which are addressed in Part IV.D.2.

Pursuant to the term ''prohibits,'' the definition applies to terms and conditions that expressly prohibit a worker from seeking or accepting other work or starting a business after their employment ends. Examples of such agreements would be a contractual term between a national sandwich shop chain and its workers stating that, for two years after the worker leaves their job, they cannot work for another sandwich shop within three miles of any of the chain's locations,[335] or a contractual term between a steelmaker and one of its executives prohibiting the executive from working for any competing business anywhere in the world for one year after the end of the executive's employment.[336] The vast majority of existing agreements covered by the final rule fall into this category of agreements that expressly prohibit a worker from seeking or accepting other work or starting a business after their employment ends.

Pursuant to the term ''penalizes,'' the definition also applies to terms and conditions that require a worker to pay a penalty for seeking or accepting other work or starting a business after their employment ends. One example of such a term is a term providing that, for two years after the worker's employment ends, the worker may not engage in any business within a certain geographic area that competes with the employer unless the worker pays the employer liquidated damages of $50,000.[337] Because such an agreement penalizes the worker for seeking or accepting other work or for starting a business after the worker leaves their job, it would be a non-compete clause under § 910.1. Indeed, where an agreement restricts who a worker can work for or their ability to start a business after they leave their job, State courts generally characterize the agreement as a non-compete, regardless of whether the agreement contains an express prohibition or requires the worker to pay liquidated damages.[338]

Another example of a term that ''penalizes'' a worker, under § 910.1, is an agreement that extinguishes a person's obligation to provide promised compensation or to pay benefits as a result of a worker seeking or accepting other work or starting a business after they leave their job. One example of such an agreement is a forfeiture-for-competition clause, which, similar to the agreement with liquidated damages described previously, imposes adverse financial consequences on a former employee as a result of the termination of an employment relationship, expressly conditioned on the employee seeking or accepting other work or starting a business after their employment ends. An additional example of a term that ''penalizes'' a worker under § 910.1 is a severance arrangement in which the worker is paid only if they refrain from competing. The Commission also notes that a payment to a prospective competitor to stay out of the market may also violate the antitrust laws even if it is not a non-compete under this rule.[339]

The common thread that makes each of these types of agreements non-compete clauses, whether they ''prohibit'' or ''penalize'' a worker, is that on their face, they are triggered where a worker seeks to work for another person or start a business after they leave their job—*i.e.,* they prohibit or penalize post-employment work for another employer or business. As elaborated in Part IV, such non-competes are inherently restrictive and exclusionary conduct, and they tend to negatively affect competitive conditions in both labor and product and service markets by restricting the mobility of workers and preventing competitors from gaining access to those workers.

Pursuant to the term ''functions to prevent,'' the definition of non-compete clause also applies to terms and conditions that restrain such a large scope of activity that they function to prevent a worker from seeking or accepting other work or starting a new business after their employment ends, although they are not expressly triggered by these specific undertakings. This prong of the definition does not categorically prohibit other types of restrictive employment agreements, for example, NDAs, TRAPs, and non-solicitation agreements. These types of agreements do not by their terms prohibit a worker from or penalize a worker for seeking or accepting other work or starting a business after they leave their job, and in many instances may not have that functional effect, either. However, the term ''functions to prevent'' clarifies that, if an employer adopts a term or condition that is so broad or onerous that it has the same functional effect as a term or condition prohibiting or penalizing a worker from seeking or accepting other work or starting a business after their employment ends, such a term is a non-compete clause under the final rule.

In response to the comments alleging that covering ''de facto'' or ''functional'' non-competes is overinclusive or vague, the Commission notes that the definition's three prongs—''prohibit,'' ''penalize,'' and ''function to prevent''—are consistent with the current legal landscape governing whether a particular agreement is a non-compete. In addition to generally accepted definitions of non-competes encompassing the ''prohibits'' prong of the definition, terms that ''penalize'' workers for seeking or accepting other work or starting a business after they leave their job (for example, by requiring them to pay liquidated damages) are typically considered non-competes under State law.[340] And the ''functions to prevent'' prong of the definition is likewise consistent with legal decisions holding that restrictive employment agreements other than non-competes may be analyzed under the State law test applicable to non-competes where they function similarly to non-competes.[341] As the First Circuit stated in a recent opinion, ''[O]verly broad nondisclosure agreements, while not specifically prohibiting an employee from entering into competition with the former employer, raise the same policy concerns about restraining competition as noncompete clauses where, as here, they have the effect of preventing the defendant from competing with the plaintiff.'' [342] The fact that whether a given restrictive covenant rises to the level of being a functional non-compete will turn on the facts and circumstances

[335] This example is based on the agreements described in Jamieson, *supra* note 32. The company agreed to remove the non-competes in 2016 as part of a settlement. of particular covenants and the surrounding market context does not render this aspect of the final rule overinclusive or vague. Such covenants would be subject to case-by-case adjudication for whether they constitute an unfair method of competition even in the absence of the final rule.

In response to the comments alleging the Commission failed to cite evidence that functional non-competes harm competition, the Commission disagrees. This final rule is based on a robust evidentiary record that includes significant empirical evidence and thousands of public comments, as well as the Commission's longstanding expertise in evaluating competition issues. Based on this record, the Commission finds that non-competes are restrictive and exclusionary conduct that tends to negatively affect competitive conditions in labor markets and markets for products and services.[343] In addition, the Commission finds that, with respect to workers other than senior executives, non-competes are exploitative and coercive.[344] The Commission finds that the functional equivalents of non-competes—because they prevent workers from engaging in the same types of activity—are likewise restrictive and exclusionary conduct that tends to negatively affect competitive conditions in a similar way. In response to the commenters who expressed concern that prohibiting functional non-competes would undermine the rule's intent to permit reasonable substitutes, the Commission stresses that, as described throughout this Part III.D, the ''functions to prevent'' prong of the definition of non-compete clause captures only agreements that function to prevent a worker from seeking or accepting other work or starting a business after they leave their job—not appropriately tailored NDAs or TRAPs that do not have that functional effect.

While many commenters requested the Commission state expressly in the final rule whether various specific restrictive employment agreements satisfy the definition of non-compete clause, the Commission declines to adopt a definition that attempts to capture or carve out every edge case. Rather, the final rule focuses on providing a clear, understandable, and generally applicable definition of non-compete clause that reflects the need for case-by-case consideration of whether certain restrictive covenants rise to the level of being functional non-competes—which is fully consonant with the legal landscape employers generally face today. The Commission nevertheless here responds to comments regarding the restrictive clauses that commenters contended should be expressly addressed in the final rule.

As noted in this Part III.D, restrictive employment agreements other than non-competes—such as NDAs, non-solicitation agreements, and TRAPs—do not by their terms or necessarily in their effect prevent a worker from seeking or accepting work with a person or operating a business after the worker leaves their job. For example, a garden-variety NDA in which the worker agrees not to disclose certain confidential information to a competitor would not prevent a worker from seeking work with a competitor or from accepting such work after the worker leaves their job. Put another way, an NDA would not be a non-compete under § 910.1 where the NDA's prohibitions on disclosure do not apply to information that (1) arises from the worker's general training, knowledge, skill or experience, gained on the job or otherwise; or (2) is readily ascertainable to other employers or the general public.[345]

However, NDAs may be non-competes under the ''functions to prevent'' prong of the definition where they span such a large scope of information that they function to prevent workers from seeking or accepting other work or starting a business after they leave their job. Examples of such an agreement may include an NDA that bars a worker from disclosing, in a future job, any information that is ''usable in'' or ''relates to'' the industry in which they work.[346] Such an agreement would effectively prevent the worker from working for another employer in that industry. A second example would be an NDA that bars a worker from disclosing any information or knowledge the worker may obtain during their employment whatsoever, including publicly available information.[347] These agreements are so broadly written that, for practical purposes, they function to prevent a worker from working for another employer in the same field and are therefore non-competes under § 910.1.

Under the final rule's definition of non-compete clause, the same inquiry applies to non-solicitation agreements. Non-solicitation agreements are generally not non-compete clauses under the final rule because, while they restrict who a worker may contact after they leave their job, they do not by their terms or necessarily in their effect prevent a worker from seeking or accepting other work or starting a business. However, non-solicitation agreements can satisfy the definition of non-compete clause in § 910.1 where they function to prevent a worker from seeking or accepting other work or starting a business after their employment ends. Whether a non-solicitation agreement—or a no-hire agreement or a no-business agreement, both of which were referenced by commenters, as discussed previously—meets this threshold is a fact-specific inquiry. The Commission further notes that—like all the restrictive employment agreements described in this Part III.D—non-solicitation agreements, no-hire, and no-business agreements are subject to section 5's prohibition of unfair methods of competition, irrespective of whether they are covered by the final rule.

Depending on the facts and circumstances, a TRAP can also function to prevent a worker from working for another firm or starting a business. For example, one commenter cited a TRAP that required entry-level workers at an IT staffing agency who were earning minimum wage or nothing at all during their training periods to pay over $20,000 if they failed to complete a certain number of billable hours.[348] The commenter also cited a TRAP requiring nurses to work for three years or else repay all they have earned, plus paying the company's ''future profits,'' attorney's fees, and arbitration costs.[349] These types of TRAPs may be functional non-competes because when faced with significant out-of-pocket costs for leaving their employment—dependent on the context of the facts and circumstances—workers may be forced to remain in their current jobs, effectively prevented from seeking or accepting other work or starting a business.

In response to the comments, the Commission declines at this time to either categorically prohibit all TRAPs related to leaving employment, or to exempt such provisions altogether. The Commission agrees with comments raising substantial concerns about the

[349] *Id.* at 6–7.

potential effects of such agreements on competitive conditions. As noted in the summary of the comments, commenters cited TRAPs that impose penalties disproportionate to the value of training workers received and/or that claimed training expenses for on-the-job training. However, the evidentiary record before the Commission principally relates to non-competes, meaning on the present record the Commission cannot ascertain whether there are any legitimate uses of TRAPs that do not tend to negatively affect competitive conditions. When TRAPs function to prevent a worker from seeking or accepting other work or starting a business after the employment associated with the TRAP, they are non-competes under § 910.1.

The Commission notes that clauses requiring repayment of a bonus when a worker leaves their job would not be non-competes under § 910.1 where they do not penalize or function to prevent a worker from seeking or accepting work with a person or operating a business after the worker leaves their job. For example, a provision requiring the repayment of a bonus if the worker leaves before a certain period of time would not be a non-compete under § 910.1 where the repayment amount is no more than the bonus that was received, and the agreement is not tied to who the worker can work for, or their ability to start a business, after they leave their job. Similarly, a term or condition under which a worker loses accrued sick leave when their employment ends would not function to prevent a worker from seeking or accepting work with a person or operating a business after the worker leaves their job.

With respect to garden leave agreements, as noted previously, commenters used the term ''garden leave'' to refer to a wide variety of agreements. The Commission declines to opine on how the definition of non-compete clause in § 910.1 would apply in every potential factual scenario. However, the Commission notes that an agreement whereby the worker is still employed and receiving the same total annual compensation and benefits on a *pro rata* basis would not be a non-compete clause under the definition,[350] because such an agreement is not a post-employment restriction. Instead, the worker continues to be employed, even though the worker's job duties or access to colleagues or the workplace may be significantly or entirely curtailed. Furthermore, where a worker does not meet a condition to earn a particular aspect of their expected compensation, like a prerequisite for a bonus, the Commission would still consider the arrangement ''garden leave'' that is not a non-compete clause under this final rule even if the employer did not pay the bonus or other expected compensation. Similarly, a severance agreement that imposes no restrictions on where the worker may work following the employment associated with the severance agreement is not a non-compete clause under § 910.1, because it does not impose a post-employment restriction.

The Commission declines a commenter's request to replace the term ''prevent'' with ''restrains'' or ''limits.'' Commenters generally did not express concern about the term ''prevent'' and the Commission is concerned that different language could greatly expand the scope of the definition and reduce its clarity.

The Commission also declines to adopt alternative *de facto* tests raised by commenters, such as a version of the ''quick look'' test. As described in Part II.F, the legal standard under section 5 of the FTC Act is distinct from that of the Sherman Act. The Commission also declines to adopt a test that would consider the primary purpose of a restrictive employment agreement. The Commission believes that it can be difficult to establish an employer's subjective ''purpose'' in entering into an agreement. In addition, such a test could allow extremely overbroad agreements that dramatically restrict a worker's ability to compete against the employer—and have the negative effects described in Parts IV.B and IV.C—as long as the employer entered into the agreement without the subjective intent to restrict competition.

The Commission agrees with the commenter who stated that proposed § 910.1(b)(2) was redundant because proposed § 910.1(b)(1) was already a functional definition. In the final rule, the Commission has revised the text of the definition of non-compete clause to address confusion among commenters about whether proposed § 910.1(b)(2) clarified the definition or extended it.

In response to the commenters requesting that the Commission clarify the circumstances under which the definition would apply to various other types of restrictive employment agreements, the Commission declines at this time to enumerate every circumstance that may arise. As noted, a restrictive employment covenant may be a non-compete clause under § 910.1 if it expressly prohibits a worker from, or penalizes a worker for, seeking or accepting other work or starting a business, or if it does not do so expressly but is so broad or onerous in scope that it functionally has the same effect of preventing a worker from doing the same.

3. International Application of the Rule

a. Comments Received

The Commission received several comments expressing concern about whether the final rule would apply to non-competes that restrict work outside the U.S. In response, the final rule's definition of non-compete clause clarifies that it applies only to work in the U.S. or operating a business in the U.S.

Some commenters raised concerns about the cross-border movement of workers. A research center commenter asserted there is a global shortage of science and technology workers and stated that the final rule's adoption could exacerbate the U.S. shortage by allowing other countries to more easily poach U.S. workers. An academic commenter argued that banning non-competes might deter foreign investors from sending workers to the U.S. if the final rule would invalidate their non-competes.

Some commenters argued that legal systems in the People's Republic of China or other jurisdictions provide insufficient protection for U.S. companies' trade secrets, confidential information, or patent rights, and contended employers need non-competes as *ex ante* protection. These commenters generally say that trade secrets litigation is more challenging in some jurisdictions outside the U.S., for example because of less extensive discovery processes, less frequent use of preliminary injunctions, insufficient remedies, and a lower propensity to prosecute criminal intellectual property cases. An academic commenter argued that some courts may have fewer protections for confidential information compared to the U.S., so a suit concerning only a non-compete is less likely to reveal trade secrets through the course of litigation and thus more effectively prevent technologies from leaking to other governments and protecting U.S. national security interests. However, the comments provided limited evidence on non-competes and trade secret protection outside the U.S., and collectively only

[350] The term and practice of ''garden leave'' appears to have a British origin and is recognized by the Government of the United Kingdom. *See Gov.UK, Handing in your notice, https://www.gov.uk/handing-in-your-notice/gardening-leave* (''Your employer may ask you not to come into work, or to work at home or another location during your notice period. This is called 'gardening leave'.'').

discussed evidence from a few jurisdictions. One commenter noted that legal information and data from some jurisdictions may not be fully accurate because not all court decisions are public.

Two commenters highlighted the domestic semiconductor industry and the CHIPS Act of 2022, arguing the Chinese government seeks to acquire IP related to semiconductors and semiconductor experts with relevant knowledge and information. Those comments expressed concern that a ban on non-competes would damage the semiconductor industry, which relies on skilled workers and trade secrets, by weakening trade secrets protection and disincentivizing investment. Another commenter argued the proposed rule would undermine export controls designed to prevent foreign countries from acquiring U.S. technology and knowledge by allowing workers to move to foreign competitors. One commenter argued the proposed rule conflicts with an October 2022 Bureau of Industry and Security (''BIS'') export control rulemaking, stating that the rulemaking limits worker mobility in certain industries from the U.S. to the People's Republic of China. Another commenter suggested the proposed rule would violate the World Trade Organization's Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS), which requires that persons ''shall have the possibility of preventing information lawfully within their control from being disclosed to, acquired by, or used by others without their consent . . . .'' [351] Finally, one commenter argued that by making it more difficult for businesses to protect against international theft of their intellectual property, the rule is at odds with the purposes of the Protecting American Intellectual Property Act of 2022.[352]

Some of these commenters made recommendations for the final rule. A law firm suggested that the final rule prevent evasion by barring employers from selecting the law of non-U.S. jurisdictions to govern employment contracts with U.S.-based workers. A trade association requested that the final rule cover only agreements subject to the law of a U.S. State. An academic commenter suggested revisions to the text of the proposed rule to ensure the final rule applies only within the U.S. The commenter also recommended stating that a non-compete restricting work outside the U.S. is not a *per se* unfair method of competition and providing guidance on how employers should evaluate international non-competes, using factors such as the business justification for the non-compete and the impact on the worker. The commenter recommended applying the law of the jurisdiction where the worker seeks to be employed.

b. The Final Rule

In response to commenters' concerns, in this final rule the Commission adopts changes to the definition of ''non-compete clause'' that expressly limit the definition of non-compete to terms or conditions that prevent workers from seeking or accepting work in the U.S. or operating a business in the U.S. The final rule does not apply to non-competes if they restrict only work outside the U.S. or starting a business outside the U.S.

This revision clarifies for stakeholders the scope of the final rule and confirms it does not prohibit employers from using non-competes that restrict work outside the U.S., in compliance with those jurisdictions' own laws. The Commission understands that, as a commenter noted, some companies operating or competing globally already draft non-competes that comply with the laws of multiple jurisdictions and, thus, amending their non-competes to reflect this application of the final rule would not pose a significant challenge for those entities.

The Commission's revision clarifying the final rule's application to work or starting a business only in the U.S. also addresses the concerns from some commenters about key U.S. workers and technology flowing overseas, because the final rule does not ban non-competes that restrict workers from working or starting a business outside the U.S. It also clarifies that the final rule would not invalidate non-competes entered into by foreign companies with foreign workers unless they restrict a worker's ability to work or start a business inside the U.S. Other questions about the final rule's application to cross-border or non-U.S. employment are also addressed by the Foreign Trade Antitrust Improvements Act, codified at 15 U.S.C. 45(a)(3).

The Commission agrees with the academic commenter that, for non-competes that apply outside the U.S., the law of the relevant jurisdiction should govern any issue other than restricting work or starting a business in the U.S. However, the Commission declines to adopt a balancing test for non-competes restricting a worker's ability to work or start a business outside the U.S., as a bright-line rule that applies only to work or starting a business in the U.S. is more administrable. In addition, the Commission declines to add language in the final rule stating that it does not apply to overseas employers or to non-competes not subject to U.S. State law. The final rule may apply to overseas employers if the non-compete purports to restrict work or starting a business in the U.S. and the reviewing court applies U.S. law.

The empirical evidence cited in the NPRM focused on the U.S., primarily consisting of studies based on the effects of changes in State laws in the U.S. The comments provided limited evidence on non-competes and trade secret protection outside the U.S., leaving many issues and most jurisdictions unaddressed. The Commission also notes, as one commenter did, that legal information and data from some jurisdictions may not be fully accurate because not all court decisions are public. On the current record, the Commission cannot reach conclusions on whether other jurisdictions have sufficient alternatives to non-competes, the scope of any potential risk, and many of the other issues raised. As a result, the Commission limits application of the final rule to work in the U.S., where the Commission has ample evidence on non-competes' negative effects.

One commenter argued the rule conflicts with BIS's October 2022 export control rulemaking, which restricts the ability of U.S. persons to support development or production at certain semiconductor facilities in the People's Republic of China without a license from BIS.[353] While the revision addresses the commenter's underlying concern about protection of sensitive technology from other governments by not banning non-competes that restrict the movement of workers to and in other jurisdictions, neither the NPRM nor the final rule is inconsistent with the BIS rule. The final rule will not affect BIS's ability to grant or decline to grant a license. With respect to the commenter that suggested the rule would violate TRIPS, the Commission has found that U.S. law provides alternative means of protecting trade secrets,[354] and TRIPS does not require enforcement of non-competes.

With respect to the commenter that stated that the final rule should include

[351] Agreement on Trade-Related Aspects of Intellectual Property Rights, Apr. 15, 1994, Marrakesh Agreement Establishing the World Trade Organization, Annex 1C, sec. 7, art. 39, para. 2, 33 I.L.M. 81 (as amended Jan. 23, 2017).

[352] 50 U.S.C. 1709.

[353] Implementation of Additional Export Controls: Certain Advanced Computing and Semiconductor Manufacturing Items; Supercomputer and Semiconductor End Use; Entity List Modification, Interim Final Rule, 87 FR 62186 (Oct. 13, 2022).

[354] *See* Part IV.D.2.

a choice-of-law provision to prevent evasion, there is an existing body of law in the U.S. governing choice of law and conflict of law issues. Accordingly, the Commission declines to add any provisions concerning choice of law or conflict of law to the final rule. Rather, such questions are left to the relevant jurisdiction, whether that is a U.S. State, the Federal government, or another jurisdiction, as determined by applicable law.

4. Other Issues Relating to the Definition

a. Comments Received

While most commenters focused on the proposed definition's application to functional non-competes or international application, some commenters addressed other issues relating to the proposed definition. Several commenters stated that the definition should cover workplace policies or handbooks, to minimize confusion and make clear that employers are prohibited from including non-competes in workplace policies or handbooks, even if such clauses are unenforceable because they are not formal binding contracts. Some commenters stated that such policies or handbooks can affect a worker's decision to leave their job to work with a competitor or start their own businesses. Others stated the same about oral agreements. One commenter stated that the definition should not cover workplace policies because they apply only during, not after, employment.

A few commenters said the Commission should state explicitly in the definition of ''non-compete clause'' that restrictions on concurrent employment, such as prohibitions on ''moonlighting'' with competitors, are excluded. Other commenters urged the Commission to expand the definition to include restraints on concurrent employment because workers often need to take additional jobs during economic downturns, and low-wage workers generally need to take on additional jobs.

An organized labor commenter argued that no-raid agreements, which the commenter described as agreements between labor organizations not to attempt to organize workers already under representation by another union, should be exempted from the definition. An industry trade organization asked the Commission to clarify whether the definition would apply to non-competes in agreements between motor carriers and brokers in the trucking industry. In addition, a few commenters stated that proposed § 910.1(b)(1) was too broad or potentially ambiguous without pointing to any specific features of the definition.

b. The Final Rule

To address the concerns raised by commenters about workplace policies and handbooks, the definition of non-compete clause in § 910.1 uses the phrase ''a term or condition of employment'' instead of ''contractual term.'' The definition further clarifies that term or condition of employment includes ''a contractual term or workplace policy, whether written or oral.'' The Commission finds that employers have used restrictions in handbooks, workplace policies, or other vehicles that are not formal written contracts to successfully prevent workers from seeking or accepting other employment or starting a new business. The Commission finds, consistent with the views expressed by commenters, that such restrictions in handbooks, workplace policies, or other such vehicles have the same tendency to negatively affect competitive conditions as a formal binding contract term. To provide that such conduct is covered by the definition of non-compete clause, this language clarifies that the definition of non-compete clause is not limited to clauses in written, legally enforceable contracts and applies to all forms a non-compete might take, including workplace policies or handbooks and informal contracts. Given the comments expressing concern about oral representations, the Commission clarifies in the definition of non-compete clause that clauses that purport to bind a worker are covered, whether written or oral, and provides in § 910.2(a)(1) and (2) that it is an unfair method of competition to make representations that a worker is subject to a non-compete. (However, as explained in Part V.C, such representations are not prohibited where the person has a good-faith basis to believe that the final rule is inapplicable.)

The Commission declines to extend the reach of the final rule to restraints on concurrent employment. Although several commenters raised this issue, the evidentiary record before the Commission at this time principally relates to post-employment restraints, not concurrent-employment restraints. The fact that the Commission is not covering concurrent-employment restraints in this final rule does not represent a finding or determination as to whether these terms are beneficial or harmful to competition. The Commission relatedly clarifies that fixed-duration employment contracts, *i.e.,* contracts between employers and workers whereby a worker agrees to remain employed with an employer for a fixed term and the employer agrees to employ the worker for that period, are not non-compete clauses under the final rule because they do not restrain post-employment conduct.

While the final rule does not extend to restraints on concurrent employment, the Commission has made a technical edit to the definition of non-compete to clarify how it relates to seeking and accepting employment. Proposed § 910.1(b) defined non-compete clause as a contractual term that ''prevents the worker from seeking or accepting employment with a person . . . after the conclusion of the worker's employment with the employer.'' Because, as a technical matter, non-competes can also prevent workers from seeking or accepting future employment with another person before their work for their previous employer has concluded, the Commission has clarified the relevant language to read ''that prevents a worker from seeking or accepting work in the United States with a different person *where such work would begin after* the conclusion of the employment that includes the term or condition'' and ''that prevents a worker from operating a business in the United States *after the conclusion of the employment* that includes the term or condition'' (emphases added).

In addition, in response to comments expressing concern about evasion of the rule through third-party hiring,[355] the Commission has revised the phrase ''after the conclusion of the worker's employment with the employer'' to read ''after the conclusion of the employment that includes the term or condition.'' The Commission recognizes that non-competes can cover workers who are hired by one party but work for another, such as workers hired through staffing agencies. The Commission intends for the final rule to apply to such non-competes, and for this revision to eliminate any ambiguity as to whether such clauses are covered by the definition of non-compete clause in § 910.1.

With respect to the comment about union no-raid agreements, the Commission notes that the definition would apply only to the extent the agreement is a ''term or condition of employment'' and only if the agreement ''prevents a worker from seeking or accepting work in the United States with a different person where such work would begin after the conclusion of the employment that includes the term or

[355] These comments are described in greater detail in Part III.G.

condition'' or ''operating a business in the United States after the conclusion of the employment that includes the term or condition.'' [356] The Commission's understanding is that union no-raid agreements are not terms and conditions of employment that prevent workers from seeking or accepting work or operating a business.

With respect to the comment asking whether the definition would apply to non-competes in agreements between motor carriers and brokers in the trucking industry, the Commission notes as a general matter that the definition would not apply to non-competes between businesses, but the Commission declines to opine on specific factual circumstances.

E. Definition of ''Person''

The proposed rule did not separately define the term ''person.'' Instead, proposed § 910.1(c)—the proposed definition of ''employer''—stated that an employer ''means a person, as defined in 15 U.S.C. 57b–1(a)(6), that hires or contracts with a worker to work for the person.'' The statutory provision cross-referenced in proposed § 910.1(c) is section 20(a)(6) of the FTC Act, which defines ''person'' for purposes of the Commission's authority to issue civil investigative demands. Section 20(a)(6) defines ''person'' as ''any natural person, partnership, corporation, association, or other legal entity, including any person acting under color or authority of State law.'' No comments were received concerning the use of ''person'' in proposed § 910.1(c).

As explained in Part III.C, the Commission has removed the defined term ''employer'' from the regulatory text of the final rule. However, the regulatory text still uses the term ''person.'' For example, § 910.2(a)(1) prohibits a ''person'' from, among other things, entering into a non-compete clause. As a result, the Commission has adopted a separate definition of the term ''person.'' Section 910.1 defines ''person'' as ''any natural person, partnership, corporation, association, or other legal entity within the Commission's jurisdiction, including any person acting under color or authority of State law.'' This text consists of the proposed definition from section 20(a)(6), plus the phrase ''within the Commission's jurisdiction,'' which clarifies that only persons within the Commission's jurisdiction are subject to the final rule.

[356] § 910.1.

F. Definitions Related to Senior Executives

With respect to existing non-competes, *i.e.,* non-competes entered into before the final rule's effective date, the Commission adopts a different approach for ''senior executives'' than for other workers. Existing non-competes with senior executives can remain in force; the final rule does not cover such agreements.[357] For workers who are not senior executives, existing non-competes are no longer enforceable after the final rule's effective date.[358] The Commission describes its rationale for the final rule's differential treatment of senior executives in Part IV.C.

Section 910.1 defines the term ''senior executive'' as well as related terms. Because the Commission's rationale for the final rule's differential treatment of senior executives provides important context for these definitions, the Commission describes these definitions in Part IV.C.4.

G. Definition of ''Worker''

1. Proposed Definition

In the NPRM, the Commission proposed to define ''worker'' in proposed § 910.1(f) as ''a natural person who works, whether paid or unpaid, for an employer.'' [359] Proposed § 910.1(f) also stated that ''the term [worker] includes, without limitation, an employee, individual classified as an independent contractor, extern, intern, volunteer, apprentice, or sole proprietor who provides a service to a client or customer.'' [360]

In the NPRM, the Commission explained it intended the term ''worker'' to include not only employees, but also individuals classified as independent contractors, as well as other kinds of workers.[361] The Commission explained that, under proposed § 910.1(f), the term ''worker'' would include any natural person who works, whether paid or unpaid, for an employer, without regard to whether the worker is classified as an ''employee'' under the FLSA or any other statute that draws a distinction between ''employees'' and other types of workers.[362]

The Commission stated in the NPRM that it was concerned that if the rule were to define workers as ''employees'' according to, for example, the FLSA definition, employers may misclassify employees as independent contractors to evade the rule's requirements.[363] The Commission explained it had no reason to believe non-competes that apply to workers who are treated as independent contractors under the FLSA or interns tend to negatively affect competitive conditions to a lesser degree than non-competes that apply to employees, and that such non-competes may, in fact, be more harmful to competition, given that these other types of workers tend to have shorter working relationships.[364] In addition, the Commission explained that the purported business justifications for applying non-competes to independent contractors would not be different or more cognizable from those related to employees.[365]

Proposed § 910.1(f) also stated the term worker ''does not include a franchisee in the context of a franchisee-franchisor relationship.'' [366] The Commission explained that the relationship between a franchisor and franchisee may in some cases be more analogous to the relationship between two businesses than the relationship between an employer and a worker, and that the evidentiary record before the Commission related primarily to non-competes arising solely out of employment.[367] The Commission therefore stated that it believed it would be appropriate to clarify that a franchisee—in the context of a franchisor-franchisee relationship—is not a ''worker'' for purposes of proposed § 910.1(f).[368]

Proposed § 910.1(f) further clarified, however, that the term worker ''includes a natural person who works for the franchisee or franchisor,'' and that ''non-competes between franchisors and franchisees remain subject to [F]ederal antitrust law as well as all other applicable law.'' [369] The Commission explained that these laws include State laws that apply to non-competes in the franchise context.[370] The Commission also clarified that it was not proposing to find that non-competes between franchisors and franchisees are beneficial to competition.[371]

2. Comments Received

Several commenters stated that they agreed with the proposed definition of ''worker'' because it applies to all workers without regard to their classification. Many of these

commenters specifically urged the Commission to adopt a final definition that includes all categories of workers regardless of whether they are classified as employees, including independent contractors, ''gig'' workers, and others. These commenters pointed to the Commission's preliminary finding that non-competes are widely used across the economy. They cited employers' frequent misclassification of workers as independent contractors, agreeing with concerns raised in the NPRM that, if ''worker'' excludes independent contractors, employers may misclassify workers as independent contractors to avoid complying with the rule. Many commenters stated that millions of workers are misclassified as independent contractors, including a disproportionate number of women, people of color, and low-income workers. These commenters expressed concern that, if the rule excluded independent contractors from coverage, it would fail to benefit these groups, for whom non-competes may be particularly exploitative and coercive.

On the other hand, several commenters suggested removing bona fide independent contractors and sole proprietors from the definition of ''worker.'' Two industry groups contended that there is a lack of data regarding the prevalence and effects of non-competes among independent contractors as opposed to other kinds of workers and that, as a legal matter, the evidence is insufficient to justify including independent contractors as ''workers'' under the rule. A few industry organizations also contended that, because they have more control over their work and generally work for more than one employer, independent contractors have greater bargaining power than other workers. One academic commenter suggested that non-competes between employers and independent contractors are more akin to agreements between businesses than agreements between employers and workers. A few of these industry organizations also contended that non-competes are justified because independent contractors provide services outside the scope of their employers' expertise and thus have greater access to sensitive information than other workers. Other industry organizations contended that small businesses employ more independent contractors than their larger rivals. These commenters stated that, to protect small businesses from being impacted disproportionately by the rule, the definition of ''worker'' should exclude independent contractors. Finally, a few industry trade organizations and an academic commenter stated that independent contractors should be excluded from coverage under the rule to avoid ''free riding,'' in which a contractor working for one firm can use that firm's assets—like tools or databases—to benefit another firm.

Several commenters suggested changes to the definition of ''worker'' to maximize the rule's coverage and close potential loopholes. One worker advocacy group noted that, combined with the proposed definition of ''employer,'' the proposed definition of ''worker''—a natural person who works ''for an employer''—appeared to exclude workers who work for a person other than the person who hired or contracted with them to work. The commenter noted that workers are often employed indirectly—by way of a contractual relationship with a staffing agency, an affiliate of their common-law employer, or some entity other than their common-law employer—and that non-competes are often imposed on workers by the non-hiring party. In order to ensure these workers are covered by the rule, the commenter suggested that the definition of ''worker'' should also cover a person who works ''directly or indirectly'' for an employer and that the definition specifically include ''a person who works for the employer under an arrangement with a professional employer organization, statutory employer, wholly owned entity of which the person is the sole or principal employee or service provider, loan-out arrangement or similar arrangement.''

The same commenter also argued that employers often impose non-competes on workers who own a portion of the business while not applying the same restriction to outside investors who do not work for the company, and that such worker-owner non-competes should be treated as employment-related non-competes. In order to ensure these workers are covered by the rule, the commenter suggested that ''worker'' should also include ''a person who holds direct or indirect equity or other interest in the employer and who provides services to or for the benefit of the employer.'' Another commenter suggested that, for clarity, ''worker'' should specifically exclude a ''substantial owner, member or partner'' as defined in the sale-of-business exception.

Several State attorneys general, local government commenters, academic commenters, and a worker advocacy group warned that categorically excluding franchisees from the definition of ''worker'' would lead employers to misclassify workers as franchisees to evade the rule's requirements. Some commenters suggested incorporating the ''ABC'' test—a common law test designed to determine whether a worker is an employee based on fact-specific conditions—into the definition of ''worker'' to prevent evasion.[372]

Some commenters requested that the Commission revise the definition of ''worker'' to exclude or include certain workers from coverage under the rule. These comments are addressed in Part IV.C (comments requesting an exclusion for senior executives) and in Part V.D (comments requesting exclusions for other categories of workers).

3. The Final Rule

After considering the comments, the Commission revised the definition of ''worker'' in three ways to clarify that the term covers all current and former workers, regardless of which entity hired or contracted with them to work, and regardless of a worker's title or status under any other applicable law.

First, the Commission added ''or who previously worked'' to the basic definition of ''worker'' as ''a natural person who works.'' This revision is designed to clarify that former workers are considered ''workers'' under the final rule, such as where an employer is required to notify a former worker that their non-compete is no longer enforceable.[373]

Second, the Commission removed ''for an employer'' from the definition. This revision is designed to ensure that the final rule covers workers who are hired by one party but work for another, closing the unintended loophole identified by commenters regarding third-party hiring.

Third, the Commission added ''without regard to the worker's title or the worker's status under any other State or Federal laws'' prior to the list of examples of different categories of workers that the definition covers. This change is designed to make more explicit that the term ''worker'' includes all workers regardless of their titles, status under other laws, or the details of the contractual relationship with their employer.

The Commission has made two additional changes to the definition for clarity. First, the Commission has revised the phrase ''individual classified as an independent contractor'' to ''independent contractor.'' Second, the Commission has added ''a natural person who works for a franchisee or

[372] *See, e.g., Dynamex Operations W.* v. *Superior Ct.,* 4 Cal. 5th 903, 955–957 (Cal. 2018).

[373] *See* § 910.2(b).

franchisor'' to the non-exclusive list of examples of types of workers that would be covered by the definition. This language is simply moved from elsewhere in the definition. Third, the Commission has removed the sentence reading ''[n]on-competes between franchisors and franchisees would remain subject to Federal antitrust law as well as all other applicable law'' from the definition to avoid the implication that only such non-competes remain subject to Federal antitrust law and other applicable law.

The Commission declines to specify that a ''worker'' includes an owner who provides services to or for the benefit of their business because the definition already encompasses the same.

The Commission is not persuaded by commenters' arguments that independent contractors or sole proprietors are inherently different from other kinds of workers with respect to non-competes, and therefore declines to exclude them from the definition of ''worker.'' Commenters did not present persuasive evidence that non-competes that apply to independent contractors or sole proprietors tend to negatively affect competitive conditions to a lesser degree—or are restrictive, exclusionary, exploitative, or coercive to a lesser degree—than non-competes that apply to other workers. As noted by commenters who supported including independent contractors, non-competes' tendency to negatively affect competitive conditions by restricting workers' ability to change jobs or start businesses is not contingent on whether the worker is an employee or an independent contractor. While some commenters contended that independent contractors have more independence and more access to intellectual property than other workers, commenters did not provide evidence that this is the case. Moreover, even were this to be true, it would not justify an exclusion, because the Commission generally declines to exclude workers based on their access to intellectual capital or their independence for the reasons explained in Part V.D.

Furthermore, whether a worker is an employee or an independent contractor does not impact employers' ability to exploit imbalances of bargaining power or limit employers' ability to use less restrictive alternatives to non-competes to protect their intellectual property. While commenters who supported excluding independent contractors contended that independent contractors have more bargaining power than other workers, this contention is not backed by evidence. While some economists hypothesize that, theoretically, independent contractors may have more bargaining power vis-à-vis employers than employees do, they do not provide empirical evidence to support that assertion. Furthermore, as described by a report from the Treasury Department that was based on an extensive literature review, independent contractors may have less bargaining power than employees in many respects.[374]

The Commission is also not persuaded that non-competes are necessary to prevent ''free riding'' by independent contractors who use one firm's assets to benefit another. The final rule prohibits agreements that restrain a worker from working after the scope of employment has ended and does not prohibit agreements which prevent a worker from working for two firms simultaneously. In addition, any ''free riding'' may be addressed through less restrictive means, including through agreements prohibiting an independent contractor from using assets provided by one firm to benefit another.

Nor is the Commission persuaded that small businesses will be disproportionately harmed by a rule which prohibits non-competes for independent contractors. Commenters did not provide evidence to support their assertion that small businesses employ more independent contractors than larger ones.

The Commission agrees with the commenters who contended that excluding independent contractors may have the effect of excluding misclassified workers, who may be among the most vulnerable to exploitation and coercion. The recent overview by the U.S. Department of Labor (''DOL'') of the evidence on misclassification led it to conclude that although the prevalence of misclassification of employees as independent contractors is unclear, there is evidence that it is nonetheless ''substantial'' and has a disproportionate effect on workers who are people of color or immigrants because of the disparity in occupations most affected by misclassification, which include jobs in construction, trucking, delivery, home care, agriculture, personal care, ride-hailing services, and janitorial and building services.[375] The Commission also agrees with commenters' contentions that excluding independent contractors from the definition of ''worker'' could increase employers' incentive to misclassify workers as independent contractors. Indeed, misclassification is often motivated by attempts to evade the application of laws.

Because there is no reason to believe non-competes that apply to independent contractors or sole proprietors tend to negatively affect competitive conditions to a lesser degree, or are restrictive, exclusionary, exploitative, or coercive to a lesser degree, than non-competes that apply to employees—and in light of substantial evidence of widespread employee misclassification—the Commission declines to exclude independent contractors from the definition of ''worker.'' For this reason, the Commission also declines to incorporate the ''ABC'' test or other tests designed to differentiate between independent contractors and employees.

IV. Section 910.2: Unfair Methods of Competition

A. Introduction

1. Overview of the Commission's Findings and Determinations

In the NPRM, the Commission proposed to categorically ban employers from using non-competes with all workers, including existing agreements. However, the Commission sought comment on whether it should adopt different standards for non-competes with senior executives, and, if so, how it should define senior executives.[376] Based on the totality of the evidence, including its review of the empirical literature, its review of the full comment record, and its expertise in identifying practices that harm competition, the Commission in this final rule finds that non-competes with all workers are an unfair method of competition—although its rationale differs with respect to workers who are and are not senior executives.

The final rule provides that it is an unfair method of competition—and therefore a violation of section 5—for employers to, *inter alia,* enter into non-competes with workers on or after the final rule's effective date.[377] The Commission thus adopts a comprehensive ban on new non-competes with all workers. With respect to existing non-competes, *i.e.,* non-competes entered into before the final rule's effective date, the Commission adopts a different approach for senior executives[378] than for other workers.

[374] U.S. Treasury Dep't, Report, *The State of Labor Market Competition* (Mar. 7, 2022) (hereinafter ''Treasury Labor Market Competition Report'').

[375] Employee or Independent Contractor Classification Under the Fair Labor Standards Act, 89 FR 1638, 1735 (Jan. 10, 2024).

[376] NPRM at 3519.

[377] *See* § 910.2(a)(1)(i) and § 910.2(a)(2)(i).

[378] *See* § 910.1 (defining ''senior executive'').

Existing non-competes with senior executives can remain in force; the final rule does not cover them.[379] For workers who are not senior executives, existing non-competes are no longer enforceable after the final rule's effective date.[380] Employers must provide such workers with existing non-competes notice that the non-competes will not be enforced after the final rule's effective date.[381]

Specifically, with respect to workers who are not senior executives, the Commission determines that it is an unfair method of competition for a person to enter into or attempt to enter into a non-compete clause; enforce or attempt to enforce a non-compete clause; or represent to the worker that the worker is subject to a non-compete clause.[382] The Commission finds that with respect to these workers, these practices are unfair methods of competition in several independent ways:

- The use of non-competes is restrictive and exclusionary conduct that tends to negatively affect competitive conditions in labor markets.
- The use of non-competes is restrictive and exclusionary conduct that tends to negatively affect competitive conditions in product and service markets.
- The use of non-competes is exploitative and coercive conduct that tends to negatively affect competitive conditions in labor markets.
- The use of non-competes is exploitative and coercive conduct that tends to negatively affect competitive conditions in product and service markets.

In contrast, with respect to senior executives, the Commission determines that it is an unfair method of competition for a person to enter into or attempt to enter into a non-compete clause; enforce or attempt to enforce a non-compete clause entered into after the effective date; or represent that the senior executive is subject to a non-compete clause, where the non-compete clause was entered into after the effective date. The Commission does not find that non-competes with senior executives are exploitative and coercive. With respect to senior executives, the Commission finds that non-competes are unfair methods of competition in two independent ways:

- The use of non-competes is restrictive and exclusionary conduct that tends to negatively affect competitive conditions in product and service markets.
- The use of non-competes is restrictive and exclusionary conduct that tends to negatively affect competitive conditions in labor markets.

The final rule allows existing non-competes with senior executives to remain in force. Because the harm of these non-competes is principally that they tend to negatively affect competitive conditions (rather than exploiting or coercing the executives themselves), and due to practical concerns with extinguishing existing non-competes for such executives, the final rule prohibits employers only from entering into or enforcing new non-competes with senior executives.

Parts IV.B and IV.C set forth the findings that provide the basis for the Commission's determinations that the foregoing practices are unfair methods of competition under section 5 for these two categories of workers, respectively.[383] In these sections, the Commission also describes and responds to comments regarding the preliminary findings in the NPRM that informed its preliminary determinations related to unfair methods of competition.

2. Analytical Framework for Assessing Empirical Evidence

Before turning to the basis for its findings, the Commission describes the analytical framework it has applied in assessing the empirical evidence on non-competes. In the NPRM, the Commission discussed the existing empirical literature on non-competes and its assessment of those studies, including its preliminary view of which studies were more robust and thus should be given more weight.[384] In response, some commenters argued the Commission gave too much weight to certain studies or too little weight to others.[385]

The Commission notes that the methodologies of empirical studies on the effects of non-competes vary widely. In this final rule, based on the Commission's longstanding expertise assessing empirical evidence relating to the effects of various practices on competition, the Commission gives more weight to studies with methodologies that it finds are more likely to yield accurate, reliable, and precise results. In evaluating studies, the Commission utilized the following five principles that reflect best practices in the economic literature.

First, the Commission gives more weight to studies examining the effects of a change in legal status or a change in the enforceability of non-competes, and less weight to studies that simply compare differences between workers who are subject to non-competes and those who are not. Studies that look at what happens before and after a change in State law that affects the enforceability of non-competes provide a reliable way to study the effects of the change. This is especially true when only the enforceability of non-competes changes, and not other factors affecting firms and workers. If other substantial changes do not also occur around the same time, this study design often allows the researcher to infer that the change caused the effects—since the likelihood that confounding variables are driving the effects or outcomes is minimal.[386]

In contrast, other studies of the use of non-competes compare a sample of workers who are subject to non-competes with a sample of workers who are not subject to non-competes. The shortcoming of these studies is that they cannot easily differentiate between correlation and causation. For example, if such a study shows that workers with non-competes earn more, there could be many confounding reasons for this result. For example, employers may be more likely to enter into non-competes with workers who earn more. In contrast, a study showing that workers' earnings increase or decrease when non-

[379] *See* Part IV.C.3.

[380] *See* § 910.2(a)(1)(ii) and § 910.2(a)(1)(iii).

[381] *See* § 910.2(b).

[382] *See* § 910.2(a)(1).

[383] In addition to the findings described in Parts IV.B and C, the Commission finds that the use of non-competes by employers substantially affects commerce as that term is defined in section 5 and burdens a not insubstantial portion of commerce. The findings in Parts IV.B and C apply with respect to senior executives and other workers, whether considered together or respectively. The evidence establishes that non-competes affect labor mobility, workers' earnings, new business formation, and innovation, including empirical evidence specifically identifying cross-border effects with respect to earnings, *see infra* notes 464–468 and accompanying text, and innovation, *see infra* note 563 and accompanying text.

[384] *See* NPRM at 3484–93.

[385] The Commission discusses comments addressing specific studies in Parts IV.B, IV.C, and IV.D.

[386] In Parts IV.B and C, the Commission describes how these ''enforceability'' studies show that increased enforceability of non-competes results in various harms, such as reduced earnings, new business formation, and innovation. Notably, the available evidence also shows that workers are chilled from engaging in competitive activity even where a non-compete is likely unenforceable—for example, because they are unaware of the law or unable to afford a legal battle against the employer. *See* Part IV.B.3.a.i. The fact that many workers may not adjust their behavior in response to changes in State-level enforceability of non-competes suggests that the final rule could result in even greater effects than those observed in the research, particularly because it would require employers to provide workers with notice that their non-compete is no longer in effect, which would help correct for workers' lack of knowledge of the law. *See* § 910.2(b).

competes are made more or less enforceable provides much stronger evidence regarding the effect of non-competes, in isolation. Researchers studying non-competes are aware of this bias and frequently caution that estimates of the correlation between outcomes and the use of non-competes should not be misinterpreted as causal.[387]

Second, the Commission gives more weight to studies examining the effects of changes in non-compete enforceability and less weight to studies that simply compare economic outcomes between States where non-competes are more enforceable and States where non-competes are less enforceable. This latter category of studies is known as ''cross-sectional studies of enforceability.'' Like studies based on the use of non-competes, these cross-sectional studies of enforceability cannot easily differentiate between correlation and causation. This is because differences between States that are unrelated to non-competes and their enforceability can easily pollute comparisons. For example, non-competes are less enforceable in California than in Mississippi, and the cost of living is higher in California than in Mississippi. However, the difference in the cost of living is likely to be due to underlying differences between the economies and geographies of the two States, rather than being attributable to non-competes. In contrast, studies examining how changes in enforceability of non-competes affect various outcomes—studies that look at what happens within States before and after a change in State law that affects the enforceability of non-competes—allow researchers to infer that the change caused the effects.[388]

Despite having this limitation, the Commission believes that cross-sectional studies of enforceability are still superior to the ''use'' studies described under the first principle. This is because although comparisons of different States may have unreliable results due to confounding variables—depending on which States are compared—''use'' studies are inherently unreliable due to confounding effects. For example, because employers enter into non-competes more often with highly paid workers, all ''use'' studies related to worker earnings are inherently unreliable, although studies that utilize data on the use of non-competes but employ a design that plausibly identifies a causal effect may be less unreliable.

Third, the Commission gives more weight to studies assessing changes in the enforceability of non-competes in multiple States. This reduces the possibility that the observed change in economic outcomes was driven by an idiosyncratic factor unique to a particular State. For example, assume State X changed its laws to make non-competes less enforceable, and new business formation subsequently increased compared with other States. However, around the same time it changed its non-compete law, State X also enacted legislation to provide attractive tax incentives to entrepreneurs. It would be difficult to isolate the effect of the change in non-compete law from the effect of the tax law change. For this reason, the Commission gives more weight to studies that analyze the effects of multiple changes in enforceability. For example, if a study shows that, compared with other States that did not change their non-compete laws, new business formation rose not only in State X, but also in several other States that changed their laws to make non-competes less enforceable, the Commission would be more confident inferring that changes in non-compete law caused these effects.

Fourth, the Commission gives more weight to studies that use sophisticated, nuanced measures of enforceability, such as non-binary measures of non-compete enforceability that capture multiple dimensions of non-compete enforceability. This fourth guiding principle ensures accuracy and granularity in the measurement of non-compete enforceability.

A variety of different factors affect the enforceability of non-competes from State to State, including (among others) the permissible geographic scope and duration of non-competes and how high the employer's burden of proof is to establish that a non-compete is enforceable. Given the different factors involved, the overall level of non-compete enforceability from State to State falls along a spectrum; it is not as simple as whether non-competes are enforceable or not. Thus, scales which use binary measures miss nuance between States. This is true for enforceability overall (*e.g.,* scales which simply assign States to ''enforcing'' or ''non-enforcing'' categories) and for elements of enforceability (*e.g.,* scales which assess whether a non-compete is enforceable if a worker is fired with a yes or no answer). While no scale is perfect, scales which allow for multidimensionality and granularity measure non-compete enforceability (and thus the effects that stem from it) with a higher degree of accuracy.[389]

Fifth, the Commission gives more weight to studies in which the outcome studied by the researchers is the same as the outcome the Commission is interested in or is an effective proxy for the outcome the Commission is interested in. It gives less weight to studies that use ineffective proxies. For example, some outcomes are relatively easy to study. There is extensive data on workers' earnings at the State level, so researchers can simply use this data to study how changes in non-compete enforceability affect workers' earnings in a State. Other outcomes, however, may be more challenging to quantify directly, and thus researchers may use proxies for understanding the effect they are studying. For example, there is no single metric that measures innovation in the economy. For this reason, to learn about how non-competes affect innovation, a researcher might study the effect of changes in non-compete enforceability on the number of patents issued in the State as a proxy for innovation. However, proxies can sometimes be ineffective or inapt. For example, a study that analyzes the effect of non-compete enforceability on the number of patents issued is generally a weaker proxy for innovation than a study that also takes into account the quality of patents issued. For this reason, the Commission gives more weight to studies that measure the exact outcome of interest or studies that use effective proxies.

While these five guiding principles are important indicators of the relative strength of empirical studies evaluated by the Commission for the purpose of this final rule, the Commission's assessment of empirical studies was holistic and relied on its economic expertise. In addition to the guiding principles described in this Part IV.A.2, the Commission's holistic, expert assessment of the empirical evidence also included considering characteristics of studies important in any context, such as data quality, statistical precision, and other factors.

[387] *See, e.g.,* Starr, Prescott, & Bishara, *supra* note 68 at 73 (''Our analysis of the relationships between noncompete use and labor market outcomes . . . is best taken as descriptive and should not be interpreted causally.''); Johnson & Lipsitz, *supra* note 80 at 711 (''These regressions [of firm investment on non-compete use] should be interpreted as correlations rather than causation, since the decisions to make these investments and use [non-competes] are made jointly.'').

[388] Matthew S. Johnson, Kurt J. Lavetti, & Michael Lipsitz, *The Labor Market Effects of Legal Restrictions on Worker Mobility,* Nat'l Bureau of Econ. Rsch. 2 (2023) (''. . . cross-sectional variation in enforceability might be correlated with other unobserved differences across states.'').

[389] Jonathan M. Barnett & Ted Sichelman, *The Case for Noncompetes,* 87 U. Chi. L. Rev. 953 (2020).

In some instances, the Commission cites studies beyond those discussed in the NPRM. The Commission cites such studies only where they check or confirm analyses discussed in the NPRM, or where the Commission is responding to comments raising them. The Commission's findings do not rest on these studies, however, and they are not necessary to support its findings.

B. Section 910.2(a)(1): Unfair Methods of Competition—Non-Competes With Workers Other Than Senior Executives

The Commission now turns to the basis for its findings that non-competes with workers other than senior executives are an unfair method of competition. As explained in Part II.F, under section 5, the Commission assesses two elements: (1) whether the conduct is a method of competition, as opposed to a condition of the marketplace, and (2) whether it is unfair, meaning that it goes beyond competition on the merits. The latter inquiry has two components: (a) whether the conduct has indicia of unfairness, and (b) whether the conduct tends to negatively affect competitive conditions. These two components are weighed according to a sliding scale.

Non-competes with workers other than senior executives satisfy all the elements of the section 5 inquiry.[390] As described in Part IV.B.2, such non-competes are facially unfair because they are restrictive and exclusionary, and because they are exploitative and coercive. And as described in Part IV.B.3, such non-competes tend to negatively affect competitive conditions in labor markets and markets for products and services. As explained in Part II.F, the legal standard for an unfair method of competition under section 5 requires only a tendency to negatively affect competitive conditions. The inquiry does not turn on whether the conduct directly caused actual harm in a specific instance. Here, the tendency of non-competes to impair competition is obvious from their nature and function. And even if this tendency were not facially obvious, the evidence confirms that non-competes do in fact have a negative effect on competitive conditions.

The Commission finds that the empirical research described in this Part IV.B supports findings related to workers other than senior executives.[391]

1. The Commission Finds That Non-Competes Are a Method of Competition, Not a Condition of the Marketplace

With respect to the first element, whether the conduct is a method of competition, the Commission preliminarily found in the NPRM that non-competes are a method of competition under section 5 because they are specific conduct undertaken by an actor in a marketplace, as opposed to merely a condition of the marketplace.[392] No commenters disagreed with this finding, and the Commission reaffirms its preliminary finding that non-competes are a method of competition.

2. The Commission Finds That Non-Competes Are Facially Unfair Conduct

The Commission finds that non-competes are facially unfair conduct under section 5 because they are restrictive and exclusionary. The Commission further finds that non-competes are facially unfair under section 5 because they are exploitative and coercive.

a. Non-Competes Are Restrictive and Exclusionary Conduct

Under section 5, indicia of unfairness may be present where conduct is restrictive or exclusionary, provided that the conduct also tends to negatively affect competitive conditions.[393] In the NPRM, the Commission explained that non-competes are restrictive conduct.[394] No commenters disputed this analysis, and the Commission reaffirms its preliminary finding that non-competes are restrictive.

The restrictive nature of non-competes is evident from their name and function: non-competes restrict competitive activity. They do so by restricting a worker's ability to seek or accept other work or start a business after the worker leaves their job, and by restricting competitors from hiring that worker. Because non-competes facially restrict competitive activity, courts have long held they are restraints of trade and proper subjects for scrutiny under the antitrust laws.[395]

The restrictions that non-competes impose on workers are often substantial. Non-competes can severely restrict a worker's ability to compete against a former employer. For most workers, the most natural alternative employment options are jobs in the same geographic area and in the same field. These are the very jobs that non-competes typically prevent workers from taking. Furthermore, for most workers, the most practical entrepreneurship option is starting a business in the same field. This is the very opportunity that non-competes typically prevent workers from pursuing. Moreover, the record before the Commission reflects that non-competes are often so broad as to force a worker to sit out of the labor market altogether.

In the NPRM, the Commission used the term ''restrictive'' to encompass both restrictive and exclusionary conduct.[396] In this final rule, in addition to finding that they are restrictive conduct, the Commission separately finds that non-competes are exclusionary conduct because they tend to impair the opportunities of rivals. Where a worker is subject to a non-compete, the ability of a rival firm to hire that worker is impaired. In addition, where many workers in a market are subject to non-competes, the ability of firms to expand into that market, or entrepreneurs to start new businesses in that market, is impaired.

For the foregoing reasons, the Commission finds that the use of non-competes with workers other than senior executives is facially unfair under section 5 because it is conduct that is restrictive or exclusionary.

b. Non-Competes Are Exploitative and Coercive Conduct

Conduct may violate section 5 where it is exploitative or coercive and tends to negatively affect competitive conditions.[397] Indeed, where conduct is exploitative or coercive, it evidences

[390] For the sake of readability, in this Part IV.B, the Commission refers to non-competes with workers other than senior executives as ''non-competes.''

[391] Some of the studies described in Part IV.B analyze non-competes between employers and workers across the labor force. Other studies analyze non-competes with particular populations of workers. In each of the studies described in Part IV.B, non-competes with workers other than senior executives represented a large enough segment of the sample that the study supports findings related to the effects of non-competes for such workers. Studies that focus primarily on non-competes for senior executives are described in Part IV.C, which explains the Commission's findings related to non-competes with senior executives.

[397] *See* Part II.F.

clear indicia of unfairness, and less may be necessary to show a tendency to negatively affect competitive conditions.[398]

In the NPRM, the Commission preliminarily found that non-competes with workers other than senior executives were exploitative and coercive because in imposing them on workers, employers take advantage of their unequal bargaining power.[399] The Commission also preliminarily found that non-competes are exploitative and coercive at the time of the worker's potential departure, because they force a worker to either stay in a job the worker wants to leave or force the worker to bear other significant harms and costs, such as leaving the workforce or their field for a period of time; relocating to a different area; violating the non-compete and facing the risk of expensive and protracted litigation; or attempting to pay the employer to waive the non-compete.[400]

The Commission received an outpouring of comments on the question of whether non-competes were exploitative or coercive. Thousands of workers described non-competes as pernicious forces in their lives that took advantage of their lack of bargaining power and forced them to make choices detrimental to their finances, their careers, and their families. Above all, the predominant themes that emerged from the comments were powerlessness and fear.

Thousands of workers reported feeling powerless to avoid non-competes, either because the worker needed the job or because non-competes were pervasive in the worker's field. Hundreds of workers reported non-competes were unilaterally imposed on them. Workers overwhelmingly reported that they did not bargain over non-competes, did not receive compensation for non-competes, and were not represented by counsel in connection with non-competes, with only rare exceptions.

And hundreds of workers reported that even where they wanted a job with better pay or working conditions, or to strike out on their own, the fear of litigation from a deep-pocketed employer or the fear of being without work prevented them from doing so. Hundreds of workers described how this fear coerced them into remaining in jobs with poor conditions or pay, including dangerous or toxic work environments; into leaving an industry or profession that they invested, trained, studied, or were experienced in, damaging or derailing their careers; into moving away from their home, uprooting or separating their families; or into enduring long-distance commutes, which made it harder to care for and spend precious time with their loved ones. Many workers described how this fear hung above them even if they thought the non-compete was overbroad and probably unenforceable under State law, because having to defend a lawsuit from an employer for any length of time would devastate their finances.

Based on the entirety of the record, for the following reasons, the Commission finds non-competes with workers other than senior executives are exploitative and coercive because they are unilaterally imposed by a party with superior bargaining power, typically without meaningful negotiation or compensation, and because they trap workers in worse jobs or otherwise force workers to bear significant harms and costs.

i. Non-Competes With Workers Other Than Senior Executives Are Unilaterally Imposed

The Commission finds that employers almost always unilaterally impose non-competes, exploiting their superior bargaining power to impose—without any meaningful negotiation or compensation—significant restrictions on workers' abilities to leave for better jobs or to engage in competitive activity.

The Commission finds that employers have significantly more bargaining power than workers. Most workers, especially workers other than senior executives, depend on income from their jobs to get by—to pay their rent or mortgage, pay their bills, and put food on the table. The loss of a job or a job opportunity can severely damage workers' finances and is far more likely to have serious financial consequences for a worker than the loss of a worker or a job candidate would have for most employers.

The Treasury Department, in a report based on an extensive literature review, finds that firms generally have considerable labor market power.[401] The report states that concentration in particular industries and locations can increase employers' labor market power.[402] However, the report explains that, even in the absence of concentration, firms have significant labor market power due to a variety of factors.

As the report notes, some of these factors are inherent in the firm-worker relationship. The report states that workers are at an informational disadvantage relative to firms, often not knowing what other workers earn or the competitive wages for their labor.[403] The report states further that workers often have limited or no ability to switch locations and occupations quickly and may lack the financial resources to support themselves while they search for jobs that pay more and better match their skills and abilities.[404] According to the report, these conditions often enable firms to exert market power even in labor markets that are not highly concentrated.[405]

In addition to factors inherent to the employer-worker relationship, the report concludes that firms use a wide range of practices to restrain competition for workers, including sharing wage information and conspiring to fix wages with other firms; agreeing not to hire other firms' workers; and adopting non-competes, mandatory arbitration agreements, and overbroad NDAs.[406] The report also states that practices such as outsourcing and worker misclassification have further diminished workers' market power.[407] Overall, the report finds that employers' labor market power has resulted in a 20% decrease in wages relative to the level in a fully competitive market.[408]

The Commission finds that employers are able to exploit their considerable labor market power—and indeed routinely do so—with respect to non-competes imposed on workers other than senior executives. Employers are repeat players likely to have greater experience and skill at bargaining than individual workers in the context of negotiating employment terms such as non-competes.[409] Research has found that employers present non-competes in standard-form contracts,[410] which workers are unlikely to read,[411] and that

Continued

workers rarely bargain over non-competes and rarely seek the assistance of counsel in reviewing non-competes.[412] Many workers also lack the legal training or legal knowledge necessary to understand whether a particular non-compete is enforceable or the consequences of entering into a non-compete. The available evidence indicates that many workers are not aware of the applicable law governing non-competes or their rights under those laws.[413] Research has also found that employers exploit their power over workers by providing them with non-competes after they have accepted the job offer—and in many cases, on or after their first day of work—when the worker's negotiating power is at its weakest, since the worker may have turned down other job offers or left their previous job.[414]

The comment record provides strong support for the Commission's finding that non-competes are coercive and exploitative because they are typically unilaterally imposed by employers on workers other than senior executives. Illustrative examples of the comments the Commission received include the following:

- I am a practicing OB/GYN physician in Shreveport, LA. . . . I was put into a non-negotiable, vague non-compete with NO expiration date. . . . I needed a job. I was in a large amount of debt with accumulating interest during my four years of residency with a minimal salary. Honestly, I could not afford an attorney. So naively I trusted that the people that had been training me for the past 4 years would not take advantage of me in a contract. I did not have the ability to seek advice on ''how'' to negotiate a contract with my mentors since my mentors were the ones who wrote the contract.[415]
- As [a] physician who recently negotiated a new contract, I support FTC changes to the non-compete rules. . . . All three institutions [I considered working for] had unreasonable and onerous non-competes. Essentially making it impossible to get another job in the entire state of NJ—not just a few mile radius but two thirds of the state. . . . Non-competes are never negotiable even when hiring a lawyer to review and negotiate the contract. Hospitals refused to negotiate on the majority of the contract citing it is [an] across the board provision that cannot be altered.[416]
- I'm a worker that has had to consider whether to take a job that requires signing a no-compete agreement . . . . Several times in my career, after weeks of interviewing and salary negotiation, I've found myself facing a required no-compete agreement that would drastically limit my future career options and negotiating power. Several times I've accepted these agreements because I had already turned down competing offers and found myself with limited options.[417]
- I'm a project manager at an Interior Design & Home Staging company in Manhattan; we're the largest staging company on the East Coast. After I accepted my job offer and went in to file paperwork, I was very briefly walked through what this non-compete means (the details were not made entirely clear; I believe they left it intentionally murky) and it was buried deep in the new employee rules and regulations packet I needed to read and sign at my onboarding. I personally am very against these agreements because, as mine states, I cannot work with ''a competing staging company'' or for any of the clients of my current company. Again, we're the largest staging firm on the east coast and have a lot of clients (we do over 100 stagings per year). Essentially, I am completely shut out of working in the industry in NYC as there are only a handful of other staging companies that can pay me a living wage to do so.[418]
- You might say that we might be able to negotiate out of a non-compete in our contract, but that is simply not true. In my hospital, I was already established, owning a house and having kids in school in a spouse in a career when the Hospital came forward and sit on my next contract renewal that I had no choice, but to sign a noncompete. They had me over a barrel. At my next contract negotiation, I try to negotiate out of the noncompete, with less salary or less benefits, and it was a nonstarter. There is zero tolerance for negotiating out of the noncompete.[419]
- At the end of 2018, as a Manager at a small business (150 employees) in a niche technology industry, I was offered shares in our company as we were acquired by a Private Equity firm. . . . I worked with a company-provided attorney on an Employment Agreement. This agreement offered a 6-month severance with a 1-year non-compete period, which I negotiated down to a 6-month non-compete to match the severance period. Later that month, I was sent an additional, previously unseen 120-page Share Agreement that governed how I would vest the shares I had earned. I didn't realize it at the time, but buried toward the end of this document was another non-compete that had a much longer timeframe dictated—1 year from when I no longer held any shares. As it would potentially take up to 6 years for the company to sell again, that meant an incredibly long and indefinite sounding time period. I was given only one business day to review this agreement, and was sent a signature packet the following day. I honestly thought I was signing my Employment Agreement negotiated with a company attorney, not the share agreement that neither myself nor the attorney had reviewed, and which I had only received the day prior.[420]
- Desperate to obtain an entry level job in the Accounting field in which I am currently obtaining my Associate's degree, I was presented with an offer of employment and a non-compete agreement contract to sign. Because I needed to pay rent, I signed it.[421]
- On the first day of my husband's employment, without prior notice, an extensive 2 year non-compete clause was put in his employment contract and while it was noted within the clause he could seek counsel, when you are in the middle of your first day of work it's not practical. In addition, for most people, if it is your first experience with a non-compete, you likely do not have the funds to pay a $750 per hour lawyer to advise and negotiate on your behalf, nor realize the possible long-term consequences.[422]

Many commenters agreed with the Commission's preliminarily finding that employers generally have considerable labor market power. Even commenters opposing the NPRM did not generally dispute the notion that there is unequal bargaining power between employers and workers. Many workers stated that non-competes are pervasive in their industry, meaning they could not find a job without one. Many commenters stated that high wages or skills do not automatically translate into more bargaining power or sufficiently mitigate the harms from non-competes, especially in concentrated markets or markets where so many employers use non-competes that workers effectively have no choice but to sign them. Commenters also said that underrepresented groups may have even less bargaining power to negotiate non-competes and are less likely to have the resources for litigation, which could have an increased deterrent effect on worker mobility.

Hundreds of commenters stated that workers are rarely, if ever, able to negotiate their non-competes because non-competes are typically presented in a take-it-or-leave-it fashion. These comments spanned both lower-wage workers and workers in high-wage industries.[423] Workers often stated that they were ''forced'' to sign a non-

compete. Very few workers said they were able to decline signing a non-compete and still be hired or employed. An employment law firm also agreed with the Commission and stated that non-competes are rarely subject to negotiation.

Confirming the research described in this Part IV.B.2.b.i, many workers—including highly paid and highly skilled workers—stated that they did not receive notice that they would be required to sign a non-compete until after accepting a job offer. Some workers said they were told of the non-compete after accepting the job but before starting work. Many workers who described when they were notified of a non-compete said it was on their first day of work or even later. Many workers stated that they were required to sign their non-compete after a merger or acquisition—*i.e.,* after they were already on the job but there was a change in ownership of the company. For example, a trade organization stated that it is common for the purchaser of a business to impose non-competes on its workers, which may trap workers in an organization different from the one they originally agreed to work for. An employment law firm commented that even highly paid or highly skilled workers do not always receive notice of non-competes with the employment offer.

Many workers also stated that non-competes are often hidden or obscured. Several workers said their non-compete was buried in other paperwork or confusingly worded or vague. Some commenters stated that their employer refused to allow them to have a copy of their non-compete. Many workers said their employers gave them misleading or incorrect information about the terms or enforcement of non-competes. Each of the above categories included not only workers from low-wage industries, but also workers from high-wage industries. While these practices appear to be commonplace, based on the comments, the Commission also notes that even workers who knew about non-competes before accepting the job offer—and who did not report being misled about the non-compete—did not report bargaining or negotiating over it.

Only a small number of workers reported any negotiating over non-competes. For example, a sales worker said they were able to negotiate a non-compete, though that worker still supported the proposed rule. A surgeon group stated hospitals were willing to negotiate over non-competes, but that hospitals use the non-competes as a negotiating tactic to drive down surgeon salaries.

Few workers who submitted comments reported being compensated for signing a non-compete. Among those workers who did report receiving compensation, most still said they considered their non-competes to be exploitative or coercive. For example, some workers said they were laid off and then required to sign a non-compete as a condition for receiving severance. A few workers said their employer had threatened to withhold their commissions and/or pay on departure if they did not sign a non-compete. One worker reported never receiving the compensation associated with a non-compete, because they were terminated two months after signing.

In addition, the Commission finds that employers frequently impose non-competes even when they are unenforceable under State law. An economist suggested that non-competes may be used in States in which they are unenforceable because the employer hopes the State's policy might change, or the employer might be able to forum-shop to apply the law of another jurisdiction more favorable to non-competes. Some commenters stated that firms may remind workers they are subject to a non-compete upon departure even when those non-competes are unenforceable because they hope that workers and competitors will abide by them.

These comments that employers often use unenforceable non-competes are supported by research finding that employers frequently use non-competes even when they are unenforceable under State law.[424] This research suggests that employers may believe workers are unaware of their legal rights, or that employers may be seeking to take advantage of workers' lack of knowledge of their legal rights or the challenges workers face enforcing their rights.

A far smaller number of commenters—a group that included many businesses and trade organizations, and very few workers—argued that non-competes were not exploitative or coercive. An industry organization said non-competes are understandable to a layperson with respect to their geographic scope, time in effect, and industry to which they apply, while an alternative trade secret case would be more complex. But even if workers understand the basic terms of non-competes, that does not alter the Commission's core concern that non-competes are exploitative and coercive because they take advantage of unequal bargaining power between employers and workers and force workers to stay in jobs they want to leave or otherwise bear significant harms or costs. It also does not alter the Commission's concern that non-competes tend to negatively affect competitive conditions. Moreover, the Commission notes that the available evidence indicates that many workers are not aware of the applicable law governing non-competes or their rights under those laws.[425] In addition, many commenters stated that non-competes were not disclosed to them before they started their job. Furthermore, the Commission addresses why trade secret law is a less restrictive alternative for protect employers' legitimate interests in Part IV.D.2.

A few commenters stated that unequal bargaining power does not constitute an unfair method of competition. In response, the Commission notes that it does not find that unequal bargaining power itself is an unfair method of competition; rather, unequal bargaining power informs its analysis of exploitation and coercion.

The comment record indicates that while some highly paid workers may seek the assistance of counsel when negotiating non-competes, many do not. Commenters did not present studies or other quantitative evidence that undermines the finding in Starr, Prescott, & Bishara that less than 8% of workers seek assistance of counsel in connection with non-competes.[426] The Commission thus finds that the vast majority of workers lack assistance of counsel in connection with entering non-competes. The Commission believes that its definition of senior executives, discussed in Part IV.C.4, captures those workers who are most likely to seek assistance of counsel. To the extent any other individual workers seek assistance of counsel and/or are able to actually bargain over non-competes sufficient that a given non-compete is not exploitative and coercive, the Commission still finds that such non-competes are unfair methods of competition for the independent reason that they are restrictive and exclusionary conduct that tends to negatively affect competitive conditions.

Overall, the comments provide strong support for the Commission's finding that, with respect to workers other than senior executives, employers almost always unilaterally impose non-competes—exploiting their superior bargaining power to significantly restrict workers' abilities to leave for better jobs or engage in competitive activity.

[426] Starr, Prescott, & Bishara, *supra* note 68 at 72.

ii. Non-Competes With Workers Other Than Senior Executives Trap Workers in Jobs or Force Them to Otherwise Bear Significant Harms and Costs

The Commission finds that non-competes are exploitative and coercive because they force workers to either stay in jobs they want to leave or bear other significant harms and costs, such as leaving the workforce or their field for a period of time; relocating out of their area; or violating the non-compete and facing the risk of expensive and protracted litigation. In addition, the Commission finds non-competes exert a powerful *in terrorem* effect: they trap workers in jobs and force them to bear these harms and costs even where workers believe the non-competes are overbroad and unenforceable, due to workers' fear that having to defend a lawsuit from their employer for any length of time would devastate their finances or ruin their professional reputations.

The comment record provides strong support for this finding. Many workers submitted comments supportive of the Commission's preliminary finding that non-competes coerce workers into remaining in their current jobs. Many workers reported staying in their jobs because they feared harm to their careers if they were forced out of their field; feared having to relocate or endure a lengthy commute due to a non-compete; or feared their non-competes would cause them to be unemployed if they left. Several workers reported they were unable to take a specific desired job because of a non-compete. Many workers recounted how non-competes trapped them in jobs with poor working conditions or where they were subject to illegal conduct, including sexual harassment.[427] Some workers said they were subject to particularly broad, even global, non-competes, meaning leaving their field was their only option if they left their current job. These comments spanned both lower-wage workers and workers in high-wage industries.

Illustrative examples of the comments the Commission received include the following:

- I am a journalist who has been forced to move across the country three times, and leave my field entirely for one year, in order to comply with stringent non-compete agreements. . . . In [one] situation, I was stuck working for abusive management who fostered a toxic and abusive workplace, and I had to work there for more than a year until I could find a job in another city entirely because they had threatened to sue me under the non-compete if I left and worked for another local station. . . . [E]ven if these clauses are unenforceable, as we've all heard before, who can afford the legal representation to go up against a corporation and their lawyers when the lawsuit threat comes? My life would have been very different if I weren't trapped by non-competes at points in my career.[428]
- As a veterinarian I support the elimination of non-compete agreements. In our profession they still are overwhelmingly the normal expectation with contracts. . . . [C]ompanies use the fear of litigation to enforce them. As veterinary medicine very quickly becomes more corporate owned, basically they pit us as a singular employee against large corporations that have substantial means both financially and legally. No reasonable employee wants to take on that battle or even can financially take on that battle. So regardless if the clauses are 'unenforceable' they are enforced via intimidation. . . . When [my] job was a terrible fit and my boss ultimately ended up 'not renewing my contract' I was still left with a noncompete. This basically eliminated my ability to work within a reasonable distance of our home. I ended up commuting an hour and 15 minutes one way for 10 months until my husband, myself, and my very young child were able to move closer to my new job. While it was likely legally unreasonable in nature, I did not have the resources financially to even consider the legal battle that would have had to happen for reconsideration and I desperately needed an income to continue to pay the student debt that comes with being a young doctor. Furthermore I had a baby that needed my focus as well.[429]
- I was fired unjustly 11/2021 for declining the Covid vaccine. My medical and religious exemptions were both denied. In addition to this, I was required by my former employer contract to abide by the two-year 10 mile restrictive covenant. This greatly hindered my ability to find employment, and I was out of work for approximately three months. I could only find part-time work for a fraction of my former salary. Had I not had the noncompete clause, I could have found a full-time job almost immediately.[430]
- Unfortunately, the average dental school graduate has nearly $300,000 in student loan debt, and most new dentists are unable to make their practice-ownership dreams a reality immediately after residency. Thus, we rely on entry-level associate dentist positions to gain experience, pay off debt, and become fiscally/professionally prepared to become practice owners. Much to my dismay, upon interviewing for my first associate dentist position, I quickly realized how non-competes are being used in the dental profession to prevent vulnerable young dentists like myself from taking the next step in our careers. . . . Although dental associate positions come with relatively high compensation, it doesn't make this issue any less problematic.[431]
- My daughter had an inter-state non-compete enforced as a minimum wage medical scribe. Originally she was working with a medical scribe company in Indiana prior to Covid. Due to COVID and graduating from college she then moved to our home in Oregon. She applied for a medical scribe job in Oregon with a company that did not provide any scribe services in Indiana. But her original scribe company had 1 ''office'' they were providing scribe services to in Salem, Oregon. My daughter had applied with the local scribe company to provide services but when examined further found that her original scribe company from Indiana was going to enforce a $5000 non-compete buy-out fee on her to provide the services in Salem, Oregon that were within the sphere of restriction for her ''new'' local scribe opportunity.[432]

Many commenters explained that non-competes forced them to relocate and described the toll the relocation took on their families. Other commenters stated that their families have been forced to live apart, or they had been separated from elderly relatives, due to a non-compete forcing the relocation of one of the family members. Many commenters described how long commutes undertaken to avoid non-competes increased transportation costs and caused the worker to lose precious time with their families.

The comment record bolsters the Commission's finding that employers wield non-competes to coerce and exploit workers into refraining from competitive activity even where non-competes are unenforceable. Many workers explained that they—and others in their industry—abided by non-competes, even where they believed the non-compete was overbroad and likely unenforceable. According to a law firm specializing in executive compensation, even workers who can afford counsel may be unwilling to mount a long and uncertain legal battle to challenge a non-compete. The firm said employers almost always have deeper pockets and more access to counsel than individual workers, making workers more reluctant to litigate. Commenters further stated that employers may be able to deduct litigation costs as a business expense, giving them the wherewithal to enforce their non-competes.

Many workers with non-competes stated that they feared legal action from their employer or enormous legal fees if they left their current job, and most of those workers said they could not afford litigation. Workers also stated that they are reluctant to engage in litigation against an employer because it would harm their reputation in their industry.

Many workers reported being threatened with litigation over a non-

[427] These comments are addressed in greater detail in Part IV.B.3.a.iii.

[432] Individual commenter, FTC–2023–0007–15249.

compete when they attempted to leave an employer. Some commenters said their non-competes contained additional clauses making litigation more difficult, such as attorneys' fee-shifting provisions or forced arbitration. Other workers feared having to pay financial penalties or feared having their compensation clawed back if their employer claimed they violated the non-compete. Each of the above comment categories included numerous comments from workers in high-wage industries.

Commenters asserted that employers have several advantages in litigation, further increasing the risk of challenging a non-compete. A commenter said even an extremely overbroad non-compete may be enforceable because a court can modify it to reduce its scope or duration. An employment attorney said employers who use overbroad non-competes to stifle competition suffer few if any negative consequences for doing so. The employment attorney further said that most employers do well even in a legal regime that nominally disfavors non-competes, due to the chilling effect of the threat of litigation. One researcher cited in the NPRM stated that non-competes have a powerful chilling effect because State laws generally do not prohibit employers from requiring employees to sign overbroad non-competes. Accordingly, the researcher recommended that non-competes be banned rather than restricted in scope, thereby preventing the possibility of lawsuits (and the threat thereof).

No commenters submitted studies or empirical evidence to contradict or otherwise call into question the research cited in the NPRM finding employers frequently use non-competes even when they are unenforceable under State law. Many commenters said they perceived non-competes to be a tool used to intimidate workers, and others specifically said they had been intimidated when their employers took legal action against other workers who left. These comments spanned workers in both lower-wage and high-wage industries.

The comments reflected that fields with high compensation levels were not immune from coercion and exploitation, and that, to the contrary, specialization can increase employers' ability to coerce and exploit workers. For example, some commenters said highly trained and/or specialized workers face heightened challenges in finding a job that does not violate a non-compete without relocating or become entirely unemployable, given the smaller number of such specialized jobs available. One commenter said that many workers are compensated highly because they are in a small field or have a niche skillset, meaning non-competes significantly limit their ability to find another job in their field. Some commenters in professions requiring advanced education also submitted comments stating that significant student loan debt decreased their bargaining power or increased the financial risk of attempting to change jobs. An employment law firm stated that highly paid or highly skilled workers in roles that are not limited to a single industry or business, such as finance or human resources, are more likely to be able to find employment in another industry, while those with training and expertise in a particular industry or type of business are at a greater risk of unemployment. Some medical organizations and others pointed out that non-competes can be particularly exploitative and coercive for professions such as physicians that require State licenses, credentials, and insurance, making relocation even more difficult.

A far smaller number of commenters claimed non-competes are not exploitative or coercive and do not trap workers in jobs or force workers to bear significant harms or costs. Several commenters argued that, because non-competes are often not exploitative and coercive at the time of contracting, they are also not exploitative and coercive at the time workers seek to leave their jobs. According to these commenters, to the extent a non-compete is bargained for and fairly compensated, that same non-compete does not become exploitative and coercive at the time of departure. In response, the Commission notes that commenters overwhelmingly reported workers rarely bargain in connection with, or receive compensation for, non-competes,[433] and the mere existence of compensation does not automatically make that compensation fair.

Some business and business association commenters contended that workers with higher earnings can more easily forgo wages to wait out non-competes, and thus do not feel forced to stay in their jobs. These commenters also argued that non-competes for these workers are often tied to equity or severance, which the worker can choose to forego if they want to compete. These comments are contrary to the extensive comment record indicating that even workers with higher earnings cannot afford to forgo compensation and feel forced to stay in jobs they want to leave due to non-competes. To the extent any such individual workers bargained for or received compensation for a non-compete, the Commission still finds that such non-competes are unfair methods of competition for the independent reason that they are restrictive and exclusionary conduct that tends to negatively affect competitive conditions.

Overall, the comments provide strong support for the Commission's finding that non-competes are exploitative and coercive because they trap workers in jobs or force them to bear significant harms and costs.

For the foregoing reasons, the Commission finds that non-competes with workers other than senior executives are exploitative and coercive and thus facially unfair under section 5.

3. The Commission Finds That Non-Competes Tend To Negatively Affect Competitive Conditions

Based on the Commission's expertise and after careful review of the rulemaking record, including the empirical research and the public comments, the Commission finds that non-competes tend to negatively affect competitive conditions in labor markets for the reasons explained in this Part IV.B.3.a. (As explained in Part IV.B.3.b, the Commission further finds that non-competes tend to negatively affect competitive conditions in markets for products and services.)

As explained in Part II.F, the legal standard for an unfair method of competition under section 5 requires only a tendency to negatively affect competitive conditions. The inquiry does not turn on whether the conduct directly caused actual harm in a specific instance. Here, the tendency of non-competes to impair competition is clear from their nature and function. In any event, the evidence confirms that non-competes do in fact have a negative effect on competitive conditions.

The Commission turns now to the significant evidence of harm to competition in labor markets from non-competes, including evidence of suppressed labor mobility, suppressed earnings, and reduced job quality.

a. Non-Competes Tend to Negatively Affect Competitive Conditions in Labor Markets

The Commission finds that non-competes tend to negatively affect competitive conditions in labor markets by inhibiting efficient matching between workers and employers.

Labor markets function by matching workers and employers. In a competitive labor market, workers compete for jobs by offering their skills and time (*i.e.,* their labor services) to

[433] *See* Part IV.B.2.b.i.

employers, and employers in turn compete for those labor services by offering better pay, benefits, or other elements of job satisfaction.[434] A worker who is seeking a better job—more pay, better hours, better working conditions, more enjoyable work, or whatever the worker may be seeking—can enter the labor market by looking for work. Prospective employers can compete for the worker's services, and the worker's current employer may also compete by seeking to retain the worker—*e.g.,* by offering a raise, promotion, or other enticement.[435] Ultimately, the worker chooses the job that best meets their objectives, and the employer chooses the worker who best meets theirs. In general, the more jobs and the more workers that are available—*i.e.,* the more competing options the worker and employer each have—the stronger the match will be.

Thus, a key component of a competitive labor market is voluntary labor mobility. Choice—the ability of market participants to satisfy their preferences where possible—facilitates competition. In the labor market, voluntary labor mobility reflects both the choices or preferences of workers and that of rival competitors.

However, non-competes introduce a major friction that tends to impair the competitive functioning of labor markets. Non-competes inhibit the efficient matching between workers and employers via the competitive process because, even if a competing employer offers a better job and the worker wants to accept that better job, the non-compete will prevent the worker from accepting it if the new job is within the scope of the non-compete (or if the worker is unsure or afraid it may be). Meanwhile, the employer who would like to hire the worker is prevented from competing to attract that talent. The result is less competition among employers for the worker's services and less competition among workers for available jobs. Since the worker is prevented from taking many jobs that would otherwise be available, the worker may decide not to look for a job at all. Or the worker may enter the labor market but take a job in which they are less productive, such as when a non-compete forces a worker to leave their field of expertise and training.

In this way, non-competes frustrate competitive processes in labor markets. In competitive markets, the ''unrestrained interaction of competitive forces'' yields a variety of benefits such as lower prices for consumers, better wages and working conditions for workers, and higher quality products.[436] In contrast, when ''[i]ndividual competitors lose their freedom to compete'' in the labor market, the importance of worker preference in setting the level of wages and working conditions is reduced, which is ''not consistent with [the] fundamental goal of antitrust law.'' [437] The restraint imposed by non-competes on the interaction of competing employers and competing workers directly undercuts the functioning of the competitive process in determining wages and working conditions. Accordingly, non-competes facially harm the competitive process and tend to negatively affect competitive conditions in labor markets. Evidence that non-competes have in fact had actual detrimental impacts on outcomes of the competitive process—such as workers' earnings, new business formation, and innovation—demonstrate that non-competes do in fact harm competition.

The Commission notes that the actual effect of any one individual non-compete on the overall level of competition in a particular labor market may be marginal or impossible to discern statistically. However, as explained in Part I.B.2, non-competes are prevalent across the U.S. labor force. The empirical literature and other record evidence discussed in this section reflect that non-competes, in the aggregate, negatively affect competitive conditions in labor markets—resulting in harm not only to workers subject to non-competes and the employers seeking to hire them, but also workers and employers who lack non-competes.

The Commission finds that evidence of the effects of non-competes on workers' labor mobility and earnings is sufficient to support its finding that non-competes tend to negatively affect competitive conditions in labor markets.[438] In addition, the Commission believes that this finding is further bolstered by strong qualitative evidence that non-competes reduce job quality.[439]

The Commission's findings relating to labor mobility and earnings are principally based on the empirical evidence described in Parts IV.B.3.a.i and ii. However, the comments provide strong qualitative evidence that bolsters these findings. Furthermore, the Commission notes that the legal standard for an unfair method of competition under section 5 requires only a tendency to negatively affect competitive conditions; empirical evidence of actual harm is not necessary to establish that conduct is an unfair method of competition. In the case of non-competes, however, there is extensive empirical evidence, as well as extensive corroborating public comments, that non-competes negatively affect competitive conditions in labor markets.

i. Non-Competes Suppress Labor Mobility

Evidence of Suppressed Labor Mobility

The Commission finds that non-competes tend to negatively affect competitive conditions in labor markets by suppressing labor mobility, which inhibits efficient matching between workers and employers. The evidence indicates that non-competes reduce labor mobility. Several empirical studies find that non-competes limit the movement of workers between firms and reduce the pool of labor available to existing employers and potential entrants.[440]

In the NPRM, the Commission described the empirical research on non-competes and labor mobility.[441] The Commission stated that, across the board, studies of non-competes and labor mobility find decreased rates of mobility, measured by job separations, hiring rates, job-to-job mobility, implicit mobility defined by job tenure, and within-industry and between-industry mobility.[442] Based on that body of empirical evidence and its review of the record as a whole following the comment period, the Commission finds that non-competes reduce labor mobility.

Several empirical studies find that non-competes reduce labor mobility. Some of these studies analyze the effects of non-competes on labor mobility across the labor force.

A study by Johnson, Lavetti, and Lipsitz examined the impact on labor mobility of all legal changes in the enforceability of non-competes from 1991 to 2014 across the entire labor force.[443] This study finds that

[434] *See* Treasury Labor Market Competition Report at 3–4.

[435] *See id.*

[436] *See N. Pac. Ry. Co.* v. *United States,* 356 U.S. 1, 4 (1958).

[437] *See NCAA* v. *Bd. of Regents of Univ. of Okla.,* 468 U.S. 85, 106–07 (1984).

[438] *See* Part IV.B.3.a.i–ii.

[439] *See* Part IV.B.3.a.iii.

[440] As the Commission stated in the NPRM, it does not view reduced labor mobility as a harm in and of itself. *See* NPRM at 3490. Instead, the Commission finds that the empirical evidence showing non-competes reduce labor mobility is powerful evidence that non-competes do indeed restrict labor market competition by inhibiting the movement of workers between firms—and therefore efficient matching between workers and firms.

[443] Johnson, Lavetti, & Lipsitz, *supra* note 388. This study was updated in 2023. The updated

substantial decreases in non-compete enforceability cause a significant increase in job-to-job mobility in industries that use non-competes at a high rate.[444]

Evan Starr's study comparing workers in occupations that use non-competes at a high versus low rate finds that a State moving from mean enforceability to no enforceability would cause a decrease in employee tenure for workers in high-use occupations of 8.2%, compared with those in low-use occupations. Tenure in this study serves as a proxy for mobility, since tenure is the absence of prior mobility.[445] This use of a proxy means the outcome of interest is not precisely measured, and the study is less robust than those that examine changes in legal enforceability of non-competes. The study's findings are, however, consistent with the other studies finding that non-competes reduce labor mobility.

Starr, Prescott, and Bishara's study of non-compete use likewise finds that having a non-compete was associated with a 35% decrease in the likelihood that a worker would leave for a competitor.[446] While this finding is based on the use of non-competes (and is accordingly given less weight), the authors also survey workers, who report that the cause of their reduced mobility is their non-compete. The study finds that the mechanism underlying reduced mobility is not whether non-competes are legally enforceable or not, but rather, it is the worker's belief about the likelihood that their employer would seek to enforce a non-compete. Workers who did not believe that employers would enforce non-competes in court were more likely to report they would be willing to leave for a competitor.[447] This study thus not only supports the Commission's finding that the use of non-competes impacts labor mobility, but also supports the Commission's finding that non-competes can exert an *in terrorem* effect on labor mobility even where they are unenforceable.[448] This supports the need to ensure that workers are aware of the prohibition on non-competes.[449]

Other studies analyze how non-competes affect the labor mobility of specific populations of workers. A study by Jessica Jeffers finds that decreases in non-compete enforceability were associated with a substantial increase in departure rates of workers, especially for other employers in the same industry.[450] This study's sample is limited to knowledge workers (*i.e.,* workers whose primary asset is applying their mental skills to tasks), and the study uses a binary—rather than continuous—measure of non-compete enforceability. It does, however, examine several changes in the enforceability of non-competes to generate its results, making it fairly robust.

In addition, two recent studies examined subgroups of the population that were affected by State law changes and find major effects on those populations' labor force mobility. Balasubramanian et al., in 2022, focused on Hawaii's ban of non-competes for high-tech workers and find that the ban increased mobility by 12.5%.[451] Lipsitz and Starr, in 2022, focused on Oregon's ban of non-competes for hourly workers and find that mobility increased by 17.3%.[452]

Comments Pertaining to Labor Mobility Evidence and Commission Responses

The Commission's finding that non-competes suppress labor mobility is principally based on the empirical evidence described in this Part IV.B.3.a.i. However, the comments provide strong qualitative evidence that bolsters this finding.

Many commenters agreed with the Commission's preliminary finding that non-competes suppress labor mobility and stated that this reduction in labor mobility leads to less labor market competition and poorer wages and working conditions.

In response to the NPRM's discussion of this literature, some commenters questioned the adequacy of the studies. For example, one commenter stated that the available research is either limited to specific sectors of the economy, limited geographically, or limited by small sample sizes. Some commenters claimed the empirical research lacked appropriate counterfactuals.

The Commission acknowledges that some of the studies focus on specific industries or specific geographies, and that the studies vary in the methodologies the authors rely on. These arguments do not undermine the utility of the studies, particularly given that they all find that non-competes reduce labor mobility. Moreover, the Commission finds that each of the studies discussed in this Part IV.B.3.a.i conduct their analyses against appropriate counterfactuals. And while there may be some variation in the magnitude of the effect on mobility among industries, several of the empirical studies find economy-wide effects. That evidence shows that non-competes restrict the movement of workers to a significant degree.

Additionally, the record is replete with examples of commenters who recounted personal stories that accord with the empirical literature. The Commission received comments from several thousand individual workers stating that their mobility is or has been restricted by a non-compete. While some commenters who opposed the proposed rule disputed that non-competes prevent workers from finding other jobs in their industry, the Commission finds the weight of the evidence clearly demonstrates a significant effect on labor mobility.

The Commission further notes that many commenters' submissions substantiated its finding that non-competes can have an *in terrorem* effect on labor mobility even where they would not ultimately be enforceable in court.[453] As many commenters explained, the high costs and complexities of non-compete litigation can have a chilling effect on workers and thus reduce worker mobility regardless of whether a court would enforce the non-compete. For this reason, the very existence of a non-compete is likely to deter workers from switching jobs or starting their own business, even if it would ultimately not be enforced. This supports the Commission's view that not only should non-competes' enforcement be prohibited, it is also important to provide a readily understandable,

version of the study reports results slightly differently than the 2022 version cited in the NPRM, but the analysis and results themselves do not meaningfully change. Accordingly, the update to Johnson, Lavetti, and Lipsitz does not materially affect the Commission's analysis of the study.

uniform Federal approach, and notice to workers of unenforceability.[454]

Some commenters who generally opposed the rule questioned the virtue of labor mobility, arguing that when colleagues leave, remaining workers can experience increased workloads or harm to their employer. However, this comment ignores the benefits that will also accrue from those same firms having more ready access to incoming potential colleagues as well. The Commission also notes that unfair conduct cannot be justified on the basis that it provides the firm undertaking the conduct with pecuniary benefits.[455]

Some commenters argued labor mobility has generally been increasing in the U.S. labor market. Setting aside whether this is true, it is not probative of whether the practice of using non-competes reduces labor mobility or negatively affects labor market competition.

For these reasons, the empirical evidence that non-competes suppress labor mobility supports the Commission's finding that non-competes tend to negatively affect competitive conditions in labor markets.

ii. Non-Competes Suppress Workers' Earnings

Evidence of Suppressed Earnings

The Commission finds that non-competes suppress workers' earnings as a result, in part, of decreased labor mobility, supporting the Commission's finding that non-competes tend to negatively affect competitive conditions in labor markets. As the NPRM explained, many studies find increased enforceability of non-competes reduces earnings for workers across the labor market generally; for specific types of workers; and even for workers not subject to non-competes.[456] Several major empirical studies of how changes in non-compete enforceability affect workers' earnings show that increased enforceability of non-competes suppresses workers' earnings.

A study conducted by Johnson, Lavetti, and Lipsitz finds that non-competes limit workers' ability to leverage favorable labor markets to receive greater pay.[457] The authors find that when non-competes are more enforceable, workers' earnings are less responsive to low unemployment rates, which workers typically leverage to negotiate pay raises. The authors estimate that a nationwide ban on non-competes would increase average earnings by approximately 3–14%.[458] Of the studies of how non-competes affect earnings, this study has the broadest coverage. It spans the years 1991 to 2014, examines workers across the labor force, and uses all known common law and statutory changes in non-compete enforceability to arrive at its estimates. This study is very robust, as it satisfies all of the principles outlined in Part IV.A.2.

The same study also finds that non-competes increase racial and gender wage gaps by disproportionately suppressing the wages of women and non-White workers. While the study estimates that earnings of White men would increase substantially if a nationwide ban on non-competes is enacted, the comparable earnings increase for workers in other demographic groups would be up to twice as large, depending on the characteristics of the group.[459] The authors estimate that making non-competes unenforceable would close racial and gender wage gaps by meaningful amounts, although the mechanism behind this effect is unclear.[460]

Furthermore, a study conducted by Evan Starr estimates that earnings fall by about 4% where a State shifts its policy from non-enforcement of non-competes to a higher level of enforceability.[461] This study covers a sample which is broadly representative of the entire labor force from 1996 to 2008. Unlike many of the other studies described in this Part IV.B.3, this study does not use a change in enforceability of non-competes to analyze the impact of enforceability. Rather, it examines the differential impact of enforceability on workers in occupations that use non-competes at a high rate versus workers in occupations that use non-competes at a low rate. As described in Part IV.A.2, studies comparing differential usage of non-competes are generally less informative than studies examining changes in enforceability, although in this particular study the comparison between workers in high- and low-use occupations may effectively control for State-level differences between labor markets, lending more credibility to the estimates. More importantly, the Commission notes that the study corroborates the estimates from other studies that rely on more credible research designs, and therefore is appropriately viewed as additional evidence supporting the range of estimated effects on wages across the labor market.

Two additional studies analyze effects of non-competes on earnings for specific populations of workers. A study conducted by Lipsitz and Starr focuses on a natural experiment in Oregon, where non-competes were banned for hourly workers with relatively low earnings. The study estimates that when Oregon stopped enforcing non-competes for hourly workers, their wages increased by 2–3% relative to workers in States that did not experience legal changes. The study also finds a greater effect (4.6%) on workers in occupations that used non-competes at a relatively high rate.[462] The authors additionally find that women's earnings increased at a higher rate, with earnings increases after the non-compete ban of 3.5% for women, versus 1.5% for men.

A study by Balasubramanian et al. focuses on a natural experiment in Hawaii, which banned non-competes for high-tech workers in 2015. The study finds earnings of new hires increased by about 4% after the ban, relative to earnings in other States without bans.[463]

In addition to this research, which shows that increased enforceability of

[454] *See* Part IX.C. *See also supra* note 386 (explaining that studies assessing changes in enforceability of non-competes likely underestimate the effects of non-competes, given that workers may refrain from seeking or accepting work or starting a business even if the non-compete is likely unenforceable, and explaining the importance of notice to workers).

[455] *Atl. Refin. Co.* v. *FTC,* 381 U.S. 357, 371 (1965) (considering that defendant's distribution contracts at issue ''may well provide Atlantic with an economical method of assuring efficient product distribution among its dealers'' and holding that the ''Commission was clearly justified in refusing the participants an opportunity to offset these evils by a showing of economic benefit to themselves''); *FTC* v. *Texaco,* 393 U.S. 223, 230 (1968) (following the same reasoning as *Atlantic Refining* and finding that the ''anticompetitive tendencies of such a system [were] clear''); *L.G. Balfour Co.* v. *FTC,* 442 F.2d 1, 15 (7th Cir. 1971) (''While it is relevant to consider the advantages of a trade practice on individual companies in the market, this cannot excuse an otherwise illegal business practice.''). Justifications that are not cognizable under other antitrust laws are also not cognizable under section 5.

[456] NPRM at 3486–88.

[457] Johnson, Lavetti & Lipsitz, *supra* note 388 at 37.

[458] *Id.* at 3. The NPRM reported an increase in average earnings of 3.3–13.9%. Those numbers were taken from an earlier version of the Johnson, Lavetti, and Lipsitz paper. The updated paper finds an increase in average earnings of 3.2–14.2%. The change does not materially affect the paper's findings or the Commission's analysis of the paper.

[459] *Id.* at 42. The 2023 version of the paper by Johnson, Lavetti, and Lipsitz reports earnings increases of 1.3% for White men, and increases between 1.5–3.2% for workers in other demographic groups, corresponding to a change in non-compete enforceability equal to the difference between the 75th and 25th percentiles. These differences are statistically significant for Black men and non-White, non-Black women.

[460] *Id.* The 2023 version of the paper reports that the earnings gaps would close by 1.5–3.8% given a change in non-compete enforceability equal to the difference between the 75th and 25th percentiles.

[461] Starr, *supra* note 445 at 783.

[463] Balsubramanian et al., *supra* note 451 at S349.

non-competes reduces workers' earnings across the labor market generally and for specific types of workers, two empirical studies find that increased enforceability of non-competes suppresses earnings even for workers who are *not* subject to non-competes.

The Johnson, Lavetti, and Lipsitz study, in a separate analysis, isolates the impact of a State's enforceability policy on workers not directly affected by that policy to demonstrate that non-competes affect not just the workers subject to non-competes, but the broader labor market as well. The study finds that increases in non-compete enforceability in one State have negative impacts on workers' earnings in bordering States, and that the effects are nearly as large as the effects in the State in which enforceability changed (but taper off as the distance to the bordering State increases).[464] The study estimates that a legal change in one State has an effect on the earnings of workers just across that State's border that is 76% as great as for workers in the State in which the law was changed.[465] In other words, when one State changes its law to be more permissive of non-competes and itself experiences a decrease in workers' earnings of 4%, workers just across the border (*i.e.,* workers who share a labor market)[466] would experience decreased earnings of 3%.[467] The authors conclude that, since the workers across the border are not directly affected by the law change (*i.e.,* contracts that they have signed do not become more or less enforceable), this effect must be due to changes in the local labor market.[468] The researchers based their analysis on where workers worked, rather than their residence, so the results are not tainted by workers who worked in the State where the law changed but lived across the border.

The second of these studies, a study conducted by Starr, Frake, and Agarwal, analyzed workers without non-competes who worked in States and industries in which non-competes were used at a high rate.[469] The authors find that, when the rate of use of non-competes in an industry in a State is higher, wages are lower for workers who do not have non-competes but who work in the same State and industry. This study also finds that this effect is stronger where non-competes are more enforceable.[470]

The authors show that the reduction in earnings (and in labor mobility) is due to a reduction in the rate of job offers. Individuals in State/industry combinations that use non-competes at a high rate do not receive job offers as frequently as individuals in State/industry combinations in which non-competes are not frequently used.[471] The authors also demonstrate that decreased mobility and earnings are not due to increased job satisfaction (*i.e.,* if workers are more satisfied with their jobs, they may be less likely to change jobs, and more likely to accept lower pay).[472]

Given some methodological limitations of this study, the Commission views it as supporting the other evidence that non-competes have negative spillover effects on earnings for workers without non-competes and reduce labor mobility. Namely, the research design relies on cross-sectional differences in enforceability of non-competes. Although this study also examines the use of non-competes, it does not compare individuals who are bound by non-competes to individuals who are not. Instead, it examines the rate of use across industries and States, and therefore avoids the statistical biases inherent in studies which compare individuals with and without non-competes. The authors also employ tests to increase confidence in the causal interpretation of these results, but they cannot conclusively rule out explanations outside of the scope of their data.

Several additional studies examine the association between non-compete use—rather than enforceability—and earnings. For the reasons described in Part IV.A.2, the Commission finds that these studies are less credible in measuring how non-competes affect earnings, and accordingly the Commission gives these studies minimal weight.

In one such study, Starr, Prescott, and Bishara examine survey results and find that non-compete use is associated with 6.6% to 11% higher earnings.[473] In another study, using Payscale.com data, Balasubramanian, Starr, and Yamaguchi find that individuals with non-competes (regardless of what other post-contractual restrictions they had) had 2.1–8.2% greater earnings than individuals with no post-contractual restrictions. However, this positive association may be due to non-competes often being bundled with NDAs. The authors find that, compared with individuals subject only to NDAs, non-competes are associated with a 3.0–7.3% *decrease* in earnings, though the authors do not disentangle this effect from the effects of non-solicitation and non-recruitment provisions.[474] Another study, by Lavetti, Simon, and White, finds that use of non-competes among physicians is correlated with greater earnings (by 14%) and greater earnings growth.[475] Finally, Rothstein and Starr find that greater use of non-competes is correlated with higher earnings.[476]

Because these studies merely reflect correlation and are unlikely to reflect causation, the Commission gives them little weight. The NPRM noted that the Lavetti, Simon, and White physician study partially mitigates this methodological flaw by comparing earnings effects in a high- versus a low-enforceability State (Illinois versus California). However, at best, this comparison is a cross-sectional comparison with a minimally small number of States being compared. The study does not consider changes in non-compete enforceability over time. Therefore, it is impossible to disentangle underlying differences in those two States from the effects of non-compete enforceability. The Commission accordingly gives this study, like the other studies reliant on comparisons of populations using non-competes and not using non-competes, little weight, though the shortcoming is slightly mitigated in the case of this study. While this study is specific to physicians, the Commission nonetheless finds that studies employing stronger methodologies (especially studies of

[464] The NPRM cited an earlier version of Johnson, Lavetti, and Lipsitz's study that estimated that a legal change in one State would have an effect on the earnings of workers just across that State's border that was 87% as great as for workers in the State in which the law was changed. NPRM at 3488. The data cited in this final rule reflect an updated version of this study.

[465] Johnson, Lavetti, & Lipsitz, *supra* note 388 at 51. Seventy-six percent is calculated as the coefficient on the donor State NCA score (−.137) divided by the coefficient on own State NCA score (−.181).

[466] See U.S. Econ. Rsch. Serv., Commuting Zones and Labor Market Areas, *https://www.ers.usda.gov/data-products/commuting-zones-and-labor-market-areas/.*

[467] The Commission notes that the estimates in the updated version of Johnson, Lavetti, and Lipsitz's study are slightly different, but qualitatively similar to the earlier estimates noted in the NPRM. The results remain statistically significant and do not materially affect the Commission's analysis.

workers positioned similarly in the income distribution [477] and studies which broadly represent the U.S. workforce [478]) provide compelling evidence that non-competes significantly suppress wages.

Comments Pertaining to Suppressed Earnings and Commission Responses

The Commission's finding that non-competes suppress earnings is principally based on the empirical evidence described in this Part IV.B.3.a.ii. However, the comments provide strong qualitative evidence that bolsters this finding.

The Commission received thousands of comments from workers describing how non-competes suppressed their earnings. These commenters spanned a wide variety of industries, hailed from across the U.S., and recounted a common experience: a non-compete prevented them from earning more. Illustrative examples of these comments include the following:

- I worked at a TV station. A corporation owned us and forced me to sign a yearly non-compete in order to remain in my position. After a few years, I was offered a management job with a much bigger title and much more money. . . . However, the corporation that owned us wouldn't even talk about letting me out of the non-compete. They wouldn't even discuss a settlement. They totally refused to allow me to pursue a much higher salary and a much higher position, no matter what was offered. I was forced to choose between staying in my current job, and not being able to improve my job or money, or being unemployed for 6 months.[479]
- I have been subject to a non-compete for 11 years in aggregate as a physician. Because of my non-compete, I am unable to take a position with another organization without having to drive much farther outside of my non-compete stipulated geographic restrictions (which would add to the time that I am away from my family, and costs more in fuel and vehicle maintenance). Because of my non-compete, I haven't had a raise in 6 years, because I can't negotiate with my employer because I have no bargaining position to negotiate from if I don't have options of alternate employment within the restrictions of my non-compete.[480]
- I recently received two job offers with better compensation, but I had my non-compete reviewed by an attorney and learned that it would open myself up to a significant lawsuit and potential fines. I most likely have to sit out a year and either work completely outside my field where I have advanced degrees or not work at all. Since I am the primary breadwinner, this is not financially possible for my family, so I have to stick with my current employer who has not given me a pay increase in 2 years.[481]
- I am a Certified Nurse Practitioner and signed [a non-compete]. I live in Minnesota and would be required to travel one hour one way in order to fulfill [the] agreement. . . . My employer increased my responsibilities (on-call hours added) without additional pay using vague language in my binding agreement. I would have to hire a lawyer and spend thousands of dollars to file a lawsuit to get the agreement releasing me. . . . My employer took advantage of my binding agreement and did not increase my [Relative Value Unit] rate in 5 years for my or other Nurse Practitioners in our organization.[482]
- I was just starting out in my career when I finally got a part time job in my field of geology. Unfortunately, it didn't last long and I was let go. But because of a non compete agreement I had to sign I couldn't take another job in my field even though I had a good lead on one. Instead I had to take a job as a waitress making less than minimum wage.[483]
- I work for an IT company, low-level employee just above minimum wage, and I had to sign one of these to get the job even though I don't know any knowledge above what someone could learn in 10 or 15 hours on YouTube, yet I still had to sign this which makes it so I can't compete . . . if they offered me better pay.[484]
- I began working for my employer 10 years ago as a very young and inexperienced single mother. I desperately needed a job that could pay more than minimum wage, and I eagerly accepted my position and non-compete status. I have now been working at almost the same rate of pay (as raises are not readily given to us regardless of recessions or cost of living increases)—for a DECADE. My children are approaching college age, and I will absolutely need a higher income to help fund their educations.[485]
- I am in the laboratory medicine field and was laid off from a job as an implementation rep for an instrument vendor. Other companies were the competition, and I was held to a non-compete. This caused me to go from a six figure salary with great benefits back to the hospital making barely 60k as a single mother with twins and no emergency fund saved! I later went into the UV disinfection field and developed a tremendous amount of knowledge regarding minimizing the spread of infections in hospitals (pre-covid). After 5 years, I was laid off and prevented from continuing in this niche field that I had spent so much time developing a skillset and statistics within. I was only given a 2 week severance (along with a reminder of legal action if I worked for the competition). Companies use this as a bully tactic![486]

In addition to receiving thousands of comments recounting personal stories of non-competes stymieing the commenters' ability to get a better-paying job or a raise, many commenters also described how, over the long term, non-competes can lower wages and diminish career prospects for workers forced to sit out of the market or start over in a new field. The Commission also received numerous comments stating that non-competes exacerbate wage gaps based on gender and race, including by decreasing entrepreneurship and wages to a greater extent for women and people of color and by giving firms more power to engage in wage discrimination.[487]

With respect to the empirical literature, numerous commenters agreed that there is a wealth of empirical evidence to support the Commission's preliminary finding that, by inhibiting efficient matching between workers and employers, the use of non-competes is harming workers by suppressing their earnings. In addition to the literature discussed in the NPRM and in this final rule, some commenters pointed to a 2016 report from the Treasury Department that examines the correlation between non-compete enforceability and both earnings and earnings growth at the State level. The Treasury report finds that a one-standard-deviation increase in State-level enforceability of non-competes is correlated with 1.38% to 1.86% lower earnings, which can be found in both lower earnings upon starting a job and lower earnings growth.[488] The Commission agrees with commenters that this provides additional support for the final rule. However, the Commission gives less weight to cross-sectional studies of enforceability, like the 2016 Treasury report, that examine the correlation between non-compete enforceability and earnings growth.[489] The Commission relies more heavily on the studies that find that non-competes suppress earnings based on examining natural experiments.

Some commenters opposing the rule argued that studies of non-compete use, including the studies described in this Part IV.B.3.a.ii, show a positive association between non-compete use and earnings, especially when early notice of non-competes is provided,

while others cautioned against interpreting these relationships as causal. The Commission agrees with commenters who caution against a causal interpretation of these studies, which are unable to determine whether non-compete use causes differences in earnings, whether earnings cause differences in non-compete use, or whether a third factor simultaneously determines both, as discussed in Part IV.A.2.

Some commenters opposing the rule stated that the most comprehensive study of the earnings effects of non-competes (the Johnson, Lavetti, and Lipsitz study described in this Part IV.B.3.a.ii) examines only relatively incremental changes in laws governing the enforceability of non-competes (*i.e.,* changes other than full bans), and claimed that this study thus does not shed light on the effects of a full prohibition. In response, the Commission notes that the analysis in Johnson, Lavetti, and Lipsitz finds that the effects of changes in non-compete enforceability are broadly linear. This means the effect of a change in enforceability twice the size of another change results in a change in workers' earnings that is approximately twice as large. As a result, the Commission finds that it would be appropriate to extrapolate from the effects of incremental changes in non-compete laws to the effects of prohibitions, at least in the context of worker earnings.[490] In other words, if incremental changes in enforceability lead to a certain level of earnings effects, it is reasonable to presume—based on the linearity of the relationship between changes in enforceability and workers' earnings—larger changes will lead to larger effects.

That said, in the regulatory impact analysis, the Commission does not extrapolate from the incremental changes observed in these studies with respect to earnings effects.[491] Instead, the Commission follows a conservative approach and assumes that the prohibition in the final rule, even though it is comprehensive, will have the same effects on earnings as the incremental legal changes observed in these studies. Therefore, even if the effects of changes in non-compete enforceability are not linear, the Commission's analysis of the economic impacts of the final rule is not undermined because, if anything, it underestimates the benefits of the rule.

A commenter argued that the Johnson, Lavetti, and Lipsitz dataset is outdated because it examines enforceability between 1991 and 2014. In response, the Commission finds that while the enforceability measures contained in that dataset do not perfectly reflect current enforceability due to changes in State law in the intervening several years, the measures still reflect the impacts of non-compete enforceability on economic outcomes, and likely still have strong predictive power.

Some commenters opposing the rule asserted that the overall competitiveness of U.S. labor markets undermines the argument that workers suffer from non-competes. In response, the Commission notes that a range of factors have weakened competition in labor markets.[492] In any event, the level of competitiveness of a labor market does not justify use of a practice that tends to negatively affect competitive conditions.

Some commenters opposing the rule pointed to academic writings, including a summary of the research by an FTC economist writing in his personal capacity in 2019, stating that there was limited evidence on the effects of such clauses. The Commission finds that these writings are generally outdated and disagrees with them. As the various explanations of the empirical research in Parts IV.B and IV.C illustrate, much of the strongest evidence on the effects of non-competes has been published in recent years. The Commission notes further that Evan Starr, one expert who voiced concerns over the state of the evidence in the past, submitted a comment that was broadly supportive of the interpretation of the evidence in the NPRM and of the proposed rule.[493]

Other comments opposing the rule stated that the heterogeneity of the impact of a non-compete ban on earnings undermined the Commission's preliminary finding regarding the effects of non-competes on earnings. These commenters asked whether the population-wide average effects noted in certain studies apply across the workforce or only to certain individuals (*e.g.,* at certain points in the income distribution), certain professions, or in certain geographies (*e.g.,* where local labor markets tend to be more concentrated). Another commenter argued that if a ban on non-competes drives up earnings for highly skilled workers, wages might decrease for other categories of workers.[494]

In response to these comments, the Commission finds that, while estimates of the magnitude of the effect of non-competes on earnings vary to some extent across groups of workers, the effects are directionally and qualitatively similar across groups. For example, while Balasubramanian et al. do not report a table with average earnings for workers in their study, workers in the high tech jobs studied tend to be relatively highly paid, and the study finds non-competes suppress these workers' earnings.[495] On the lower end of the earnings spectrum, Lipsitz and Starr report average earnings of $16.41 per hour for workers in their study, which corresponds to annual earnings of approximately $34,133 per year (assuming 2,080 hours worked per year), and their study likewise finds that non-competes suppress the earnings of these workers.[496]

Additionally, Johnson, Lavetti, and Lipsitz's study of workers across the economy shows that, while college-educated workers and workers in occupations and industries in which non-competes are used at a high rate experience relatively larger adverse effects on their earnings from non-compete enforceability, the estimated effect of increased enforceability on other workers is still negative (albeit statistically insignificant in this study).[497] In short, while these studies do not estimate the magnitude of negative effects for every subset of the population, the finding of negative effects on earnings is consistent across dissimilar subsets of the population.

A commenter that opposed the NPRM asserted that a categorical ban could decrease wages for highly paid workers, arguing that such workers could negotiate higher wages in exchange for the non-compete that they would lose with a ban. This speculative assertion is belied by the comment record, which indicates that the highly paid, highly skilled workers who are not senior

[494] These commenters were generally referring to higher-wage workers, but not senior executives. Comments that focused on senior executives are addressed in Part IV.C.

[495] Workers in the occupation Computer and Information Research Scientists (SOC code 15–1221) in the private sector had median earnings of $156,620 in 2022, while Software Developers (SOC code 15–1252) in the private sector had median earnings of $127,870 in 2022. BLS, Occupational Employment and Wage Statistics, *https://www.bls.gov/oes/tables.htm.* These private-sector data are from the May 2022 National industry-specific and by ownership XLS table (*see* table labeled ''national_owner_M2022_dl'').

[496] Lipsitz & Starr, *supra* note 72 at 148.

[497] Johnson, Lavetti, & Lipsitz, *supra* note 388 at 57.

executives are also unlikely to negotiate non-competes.[498] It is also belied by empirical evidence that non-competes suppress earnings for highly paid workers.[499]

Similarly, commenters opposing the rule questioned whether earnings effects merely result from firms hiring different types of workers after changes in non-compete enforceability (for example, workers with different levels of experience or education). In response to these comments, the Commission first notes that the studies find adverse impacts across the labor force. Therefore, even if a different mix of types of workers were hired due to non-compete enforceability, the evidence shows workers' wages are suppressed across the labor force when non-competes are more enforceable. Additionally, the Commission notes that the study by Lipsitz and Starr compares the earnings growth of individual workers before and after the legal change in Oregon, showing that earnings growth increased after the non-compete ban. This provides some evidence that the effects observed in the literature are not simply due to substitution, since individual workers' earnings trajectories would not be changed if all the effects were simply due to firms substituting one type of worker for another.[500]

Some commenters opposing the rule asserted that enforceability indices are likely measured with substantial error. These commenters argue that the indices are based on qualitative analyses of State laws and not data on how frequently non-competes are actually enforced or the results of these enforcement cases. The Commission finds the enforceability indices are sufficiently reliable, because they are generated through careful analysis of State law that takes into account variation in legal enforceability along multiple dimensions.[501] Moreover, a 2024 study using enforcement outcome data finds that a non-compete ban in Washington increased earnings, consistent with the studies using enforceability indices.[502]

Some commenters opposing the rule asserted that Hawaii's prohibition of non-competes in the technology industry may not have covered the workers claimed (in particular, omitting workers in the broadcast industry).[503] These commenters also asserted that Hawaii simultaneously banned non-solicitation clauses.

The Commission finds the study of Hawaii's non-compete ban to be informative, despite these limitations. First, any workers omitted from coverage by the statute, but considered as affected in the study, would lead to a phenomenon known as ''attenuation bias,'' which causes estimated effects to underestimate the true impact.[504] Second, the non-solicitation agreements banned by the Hawaii law were non-solicitation of coworker agreements (otherwise known as non-recruitment agreements)—agreements under which workers are barred from recruiting former coworkers, as opposed to non-solicitation of client agreements, under which workers are barred from soliciting former clients. While non-solicitation of coworker agreements may have a marginal impact on workers' earnings (*e.g.,* in situations in which workers only find out about job opportunities via past coworkers), the Commission does not find it likely that they have a major effect on workers' earnings. They may prevent some workers from hearing about some job opportunities, but unlike non-competes, they do not prevent workers from taking those opportunities. And unlike non-solicitation of client agreements, they do not frustrate workers' ability to build up a client base after moving to a new employer. The Commission therefore finds it likely that much of the impact identified in the study of the Hawaii law is due to non-competes. The Commission also notes that the Hawaii study is directionally consistent with the results from other more robust studies that use different methodologies.

Some commenters opposing the rule argued that the impact of Oregon banning non-competes for low-wage workers may have been limited because the law did not affect existing non-competes; because non-competes were already disfavored in Oregon before the law change; and because the law included multiple carve-outs. Commenters also argued the negative effects on earnings found in Oregon may have been confounded by the Great Recession.

The Commission finds that those concerns are not a compelling reason to discard the study. The study carefully examines multiple comparisons of workers within Oregon and across States. The results therefore cannot be explained by a differential response of Oregon to the Great Recession, a differential response of hourly workers to the Great Recession, or even a differential response of hourly workers in Oregon to the Great Recession. The Commission also does not believe that the study is undermined because the law did not affect existing non-competes and included multiple carve-outs, or because non-competes were disfavored in Oregon before the law changed. These factors likely mitigated the magnitude of the law's negative effect on earnings, rather than exaggerating it.

Some commenters opposing the rule argued that Johnson, Lavetti, and Lipsitz[505] claim that ''[t]he overall effect of [non-compete] enforceability on earnings is ambiguous,'' and that this undermines the Commission's preliminary findings. However, these commenters take this quote out of context. The authors were referring to a theoretical model, not to the empirical work in their paper. When economists do empirical research, they often begin by constructing a theoretical model and describing what the theory would predict; they then describe their empirical findings, which may show a different result. The authors described that it is unclear, theoretically, whether non-compete enforceability would increase or decrease earnings. However, the empirical findings of the study were clear: as the authors stated, ''We find that increases in [non-compete] enforceability decrease workers' earnings.''[506] The fact that the authors described the theoretical results of a hypothesized model as ambiguous does not undermine the fact that their study had clear empirical results.

Some healthcare businesses and trade organizations opposing the rule argued that, without non-competes, physician shortages would increase physicians' wages beyond what the commenters view as fair. The commenters provided no empirical evidence to support these assertions, and the Commission is unaware of any such evidence. Contrary to commenters' claim that the rule would increase physicians' earnings beyond a ''fair'' level, the weight of the evidence indicates that the final rule

[506] *Id.* at 2.

will lead to fairer wages by prohibiting a practice that suppresses workers' earnings by preventing competition; that is, the final rule will simply help ensure that wages are determined via fair competition. The Commission also notes that it received a large number of comments from physicians and other healthcare workers stating that non-competes exacerbate physician shortages.[507]

One commenter opposing the rule criticized the analysis in the Johnson, Lavetti, and Lipsitz study, suggesting that data on where individuals live are not necessarily indicative of where individuals work, and that identified spillover effects may simply be due to cross-border commuters. The Commission disagrees, because, as noted, the study considers whether the workers are subject to enforceable non-competes based on their work location.

A commenter also argued that if the absence of non-competes helped workers, one would expect California, North Dakota, and Oklahoma to have the highest median incomes among all the States. The Commission believes this expectation is inapt. Given the evidence that non-competes suppress workers' earnings, earnings in California, North Dakota, and Oklahoma are likely higher than they would be if non-competes were enforceable, but there is no reason to expect they would necessarily be higher than all other States.

One commenter opposing the rule asserted that the Commission's citation of one study in the NPRM was insufficient to show that non-competes are directly tied to discriminatory behavior by employers, or that non-competes worsen racial or gender wage gaps. The Commission does not rest its finding in this final rule that non-competes tend to negatively affect competitive conditions on findings of increased discriminatory behavior or exacerbation of gender and wage gaps. The Commission merely notes that there are two empirical studies—described under ''Evidence of suppressed earnings''—that find that non-competes do, in fact, exacerbate earnings gaps.

One commenter opposing the rule stated that closing racial and gender wage gaps may harm racial minorities and women if their wages were to fall in absolute terms. Another commenter argued that the proposed rule would reduce capital investment and output, which would decrease White male workers' wages. In response, the Commission notes that the study by Johnson, Lavetti, and Lipsitz shows that the impact of a decrease in non-compete enforceability on earnings is positive for workers in each of these groups.

The empirical evidence makes clear that, by restricting a worker's ability to leave their current job to work for a competitor or to start a competing business, non-competes reduce workers' earnings, supporting the Commission's finding that non-competes tend to negatively affect competitive conditions in labor markets.

iii. Non-Competes Reduce Job Quality

In the NPRM, the Commission recognized that non-competes may also negatively affect working conditions, *i.e.,* job quality,[508] although this had not been studied in the empirical literature (likely because it is harder to quantify). Competition in labor markets yields not only higher earnings for workers, but also better working conditions.[509] In a well-functioning labor market, workers who are subject to poor working conditions can offer their labor services to an employer with better working conditions. Such workers can also start businesses, giving them more control over working conditions. Non-competes frustrate this competitive process by restricting a worker's ability to switch jobs or start a business. Furthermore, in a well-functioning labor market, employers compete to retain their workers by improving working conditions. Where workers are locked into a job—because their alternative employment options are restricted—those competitive forces are diminished and working conditions can suffer. The Commission accordingly sought comment on this topic.

In response, thousands of workers with non-competes described how, by frustrating these competitive processes, non-competes prevent them from escaping poor working conditions or demanding better working conditions. Based on the large number of comments the Commission received on this issue and the wide variety of negative and severe impacts commenters described, the Commission finds that, in addition to suppressing earnings, non-competes negatively affect working conditions for a significant number of workers.

The Commission finds that the effects of non-competes on labor mobility and workers' earnings are sufficient, standing alone, to support its finding that non-competes with workers other than senior executives tend to negatively affect competitive conditions in labor markets. However, the Commission believes its finding that non-competes are an unfair method of competition is further bolstered by this strong qualitative evidence related to non-competes degrading working conditions.

Numerous workers and worker advocacy organizations described how non-competes compel workers to endure jobs with poor working conditions. Illustrative examples of these comments include the following:

- In March 2018, I was fired from a job in local news for refusing to go into an unsafe situation. I'd recently received a letter from a man threatening to kidnap me. When my boss decided he would still send me out alone in the field, I fought him on it, lost, and was terminated. Three weeks later, I found out I was pregnant. Unable to work in my field because of a noncompete enforced even AFTER I was terminated, I had no choice but to apply for WIC and government assistance, and work at a retail job making half my previous salary. I wanted to work. I wanted money to support my child. I wanted money to move closer to home, to escape a domestic violence situation. My noncompete kept me in a horrible spot, and nearly cost me my life.[510]
- I started my first job as a Nurse Practitioner in 2019. All positions I interviewed for required a non-compete. . . . In my case, I work for an employer that is hostile, discriminated against me during pregnancy and maternity leave and has raised his voice at me in meetings. He told me I was lucky to even have a job after becoming pregnant. I learned after starting at the practice that he has shown this pattern before with previous employees. I say this because all of these above-mentioned reasons are why I have the right to want to quit my job and move on. I desperately want to leave and start another job but I can't because of the non compete. I feel like a prisoner to my job. I feel depressed in my work conditions and I feel like I have no way out.[511]
- I'm a barber and violated a non-compete about 6 months ago. . . . I worked for my previous employer for two years in a toxic environment. I told my employer how work was affecting my home life on more than one occasion and she did nothing. . . . How was I to know that I would be working in a toxic environment when I applied? So ultimately, I decided in order to be happy and make a living wage, I'd have no choice but to violate my non-compete. She came after me in no time flat. Now I'm paying legal fees and at risk of going to court and losing my job for 6 more months. . . . [I]f I'm working in poor working conditions, I should be able to work where I please. For two years, my job and employer affected my mental health. I chose to take anti-depressants after things got bad at work, upped my dosage twice as work
