Fact Sheets Jun 26, 2024

Calendar Year (CY) 2025 Home Health Prospective Payment System Proposed Rule Fact Sheet (CMS-1803-P)

Billing & payments Policy Home health agencies

On June 26, 2024, the Centers for Medicare & Medicaid Services (CMS) issued the Calendar Year (CY) 2025 Home Health Prospective Payment System (HH PPS) proposed rule, which would update Medicare payment policies and rates for Home Health Agencies (HHAs). These changes can support timely admission to home health services, which has demonstrated improvements for patient outcomes and reducing risk of hospital readmissions.

As required by the Bipartisan Budget Act of 2018, which amended section 1895(b) of the Social Security Act, this rule proposes a permanent prospective adjustment to the CY 2025 home health payment rate of -4.067%, to account for the impact of implementing the Patient-Driven Groupings Model (PDGM). This adjustment accounts for differences between assumed behavior changes and actual behavior changes on estimated aggregate expenditures due to the CY 2020 implementation of the PDGM and the change to a 30-day unit of payment. For CY 2023 and CY 2024, CMS previously applied a 3.925% reduction and a 2.890% reduction, respectively, which were half of the estimated required permanent adjustment.

In addition, CMS is proposing to: recalibrate the PDGM case-mix weights; update the fixed dollar loss (FDL) for outlier payments; update the low utilization payment adjustment (LUPA) thresholds, functional impairment levels, and comorbidity adjustment subgroups for CY 2025; establish a home health occupational therapy (OT) LUPA add-on factor; and update other LUPA add-on factors. This rule also proposes to adopt the core-based statistical area (CBSA) delineations for the home health wage index using the 2020 Decennial Census. Additionally, this rule includes a proposed rate update for the CY 2025 intravenous immune globulin (IVIG) items and services' payment under the IVIG benefit. It discusses how the CY 2025 payment rate update for the negative pressure wound therapy disposable device (dNPWT) will be applied.

The actions CMS is taking in this proposed rule would help improve patient care and protect the Medicare program's sustainability for future generations.

CY 2025 Proposed Payment and Policy Updates for Home Health Agencies

This rule proposes routine, statutorily required updates to the home health payment rates for CY 2025. The CY 2025 updated rates include the proposed CY 2025 home health payment update of 2.5% ($415 million increase), which is offset by an estimated 3.6% decrease and required by statute, that reflects the proposed permanent behavior adjustment ($595 million decrease) and an estimated 0.6% decrease that reflects a proposed FDL ($100 million decrease). CMS estimates that Medicare payments to HHAs in CY 2025 would decrease in the aggregate by 1.7%, or $280 million, compared to CY 2024, based on the proposed policies.

PDGM and Behavior Assumptions

On January 1, 2020, CMS implemented the home health PDGM and a 30-day unit of payment, as required by section 1895(b) of the Social Security Act, as amended by the Bipartisan Budget Act of 2018. The PDGM better aligns payments with patient care needs, especially for clinically complex individuals. The law required CMS to make assumptions about

behavior changes that could occur because of the 30-day unit of payment and the PDGM. CMS finalized three behavior assumptions in the CY 2019 HH PPS final rule: clinical group coding, comorbidity coding, and LUPA threshold. The law also requires CMS to annually determine the impact of differences between assumed behavior changes and actual behavior changes on estimated aggregate expenditures, beginning with 2020 and ending with 2026, and to make temporary and permanent increases or decreases, as needed, to the 30-day payment amount to offset such increases or decreases. Additionally, in the CY 2019 HH PPS final rule (83 FR 56455), CMS stated that we interpret actual behavior change to encompass both behavior changes that were previously outlined, as assumed by CMS when determining the budget-neutral 30-day payment amount for CY 2020, and other behavior changes not identified at the time the 30-day payment amount for CY 2020 was determined.

In the CY 2023 HH PPS final rule (87 FR 66790), CMS finalized a methodology for analyzing the impact of the differences between assumed and actual behavior changes on estimated aggregate expenditures and calculated levels of actual and estimated aggregate expenditures. Based on analyses of CYs 2020 and 2021 claims data, CMS determined a permanent adjustment was needed and finalized implementing half (-3.925%) of the permanent adjustment estimated at the time (-7.85%).

In the CY 2024 HH PPS final rule (88 FR 77676), using CY 2022 claims and the finalized methodology, CMS determined that an additional permanent adjustment needed to be applied and finalized, implementing half (-2.890%) of the permanent adjustment estimated at the time (-5.779%). This estimated permanent adjustment necessary for CY 2024 included the remaining -3.925% (to account for CYs 2020 and 2021) that was not applied to the CY 2023 payment rate.

For the CY 2025 HH PPS proposed rule, using CY 2023 claims and the methodology finalized in the CY 2023 HH PPS final rule, CMS determined that Medicare still paid more under the new system than it would have under the old system. Therefore, we are proposing an additional permanent adjustment of -4.067% to be made to the 30-day base payment rate. This proposal would continue to satisfy the statutory requirements at section 1895(b)(3)(D) of the Act to offset any increases or decreases on the impact of differences, between assumed behavior and actual behavior changes, on estimated aggregate expenditures, reduce the need for any future large permanent adjustments, and help slow the accrual of the temporary payment adjustment amount. The proposed permanent adjustment is also anticipated to lessen any potential temporary adjustment(s) in future years. While we are not proposing to implement a temporary adjustment in CY 2025, the proposed rule does provide the calculated temporary adjustment based on analysis of CY 2023 claims. The law provides CMS the discretion to make any future permanent or temporary adjustments in a time and manner determined appropriate through analysis of estimated aggregate expenditures through CY 2026.

Crosswalk for Mapping OASIS-D Data Elements to The Equivalent OASIS-E Data Elements

The Outcome and Assessment Information Set (OASIS)-D was the home health assessment instrument used under the prior 153-group system and the first three years (CYs 2020-2022) of the current PDGM; however, the Office of Management and Budget (OMB) approved an updated version of the OASIS instrument, OASIS-E, on November 30, 2022, effective January 1, 2023 (OMB-control number 0938-1279). To accurately determine payments under the 153-group system, we use the October 2019 3M Home Health Grouper (v8219) to assign a Health Insurance Prospective Payment System (HIPPS) code to each simulated 60-day episode of care. This older version of the Home Health Grouper requires responses from OASIS-D. Therefore, to continue with the repricing methodology, CMS will need to impute responses for the three items from OASIS-D that have changed in the OASIS-E. Additionally, 13 items on the OASIS-E are no longer required to be asked at a follow-up visit. For these items, we can use the most recent SOC/ROC to determine a response, which would not require imputation. We are proposing a methodology to address this issue by mapping the OASIS-E items in this proposed rule.

Proposed OT LUPA Add-on Factor and LUPA Add-on Factor Updates

With sufficient recent claims data available and to establish equitable compensation for all home health services, CMS is now proposing to establish a definitive occupational therapy (OT) specific LUPA add-on factor and discontinue the temporary use of the physical therapy (PT) LUPA add-on factor as a proxy. We propose using the same methodology to establish the skilled nursing (SN), PT, and speech-language pathology (SLP) LUPA add-on factors, as described in the

CY 2014 HH PPS final rule. The proposed OT LUPA add-on factor (1.7266) will be updated based on more complete CY 2023 claims data in the final rule.

Additionally, we propose updating LUPA add-on factors to more accurately reflect current healthcare practices and costs, by proposing to use recent claims through CY 2023 to update the SN, PT, and SLP LUPA add-on factors.

Recalibration of PDGM Case-Mix Weights

Each of the 432 payment groups under the PDGM has an associated case-mix weight and LUPA threshold. CMS' policy is to annually recalibrate the case-mix weights and LUPA thresholds using the most complete utilization data available at the time of rulemaking. In this proposed rule, CMS is proposing to recalibrate the case-mix weights — including the functional levels and comorbidity adjustment subgroups — and LUPA thresholds using CY 2023 data, to more accurately pay for the types of patients HHAs are serving.

Wage Index Update

This rule proposes to update the home health wage index and adopt the new labor market delineations from the July 21, 2023, OMB Bulletin No. 23-01 based on data collected from the 2020 Decennial Census. The July 21, 2023, OMB Bulletin No. 23-01 contains several significant changes. It is standard practice to adopt the latest OMB update when available, as using the most recent OMB statistical area delineations results in a more accurate and up-to-date payment system that reflects the reality of population shifts and labor market conditions. For example, there are new CBSAs, urban counties that have become rural, rural counties that have become urban, and existing CBSAs that have been split. We note that existing home health PPS regulations limit one-year wage index decreases to 5%, which will help mitigate the impact of CBSA changes on payment.

Home Health (HH) Quality Reporting Program (QRP) Updates

CMS is proposing to collect four new items as standardized patient assessment data elements in the social determinants of health (SDOH) category, and to modify one item collected as a standardized patient assessment data element in the SDOH category, beginning with the CY 2027 HH QRP via the OASIS. The four assessment items proposed for collection are: one living situation item, two food items, and one utilities item. In addition, CMS is proposing to modify the current transportation item beginning with the CY 2027 HH QRP via the OASIS instrument.

CMS is also proposing an update to remove the suspension to change all-payer data collection to begin with the start of care OASIS data collection timepoint instead of the discharge timepoint.

Lastly, we are seeking input on future HH QRP measure concepts.

Expanded Home Health Value-Based Purchasing (HHVBP) Model

Request for Information (RFI) on Future Performance Measure Concepts for the Expanded HHVBP Model

CMS is including in the proposed rule an RFI that would build on input from the Expanded Home Health Value-Based Purchasing (HHVBP) Model's Implementation and Monitoring technical expert panel (TEP), which met in November 2023. Discussions included potential future measure concepts that could fill measurement gaps in the expanded HHVBP Model. These include function measures complementing the existing cross-setting Discharge (DC) Function measure. These measures would include care activities like bathing and dressing, which are important for home health patients and caregivers but are not included in the DC Function measures. Based on TEP feedback, CMS may also consider adding the existing Medicare Spending per Beneficiary measure in future rulemaking. Other potential areas for measure development activities discussed with the TEP include family caregiver status and claims-based falls with major injuries.

Health Equity Update

CMS is including an update on health equity to let stakeholders know that we are committed to developing approaches to meaningfully incorporate the advancement of health equity into the expanded HHVBP Model. As we move this

important work forward, we will continue to take input from home health stakeholders and monitor the application of proposed health equity policies across CMS initiatives, such as proposed payment adjustments in the Hospital and SNF Value-Based Purchasing Programs.

Home Health Conditions of Payment (CoPs) Updates

CMS is proposing changes to the HHA CoPs to reduce avoidable care delays by helping ensure that referring entities and prospective patients can select the most appropriate HHA based on their care needs.

CMS proposes adding a new standard that would require HHAs to develop, implement, and maintain through an annual review, a patient acceptance to service policy that is applied consistently to each prospective patient referred for home health care. We are proposing that the policy must address, at a minimum, the following criteria related to the HHA's capacity to provide patient care: the anticipated needs of the referred prospective patient, the HHA's caseload and case mix, the HHA's staffing levels, and the skills and competencies of the HHA staff. This proposed rule would not prevent HHAs from maintaining their existing acceptance to service policies; rather, it is intended to complement them. Additionally, CMS is proposing that HHAs make available to the public accurate information regarding the services offered by the HHA and any service limitations related to types of specialty services, service duration, or service frequency. HHAs would be required to review this information annually.

Request for Information on Rehabilitative Therapists and HHAs Scope of Services

Lastly, we are seeking public comments on two RFIs. First, we are seeking information regarding the feasibility of rehabilitative therapists conducting the comprehensive assessment for cases that have both therapy and nursing services ordered as part of the plan of care. Second, we are seeking information regarding the HHA scope of services and how these services interact with HHA operations. We are soliciting comment on the communications that occur between patients' physicians and allowed practitioners in establishing and reviewing the plan of care. We are also seeking information on how the physician and allowed practitioners ensure patients receive the right mix, duration, and frequency of services to meet measurable outcomes and goals identified by the HHA and the patient.

Long-Term Care (LTC) Facility Acute Respiratory Illness Data Reporting

CMS proposes replacing the current COVID-19 reporting standards for LTC facilities that sunset in December 2024 with a new standard that will address a broader range of acute respiratory illnesses. This new standard would require that, beginning on January 1, 2025, facilities electronically report information about COVID-19, influenza, and respiratory syncytial virus (RSV) to the Centers for Disease Control and Prevention (CDC) National Healthcare Safety Network (NHSN). CMS proposes that the data elements for which reporting would be required include facility census; resident vaccination status for COVID-19, influenza, and RSV; confirmed resident cases of COVID-19, influenza, and RSV (overall and by vaccination status); and hospitalized residents with confirmed cases of COVID-19, influenza, and RSV (overall and by vaccination status). CMS continues to believe that sustained data collection and reporting of respiratory illnesses outside of emergencies will help LTC facilities gain important insights related to their evolving infection control needs.

CMS also recognizes that, while necessary, these data may not be sufficient during an actual emergency event. Accordingly, we are also proposing that in the event of a declared — or significantly likely — national public health emergency (PHE) for an acute respiratory illness, there may be additional categories or reporting required, such as: reporting data up to a daily frequency and additional or modified data elements relevant to the PHE — including but not limited to relevant confirmed infections, supply inventory shortages, and additional demographic factors.

CMS is seeking comment on ways the reporting burden can be minimized while still providing adequate data; whether we should expand the proposed requirements for what is collected and how often, both during and outside a declared — or significantly likely — PHE; the value of these data in protecting the health and safety of residents in LTC facilities both during and outside of a PHE; system readiness and capacity to collect and report these data; and whether race, ethnicity, or other demographic information, such as socioeconomic factors or disability status, should be included in the requirements for ongoing reporting beginning on January 1, 2025.

Medicare Provider Enrollment

CMS is proposing to add providers and suppliers that are reactivating their Medicare billing privileges to the categories of new providers and suppliers subject to additional oversight. CMS may impose a provisional period of enhanced oversight (PPEO) for 30 days to one year for new providers and suppliers. The goal of a PPEO is to reduce and prevent fraud, waste, and abuse. During a PPEO, CMS may, among other things, conduct prepayment medical review and cap payments. Currently, CMS can apply a PPEO to new providers or suppliers, which are defined as providers or suppliers that are: (1) newly enrolling; (2) undergoing a change of ownership under 42 CFR § 489.18; and/or (3) undergoing a 100% change of ownership via a change of information. This proposal would add reactivating providers and suppliers as another category of new providers and suppliers subject to a PPEO.

Re: **CMS-1803-P: Medicare Program; Calendar Year (CY) 2025 Home Health Prospective Payment System (HH PPS) Rate Update; HH Quality Reporting Program Requirements; HH Value-Based Purchasing Expanded Model Requirements; Home Intravenous Immune Globulin (IVIG) Items and Services Rate Update; and Other Medicare Policies**

Dear Administrator Brooks-LaSure,

The Centers for Medicare and Medicaid Services (CMS) and the U.S. Department of Health and Human Services have proposed several reforms affecting the Medicare home health benefit and the CY 2025 payment rates in the Notice of Proposed Rulemaking (NPRM). 89 Fed. Reg. 55312 (July 3, 2023).

The NAHC-NHPCO ALLIANCE (formerly the National Association for Home Care & Hospice), hereinafter "ALLIANCE," respectfully submits these comments regarding the proposals contained within the NPRM. The ALLIANCE is the largest trade association representing the interests of Medicare home health agencies (HHAs) and hospices nationwide including nonprofit, proprietary, urban, and rural based, hospital affiliated, public and private corporate entities, and government run providers of home care since 1982. ALLIANCE members provide most Medicare home care services throughout the U.S.

The ALLIANCE is also an original provider-member of the Leadership Council of Aging Organizations (LCAO) as it has put patients first in its health policy and advocacy positions since its inception. Each year, ALLIANCE members serve millions of patients of all ages, infirmities, and disabilities, providing an opportunity for individuals to be cared for in their own homes, the care setting preferred by most people.

Many members of our Forum of State Associations also support these comments. We are specifically joined on this letter by numerous state home care associations listed on the final page. Many others are filing their own comments too. State associations are an important voice in understanding the

impact of the proposed rules in their local settings. Their "on the ground" perspective deserves special attention.

We are aware that numerous other organization and representatives of the HHA community have submitted comments as well. We especially recommend that CMS provide thoughtful consideration to those comments submitted by the Partnership for Quality Home Health along with those submitted by several by our the EMR/IT business partner members that offer extensive "real-time" data analysis.

At the outset, we respectfully express that the existing and newly proposed payment rate cuts will continue to serve to significantly reduce access to essential home health services throughout the country and set the stage for further annual rate cuts that will dismantle this crucial benefit. That outcome stems from the application of a budget neutrality adjustment methodology that will perpetually rebase payment rates reflecting the natural and foreseeable reaction of home health agencies (hereinafter "HHAs") to reduced reimbursement. CMS understands HHAs, like all health services providers, will reduce costs in reaction to payment reductions. Cost reductions often can include service reductions involving the admission of patients, the scope of services offered, and the extent of services provided. Consequently, the CMS budget neutrality methodology will continue to trigger further payment rate reductions that will eventually destroy the value of the home health services benefit.

CMS has the authority and the responsibility to prevent such an outcome under 42 USC 1395fff to determine the "time and manner" of applying any rate adjustments under PDGM. CMS has the full discretionary power to go forward with the 2025 rate setting without the proposed 4.067% rate cut.

While we once again will not relitigate here our position that the budget neutrality methodology fails to conform with statutory mandates, CMS does have the clear authority to determine the time and manner of any permanent and temporary adjustments under the payment model and has used that power in past rulemakings. **We once again strongly recommend that CMS use that authority to withhold any such adjustments in 2025 to provide the opportunity for a full and deep review of the direction of the home health benefit, its impact on access to care, and options to preserve a longstanding benefit that has brought high quality of care and essential health care services to millions of Medicare beneficiaries since 1965, along with great value to the Medicare program through expenditure savings far in excess of any other Medicare benefit. Since the initiation of PDGNM in CY2020, CMS's own data shows the significant deterioration of the home health benefit and the increasing reduction in access across the country. As detailed below, fewer Medicare beneficiaries have access to the home health benefit and those that do face a significantly reduced scope and depth of care.**

Specific comments on all elements of the NPRM are below. We offer the following summary of our overall recommendations:

OVERALL RECOMMENDATIONS

A. Home Health Services Payment Rates

- CMS should postpone application of any further permanent adjustments related to PDGM budget neutrality to preserve current access to home health services and the scope of care available.

- CMS should maintain its position to withhold any part of the PDGM budget neutrality temporary adjustments in 2025.
- CMS should recognize the disruptive, continuing, and permanent financial impact of its forecasting error with respect to the annual Market Basket Index updates from 2021 and 2022 and implement a one-time adjustment to account for the 5.2% forecasting error.
- CMS should consider the negative and disruptive financial impacts of its proposed wage index changes and case mix weight recalibrations on care access as it finalizes the 2025 payment rates and any systemic reforms.

B. HH QRP

- CMS should limit revisions to the OASIS data set to intervals no less than 4 years from the last revision.
- CMS should consider imbedding the AHC-HRSN core question screening tool into the PAC assessments if feasible.
- CMS should monitor additions to the OASIS data set to ensure that the tool is manageable for HHAs.
- CMS should provide sufficient data on HHA quality measures and assessment items prior to implementing any changes in the OASIS data set.

C. HH QRP Measure Concepts

- CMS should not consider including in the HH QRP the "Adult Immunization Status" measure, or any similar measure related to vaccinations that requires extensive review of data sources.
- CMS must consider the limitations for HHAs to address a depression diagnosis when considering the measure concept for the HH QRP
- CMS should not move forward with a measure concept related to SUD for inclusion in the HH QRP

D. HHVBP Measure Concepts

- CMS must consider the complexity and potential burden for data collection when developing a measure to address the needs of the family caregivers for home health patients.
- CMS should not include the falls with injury measure into the HHVBP
- CMS should not include the MSPB measure in the HHVBP
- The ALLIANCE supports the inclusion of additional function measures in the HHVBP that complement the DC Function measure.

E. Home Health CoP Changes -Acceptance to Service Policy

- CMS should withdraw its proposal, at § 484.105(i)(1)(i) through (iv), for an acceptance to service policy and to require HHAs make publicly available information on services, and limitations on frequency and duration.
- CMS should continue to seek feedback from stakeholders to determine the root cause for the decreases in patient access to home health services.
- Withdraw the position that HHAs can only decline an admission to care based on a finding that it cannot safely and effectively meet the clinical needs of the patient**.**

SPECIFIC COMMENTS ON PROPOSED RULE AND POLICY CHANGES

The Proposed Payment Rate Cuts Further Exacerbate Significant Care Access Barriers for Patients and Will Bring the Home Health Benefit to a Point of Crisis

For several years, Medicare payment policies have seriously diminished the Medicare home health benefit. Concurrent with rate reductions, payment model changes, case mix weight recalibrations, and inaccurate cost inflation forecasts there continues to be a corresponding dilution of the home health benefit resulting in a significant, negative impact on care access. The ALLIANCE forecast this outcome in it CY2020 comments with added support for the contention each year thereafter. While CMS thankfully responded to those concerns by withholding any application of the growing temporary adjustments along with a reduced permanent adjustment in CY 2023 and CY 2024, the deterioration of the benefit and access to it continues. The outcome has been startling with several hundred thousand less Medicare beneficiaries annually using home health services, less care provided to patients, and fewer provider options. Such dramatic changes cannot be accounted for because of oversight activities, marketplace changes, or the increased enrollment in Medicare Advantage plans as an alternative to traditional Medicare enrollment. This deterioration is clearly displayed even in the limited data offered by MedPAC and data routinely available to CMS.

The 2023 MedPAC data analysis shows a decline of 400,000 home health users between 2017 and 2021. In-person visits per user declined by over 17% from 30.7 to 25.4. Active HHAs fell by 1,232 from 2016-2021. The active provider numbers continue to decline to date, except for California where program integrity issues have been raised. **This data does not depict a stable home health benefit in any form.**

As predicted by the ALLIANCE in its earlier PDGM comments, the data analysis shows a continuing decline in home health users, in-person visits per user, and active HHAs. **An ongoing pattern of loss of access to care cannot be ignored by CMS, particularly when the obvious cause is the flawed payment model established and introduced by CMS in 2020.** An alternative explanation does not lie in increased Medicare Advantage enrollment as the percentage of Medicare Fee-for-Service enrollees using home health services is declining, not just the gross number of users. Similarly, the explanation does not lie in a reduced inpatient population as the majority of HHA admissions is from the community and those enrollees that would have come from an inpatient stay to home health in the past still have health care needs even if they are no going to inpatient care. Finally, CMS cannot reasonably adopt the MedPAC view that there has been a reduction in use of home health along with a declining number of HHAs since 2013 as the explanation. The institution of PDGM re-triggered the benefit deterioration that began with the Affordable Care Act's rate rebasing mandate after just two years of a modicum of "stability."

All told, the PDGM era to date has shown a combination of:

- **Nearly 500,000 fewer Medicare beneficiaries accessing home health services**
- **A 22.4% decline in the proportion of Medicare fee-for-service beneficiaries accessing home health services.**
- **A 9% nationwide reduction in active HHAs accessible to beneficiaries**
- **A 15.6% reduction in the number of clinical visits in a 30-day period**

These data do not portray a budget neutral transition to PDGM. Instead, these data depict a crucial and essential benefit in the Medicare program, one that has demonstrated dynamic positive impact

through cost and care avoidance, which is on a continuing downward path to being effectively dismantled.

The chart that follows shows that fewer beneficiaries as a percentage of enrollees have accessed home health services in all 50 states since the initiation of PDGM in 2020. This should concern every Medicare enrollee, particularly as the US population ages overall while consumers increasingly express a very strong desire to age in place with health care services in their own homes. It should also concern CMS as Medicare heads towards significant financial challenges with its ongoing reliance on inpatient and institutional care. It is time for CMS to recognize, in its practices, what it has conveyed regarding the Home Health Value Based Purchasing demonstration program—home health services reduce overall Medicare expenditures—when used.

The following data from the CMS Market Saturation Report details the decline in home health utilization. CMS cannot ignore its own data and the obvious impact of PDGM during the period involved. Coincidences are not simply happenstance. Notably, both CMS and Congress recognized that Medicare payment changes lead to provider behavior changes. These data support that assumption. Reduced payment rates have led to reduced care access and usage. Correspondingly, the proposed further reductions in payment rates for CY2025 will lead to further reductions in care access and usage.

https://data.cms.gov/summary-statistics-on-use-and-payments/program-integrity-market-saturation-by-type-of-service/market-saturation-utilization-state-county

While the ALLIANCE does not consider the below MedPAC analyses to be wholly accurate in comparison to the CMS Market Saturation Reports, those analyses are categorically consistent with the downward trends displayed in the CMS data. Nearly 600,000 fewer users of home health services, a 6% decline in the proportion of FFS beneficiaries utilizing home health services between 2019 and 2022, reduced lengths of stay receiving home health services, and a significant decline in the number of in-person clinical visits to patients are all consistent with the Market Saturation Report data compiled by CMS.

MedPAC March 2023 Report to Congress

TABLE 8–2

In 2021, the share of FFS beneficiaries using home health care increased, while the number of in-person home health visits per user declined

	Prepandemic			Pandemic		Average annual percent change	
	2017	2018	2019	2020	2021	2017–2019	2020–2021
Medicare FFS home health users (in millions)	3.4	3.4	3.3	3.1	3.0	–1.7%	–1.1%
Share of FFS beneficiaries using home health care	8.8%	8.7%	8.5%	8.1%	8.3%	–1.3	2.5
Total visits (in millions)	104.8	103.9	99.7	81.1	76.8	–2.5	–5.3
In-person visits per user	30.7	30.8	30.2	26.6	25.4	–0.8	–4.2
30-day periods (in millions)				9.6	9.3		–2.9
30-day periods per 100 FFS Medicare beneficiaries				25	26		0.7

Note: FFS (fee-for-service). Percentage change was calculated on unrounded data.

89 Fed. Reg. 55312, 55318 (July 3, 2024).

The pattern is clear and unambiguous. Rate cuts under PDGM lead to care cuts.

The decline in the number of active, billing HHAs continues to plummet nationwide, with very frwe states excepted. Notably, California is the unicorn among the states with 534 active HHAs added between 2019 and 2023. Active is defined as billing for Medicare homne health services during that calenadr year. Active is contrasted with simply existing as a certified HHA as that status does not help define care access.

The data from the CMS Market Saturation Reports shows a 9% decline in the number of active HHAs since prior to PDGM. All but six states (AZ, CA, ME, NV, RI, and WA) show a sizeable decline in the number of HHAs that are active. California is suspected to have seen growth with a large number of new HHAs raising program integrity concerns. With California excepted, the decline in active HHAs during PDGM is in excess of 17%

Source: CMS Market Saturation Reports, https://data.cms.gov/summary-statistics-on-use-and-payments/program-integrity-market-saturation-by-type-of-service/market-saturation-utilization-state-county

The ALLIANCE also considers the CMS Market Saturation Reports a superior data source on access to HHAs to that displayed by MedPAC as it relies on robust claims data analyzed by CMS itself. Nevertheless, even the MedPAC analyses in 2023 and 2024 depict a continuiing decline in available HHAs. Such a finding supports the concerns voiced by the ALLIANCE over the past PDGM years that the access to care has been materially diminished and is facing an ongoing threat to a complete loss in some parts of the country due to the continuing PDGM rate cuts based on the flawed budget neutrality assessment methodology applied by CMS.

MedPAC March 2023 Report to Congress

TABLE 8–1 Rate of decline in home health agencies participating in Medicare has slowed

	Prepandemic			Pandemic		Average annual percent change	
	2013	2018	2019	2020	2021	2013–2019	2020–2021
Active HHAs	12,788	11,699	11,569	11,556	11,474	–1.7%	–0.8%
Number of HHAs per 10,000 Medicare beneficiaries	2.4	1.9	1.9	1.8	1.8	–4.2	–2.1

Note: HHA (home health agency). "Active HHAs" includes all agencies operating during a year, including agencies that closed or opened at some point during the year. Average annual changes were calculated on unrounded data.

MedPAC March 2024 Report to Congress

TABLE 7–1 Annual rate of decline for home health agencies participating in Medicare has been approximately 1 percent per year

					Average annual percent change	
	2019	2020	2021	2022	2019–2022	2021–2022
Active home health agencies	11,569	11,565	11,474	11,353	–0.6%	–1.1%
Number of home health agencies per 10,000 Medicare beneficiaries	1.88	1.83	1.79	1.75	–2.3	–2.7

Note: "Active home health agencies" includes all agencies operating during a year, including agencies that closed or opened at some point during the year. Average annual changes were calculated on unrounded data.

Source: MedPAC analysis of CMS's Quality, Certification and Oversight file and the 2021 annual report of the Boards of Trustees of the Medicare trust funds.

Sources: March 2023 Report to the Congress: Medicare Payment Policy. Medicare Payment Advisory Commission, Chapter 8, Pages 242, 243, 245. https://www.medpac.gov/document/march-2023-report-to-the-congress-medicare-payment-policy/

March 2024 Report to Congress: Medicare Payment Policy. Medicare Payment Advisory Commission, Chapter 7, Pages 206-211. https://www.medpac.gov/document/march-2024-report-to-the-congress-medicare-payment-policy/

MedPAC's mischaracterization of the data trends as offering sufficient access to care should be given no weight as the numbers speak for themselves—care utilization is significantly down, less care is provided today than in prior years, and there are fewer HHA choices for beneficiaries. While full data is not yet available, there are clear indications that the reduction in patients using home health services and the volume of in-person visits continue to decline post-2022 along with the number of active HHAs.

Further indications of the fragility of the financial status of HHAs are found in cost report data from calendar year 2022. The ALLIANCE analyzed cost reports for all HHAs with a fiscal year end of

12/31/22 to evaluate the impact of CY2022 payment rates, cost inflation, service changes, and other factors related to 2022 influences and behavior in a consistent manner. The ALLIANCE methodology trimmed out reports with no data on revenue and/or costs along with an application of the common 90/10 natural log trim. The ALLIANCE evaluated both "Medicare margins" (the difference between reported fee-for-service Medicare revenue and reported fee-for-service Medicare costs) as well as "Overall Margins" (total home health revenue compared to total home health costs).

The ALLIANCE notes the following regarding the cost report data analysis:

1. Cost report data came from CMS at https://www.cms.gov/research-statistics-data-and-systems/downloadable-public-use-files/cost-reports/cost-reports-by-fiscal-year
2. Cost reports used were limited to those with 12/31/22 fiscal year ends. An estimated 30% of HHAs use alternative fiscal years.
3. Cost report inputs were used as reported.
4. CMS cost reporting standards do not consider certain usual and ordinary business costs, such as marketing, telehealth services and equipment, and certain taxes as "allowable" thereby depressing the amount of costs in the margin analysis.
5. The wide range in margins makes the nature of the cost report trimming affect the margin calculation.

Most notable from the cost report analysis is that HHAs experience a wide range of financial outcomes in both the "Medicare Margin" and the "Overall Margin." This outcome occurs regardless of HHA geographic location, urban or rural service area, tax status, or size. The wide range of financial outcomes of a payment model set out below itself demonstrates current fragility and uncertainty in the financial status of the organization along with the impact of any future rate changes. Most importantly, it demonstrates that relying upon averages is a high risk undertaking when setting or evaluating payment rates and any changes in payment rates, particularly as it relates to the impact on care access as averaging masks the impact that comes from losing those providers with margins below the average.

HHAs with FYE 12/31 data	**2022**	**2022**	**2023**	**2023**
Region	**Total Medicare FFS Reimbursement**	**Number of HHAs**	**Total Medicare FFS Reimbursement**	**Number of HHAs**
National	$11,625,894,736	5,639	$12,399,838,395	6.145
Medicare Margin	**Number of HHAs**	**Percentage of HHAs**	**Number of HHAs**	**Percentage of HHAs**
Greater than 20%	2,958	52.6%	3,326	54.2%
Between 0% and 20%	1,479	26.2%	1,546	25.1%
Less than 0%	2,681	21.2%	1,273	20.6%

It should be apparent that HHAs with current negative Medicare Margins would face significant financial difficulties in absorbing the proposed additional 4.067% rate cut for 2025 and 2.89% in 2024 based on FYE 2022 data alone. With those providers, serious negative impact on patients can be fully expected if the affected HHA is to continue operations.

For HHAs with Medicare Margins above zero percent, those difficulties are also serious and insurmountable without negative impacts on patients. As we have seen over the years, rate cuts have reduced access in several ways, including HHA closures, reduced service areas, reduced admissions, and reduced scope of services.

However, we advise CMS not to confine its access impact analysis to a silo built on Medicare Margins data. While payers may prefer to limit their rate impact evaluation to the relationship of its rate to provider cost, the economic model of HHAs necessitates a view consistent with the HHAs' evaluation of its overall financial condition. HHAs do not have the luxury of confining its evaluation to a payer-centered one. Instead, it must look at the overall combination of payers to determine the impact of any single payer change on its operations because HHAs' business is a variety of government or quasi-government-based payers where payment rates are assigned by the payer, not determined by the provider. For HHAs, most payments come from traditional Medicare, Medicare Advantage, Medicaid, the VA, and Tricare. Most HHAs have little or no commercial insurance or private pay home health services, unlike most other health care sectors.

HHAs serve patients and do not distinguish between traditional Medicare patients and those patients covered by Medicare Advantage, Medicaid, the VA, or other payers. HHA nurses, therapists, and home health aides provide patient care, not Medicare patient care, Medicare Advantage patient care. Medicaid patient care, or care that is different based on payer source. Professional standards of care make home health services payer-agnostic. The Medicare Conditions of Participation apply equally to all payers too.

It is notable that MedPAC evaluates the full financial outcome for inpatient hospital services and SNF services in its consideration of the impact of Medicare rates of payment on access to care. Such makes sense as health care providers do not operate in payer-related silos. As previously stated, the Medicare Conditions of Participation apply equally to all patients without regard to payer source. In home health services, all patients are subject to the OASIS patient assessment and quality of care measures along with public quality data reporting do not distinguish patients by payer source. The Medicare cost report does require delineation by Medicare, Medicaid, and "Other," but cost calculations blend all costs without regard to payer source.

The ALLIANCE recognizes that, based on cost report data and inputs from The ALLIANCE members, traditional Medicare payments may subsidize other payers such as Medicare Advantage or Medicaid. In some respects that is the reality that HHAs must deal with every year. In other respects, it may be a creature of cost reporting weaknesses. Either way, HHAs operate as an HHA, not a Medicare Fee-for-Service HHA. It is not unusual for one payer's revenue to be needed to subsize a shortfall from another payer.

While it may not be the best Medicare payment policy, currently it must be recognized as a central impacting feature of the financial status of HHAs. Changing payment rates in traditional Medicare has a ripple effect on the entire patient population of an HHA. That is particularly the case when the other payers are highly unlikely to step up and improve their payment rates as we have here in home health with Medicare Advantage and Medicaid, both having rate setting power that is sanctioned by CMS. Accordingly, CMS must recognize the need to apply its discretion on the application of PDGM permanent adjustments taking into consideration the overall impact of rate cuts on the ability of HHAs to

maintain full access to care. Here the proposed rate cuts are clearly highly disruptive in relation to continued care access. The "Overall Margins" of HHAs, as discussed below, demonstrates that the level of disruption is monumental.

The projected national Overall Margin for 2024 with the existing base rate cut shows that 52.7% of freestanding HHAs would be "underwater" with overall margins below 0% assuming no change in costs compared to 2022. The analysis is limited to freestanding HHAs due to the unavailability of such data from cost reports submitted by institution based HHAs. However, it can be safely assumed that the percentage would increase if those HHAs were capable of being included since the Medicare-related margins tend to be lower than freestanding HHAs as a starting point.

These data depict a substantial risk that a majority of HHAs would be in jeopardy of bankruptcy or closure with the proposed rate cut. Those HHAs' options to avoid that risk are highly limited, none of which would be good for the patient population and most have already been employed with the CY2023 rate cut. Those options include:

- Reducing the volume of visits in the episode of care. More than a full visit reduction on average would be needed to stay financially even.
- Reducing costs by narrowing the geographic scope of the service area to reduce travel time between visits or the need for a branch office. That action would effectively "close" the provider for a portion of previously served patients.
- Eliminate services to Medicare Advantage and Medicaid patients. This would require an HHA to address fixed and semi-variable costs that would remain through such a census reduction.
- Refocus Medicare home health services on certain patient populations that would not trigger financial losses in a manner consistent with nondiscrimination requirements.

Such changes in service are easy to predict since they are already ongoing due to the initial 4.36% rate cut at the start of PDGM, shortfalls triggered by inflation rate forecasting errors, and the 3.925% rate cut in 2023. Compounding the risk is the 5.2% forecast error in 2021 and 2022 as it relates to cost inflation and the resulting Market Basket Index (discussed further below). The proposed 4.067% rate reduction for 2025 will send the overall financial status of HHAs into the world of closures, bankruptcies, and patient service roadblocks and reductions. The data earlier presented and as further set out below shows that such a crisis has begun and will continue to grow nationwide. Exclusive of California, the number of active and somewhat accessible HHAs dropped by 332 between 2022 and 2023. With the cut imposed in 2024 and the proposed cut for 2025, that number can be reasonably expected to rise even further. Closure is that last action of financially troubled HHA would take. Prior to that, care access diminishes in a multitude of other ways including reduced coverage areas and limits on patient admissions.

State	HHAs	Overall Financial Projected Status	Percentage

Source: FYE12/31/2022 Freestanding HHA cost reports, https://www.cms.gov/research-statistics-data-and-systems/downloadable-public-use-files/cost-reports/cost-reports-by-fiscal-year. The forecast is based on 2022 data trended forward with the 9.36% base rate cuts in 2023 and proposed for 2024 without regard to any cost changes that are greater than the 2023 MBI and proposed 2024 MBI. If cost to revenue changes were considered, it is expected that the number of HHAs with overall margins below zero would increase.

Most states are already in trouble with the existing 2024 rate cut. Extending a further cut of 4.067% in 2025 is bound to accelerate the decline in care access. Most geographic areas within each state are at risk of losing HHAs. In some areas, all HHAs are forecast to be faced with a negative net financial margin. The risk to access to care for Medicare beneficiaries and all others that need home health services is acute and undeniable. CMS cannot let that happen.

The Home Health Benefit Has Been Shrinking with Each Rate Cut: The Proposed 2025 Rate Cut Will Only Bring Further Shrinkage

In 1996, the number of visits per user of home health services was 74. By 2021 it had shrunk to 25.44. That shrinking occurred at various stages of payment model changes and payment rate reductions. The first generation of benefit shrinkage was in 1998, the first year of the ill-designed Interim Payment System (IPS), where average visits dropped to 51. With the onset of the Prospective Payment System in October 2000, the CY2001 average number of visits dropped to 31. With a few years of stability in the payment rates, visit volume per patient stabilized and rose slightly. However, within a six-year series of rate cuts, visits per patient dropped back down to an average of 31. With the additional rate cuts that began in 2014 and continued to 2017, per patient visit volume stayed steady, but by 2018 the number of patients served dropped by over 100,000 despite the growth in Medicare enrollment of more than 1.4 million.

With the onset of the PDGM system in CY2020, another drop in per patient visits occurred, reducing the average to 27.57. The second year of PDGM saw more of the same with the average reduced to 25.44 visits. While the level of services lost has been significant, the reduction in Medicare beneficiaries that use home health services has been even more dramatic, dropping from 3.6 million in 1996 to 3.02 million in 2021 despite a 2.7 million increase in traditional Medicare enrollees.

YEAR	Traditional Medicare Enrollees	USERS (1000s)	VISITS PER PERSON	VISITS PER EPISODE	MEDICARE HH PAYMENTS (1000s)	PAYMENTS PER PERSON	PAYMENTS PER EPISODE

Medicare Home Health Services Use Reductions Coincided with Payment Rate Reductions: The Proposed PDGM Cut Will Bring More

While payment rate and payment method are not the only contributing factors to service access and level of care changes in home health services, their impacts are natural and foreseeable. Since BBA 1997, home health services PPS episodic rates have been subject to numerous negative adjustments that began with the initial rate setting for FY2001. Due to the dramatic impact of the Interim Payment System in 1998-2000 and the BBA 1997 requirement that PPS be set in a budget neutral manner, the FY2001 payment rates were set at a level that was over $300 lower than provider costs $2115.50 versus $2416.01) due to a .88423 budget neutrality adjustment. https://www.govinfo.gov/content/pkg/FR-2000-07-03/pdf/00-16432.pdf. Thereafter, the episodic rates have been hit with multiple legislated and regulatory reductions. The table below sets out those reductions. The PDGM rate reductions have and will continue to have the same reduction in care access and level of services.

YEAR	MBI REDUCTION	PRODUCTIVITY ADJUSTMENT	BUDGET NEUTRALITY and CASE MIX WEIGHT ADJUSTMENT**	REBASING REDUCTION

Current Care Access Problems Are Expected to Significantly Increase with the Proposed Rate Cut

In the CY 2024 rulemaking, the ALLIANCE and others presented stunning evidence about the growing barriers to care access faced by Medicare beneficiaries since the onset of PDGM. This evidence was dismissed by CMS in its rulemaking responses for a variety of reasons including that causation was not established, the data analysis may have relied on duplication of patients, and that the rejection of a patient by one HHA did not automatically translate to rejection by all HHAs.

Such a position begs for something more than a dismissal of concerns. Instead, CMS, with its ability to evaluate global data on home health care access, must take steps to answer the questions posed through the analyses presented by HHAs and their representatives. CMS is best positioned to undertake that analysis. Something more from CMS than a casual dismissal of relevant data analysis is a CMS responsibility.

One of the CY 2024 rulemaking commenters, Homecare Homebase, took added steps for its CY2025 rulemaking comments on the extraordinarily relevant question as to what becomes of patients that are rejected for admission by an HHA. In using its vast database of Medicare claims and other data, the recent comments submitted by Homecare Homebase confirm the concerns that have been previously voiced. Its data analysis shows that 35% of referrals to its clients are rejected and do not find access with any other of its clients. Given the significant market share for Homecare Homebase, at a minimum this outcome warrants a deeper dive by CMS. Even if one-half of those referrals find an alternative HHA, the impact on patients and Medicare of the remaining half finding no care is unacceptable. When combined with the continuing reduction in the number of home health users annually since PDGM, an investigation is the duty of CMS.

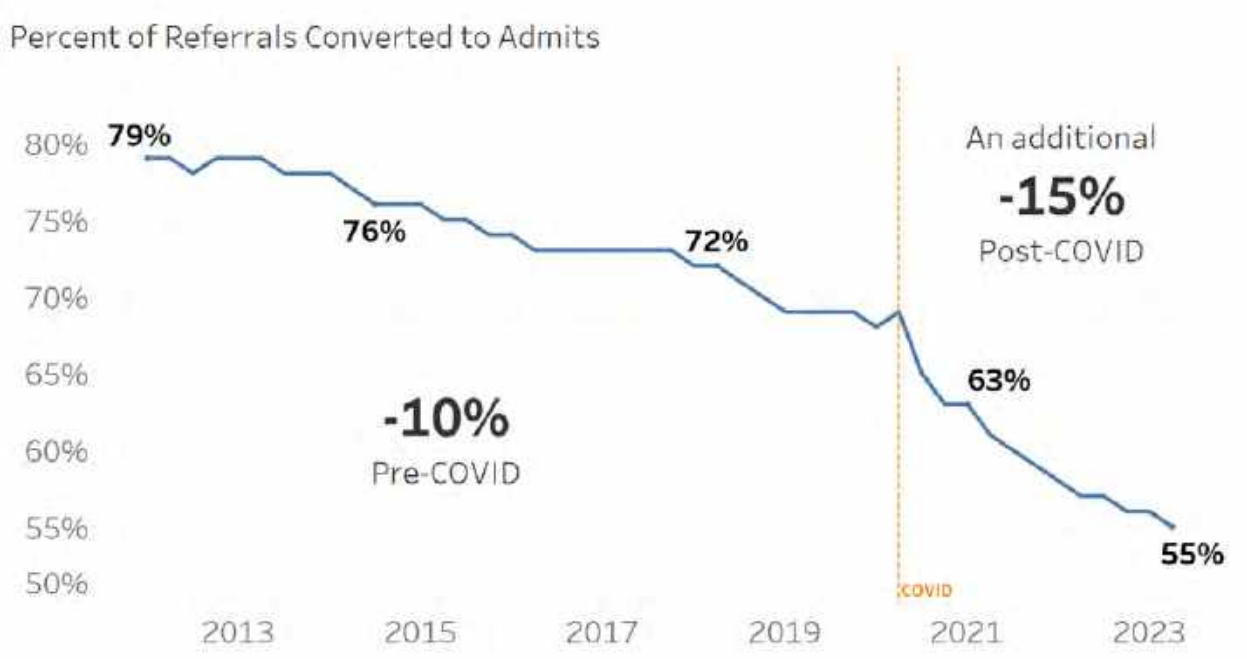
Here are several previously referenced signs of the existing difficulties in care access:

Hospital discharge data shows that hospitals are facing a growing level of patient referral rejections for prospective home health patients. This has led to delays in discharging patients to their homes, and extending costly inpatient stays as reported by the American Hospital Association. file:///C:/Users/wad/AppData/Local/Microsoft/Windows/INetCache/Content.Outlook/L69H8U3R/Issue-Brief-Patients-and-Providers-Faced-with-Increasing-Delays-in-Timely-Discharges.pdf

The delays in hospitals discharging patients to home health services is certain to create a significant cost to the hospitals, but also to Medicare.

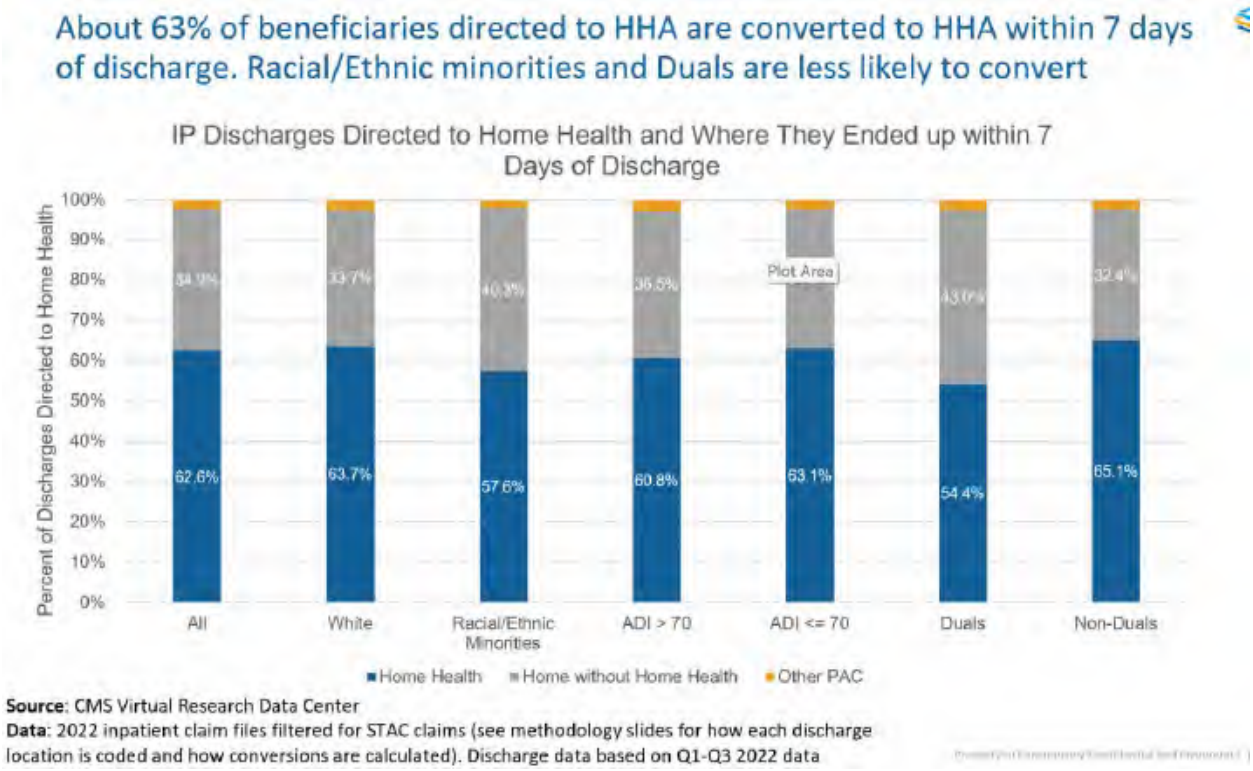
Source: July 25, 2023, WellSky Evolution of Care report, available at: https://careporthealth.com/about/results/the-evolution-of-care-2023/

Home Care Home Base, a large provider of EMR and billing services to HHAs further reports decreasing patient acceptance rates under the current PDGM payment rates.



Source: HCHB data, as presented in HCHB comments on this Proposed Rule.

Finally, data analytics company, Care Journey explains that only 63% of inpatient discharges are securing and initiating home health services within 7 days.



We characterized this data as "scary" in our CY 2024 comments. It has gotten worse and all trends point o the decline to continue. HHAs routinely express to the ALLIANCE that nurses are rejecting home health care employment every day due to compensation offers that fall short of what they can earn in other care sectors. Reducing payment rates at this time will certainly make care access even worse.

Additional Proposed Changes Affecting Medicare Payment Rate Will Greatly Increase the Disruptive Nature of the CY2024 Payment Rule Creating Further Risks to Care

The above analysis fully substantiates the ALLIANCE's concerns that the proposed rate cut in 2025 will be a disaster for home health services patients and HHAs. However, there are additional elements of the proposed rule that affect payment that can be fully expected to compound the negative impact of that rate cut. These other proposals include:

- The failure to correct the unprecedented error level in the forecast of HHA cost changes in 2021-2022.
- Significant shifts in the wage index values.
- Recalibration of the 432 case mix weights.
- Market Basket Index rebasing and revision of input weights.

The Financial Shortfall in the Market Basket Index Will Continue to Disrupt the Financial Stability of HHAs

CMS has confirmed that its modeling led to a Market Basket Index forecasting error for CY2021 through CY 2022. The ALLIANCE previously estimated that error to be 1.8 and 3.2 points in 2021 and 2022 respectively. In previous rulemaking, CMS declined to correct the error indicating it did not have such authority.As submitted in the ALLIANCE's CY 2024 NPRM comments, the estimated impact of that error cast is expected to result in an approximately $11 billion underpayment by Medicare over a ten-year period.

Projected Impact of 5.2 Forecast Market Basket Error in CY 2021 through CY 2030

Total Payments	Impact of CY 2021 and CY 2022 Forecast Error
2021	-$285,512,085
2022	-$867,452,091
2023	-$871,874,624
2024	-$1,115,186,361
2025	-$1,161,316,235
2026	-$1,225,352,343
2027	-$1,273,931,221
2028	-$1,342,554,653
2029	-$1,394,931,985
2030	-$1,449,139,655
Total	**-$10,987,251,254**

Source: Dobson | Davanzo

While CMS has not and is not likely to correct the error, the impact is nonetheless real for HHAs, creating another destabilizing force within the HHA community. When combined with the proposed rate reduction, the impact of significant swings in wage index values, and the recalibration of the 4432 case mix weights and resetting of the universe of LUPA thresholds, HHAs face multiple disruptions in operations that will affect patient access to care and the level of services available. The impact is not conjecture. Instead, it is a prognosis based on over a decade of experiences since 2011.

Significant Shifts in Wage Index Values Add to the Destabilization of the Home Health Benefit

Once again, the changes in wage index values significantly contribute to the instability on access to the home health benefit. As CMS well knows, HHAs are relegated to the pre-rural floor, pre-geographic reclassification inpatient hospital wage index while HHAs compete with hospitals that are subject to a different wage index for the same clinical and administrative staff. For 2024, CMS implemented a recalibration of the assigned wage index values, but also a resetting of the labor percentage of payment rates affected by the wage index. For 2025, in addition to the usual swings in the wage index for HHAs, CMS proposes to modify the county-level designations in CBSAs and rural areas. Since the home health NPRM was issued, CMS finalized these changes for other health care sectors operating on a federal fiscal year basis. As such, the disruptive effect of the proposed wage index changes

for home health can reasonably be presumed to be the reality for 2025 in home health services. These changes add to the complications wrought by the proposed rate reduction and other payment-affecting proposals.

The ALLIANCE compared the current 2024 wage index values with the proposed values post-5% cap for 2025, See, Appendix A attached).

Home Health Providers Significantly Impacted by Wage Index Change in CY 2025

Count	Number
Counties with wage index value change >/= -0.02	597
Counties with wage index value change >/= -0.03	370
Counties with wage index value change >/= -0.04	246
Counties with wage index value change >/= -0.05	71
Counties with wage index value change >/= -0.06	27
Counties with wage index value change >/= -0.07	9
Counties with wage index value change >/= -0.08	5
Counties with wage index value change >/= -0.09	2

The ALLIANCE recommends that CMS consider the impact of the wage index changes in determining whether to use its authority to postpone the proposed PDGM rate cuts to mitigate the expected overall access and care impacts already underway with home health services that will expand in 2025 with all these changes.

Medicare Stands to Lose Out in the HHVBP Demonstration as a Result of Expected Care Changes Triggered by the Proposed Rate Cuts

It was just two years ago that CMS moved to expand the successful Home Health Value Based Purchasing demonstration program from nine states to nationwide application. The ALLIANCE had been a supporter of the program since its initial design and fully supported the expansion. The program stood as one of the few value-based payment experiments to date with Medicare savings millions annually through reduced hospital admissions and more brought about through high quality home health services. CMS estimated that the nationwide expansion would reduce Medicare expenditures by nearly $3.4 billion over five years.

To get that savings takes dedication and innovation by HHAs. That effort also comes with a cost in resources. The proposed rule reducing payment rates by 4.067% and the combined effect of a 5.2% shortfall in the annual inflation update, a modified wage index, and the instabilities coming through case mix weight recalibrations are certain to diminish needed resources to succeed in HHVBP. There is only so much an HHA can do to produce the highest quality of care when the resources needed to deliver care are reduced. While we expect that HHAs will continue to provide an incredibly high quality of care as they have done following other rate reductions, we believe that they have reached a breaking point financially. As noted above, as rates of payment are decreased, access to care and the level of care available also decrease. These changes are bound to affect patient outcomes and the success of HHVBP.

The proposed rate reduction may be viewed by some as CMS's lack of respect for the value of home health services, which is at odds with the objective evidence in HHVBP that home health care

brings a dynamic value to Medicare and the patients its serves. The ALLIANCE believes that CMS maintains an understanding of the value of home health services and will recognize the need to preserve that value by postponing the proposed rate cut in 2025.

The ALLIANCE Maintains That the Methodology Applied by CMS to Determine Whether PDGM Is Budget Neutral Is Noncompliant with the Statutory Mandate

In the 2022 and 2023 HHPPS rulemaking, the ALLIANCE strenuously expressed its view that the budget neutrality assessment methodology used by CMS was fatally flawed both logically and under Medicare law. That view was supported by two independent legal analyses from highly respected law firms that included attorneys formerly with the CMS/HHS Office of General Counsel. The ALLIANCE will not repeat all the arguments presented to support that position.

While the U.S. District Court for the District of Columbia dismissed the case based on failure to exhaust the remedy of seeking expedited judicial review, the matter will be eventually refiled once that administrative step concludes. However, with the normal time involved in administrative appeals and the normal pace of litigation, it is unexpected that the matter will be resolved prior to January 1. 2025 effective date of the Final Rule that comes out of the pending proposed rule. For that reason, The ALLIANCE respectfully requests that CMS use its authority under 42 USC 1395fff to postpone the proposed 4.067% rate cut as the great harm outlined above must be avoided.

RECOMMENDATIONS:

1. **CMS should postpone application of any permanent adjustments related to PDGM budget neutrality to preserve current access to home health services and the scope of care available.**
2. **CMS should maintain its proposed position to withhold any part of the PDGM budget neutrality temporary adjustments in 2025.**
3. **CMS should recognize the disruptive and permanent financial impact of its forecasting error with respect to the annual Market Basket Index updates from 2021 and 2022 and implement a one-time adjustment to account for the 5.2% forecasting error.**
4. **CMS should consider the negative and disruptive financial impacts of its proposed wage index changes and case mix weight recalibrations on care access as it finalizes the 2025 payment rates and any systemic reforms.**

NON-PAYMENT PROVISIONS

III. Home Health Quality Reporting Program (HH QRP)

D. Proposal To Collect Four New Items as Standardized Patient Assessment Data Elements and Modify One Item Collected as a Standardized Patient Assessment Data Element Beginning With the CY 2027 HH QRP.

CMS proposes collecting one item that addresses living situation, two food items, and one for utilities, along with a proposal to modify the currently collected transportation assessment item using the Outcome and Assessment Information Set (OASIS) data set. The ALLIANCE supports collecting these additional social determinants of health (SDOH) data items. Although HHAs consider these SDOH for effective care planning, there is no standardized mechanism for collecting and reporting the data, which could provide valuable information for HH QRP and other federal programs. CMS might want to

consider including in future rulemaking the AHC HRSN core questions screening tool within the post-acute care (PAC) assessment instruments if there are plans to continue to propose and adopt items from the tool.

However, we have concerns with the frequency that CMS has modified the HH QRP necessitating updates to the OASIS data set over the last several years. The addition of the proposed new and modified items will require yet another revision of the OASIS data set to be issued sometime in 2026 to accommodate the January 1, 2027, proposed collection date. Since the implementation of the Improving Medicare Post - Acute Care Transformation (IMPACT) Act there have been multiple revisions to the OASIS data set to accommodate the development of standardized assessment items and cross setting measures as required by the Act. HHAs have had to adjust to a revised OASIS data set and instructions in 2019, 2020, and 2023[1]. The last revision related to the IMPACT Act requirements was implemented in 2023 (OASIS E). However, CMS continued to implement additional changes to the HH QRP requiring another revision to the OASIS data set, effective January 1, 2025. CMS, again, is proposing additional changes to be implemented in 2027.

Changes to the OASIS data set, even small changes, increase resource use for agencies in terms of staff training, coordination with vendors, and altered productivity associated with the learning curve required for collecting new material. The burden is magnified by increased rate cuts and a protracted workforce shortage. Also, the addition of assessment items without modifications to reduce the data set could result in a very lengthy assessment tool.

An additional concern with frequent changes to the HH QRP is the delay in data reporting for HHAs. HHAs have consistently been the last of the PAC settings subject to the IMPACT Act to have their data set modified for cross setting assessment items and quality measures. CMS has convened technical expert panels to address inclusion/exclusion of cross setting assessment items and measures based on data derived from the other PAC settings without the home health data being accessible to the participants or the home health agencies themselves.

Recommendations: CMS should:

1. **Limit revisions to the OASIS data set to intervals no less than 4 years from the last revision.**
2. **Considered imbedding the AHC-HRSN core question screening tool into the PAC assessments if feasible.**
3. **Monitor additions to the OASIS data set to ensure that the tool is manageable for HHAs.**
4. **Provide sufficient data on HHA quality measures and assessment items prior to implementing any changes in the OASIS data set.**

G. HH QRP Quality Measure Concepts Under Consideration for Future Years— Request for Information (RFI)

CMS is seeking feedback on four measure concepts that are part of the "Universal Foundation" of quality measures. The measures include immunizations (i.e. Adult Immunization Status measure); depression (i.e. Clinical Screening for Depression and Follow-up measure); pain management; and substance use disorder (i.e. Initiation and Engagement of Substance Use Disorder Treatment measure).

[1] Outcome and Assessment Information Set OASIS-E1 Manual, Centers for Medicare & Medicaid Services, effective 01/01/2025, https://www.cms.gov/files/document/draft-oasis-e1-manual-04-28-2024.pdf

Immunization - Adult Immunization Status measure:

The recommended measure for the immunization concept includes the following vaccine rates and reasons for not receiving the vaccine.

> Four individual vaccine rates: 1. Influenza rate: Beneficiaries who received an influenza vaccine on or between July 1 of the year prior to the Measurement Period and June 30 of the Measurement Period. 2. Td/Tdap rate: a. Beneficiaries who received at least one Td vaccine or one Tdap vaccine between nine years prior to the start of the Measurement Period and the end of the Measurement Period, or b. Members with a history of at least one of the following contraindications any time before or during the Measurement Period: i. Anaphylaxis due to the diphtheria, tetanus, or pertussis vaccine. ii. Encephalitis due to the diphtheria, tetanus, or pertussis vaccine. 3. Zoster rate: Beneficiaries who received at least one dose of the herpes zoster live vaccine or two doses of the herpes zoster recombinant vaccine at least 28 days apart, anytime on or after the beneficiary's 50th birthday and before or during the Measurement Period, or beneficiaries with anaphylaxis due to the herpes zoster vaccine any time before or during the measurement period. 4. Pneumococcal rate. Beneficiaries who were administered at least one dose of adult pneumococcal vaccine on or after their 19th birthday and before or during the measurement period, or beneficiaries with anaphylaxis due to the pneumococcal vaccine any time before or during the measurement period.

HHAs would not have access to information on the multiple vaccination status of patients without a tremendous amount of research across a patient's medical records and /or interviews with practitioners familiar with the patient. HHAs will likely have to rely on the patient's recall of their vaccination status, leading to inaccurate or misleading responses. The burden for HHAs to collect multiple vaccine rates far outweighs any benefit that could be derived from collecting the information. Additionally, many of the provider representatives on the Post-Acute Care (PAC) and Hospice Quality Reporting Program Cross-Setting Technical Expert Panel[2] did not support the measure for the reasons associated with the burden to collect the information. Therefore, we believe that the measure concept, as proposed, is not appropriate for the home health setting from a practicable standpoint.

Recommendation: CMS should not consider including in the HH QRP the "Adult Immunization Status" measure, or any similar measure related to vaccinations that requires extensive review of data sources.

Depression- (i.e. Clinical Screening for Depression and Follow-up measure)

The typical HHA is not set up to treat patients presenting with depression. Interventions to address a positive depression screen would not be within the HHAs control to facilitate without significant resources and an infrastructure to address a depression diagnosis. Additionally, home health patients are often discharged from services before any outcomes through community referrals can be realized.

If CMS were to include a measure for depression screening and follow-up, the follow-up would need to be limited to a referral to the patient's PCP for further interventions. The Clinical Screening for Depression and Follow-up measure or similar measure that CMS is considering is one that is used for

[2] Standing Technical Expert Panel for the Development, Evaluation, and Maintenance of Post-Acute Care (PAC) and Hospice Quality Reporting Program (QRP) Measurement Sets Summary Report. https://www.cms.gov/files/document/december-2023-pac-and-hospice-cross-setting-tep-summary-report.pdf-3

individual practitioners who have the expertise and authority to prescribe pharmacological interventions and have a relationship with the patient that supports the necessary follow-up for such interventions. As stated above, HHAs do not have a consistent relationship with most patients that would allow for the HHA to treat the patient. Unless an HHA specializes in the delivery of psychiatric nursing care it does not have staff with the training and expertise necessary to determine if a referral to a psychiatrist, psychologist, mental health counselor or primary care physician is most appropriate. Additionally, HHAs provide care to patients for an average of 3.1 episodes[3] which is conducive to the necessary monitoring and follow-up for pharmacological interventions. HHAs cannot be expected to provide intervention aimed directly at treating depression such as pharmacological interventions or other follow-up that involves long term planning.

Recommendation: CMS must consider the limitations for HHAs to address a depression diagnosis when considering the measure concept for the HH QRP

Substance use disorder (i.e. Initiation and Engagement of Substance Use Disorder Treatment measure).

Like the depression diagnosis, HHAs are not set up to address patients with a substance use disorder (SUD), either as a primary or secondary diagnosis. HHAs are even less likely to accept a patient onto service with an active SUD due to their inability to effectively provide interventions or ensure that community support is available for the treatment of the disorder. Patients with a SUD require interventions provided by specially trained clinicians to treat SUD, along with intensive therapies. There is a known shortage of these clinicians and programs within most communities, and the typical HHA does not have specialty trained clinicians on staff. HHAs would have limited control over the availability of such programs much less the interventions provided. Additionally, there is no data source currently available that captures SUD and interventions for home health patients, therefore, an added burden will be created for agencies to collect and report data needed for the measure concept.

As such, a measure concept for patients with SUD in the home health setting is not appropriate, particularly as described in the suggested measure for this concept.

Initiation and Engagement of Substance Use Disorder Treatment -measure description

1. Percentage of patients 13 years of age and older with a new substance use disorder (SUD) episode who received the following (Two rates are reported):
    a. Percentage of patients who initiated treatment, including either an intervention or medication for the treatment of SUD, within 14 days of the new SUD episode.
    b. Percentage of patients who engaged in ongoing treatment, including two additional interventions or short-term medications, or one long-term medication for the treatment of SUD, within 34 days of the initiation.

Recommendation: CMS should not move forward with a measure concept related to SUD for inclusion in the HH QRP.

Pain management

The ALLIANCE supports performance measures around pain management and has relevance for home health patients. However, CMS removed the improvement in pain management measure from the HH QRP in 2020 due to the opioid crisis. Therefore, it is unclear what CMS is seeking in terms of a pain management performance measure in the current environment.

[3] Home Care Chartbook, 2023. https://researchinstituteforhomecare.org/wp-content/uploads/Final-RIHC-Chartbook-2023-1.pdf

IV. The Expanded Home Health Value Based Purchasing (HHVBP) Model
B. Request for Information on Future Performance Measure Concepts for the Expanded HHVBP Model

CMS is seeking information on four measure concepts for inclusion in the HHVBP: family caregiver measure; falls with injury (claims-based) measure; Medicare Spending per Beneficiary measure; and function measures to complement existing cross-setting Discharge (DC) Function measure:

Family Caregiver Measure

The measure would address whether the needs of caregivers for home health patients have been met. CMS does not provide much information on exactly what is to be measured and how this measure would be constructed. Therefore, it is difficult to comment in support of the measure concept. The immediate concern is the additional burden around data collection for the measure. CMS would likely need to revise the standardized assessment tool or modify the HH CAHPs survey, which are already lengthy tools, for collecting and reporting of the data. Additionally, an HHA's focus is on the care of the patient and not the needs of the caregiver. Further, it is unknown if a measure can be developed that accurately reflects whether a caregiver's needs have been met. It is also questionable whether a measure can be developed that will allow for accurate comparisons among HHAs.

Recommendation: CMS must consider the complexity and potential burden for data collection when developing a measure to address the needs of the family caregivers for home health patients.

Fall with injury (Claims Based) measure

The ALLIANCE has the same concern with a potential claims-based measure for falls as it does with the OASIS based measure. The falls with injury measure (claims or OASIS based) does not take into consideration the nature of home health services. Care is provided on an intermittent basis with the focus on the home environment. The measure will capture a fall with injury anytime during the home health episode irrespective of whether the HHA had any control over the patient's movements. For example, the patient falls while outside the home, such as on the way to the physician's office. Fall prevention programs aimed at safety in the home for a particular patient might not be transferable to the general community setting.

Recommendation. CMS should not include the falls with injury measure into the HHVBP

Medicare Spending per Beneficiary (MSPB)

It is unclear how CMS intends to use the MSPB measure in the HHVBP. It is important to note that the MSPB measure is not a quality measure but a measure for Medicare spending. The measure is assumed to be a measure of efficiency if the HHA's MSPB is less than the Medicare spending of the national median home health agency's MSPB. However, the amount spent on care does not necessarily correlate with the efficient provision of services or the quality of care.

Recommendation: CMS should not include the MSPB measure in the HHVBP.

Function measures to complement existing cross-setting Discharge (DC) Function measure:

Recommendation: The ALLIANCE supports the inclusion of additional function measures in the HHVBP that complement the DC Function measure.

3. Requests for Information
a. RFI Regarding Rehabilitative Therapists Conducting the Initial and Comprehensive Assessment

How do HHAs currently assign staff to conduct the initial assessment and comprehensive assessment? Do HHAs implement specific skill and competency requirements?

HHAs provide all professional staff with additional training specific to the agency policies and procedures, completing the OASIS data set, and applying practice to the home health setting. Additionally, new hires to HHAs would go through some type of orientation and period of supervision to determine their readiness for providing home health services. The orientation and supervision would be tailored to the individual's clinical skills and needs. The clinical professionals (therapist and registered nurses) would be expected to have the skills necessary to conduct an initial and comprehensive assessment of a patient, and therefore when permitted by regulation, be able to conduct the assessments as needed.

What types of mentorships, preceptorship, or training do these disciplines have qualifying them to conduct the initial assessment and comprehensive assessment?

Do the education requirements for entry-level rehabilitative therapist provide them with the skills to perform both the initial assessment and comprehensive assessment? Is this consistent across all the therapy disciplines? How does this compare with entry-level education for nursing staff?

What, if any, potential education or skills gaps may exist for rehabilitative therapists in conducting the initial assessment and comprehensive assessment

This response is intended to address the above questions. In discussion with representatives from the professional associations for physical therapy, occupational therapy, and speech language pathology (American Physical Therapy Association (APTA), American Occupational Therapy Association, (AOTA) and the American Speech-Language Hearing Association (ASHA)) all concurred that the education and training for therapists is aimed to prepare the respective therapists to adequately conduct an initial and comprehensive assessments on home health patients. However, any new graduate (therapist or registered nurse) would not be expected to conduct an initial and comprehensive assessment without participating in a mentorship program and demonstrating that they have the necessary skills to conduct the initial and comprehensive assessments. It is important to note that HHA's typically do not hire new graduate therapists, the preference for new hires, for all disciplines, is to have several years of clinical experience.

Additionally, CMS notes in the proposed rule the specific training required by each discipline. PTs must hold a Doctor of Physical Therapy. Physical therapy entry-level education requires a Doctor of Physical Therapy degree. The Commission on Accreditation in Physical Therapy Education (CAPTE) of American Physical Therapy Association (APTA) accredits entry-level physical therapist education programs. Graduates of these programs are then eligible to take the National Physical Therapy Examination and apply for State licensure. The curriculum includes the general clinical skills required to conduct the initial and comprehensive assessments, both in the identification of immediate care and support needs, as well as the assessment of the patient's general health, psychosocial, functional, cognitive, and pharmacological status, and clinical experience.

.

SLPs must obtain a Certificate of Clinical Competence in Speech-Language Pathology as well as state licensure. SLP must obtain a master's, doctoral, or other recognized post-baccalaureate degree. Once students complete all academic coursework and a graduate student clinical practicum, they must also complete a clinical fellow.

This requires graduation from a program accredited by the Council on Academic Accreditation in Audiology and Speech-Language Pathology (CAA) of the American Speech-Language Hearing

Association (ASHA). Individuals applying for certification in speech-language pathology must have been awarded a master's, doctoral, or other recognized post-baccalaureate degree. Once students complete all academic coursework and a graduate student clinical practicum, they must also complete a clinical fellowship under the supervision of a SLP mentor. The clinical fellowship requires working at least 36 weeks and 1,260 hours and is intended to transition the fellow from a student enrolled in a communication sciences and disorders (CSD) program to an independent provider of speech-language pathology clinical services

OTs must hold either a Master's degree or Doctorate of Occupational Therapy. Education programs are accredited by the Accreditation Council for Occupational Therapy Education (ACOTE) of the AOTA. The ACOTE establishes, approves, and administers educational standards to evaluate occupational therapy educational programs. Graduates of ACOTE accredited programs are eligible to take the National Board for Certification in Occupational Therapy (NBCOT) certification exam and apply for State licensure

What challenges did HHAs and therapists that conducted these assessments under the PHE waiver experience that may have impacted the quality of these assessments?

Home health agencies did not report any challenges with exercising the waiver that expanded the role of therapists in conducting the initial and comprehensive assessments. Nor was there any evidence that quality of care for patients was impacted, suggesting that assessments conducted by therapist were completed accurately.

During the PHE, HHAs relied on therapists to conduct the initial and comprehensive assessments that were existing employees with the agency and had a proven record of clinical competence. New hires for HHAs were virtually nonexistent during the PHE.

For the HHAs and therapists that conducted the initial assessment and comprehensive assessment under the PHE waiver, what were the benefits and were there any unintended consequences of this on patient health and safety?

Because the regulations permit a therapist to conduct the initial and comprehensive assessments if therapy is the only discipline ordered, there has always been precedent for a therapist to conduct the assessments. Long before the PHE, we had advocated for a change in the regulations at §484.55 that provided a similar flexibility as the PHE waiver.

HHAs have overwhelmingly reported that this flexibility was most beneficial during the PHE in their ability to provide care to patients requiring home health services and allowed for the timely initiation of care during unprecedented workforce challenges. HHAs also reported that the waiver was the most widely used of all the PHE waivers.

The application of that waiver into HHA operations during the PHE had the same effect as a three-year demonstration project. During that time there were no adverse effects on the quality of care for home health patients. The waiver was particularly beneficial for patients in rural areas where workforce shortages were, and remain, the most profound.

What challenges, barriers, or other factors, such as workforce shortages, particularly in rural areas, impact rehabilitative therapists and nurses in meeting the needs of patients at the start of care and early in the plan of care?

The recent Medicare payment cuts to HHAs and the workforce shortages have significantly impacted HHAs in rural areas. Rural providers have unique challenges that include longer travel distances between visits and greater competition for qualified workers. Additionally, home health therapists and nurses often serve as the primary source for health evaluations and care delivery in underserved areas. Rural agencies are incurring significant unreimbursed costs to recruit and retain home care professionals and to integrate the use of technologies in agency operations. As a result, agencies have been forced to reduce service areas and refuse admission to patients whose care costs would place an agency at financial risk.

Reports from our rural provider members have sounded the alarm with closures and service area reductions. For example, one agency in rural Nebraska reported having to downsize from serving 13 counties (60-mile radius) to serving only one county (25- mile radius) with a drop in the average daily census (ADC) by 60% since 2020. An agency in rural Vermont has reduced its service area by a third with ADC down by nearly 50% over the past year. The state of Missouri alone has lost 56 home health agencies to closure since August 2017, and 14 of those just in the last 18 months. Sixty-six percent of these closures were in rural areas. It is reasonable to believe that this pattern of care delivery reductions and HHA closures is being repeated throughout rural America.

b. Plan of Care Development and Scope of Services Home Health Patients Receive

What factors influence an HHA's decision on what services to offer as part of its business model and how often do HHAs change the service mix?

Most HHAs do, or strive to, provide all services permitted under the home health benefit. Limitations to the services an agency provides is usually driven by available staff. Agencies report having difficulty recruiting and retaining nurses and home health aides, although we are also hearing of reports of difficulty in recruiting and retaining all discipline types, particularly in rural areas. Therefore, the change in services provided is often dictated by market forces and the availability of certain categories of staff.

What are the common reasons for an HHA to not accept a referral?

HHAs currently report that the most common reason for having to turn down referrals is because of workforce shortages particularly for nurses and home health aides, although HHAs also report difficulty in recruiting all disciplines to some degree. Some providers have reported a significant shortage of therapists in their region particularly in rural areas. Home health patients are being referred to home health with more complex conditions requiring multiple disciplines and the need for front loading of visits that the HHA may not be able to provide. Home health is experiencing a perfect storm of challenges whereby patients have greater needs, but the workforce is at a critical low.

Other reasons include incomplete referrals, particularly where the referral source is not able to identify a community provider to follow the patient or have the wrong provider listed. If the HHA cannot locate a practitioner to follow the patient timely, it places both the patient and agency at risk.

Discharge planners in acute/post-acute care facilities often routinely refer beneficiaries to home health care, irrespective of whether the beneficiary meets coverage criteria. It is not uncommon for inpatient referral sources to include a multitude of services on a referral irrespective of the needs of the patient. The HHA must explain to the beneficiary why they do not meet coverage criteria for some, or all, of the services ordered. Conversely, it is not unusual for HHAs to receive referrals for patients where the needs are too complex to be met in the home.

How do physicians and allowed practitioners use their role in establishing and reviewing the plan of care to ensure patients are receiving the right mix, duration, and frequency of services to meet the measurable outcomes and goals identified by the HHA and the patient?

Physicians and allowed practitioners use their role in establishing and reviewing the POC for adequacy of service delivery based on their professional judgement. HHAs may only provide care as ordered by a physician or allowed practitioner and therefore their role is critical in providing the appropriate mix of disciplines, and duration and frequency of services.

To what extent do physicians rely on HHA clinician evaluations and reports in establishing the mix of services, service frequency, and service duration included in the plan of care?

Community practitioners rely on the HHA's evaluation and reports to inform the plan of care. If a patient is being referred to home health from an acute/post-acute care facility the patient will have been followed by a hospitalist and/or a skilled nursing facility Medical Director who refers the patient to home health. The patient's primary care practitioner (PCP) resumes care only upon the patient's return home. The HHA is usually the first contact the patient has with a community healthcare provider. Therefore, the HHA's evaluation of the patient's condition and care needs relative to the home setting is necessary for effective care planning by the community practitioner. Even when a referral is received from the community PCP, the HHA provides a unique perspective for care planning in the individual's home.

What are the patient and caregiver experiences in receiving nursing, aide, and therapy services when under the care of a home health agency?

Sources for this information include the Home Health Consumer Assessment of Healthcare Providers and Systems (HHCAHPS) survey and the HHA complaint logs.

What additional evidence is available regarding negative outcomes or adverse events that may be attributable to the mix, duration, and service frequency provided by HHAs, including, but not limited to, avoidable hospitalizations?

CMS' discussion on negative outcomes for patients largely addressed those patients who were unable to access home health services timely. CMS cited several publications that addressed the workforce shortages related to the COVID-19 PHE. It is unclear what additional evidence CMS is seeking.

In what ways can referring providers and HHAs improve the referral process?

Improved communication between referral sources and HHAs is needed and should include consistent feedback regarding necessary information needed for a complete referral, coverage criteria for beneficiaries to receive Medicare covered home health services, and the HHAs capacity for acceptance with anticipated referrals.

CMS should support and encourage interoperability of health care information across providers. Interoperability will help facilitate the referral process by allowing HHAs to obtain the necessary information regarding the patient's current condition and care needs along with the past medical history and any social determinants of health that might impact care planning and delivery

What other factors may influence the provision of services that impact the timeliness of services and service initiation?

The increasing cost of providing care along with inadequate reimbursement from the primary sources of payment for home health services and the workforce shortage are not the only stressors on HHA resources. Federal policies that have impacted home health care operations include several recent initiatives that contribute to significant administrative burdens. For example, CMS' policy for the collection and reporting of the OASIS data set on all patients beginning in 2025. This policy alone has an unfunded $267 million price tag for HHAs, and for some HHAs, will have a significant impact on the availability for staff to meet the expanded collection requirement. Additionally, the nationwide Home Health Valiue Based Purchasing program and the Review Choice Demonstration requires HHAs to expend additional resources and disrupts agency operations. CMS must be mindful of the impact policies implemented by federal agencies have on HHA resources and operations.

What additional areas should CMS consider to address HHA patient health and safety concerns?

The problem of diminishing patient access to home health services is not a singular issue nor related solely to home health agency operations. As previously noted, there are multiple factors that are contributing to this systemic problem that need to be individually identified and addressed.

Therefore, CMS should develop a systematic approach to gathering additional information from all stakeholders with ideas for probable solutions. Although this RFI is a step in the right direction, CMS should not stop with this initiative to understand the root causes for patients' inability to access home health services.

VI. Home Health CoP Changes and Long Term (LTC) Requirements for Acute Respiratory Illness Reporting

A. Home Health CoP Changes

CMS claims they have received an increasing number of beneficiary complaints related to the difficulty finding a HHA to accept them for service. Beneficiaries complain that in some instances, HHA services are being altered or diminished from the original plan of care without an accompanying reduction in patient needs or achievement of the measurable outcomes and goals set forth in the plan of care.

In addition to the challenges of finding the right HHA and resultant potential delays in the timely initiation of home health care, CMS also expressed concern that HHAs are at higher risk of overextending their available resources when accepting new patients to HHA services. Delays in service initiation may indicate not only that referral sources have difficulty locating an appropriate HHA, but also that HHAs are accepting patients when and for whom they are not capable of delivering timely care.

To this end, CMS is proposing at § 484.105(i)(1)(i) through (iv), that HHAs would be required to include information regarding the HHA's case load and case mix (that is, the volume and complexity of the patients currently receiving care from the HHA), anticipated needs of the referred prospective patient, the HHA's current staffing levels, and the skills and competencies of the HHA staff. These proposed elements are designed to inform an HHA's assessment of its capacity and determine its suitability to meet the anticipated needs of the prospective patient that has been referred for HHA services.

CMS also proposes at § 484.105(i)(2) that HHAs make public accurate information regarding the services offered by the HHA and any limitations related to the types of specialty services, service duration, or service frequency, and that HHAs review that information annually or as necessary.

The ALLIANCE has concerns with CMS' proposal for the acceptance to service requirements, which include a prescribed acceptance to service policy and a requirement for HHAs to make publicly available information limitations on services, frequency and duration. The concerns CMS expresses around beneficiary access to home health services are not related to an agency's process for accepting admissions. HHAs are not able to accept patients onto service for multiple reasons. For example, available resources, an inability to identify a community practitioner, coverage criteria is not met, care needs are inappropriate for the home setting, to name a few.

However, in the current environment, the main reason beneficiaries are not able to access home health services is because HHAs do not have the capacity to accept all referrals. HHA capacity continues to shrink because of the increasing cost of providing services along with reduced reimbursement from the primary payer sources for home health services, compounded by an ongoing workforce shortage. HHAs are having an even greater time recruiting and retaining staff because of its precarious financial status that does not permit competitive compensation to clinicians in comparison to hospitals and other care settings. An additional challenge for staff recruitment and retention is the nature of delivering care in the home. Home care employees face a combination of occupational health and safety challenges that are not traditionally experienced by health care providers in other care settings.

Research studies have reported a range of 18% to 65% of home healthcare workers experiencing verbal abuse from patients. As many as 41% of home healthcare workers have reported sexual harassment. Between 2.5% and 44% of home healthcare workers have reported being physically assaulted. In one study, home healthcare registered nurses frequently reported demanding patients (34%), aggressive pets (27%), poor lighting in patient homes (21%), neighborhood violence/crime (19%), patients' challenging family members (18%), personal security fears (14%), drug use in patient homes (13%), firearms in the home (9%), and racial/ethnic discrimination (8%). Researchers have also reported that physical or verbal threats of violence were associated with providing home care services to patients with a history of violence or patients with mental illness or substance use disorders.[4] Although HHAs employ various strategies to protect workers these interventions also carry a cost and may not be enough to attract new hires.

In addition to staffing issues, we are hearing increasing reports of HHAs receiving incomplete referrals, particularly referrals for which there is not a community provider to follow the patient. The patient either has not identified a community practitioner or the referral source indicates an incorrect primary care practitioner. Referring patients to a HHA without identifying a community practitioner raises significant safety concerns for patients and liabilities for agencies. Because the HHA must conduct the initial evaluation visit within 48 hours of a patient's return home or referral, many HHAs will not accept these patients even if they believe a physician/practitioner can be identified readily.

CMS also expresses concern that "*delays in service initiation may indicate not only that referral sources have difficulty locating an appropriate HHA, but also that HHAs are accepting patients when and for whom they are not capable of delivering timely care.*" CMS seems to be setting policy on a presumed effect of delays in services, and does not provide any analysis on the scope of the problem or

[4] Felice, S.T., Goodwin, S.G., Oliveri, A., Socias-Morales, C., Castillo, D., & Olawoyin, R. (2021). Home Health care Workers: A Growing and Diverse Workforce at High Risk for Workplace Violence. Centers for Disease Control and Prevention. https://blogs.cdc.gov/niosh-science-blog/2021/09/02/hhc-violence

types of patients that have or may be impacted. CMS only states that they are "*..aware of anecdotal reports of home care agencies not providing care to meet patient needs."*

Although staffing changes can impact services provided and there will always be unforeseen circumstances, in any health care setting, that may alter capacity, HHAs do not routinely admit patients for which they cannot provide services. HHAs have admission policies in place that take into consideration the agency's capacity and clinical skills of staff when determining whether to accept a patient onto service. Additionally, there are standards at §484.60 to ensure HHAs only accept those patients for whom there is a reasonable expectation that the agency will be able to meet the patient's needs.

CMS' proposals for an acceptance to service policy and requiring HHAs make publicly available information on the HHA's service, duration and frequency, do not address the root causes around beneficiary access to home health services, and therefore, will not likely help to mitigate the problem. An acceptance to service policy as proposed will not increase an agency's capacity or help to address many of the other reasons for non-acceptance onto services. In terms of transparency and HHAs making publicly available information on services offered, many agencies list on their website the services they provide. This information is also available on the CMS Care Compare website. Perhaps referral sources are not consulting these resources. Also, there is confusion around what CMS expects regarding the HHA's listing limitations on frequency and duration of services that is to be made publicly available.

Furthermore, we have concerns with CMS' following stated position:

> "*…if an HHA accepts payment from both Medicare and another payment source, ''source X,'' the HHA's referral policy should be applied consistently to referrals for patients having Medicare or ''source X'' as a payment source. It is our position that HHAs should accept or decline patient referrals based solely on clinical considerations and the capacity of the HHA to safely and effectively deliver care to meet patient needs, rather than on financial factors related to the perceived adequacy of the payment rate that the HHA has already voluntarily agreed to accept upon establishment of relationships with its payment sources*."

CMS provides no statutory or regulatory references to support that position. While HHAs must comply with a variety of civil rights laws, there are none that prohibit an HHA from rejecting patients for admission based on a policy that limits admissions to patients with a payment source sufficient to cover the cost of care. Likewise, Medicare provider agreement requirements include no standard that obligates an HHA to admit all Medicare patients except those whose clinical needs cannot be met by that HHA. HHAs must accept Medicare payment as payment in full, but that requirement applies only for patients accepted into care by the HHA. Further, HHAS may not discriminate against Medicare patients in any respect where the restrictive admission standards do not apply equally to other patients.

With the standard referenced by CMS, an HHA could drive itself into bankruptcy where the referred Medicare patient census have a care plan and case mix adjustment categorization that provides reimbursement less than the cost of care. It is recognized that the PDGM prospective payment system will provide reimbursement that in some cases exceeds cost and other cases where the payment amount falls short of care costs. However, if an HHA is faced with a patient census that all or the majority fall into a financial loss outcome, that HHA will cease to exist and be inaccessible to all patients. A Medicare provider agreement is not the equivalent on indentured servitude.

If CMS believes that providers must act consistent with its above-referenced statement, the ALLIANCE respectfully asks that it provide a detailed rationale with full citations to any applicable statutory or regulatory authority or case law.

Recommendations: CMS should:

- **Withdraw its proposal at § 484.105(i)(1)(i) through (iv), for an acceptance to service policy and to require HHAs make publicly available information on services, and limitations on frequency and duration.**
- **Continue to seek feedback from stakeholders to determine the root cause for the decreases in patient access to home health services and develop policy and programs to help address these root causes.**
- **Withdraw the position that HHAs can only decline an admission to care based on a finding that it cannot safely and effectively meet the clinical needs of the patient.**

Conclusion

Thank you for the opportunity to submit these comments. As you will note from our comments, we take this process very seriously and we are confident that CMS will give our comments thoughtful consideration as well. The contents of the proposed rule will have a significant impact on the abilities of HHAs to serve individuals in need of essential home health services.

Very truly yours,

William A. Dombi

118TH CONGRESS
1ST SESSION

S. 2137

To amend title XVIII of the Social Security Act to ensure stability in payments to home health agencies under the Medicare program.

IN THE SENATE OF THE UNITED STATES

JUNE 22, 2023

Ms. STABENOW (for herself and Ms. COLLINS) introduced the following bill; which was read twice and referred to the Committee on Finance

---

A BILL

To amend title XVIII of the Social Security Act to ensure stability in payments to home health agencies under the Medicare program.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the ''Preserving Access to Home Health Act of 2023''.

SEC. 2. ENSURING STABILITY IN PAYMENTS TO HOME HEALTH AGENCIES.

(a) REPEAL OF PERMANENT AND TEMPORARY ADJUSTMENTS.—Section 1895(b)(3) of the Social Security

Act (42 U.S.C. 1395fff(b)(3)) is amended by striking subparagraph (D).

(b) EFFECTIVE DATE; IMPLEMENTATION.—

(1) EFFECTIVE DATE.—The amendment made by subsection (a) shall take effect as if included in the enactment of the Bipartisan Budget Act of 2018 (Public Law 115–123).

(2) IMPLEMENTATION.—The Secretary of Health and Human Services (in this section referred to as the ''Secretary'') shall implement such section 1895(b)(3) for 2024 and subsequent years as if the amendment made by section 51001(a)(2)(B) of division E of the Bipartisan Budget Act of 2018 (Public Law 115–123) (adding such subparagraph (D)) had not been made.

(c) CONSTRUCTION.—Nothing in this section shall be construed as signifying congressional approval or disapproval of the methodology promulgated by the Secretary to implement section 1895(b)(3)(D) of the Social Security Act in the final rule entitled, ''Medicare Program; Calendar Year (CY) 2023 Home Health Prospective Payment System Rate Update; Home Health Quality Reporting Program Requirements; Home Health Value-Based Purchasing Expanded Model Requirements; and Home Infusion Therapy Services Requirements'' published in the

Federal Register on November 4, 2022 (87 Fed. Reg. 66790).

SEC. 3. INTERACTION OF MEDICARE PAYMENT POLICIES WITH HEALTH CARE DELIVERY GENERALLY.

Section 1805(b)(2)(C) of the Social Security Act (42 U.S.C. 1395b–6(b)(2)(C)) is amended—

(1) by striking ''GENERALLY.—Specifically,'' and inserting ''GENERALLY.—

''(i) IN GENERAL.—Specifically,''; and

(2) by adding at the end the following new clause:

''(ii) SPECIAL RULE FOR HOME HEALTH AGENCIES.—

''(I) IN GENERAL.—When conducting the review of home health agency financial performance and its impact on access to care under the original fee-for-service system, the Commission shall—

''(aa) review and report on aggregate trends in spending, utilization, and financial performance under the Medicare Advantage program, the Medicaid program under title XIX (both fee-

for-service and managed care payment models), and other payers for home health agency services;

"(bb) evaluate and consider the impact of all payers on access to care for Medicare beneficiaries; and

"(cc) comprehensively disclose the methodologies used to evaluate and calculate home health agency margins under this title and all other payers, including the process for developing the data used.

Where appropriate, the Commission shall conduct such reviews in consultation with the Medicaid and CHIP Payment and Access Commission established under section 1900.

"(II) MEDICARE HOME HEALTH COST REPORT AMENDMENTS.—For cost reporting periods beginning in 2025 and subsequent years, the Secretary shall have in effect an amended

Medicare home health cost report that collects data on visit utilization and total payments by payer source, including original fee-for-service payments, Medicare Advantage, the Medicaid program under title XIX (both fee-for-service and managed care payment models), and other payers. The Secretary shall make such amended cost reports available to the Commission in the form and manner necessary to conduct the analysis described in subclause (I).

''(III) FINANCIAL DATA.—Prior to the availability of cost report data as described in subclause (II), the Commission shall utilize data on cost and revenues from sources it deems as reliable and valid for purposes of conducting the analysis described in subclause (I).''.

I

118TH CONGRESS
1ST SESSION

H. R. 5159

To amend title XVIII of the Social Security Act to ensure stability in payments to home health agencies under the Medicare program.

IN THE HOUSE OF REPRESENTATIVES

AUGUST 4, 2023

Ms. SEWELL (for herself and Mr. SMITH of Nebraska) introduced the following bill; which was referred to the Committee on Ways and Means, and in addition to the Committee on Energy and Commerce, for a period to be subsequently determined by the Speaker, in each case for consideration of such provisions as fall within the jurisdiction of the committee concerned

---

A BILL

To amend title XVIII of the Social Security Act to ensure stability in payments to home health agencies under the Medicare program.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the ''Preserving Access to Home Health Act of 2023''.

SEC. 2. ENSURING STABILITY IN PAYMENTS TO HOME HEALTH AGENCIES.

(a) REPEAL OF PERMANENT AND TEMPORARY ADJUSTMENTS.—Section 1895(b)(3) of the Social Security Act (42 U.S.C. 1395fff(b)(3)) is amended by striking subparagraph (D).

(b) EFFECTIVE DATE; IMPLEMENTATION.—

(1) EFFECTIVE DATE.—The amendment made by subsection (a) shall take effect as if included in the enactment of the Bipartisan Budget Act of 2018 (Public Law 115–123).

(2) IMPLEMENTATION.—The Secretary of Health and Human Services (in this section referred to as the ''Secretary'') shall implement such section 1895(b)(3) for 2024 and subsequent years as if the amendment made by section 51001(a)(2)(B) of division E of the Bipartisan Budget Act of 2018 (Public Law 115–123) (adding such subparagraph (D)) had not been made.

(c) CONSTRUCTION.—Nothing in this section shall be construed as signifying congressional approval or disapproval of the methodology promulgated by the Secretary to implement section 1895(b)(3)(D) of the Social Security Act in the final rule entitled, ''Medicare Program; Calendar Year (CY) 2023 Home Health Prospective Payment System Rate Update; Home Health Quality Reporting

Program Requirements; Home Health Value-Based Purchasing Expanded Model Requirements; and Home Infusion Therapy Services Requirements'' published in the Federal Register on November 4, 2022 (87 Fed. Reg. 66790).

SEC. 3. INTERACTION OF MEDICARE PAYMENT POLICIES WITH HEALTH CARE DELIVERY GENERALLY.

Section 1805(b)(2)(C) of the Social Security Act (42 U.S.C. 1395b–6(b)(2)(C)) is amended—

(1) by striking ''GENERALLY.—Specifically,'' and inserting ''GENERALLY.—

''(i) IN GENERAL.—Specifically,''; and

(2) by adding at the end the following new clause:

''(ii) SPECIAL RULE FOR HOME HEALTH AGENCIES.—

''(I) IN GENERAL.—When conducting the review of home health agency financial performance and its impact on access to care under the original fee-for-service system, the Commission shall—

''(aa) review and report on aggregate trends in spending, utilization, and financial perform-

ance under the Medicare Advantage program, the Medicaid program under title XIX (both fee-for-service and managed care payment models), and other payers for home health agency services;

"(bb) evaluate and consider the impact of all payers on access to care for Medicare beneficiaries; and

"(cc) comprehensively disclose the methodologies used to evaluate and calculate home health agency margins under this title and all other payers, including the process for developing the data used.

Where appropriate, the Commission shall conduct such reviews in consultation with the Medicaid and CHIP Payment and Access Commission established under section 1900.

"(II) MEDICARE HOME HEALTH COST REPORT AMENDMENTS.—For

cost reporting periods beginning in 2025 and subsequent years, the Secretary shall have in effect an amended Medicare home health cost report that collects data on visit utilization and total payments by payer source, including original fee-for-service payments, Medicare Advantage, the Medicaid program under title XIX (both fee-for-service and managed care payment models), and other payers. The Secretary shall make such amended cost reports available to the Commission in the form and manner necessary to conduct the analysis described in subclause (I).

''(III) FINANCIAL DATA.—Prior to the availability of cost report data as described in subclause (II), the Commission shall utilize data on cost and revenues from sources it deems as reliable and valid for purposes of conducting the analysis described in subclause (I).''.

○

Home Health Certification/Recertification Requirements

To qualify for the Medicare home health benefit, under §§1814(a)(2)(C) and 1835(a)(2)(A) of the Act, a Medicare beneficiary must meet the following requirements:

- Be confined to the home
- Under the care of a physician or allowed practitioner
- Receiving services under a plan of care established and periodically reviewed by a physician or allowed practitioner
- Need skilled nursing care on an intermittent basis (fewer than 7 days each week or less than 8 hours of each day for periods of 21 days or less) or physical therapy or speech-language pathology
- Have a continuing need for occupational therapy

Confined to Home (Homebound)

An individual shall be considered "confined to the home" (homebound) if the following **two** criteria are met:

Criterion One:

The patient must either:

- Because of illness or injury, need the aid of supportive devices such as crutches, canes, wheelchairs, and walkers; the use of special transportation; or the assistance of another person in order to leave their place of residence.
- Have a condition such that leaving his or her home is medically contraindicated.

If the patient meets one of the criterion one conditions, then the patient **must ALSO** meet two additional requirements defined in criterion two below.

Criterion Two:

- There must exist a normal inability to leave home; AND,
- Leaving home must require a considerable and taxing effort.

Physician/Allowed Practitioner

Allowed practitioners in addition to physicians, can certify and recertify beneficiaries for eligibility, order home health services, and establish and review the care plan. Allowed practitioners are defined at § 484.2 as a physician assistant (PA), nurse practitioner (NP), or clinical nurse specialist (CNS) as defined at this part. NPs, CNSs, and PAs are required to practice in accordance with state law in the state in which the individual performs such services. Physician assistant means an individual as defined at § 410.74(a) and (c). Clinical nurse specialist means an individual as defined at § 410.76(a) and (b), and who is working in collaboration with the physician as defined at § 410.76(c)(3). Nurse practitioner means an individual as defined at § 410.75(a) and (b), and who is working in collaboration with the physician as defined at § 410.75(c)(3).

Content of the Plan of Care

The HHA must be acting upon a physician or allowed practitioner plan of care that meets the requirements of this section for HHA services to be covered. For HHA services to be covered, the individualized plan of care must specify the services necessary to meet the patient-specific needs identified in the comprehensive assessment. In addition, the plan of care must include the identification of the responsible discipline(s) and the frequency and duration of all visits as well as those items listed in 42 CFR 484.60(a) that establish the need for such services. All care provided must be in accordance with the plan of care.

Who Signs the Plan of Care

The physician or allowed practitioner who signs the plan of care must be qualified to sign the certification as described in 42 CFR 424.22.

Timeliness of Signature

The plan of care must be signed and dated by a physician or allowed practitioner as described who meets the certification and recertification requirements of 42 CFR 424.22 and before the claim for each 30-day period for services is submitted for the final percentage payment.

Frequency of Review of the Plan of Care

The plan of care must be reviewed and signed by the physician or allowed practitioner who established the plan of care, in consultation with HHA professional personnel, at least every 60 days. Each review of a patient's plan of care must contain the signature of the physician or allowed practitioner and the date of review.

Needs Skilled Nursing Care on an Intermittent Basis

The patient must need one of the following types of services:

- Skilled nursing care that is:
  - Reasonable and necessary as defined in §40.1
  - Needed on an "intermittent" basis as defined in §40.1.3; and
  - Not solely needed for venipuncture for the purposes of obtaining blood sample as defined in §40.1.2.13; or
- Physical therapy as defined in §40.2.2; or

- Speech-language pathology services as defined in §40.2.3; or
- Have a continuing need for occupational therapy as defined in §§40.2.4.

Physician Certification Including Face to Face (FTF)

The certifying physician must attest to the 5 required elements/certification statement and supply a face-to-face assessment (clinical) documentation which shows evidence of the beneficiary's homebound criteria, skilled need, and primary reason care was being initiated. This assessment must have occurred no more than 90 days prior to the SOC, or 30 days after.

Initial certification

Initial certification is considered to be anytime that a Start of Care (SOC) OASIS is completed to initiate care. In such instances, a physician must certify (5 elements) (attest) that:

- The home health services are or were needed because the patient is or was confined to the home as defined in the CMS Medicare Benefit Policy Manual (Pub. 100-02), chapter 7, §30.1.1.
- The patient needs or needed skilled nursing services on an intermittent basis or physical therapy, or speech-language pathology services.
- A plan of care has been established and is periodically reviewed by a physician or allowed practitioner.
- The services are or were furnished while the patient is or was under the care of a physician or allowed practitioner.
- A face-to-face encounter occurred no more than 90 days prior to or within 30 days after the start of the home health care, was related to the primary reason the patient requires home health services and was performed by a physician or non-physician practitioner. The certifying physician or allowed practitioner must also document the date of the encounter.

Note: If the patient is starting home health directly after discharge from an acute/post-acute care setting where the physician or allowed practitioner, with privileges, that cared for the patient in that setting is certifying the patient's eligibility for the home health benefit, but will not be following the patient after discharge, then the certifying physician or allowed practitioner must identify the community physician or allowed practitioner who will be following the patient after discharge.

Face-to-Face Encounter

As part of the certification of patient eligibility for the Medicare home health benefit, a face-to-face encounter with the patient must be performed by the certifying physician or allowed practitioner himself or herself, a physician or allowed practitioner that cared for the patient in the acute or post-acute care facility (with privileges who cared for the patient in an acute or post-acute care facility from which the patient was directly admitted to home health) or an allowed non-physician practitioner (NPP).

NPPs allowed to perform the encounter:

A nurse practitioner or a clinical nurse specialist working in accordance with State law and in collaboration with the certifying physician or in collaboration with an acute or post-acute care physician, with privileges, who cared for the patient in the acute or post-acute care facility from which the patient was directly admitted to home health.

A certified nurse midwife, as authorized by State law, under the supervision of the certifying physician or under the supervision of an acute or post-acute care physician with privileges who cared for the patient in the acute or post-acute care facility from which the patient was directly admitted to home health.

A physician assistant under the supervision of the certifying physician or under the supervision of an acute or post-acute care physician with privileges who cared for the patient in the acute or post-acute care facility from which the patient was directly admitted to home health.

The physician or allowed practitioner that performed the required face-to-face encounter must sign the certification of eligibility unless the patient is directly admitted to home health care from an acute or post-acute care facility and the encounter was performed by a physician or allowed practitioner in such setting.

Timeframe Requirements

The encounter must occur no more than 90 days prior to the home health start of care date or within 30 days after the start of care.

Physician Recertification

A physician's recertification is required at least every 60 days when there is a need for continuous home health care after an initial 60-day episode. Recertification should occur at the time the plan of care is reviewed and must be signed and dated by the physician who reviews the plan of care.

For recertification of home health services, the physician or allowed practitioner must certify (attest) that the home health services are or were needed because the patient is or was confined to the home as defined in §30.1. The patient needs or needed skilled nursing services on an intermittent basis (other than solely venipuncture for the purposes of obtaining a blood sample), or physical therapy, or speech-language pathology services; or continues to need occupational therapy, a plan of care has been established and is periodically reviewed by a physician or allowed practitioner; and the services are or were furnished while the patient is or was under the care of a physician or allowed practitioner.

Who May Sign the Certification or Recertification

The physician or allowed practitioner who signs the certification or recertification must be permitted to do so by 42 CFR 424.22. A physician or other allowed non-physician practitioner, other than the certifying physician or certifying allowed practitioner who established the home health plan of care, may sign the plan of care or the recertification statement in the absence of the certifying physician or certifying allowed practitioner. This is only permitted when such physician or allowed non-physician practitioner has been authorized to care for the certifying physician's or allowed practitioner's patients in his/her absence. The HHA is responsible for ensuring that the physician or allowed nonphysician practitioner who signs the plan of care and recertification statement was authorized by the physician or allowed practitioner who established the plan of care and completed the certification for his/her patient in his/her absence. The physician or allowed practitioner that performed the required face-to-face encounter must sign the certification of eligibility unless the patient is directly admitted to home health care from an acute or post-acute care facility and the encounter was performed by a physician or allowed practitioner in such setting.

Baltimore, Maryland 21244-1850

Center for Clinical Standards and Quality

Ref: QSO-24-07-HHA

DATE: March 15, 2024

TO: State Survey Agency Directors

FROM: Directors, Quality, Safety & Oversight Group (QSOG) and Survey & Operations Group (SOG)

SUBJECT: Revisions to Home Health Agencies (HHA) – Appendix B of the State Operations Manual

Memorandum Summary

- **Updates to the State Operations Manual (SOM) Appendix B - Guidance for Surveyors: Home Health Agencies –** The Centers for Medicare & Medicaid Services (CMS) is releasing interpretive guidelines and updates to Appendix B of the SOM because several final rules have amended the Home Health Agency (HHA) Conditions of Participation (CoPs). We made conforming revisions to the regulatory tags and interpretive guidelines. We are also combining the HHA survey protocol and interpretive guidelines into one document, updating Level 1 tags, and making clarifications and technical corrections to other guidance areas based on stakeholder feedback.

- **Several previously released S&C, QSO, and Admin Info memos that are now obsolete with the revision of Appendix B.** Memos: Admin Info 19-07, QSO-18-13, QSO-18-25, SC11-11, SC12-15, SC14-14, SC15-51, and SC15-52 are now expired. CMS will note the expiration date on these memos that are currently on the CMS website. This memo and the associated Appendix B update will supersede the expired memos.

Background:

CMS published several final rules which amended the HHA conditions of participation (CoPs):

- *Medicare and Medicaid Programs; Revisions to Requirements for Discharge Planning for Hospitals, Critical Access Hospitals, and Home Health Agencies, and Hospital and Critical Access Hospital Changes to Promote Innovation, Flexibility, and Improvement in Patient Care* (84 FR 51836).
- *Medicare and Medicaid Programs, Basic Health Program, and Exchanges; Additional Policy and Regulatory Revisions in Response to the COVID-19 Public Health Emergency* (85 FR 27550).
- *Medicare and Medicaid Programs; CY 2021 Home Health Prospective Payment System Rate Update* (85 FR 70298).

- *Medicare and Medicaid Programs; CY 2022 Home Health Prospective Payment System Rate Update* (86 FR 62240).

Discussion:
While the primary revisions to Appendix B are the result of the above referenced final rules which amended the CoPs, CMS has also updated the survey protocol, interpretive guidance, and tags. A general summary of the changes follows:

- Retires CMS memos that are no longer applicable or have been incorporated into Appendix B.
- Adds the survey protocol for HHAs to Part I of Appendix B. Appendix B replaces older CMS memos that we are retiring and describes the requirements and procedures for conducting an HHA survey.
- Revises the Level 1 standards that surveyors must assess during a standard survey. Added three Emergency Preparedness tags to Level 1 standards. A partial extended survey is conducted when noncompliance is identified in any Level 1 Standard.
- CMS no longer identifies specific Level 2 standards; instead, when noncompliance with a Level 1 standard is identified, all remaining standards within the relevant CoP are evaluated, and a determination must be made as to the compliance with the condition.
- Revises tags to reflect updated regulatory language based on final rules and adds interpretive guidance where appropriate.
- Consolidates tags to remove redundancy.
- Adds survey procedures to multiple tags to assist surveyors in assessing compliance with the regulatory requirements.
- Adds a cross-reference to Appendix Z for the HHA emergency preparedness tags.
- Makes multiple technical and formatting revisions to fix regulatory citations, acronyms, and tag titles.

The tags in the Internet Quality Improvement and Evaluation System (iQIES) for HHA surveys have been revised and renumbered. The Appendix B interpretive guideline revisions will be reflected in iQIES shortly following the release of this memo.

Surveyor Training:
The HHA regulations at §488.735 require that surveys must be conducted by individuals who meet minimum qualifications prescribed by CMS. In addition, before any State or Federal surveyor may serve on an HHA survey team (except as a trainee), they must have successfully completed the relevant CMS-sponsored Basic HHA Surveyor Training Course.

CMS is updating the existing "Home Health Agency Basic Training" surveyor course on the Quality, Safety & Education Portal (QSEP). We anticipate that the revised surveyor training course will be available in early 2024. Currently, the training is available free of charge through the QSEP website at https://qsep.cms.gov.

Contact:
For questions or concerns relating to this memorandum, please contact HHAsurveyprotocols@cms.hhs.gov.

Effective Date:
Immediately. Please communicate to all appropriate staff within 30 days.

Resources to Improve Quality of Care:

Check out CMS's new Quality in Focus interactive video series. The series of 10–15 minute videos are tailored to specific provider types and intended to reduce the deficiencies most commonly cited during the CMS survey process, like infection control and accident prevention. Reducing these common deficiencies increases the quality of care for people with Medicare and Medicaid.

Learn to:

- *Understand surveyor evaluation criteria*
- *Recognize deficiencies*
- *Incorporate solutions into your facility's standards of care*

See the Quality, Safety, & Education Portal Training Catalog, and select Quality in Focus.

State Operations Manual
Appendix B – Guidance for Surveyors: Home Health Agencies (HHAs)

Table of Contents
(Rev. ADVANCED COPY)

Subpart C--Organizational Environment

§484.100 Condition of participation: Compliance with Federal, State, and local laws and regulations related to health and safety of patients.
§484.102 Condition of participation: Emergency preparedness.
§484.105 Condition of participation: Organization and administration of services.
§484.110 Condition of participation: Clinical records.
§484.115 Condition of participation: Personnel qualifications.

Survey Protocol for Home Health Agencies

Part I
(Rev.)

I. – Introduction

Home health agencies (HHAs) are required to meet the definition of an HHA as stated in section 1861(o) of the Social Security Act (the Act) and comply with the federal requirements set forth in the Medicare Conditions of Participation (CoPs) in order to be certified by the Medicare program. The HHA survey process evaluates compliance with the CoPs set forth at section 1891 of the Act and 42 CFR Part 484 to ensure that the HHA meets minimum health and safety standards.

The HHA survey process incorporates an approach that is patient-focused and outcome-oriented, making it effective and efficient in assessing, monitoring, and evaluating the quality of care delivered by an HHA.

The purpose of the survey protocols and interpretive guidelines (IGs) is to provide a standardized methodology for conducting the survey. Surveyors conduct the HHA survey in accordance with the appropriate protocols, which are intended to promote consistency in the survey process.

Compliance with the CoPs is evaluated from information gathered during observations of the HHA's performance and practices as well as clinical record reviews and interviews with the HHA's patients, patients' caregivers and HHA staff.

All mandatory requirements for HHAs are set forth in relevant provisions of the Social Security Act and in the Code of Federal Regulations (CFR). Although surveyors use the information contained in the IGs to help to make a determination about compliance with the requirements, the IGs are not binding and do not replace or supersede the law or regulations.

The IGs contain authoritative interpretations and clarification of statutory and regulatory requirements and are used to assist surveyors in making determinations about an HHA's compliance, however IGs may not be used alone as the sole basis for a citation.

A. Survey Team Size and Composition

Surveyor qualifications are specified at 42 CFR §488.735. Surveyors must successfully complete the Centers for Medicare & Medicaid Services (CMS)-sponsored Basic HHA Surveyor Training Course and any associated course prerequisites before they may serve on an HHA survey team (except as a trainee). Surveyor trainees may participate in an HHA survey under the supervision of an experienced surveyor. Each HHA survey team must include at least one Registered Nurse (RN).

The survey team size will vary depending on the size of the agency. Survey team size is determined by the State Survey Agency (SA) (or the CMS Location for federal teams) and influenced by the following factors:

- *The HHA patient census, number of unduplicated admissions, and number of branches at the time of the last survey;*
- *A pattern of past serious deficiencies or complaints.*

Home health agency surveys will also vary in duration, based on the patient census, the number of branches and their locations, number of home visits and travel time, as well as the number and complexity of concerns that are identified during the survey.

Prohibition of Conflicts of Interest

Prior to finalizing the survey team, SAs, federal teams, and Accreditation Organizations (AO) must ensure that no conflicts of interest are present between surveyors and the HHA being surveyed. Section 488.735(b) sets out the circumstances that would disqualify a surveyor from surveying a particular agency.

Any of the following circumstances disqualifies a surveyor from surveying an HHA.

- *The surveyor currently works for, or, within the past two years, has worked with the HHA to be surveyed as a direct employee, employment agency staff at the agency, or officer, consultant, or agent for the agency to be surveyed.*
- *The surveyor has a financial interest or an ownership interest in the HHA to be surveyed.*
- *The surveyor has a family member who has a relationship with the HHA to be surveyed.*
- *The surveyor has an immediate family member who is a patient of the HHA to be surveyed.*

B. Types of Home Health Agency Surveys

All agencies that seek to participate or are participating as HHAs in Medicare are subject to the following unannounced surveys:

1. Initial Certification Survey

Initial certification surveys are conducted when an agency seeks to participate in the Medicare program as an HHA. SAs or AOs with CMS deeming authority, may conduct the initial certification survey. The initial certification survey reviews all CoPs for compliance with the requirements.

Before the initial certification survey can be conducted, the prospective HHA must obtain Medicare Administrative Contractor (MAC) approval of the application for enrollment (CMS 855-A). The HHA must also meet the following criteria for an initial survey listed below:

- *Provide skilled nursing and at least one other therapeutic service (physical therapy, speech language pathology, occupational therapy, medical social services or home health aide) - See §484.105(f)(1); and*
- *Have provided care to a minimum of 10 skilled patients receiving care (not required to be Medicare beneficiaries) that is consistent with the CoPs. At least 7 of the 10 required patients should be receiving skilled care from the prospective HHA at the time of the initial certification survey. If the prospective HHA has not provided skilled care to at least 10 patients, the SA or the AO must contact the CMS Location to determine if the agency is in a medically underserved area (MUA). In making such a determination, the CMS locations may use the MUA Find search tool (https://data.hrsa.gov/tools/shortage-area/mua-find) developed by the Health Resources & Services Administration (HRSA). In this situation, the CMS Location may reduce the minimum number of skilled patients from 10 to 5. In such situations, at least 2 of the 5 required patients should be receiving skilled care from the prospective HHA at the time of the initial Medicare survey.*

Change of Ownership (CHOW)

HHAs that undergo a change in majority ownership by sale within three years of the effective date of its initial Medicare enrollment, or within three years of its most recent change in majority ownership, must enroll in the Medicare program as a new HHA provider (initial certification) under 42 CFR §424.550(b)(1) unless an exception under §424.550(b)(2) applies. Therefore, the HHA must undergo an initial certification survey by the SA or an AO with deeming authority. This is necessary to ensure that newly-sold HHAs are compliant with the CoPs.

2. Recertification Survey

Each HHA must be surveyed not later than 36 months after the last day of the previous standard survey as specified in 42 CFR §488.730. Recertification surveys begin as a standard survey, but may, as needed, be converted to a partial extended or an extended survey as outlined below in Part I, Section C. Survey Protocols: Standard, Partial Extended, and Extended Surveys.

3. Abbreviated Standard Survey

The abbreviated standard survey is a highly focused survey that evaluates an HHA's compliance with specific standards within a CoP or the CoP itself, as determined by the reason or purpose of the survey. An abbreviated standard survey may be based on complaints received, a change of ownership or management, or other indicators of specific concern such as reapplication for Medicare billing privileges following a deactivation.

Types of Abbreviated standard surveys include:

a. Complaint Survey (Investigation)

A complaint investigation is conducted to investigate specific allegations of noncompliance. Refer to the State Operations Manual (SOM), Chapter 5, for additional guidance regarding complaint surveys.

b. Post-Survey Revisit (Follow-up Survey)

When deficiencies have been cited during any type of survey, the surveyor may, as necessary, conduct a post-survey revisit to determine if the agency has made significant corrections to meet the requirements for participation for those cited deficiencies. However, the existence of condition-level deficiencies in any CoP requires an onsite post-survey revisit to determine if the HHA has corrected these deficiencies. See also, SOM, Chapter 2, for information on revisit surveys.

4. Validation Survey for Deemed HHAs

Section 1865(a)(1) of the Act permits providers and suppliers "accredited" by a CMS-approved program of a national AO to be exempt from routine surveys by SAs to determine compliance with CoPs if they apply for deemed status. These deemed status HHAs may be subject to validation surveys authorized by CMS, as a component of CMS's oversight of an AO's deeming program.

C. Survey Protocols: Standard, Partial Extended, and Extended Surveys

Section 1891(c)(2) of the Act establishes the requirements for surveying HHAs to determine whether they meet the Medicare conditions of participation. These requirements are reflected in the definitions at 42 CFR §488.705 for the standard survey, the partial extended survey, and extended survey as well as in the regulations at 42 CFR part 488, Subpart I.

1. Standard Survey

CMS has identified a select number of standards, called Level 1 standards, most closely related to the agency's ability to deliver quality patient care and services as required under the CoPs. Compliance with these Level 1 standards is associated with positive outcomes for patient care. ***See Table 1 for the Level 1 standards.***

The standard survey focuses on the Level 1 standards and utilizes information from clinical record reviews, observational home visits, and patient and staff interviews. Staff interviews are conducted as indicated to gain more information based on the findings from other information gathering tasks.

If no deficiencies are identified during home visits, clinical record reviews, and interviews with patients and staff, and no other concerns are identified, the HHA is considered to be compliant with the CoPs. Surveyors may conclude the survey and exit the HHA.

When noncompliance is identified with any Level 1 standard, the survey must be expanded to a partial extended survey to further investigate the noncompliance. If it is obvious during a survey

that noncompliance exists at the condition-level, the surveyor may immediately advance to an extended survey that examines all conditions of participation. The requirement to encode and transmit Outcome and Assessment Information Set (OASIS) data (§484.45(a)) is not designated as a Level 1 standard, however it is evaluated during the pre-survey preparation. A deficiency cited for this requirement does not trigger a partial extended or extended survey.

2. Partial Extended Survey

A partial extended survey is conducted when noncompliance is identified in any Level 1 standard. CMS no longer identifies specific Level 2 standards, instead, all remaining standards within the CoP that contains a Level 1 standard deficiency are evaluated and a determination must be made as to the compliance with the condition.

3. Extended Survey

Substandard care means noncompliance with one or more of the eight CoPs reviewed in the standard survey, including deficiencies which could result in actual or potential harm to patients of the HHA (see Table 1). When a standard or partial extended survey reveals substandard care, the surveyor must extend the survey to review all 15 CoPs. The extended survey may be conducted at any time at the discretion of the AO, SA or CMS Location, but must always be conducted when substandard care is identified.

The extended survey should be initiated immediately upon a finding of substandard care. Unless there are extenuating circumstances (for example, weather, scheduling, etc.), the extended survey should be completed without interruption. However, no longer than 14 calendar days can lapse before the extended survey is completed. For example, when a complaint investigation identifies condition-level noncompliance, the extended survey must be completed within 14 days.

Noncompliance with Requirements other than Level 1 Standards during the Standard or Partial Extended Survey

A surveyor may discover noncompliance unrelated to Level 1 standards during a standard or partially extended survey. In this case, the surveyor would determine any additional standards and conditions to examine based on findings of noncompliance. If noncompliance is identified in a non-Level 1 standard, the finding is documented on the Form CMS -2567 and the survey may continue as a standard survey.

Condition-level non-compliance in CoPs that do not contain Level 1 standards does not trigger an extended survey. However, at the discretion of the SA or CMS Location, the survey may be elevated to an extended survey at any time.

Part II – The Survey Tasks

The HHA survey process consists of seven standard tasks, listed below:

- *Task 1 Pre-Survey Preparation;*
- *Task 2 Entrance Conference;*
- *Task 3 Survey Sample Selection;*
- *Task 4 Information Gathering*
- *Task 5 Preliminary Decision Making and Analysis of Findings;*
- *Task 6 Exit Conference; and*
- *Task 7 Post-Survey Activities.*

Task 1 - Pre-Survey Preparation

The objectives of the pre-survey preparation are to review historical information about the HHA that may assist in identifying areas of potential concern during the survey and to establish the plan for the logistics of the survey. The primary pre-survey activities include:

A. Reviewing background information about the HHA;

B. Generating and printing OASIS Reports; and

C. Printing surveyor worksheets.

A. Reviewing Background Information

In preparation for the survey/resurvey, review documents of record including licensure records, previous survey reports including complaint investigations, media reports about the facility, and other publicly available information about the facility (e.g., the HHA's website; CMS Care Compare – HHAs). The background material that is reviewed in the SA and AO's files assists in determining the composition of the survey team and the time that may be required for the survey, as well as identifying potential concerns for a focused review. Review the following files:

- *The most recent form CMS-1572, Home Health Agency Survey Report; this provides information of the HHA from the last survey conducted as well as general information such as location, name of the administrator, staffing, services provided, and branches. This information can assist in the planning of the survey, for example, if branches need to be visited and determining the potential number of home visits.*
- *The most recent Form CMS-2567, Statement of Deficiencies and Plan of Correction; and*
- *All complaint investigations since the last recertification survey to evaluate for patterns of deficient practice.*

B. OASIS Reports

During the pre-survey preparation, four reports are downloaded from the CMS national data system for review:

1. *The Potentially Avoidable Event Report (12 months);*
2. *The Potentially Avoidable Event Report: Patient Listing (12 months);*
3. *The Agency Patient Related Characteristics Report (12 months); and*
4. *The HHA Error Summary by Agency (12 months).*

The reports are created from OASIS data elements. The requirements at §484.45, Reporting OASIS Information, specify that an HHA transmit OASIS elements to the CMS system. This data is utilized to populate the internet Quality Improvement & Evaluation System (iQIES) and generate reports.

The reports contain information that may assist the surveyor in identifying potential areas of concern that may need to be emphasized during the survey to help focus the survey, as well as identifying potential patients for the survey sample. OASIS coordinators can assist with providing available OASIS reports to surveyors.

1. The Potentially Avoidable Event Report

This report contains outcome measures that address potentially avoidable events, defined as outcomes that may or may not have been influenced by the care and services provided by the HHA. This report is used in conjunction with the Potentially Avoidable Event Patient Listing Report to select patients for closed record review.

2. The Potentially Avoidable Event Patient Listing Report
This report is a companion to the above Potentially Avoidable Event Report and provides the names of the patients who experienced the events noted in that report.

3. The Agency Patient-Related Characteristics (formerly Case Mix) Report
This report compiles several OASIS data elements into one report that provides a high-level overview of the HHA patient demographics, home care diagnoses, and agency statistics. The report displays the types of patients for whom the agency is providing care, their characteristics at the start of care, as well as outcome and discharge information. The agency's data is compared to a national reference sample, and to the HHA's own data from a prior reporting period. This data may inform the active sample selection. For example, the home visit sample may be influenced by high rates of recertification of care or clinically complex patient care services that might require increased coordination of care needs.

4. The HHA Error Summary by Agency Report
This report compiles OASIS submission errors to iQIES. While this report displays any warning or fatal errors encountered in OASIS records processed by iQIES for a user-specified time; the focus for this report should be on one specific error, -3330, "Record Submitted Late: The submission date is more than 30 days after M0090 (Date Assessment Completed) on this new record." The date criteria for this report is the prior calendar year. Any HHA with one or more assessments with error -3330 on this report will result in a citation at G372, Encoding and transmitting OASIS data (§484.45(a)).

C. Surveyor Forms

The forms for HHA surveys include:

- *Home Health Agency Survey Report, Form CMS-1572;*
- *Surveyor Notes Worksheet, Form CMS-807 (optional);*
- *Home Visit Consent Form CMS-36;*
- *HHA Survey Investigation Worksheet: Agency Summary (optional);*
- *HHA Survey Investigation Worksheet: Calendar (optional).*

Task 2 – Entrance Conference

The objectives of this task are to generally inform the HHA administrator or designee of the survey activities that will take place and request specific information that will be needed to

conduct the survey. Surveyors must be professional, organized, prepared, and courteous. The entrance conference should be informative, concise, and brief. If the HHA is not open when the surveyor arrives, the SA should be contacted for further guidance. See also State Operations Manual (SOM) Chapter 2 for additional details on entrance protocol.

Upon entrance, the survey team will:

- *Present identification;*
- *Introduce the survey team to the administrator or designee;*
- *Explain the purpose of the survey; and*
- *Provide the estimated survey duration.*

For all surveys, request assistance with the following from the administrator (or designee):

- *A private space for the survey team to work;*
- *Location of a copier and operation instructions;*
- *An assigned HHA staff person(s) who will be a resource to respond to the surveyor's questions and can obtain information for the surveyor;*
- *HHA staff who are most knowledgeable about clinical supervision, in-service training, and home health aide supervision;*
- *Orientation to the electronic and/or paper clinical records that includes:*
  - *The comprehensive assessment, the plan of care, physician's orders, progress notes and home visits, supervisory visits, case conferences, medication lists, medication administration records;*
  - *How to use electronic health records (EHR);*
  - *The designated individual who will respond to any questions or assist the surveyor as needed in accessing the EHR in a timely fashion; and*
  - *Computer terminals where the surveyors may access the electronic health records, if applicable.*

For a standard survey, request that the HHA provide the following documentation:

- *The number of unduplicated skilled care admissions from the 12 months prior to the survey, including all payer sources and all HHA locations, i.e. parent and all branch locations. The unduplicated skilled admission total is used to determine the survey sample size. Unduplicated means that patients are counted only once in 12 months for the number of skilled care admissions;*
- *A complete list of active skilled care patients (all payer sources) for the parent HHA and its branches containing, at a minimum, the following information for each patient:*
  - *Patient names;*
  - *Patient certification dates (start of care/resumption of care dates);*
  - *Admitting diagnosis;*
  - *Services provided by discipline (i.e. skilled nurse (SN), physical therapy (PT), occupational therapy (OT), speech-language pathology (SLP), or social worker*

(SW));

- *Clinically complex, specialized services or treatments, for example, infusion therapies, pediatrics, anticoagulant therapy management, mechanical ventilation, tracheostomy care, wound care, or pressure ulcer care.*

- *The schedule of home visits that will be performed during the survey for all locations including parent and branches; and*

- *A complete list of all discharged patients in the past six months with start of care and discharge dates, diagnoses, services provided, and the disposition of the patient.*

Request the agency provide the following additional information:

- *Current list of all direct and contracted employees including job title and date of hire;*
- *Whether outpatient therapy is provided at the parent or any of its branches; if so, contact the SA for guidance on including evaluation of the service during the survey;*
- *An updated Form CMS-1572, Home Health Agency Survey Report, by the end of the first day of the survey;*
- *Organizational chart for parent and branches;*
- *Admission packet;*
- *Complaint log; and*
- *Abuse tracking log, if available.*

When an extended survey is conducted, any additional information required may be requested at the time of the entrance (if it is a planned extended survey, e.g. initial), or when the survey is expanded to an extended survey.

- *Home health aide training records and/or competency evaluations and in-service training;*

- *The identity of, and governing body authorization for, the person who is authorized in writing to act on behalf of the administrator;*

- *The Clinical Laboratory Improvement Amendments (CLIA) Certificate of Waiver for the agency and CLIA licenses for clinical laboratories where the agency sends specimens;*

- *The Quality Assessment and Program Improvement (QAPI) program activities and performance improvement projects including infection control; and*

- *The Emergency Preparedness Plan.*

Task 3 – Survey Sample Selection

The objective of this task is to select a case-mix stratified patient sample that represents the range of skilled services provided to a selection of home health patients from all operating locations (parent and branch). "Case-mix" means the sample contains a range of admitting

diagnoses, and "stratified" means the sample includes patients who receive a variety of skilled services including: nursing, physical therapy (PT), speech language pathology (SLP), occupational therapy (OT), medical social services, and home health aide services.

The sample consists of both closed (discharged) and active (current) patients for all payer sources. The active patient sample is comprised of two groups: record review only and record review with home visit.

Documents and Information Utilized for Sample Selection:

- *The list of unduplicated skilled care admissions in the 12 months prior to the survey from all payer sources and all HHA branches. The number of unduplicated skilled admissions determines the total patient sample size;*
- *The complete census of all active (current) skilled care patients (all payer sources) in the parent HHA and all branches;*
- *The list of patients receiving clinically complex services or treatments;*
- *The home visit schedule during the survey for all skilled services in all locations including parent and branches;*
- *The list of all discharged patients in the six months prior to the survey;*
- *iQIES Reports: Potentially Avoidable Event Report and Potentially Avoidable Event Patient Listing Report; and*
- *iQIES Report: Agency Patient-Related Characteristics (Case Mix) Report.*

A. Patient Sample Selection Protocol

Based on the number of unduplicated skilled service admissions, use Table 2, Survey Sample Table (below) to determine the minimum sample size for closed record review, active patient home visit with record review, and active patient record review only. The sample may be expanded per surveyor discretion at any point in the survey as needed to further investigate findings.

If the HHA has had a very low census of skilled admissions in the past 12 months and does not meet the minimum sample size (i.e. less than 7), the surveyor may use the skilled admissions since the last certification survey from which to pull the sample. For instance, if the HHA only has one skilled admission in the past 12 months, the surveyor should extend the period beyond 12 months to obtain additional skilled admissions for review. In these instances, the sample will be reduced to those skilled admissions that are available for review. The sample must, however, include patients receiving skilled services and the surveyor may not substitute non-skilled home health aide personal care observations to complete the home visit patient sample.

Table 2. Survey Sample Table

Number of Unduplicated Skilled Admissions for the Past 12 Months	***Closed Record Review (Discharged)***	***Active Sample: Home Visit with Record Review***	***Active Sample: Record Review Only***	***Total Patient Sample (Minimum)***
Less than 300	*2*	*3*	*2*	*7*
301 - 500	*3*	*4*	*3*	*10*
501 - 700	*4*	*5*	*4*	*13*
701 or more	*5*	*7*	*5*	*17*

For abbreviated surveys (complaint and revisit), surveyors should select at least 3 records for review to ensure the HHA is in compliance with the applicable CoP. Record review and the number of records is dependent upon the nature of the complaint and investigation or revisit follow up and may require more or less than 3 records based on observations, interviews, home visits, etc. Some abbreviated surveys may not require record review if the Medicare condition does not require medical record documentation. For complaint surveys, it is important to note that surveyors must assess the entire CoP related to the complaint allegation and therefore it is not enough to look only at the medical record for the complaint case when conducting a complaint investigation.

If surveyors find the HHA has no patients on the current patient roster (for any payment source) and has not provided care to any patients for twelve months or more, they should discuss with the appropriate CMS location whether continuing the survey is possible. The determination should be made whether to proceed with the survey and lead to possible enforcement actions or to allow the HHA to voluntary terminate based on cessation of business (see also 42 CFR 489.52(b)(3)). Please note that the twelve-month period is guidance to surveyors about when they should contact CMS locations about cessation of services. It does not limit CMS's ability to terminate a provider that has not provided services for a shorter period of time. Pursuant to section 1866(b)(2)(B) of the Act, CMS has the discretion to terminate a provider when it no longer meets the definition of an HHA at section 1861(o)(1). [42 CFR 489.53(a)(1).] CMS has the discretion to decide how long a cessation of services is too long, and may determine that a shorter period is appropriate in some cases.

B. Closed Record Sample Criteria

1. Potentially Avoidable Event Reports Review Procedure

The Potentially Avoidable Event Report and the Potentially Avoidable Event Patient Listing Report are used to select the closed record sample. Potentially avoidable events are outcomes that can be influenced, although not necessarily totally avoided, by following best practices in providing care. Utilize the reports as follows:

- *Review the Potentially Avoidable Event report for all outcomes greater than the national "observation" (language used in the OASIS Case Mix Report);*

- *In areas where the HHA exceeds the national observation, refer to the Potentially Avoidable Event Patient Listing Report to select the patients for the closed record sample; and*
- *Patients listed under one or more measures should be selected for the closed record review sample due to having more potentially avoidable events.*

Request the records for the patients selected from the report after the entrance conference to expedite the retrieval of these clinical records for review.

If there are no patients listed in the Potentially Avoidable Event, Patient Listing Report, or there is an insufficient number of patients to meet the required closed record sample size, complete the closed record sample using the discharged patient list, as well as the complaint log obtained during the entrance conference. When using the discharged patient list provided by the HHA, randomly select the patients from the list who had different discharge dispositions such as hospitalization, transfer to another provider, or routine discharge as planned.

Occasionally, the patients in the Potentially Avoidable Event reports have not yet been discharged from the HHA. When this occurs, consider adding that patient to the active sample, and replace with another patient to complete the closed record sample.

2. Agency Patient-Related Characteristics (Case Mix) Report Review Procedure

Review the Patient Diagnostic Information for:
- *Acute and Chronic Conditions;*
- *Home Care Diagnoses; and*
- *Active Diagnoses.*

Note the diagnoses where the HHA's observation exceeds the national average (as noted in the OASIS Case Mix Report data). For example, identify the type of patients the agency treats on a regular basis, such as orthopedic, neurological, musculoskeletal, wound care, and diabetes mellitus. Consider this information to assist in case mix stratification when selecting a sample that is representative of the HHA's patient population.

C. Active Patient Criteria

The active patient sample includes:
1) Active patient home visits with record review; and
2) Active patient record reviews only.

Use the following criteria for the active patient sample selection:
- *Include patients who receive more than one HHA service to assess for coordination of care across the disciplines;*
  - *The Agency Patient Characteristics Report can provide additional information on the type of patients where the HHA observation exceeds the national average to include in*

the sample.

- *Include patients from all branches of the HHA in addition to the parent location;*
- *Include patients who receive clinically complex services or treatments, for example:*
  - *Infusion therapies;*
  - *Wound and ulcer care, including negative pressure wound therapy;*
  - *Pediatric care;*
  - *Anticoagulant therapy management;*
  - *Diabetes management;*
  - *Congestive heart failure monitoring;*
  - *Enteral and parenteral nutrition;*
  - *Tracheostomy care;*
  - *Bi-level positive airway pressure (BiPap), and other respiratory therapy devices; and/or*
  - *Therapy modalities such as ultrasound and electrical muscle stimulation (e-stim).*

Active Patient Home Visit with Record Review Sample Selection

Surveyors may conduct home visits to any patients of the HHA who have given their permission for the surveyor to directly observe care and services. The surveyor selects the patients according to the sample criteria, rather than the HHA selecting the home visit sample. The home visit sample should represent the variety of services that the HHA provides. Home visits to patients being served by branch locations should be made whenever possible.

Use the Survey Sample Table (Table 2) to determine the number of active patients for home visits with record review. It is recommended to select a few more patients than the number of required home visits to accommodate possible refusals. Provide the HHA with the home visit sample as soon as possible so that the agency may begin to contact the patients to request their permission. Additional home visits may be made to address any concerns initially identified by survey findings.

For a small agency with a low skilled patient census, enough home visits may not be available during the survey to meet the home visit sample requirement. At least one home visit must be conducted to evaluate compliance with the CoPs. Additionally, the surveyor may substitute active record reviews as a first option, or closed records to review for a range of skilled services to meet the minimum sample size.

Record Review Only

Use the same criteria for record review only that is used for the home visit sample. If a home visit cannot be made to all branches, this is the opportunity to include patients from all branch location(s) in the record review sample and expand the sample as needed to ensure that at least one patient from each branch is included in the active sample record review. Select patients who are not receiving a home visit during the survey, but meet the active sample with home visit

criteria.

Task 4: Information Gathering

Information gathering is an organized, systematic, and consistent process designed to assist surveyors to make findings concerning the HHA's compliance with the CoPs during a survey. The information gathering activities in the home health agency survey consist of:

A. *Home Visit and Patient Interview Procedures*

B. *Clinical Record Review Procedures*

C. *Interviews with Agency Staff*

D. *Other HHA Documentation Review*

E. *Guidance for Evaluating Compliance with Level 1 Standards: Home Visit Observation and Interview, Clinical Record Review, and Other HHA Documentation Review*

F. *Home Visit Follow-Up Procedures*

Surveyors gather information by focusing on home visit observations, interviews, and clinical record reviews. Surveyors assess for compliance with the Level 1 standards to determine if patient outcomes were negatively influenced by non-compliance with the CoPs by the HHA. The findings determine whether the survey is elevated to a partial extended or extended survey as well as identifying possible areas for further investigation. Surveyors will validate any findings with additional document review and/or interviews.

The closed clinical record review is a review of agency services and patient care outcomes from admission through discharge. Closed record review differs from active record review in that surveyors will also evaluate whether the discharge and transfer summaries were completed as required per §484.110(a)(6), and evaluate the HHA's compliance with the 60-day recertification of care. The records are assessed for compliance with the CoPs to determine if the agency provided the necessary care and services to meet the patients' health needs.

A. Home Visit and Patient Interview Procedures

<u>Objective of Home Visits</u>

The purpose of the home visit is to evaluate whether the care being provided by the HHA meets the health and safety standards of the Medicare program (i.e., CoPs) and to confirm that the agency follows the patient's plan of care. The home visit is the only opportunity for the surveyor to observe direct care being provided by the HHA personnel and is thus the most important means of information gathering during the HHA survey. The surveyor uses observational and interview skills to assess the HHA's adherence to the requirements.

<u>Planning the Home Visit with the Agency</u>

After sample selection by the survey team, the HHA should contact the patient, family, or caregiver to request permission and make the arrangements for the home visit. If the patient refuses to allow the surveyor to visit, the surveyor should select an alternate patient.

Clinical records should be reviewed prior to and after the home visit. Prior to the home visit, obtain the information most relevant for the home visit, such as copies of the most current version of the plan of care, medication list, and aide instructions.

Conducting Home Visits and Patient Interviews

The surveyor must always be cognizant that as a guest in a patient's home or place of residence, courtesy, respect, and sensitivity to the patient's clinical status (physical and emotional) are necessary. Explain to the patient that the purpose of the visit is to ensure that the care being provided to them by the HHA meets the health and safety standards of the Medicare program and is provided in accordance with the plan of care ordered by the patient's physician or allowed practitioner. Prior to asking the patient to sign the home visit consent, confirm with the beneficiary that the HHA explained that the home visit and interview is voluntary and refusal would not affect their home health benefits.

Ask the patient or caregiver to sign a Consent for Home Visit (Form CMS-36) in a language and manner the individual(s) understands. Provide a copy of the signed consent form to the patient, a copy to the HHA for the patient's clinical record, and retain a copy for the survey file.

Observe, but do not interfere with, the delivery of care and the interactions between the HHA representative and the patient/family and/or caregiver. Home visit observations and the plan of care determine the focus and depth of questions asked of the patient and HHA staff by the surveyor. It may be appropriate to ask questions during patient care if it does not interfere with care or disturb the rapport of the HHA staff with the patient. The surveyor should ask the patient's permission to review the patient's information packet and written information that the HHA provided to the patient at the start of care and subsequent updates. The patient may not be able to locate the information readily, and if that is the case, do not press the issue with the patient and continue the visit.

The surveyor should end the interview or home visit if the patient expressly requests or indicates through body language a desire to conclude the interview or home visit. The surveyor should attempt to address any potential concerns of the patient by inquiring if the surveyor's presence is problematic and reassuring the patient of the role of the observational home visit. The surveyor should be alert to signals from the patient, such as displaying reluctance to speak in front of staff, appearing fatigued or distressed, that may be an indication of an unexpressed concern or unwillingness to participate. Surveyors should remain (if the opportunity presents) after the HHA staff leave to give the patient and family an opportunity to share information with them confidentially.

If conditions in the patient's home raise concerns for the surveyor's physical safety, the surveyor should discontinue the visit.

B. Clinical Record Review Procedures

The clinical record review is used to verify that HHA documentation thoroughly and accurately reflects the care and services provided by the HHA and confirms that services are provided in compliance with the plan of care and CoPs.

The surveyor should review the clinical record only in enough detail prior to the home visit to allow the surveyor to be prepared to observe the care and services that will be provided (e.g. the most current plan of care, medication list, and aide instructions). The surveyor should review the record in more detail after the home visit to address any concerns for non-compliance identified during the home visit and further evaluate the requirements of Level 1 standards included in the standard survey.

C. Interviews with Agency Staff

Interviews provide another method to collect information, and to verify and validate information obtained through observations, record reviews, and/or patient interviews. The depth of the interview and the number of interviewees is determined by the issues identified.

Informal interviews are conducted throughout the duration of the survey. The information obtained from interviews may be used to determine what additional observations, interviews, and record reviews are necessary to determine compliance or noncompliance with the CoPs.

Interviews should be focused on obtaining detailed information regarding a specific event, how a care task was completed or not completed, or action or inaction by the HHA. Ask open-ended questions whenever possible to elicit staff knowledge rather than questions that lead the staff member to certain responses. Interview agency staff, including the administrator, clinical managers, skilled professional staff, home health aides, and other HHA staff, only as necessary, to address concerns identified. For example, if concerns are identified with clinical record confidentiality during transport of records, the surveyor may ask the staff how they transport and secure protected health information while outside the HHA parent or branch office.

D *Other HHA Documentation Review*

When surveyors identify concerns that indicate actual or potential findings of noncompliance, surveyors should review additional documentation to assist the surveyor in making a compliance determination. Non-clinical record materials, such as personnel records, service contracts, policies and procedures, clinical practice guidelines, documentation of home health aide training and/or competency evaluation, documentation of complaint investigation and resolution, CLIA waiver, and/or other materials, are not routinely reviewed unless the surveyor identifies concerns during HHA staff interviews, patient/caregiver interviews, home visits, and clinical record reviews.

E. Home Visit Follow-Up Procedures

If the surveyor has any questions or concerns based on the home visit observation, the agency staff that was observed may also be interviewed following the home visit. Additionally, if the surveyor identifies concerns or potential noncompliance during the home visit, the surveyor may conduct additional record review and staff interviews as necessary to investigate findings.

If the patient or caregiver reports having lodged a complaint, review the complaint log to investigate how the HHA addressed the issue.

F. Additional Survey Considerations

Onsite Review of Approved Branches by the SA During Survey

The Form CMS-1572, the Home Health Agency Survey and Deficiencies Report, includes a field where the HHA indicates the total number of branches and the name and address of each branch location. The surveyor should enter this information regarding the HHA's branches into the national survey data system (iQIES as appropriate) after every survey as part of the survey kit.

As surveys are conducted, SAs, AOs and federal surveyors should verify that the information on branch locations is current and accurate. During a survey, if a surveyor finds that services are being provided from an unapproved location that is not listed on the CMS 1572, the surveyor must investigate this location to determine if it is a CMS-approved branch.

Application of Home Health Agency Conditions of Participation to Patients Who Do Not Receive Skilled Services

In addition to the home health services listed in §1861(m) of the Act, and Medicaid State Plan services identified in §1905(a) of the Act, some Medicare certified HHAs choose to offer non-skilled services through various Medicaid state programs including:

- *Personal care services, such as help with activities of daily living (ADLs) like bathing, dressing, eating, getting in or out of bed, moving around, and using the bathroom;*
- *Housekeeping services;*
- *General household chores; or*
- *Family and caregiver support services.*

The HHA may offer these services to individuals who choose to pay for them privately, and/or individuals who are provided these services from other state programs.

Two standards in the HHA CoP home health aide services, at 42 CFR §484.80, apply to beneficiaries who receive non-skilled services only:

- *42 CFR §484.80(h)(2) - see also G814*
- *42 CFR §484.80(i) - see also G828*

Review of these two requirements during survey is conducted through a separate sample than the sample used to evaluate compliance with skilled services requirements for HHA patients.

HHAs are required, as a part of the patient rights CoP, to advise the patient of the extent to which payment for HHA services may be expected from Medicare or other sources and the extent to which payment may be required from the patient. The HHA should explain to a beneficiary who is ending a Medicare episode and is considering to receive non-skilled services that Medicare does not pay for those services. For additional information, see the interpretive guidance and survey procedures at §484.50.

Agencies Serving Medicaid Waiver and State Plan Patients

*If a Medicare certified HHA provides **skilled** care services to non-Medicare beneficiaries under a Medicaid Waiver or State Plan, the HHA must meet all CoPs for these beneficiaries including the comprehensive assessment and OASIS data reporting requirements.*

Task 5 - Preliminary Decision Making and Analysis of Findings

A. General

The general objectives of this task are to integrate findings, review and analyze all information collected from observations, interviews, and record reviews, and to determine whether the HHA is in compliance with the CoPs. The information analysis process requires surveyors to review the information gathered during the survey and make judgments about the compliance of the HHA. An evaluation of whether a finding constitutes a standard-level deficiency or whether a condition-level deficiency exists should not be made until all necessary information has been collected. Survey activities and investigations including the record review, home visit observations and interviews substantiate and support any findings of non-compliance with the CoPs.

B. Analysis

Guidance for Citing Standard- versus Condition-Level Noncompliance

The regulations at 42 CFR §488.26(b) state in part, "The decision as to whether there is compliance with a particular requirement, condition of participation, or condition for coverage depends upon the manner and degree to which the provider or supplier satisfies the various standards within each condition."

When noncompliance with a particular standard within the CoP is noted, the determination of whether the lack of compliance is at the standard- or condition-level depends upon the nature of the noncompliance – i.e., how serious is the deficiency in terms of its potential or actual harm to patients – and the extent of noncompliance – e.g., how many different regulatory requirements within a CoP are being cited for noncompliance, or how widespread was a given noncompliant practice, etc. One instance of noncompliance with a standard that poses a serious threat to patient health and safety is enough to find condition-level noncompliance. Likewise, when an HHA has multiple standard-level deficiencies in a CoP, the extent of the non-compliance could be enough to find condition-level noncompliance.

When deficiencies are found during a survey, the surveyor should explain the noncompliance to the provider during the Exit Conference. It is not the surveyor's responsibility to provide

consultation on how to fix the deficiencies. Surveyors should maintain their role as representatives of a regulatory agency. Although non-consultative information may be provided to the HHA upon request, the surveyor is not a consultant and may not provide consulting services to the HHA. See also SOM Chapter 2 and 4 for additional information related to the regulatory role of surveyors.

Guidance for Level 1 Standards and Survey Type (Standard, Partial Extended, Extended)

During a standard survey, surveyors review Level 1 standards only. Because the Level 1 standards are identified as those most closely related to the delivery of high-quality patient care, a single finding may support a determination of noncompliance with the standard (i.e., standard level noncompliance), and warrant the move to a partial extended survey to investigate noncompliance at the condition level. However, if it is obvious that the noncompliance exists at the condition-level during a standard survey, the surveyor may immediately advance to an extended survey that examines all conditions of participation without expanding to a partial extended survey first.

The partial extended survey may be conducted at any time at the discretion of CMS, the SA, or AO, but must be conducted when a Level 1 finding indicates that a condition may be out of compliance. During a partial extended survey, all standards within the condition of participation that contains one or more Level 1 standards are evaluated. If a surveyor determines that noncompliance exists at the condition-level during a partial extended survey, the surveyor advances to an extended survey to review all conditions of participation. Advanced CMS Location approval is not required to extend the survey.

An extended survey may be conducted at any time at the discretion of CMS, the SA, or AO, but will always be conducted when substandard care is identified during a survey. Substandard care is defined in §488.705 as noncompliance with one or more conditions of participation identified on a standard survey, including deficiencies that could result in actual or potential harm to patients of an HHA. The HHA standard survey evaluates compliance with eight of the 15 HHA CoPs and noncompliance with any of these eight conditions would constitute substandard care. When substandard care is identified, the extended survey reviews and identifies the HHA's policies, procedures, and practices that produced the substandard care.

The extended survey should be initiated immediately upon finding substandard care. Unless there are extenuating circumstances, the extended survey should be completed without interruption. However, no longer than 14 calendar days may elapse before the extended survey is completed. For example, when a complaint investigation identifies condition-level noncompliance, the extended survey must be completed within 14 days.

If the surveyor identifies or suspects an immediate jeopardy (IJ) situation, they must immediately follow the guidelines in SOM Appendix Q, including use of the IJ template. Immediate jeopardy means a situation in which the provider's or supplier's non-compliance with one or more requirements, conditions of participation, conditions for coverage, or conditions for certification has caused, or is likely to cause, serious injury, harm, impairment, or death to a resident or patient. [see 42 CFR 488.805 Definitions.] As noted in Appendix Q, if an IJ is identified,

surveyors must notify the administrator (or appropriate staff member who has full authority to act on behalf of the entity) that IJ has been identified and provide a copy of the completed IJ template to the entity

Non-Level 1 Deficiencies: *A surveyor may discover noncompliance unrelated to Level 1 standards during a standard or partially extended survey. In this case, the surveyor determines the additional standards and/or conditions to examine based on the finding of noncompliance. If noncompliance is identified in a non-Level 1 standard, the finding is documented on the Form CMS -2567 and the survey may continue as a standard survey. Condition-level noncompliance with CoPs that do not contain Level 1 standards does not trigger an extended survey. However, at the discretion of the SA/CMS location the survey may be elevated to an extended survey at any time.*

The requirement to encode and transmit OASIS data (§484.45(a)), while not a Level 1 standard, is evaluated during a standard survey. Deficiencies cited with this requirement do not trigger a partial or extended survey.

Task 6 - Exit Conference

The purpose of the exit conference is to inform the HHA staff of the observations and preliminary findings of the survey.

Because of ongoing dialogue between the surveyor(s) and HHA staff during the survey, there should be few instances where the HHA is not generally aware of the surveyor concerns prior to the exit conference. If the HHA asks for the specific regulatory basis for a finding of noncompliance, surveyors may provide the preliminary regulatory citation.

Additionally, surveyors will:

- *Conduct the exit conference with the HHA administrator, clinical managers, and other staff invited by the HHA. Clarify and note the names and positions of all HHA personnel or other individuals attending the meeting;*
- *Describe the regulatory requirements that the HHA does not meet and the preliminary findings that substantiate these deficiencies. Do not refer to any specific iQIES software data tag numbers when describing deficiency findings. In the process of writing up the findings the SA or AO will finalize just which tags/regulatory text to cite for each finding, so it would be premature to make such statements during the exit conference;*
- *Present findings regarding citations of deficient practice(s) in a straight forward, understandable way, and in a clear logical sequence. Offer examples to support the findings as appropriate;*
- *Answer questions regarding the findings and accept further pertinent information from the HHA for the surveyors to consider offsite prior to the completion of the Form CMS-2567;*

- *Respond to any HHA procedural questions with accurate survey process information (e.g., the timeframe for receiving Form CMS-2567 and submitting a plan of correction to the SA in response to the written citations); and*
- *Inform the HHA that the Form CMS-2567 will be provided in accordance with the State agency's policy, but generally no later than 10 working days after the exit conference.*

Discontinuation of an Exit Conference

CMS' general policy is to conduct an exit conference at the conclusion of all types of surveys as a courtesy to the provider/supplier and to promote timely remediation of quality of care for safety problems. However, there are some rare situations that justify refusal to conduct or continue an exit conference. For example, as noted in SOM Chapter 2:

> *• Surveyors may refuse to conduct or may discontinue the exit conference if the HHA is represented by an attorney who is present at the conference and the attorney attempts to turn it into an evidentiary hearing; or*
> *• If HHA staff /administration create an environment that is hostile, intimidating, or inconsistent with the informal and preliminary nature of an exit conference.*

Under such circumstances, it is suggested that the surveyor stop the exit conference and call the SA or AO for further direction. If a survey team is on-site, the Team Coordinator should take the above actions.

Recording the Exit Conference

If the facility wishes to audio tape the conference, it must provide two tapes and tape recorders, recording the meeting simultaneously. The surveyor or Team Coordinator should select one of the tapes at the conclusion of the exit conference to take back to the SA/AO. If the recording is electronic, a copy must be submitted to the surveyor immediately upon ending the conference. Videotaping is also permitted, if: 1) the surveyor/team agrees to this, and 2) a copy is provided the surveyor/team at the conclusion of the conference. The surveyor or survey team is under no obligation to consent to videotaping and is not required to offer a reason if it refuses to permit videotaping.

Task 7 – Post-Survey Activities

The general objective of this task is to complete the survey and certification requirements, in accordance with the regulations found at 42 CFR Part 488.

General Procedures

Each SA and CMS location must follow the instructions in the SOM including:

• Timelines for completing each step of the process;
• Responsibilities for completing the Form CMS 2567, "Statement of Deficiencies and Plan of Correction;"
• Notification to the HHA regarding survey results;
• Additional survey activities based on the survey results (e.g., revisit, forwarding documents to the CMS location for further action/direction, such as concurrence with findings for deemed HHAs); and
• Compilation of documents for the HHA's file.

Statement of Deficiencies Report & Plan of Correction

The Statement of Deficiencies Report and Plan of Correction (Form CMS-2567) is the official document that communicates the determination of compliance or noncompliance with federal requirements. Also, it is the form that the HHA will use to submit a plan to achieve compliance. Form CMS-2567 is an official record and is available to the public upon request. See SOM, Chapter 2 for information related to preparation of the Statement of Deficiencies and Plan of Correction. Refer to the document "Principles of Documentation" in SOM Chapter 9, Exhibit 7A, for detailed instructions on completing the Form CMS-2567.

Regulations and Interpretive Guidelines for Home Health Agencies

Subpart A--General Provisions

(Rev.)

G325

(New)

§484.1 Basis and Scope

(a) Basis. This part is based on:

(1) Sections 1861(o) and 1891 of the Act, which establish the conditions that an HHA must meet in order to participate in the Medicare program and which, along with the additional requirements set forth in this part, are considered necessary to ensure the health and safety of patients; and

(2) Section 1861(z) of the Act, which specifies the institutional planning standards that HHAs must meet.

(b) Scope. The provisions of this part serve as the basis for survey activities for the purpose of determining whether an agency meets the requirements for participation in the Medicare program.

Interpretive Guidelines §484.1

To qualify for a provider agreement as a home health agency under Medicare and Medicaid, an entity must meet and continue to meet all the statutory provisions of §1861(o), 1891 and 1861(z) of the Act, including the Condition of Participation (CoP) requirements.

This, in part, means the HHA:

- *is primarily engaged in providing skilled nursing services and other therapeutic services [§1861(o)(1) of the Act; 42 CFR 484.105, Organization and administration of services];*

- *has policies, established by a group of professional personnel (associated with the agency or organization), including one or more physicians and one or more registered professional nurses, to govern the services which it provides, and provides for supervision of such services by a physician or registered professional nurse [§1861(o)(2) of the Act; 42 CFR 484.75, Skilled professional services];*

- *maintains clinical records on all patients [§1861(o)(3) of the Act; 42 CFR 484.110, Clinical records];*

- *for any HHA in a state or local jurisdiction with a law that requires agencies or organizations like HHAs to be licensed, is licensed pursuant to such law, or is approved, by the State or local agency responsible for licensing agencies or organizations of this nature, as meeting the standards established for such licensing [§1861(o)(4) of the Act; 42 CFR 484.100, Compliance with Federal, State and local laws and regulations related to health and safety of patients];*

- *has in effect an overall plan and budget [§1861(o)(5) of the Act; 42 CFR 484.105, Organization and administration of services];*

- *meets the conditions of participation specified in section 1891(a) and such other conditions of participation as the Secretary may find necessary in the interest of the health and safety of individuals who are furnished services by such agency or organization [§1861(o)(6) of the Act; 42 CFR 484.1, Basis and Scope, et seq.];*

- *provides the Secretary with a surety bond [§1861(o)(7) of the Act; 42 CFR Part 489, Subpart F];*

- *meets such additional requirements (including conditions relating to bonding or establishing of escrow accounts as the Secretary finds necessary for the financial security of the program) as the Secretary finds necessary for the effective and efficient operation of the program [§1861(o)(8) of the Act; 42 CFR 484.1, Basis and Scope, et seq.];*

- *except that for purposes of part A "home health agency" shall not include any agency or organization which is primarily for the care and treatment of mental diseases. The Secretary may waive the requirement of a surety bond under paragraph (7) in the case of an agency or organization that provides a comparable surety bond under State law [§1861(o) of the Act; 42 CFR 484.1, Basis and Scope, et seq.].*

CMS is required to determine whether an HHA is complying substantially with the Medicare participation requirements established by the Act and regulations. Section 1866(b)(2)(B) of the Act states in part that a provider's participation agreement may be terminated if CMS determines that "the provider fails substantially to meet the applicable provisions of section 1861." To remain a Medicare participating HHA, the HHA must remain in substantial compliance with all conditions of participation.

No Tag

(Rev.)

§484.2 Definitions.

As used in subparts A, B, and C, of this part--

Allowed practitioner *means a physician assistant, nurse practitioner, or clinical nurse specialist as defined at this part.*

Branch office *means an approved location or site from which a home health agency provides services within a portion of the total geographic area served by the parent agency. The parent home health agency must provide supervision and administrative control of any branch office. It is unnecessary for the branch office to independently meet the conditions of participation as a home health agency.*

Clinical note *means a notation of a contact with a patient that is written, timed, and dated, and which describes signs and symptoms, treatment, drugs administered and the patient's reaction or response, and any changes in physical or emotional condition during a given period of time.*

Clinical nurse specialist *means an individual as defined at §410.76(a) and (b) of this chapter, and who is working in collaboration with the physician as defined at §410.76(c)(3) of this chapter.*

In advance *means that HHA staff must complete the task prior to performing any hands-on care or any patient education.*

Nurse practitioner *means an individual as defined at §410.75(a) and (b) of this chapter, and who is working in collaboration with the physician as defined at §410.75(c)(3) of this chapter.*

Parent home health agency *means the agency that provides direct support and administrative control of a branch.*

Physician *is a doctor of medicine, osteopathy, or podiatric medicine, and who is not precluded from performing this function under paragraph (d) of this section. (A doctor of podiatric medicine may perform only plan of treatment functions that are consistent with the functions he or she is authorized to perform under State law.)*

Physician assistant *means an individual as defined at §410.74(a) and (c) of this chapter.*

Primary home health agency *means the HHA which accepts the initial referral of a patient, and which provides services directly to the patient or via another health care provider under arrangements (as applicable).*

Proprietary agency *means a private, for-profit agency.*

Pseudo patient means a person trained to participate in a role-play situation, or a computer-based mannequin device. A pseudo-patient must be capable of responding to and interacting with the home health aide trainee, and must demonstrate the general characteristics of the primary patient population served by the HHA in key areas such as age, frailty, functional status, and cognitive status.

Public agency *means an agency operated by a state or local government.*

Quality indicator *means a specific, valid, and reliable measure of access, care outcomes, or satisfaction, or a measure of a process of care.*

Representative *means the patient's legal representative, such as a guardian, who makes health-care decisions on the patient's behalf, or a patient-selected representative who participates in making decisions related to the patient's care or well-being, including but not limited to, a family member or an advocate for the patient. The patient determines the role of the representative, to the extent possible.*

Simulation means a training and assessment technique that mimics the reality of the homecare environment, including environmental distractions and constraints that evoke or replicate substantial aspects of the real world in a fully interactive fashion, in order to teach and assess proficiency in performing skills, and to promote decision making and critical thinking.

Subdivision *means a component of a multi-function health agency, such as the home care department of a hospital or the nursing division of a health department, which independently meets the conditions of participation for HHAs. A subdivision that has branch offices is considered a parent agency.*

Summary report *means the compilation of the pertinent factors of a patient's clinical notes that is submitted to the patient's physician, physician assistant, nurse practitioner, or clinical nurse specialist.*

Supervised practical training *means training in a practicum laboratory or other setting in which the trainee demonstrates knowledge while providing covered services to an individual under the direct supervision of either a registered nurse or a licensed practical nurse who is under the supervision of a registered nurse.*

Verbal order *means a physician, physician assistant, nurse practitioner, or clinical nurse specialist order that is spoken to appropriate personnel and later put in writing for the purposes of documenting as well as establishing or revising the patient's plan of care.*

Subpart B--Patient Care

G350
(Rev.)

§484.40 Condition of participation: Release of patient identifiable OASIS information.

The HHA and agent acting on behalf of the HHA in accordance with a written contract must ensure the confidentiality of all patient identifiable information contained in the clinical record, including OASIS data, and may not release patient identifiable OASIS information to the public.

Interpretive Guidelines §484.40

An agent acting on behalf of the HHA is a person or organization, other than an employee of the agency that performs certain functions on behalf of, or provides certain services under contract or arrangement. HHAs often contract with specialized software vendors to submit OASIS data and are commonly referred to by the HHA as the Third-Party vendor.

HHAs and their agents must develop and implement policies and procedures to protect the security of all patient identifiable information contained in electronic format that they create, receive, maintain, and transmit. The agreements between the HHA and OASIS vendors must address policies and procedures to protect the security of such electronic records in order to:

- Ensure the confidentiality, integrity, and availability of all electronic records they create, receive, maintain, or transmit;
- Identify and protect against reasonably anticipated threats to the security or integrity of the electronic records;
- Protect against reasonably anticipated, impermissible uses or disclosures; and,
- Ensure compliance by their workforce

The HHA is ultimately responsible for compliance with these confidentiality requirements and is the responsible party if the agent does not meet the requirements. (See also §484.50(c)(6) Patient Rights)

G370
(Rev.)

§484.45 Condition of participation: Reporting OASIS information.

HHAs must electronically report all OASIS data collected in accordance with §484.55.

Interpretive Guidelines §484.45

The home health regulations at §484.55 require that each patient receive from the HHA a patient-specific, comprehensive assessment. As part of the comprehensive assessment of adult skilled patients, HHAs are required to use a standard core assessment data set, the OASIS. The OASIS data collection set must include the data elements listed in §484.55(c)(8) and be collected and updated per the requirements under §484.55(d).

G372
(Rev.)

§484.45(a) Standard: Encoding and transmitting OASIS data. **An HHA must encode and electronically transmit each completed OASIS assessment to the CMS system, regarding each beneficiary with respect to which information is required to be transmitted (as determined by the Secretary), within 30 days of completing the assessment of the**

beneficiary.

Interpretive Guidelines §484.45(a)

"CMS system" means the national *internet* Quality Improvement Evaluation System (*i*QIES).

"Encode" means to enter OASIS information into a computer.

"Transmit" means electronically send OASIS information, from the HHA directly to the CMS system.

An HHA must transmit a completed OASIS to the CMS system for all Medicare patients, Medicaid patients, and patients utilizing any federally funded health plan options that are part of the Medicare program (e.g., Medicare Advantage (MA) plans). An HHA must also transmit an OASIS assessment for all Medicaid patients receiving services under a waiver program receiving services subject to the Medicare Conditions of Participation as determined by the State.

Exceptions to the transmittal requirements are patients:

- Under age 18;
- Receiving maternity services;
- Receiving housekeeping or chore services only;
- Receiving only personal care services; and
- Patients for whom Medicare or Medicaid insurance is not billed.

The comprehensive assessment and reporting regulations are not applicable to patients receiving personal care only services, regardless of payor source.

As long as the submission time frame is met, HHAs are free to develop schedules for transmission of the OASIS assessments that best suit their needs.

G374
(Rev.)

§484.45(b) Standard: Accuracy of encoded OASIS data. **The encoded OASIS data must accurately reflect the patient's status at the time of assessment.**

Interpretive Guidelines §484.45(b)

"Accurate" means that the OASIS data transmitted to CMS is consistent with the status of the patient at the time the OASIS was completed.

G378
(Rev.)

§484.45(c) *Standard: Transmittal of OASIS data. An HHA must—*

(1) For all completed assessments, transmit OASIS data in a format that meets the requirements of paragraph (d) of this section.

Interpretive Guidelines §484.45(c)(1)

Successful transmission of OASIS data is verified through validation and feedback reports from *i*QIES. *Although not required by the regulation, it is recommended that the HHA keep copies of the electronic validation records, that indicate transmission was successful, for twelve months, or until the next set of reports are available. The validation reports may be needed as evidence if the HHA receives a denial from the Medicare Administrative Contractor (MAC) for missing OASIS assessments.*

G382
(Rev.)

§484.45(c) *Standard: Transmittal of OASIS data. An HHA must—*

(*2*) Transmit data using electronic communications software that complies with the Federal Information Processing Standard (FIPS 140-2, issued May 25, 2001) from the HHA or the HHA contractor to the CMS collection site.

Interpretive Guidelines §484.45(c)(*2*)

HHAs may directly transmit OASIS data (to the national data repository) via *iQIES* or other software that conforms to the FIPS 140-2.

G384
(Rev.)

§484.45(c) *Standard: Transmittal of OASIS data. An HHA must—*

(*3*) Transmit data that includes the CMS-assigned branch identification number, as applicable.

G386
(Rev.)

§484.45(d) Standard: Data Format.

The HHA must encode and transmit data using the software available from CMS or software that conforms to CMS standard electronic record layout, edit specifications, and data dictionary, and that includes the required OASIS data set.

G406
(Rev.)

§484.50 Condition of participation: Patient rights.

The patient and representative (if any), have the right to be informed of the patient's rights in a language and manner the individual understands. The HHA must protect and promote the exercise of these rights.

Interpretive Guidelines §484.50

Ensuring that patients (and representative, if any) are aware of their rights and how to exercise them is vital to quality of care and patient satisfaction. HHAs must inform patients of their rights and protect and promote the exercise of these rights, e.g., by informing the patient how to exercise those rights.

The manner and degree of noncompliance identified in relation to the standard level tags for §484.50 may result in substantial noncompliance with this CoP, requiring citation at the condition level.

Survey Procedures: §484.50

When there is a team surveying the HHA, survey of the Patient rights Condition should be coordinated by one surveyor. However, each surveyor, as they conduct their survey assignments, should assess the HHA's compliance with the Patient rights regulatory requirements. It is particularly important for the surveyor who will be conducting home visits to observe how the HHA's actions protect and promote those patients' exercise of their rights.

• Determine whether the HHA provides patients (or their representatives, if any), with notice of their rights, consistent with the standards under this condition. Review documents in the home provided by the HHA to the patient if the patient (or authorized representative) can provide them.

• Determine whether the HHA promotes the patients' exercise of their rights (or their representatives, as applicable), consistent with the standards under this condition. Interview the patient (or authorized representative) to assess whether they were informed that they are entitled to certain rights.

G410
(Rev.)

§484.50(a) Standard: Notice of rights. The HHA must—

(1) Provide the patient and the patient's legal representative (if any), the following information during the initial evaluation visit, in advance of furnishing care to the patient:

Interpretive Guidelines §484.50(a)(1)

The term “in advance” is defined at §484.2. “In advance” means that HHA staff must complete the task prior to performing any hands-on care or any patient education.

A “legal representative” is an individual who has been legally designated or appointed as the patient’s health care decision maker. When there is no evidence that a patient has a legal representative, such as a guardianship, a power of attorney for health care decision-making, or a designated health care agent, the HHA must provide the information directly to the patient.

The initial evaluation visit is the initial assessment visit that is conducted to determine the immediate care and support needs of the patient.

G412

(Rev.)

[§484.50(a) Standard: Notice of rights. The HHA must—(1) Provide the patient and the patient's legal representative (if any), the following information during the initial evaluation visit, in advance of furnishing care to the patient:]

(i) Written notice of the patient’s rights and responsibilities under this rule, and the HHA’s transfer and discharge policies as set forth in paragraph (d) of this section. Written notice must be understandable to persons who have limited English proficiency and accessible to individuals with disabilities;

Interpretive Guidelines §484.50(a)(1)(i)

We expect HHA patients to be able to confirm, upon interview, that their rights and responsibilities, as well as the transfer and discharge policies of the HHA, were understandable and accessible.

To ensure patients receive appropriate notification:

- Written notice to the patient or their representative of their rights and responsibilities under this rule should be provided via hard copy unless the patient requests that the document be provided electronically.

- If a patient or his/her representative’s understanding of English is inadequate for the patient’s comprehension of his/her rights and responsibilities, the information must be provided in a language or format familiar to the patient or his/her representative.

- Language assistance should be provided *using* competent bilingual staff, staff interpreters, contracts or formal arrangements with local organizations providing interpretation, translation services, or technology and telephonic interpretation services.

- All agency staff should be trained to identify patients with any language barriers which may prevent effective communication of the rights and responsibilities. Staff that have

on-going contact with patients who have language barriers, should be trained in effective communication techniques, including the effective use of an interpreter.

See §484.50(f) for discussion on communication of rights and responsibilities with patients who have disabilities that may hinder communication with the HHA.

G414
(Rev.)

§484.50(a) *Standard: Notice of rights. The HHA must—*

[(1) Provide the patient and the patient's legal representative (if any), the following information during the initial evaluation visit, in advance of furnishing care to the patient:]

(ii) Contact information for the HHA administrator, including the administrator's name, business address, and business phone number in order to receive complaints.

G416
(Rev.)

§484.50(a) *Standard: Notice of rights. The HHA must—*

[(1) Provide the patient and the patient's legal representative (if any), the following information during the initial evaluation visit, in advance of furnishing care to the patient:]

(iii) An OASIS privacy notice to all patients for whom the OASIS data is collected.

Interpretive Guidelines §484.50(a)(1)(iii)

Use of the OASIS Privacy Notice is required under the Federal Privacy Act of 1974 and must be used in addition to other notices that may be required by other privacy laws and regulations. The OASIS privacy notice is available in English and Spanish on the CMS website. The OASIS Privacy Notice must be provided at the time of the initial evaluation visit.

Survey Procedures: §484.50(a)(1)(iii)

Patient interview and clinical record review should confirm that the required privacy notice was provided.

G418
(Rev.)

§484.50(a) *Standard: Notice of rights. The HHA must—*

(2) Obtain the patient's or legal representative's signature confirming that he or she has received a copy of the notice of rights and responsibilities.

Survey Procedures: §484.50(a)(2)

Clinical record review should confirm that the required written notice of patient rights and responsibilities was provided to the patient. Note if the patient/legal representative's signature was obtained as required.

G420
(Rev.)

§484.50(a)(3)
[Reserved]

G422
(Rev.)

§484.50(a) ***Standard: Notice of rights. The HHA must—***

(4) Provide written notice of the patient's rights and responsibilities under this rule and the HHA's transfer and discharge policies as set forth in paragraph (d) of this section to a patient-selected representative within 4 business days of the initial evaluation visit.

G424
(Rev.)

§484.50(b) Standard: Exercise of rights.

(1) If a patient has been adjudged to lack legal capacity to make health care decisions as established by state law by a court of proper jurisdiction, the rights of the patient may be exercised by the person appointed by the state court to act on the patient's behalf.

(2) If a state court has not adjudged a patient to lack legal capacity to make health care decisions as defined by state law, the patient's representative may exercise the patient's rights.

(3) If a patient has been adjudged to lack legal capacity to make health care decisions under state law by a court of proper jurisdiction, the patient may exercise his or her rights to the extent allowed by court order.

Interpretive ***Guidelines §484.50(b)***

The HHA should obtain official documentation of: (1) any adjudication by a court that indicates that a patient lacks the legal capacity to make his or her own health care decisions; and (2) the name of any person identified by the court who may exercise the patient's rights.

G428
(Rev.)

§484.50(c) *Standard: Rights of the patient. The patient has the right to—*

(1) Have his or her property and person treated with respect;

Interpretive Guidelines §484.50(c)(1)

Respect for Property: The patient has the right to expect the HHA staff will respect his or her property and person while in the patient's home. The HHA must ensure that during home visits the patient's property, both inside and outside the home, is not stolen, damaged, or misplaced by HHA staff.

Respect for Person: The HHA must consider and accommodate any patient requests within the parameters of the assessment and plan of care, and the patient must be treated by the HHA as an active partner in the delivery of care. The HHA should make all reasonable attempts to respect the preferences of the patient regarding the services that will be delivered, such as the HHA visit schedule, which should be made at the convenience of the patient rather than of the agency personnel. The HHA must keep the patient informed of the visit schedule and timely and promptly notify the patient when scheduled services are changed.

G430
(Rev.)

§484.50(c) *Standard: Rights of the patient. The patient has the right to—*

(2) Be free from verbal, mental, sexual, and physical abuse, including injuries of unknown source, neglect and misappropriation of property;

Interpretive Guidelines §484.50(c)(2)

The patient has a right to be free from abuse from the HHA staff and others in his or her home environment. The HHA should address any allegations or evidence of patient abuse to determine if immediate care is needed, a change in the plan of care is indicated, or if a referral to an appropriate agency is warranted. (State laws vary in the reporting requirements of abuse. HHAs should be knowledgeable of these laws and comply with the reporting requirements.) In addition, the HHA should intervene immediately if, as indicated by the circumstances, any injury is the result of an HHA staff member's actions. The HHA should also immediately remove staff from patient care if there are allegations of misconduct related to abuse or misappropriation of property.

"Abuse" means the willful infliction of injury, unreasonable confinement, intimidation, or punishment with resulting physical harm, pain or mental anguish. Abuse may be verbal, mental, sexual, or physical and includes abuse facilitated or enabled through the use of technology.

"Verbal abuse" refers to abuse perpetrated through any use of insulting, demeaning, disrespectful, oral, written or gestured language directed toward and in the presence of the client.

"Mental abuse" is a type of abuse that includes, but is not limited to, humiliation, harassment, and threats of punishment or deprivation, sexual coercion and intimidation (e.g. living in fear in one's own home).

"Sexual abuse" is a type of abuse that includes any incident where a beneficiary is coerced, manipulated, or forced to participate in any form of sexual activity for which the beneficiary did not give affirmative permission (or gave affirmative permission without the mental capacity required to give permission), or sexual assault against a beneficiary who is unable to defend him/herself.

"Physical abuse" refers to abuse perpetrated through any action intended to cause physical harm or pain, trauma or bodily harm (e.g., hitting, slapping, punching, kicking, pinching, etc.). It includes the use of corporal punishment as well as the use of any restrictive, intrusive procedure to control inappropriate behavior for purposes of punishment.

"Injury of unknown" source is an injury that was not witnessed by any person and the source of the injury cannot be explained by the patient.

"Misappropriation of property" is theft or stealing of items from a patient's home. The HHA staff must investigate and take immediate action on any allegations of misappropriation of patient property by HHA staff and refer to authorities when appropriate.

Neglect means a failure to provide goods and/or services necessary to avoid physical harm, mental anguish or mental illness.

Survey Procedures: §484.50(c)(2)

Examine the extent to which the HHA has a system in place to protect patients from abuse, neglect, and misappropriation of property of all forms, whether from staff or from other persons. Determine the extent to which the HHA addresses the following issues:

- *How does the HHA staff conduct themselves in the patient's home in regards to demonstrating respect for persons and property?*
- *Does the HHA have policies and procedures for investigating allegations of abuse, neglect and misappropriation of property?*
- *Interview staff to determine if staff members know what to do if they witness abuse, neglect or misappropriation of property.*

- *Ask the HHA if it has had any allegations of patient abuse or neglect from any source during the past year. If it has, ask the HHA to provide the files and to describe how the matter was handled. Review the HHA records to see if the appropriate agencies were notified in accordance with State and federal laws regarding incidents of substantiated abuse and neglect.*

G432
(Rev.)

§484.50(c) *Standard: Rights of the patient. The patient has the right to—*

(3) Make complaints to the HHA regarding treatment or care that is (or fails to be) furnished, and the lack of respect for property and/or person by anyone who is furnishing services on behalf of the HHA;

Interpretive Guidelines §484.50(c)(3)

The HHA should have written policies and procedures that address the acceptance, processing, review, and resolution of patient complaints, including complaint intake procedures, timeframes for investigations, documentation, and potential outcomes and actions that the HHA may take to resolve patient complaints. See also §484.50(e) Investigation of complaints.

The HHA should record, in both the clinical record and the patient's home folder, that the patient was provided with information regarding his or her right to lodge a complaint to the HHA.

G434
(Rev.)

§484.50(c) *Standard: Rights of the patient. The patient has the right to—*

(4) Participate in, be informed about, and consent or refuse care in advance of and during treatment, where appropriate, with respect to –

(i) Completion of all assessments;
(ii) The care to be furnished, based on the comprehensive assessment;
(iii) Establishing and revising the plan of care;
(iv) The disciplines that will furnish the care;
(v) The frequency of visits;
(vi) Expected outcomes of care, including patient-identified goals, and anticipated risks and benefits;
(vii) Any factors that could impact treatment effectiveness; and
(viii) Any changes in the care to be furnished.

Interpretive Guidelines §484.50(c)(4)

The patient's informed consent on the items (i)-(viii) is not intended to be recorded on a single signed form. Informed consent and patient participation take place on an ongoing basis as the patient's care changes and evolves during his or her episodes of care. There must be evidence in the patient's medical record that, both initially and as changes occur in the patient's care, the patient was consulted and consented to planned services and care.

"Participation" means that the patient is given options regarding care choices and preferences. For example, patient preferences should be respected in encouraging the patient to choose between a bath and a shower, unless there are physical restrictions or medical contraindications that limit patient choice.

"Informed" means that all aspects of the planned care and services, and the *way* the care and services will be delivered, are reviewed by HHA staff with the patient and that, during such review, HHA staff solicits the patient's agreement or disagreement. When there is a change to the plan of care, whether initiated by the HHA/physician or at the request of the patient, documentation in the clinical record should indicate whether the patient was informed of and agreed to the changes.

G436
(Rev.)

§484.50(c) *Standard: Rights of the patient. The patient has the right to—*

(5) Receive all services outlined in the plan of care.

Survey Procedures: §484.50(c)(5)

Clinical record review and patient interview should confirm that the HHA is providing the services identified in the patient's individualized plan of care (see also §484.60(a)).

G438
(Rev.)

§484.50(c) *Standard: Rights of the patient. The patient has the right to—*

(6) Have a confidential clinical record. Access to or release of patient information and clinical records is permitted in accordance with 45 CFR parts 160 and 164.

Interpretive Guidelines §484.50(c)(6)

45 CFR Part 160 and 164 pertain to requirements of the Health Insurance Portability and Accountability Act of 1996 ("HIPAA"). The HIPAA Privacy Rule (45 CFR Part 160 and Subparts A and E of Part 164), Security Rule (45 CFR Part 160 and Subparts A and C of Part 164), and Breach Notification Rule (45 CFR §§ 164.400–414) protect the privacy and security of health information and provide individuals with certain rights regarding their health information as follows:

• The Privacy Rule sets national standards for covered entities (health plans, health care clearinghouses, and health care providers that conduct certain health care transactions electronically) and their business associates, including appropriate safeguards to protect the privacy of protected health information (PHI) and the limits and conditions under which PHI is permitted or required to be used or disclosed;

• The Security Rule specifies safeguards that covered entities and their business associates must implement to protect the confidentiality, integrity, and availability of electronic protected health information (ePHI)

• The Breach Notification Rule requires covered entities and their business associates to notify affected individuals, U.S. Department of Health & Human Services (HHS), and in some cases, the media of a breach of unsecured PHI.

The HIPAA Privacy Rule also gives certain patients' rights over their health information, including rights to examine and obtain a copy of their health records, and to request corrections.

HHAs have unique concerns and risks regarding staff and contractors who transport documents and/or electronic devices containing PHI, such as during their visits to patient's homes. Compliance with §484.50(c)(6) is evidenced by documentation of HIPAA training for all staff and monitoring HIPAA compliance to manage the risk of inappropriate PHI disclosure or unsecured ePHI. Each covered entity and business associate is responsible for ensuring its compliance with the HIPAA Privacy, Security, and Breach Notification Rules, as applicable, including consulting appropriate counsel as necessary.

Survey procedures §484.50(c)(6)

Verify that the agency staff maintain the confidentiality of protected health information that they transport and use.

G440
(Rev.)

§484.50(c) *Standard: Rights of the patient. The patient has the right to—*

(7) Be advised, orally and in writing, of—

(i) The extent to which payment for HHA services may be expected from Medicare, Medicaid, or any other federally-funded or federal aid program known to the HHA,
(ii) The charges for services that may not be covered by Medicare, Medicaid, or any other federally-funded or federal aid program known to the HHA,
(iii) The charges the individual may have to pay before care is initiated; and
(iv) Any changes in the information provided in accordance with paragraph (c)(7) of this section when they occur. The HHA must advise the patient and

representative (if any), of these changes as soon as possible, in advance of the next home health visit. The HHA must comply with the patient notice requirements at 42 CFR 411.408(d)(2) and 42 CFR 411.408(f).

***Survey Procedures* §484.50(c)(7)**

Ask the patient or legal representative (if any) about whether the HHA informed them if there were any services that may not be covered by Medicare and, if so, how that would be addressed. If a notice of Medicare non-coverage was provided to the patient, confirm that it was received prior to the care being provided. Surveyors are not to advise the patient about finances, or coverage, or payment issues, but rather confirm if the HHA provided this information.

G442
(Rev.)

§484.50(c) *Standard: Rights of the patient. The patient has the right to—*

(8) Receive proper written notice, in advance of a specific service being furnished, if the HHA believes that the service may be non-covered care; or in advance of the HHA reducing or terminating on-going care. The HHA must also comply with the requirements of 42 CFR 405.1200 through 405.1204.

Interpretive Guidelines §484.50(c)(8)

§405.1200 through §405.1204 describe the expedited determination process, which is a right that Medicare beneficiaries may exercise to dispute the termination of Medicare-covered services in certain settings including home health.

Survey Procedures §484.50(c)(8)

Surveyors are not to advise the patient about finances, or coverage, or payment issues, but rather confirm if the HHA provided this information.

G444
(Rev.)

§484.50(c) *Standard: Rights of the patient. The patient has the right to—*

(9) Be advised of the state toll free home health telephone hot line, its contact information, its hours of operation, and that its purpose is to receive complaints or questions about local HHAs.

Survey Procedures §484.50(c)(9)

Determine if the patient is aware of the state home health hotline to lodge a complaint if dissatisfied with the care provided by the HHA. Inquire if the patient filed any complaints directly with the HHA and if the care and services were negatively affected by this action (see also §484.50(c)(11)).

G446
(Rev.)

§484.50(c) *Standard: Rights of the patient. The patient has the right to—*

(10) Be advised of the names, addresses, and telephone numbers of the following Federally-funded and state-funded entities that serve the area where the patient resides:

(i) Agency on Aging
(ii) Center for Independent Living
(iii) Protection and Advocacy Agency,
(iv) Aging and Disability Resource Center; and
(v) Quality Improvement Organization.

G448
(Rev.)

§484.50(c) *Standard: Rights of the patient. The patient has the right to—*

(11) Be free from any discrimination or reprisal for exercising his or her rights or for voicing grievances to the HHA or an outside entity.

Interpretive Guidelines §484.50(c)(11)

"Discrimination or reprisal against a patient for exercising his or her rights or for voicing grievances" is defined as treating a patient differently from other patients *after* receipt by the HHA of a patient complaint, without a medical justification for such different treatment.

Examples of discrimination or reprisal include, but are not limited to, a reduction of current services, a complete discontinuation of services, or discharge from the HHA *after* receipt by the HHA of a patient complaint, without a medical justification for the change of services or discharge.

Survey Procedures §484.50(c)(11)

Inquire if the patient filed any complaints directly with the HHA and if the care and services were negatively affected by this action. Determine if the patient is aware of the state HHA hotline to lodge a complaint if dissatisfied with the care provided by the HHA (§484.50(c)(9)).

G450
(Rev.)

§484.50(c) *Standard: Rights of the patient. The patient has the right to—*

(12) Be informed of the right to access auxiliary aids and language services as described in paragraph (f) of this section, and how to access these services.

G452
(Rev.)

§484.50(d) Standard: Transfer and discharge.

The patient and representative (if any), have a right to be informed of the HHA's policies for transfer and discharge. The HHA may only transfer or discharge the patient from the HHA if:

G454
(Rev.)

§484.50(d) *Standard: Transfer and discharge.*

[…The HHA may only transfer or discharge the patient from the HHA if:]

(1) The transfer or discharge is necessary for the patient's welfare because the HHA and the physician *or allowed practitioner* who is responsible for the home health plan of care agree that the HHA can no longer meet the patient's needs, based on the patient's acuity. The HHA must arrange a safe and appropriate transfer to other care entities when the needs of the patient exceed the HHA's capabilities;

Interpretive Guidelines §484.50(d)(1)

When a patient's care needs change to require more than intermittent services or require specialized services not provided by the agency, the HHA must inform the patient, patient representative (if any), and the physician *or allowed practitioner* who is responsible for the patient's home health plan of care that the HHA cannot meet the patient's needs without potentially adverse outcomes. *(As noted in §484.2, "allowed practitioner" means a physician assistant, nurse practitioner, or clinical nurse specialist as defined at this part.)* The HHA should assist the patient and his or her representative (if any) in choosing an alternative entity by identifying those entities in the patient's geographic area that may be able to meet the patient's needs based on the patient's acuity. Once the patient chooses an alternate entity, the HHA must contact that entity to facilitate a safe transfer. The HHA must ensure timely transfer of patient information to the alternate entity to facilitate continuity of care, i.e., the HHA must ensure that patient information is provided to the alternate entity prior to or simultaneously with the initiation of patient services at the new entity.

Also see *the discharge planning requirements at §484.58 and the requirements at* §484.110(a)(6)(ii) regarding time frame for the transfer summary.

G456
(Rev.)

§484.50(d) *Standard: Transfer and discharge.*

[…The HHA may only transfer or discharge the patient from the HHA if:]

(2) The patient or payer will no longer pay for the services provided by the HHA;

G458
(Rev.)

§484.50(d) *Standard: Transfer and discharge.*

[…The HHA may only transfer or discharge the patient from the HHA if:]

(3) The transfer or discharge is appropriate because the physician *or allowed practitioner* who is responsible for the home health plan of care and the HHA agree that the measurable outcomes and goals set forth in the plan of care in accordance with §484.60(a)(2)(xiv) have been achieved, and the HHA and the physician *or allowed practitioner* who is responsible for the home health plan of care agree that the patient no longer needs the HHA's services;

G460
(Rev.)

§484.50(d) *Standard: Transfer and discharge.*

[…The HHA may only transfer or discharge the patient from the HHA if:]

(4) The patient refuses services, or elects to be transferred or discharged;

Interpretive Guidelines §484.50(d)(4)

A patient who occasionally declines a service is distinguished from a patient who refuses services altogether, or who habitually declines skilled care visits. It is the patient's right to refuse services. It is the agency's responsibility to educate the patient on the risks and potential adverse outcomes that can result from refusing services. In the case of patient refusals of skilled care, the HHA must document its communication with the physician *or allowed practitioner* who is

responsible for the patient's home health plan of care, as well as the measures the HHA took to investigate the patient's refusal and the interventions the HHA attempted in order to obtain patient participation with the plan of care.

The HHA may consider discharge if the patient's decision to decline services compromises the agency's ability to safely and effectively deliver care to the extent that the agency can no longer meet the patient's needs.

G462
(Rev.)

§484.50(d) *Standard: Transfer and discharge.*

[…The HHA may only transfer or discharge the patient from the HHA if:]

(5) The HHA determines, under a policy set by the HHA for the purpose of addressing discharge for cause that meets the requirements of paragraphs (d)(5)(i) through (d)(5)(iii) of this section, that the patient's (or other persons in the patient's home) behavior is disruptive, abusive, or uncooperative to the extent that delivery of care to the patient or the ability of the HHA to operate effectively is seriously impaired. The HHA must do the following before it discharges a patient for cause:

Interpretive Guidelines §484.50(d)(5)

"Disruptive, abusive behavior" includes verbal, non-verbal or physical threats, sexual harassment, or any incident in which agency staff feel threatened or unsafe, resulting in a serious impediment to the agency's ability to operate safely and effectively in the delivery of care.

"Uncooperative" is defined as the patient's repeated declination of services or persistent obstructive, hostile or contrary attitudes to agency caregivers that are counterproductive to the plan of care.

The HHA must document in the patient's clinical record the behaviors and circumstances that warranted patient discharge for cause as well as the HHA's efforts to resolve the problems.

G464
(Rev.)

§484.50(d) *Standard: Transfer and discharge.*

[…The HHA must do the following before it discharges a patient for cause:]

(5)(i) Advise the patient, *the* representative (if any), the physician*(s) or allowed practitioners(s)* issuing orders for the home health plan of care, and the patient's primary care practitioner or other health care professional who will be responsible for providing

care and services to the patient after discharge from the HHA (if any) that a discharge for cause is being considered;

Interpretive Guidelines §484.50(d)(5)(i)

The HHA must notify the patient, his or her representative (if any), the physician*(s) or allowed practitioners(s)* issuing orders for the home health care and the patient's primary care practitioner that the HHA is considering a discharge for cause. If the HHA *can* identify other health care professionals who may be involved in the patient's care after the discharge occurs, then the HHA should notify those individuals of the discharge when discharge becomes imminent.

G466
(Rev.)

§484.50(d) *Standard: Transfer and discharge.*

[…The HHA must do the following before it discharges a patient for cause:]

(5)(ii) Make efforts to resolve the problem(s) presented by the patient's behavior, the behavior of other persons in the patient's home, or situation;

G468
(Rev.)

§484.50(d) *Standard: Transfer and discharge.*

[…The HHA must do the following before it discharges a patient for cause:]

(5)(iii) Provide the patient and representative (if any), with contact information for other agencies or providers who may be able to provide care; and

Interpretive Guidelines §484.50(d)(5)(ii) and (iii)

The clinical record should reflect:

- Identification of the problems encountered;
- Assessment of the situation;
- Communication among HHA management, patient caregiver, legal representative and the physician responsible for the plan of care;
- A plan to resolve the issues; and
- Results of the plan implementation.

Only in extreme situations when there is a serious imminent threat of physical harm to

HHA staff, the HHA may take immediate action to discharge or transfer the patient without first making efforts to resolve the underlying issue.

Evidence in the record should document that the HHA provided the patient and his or her representative (if any) with information including contact numbers for other community resources and names of other agencies or providers that may be able to provide services to the patient.

G470
(Rev.)

§484.50(d) ***Standard: Transfer and discharge.***

[…The HHA must do the following before it discharges a patient for cause:]

(5)(iv) Document the problem(s) and efforts made to resolve the problem(s), and enter this documentation into its clinical records;

G472
(Rev.)

§484.50(d) ***Standard: Transfer and discharge.***

[…The HHA may only transfer or discharge the patient from the HHA if:]

(6) The patient dies; or

G474
(Rev.)

§484.50(d) ***Standard: Transfer and discharge.***

[…The HHA may only transfer or discharge the patient from the HHA if:]

(7) The HHA ceases to operate.

Interpretive Guidelines §484.50(d)(7)

The agency must provide sufficient notice of its planned cessation of business to enable patients to select an alternative service provider and to enable the HHA to facilitate the safe transfer of its patients to other agencies.

G478
(Rev.)

§484.50(e) Standard: Investigation of complaints.

§484.50(e)(1) The HHA must—

(i) Investigate complaints made by a patient, the patient's representative (if any), and the patient's caregivers and family, including, but not limited to, the following topics:

(A) Treatment or care that is (or fails to be) furnished, is furnished inconsistently, or is furnished inappropriately;

(B) ***Mistreatment, neglect, or verbal, mental, sexual, and physical abuse, including injuries of unknown source, and/or misappropriation of patient property by anyone furnishing services on behalf of the HHA.***

G484
(Rev.)

§484.50(e)(1) The HHA must—

(ii) Document both the existence of the complaint and the resolution of the complaint; and

Survey Procedures §484.50(e)(1)(ii)

Obtain the complaint log (or other format used for documenting complaints) to verify that the HHA is tracking complaints received from receipt of complaint through resolution.

G486
(Rev.)

§484.50(e)(1) The HHA must—

(iii) Take action to prevent further potential violations, including retaliation, while the complaint is being investigated.

Interpretive Guidelines §484.50(e)(1)

The HHA should have systems in place to record, track and investigate all complaints. Written policies and procedures on the acceptance, processing, review, and resolution of patient complaints should be developed and communicated to staff. These policies should include intake procedures, timeframes for investigations, documentation, and outcomes and actions that the

HHA may take to resolve patient complaints. Complaint investigations should be incorporated into the agency's Quality Assurance Performance Improvement program.

The HHA should be able to produce documentation for each complaint received that confirms that an investigation was conducted and records the investigation findings as well as the ultimate resolution of the complaint. The documentation should also describe any actions taken by the HHA to remove any risks to the patient while the complaint was being investigated.

G488
(Rev.)

§484.50(e)(2) Any HHA staff (whether employed directly or under arrangements) in the normal course of providing services to patients, who identifies, notices, or recognizes incidences or circumstances of mistreatment, neglect, verbal, mental, sexual, and/or physical abuse, including injuries of unknown source, or misappropriation of patient property, must report these findings immediately to the HHA and other appropriate authorities in accordance with state law.

Interpretive Guidelines §484.50(e)(2)

Immediately means reporting without delay, as soon as possible following the discovery. *States commonly have mandatory reporting requirements for providers, suppliers, and individuals making them legally responsible to report suspicions of abuse and neglect to appropriate State authorities. These entities and individuals should follow existing mandatory reporting requirements in their State in addition to any applicable Federal requirements. Action or inaction on the part of a provider or supplier to follow mandatory reporting requirements does not preclude an employee from fulfilling their reporting obligations.*

G490
(Rev.)

§484.50(f) *Standard: Accessibility.* Information must be provided to patients in plain language and in a manner that is accessible and timely to—

(1) Persons with disabilities, including accessible web sites and the provision of auxiliary aids and services at no cost to the individual in accordance with the Americans with Disabilities Act and Section 504 of the Rehabilitation Act.

(2) Persons with limited English proficiency through the provision of language services at no cost to the individual, including oral interpretation and written translations.

Interpretive Guidelines §484.50(f)

"Plain language" (also referred to as "Plain English") is communication the patient and/or his or her representative (if any) can understand the first time they read or hear it. Language that is

plain to one set of readers may not be plain to others. Written material is in plain language if the audience can:

- Find what they need;
- Understand what they find; and
- Use what they find to meet their needs.

Section 504 of the Rehabilitation Act and the Americans with Disabilities Act protect qualified individuals with disabilities from discrimination on the basis of disability in the provision of benefits and services. Concerns related to potential discrimination issues under 504 should be referred to the Office of Civil Rights for further review.

"Auxiliary aids and services" for individuals who are deaf or hard of hearing include services and devices such as, but not limited to: qualified interpreter services (on-site or through video remote interpreting (VRI)); note takers; real-time computer-aided transcription services; written materials; exchange of written notes; telephone handset amplifiers; assistive listening devices; assistive listening systems; telephones compatible with hearing aids; closed caption decoders; open and closed captioning, including real-time captioning; voice, text, and video-based telecommunications products and systems, including text telephones (TTYs), videophones, and captioned telephones, or equally effective telecommunications devices; videotext displays; and accessible electronic and information technology. Auxiliary aids and services for individuals who are blind or have low vision include services and devices such as: qualified readers; taped texts; audio recordings; Braille materials and displays; screen reader software; magnification software; optical readers; secondary auditory programs (SAP); large print materials; and accessible electronic and information technology.

The patient's clinical record should include evidence that the HHA facilitated the availability of needed auxiliary aids and language services.

G510
(Rev.)

§484.55 Condition of participation: Comprehensive assessment of patients.

Each patient must receive, and an HHA must provide, a patient-specific, comprehensive assessment. For Medicare beneficiaries, the HHA must verify the patient's eligibility for the Medicare home health benefit including homebound status, both at the time of the initial assessment visit and at the time of the comprehensive assessment.

Interpretive Guidelines §484.55

A comprehensive assessment of the patient, in which patient needs are identified, is a crucial step in the establishment of a plan of care. In addition, a comprehensive assessment identifies patient progress toward desired outcomes or goals of the care plan.

The manner and degree of noncompliance identified in relation to the standard level tags for §484.55 may result in substantial noncompliance with this CoP, requiring citation at the condition level.

G514
(Rev.)

§484.55(a) *Standard: Initial assessment visit.*

(1) A registered nurse must conduct an initial assessment visit to determine the immediate care and support needs of the patient; and, for Medicare patients, to determine eligibility for the Medicare home health benefit, including homebound status. The initial assessment visit must be held either within 48 hours of referral, or within 48 hours of the patient's return home, or on the physician*- or allowed practitioner*-ordered start of care date.

Interpretive Guidelines §484.55(a)(1)

For patients receiving only nursing services or both nursing and rehabilitation therapy services, a registered nurse must conduct the initial assessment visit. For patients receiving rehabilitation therapy services only, the initial assessment may be made by the applicable rehabilitation skilled professional rather than the registered nurse. See §484.55(a)(2).

The initial assessment bridges the gap between when the first patient encounter occurs and when a plan of care can be implemented. "Immediate care and support needs" are those items and services that will maintain the patient's health and safety through this interim period, i.e., until the HHA can complete the comprehensive assessment and implement the plan of care. "Immediate care and support needs" may include medication, mobility aids for safety, skilled nursing treatments, and items to address fall risks and nutritional needs.

The clinical record must demonstrate that homebound status/eligibility for the Medicare home health benefit was determined and documented during the initial visit.

An HHA that is unable to complete the initial assessment within 48 hours of referral or the patient's return home, shall not request a different start of care date from the ordering physician to ensure compliance with the regulation or to accommodate the convenience of the agency. *(**NOTE:** CMS OASIS coding guidance[1] for M0104 defines the referral date as the most recent date that verbal, written, or electronic authorization to begin or resume home care was received by the HHA.)*

In instances where the patient requests a delay in the start of care date, the HHA would need to contact the physician to request a change in the start of care date and such change would need to be documented in the medical record.

---

G516
(Rev.)

§ 484.55(a)(2) When rehabilitation therapy service (speech language pathology, physical therapy, or occupational therapy) is the only service ordered by the physician *or allowed practitioner* who is responsible for the home health plan of care, *the initial assessment visit may be made by the appropriate rehabilitation skilled professional. For Medicare patients, an occupational therapist may complete the initial assessment when occupational therapy is ordered with another qualifying rehabilitation therapy service (speech-language pathology or physical therapy) that* establishes program eligibility.

G520
(Rev.)

§484.55(b) Standard: Completion of the comprehensive assessment.

(1) The comprehensive assessment must be completed in a timely manner, consistent with the patient's immediate needs, but no later than 5 calendar days after the start of care.

Interpretive Guidelines §484.55(b)(1)

The start of care date *is* the first visit where the HHA provides hands on, direct care services or treatments to the patient. If an initial assessment is completed without any direct care services being provided by the HHA during the assessment visit, the date of that initial assessment visit would not be the start of care date. The comprehensive assessment must be completed within 5 calendar days of the first visit where the HHA provides hands on, direct care services/treatments to the patient.

G522
(Rev.)

§484.55(b)(2) Except as provided in paragraph (b)(3) of this section, a registered nurse must complete the comprehensive assessment and for Medicare patients, determine eligibility for the Medicare home health benefit, including homebound status.

Interpretive Guidelines §484.55(b)(2)

The requirements for conducting the initial assessment visit and the comprehensive assessment for home health services are based on sections 1814(a)(2)(c) and 1835(a)(2)(A) of the Act regarding eligibility and payment for home health services. The requirements for these assessments are based on the professional disciplines that will be involved in, and coordinating, care for the patient. When nursing is assigned to the case, it is likely the patient will have a

greater need for nursing services than other services and therefore skilled nurses should conduct the initial assessment visit and initiate the comprehensive assessment (86 FR 62240, 62351 (Nov. 9, 2021)).

Survey Procedures §484.55(b)(2)

- *Through clinical record review, verify the initial assessment was conducted by a registered nurse unless the patient is receiving therapy services only.*

- *Through home visit observation, verify if the current comprehensive assessment and plan of care were completed and accurately reflect the patient's status.*

G524
(Rev.)

§484.55(b)(3) When physical therapy, speech-language pathology, or occupational therapy is the only service ordered by the physician *or allowed practitioner*, a physical therapist, speech-language pathologist or occupational therapist may complete the comprehensive assessment, and for Medicare patients, determine eligibility for the Medicare home health benefit, including homebound status. *For Medicare patients, the occupational therapist may complete the comprehensive assessment when occupational therapy is ordered with another qualifying rehabilitation therapy service (speech-language pathology or physical therapy) that establishes program eligibility.*

Interpretive Guidelines §484.55(b)(3)

In therapy-only cases, a qualified therapist (registered and/or licensed by the State in which they practice) *may conduct* the comprehensive assessment for therapy services ordered.

G528
(Rev.)

§484.55(c) Standard: Content of the comprehensive assessment. The comprehensive assessment must accurately reflect the patient's status, and must include, at a minimum, the following information:

(1) The patient's current health, psychosocial, functional, and cognitive status;

Interpretive Guidelines §484.55(c)(1)

Completion of the comprehensive assessment should provide the HHA with a complete picture of the patient's status to assist the HHA in developing the patient's plan of care.

Assessment of the patient's current health status includes relevant past medical history as well as all active health and medical problems.

Assessment of a patient's psychosocial status and his/her functional capacity within the community is intended to be a screening of the patient's relationships, living environment, impact on the delivery of services and ability to participate in his/her own care. Assessment of a patient's functional status includes the patient's level of ability to function independently in the home such as activities of daily living.

Assessment of a patient's cognitive status refers to an evaluation of the degree of his or her ability to understand, remember, and participate in developing and implementing the plan of care.

G530
(Rev.)

[*§484.55(c) *… The comprehensive assessment must accurately reflect the patient's status, and must include, at a minimum, the following information:]

(2) The patient's strengths, goals, and care preferences, including information that may be used to demonstrate the patient's progress toward achievement of the goals identified by the patient and the measurable outcomes identified by the HHA;

Interpretive Guidelines §484.55(c)(2)

Consistent with the principles of patient-centered care, the intent in identifying patient strengths is to empower the patient to take an active role in his or her care. The HHA must ask the patient to identify her or his own strengths and must also independently identify the patient's strengths to inform the plan of care and to set patient goals and measurable outcomes. Examples of patient strengths identified by HHAs through observation and by patient self-identification may include: awareness of disease status, knowledge of medications, motivation and readiness for change, motivation/ability to perform self-care and/or implement a therapeutic exercise program, understanding of a dietary regimen for disease management, vocational interests/hobbies, interpersonal relationships and supports, and financial stability.

The intent of assessing patient care preferences is to engage the patient to the greatest degree possible to take an active role in their home care rather than placing the patient in a passive recipient role by informing the patient what will be done for them and when.

"Patient goal" is defined as a patient-specific objective, adapted to each patient based on the medical diagnosis, physician's *or allowed practitioner's* orders, comprehensive assessment, patient input, and the specific treatments provided by the agency.

"Measurable outcome" is a change in health status, functional status, or knowledge, which occurs over time in response to a health care intervention. Measurable outcomes may include end-result functional and physical health improvement/stabilization, health care utilization measures (hospitalization and emergency department use), and potentially avoidable events. Because the nature of the change can be positive, negative, or neutral, the actual change in patient health status can vary from patient to patient, ranging from decline, no change, to improvement in patient condition or functioning.

G532
(Rev.)

[§484.55(c) … The comprehensive assessment must accurately reflect the patient's status, and must include, at a minimum, the following information:]

(3) The patient's continuing need for home care;

Interpretive Guidelines §484.55(c)(3)

Medicare does not limit the number of continuous 60-day episode recertifications for beneficiaries who continue to be eligible for the home health benefit. Therefore, the comprehensive assessment must clearly demonstrate the continuing need, i.e., eligibility, for the home health benefit.

G534
(Rev.)

[§484.55(c) … The comprehensive assessment must accurately reflect the patient's status, and must include, at a minimum, the following information:]

(4) The patient's medical, nursing, rehabilitative, social, and discharge planning needs;

Survey Procedures §484.55(c)(4)

Verify if the current comprehensive assessment accurately reflects the patient's current status.

G536
(Rev.)

[§484.55(c) … The comprehensive assessment must accurately reflect the patient's status, and must include, at a minimum, the following information:]

(5) A review of all medications the patient is currently using in order to identify any potential adverse effects and drug reactions, including ineffective drug therapy, significant side effects, significant drug interactions, duplicate drug therapy, and noncompliance with drug therapy.

Interpretive Guidelines §484.55(c)(5)

The patient's clinical record should identify all medications that the patient is taking, both prescription and non-prescription *(e.g., over-the-counter drugs, herbal remedies, and other alternative treatments that could affect drug therapy),* as well as *the dose, route, frequency, or time of administration when indicated on the prescription or order. T*he skilled professional *performing the comprehensive assessment* should consider, and the clinical record should document, that the skilled professional considered each medication the patient is currently taking for possible side effects and the list of medications in its entirety for possible drug interactions. *Each agency must determine the capabilities of current staff members to perform comprehensive assessments, considering professional standards or practice acts specific to the State. No specific discipline is identified as exclusively able to perform the medication review. However, only Registered Nurses (RNs), Physical Therapists (PTs), Occupational Therapists (OTs) and Speech-Language Pathologists (SLPs) are qualified to perform comprehensive assessments (see also §484.55(b)). While only the assessing clinician is responsible for accurately completing and signing a comprehensive assessment, the agency may develop a policy where clinicians may collaborate to collect data for all OASIS items. For example, to assess potential side effects and drug interactions, the agency may wish to have RNs or practical (vocational) nurses, as defined in §484.115, review the mediation lists.*

HHA should have policies that guide staff in the event there is a concern identified with a patient's medication that should be reported to the physician *or allowed practitioner*.

Survey Procedures §484.55(c)(5)

Through home visit observation and record review, confirm the medications the patient identifies they are taking against the medical record documentation to verify that the HHA identified all medications, both prescription and non-prescription.

G538
(Rev.)

[§484.55(c) … The comprehensive assessment must accurately reflect the patient's status, and must include, at a minimum, the following information:]

§484.55(c)(6) The patient's primary caregiver(s), if any, and other available supports, including their:

(i) Willingness and ability to provide care, and

(ii) Availability and schedules;

G540
(Rev.)

[§484.55(c) … The comprehensive assessment must accurately reflect the patient's status, and must include, at a minimum, the following information:]

(7) The patient's representative (if any);

G542
(Rev.)

[§484.55(c) … The comprehensive assessment must accurately reflect the patient's status, and must include, at a minimum, the following information:]

(8) Incorporation of the current version of the Outcome and Assessment Information Set (OASIS) items, using the language and groupings of the OASIS items, as specified by the Secretary. The OASIS data items determined by the Secretary must include: clinical record items, demographics and patient history, living arrangements, supportive assistance, sensory status, integumentary status, respiratory status, elimination status, neuro/emotional/behavioral status, activities of daily living, medications, equipment management, emergent care, and data items collected at inpatient facility admission or discharge only.

G544
(Rev.)

§484.55(d) Standard: Update of the comprehensive assessment.

The comprehensive assessment must be updated and revised (including the administration of the OASIS) as frequently as the patient's condition warrants due to a major decline or improvement in the patient's health status, but not less frequently than-

Interpretive Guidelines §484.55(d)

A marked improvement or worsening of a patient's condition, which changes, and was not anticipated in, the patient's plan of care would be considered a "major decline or improvement in the patient's health status" that would warrant update and revision of the comprehensive assessment.

G546
(Rev.)

[§484.55(d) Standard: Update of the comprehensive assessment…not less frequently than-]

(1) The last 5 days of every 60 days beginning with the start-of-care date, unless there is a-

(i) Beneficiary elected transfer;

(ii) Significant change in condition; or

(iii) Discharge and return to the same HHA during the 60-day episode.

G548
(Rev.)

[§484.55(d) Standard: Update of the comprehensive assessment…not less frequently than-]

(2) Within 48 hours of the patient's return to the home from a hospital admission of 24 hours or more for any reason other than diagnostic tests, or on physician *or allowed practitioner* -ordered resumption date;

G550
(Rev.)

[§484.55(d) Standard: Update of the comprehensive assessment…not less frequently than-]

(3) At discharge.

Interpretive Guidelines § 484.55(d)(3)

The update of the comprehensive assessment at discharge would include a summary of the patient's progress in meeting the care plan goals.

***(NOTE:** CMS OASIS coding guidance[2] notes that a discharge comprehensive assessment including OASIS is required within two days of the patient's discharge date.)*

G560
(Rev.)

§ 484.58 Condition of participation: Discharge planning.

Interpretive Guidelines § 484.58

The manner and degree of noncompliance identified in relation to the standard level tags for §484.58 may result in substantial noncompliance with this CoP, requiring citation at the condition level.

G562
(Rev.)

[2] *CMS, May 2022 CMS OASIS Q&As Category 2 – Comprehensive Assessment, Answer 15.3.7.* https://qtso.cms.gov/system/files/qtso/508_OASIS_CAT_2_Static_QA_FINAL_05_2022.pdf

§484.58(a) Standard: Discharge planning.

A home health agency must develop and implement an effective discharge planning process. For patients who are transferred to another HHA or who are discharged to a SNF, IRF or LTCH, the HHA must assist patients and their caregivers in selecting a post-acute care provider by using and sharing data that includes, but is not limited to HHA, SNF, IRF, or LTCH data on quality measures and data on resource use measures. The HHA must ensure that the post-acute care data on quality measures and data on resource use measures is relevant and applicable to the patient's goals of care and treatment preferences.

Interpretive Guidelines §484.58(a)

The goal of discharge planning is to prepare patients and caregivers to be active partners in post-discharge care, to effectively transition the patient from HHA to post-HHA care, and to reduce the factors that often lead to preventable readmissions.

Data on quality and resource use measures are available on the CMS.gov web site to assist consumers in making informed decisions about the performance of HHA and other providers including skilled nursing facilities (SNFs), inpatient rehabilitation facilities (IRFs), long term care hospitals (LTCHs) and hospices.

G564
(Rev.)

§484.58(b) Standard: Discharge or transfer summary content.

(1) The HHA must send all necessary medical information pertaining to the patient's current course of illness and treatment, post-discharge goals of care, and treatment preferences, to the receiving facility or health care practitioner to ensure the safe and effective transition of care.

Interpretive Guidelines §484.58(b)(1)

See also §484.110(a)(6) for discharge and transfer summary requirements.

G566
(New)

§484.58(b) Standard: Discharge or transfer summary content.

(2) The HHA must comply with requests for additional clinical information as may be necessary for treatment of the patient made by the receiving facility or health care practitioner.

G570
(Rev.)

§484.60 Condition of participation: Care planning, coordination of services, and quality of care.

Patients are accepted for treatment on the reasonable expectation that an HHA can meet the patient's medical, nursing, rehabilitative, and social needs in his or her place of residence. Each patient must receive an individualized written plan of care, including any revisions or additions. The individualized plan of care must specify the care and services necessary to meet the patient-specific needs as identified in the comprehensive assessment, including identification of the responsible discipline(s), and the measurable outcomes that the HHA anticipates will occur as a result of implementing and coordinating the plan of care. The individualized plan of care must also specify the patient and caregiver education and training. Services must be furnished in accordance with accepted standards of practice.

Interpretive Guidelines §484.60

"Reasonable expectation that an HHA can meet the patient's medical, nursing, rehabilitative, and social needs in his or her place of residence" means that, in consideration of the patient's level of acuity, the HHA can effectively and safely provide the patient with the skilled services that the patient needs within the patient's home.

"Accepted standards of practice" include guidelines and recommendations issued by nationally recognized organizations with expertise in the relevant field. The Agency for Healthcare Research and Quality (AHRQ) maintains a National Guideline Clearinghouse as a public resource for summaries of evidence-based clinical practice guidelines.

See *§*484.60(e) for written information that must be provided to the patient.

G572
(Rev.)

§484.60(a) Standard: Plan of care.

(1) Each patient must receive the home health services that are written in an individualized plan of care that identifies patient-specific measurable outcomes and goals, and which is established, periodically reviewed, and signed by a doctor of medicine, osteopathy, or podiatry acting within the scope of his or her state license, certification, or registration. If a physician *or allowed practitioner* refers a patient under a plan of care that cannot be completed until after an evaluation visit, the physician *or allowed practitioner* is consulted to approve additions or modifications to the original plan.

Interpretive Guidelines §484.60(a)(1)

"Patient-specific measurable outcome" is a change in health status, functional status, or knowledge, which occurs over time in response to a health care intervention that provides end-result functional and physical health improvement/stabilization.

Patient-specific goals must be individualized to the patient based on the patient's medical diagnosis, physician *or allowed practitioner* orders, comprehensive assessment and patient input. Progress/non-progress toward achieving the goals is evaluated through measurable outcomes. The HHA must include goals for the patient, as well as patient preferences and service schedules, as a part of the plan of care (See §484.60(a)(2) below).

"Periodically reviewed" means every 60 days or more frequently when indicated by changes in the patient's condition (see §484.60(c)(1)).

The patient's physician *or allowed practitioner* orders for treatments and services are the foundation of the plan of care. If the HHA misses a visit or a treatment or service as required by the plan of care*, the HHA should make every attempt to reschedule the missed visit. If the visit cannot be rescheduled, the responsible physician or allowed practitioner should be notified, and the HHA should document the potential clinical impact of missed treatments or services. The HHA should advise and educate the patient on the potential impacts of missed visits.*

If the patient or the patient's representative refuses care that could impact the patient's clinical wellbeing (such as dressing changes or essential medication) on more than one occasion, then the HHA must attempt to identify the reason for the refusal. If the HHA is unable to identify and address the reason for the refusal, then the HHA must communicate with the patient's responsible physician *or allowed practitioner* to discuss how to proceed with patient care.

The physician *or allowed practitioner* should not be approached to reduce the frequency of services based solely on the availability of HHA staff.

In instances where the HHA receives a general referral from a physician *or allowed practitioner* that requests HHA services but does not provide the actual plan of care components (i.e., treatments and observations) for the patient, the HHA will not be able to create a comprehensive plan of care to include goals and services until a home visit is done and sufficient information is obtained to communicate with and receive approval from the physician *or allowed practitioner*.

G574
(Rev.)

§484.60(a)(2) The individualized plan of care must include the following:

(i) All pertinent diagnoses;

(ii) The patient's mental, psychosocial, and cognitive status;

(iii) The types of services, supplies, and equipment required;

(iv) The frequency and duration of visits to be made;

(v) Prognosis;

(vi) Rehabilitation potential;

(vii) Functional limitations;

(viii) Activities permitted;

(ix) Nutritional requirements;

(x) All medications and treatments;

(xi) Safety measures to protect against injury;

(xii) A description of the patient's risk for emergency department visits and hospital re-admission, and all necessary interventions to address the underlying risk factors.

(xiii) Patient and caregiver education and training to facilitate timely discharge;

(xiv) Patient-specific interventions and education; measurable outcomes and goals identified by the HHA and the patient;

(xv) Information related to any advanced directives; and

(xvi) Any additional items the HHA or physician *or allowed practitioner* may choose to include.

Interpretive Guidelines §484.60(a)(2)

A detailed, individualized plan of care is critical to both the quality and safety of patient care and therefore each of the required elements must be included.

- *In general, pertinent diagnoses include, but are not limited to, the chief reason the patient is receiving home care and the diagnosis most related to the current home health plan of care. Additionally, comorbid conditions that exist at the time of the assessment, that are actively addressed in the patient's Plan of Care, or that have the potential to affect the patient's responsiveness to treatment and rehabilitative prognosis should be considered and documented.*

- Mental status is generally screened by asking the patient questions on orientation to time, place and person.

- Psychosocial status, as relevant to the patient's plan of care, may include but is not limited to, interpersonal relationships in the immediate family, financial status,

homemaker/household needs, vocational rehabilitation needs, family social problems and transportation needs.

- *In general, the plan of care should list the required supplies and equipment which are non-routine and medically necessary for the patient's care. Examples include, but are not limited to, shower chairs, catheters, tube feeding supplies, and ostomy bags.*

G576
(Rev.)

§484.60(a)(3) All patient care orders, including verbal orders, must be recorded in the plan of care.

Interpretive Guidelines §484.60(a)(3)

All patient care orders, including verbal orders are part of the plan of care. *The plan of care may include orders for treatment or services received from physicians other than the responsible physician.* The plan should be revised to reflect any verbal order received during the 60-day certification period so that all HHA staff are working from a current plan. It is not necessary for the physician *or allowed practitioner* to sign an updated plan of care until the patient is recertified to continue care and the plan of care is updated to reflect all current ongoing orders including any verbal orders received during the 60-day period.

NOTE: Pulse oximetry is a ubiquitous assessment tool, often used as a part of routine vital signs across health care providers. Routine monitoring of vital signs, including pulse oximetry, do not require a physician order.

G580
(Rev.)

§484.60(b) *Standard: Conformance with the physician or allowed practitioner orders.*

(1) Drugs, services, and treatments are administered only as ordered by a physician *or allowed practitioner*.

Interpretive Guidelines §484.60(b)(1)

Drugs, services and treatments *must be administered in accordance with the orders of a* physician *or allowed practitioner* that establishes and periodically reviews the plan of care. See *also* §484.60(a)(1).

G582
(Rev.)

§484.60(b)(2) Influenza and pneumococcal vaccines may be administered per agency policy developed in consultation with a physician, *physician assistant, nurse practitioner, or clinical nurse specialist,* and after an assessment of the patient to determine for contraindications.

Interpretive Guidelines §484.60(b)(2)

The HHA, in consultation with a physician, *physician assistant, nurse practitioner, or clinical nurse specialist* must develop a written policy that addresses vaccination screening for safety exclusions and assessing contraindications prior to administration of a vaccine, as well as written policies and procedures that address vaccine administration, including managing adverse reactions. No individual physician *or allowed practitioner* order is required for a vaccine. The administration of these vaccines is an exception to §484.60(b)(1).

G584
(Rev.)

§484.60(b)(3) Verbal orders must be accepted only by personnel authorized to do so by applicable state laws and regulations and by the HHA's internal policies.

§484.60(b)(4) When services are provided on the basis of a physician *or allowed practitioner's* verbal orders, a nurse acting in accordance with state licensure requirements, or other qualified practitioner responsible for furnishing or supervising the ordered services, in accordance with state law and the HHA's policies, must document the orders in the patient's clinical record, and sign, date, and time the orders. Verbal orders must be authenticated and dated by the physician *or allowed practitioner* in accordance with applicable state laws and regulations, as well as the HHA's internal policies.

Interpretive Guidelines §484.60(b)(4)

When services are furnished based on a physician *or allowed practitioner*'s verbal order, the order must be put into writing by personnel authorized to do so by applicable state laws as well as by the HHA's internal policies. The orders must be signed and dated with the date of receipt by the nurse or qualified therapist (i.e., physical therapist, speech-language pathologist, occupational therapist, or medical social worker) responsible for furnishing or supervising the ordered services.

In the absence of a state requirement, the HHA should establish a timeframe for physician *or allowed practitioner* authentication, i.e. for obtaining a physician *or allowed practitioner* signature for verbal/telephone orders received. The signature may be written or in electronic form following the requirements of the particular system. A method must be established to identify the signer.

When verbal orders are added to the plan of care, it is not necessary for the physician or allowed practitioner to sign an updated plan of care until the patient is recertified. However, all

verbal orders must be authenticated and dated by the physician or allowed practitioner in accordance with applicable state laws and regulations, as well as the HHA's internal policies.

G588
(Rev.)

§484.60(c) Standard: Review and revision of the plan of care.

(1) The individualized plan of care must be reviewed and revised by the physician *or allowed practitioner* who is responsible for the home health plan of care and the HHA as frequently as the patient's condition or needs require, but no less frequently than once every 60 days, beginning with the start of care date. . . .

Interpretive Guidelines §484.60(c)(1)

See Tag G590 for Interpretive Guidelines for §484.60(c)(1).

G590
(Rev.)

§484.60(c)(1)
. . . The HHA must promptly alert the relevant physician(s) *or allowed practitioner(s)* to any changes in the patient's condition or needs that suggest that outcomes are not being achieved and/or that the plan of care should be altered.

Interpretive Guidelines §484.60(c)(1) *(Tags G588 and G590)*

For "responsible physician" see §484.60(a)(1).

The signature and date of the review by the responsible physician *or allowed practitioner* verifies the interval between plan of care reviews.

In the event of a change in patient condition or needs that suggest outcomes are not being achieved and/or that the patient's plan of care should be altered, the HHA should notify both the responsible physician *or allowed practitioner* and the physician(s) *or allowed practitioner(s)* associated with the relevant aspect of care.

Changes in physician *or allowed practitioner* orders during the plan of care certification period do not automatically restart the timeframe for physician *or allowed practitioner* review of the plan of care.

G592
(Rev.)

§484.60(c)(2) A revised plan of care must reflect current information from the patient's updated comprehensive assessment, and contain information concerning the patient's progress toward the measurable outcomes and goals identified by the HHA and patient in the plan of care.

Survey Procedures §484.60(c)(2)

The clinical record should demonstrate that patients are assessed throughout the episode of care to assure that HHA services meet the needs of the patient; changes in a patient's status are consistently communicated; and the plan of care is updated as needed.

G594
(Rev.)

§484.60(c)(3) Revisions to the plan of care must be communicated as follows:

Survey Procedures §484.60(c)(3)

Ask the HHA to explain how changes to the plan of care are consistently communicated and verify through record review that communications occur.

G596
(Rev.)

§484.60(c)(3)(i) Any revision to the plan of care due to a change in patient health status must be communicated to the patient, representative (if any), caregiver, and all physicians *or allowed practitioners* issuing orders for the HHA plan of care.

Interpretive Guidelines §484.60(c)(3)(i)

There must be evidence in the clinical record that the HHA explained to the patient that a change to the plan of care has occurred and how the change will impact the care delivered by the HHA. The clinical record must also document that the revised plan of care was shared with all relevant physicians *or allowed practitioners* providing care to the patient.

G598
(Rev.)

§484.60(c)(3)(ii) Any revisions related to plans for the patient's discharge must be communicated to the patient, representative, caregiver, all physicians *or allowed practitioners* issuing orders for the HHA plan of care, and the patient's primary care practitioner or other health care professional who will be responsible for providing care and services to the patient after discharge from the HHA (if any).

Interpretive Guidelines §484.60(c)(3)(ii)

Discharge planning begins early in the provision of care and must be revised as the patient's condition or life circumstances change. There must be evidence in the clinical record that the HHA discussed any such changes with the patient, his or her representative (if any) and the responsible physician *or allowed practitioner*. Other physicians *or allowed practitioner(s)* who contributed orders to the patient's plan of care must also be notified of changes to the patient's discharge plan

G602
(Rev.)

§484.60(d) Standard: Coordination of Care. The HHA must:

(1) Assure communication with all physicians *or allowed practitioners* involved in the plan of care.

Interpretive Guidelines §484.60(d)(1)

The physician *or allowed practitioner* who initiated home health care is responsible for the ongoing plan of care; however, to assure the development and implementation of a coordinated plan of care, HHA communication with all physicians *or allowed practitioner* involved in the patient's care is often necessary. While a patient may see several physicians *or allowed practitioner(s)* for various medical problems, not all the physicians *or allowed practitioner(s)* would necessarily be involved in the skilled services defined in the patient's home health plan of care. *Regarding* this requirement, "physicians *or allowed practitioners* involved in the plan of care" means those physicians *or allowed practitioners* who give orders that are directly related to home health skilled services.

G604
(Rev.)

§484.60(d)(2) Integrate orders from all physicians *or allowed practitioners* involved in the plan of care to assure the coordination of all services and interventions provided to the patient.

Interpretive Guidelines §484.60(d)(2)

The clinical manager or other staff designated by the HHA is responsible for integrating orders from all relevant physicians *or allowed practitioners* involved into the HHA plan of care and ensuring the orders are approved by the responsible physician *or allowed practitioner*.

G606
(Rev.)

§484.60(d)(3) Integrate services, whether services are provided directly or under arrangement, to assure the identification of patient needs and factors that could affect patient safety and treatment effectiveness and the coordination of care provided by all disciplines.

Interpretive Guidelines §484.60(d)(3)

The HHA must integrate services provided by various disciplines by:

- Managing the scheduling of patients, taking into consideration the type of services that are being provided on a given day. For example, a patient may become fatigued after a HH aide visit assisting with a bath, thus making a physical therapy session scheduled for directly after the HH aide visit less effective.
- Managing pain during physical therapy or physical care (i.e. dressing changes or wound care) to minimize patient discomfort while maximizing the effectiveness of the therapy session.
- Working with the patient to recommend and make safety modifications in the home.
- Assuring that staff who provide care are communicating any patient concerns and patient progress toward the goals identified in the plan of care with others involved in the patient's care.

G608
(Rev.)

§484.60(d)(4) Coordinate care delivery to meet the patient's needs, and involve the patient, representative (if any), and caregiver(s), as appropriate, in the coordination of care activities.

Survey Procedures §484.60(d)(4)

Determine through interview if the patient, representative, and caregiver, as applicable and appropriate, are involved in care coordination. For example, were individual schedules considered and accommodated as able?

G610
(Rev.)

§484.60(d)(5) Ensure that each patient, and his or her caregiver(s) where applicable, receive ongoing education and training provided by the HHA, as appropriate, regarding the care and services identified in the plan of care. The HHA must provide training, as necessary, to ensure a timely discharge.

Interpretive Guidelines §484.60(d)(5)

The comprehensive assessment, patient-centered plan of care and the goals identified therein inform the training and education objectives for each patient. The goals of the HHA episode are established at admission and revised as indicated by the patient's condition. With the discharge plan clearly identified, patient education and documentation of the patient response to the education begins upon admission and continues throughout the provision of HHA services. The HHA must monitor patient and caregiver responses to and comprehension of any training provided.

Survey Procedures §484.60(d)(5)

If education was conducted, did the HHA staff provide education and training to the patient and any caregivers, when appropriate, and according to the plan of care? Look for evidence that the education was conducted by reviewing the written information in the patient's home and/or interviewing the patient and HHA staff.

G612
(Rev.)

§484.60(e) Standard: Written information to the patient.

The HHA must provide the patient and caregiver with a copy of written instructions outlining:

Interpretive Guidelines §484.60(e)

The documents listed in (e)(1)-(5) must be provided to the patient and/or their his/her caregiver and representative (if any) no later than the next visit after the plan of care has been approved by the physician *or allowed practitioner*. The written information should be updated as the plan of care changes. Clear written communication between the HHA and the patient and the patient's caregiver and representative (if any) helps ensure that patients and families understand what services to expect from the HHA, the purpose of each service and when to expect the services.

G614
(Rev.)

[The HHA must provide the patient and caregiver with a copy of written instructions outlining…]

§484.60(e)(1) Visit schedule, including frequency of visits by HHA personnel and personnel acting on behalf of the HHA.

Interpretive Guidelines §484.60(e)(1)

The HHA must ensure that the written visit schedule provided to the patient is consistent with the patient's most current plan of care.

G616
(Rev.)

[The HHA must provide the patient and caregiver with a copy of written instructions outlining…]

§484.60(e)(2) Patient medication schedule/instructions, including: medication name, dosage and frequency and which medications will be administered by HHA personnel and personnel acting on behalf of the HHA.

Interpretive Guidelines §484.60(e)(2)

The HHA must prepare, and provide to the patient and his or her caregiver (if any) written information regarding the patient's medication regimen as based on the results of the medication review conducted at §484.55(c)(5). The medication administration instructions must be written in plain language that does not use medical abbreviations.

The HHA must provide this information to the patient regardless of whether the patient is receiving only rehabilitation therapy services. See §484.55(c)(5) for communication between the therapist and the HHA nurse regarding medications.

Survey Procedures §484.60(e)(2)

Review the most current medication list that the HHA personnel provided to the patient. Determine if the medications match those listed in the comprehensive assessment, the plan of care, and the written information to the patient. Investigate any discrepancies for additions or deletions to the medications since the information was last updated by the HHA.

G618
(Rev.)

[The HHA must provide the patient and caregiver with a copy of written instructions outlining…]

§484.60(e)(3) Any treatments to be administered by HHA personnel and personnel acting on behalf of the HHA, including therapy services.

G620
(Rev.)

[The HHA must provide the patient and caregiver with a copy of written instructions outlining…]

§484.60(e)(4) Any other pertinent instruction related to the patient's care and treatments that the HHA will provide, specific to the patient's care needs.

G622
(Rev.)

[The HHA must provide the patient and caregiver with a copy of written instructions outlining…]

§484.60(e)(5) Name and contact information of the HHA clinical manager.

Interpretive Guidelines §484.60(e)(5)

The name and contact information of the HHA's clinical manager, including the clinical manager's telephone number and, if the patient prefers electronic communication, e-mail, must be provided to the patient. The HHA explains to the patient when the clinical manager should be contacted for discussion about their services.

G640
(Rev.)

§484.65 Condition of participation: Quality assessment and performance improvement (QAPI).

The HHA must develop, implement, evaluate, and maintain an effective, ongoing, HHA-wide, data-driven QAPI program. The HHA's governing body must ensure that the program reflects the complexity of its organization and services; involves all HHA services (including those services provided under contract or arrangement); focuses on indicators related to improved outcomes, including the use of emergent care services, hospital admissions and re-admissions; and takes actions that address the HHA's performance across the spectrum of care, including the prevention and reduction of medical errors. The HHA must maintain documentary evidence of its QAPI program and be able to demonstrate its operation to CMS.

Interpretive Guidelines § 484.65

The manner and degree of noncompliance identified in relation to the standard level tags for §484.65 may result in substantial noncompliance with this CoP, requiring citation at the condition level.

G642
(Rev.)

§484.65(a) Standard: Program scope.

(1) The program must at least be capable of showing measurable improvement in indicators for which there is evidence that improvement in those indicators will improve health outcomes, patient safety, and quality of care.

(2) The HHA must measure, analyze, and track quality indicators, including adverse patient events, and other aspects of performance that enable the HHA to assess processes of care, HHA services, and operations.

Interpretive Guidelines §484.65(a)

The HHA selects the indicators that it will utilize in its QAPI program based upon identified adverse or negative patient outcomes or agency processes that the HHA wishes to monitor and measure. Each indicator must be measurable through data to evaluate any HHA change in procedure, policy or intervention.

The HHA QAPI program must include procedures for measurement and analysis of indicators and address the frequency with which such measurement and analysis will occur.

Per §484.70(b) the HHA must maintain a coordinated agency-wide program for the surveillance, investigation, identification, prevention, control and investigation of infectious and communicable diseases as an integral part of the QAPI program.

G644

(Rev.)

§484.65(b) Standard: Program data.

(1) The program must utilize quality indicator data, including measures derived from OASIS, where applicable, and other relevant data, in the design of its program.

(2) The HHA must use the data collected to-

(i) Monitor the effectiveness and safety of services and quality of care; and

(ii) Identify opportunities for improvement.

(3) The frequency and detail of the data collection must be approved by the HHA's governing body.

Interpretive Guidelines §484.65(b)(1)-(3)

HHAs seeking initial enrollment in the Medicare program are unlikely to have collected extensive data for their QAPI program indicators, since they likely have been in operation for a relatively brief time. Nevertheless, these initial applicants must have a QAPI program in place, and must be able to describe how the program functions, including which indicators/measures are being tracked, at what intervals, and how the information will be used by the HHA to improve quality and safety.

G646

(Rev.)

§484.65(c) Standard: Program activities.

(1) The HHA's performance improvement activities must—

(i) Focus on high risk, high volume, or problem-prone areas;
(ii) Consider incidence, prevalence, and severity of problems in those areas; and
(iii) Lead to an immediate correction of any identified problem that directly or potentially threaten the health and safety of patients.

Interpretive Guidelines §484.65(c)(1)

"High risk" areas may include global concerns such as a type of service (e.g., pediatrics), geographic concerns (e.g., safety of a neighborhood served); or specific patient care services (e.g., administration of intravenous medications or tracheostomy care). All factors would be associated with significant risk to the health or safety of patients.

"High volume" areas refers to care or service areas that are frequently provided by the HHA to a large patient population, thus possibly increasing the scope of the problem (e.g. laboratory testing, physical therapy, infusion therapy, diabetes management).

"Problem-prone" areas refer to care or service areas that have the potential for negative outcomes and that are associated with a diagnosis or condition for a particular patient group or a particular component of the HHA operation or historical problem areas.

G654

(Rev.)

§484.65(c)(2) Performance improvement activities must track adverse patient events, analyze their causes, and implement preventive actions.

Interpretive Guidelines §484.65(c)(2)

"Adverse patient events" are those patient events that are negative and unexpected, impact a patient's HHA plan of care, and have the potential to cause a decline in a patient's condition.

HHAs must track all adverse patient events, to determine through subsequent analysis whether they were the result of errors that should have been preventable, to reduce the likelihood of such events in the future. HHAs should also consider a way to identify errors that result in near misses, since such errors have the potential to cause future adverse events.

G656

(Rev.)

§484.65(c)(3) The HHA must take actions aimed at performance improvement, and, after implementing those actions, the HHA must measure its success and track performance to ensure that improvements are sustained.

G658
(Rev.)

§484.65(d) Standard: Performance improvement projects.

Beginning January 13, 2018 HHAs must conduct performance improvement projects.

> **(1) The number and scope of distinct improvement projects conducted annually must reflect the scope, complexity, and past performance of the HHA's services and operations.**
>
> **(2) The HHA must document the quality improvement projects undertaken, the reasons for conducting these projects, and the measurable progress achieved on these projects.**

Interpretive Guidelines §484.65(d)

The HHA should have at least one performance improvement project either in development, on-going or completed each calendar year.

The HHA decides, based on the QAPI program activities and data, what projects are indicated and the priority of the projects.

Survey Procedures §484.65(d)

• Ask the HHA to show you documentation for performance improvement projects currently underway, as well as those completed in the prior year.

• Does the HHA's documentation indicate the rationale for undertaking each project? Does the HHA have data indicating it had a problem in the area targeted for improvement, or could the HHA point to recommendations from a nationally recognized expert organization suggesting the activities?

• Does the documentation for the completed project(s) include the project's results? If a project was unsuccessful, ask the HHA what actions it took because of that information. If the project was successful, ask the HHA how it is sustaining the improvement.

G660
(Rev.)

§484.65(e) Standard: Executive responsibilities.

The HHA's governing body is responsible for ensuring the following:

(1) That an ongoing program for quality improvement and patient safety is defined, implemented, and maintained;

(2) That the HHA-wide quality assessment and performance improvement efforts address priorities for improved quality of care and patient safety, and that all improvement actions are evaluated for effectiveness;

(3) That clear expectations for patient safety are established, implemented, and maintained; and

(4) That any findings of fraud or waste are appropriately addressed.

Interpretive Guidelines §484.65(e)(1)-(4)

The governing body must assume overall responsibility for ensuring that the QAPI program reflects the complexity of the HHA and its services, involves all services (including those provided under contract or arrangement), focuses on indicators related to improved outcomes, and takes actions that address the HHA's performance across the spectrum of care. Additionally, the HHA's governing body must appropriately address any findings of fraud or waste in order to assure that resources are appropriately used for patient care activities and that patients are receiving the right care to meet their needs (82 FR 4504, 4510, 4561 (Jan. 13, 2017)). If the HHA identifies or otherwise learns of an action by an HHA employee, contractor or responsible or relevant physician *or allowed practitioner* that may be illegal, the HHA *should* report the action to the appropriate authorities in accordance with applicable law.

Survey Procedures §484.65(e)(1)-(4)

- *Ask the HHA for information about its governing body. If there are questions about who constitutes the HHA's governing body, it may help to review the information the HHA reported on its CMS Form 855A application, identifying those individuals with ownership interest or managing control of the HHA.*

- *Ask to see meeting minutes or other evidence of how the governing body exercises ongoing oversight of and accountability for the HHA's QAPI program.*

G680
(Rev.)

§484.70 Condition of participation: Infection prevention and control.

The HHA must maintain and document an infection control program which has as its goal the prevention and control of infections and communicable diseases.

Interpretive Guidelines § 484.70

The home health setting presents unique challenges for infection control, because: care is delivered in the home environment, not a structured facility; sterile supplies are transported by staff and may need to be stored and protected in the home; and patients may not have access to basic hygiene necessities in their home. It is essential that HHAs have a comprehensive and effective infection control program, because the consequences of poor infection prevention and control can be very serious.

The manner and degree of noncompliance identified in relation to the standard level tags for §484.70 may result in substantial noncompliance with this CoP, requiring citation at the condition level.

Survey Procedures § 484.70

- *Surveyors will focus their observation of infection control practices by the HHA during home visits.*
- *Determine whether the policies and procedures of the HHA's infection control program are implemented correctly based on observations of care.*
- *Determine that there is an ongoing, documented program for the prevention and control of infections and communicable diseases among patients and HHA personnel.*

G682
(Rev.)

§484.70(a) Standard: Prevention

The HHA must follow accepted standards of practice, including the use of standard precautions, to prevent the transmission of infections and communicable diseases.

Interpretive Guidelines §484.70(a)

Federal and state agencies such as the Centers for Disease Control and Prevention (CDC) and state departments of health, national professional organizations, have all developed infection prevention and control standards of practice. Examples of national organizations that promulgate nationally recognized infection and communicable disease control guidelines, and/or recommendations include: the CDC, the Association for Professionals in Infection Control and Epidemiology (APIC), and the Society for Healthcare Epidemiology of America (SHEA). An HHA should identify the source of the standards it selects and be capable of explaining why those standards were chosen for incorporation into the HHA's infection prevention and control program (82 FR 4543).

Standard precautions must be used to prevent transmission of infectious agents. "Standard precautions" are a group of infection practices that apply to all patients regardless of suspected or confirmed infection status at the time health care is delivered. *These practices protect*

healthcare personnel and prevent healthcare personnel or the environment from transmitting infections to patients.

*For example, t*he following are six (6) *core practices*, identified by the *CDC are based on the CDC's "Core Infection Prevention and Control Practices for Safe Healthcare Delivery in All Settings –Recommendations of The Healthcare Infection Control Practices Advisory Committee (HICPAC),*[3] *which is periodically updated. These are a core set of infection prevention and control practices that are recommended in all healthcare settings, regardless of the type of healthcare provided. Also, refer to "Guide to Infection Prevention for Outpatient Settings: Minimum Expectations for Safe Care" published by the National Center for Emerging and Zoonotic Infectious Diseases Division of Healthcare Quality Promotion, Version 2.3.*

1. Hand Hygiene

HHAs and surveyors are advised to review the most current CDC's hand hygiene recommendations for correct procedures. Hand Hygiene should be performed:

• Before *and after* contact with a patient;
• Before performing an aseptic task (e.g., insertion of IV, preparing an injection, performing wound care);
• After contact with blood, body fluids or contaminated surfaces;
• *After contact with the patient's immediate environment;*
• *When* moving from a contaminated body site to a clean body site during patient care; and
• After removal of personal protective equipment *(e.g., gloves, gown, facemask).*

The term "hand hygiene" includes both handwashing with either plain or antiseptic- containing soap and water, and use of alcohol-based products (gels, rinses, foams) that do not require the use of water. In the absence of visible soiling of hands, approved alcohol-based products for hand disinfection are preferred over antimicrobial or plain soap and water because of their superior microbiocidal activity, reduced drying of the skin, and convenience. The HHA must ensure that supplies necessary for adherence to hand hygiene are provided.

2. Environmental cleaning and disinfection

Environmental cleaning and disinfection presents a unique challenge for HHA personnel. The HHA staff have little control over the home environment but must *protect their equipment and supplies during the home visit. Examples of how this might be accomplished include but are not limited to: Cleaning and disinfecting or placing a clean barrier on the surface in the home where clean equipment will be placed and/or preparation of injectable medications will be performed. Additionally, items that are taken from one home to another should be cleaned and disinfected in accordance with accepted standards of practice, which include manufacturer's instructions for use.*

[3] *https://www.cdc.gov/hicpac/pdf/core-practices.pdf.*

3. Injection and Medication Safety

Safe injection practices include but are not limited to:

• Use of aseptic technique when preparing and administering medications;
• Not reusing needles, lancets, *lancet holding devices,* or syringes for more than one use on one patient; using single-dose vials for parenteral medications whenever possible;
• Not administering medications from a single-dose vial or ampule to multiple patients;
• Use of fluid infusion and administration sets (i.e., intravenous bags, tubing and connectors) for one patient only and disposal appropriately after use;
• Considering a syringe or needle/cannula contaminated once it has been used to enter or connect to patient's intravenous infusion bag or administration set;
• Entering medication containers with a new needle and a new syringe even when obtaining additional doses for the same patient;
• Insulin pens *are* dedicated for a single patient and never shared even if the needle is changed; and,
• Sharps disposal *complies with* applicable state and local laws and regulations.

4. Appropriate Use of Personal Protective Equipment

Appropriate Use of Personal Protective Equipment (PPE) is the use of specialized clothing or equipment worn for protection and as a barrier against infectious materials or any potential infectious exposure. PPE protects the caregiver's skin, hands, face, respiratory tract, and/or clothing from exposure. Examples of PPE include: gloves, gowns, face *protection (facemask and goggles or face shields).* The selection *and use* of PPE *is determined by the nature of patient interaction and potential for exposure to blood, body fluids and/or* infectious materials.

5. Minimizing Potential Exposures

Minimizing Potential Exposures in the home health setting *focuses* on prevention of *reducing the* exposure *and transmission of respiratory infections.* HHA staff *should also be careful to minimize potential exposures to infectious agents* while transporting medical specimens and medical waste, such as sharps.

6. Reprocessing, Storage, Transport, and Usage/Operation of Equipment or Devices Used for Patient Care

Cleaning and disinfecting of medical equipment is essential. *Staff should follow the manufacturer's instructions for reprocessing (i.e., cleaning and disinfection or cleaning and sterilization) and use and current standards of practice for transport and storage of patient care equipment. Single-use equipment is discarded after use according to the manufacturer's instructions for proper disposal.* Reusable medical equipment (e.g., blood glucose meters and *other point-of-care meters*, blood pressure cuffs, oximeter probes) *are reprocessed* prior to use on another patient and when soiled. The HHA must ensure that HHA staff are trained to maintain separation between clean and soiled equipment to prevent cross contamination *in the patient care environment and during transport*.

G684
(Rev.)

§484.70(b) Standard: Control.

The HHA must maintain a coordinated agency-wide program for the surveillance, identification, prevention, control, and investigation of infectious and communicable diseases that is an integral part of the HHA's quality assessment and performance improvement (QAPI) program. The infection control program must include:

Interpretive Guidelines §484.70(b)

The HHA should have a program for the surveillance, identification, prevention, control and investigation of infectious and communicable diseases specific to care and services provided in the home setting. The CDC defines surveillance as "the ongoing, systematic collection, analysis, interpretation and evaluation of health data closely integrated with the timely dissemination of this data to those who need it."

As part of its infection control program the HHA should: (1) observe and evaluate services from all disciplines to identify sources or causative factors of infection, track patterns and trends of infections; and (2) establish a corrective plan for infection control (if appropriate) and monitor the effectiveness of the corrective plan. Cross Reference to §484.65(a), QAPI Program Scope.

§484.70(b)(1) A method for identifying infectious and communicable disease problems; and

Interpretive Guidelines §484.70(b)(1)

The HHA must develop a procedure for the identification of infections or risk of infections among patients. It is the prerogative of the HHA to determine the methodology to be used for such identification. Example methodologies include, but are not limited to:

- Clinical record review;
- Staff reporting procedures;
- Review of laboratory results;
- Data analysis of physician *or allowed practitioner* and emergency room visits for symptoms of infection; and
- Identification of root cause of infection through evaluation of HHA personnel technique and self-care technique by patients or caregivers.

Analysis of surveillance data should be used to improve care practices and control infections and transmission of communicable diseases.

While not required by the regulation, CMS suggests HHAs have a way to receive alerts from the CDC Health Alert Network or local public health network as a means of staying up to date with

alerts and information related to public health incidents (as seen with the 2019 Novel Coronavirus public health emergency).

§484.70(b)(2) A plan for the appropriate actions that are expected to result in improvement and disease prevention.

Interpretive Guidelines §484.70(b)(2)

The HHA must develop a*n* action plan to address or prevent infections or transmission of communicable diseases. Such plan should be based on surveillance findings, any identified root cause of infection or disease transmission, tracking data and analysis of data findings.

Actions to facilitate improvements and disease prevention may include the following:
• Policy, procedure or practice changes to improve care;
• Education for patients, caregivers, and HHA personnel to prevent infections and transmission of communicable diseases; and
• The development of process or outcome measures which could be used to monitor and address identified issues (e.g., infection prevention and control observations for technique).

The HHA must evaluate and revise the plan as needed.

G686
(Rev.)

§484.70(c) Standard: Education.

The HHA must provide infection control education to staff, patients, and caregiver(s).

Interpretive Guidelines §484.70(c)

The regulation does not specify the form or content of education regarding infection prevention and control. However, in accordance with requirements under §484.60, patients and caregivers must be provided with education and training specific to the individualized plan of care. HHAs should also take into consideration the patient's and caregiver(s)' health conditions and individual learning needs. The HHA should review training information with the patient and his or her representative (if any), including information on how to clean and care for equipment (e.g., blood glucose meters or reusable catheters), at sufficient intervals to reinforce comprehension of the training.

Additionally, HHAs must provide infection control education to staff.

HHA staff infection control education should include the following:

• Information on appropriate use, transport, storage, and cleaning methods of patient care equipment according to manufacturer guidelines*/instructions for use*;

• Job-specific, infection prevention education and training to all health care personnel for all of their respective tasks;
• Processes to ensure that all health care personnel understand and are competent to adhere to infection prevention requirements as they perform their roles and responsibilities;
• Written infection prevention policies and procedures that are widely available, current, and based on current standards of practice;
• Training before individuals are allowed to perform their duties and periodic refresher training as designated by HHA policy;
• Additional training in response to recognized lapses in adherence and to address newly recognized infection transmission threats (e.g., introduction of new equipment or procedures);
• Infection control education provided to staff at periodic intervals consistent with accepted standards of practice. Such education must be provided at orientation, annually, and as needed to meet the staff's learning needs to provide adequate care; identify infection signs and symptoms; identify routes of infection transmission; appropriately disinfect/sanitize/transport equipment and devices used for patient care; and use proper medical waste disposal techniques. Such education must include instructions on how to implement current infection prevention/treatment practices in the home setting.

Survey Procedures §484.70(c)

- *Review the clinical record for evidence of patient/caregiver infection control education pertinent to the patient's condition and per the plan of care (see also §484.60).*

- *Ask the staff what training they received in infection control. Based on interview responses, follow up through HHA policy review and training records to ensure evidence of compliance.*

G700
(Rev.)

§484.75 Condition of participation: Skilled professional services.

Skilled professional services include skilled nursing services, physical therapy, speech-language pathology services, and occupational therapy, as specified in §409.44 of this chapter, and physician *or allowed practitioner* and medical social work services as specified in §409.45 of this chapter. Skilled professionals who provide services to HHA patients directly or under arrangement must participate in the coordination of care.

Interpretive Guidelines § 484.75

The manner and degree of noncompliance identified in relation to the standard level tags for §484.75 may result in substantial noncompliance with this CoP, requiring citation at the condition level.

G702
(Rev.)

§484.75(a) Standard: Provision of services by skilled professionals.

Skilled professional services are authorized, delivered, and supervised only by health care professionals who meet the appropriate qualifications specified under §484.115 and who practice according to the HHA's policies and procedures.

G704
(Rev.)

§484.75(b) Standard: Responsibilities of skilled professionals.

Skilled professionals must assume responsibility for, but not be restricted to, the following:

G706
(Rev.)

[§484.75(b) Standard: Responsibilities of skilled professionals. Skilled professionals must assume responsibility for, but not be restricted to, the following:]

(1) Ongoing interdisciplinary assessment of the patient;

Interpretive Guidelines §484.75(b)(1)

The term "interdisciplinary" refers to an approach to healthcare that includes a range of health service workers.

"Ongoing interdisciplinary assessment" is the continual involvement of all skilled professional staff involved in a patient's plan of care from the initial assessment through discharge, which should include periodic discussions among the team regarding the patient's health status and recommendations for the plan of care.

An interdisciplinary approach recognizes the contributions of various health care disciplines (MDs, RNs, *Licensed Practical/Vocational Nurses (*LPN/LVN*),* PT, OT, SLP, *Master of Social Work (*MSW*)*, HH aides) and their interactions with each other to meet the patient's needs.

G708
(Rev.)

[§484.75(b) Standard: Responsibilities of skilled professionals. Skilled professionals must assume responsibility for, but not be restricted to, the following:]

(2) Development and evaluation of the plan of care in partnership with the patient, representative (if any), and caregiver(s);

G710
(Rev.)

[§484.75(b) Standard: Responsibilities of skilled professionals. Skilled professionals must assume responsibility for, but not be restricted to, the following:]

(3) Providing services that are ordered by the physician *or allowed practitioner* as indicated in the plan of care;

G712
(Rev.)

[§484.75(b) Standard: Responsibilities of skilled professionals. Skilled professionals must assume responsibility for, but not be restricted to, the following:]

(4) Patient, caregiver, and family counseling;

Survey Procedures §484.75(b)(4)

Home visit observations with direct care observation and patient interview should assist in determining compliance with this requirement. The clinical record should reflect the education and counseling provided by skilled professionals to the patient, caregiver, and family (see also §484.75(b)(5)).

G714
(Rev.)

[§484.75(b) Standard: Responsibilities of skilled professionals. Skilled professionals must assume responsibility for, but not be restricted to, the following:]

(5) Patient and caregiver education;

Survey Procedures §484.75(b)(5)

Home visit observations with direct care observation and patient interview should assist in determining compliance with this requirement. The clinical record should reflect the education and counseling provided by skilled professionals to the patient, caregiver, and family (see also §484.75(b)(4)).

G716
(Rev.)

[§484.75(b) Standard: Responsibilities of skilled professionals. Skilled professionals must assume responsibility for, but not be restricted to, the following:]

(6) Preparing clinical notes;

G718
(Rev.)

[§484.75(b) Standard: Responsibilities of skilled professionals. Skilled professionals must assume responsibility for, but not be restricted to, the following:]

(7) Communication with all physicians involved in the plan of care and other health care practitioners (as appropriate) related to the current plan of care;

G720
(Rev.)

[§484.75(b) Standard: Responsibilities of skilled professionals. Skilled professionals must assume responsibility for, but not be restricted to, the following:]

(8) Participation in the HHA's QAPI program; and

Interpretive Guidelines §484.75(b)(8)

All skilled professional staff must provide input into and participate in the implementation of the HHA's QAPI program for the QAPI program to be effective. Every HHA skilled professional, regardless of whether the skilled professional is a direct employee or contractor of the HHA, is expected to contribute to all phases of the QAPI program. These contributions may include: identification of problem areas; recommendations to address problem areas; data collection; attendance at periodic QAPI meetings; and participation in performance improvement projects.

G722
(Rev.)

[§484.75(b) Standard: Responsibilities of skilled professionals. Skilled professionals must assume responsibility for, but not be restricted to, the following:]

(9) Participation in HHA-sponsored in-service training.

G724
(Rev.)

§484.75(c) Standard: Supervision of skilled professional assistants.

Interpretive Guidelines §484.75(c)

Documentation in the clinical record should show how communication and oversight exist between the skilled professional and assistant regarding the patient's status, the patient's response to services furnished by the assistant, and the effectiveness of any written instructions provided by the skilled professional to the assistant.

Any specific written instructions by skilled professionals to assistants are based on treatments prescribed in the patient's plan of care, patient assessments by the skilled professional, and accepted standards of professional practice. The skilled professional must periodically evaluate the effectiveness of the services furnished by the assistant to ensure the patient's needs are met.

Survey Procedures §484.75(c)

Documentation in the clinical record should demonstrate evidence that the skilled professionals supervise professional assistants as per HHA policy. Supervision of the skilled assistants must be conducted by the same discipline as the skilled professional that developed the assistant's instructions. Look for evidence in the clinical record that the skilled professional remains active in the ongoing plan of care through periodic supervisory follow-up. Review clinical notes to verify that professional assistants adhere to the instructions established by the skilled professional and that they document the treatment and patient response to the treatment.

G726
(Rev.)

§484.75(c)(1) Nursing services are provided under the supervision of a registered nurse that meets the requirements of §484.115(k).

Interpretive Guidelines §484.75(c)(1)

The HHA should identify a registered nurse (RN) to supervise the care provided by licensed practical/vocational nurses (LPN/LVNs). *§484.115(k) requires the RN be a graduate of an approved school of professional nursing who is licensed in the state where practicing.*

The identified RN must in turn monitor and evaluate LPN/LVN performance in the provision of services, provision of treatments, patient education, communication with the RN, and data collection regarding the patient's status and health needs (as delegated by the RN). Only a registered nurse may perform comprehensive assessment, evaluations, care planning and discharge planning.

G728
(Rev.)

§484.75(c)(2) Rehabilitative therapy services are provided under the supervision of an occupational therapist or physical therapist that meets the requirements of §484.115(f) or (h), respectively.

Interpretive Guidelines §484.75(c)(2)

An assistant must be supervised by a skilled therapy professional for the assistant's respective therapy type. For example, only a physical therapist may supervise a physical therapist assistant and only an occupational therapist may supervise an occupational therapy assistant. The

applicable therapist should monitor and evaluate the therapy assistant's performance *regarding* provision of treatments, patient education, communication with the therapist, and data collection regarding the patient's status and health needs (as delegated by the therapist). Only the skilled therapist may perform comprehensive assessments, patient evaluations, care planning and discharge planning.

G730
(Rev.)

§484.75(c)(3) Medical social services are provided under the supervision of a social worker that meets the requirements of §484.115(m).

Interpretive Guidelines §484.75(c)(3)

Any social service provided by a social work assistant must be supervised by a social worker who has a master's degree or doctoral degree from a school of social work accredited by the Council on Social Work Education *and has 1 year of social work experience in a health care setting.*

G750
(Rev.)

§484.80 Condition of participation: Home health aide services.

All home health aide services must be provided by individuals who meet the personnel requirements specified in paragraph (a) of this section.

Interpretive Guidelines §484.80

The manner and degree of noncompliance identified in relation to the standard level tags for §484.80 may result in substantial noncompliance with this CoP, requiring citation at the condition level.

G754
(Rev.)

§484.80(a) Standard: Home health aide qualifications.

(1) A qualified home health aide is a person who has successfully completed:

> **(i) A training and competency evaluation program as specified in paragraphs (b) and (c) respectively of this section; or**
>
> **(ii) A competency evaluation program that meets the requirements of paragraph (c) of this section; or**

(iii)A nurse aide training and competency evaluation program approved by the state as meeting the requirements of §483.151 through §483.154 of this chapter, and is currently listed in good standing on the state nurse aide registry; or

(iv) The requirements of a state licensure program that meets the provisions of paragraphs (b) and (c) of this section.

Interpretive Guidelines §484.80(a)(1)

The regulation describes four methods by which a home health aide may become qualified:

- The candidate may successfully complete a training and competency evaluation program offered by an HHA (except by an HHA specified in §484.80(f)).

- The candidate may successfully complete a competency evaluation program only. The competency evaluation program must address all requirements in §484.80(c).

- A nurse aide who successfully completes a nurse aide training and competency evaluation program, and is found to be in good standing in the state nurse aide registry, is considered to have met the training and competency requirements for an HHA aide. See also 42 CFR Part 483, Subpart D for requirements for states and state agencies on Nurse Aide Training and Competency Evaluation.

- The candidate may successfully complete a State administered program that licenses or certifies HHA aides and that meets or exceeds the requirements under paragraphs (b) and (c) of this section.

The HHA is responsible for ensuring that any HHA aide (whether employed directly or under arrangement) who provides home health aide services for the HHA meets the provisions of this regulation.

Any state requirement regarding aide education, training, competency evaluations, or certification and supervision that is more stringent that the corresponding federal requirement takes precedence over the federal requirement. Likewise, any federal requirement that is more stringent than a corresponding state requirement takes precedence over the more lenient state requirement

G756
(Rev.)

§484.80(a)(2) A home health aide or nurse aide is not considered to have completed a program, as specified in paragraph (a)(1) of this section, if, since the individual's most recent completion of the program(s), there has been a continuous period of 24 consecutive months during which none of the services furnished by the individual as described in §409.40 of this chapter were for compensation. If there has been a 24 month lapse in

furnishing services for compensation, the individual must complete another program, as specified in paragraph (a)(1) of this section, before providing services.

Interpretive Guidelines §484.80(a)(2)

If an individual has a 24 consecutive month lapse in furnishing aide services for compensation, regardless of the circumstances surrounding the lapse, the aide will be required to complete a new training and competency evaluation program, or a competency evaluation program, prior to providing aide services on behalf of the HHA. Compensation as it relates to home health aide means monetary compensation, as set forth in section 1891(a)(3)(A) of the Act (as noted in 82 FR 4545 preamble discussion).

G760
(Rev.)

§484.80(b) Standard: Content and duration of home health aide classroom and supervised practical training.

(1) Home health aide training must include classroom and supervised practical training in a practicum laboratory or other setting in which the trainee demonstrates knowledge while providing services to an individual under the direct supervision of a registered nurse, or a licensed practical nurse who is under the supervision of a registered nurse. Classroom and supervised practical training must total at least 75 hours.

Interpretive Guidelines §484.80(b)(1)

Home health aide training must include classroom and supervised practical training in a practicum laboratory or other setting in which the trainee demonstrates knowledge while providing services to an individual under the direct supervision of a registered nurse, or a licensed practical nurse who is under the supervision of a registered nurse. Alternative formats for classroom training, such as online course material or internet based interactive formats are acceptable delivery methods for the classroom training. These alternative formats should also provide an interactive component that permits students to ask questions and receive responses related to the training.

G762
(Rev.)

[§484.80(b) Standard: Content and duration of home health aide classroom and supervised practical training.]

(2) A minimum of 16 hours of classroom training must precede a minimum of l6 hours of supervised practical training as part of the 75 hours.

G764
(Rev.)

[§484.80(b) Standard: Content and duration of home health aide classroom and supervised practical training.]

(3) A home health aide training program must address each of the following subject areas:

(i) Communication skills, including the ability to read, write, and verbally report clinical information to patients, representatives, and caregivers, as well as to other HHA staff.

(ii) Observation, reporting, and documentation of patient status and the care or service furnished.

(iii) Reading and recording temperature, pulse, and respiration.

(iv) Basic infection prevention and control procedures.

(v) Basic elements of body functioning and changes in body function that must be reported to an aide's supervisor.

(vi) Maintenance of a clean, safe, and healthy environment

(vii) Recognizing emergencies and the knowledge of instituting emergency procedures and their application.

(viii) The physical, emotional, and developmental needs of and ways to work with the populations served by the HHA, including the need for respect for the patient, his or her privacy, and his or her property.

(ix) Appropriate and safe techniques in performing personal hygiene and grooming tasks that include—

- **(A) Bed bath;**
- **(B) Sponge, tub, and shower bath;**
- **(C) Hair shampooing in sink, tub, and bed;**
- **(D) Nail and skin care;**
- **(E) Oral hygiene;**
- **(F) Toileting and elimination;**

(x) Safe transfer techniques and ambulation;

(xi) Normal range of motion and positioning;

(xii) Adequate nutrition and fluid intake;

(xiii) Recognizing and reporting changes in skin condition; and

(xiv) Any other task that the HHA may choose to have an aide perform as permitted under state law.

(xv) The HHA is responsible for training home health aides, as needed, for skills not covered in the basic checklist, as described in paragraph (b)(3)(ix) of this section.

Interpretive Guidelines §484.80(b)(3)

Two requirements were added to 484.80(b)(3) in 2017 (82 FR 4504) that must be included in HHA training beginning on January 13, 2018:

1. Communication skills in regard to the aide's ability to read, write, and verbally report clinical information to patients, representatives, and caregivers, as well as to other HHA staff; and
2. Recognizing and reporting changes in skin condition.

For individuals who met the qualification requirements for HHA aides prior to January 13, 2018, new training content in these requirements may be completed via in-service training.

G766
(Rev.)

[§484.80(b) Standard: Content and duration of home health aide classroom and supervised practical training.]

(b)(4) The HHA must maintain documentation that demonstrates that the requirements of this standard have been met.

Survey Procedures §484.80(b)(4)

When aide services are observed during the surveyor home visit, or are included in the patient sample, review documentation of the HHA aide competency testing for those home health aides to confirm that it was completed. The competency evaluation consists of those subject areas specified in §484.80(b)(3).

G768
(Rev.)

§484.80(c) Standard: Competency evaluation.

An individual may furnish home health services on behalf of an HHA only after that individual has successfully completed a competency evaluation program as described in this section.

Interpretive Guidelines §484.80(c)

The HHA may not allow an aide to provide services to patients independently until they have successfully completed competency testing either at that HHA or at another training facility and successful completion is verified through documentation provided by the applicant or the training facility.

§484.80(c)(1) The competency evaluation must address each of the subjects listed in paragraph (b)(3) of this section. Subject areas specified under paragraphs (b)(3)(i), (iii), (ix), (x), and (xi) of this section must be evaluated by observing an aide's performance of the task with a patient or pseudo-patient. The remaining subject areas may be evaluated through written examination, oral examination, or after observation of a home health aide with a patient, or with a pseudo-patient as part of a simulation.

Interpretive Guidelines §484.80(c)(1)

The following skills must be evaluated by observing the aide's performance while carrying out the task with a patient *or pseudo-patient*.

(i) Communication skills, including the ability to read, write, and verbally report clinical information to patients, representatives, and caregivers, as well as to other HHA staff;
(iii) Reading and recording temperature, pulse, and respiration;
(ix) Appropriate and safe techniques in performing personal hygiene and grooming tasks that include—
  (A) Bed bath;
  (B) Sponge, tub, and shower bath;
  (C) Hair shampooing in sink, tub, and bed;
  (D) Nail and skin care;
  (E) Oral hygiene;
  (F) Toileting and elimination;
(x) Safe transfer techniques and ambulation;
(xi) Normal range of motion and positioning.

In accordance with §484.80(c)(3), a registered nurse, in consultation with other skilled professionals (as appropriate), must observe the HHA aide candidate perform each of the tasks above in its entirety to confirm the competence of the candidate.

HHA aides who successfully completed a competency evaluation prior to January 13, 2018, do not need to repeat the portions of the competency evaluation required to be done while providing services to a patient under §§484.80 (b) (i), (iii), (ix), (x), and (xi). For all HHA aides who receive a competency evaluation after January 13, 2018, however, these skills must be tested while the aide is providing care to a patient *or pseudo-patient.* A p*seudo-patient is a person who*

is trained to participate in a role-play situation, or a computer-based mannequin device. A pseudo-patient must be capable of responding to and interacting with the home health aide trainee, and must be similar in characteristics to the primary patient population served by the HHA in key areas such as age, frailty, functional status, and cognitive status.

When pseudo-patients are used to test home health aide competency, the simulated environment must mimic the reality of the homecare environment, including environmental distractions and constraints that evoke or replicate substantial aspects of the real world in a fully interactive fashion, to assess proficiency in performing skills.

G770
(Rev.)

§484.80(c)(4) A home health aide is not considered competent in any task for which he or she is evaluated as unsatisfactory. An aide must not perform that task without direct supervision by a registered nurse until after he or she has received training in the task for which he or she was evaluated as "unsatisfactory," and has successfully completed a subsequent evaluation. A home health aide is not considered to have successfully passed a competency evaluation if the aide has an "unsatisfactory" rating in more than one of the required areas.

G772
(Rev.)

§484.80(c)(5) The HHA must maintain documentation which demonstrates that the requirements of this standard have been met.

Interpretive Guidelines §484.80(c)(5)

Documentation of competency must:

- Include a description of the competency evaluation program, including the qualifications of the instructors;
- Confirm that competency was determined by direct observation and the results of those observations;
- Distinguish between skills evaluated during patient care and those taught in a laboratory, e.g., skills evaluated through use of a volunteer or direct observation of patient care versus a skill lab demonstration; and
- Describe how additional skills beyond the basic skills listed at §484.80(b)(3) were taught and tested.

An HHA aide that is unable to provide the above documentation will be required to successfully complete a competency evaluation before providing care to patients *(§484.80(c)(4))*.

G774
(Rev.)

§484.80(d) Standard: In-service training.

A home health aide must receive at least l2 hours of in-service training during each 12-month period. In-service training may occur while an aide is furnishing care to a patient.

Interpretive Guidelines §484.80(d)

The annual 12 hours of in-service training is met for the 12 months following successful completion of an HHA aide training and competency evaluation, unless the HHA introduces a new procedure that would indicate the need for further HHA aide in-service training.

When conducting in-service training during patient care, the patient must first be informed of and consent to the training and be informed of how the training will be conducted; patient rights, respect for the patient's preferences, and potential for care disruption must always guide such training.

G776
(Rev.)

§484.80(d)(1) In-service training may be offered by any organization and must be supervised by a registered nurse.

Interpretive Guidelines §484.80(d)(1)

RN supervision means that the RN approves the content of and attends the in-service training to ensure the content is consistent with the HHA's policies and procedures. *It would be permissible for HHAs to use in-service education through another organization, if it is under the supervision of an RN (82 FR 4545).*

G778
(Rev.)

§484.80(d)(2) The HHA must maintain documentation that demonstrates the requirements of this standard have been met.

Survey Procedures §484.80(d)(2)

Review a sample of HHA personnel and training records to verify compliance.

G780
(Rev.)

§484.80(e) Standard: Qualifications for instructors conducting classroom and supervised practical training.

Classroom and supervised practical training must be performed by a registered nurse who possesses a minimum of 2 years nursing experience, at least 1 year of which must be in home health care, or by other individuals under the general supervision of the registered nurse.

Interpretive Guidelines §484.80(e)

The required 2 years of nursing experience for the RN instructor should be "hands on" clinical experience such as providing care and/or supervising nursing services or teaching nursing skills in an organized curriculum or in-service program. At least 1 year of experience must be in home health care.

"Other individuals" *who may help with home health aide training would include health care professionals such as*:

- *Physicians;*
- Physical therapists;
- Occupational therapists;
- Speech-language pathologists;
- Medical social workers,
- LPN/LVNs; and
- Nutritionists.

G782
(Rev.)

§484.80(f) Standard: Eligible training and competency evaluation organizations.

A home health aide training program and competency evaluation program may be offered by any organization except by an HHA that, within the previous 2 years:

(1) Was out of compliance with the requirements of paragraphs (b), (c), (d), or (e) of this section; or

(2) Permitted an individual who does not meet the definition of a "qualified home health aide" as specified in paragraph (a) of this section to furnish home health aide services (with the exception of licensed health professionals and volunteers); or

(3) Was subjected to an extended (or partially extended) survey as a result of having been found to have furnished substandard care (or for other reasons as determined by CMS or the state); or

(4) Was assessed a civil monetary penalty of $5,000 or more as an intermediate sanction; or

(5) Was found to have compliance deficiencies that endangered the health and safety of the HHA's patients, and had temporary management appointed to oversee the management of the HHA; or

(6) Had all or part of its Medicare payments suspended; or

(7) Was found under any federal or state law to have:

(i) Had its participation in the Medicare program terminated; or

(ii) Been assessed a penalty of $5,000 or more for deficiencies in federal or state standards for HHAs; or

(iii) Been subjected to a suspension of Medicare payments to which it otherwise would have been entitled; or

(iv) Operated under temporary management that was appointed to oversee the operation of the HHA and to ensure the health and safety of the HHA's patients; or

(v) Been closed, or had its patients transferred by the state; or

(vi) Been excluded from participating in federal health care programs or debarred from participating in any government program.

Interpretive Guidelines §484.80(f)

The home health aide training and competency evaluation program may be offered by any HHA, except an HHA that falls under one of the exceptions specified in the regulation. These exceptions include, but are not limited to, agencies that have been found out of compliance with the home health aide requirements any time in the last 2 years, agencies that permitted an unqualified individual to function as a home health aide, and agencies that have been found to have compliance deficiencies that endangered patient health and safety. The full list of exceptions is included in the regulatory text.

"Substandard care" is defined as care that is noncompliant with federal HHA regulations at a condition-level.

If an HHA chooses to use volunteers to provide patient care services, the volunteer must either: (1) be licensed by the State to provide the service (RN/LPN/LVN/physical therapist, occupational therapist or speech therapist); or (2) have successfully completed any training and competency requirements applicable to the service performed.

The most reliable source of information to assure that an HHA has not been excluded from participating in federal health care programs is the List of Excluded Individuals and Entities on the HHS Office of Inspector General (OIG) website: https://oig.hhs.gov/exclusions/. In addition, a reliable source to confirm whether an HHA has been debarred (in accordance with the

debarment regulations at 2 CFR 180.300) is the System for Award Management (SAM), an official website of the U.S. government: https://www.sam.gov/portal/SAM/##11#1.

Prohibition/Loss of Home Health Aide Training and Competency Evaluation Program

If a partially extended survey is conducted, but no condition-level deficiency is found, then the HHA would not be precluded from offering its own aide training and/or competency evaluation program. If a condition-level deficiency is found during a partially extended or extended survey, then the HHA may complete any training course and competency evaluation program that is in progress; however, the HHA may not: (1) accept new candidates into the program; or (2) begin a new program for two years after receipt of written notice from the CMS Regional Office of such condition-level deficiency. Correction of the condition-level deficiency does not lift the two-year restriction identified in this standard.

If an HHA loses the authority to operate a home health aide training and competency evaluation program, that does not preclude the HHA from using a contractor to acquire training (see 54 FR 33354, 33358 (Aug. 14, 1989)). If the HHA has its own training and competency lab onsite, it may be permissible for a contractor to conduct the training on the HHA premises. However, the HHA must have no influence or role in the conduct of the training and competency evaluation. The program must be independent of the HHA in all other regards.

G798
(Rev.)

§484.80(g) Standard: Home health aide assignments and duties.

(1) **Home health aides are assigned to a specific patient by a registered nurse or other appropriate skilled professional, with written patient care instructions for a home health aide prepared by that registered nurse or other appropriate skilled professional (that is, physical therapist, speech-language pathologist, or occupational therapist).**

Interpretive Guidelines §484.80(g)*(1)*

The act of assigning a "specific patient" to a HH aide should be an intentional and deliberate decision that takes into consideration the skills of the aide, the availability of the aide for patient care continuity, patient preference (when possible), and other considerations as determined by the patient's care needs.

Most generally, HH aide services are provided in conjunction with, and as an adjunct to, a skilled nursing service. When both nursing and therapy services are involved, *either skilled professional may assign home health aides and develop written patient care instructions.*

G800
(Rev.)

§484.80(g)(2) A home health aide provides services that are:

(i) Ordered by the physician *or allowed practitioner*;
(ii) Included in the plan of care;
(iii) Permitted to be performed under state law; and
(iv) Consistent with the home health aide training

G802
(Rev.)

§484.80(g)(3) The duties of a home health aide include:

(i) The provision of hands on personal care;
(ii) The performance of simple procedures as an extension of therapy or nursing services;
(iii) Assistance in ambulation or exercises; and
(vi) Assistance in administering medications ordinarily self-administered.

Interpretive Guidelines §484.80(g)(3)

"Self-administration of medications" means that the patient (or the patient's caregiver, if applicable) *can* manage all aspects of taking her or his medication, including safe medication storage, removing the correct dose of medication from the container, taking the medication at the correct time, and knowing how to contact the pharmacy for refills or other questions.

"Assistance in administering medications," as referenced in this requirement, means that the HH aide may take only a passive role in this activity. Assistance may include items such as:

- Bringing a medication to the patient either in a pill organizer or a medication container as requested by the patient or caregiver;
- Providing fluids to take with the medication;
- Reminding the patient to take a medication;
- Applying a topical product, such as a non-prescription cream, to intact skin per home health aide instructions in how to apply it.

G804
(Rev.)

§484.80(g)(4) Home health aides must be members of the interdisciplinary team, must report changes in the patient's condition to a registered nurse or other appropriate skilled professional, and must complete appropriate records in compliance with the HHA's policies and procedures.

Interpretive Guidelines §484.80(g)(4)

As noted in 82 FR 4532, interdisciplinary teams work together, each member contributing their knowledge and skills, interacting with and building upon each other, to enhance patient care.

The interdisciplinary team model is the foundation of care in other health care providers, such as hospices and complex chronic care management practices. HHAs may choose to develop interdisciplinary team models based on the experiences and knowledge developed by these similar care providers, or may develop their own strategies and structures to create effective interdisciplinary teams. The term "interdisciplinary" refers to an approach to healthcare that includes a range of health service workers, *which may include but is not limited to,* MDs, RNs, LPN/LVN, PT & *Physical Therapy Assistant* (PTA), OT & *Occupational Therapy Assistant* (OTA), SLP, MSW, and HH aides.

During interdisciplinary team meetings, all HHA staff involved in the patient's care must be present for, and, where appropriate, should contribute to, any discussion regarding the patient's care. *Since home health aides play an integral role in the delivery of HHA services and have frequent and/or prolonged encounters with patients, their input as members of the interdisciplinary team is important for information sharing and their participation in the team should be reflected in the visit notes of the clinical record.* The HHA aide may participate in person, electronically or via telephone.

G808
(Rev.)

§484.80(h) Standard: Supervision of home health aides.

(1)(i) If home health aide services are provided to a patient who is receiving skilled nursing, physical or occupational therapy, or speech language pathology services—

> ***(A) A registered nurse or other appropriate skilled professional who is familiar with the patient, the patient's plan of care, and the written patient care instructions described in paragraph (g) of this section, must complete a supervisory assessment of the aide services being provided no less frequently than every 14 days; and***
>
> ***(B) The home health aide does not need to be present during the supervisory assessment described in paragraph (h)(1)(i)(A) of this section.***

Interpretive Guidelines §484.80(h)(1)(i)

An occupational therapist may conduct a home health initial assessment visit and complete a comprehensive assessment under the Medicare program, but only when occupational therapy is on the home health plan of care, with either physical therapy or speech therapy, and when skilled nursing services are not initially in the plan of care (86 FR 62242).

G810
(Rev.)

§484.80(h)(1)(ii) ***The supervisory assessment must be completed onsite (that is, an in person visit), or on the rare occasion by using two-way audio-video telecommunications technology***

that allows for real-time interaction between the registered nurse (or other appropriate skilled professional) and the patient, not to exceed 1 virtual supervisory assessment per patient in a 60-day episode.

G812
(Rev.)

§484.80(h)(1)(iii) ***If an area of concern in aide services is noted by the supervising registered nurse or other appropriate skilled professional, then the supervising individual must make an on-site visit to the location where the patient is receiving care in order to observe and assess the aide while he or she is performing care.***

G813
(New)

§484.80(h)(1)(iv) A registered nurse or other appropriate skilled professional must make an annual on-site visit to the location where a patient is receiving care in order to observe and assess each aide while he or she is performing care.

Interpretive Guidelines §484.80(h)(1)(iv)

In addition to the regularly-scheduled 14-day supervisory assessment and as-needed observation visits for aides providing care to patients receiving skilled services, HHAs are required to make an annual on-site, in person, visit to a patient's home to directly observe and assess each home health aide while he or she is performing patient care activities. The HHA is required to observe each home health aide annually with at least one patient (86 FR 62347). The skilled professional who supervises aide services should be familiar with the patient, the patient's plan of care, and the written patient care instructions.

If, during a supervisory visit described in §484.80(h)(1)(i*ii*), a concern is identified at a patient's home, but the aide is not present, then the skilled professional must go on-site with the aide at the next scheduled visit to observe and assess the aide while he or she is performing care.

G814
(Rev.)

§484.80(h)(2)*(i)* If home health aide services are provided to a patient who is not receiving skilled nursing care, physical or occupational therapy, or speech-language pathology services, —

> ***(A) The registered nurse must make an onsite, in person visit every 60 days to assess the quality of care and services provided by the home health aide and to ensure that services meet the patient's needs; and***
>
> ***(B) The home health aide does not need to be present during this visit.***

(ii) Semi-annually the registered nurse must make an on-site visit to the location where each patient is receiving care in order to observe and assess each home health aide while he or she is performing non-skilled care.

G816
(Rev.)

§484.80(h)(3) If a deficiency in aide services is verified by the registered nurse or other appropriate skilled professional during an on-site visit, then the agency must conduct, and the home health aide must complete, *retraining* and a competency *evaluation for the deficient and all related skills.*

G818
(Rev.)

§484.80(h)(4) Home health aide supervision must ensure that aides furnish care in a safe and effective manner, including, but not limited to, the following elements:

(i) Following the patient's plan of care for completion of tasks assigned to a home health aide by the registered nurse or other appropriate skilled professional;
(ii) Maintaining an open communication process with the patient, representative (if any), caregivers, and family;
(iii) Demonstrating competency with assigned tasks;
(iv) Complying with infection prevention and control policies and procedures;
(v) Reporting changes in the patient's condition; and
(vi) Honoring patient rights.

Interpretive Guidelines §484.80(h)(4)

During each supervisory visit the supervising registered nurse, or other appropriate skilled professional, should document his or her evaluation of the HH aide *regarding* each of the elements of this standard.

§484.80(h)(4)(ii) "Maintaining an open communication process" means that the aide *can* explain what *they are* going to do with the patient, ask the patient open-ended questions, seek feedback from the patient, and respond to the needs and requests of the patient, representative (if any), caregivers, and family.

G820
(Rev.)

§484.80(h)(5) If the home health agency chooses to provide home health aide services under arrangements, as defined in section 1861(w)(1) of the Act, the HHA's responsibilities also include, but are not limited to:

(i) Ensuring the overall quality of care provided by an aide;
(ii) Supervising aide services as described in paragraphs (h)(l) and (2) of this section; and
(iii) Ensuring that home health aides who provide services under arrangement have met the training or competency evaluation requirements, or both, of this part.

G828
(Rev.)

§484.80(i) Standard: Individuals furnishing Medicaid personal care aide-only services under a Medicaid personal care benefit.

An individual may furnish personal care services, as defined in §440.167 of this chapter, on behalf of an HHA. Before the individual may furnish personal care services, the individual must meet all qualification standards established by the state. The individual only needs to demonstrate competency in the services the individual is required to furnish.

Subpart C--Organizational Environment

G848
(Rev.)

§484.100 Condition of participation: Compliance with Federal, State, and local laws and regulations related to the health and safety of patients.

The HHA and its staff must operate and furnish services in compliance with all applicable federal, state, and local laws and regulations related to the health and safety of patients. If state or local law provides licensing of HHAs, the HHA must be licensed.

Interpretive Guidelines §484.100

Non-compliance with this condition includes: 1) the agency is not currently licensed per State requirements; or 2) the HHA has been cited by a Federal program (other than CMS), or a State or local authority for a non-compliance with licensing requirements. The Federal, State or local authority has made a final determination after all administrative procedures have been completed; all appeals have been finalized; and the findings of the noncompliance with the laws/regulations were upheld and enforced.

G850
(Rev.)

§484.100(a) Standard: Disclosure of ownership and management information.

The HHA must comply with the requirements of part 420 subpart C, of this chapter. The HHA also must disclose the following information to the state survey agency at the time of the HHA's initial request for certification, for each survey, and at the time of any change in ownership or management:

(1) The names and addresses of all persons with an ownership or controlling interest in the HHA as defined in §420.201, §420.202, and §420.206 of this chapter.

(2) The name and address of each person who is an officer, a director, an agent, or a managing employee of the HHA as defined in §420.20l, §420.202, and §420.206 of this chapter.

(3) The name and business address of the corporation, association, or other company that is responsible for the management of the HHA, and the names and addresses of the chief executive officer and the chairperson of the board of directors of that corporation, association, or other company responsible for the management of the HHA.

G860
(Rev.)

§484.100(b) Standard: Licensing.

The HHA, its branches, and all persons furnishing services to patients must be licensed, certified, or registered, as applicable, in accordance with the state licensing authority as meeting those requirements.

G862
(Rev.)

§484.100(c) Standard: Laboratory services.

(1) If the HHA engages in laboratory testing outside of the context of assisting an individual in self-administering a test with an appliance that has been cleared for that purpose by the Food and Drug Administration, the testing must be in compliance with all applicable requirements of part 493 of this chapter. The HHA may not substitute its equipment for a patient's equipment when assisting with self-administered tests.

Interpretive Guidelines §484.100(c)(1)

If an HHA nurse or other HHA employee only *assists* a patient who has her or his own glucose meter, then a Clinical Laboratory Improvement Amendment (CLIA) certificate is not required. If the HHA nurse or HHA employee conducts the test, regardless of whether the patient's

equipment or the HHA's equipment is used, then a CLIA certificate (specifically a Certificate of Waiver) is required.

The HHA may not substitute its equipment for a patient's equipment when assisting with self-administered tests, except that an HHA may allow a patient to use HHA testing equipment for a short, defined period of time until the patient has obtained his or her own testing equipment. As a part of the care planning process, HHAs are expected to help patients identify and obtain resources to secure the equipment needed for self-testing.

G864
(Rev.)

§484.100(c)(2) If the HHA refers specimens for laboratory testing, the referral laboratory must be certified in the appropriate specialties and subspecialties of services in accordance with the applicable requirements of part 493 of this chapter.

Interpretive Guidelines §484.100(c)(2)

HHAs may refer to Appendix C of the CMS State Operations Manual for regulations and interpretive guidelines for Part 493 (Laboratory Requirements).

REFER TO E-TAGS (Appendix Z)
(Rev.)

§484.102 Condition of participation: Emergency preparedness.

Interpretive Guidelines: § 484.102

HHAs must comply with the applicable emergency preparedness requirements referenced in Appendix Z of the State Operations Manual. For all applicable requirements and guidance for Emergency Preparedness, please refer to Appendix Z. We note that compliance with the emergency preparedness requirements is assessed in accordance with the survey protocol outlined within Appendix Z.

G940
(Rev.)

§484.105 Condition of participation: Organization and administration of services.

The HHA must organize, manage, and administer its resources to attain and maintain the highest practicable functional capacity, including providing optimal care to achieve the goals and outcomes identified in the patient's plan of care, for each patient's medical, nursing, and rehabilitative needs. The HHA must assure

that administrative and supervisory functions are not delegated to another agency or organization, and all services not furnished directly are monitored and controlled. The HHA must set forth, in writing, its organizational structure, including lines of authority, and services furnished.

Interpretive Guidelines §484.105

The roles of the governing body, administrator and clinical manager may not be delegated. In other words, an HHA must ensure that the responsibilities of the governing body, administrator and clinical manager (for the day-to-day operation of the HHA) are not relinquished to another person or organization on an on-going basis. This does not apply to periodic "acting" employees in the absence of the administrator or clinical manger. In addition, the use of payroll services, OASIS transmission contractors, and personnel training programs are not considered to be delegation of administrative and supervisory functions; these are service contracts that the agency may use to optimize administrative and supervisory efficiencies.

G942
(Rev.)

§484.105(a) Standard: Governing body.

A governing body (or designated persons so functioning) must assume full legal authority and responsibility for the agency's overall management and operation, the provision of all home health services, fiscal operations, review of the agency's budget and its operational plans, and its quality assessment and performance improvement program.

Interpretive Guidelines §484.105(a)

An HHA may establish a governing body composed of individuals of its choosing. The individuals that comprise the governing body are those who have the legal authority to assume responsibility for assuring that management and operation of the HHA is effective and operating within all legal bounds (as noted in 82 FR 4548).

G946
(Rev.)

§484.105(b)(1) Standard: Administrator. The administrator must:

(i) Be appointed by and report to the governing body;

Interpretive Guidelines §484.105(b)(1)(i)

The administrator is actively involved in the daily responsibilities of running the HHA. The administrator must be appointed by and accountable to the governing body; acting as a liaison between the daily functions of the HHA and the governing body (as noted in 82 FR 4548).

G948
(Rev.)

[§484.105(b)(1) The administrator must:]

(ii) Be responsible for all day-to-day operations of the HHA;

Interpretive Guidelines §484.105(b)(1)(ii)

The HHA administrator is required, among other things, to be responsible for all day-to-day operations of the HHA and to be available to patients, representatives, and caregivers to receive complaints (§ 484.50(a)(1)(ii) and (c)(3)). The administrator should be actively involved in the daily responsibilities of running the HHA, and each HHA should be able to demonstrate such involvement upon survey (as noted in 82 FR 4548).

G950
(Rev.)

[§484.105(b)(1) The administrator must:]

(iii) Ensure that a clinical manager as described in paragraph (c) of this section is available during all operating hours;

Interpretive Guidelines §484.105(b)(1)(iii)

"Operating hours" include all hours which the HHA is open and providing care to patients.

G952
(Rev.)

[§484.105(b)(1) The administrator must:]

(iv) Ensure that the HHA employs qualified personnel, including assuring the development of personnel qualifications and policies.

G954
(Rev.)

§484.105(b)(2) When the administrator is not available, a qualified, pre-designated person, who is authorized in writing by the administrator and the governing body, assumes the same responsibilities and obligations as the administrator. The pre-designated person may be the clinical manager as described in paragraph (c) of this section.

Interpretive Guidelines §484.105(b)(2)

"Pre-designation" means that the individual who is responsible for fulfilling the role of the administrator in his/her absence is established in advance and approved by the governing body.

Pre-designation needs to be by both the administrator and the governing body. The goal of this requirement is to provide management continuity within the HHA to the greatest degree possible. HHA staff should know and be able to verbalize upon interview who the pre-designated individual(s) is/are for this role (82 FR 4549).

G956
(Rev.)

§484.105(b)(3) The administrator or a pre-designated person is available during all operating hours.

Interpretive Guidelines §484.105(b)(3)

"Available" means physically present at the agency or able to be contacted via telephone or other electronic means.

G958
(Rev.)

§484.105(c) Standard: Clinical manager.

One or more qualified individuals must provide oversight of all patient care services and personnel. Oversight must include the following-

Interpretive Guidelines §484.105(c)

§484.115(c) provides that a clinical manager must be a licensed physician, physical therapist, speech-language pathologist, occupational therapist, audiologist, social worker, or a registered nurse.

G960
(Rev.)

[§484.105(c) Standard: Clinical manager…Oversight must include the following-]

(1) Making patient and personnel assignments,

(3) Coordinating referrals,

G966
(Rev.)

[§484.105(c) Standard: Clinical manager…Oversight must include the following-]

(4) Assuring that patient needs are continually assessed, and

G968
(Rev.)

[§484.105(c) Standard: Clinical manager…Oversight must include the following-]

(5) Assuring the development, implementation, and updates of the individualized plan of care.

G972
(Rev.)

§484.105(d) Standard: Parent-branch relationship.

(1) The parent HHA is responsible for reporting all branch locations of the HHA to the state survey agency at the time of the HHA's request for initial certification, at each survey, and at the time the parent proposes to add or delete a branch.

Interpretive Guidelines §484.105(d)(1)

A "branch" is an approved location or site (physically separate from its parent's location) from which an HHA provides services within a portion of the total geographic area served by the

parent agency. A branch provides services under the same CMS certification number (CCN) as its parent agency. *See Chapter 2 of the State Operations Manual for additional information on HHA Branch CMS Certification Numbers.*

G974
(Rev.)

(2) The parent HHA provides direct support and administrative control of its branches.

Interpretive Guidelines §484.105(d)*(2)*

The parent location must provide supervision and administrative control of its branches daily to the extent that the branches depend upon the parent's supervision and administrative functions to meet the CoPs, and could not do so as independent entities. The parent agency must be available to meet the needs of any situation and respond to issues that could arise with respect to patient care or administration of a branch. A violation of a CoP in a branch would apply to the entire HHA. Therefore, it is essential for the parent to exercise adequate control, supervision, and guidance for all branches under its leadership.

"Direct support and administrative control" of a branch *includes that the* parent agency maintains responsibility for:

- The governing body oversight of the branch;
- Any branch contracts for services;
- The branch's quality assurance and performance improvement plan;
- Policies and procedures implemented in the branch;
- How and when management and direct care staff are shared between the parent and branch, particularly in the event of staffing shortfalls or leave coverage;
- Human resource management at the branch;
- Assuring the appropriate disposition of closed clinical records at the branch; and
- Ensuring branch personnel training requirements are met.

Survey Procedures §484.105(d)(2)

HHAs must demonstrate compliance through evidence of established policies and procedures to ensure adequate control, supervision, and guidance for all branches under an HHA's leadership.

G976
(Rev.)

§484.105(e) Standard: Services under arrangement.

(1) The HHA must ensure that all services furnished under arrangement provided by other entities or individuals meet the requirements of this part and the requirements of section 1861(w) of the Act (42 U.S.C. 1395x(w)).

G978
(Rev.)

§484.105(e)(2) An HHA must have a written agreement with another agency, with an organization, or with an individual when that entity or individual furnishes services under arrangement to the HHA's patients. The HHA must maintain overall responsibility for the services provided under arrangement, as well as the manner in which they are furnished. The agency, organization, or individual providing services under arrangement may not have been:

(i) Denied Medicare or Medicaid enrollment;

(ii) Been excluded or terminated from any federal health care program or Medicaid;

(iii) Had its Medicare or Medicaid billing privileges revoked; or

(iv) Been debarred from participating in any government program.

G980
(Rev.)

§484.105(e)(3) The primary HHA is responsible for patient care, and must conduct and provide, either directly or under arrangements, all services rendered to patients.

Interpretive Guidelines §484.105(e)

The HHA retains overall responsibility for all services provided, whether provided directly by the HHA or through arrangements (i.e., under contract). For example, in contracting for a service such as physical therapy, an HHA may require the contracted party to do the day-*to*-day professional evaluation component of the therapy service. The HHA may not, however, delegate its overall administrative and supervisory responsibilities *(see also §484.105(d))*. All HHA contracts for services should specify how HHA supervision will occur.

G982
(Rev.)

§484.105(f) Standard: Services furnished.

(1) Skilled nursing services and at least one other therapeutic service (physical therapy, speech-language pathology, or occupational therapy; medical social services; or home health aide services) are made available on a visiting basis, in a place of residence used as a patient's home. An HHA must provide at least one of the services described in this subsection directly, but may provide the second service and additional services under arrangement with another agency or organization.

Interpretive Guidelines §484.105(f)

The HHA must provide skilled nursing services and at least one other therapeutic service. However, only one service *must* be provided directly by the HHA.

An HHA is considered to provide a service "directly" when the persons providing the service for the HHA are HHA employees. An individual who works for the HHA on an hourly or per-visit basis may be considered an HHA employee if the HHA is required to issue a form W-2 on the individual's behalf with no intermediaries. An HHA is considered to provide a service "under arrangements" when the HHA provides the service through contractual or affiliation arrangements with other agencies or organizations, or with an individual(s) who is not an HHA employee.

Contracted staffing may supplement, but may not be used in lieu of, HHA staffing for services provided directly by the HHA. In addition, the use of contracted staff in a service provided directly by the HHA may occur only on a temporary basis to provide coverage for unexpected HHA staffing shortages, or to provide a specialized service that HHA employees cannot provide.

G984

(Rev.)

§484.105(f)(2) All HHA services must be provided in accordance with current clinical practice guidelines and accepted professional standards of practice.

Interpretive Guidelines §484.105(f)*(2)*

Accepted standards of practice include guidelines or recommendations issued by nationally recognized organizations with expertise in the field. Clinical practice guidelines and accepted professional standards of practice may be found in, but are not limited to:

- *State practice acts;*
- *Standards established by national organizations, boards, and councils (e.g., the American Nurses' Association standards); and*
- *The HHA's own policies and procedures.*

HHAs should consider identifying the clinical practice guideline or standard of practice used when developing and updating care policies and procedures.

G986

(Rev.)

§484.105(g) Standard: Outpatient physical therapy or speech-language pathology services.

An HHA that furnishes outpatient physical therapy or speech-language pathology services must meet all of the applicable conditions of this part and the additional health and safety

requirements set forth in §485.711, §485.713, §485.715, §485.719, §485.723, and §485.727 of this chapter to implement section 1861(p) of the Act.

Interpretive Guidelines §484.105(g)

In general, this guidance is for situations where a patient would be coming to the premises of the HHA for outpatient therapy services. The patient would not be receiving HHA services and OPT services at the same time and therefore not all the HHA CoPs would apply. For example, the patient could have a total joint operation and be discharged home to get HHA services inclusive of therapy. Then when the patient is doing better, they could transition to outpatient services provided by the HHA on the premises of the HHA where the HHA has a therapy gym.

If an HHA provides outpatient physical therapy services or speech-language pathology services it must also meet the conditions of the regulations summarized below*, among others*, as applicable:

§485.711 Condition of participation: Plan of care and physician involvement: For each patient in need of outpatient physical therapy or speech pathology services, there is a written plan of care established and periodically reviewed by a physician, or by a physical therapist or speech pathologist respectively.

§485.713 Condition of participation: Physical therapy services: If the HHA offers physical therapy services, it provides an adequate program of physical therapy and has an adequate number of qualified personnel and the equipment necessary to carry out its program and to fulfill its objectives.

§485.715 Condition of participation: Speech pathology services: If speech pathology services are offered, the HHA provides an adequate program of speech pathology and has an adequate number of qualified personnel and the equipment necessary to carry out its program and to fulfill its objectives.

§485.719 Condition of participation: Arrangements for physical therapy and speech pathology services to be performed by other than salaried organization personnel

The following two CoPs, §485.723 and §485.727, are applicable when specialized rehabilitation space and equipment is owned, leased, operated, contracted for, or arranged for at sites under the HHA's control and when the HHA bills the Medicare/Medicaid programs for services rendered at these sites.]

§485.723 Condition of participation: Physical environment. The building housing the HHA is constructed, equipped, and maintained to protect the health and safety of patients, personnel, and the public and provides a functional, sanitary, and comfortable environment.

§485.727 Condition of participation: Emergency preparedness. The HHA must establish and maintain an emergency preparedness program.

G988
(Rev.)

§484.105(h) Standard: Institutional planning.

The HHA, under the direction of the governing body, prepares an overall plan and a budget that includes an annual operating budget and capital expenditure plan.

(1) *Annual operating budget.* There is an annual operating budget that includes all anticipated income and expenses related to items that would, under generally accepted accounting principles, be considered income and expense items. However, it is not required that there be prepared, in connection with any budget, an item by item identification of the components of each type of anticipated income or expense.

(2) *Capital expenditure plan.* (i) There is a capital expenditure plan for at least a 3-year period, including the operating budget year. The plan includes and identifies in detail the anticipated sources of financing for, and the objectives of, each anticipated expenditure of more than $600,000 for items that would under generally accepted accounting principles, be considered capital items. In determining if a single capital expenditure exceeds $600,000, the cost of studies, surveys, designs, plans, working drawings, specifications, and other activities essential to the acquisition, improvement, modernization, expansion, or replacement of land, plant, building, and equipment are included. Expenditures directly or indirectly related to capital expenditures, such as grading, paving, broker commissions, taxes assessed during the construction period, and costs involved in demolishing or razing structures on land are also included. Transactions that are separated in time, but are components of an overall plan or patient care objective, are viewed in their entirety without regard to their timing. Other costs related to capital expenditures include title fees, permit and license fees, broker commissions, architect, legal, accounting, and appraisal fees; interest, finance, or carrying charges on bonds, notes and other costs incurred for borrowing funds.

(ii) If the anticipated source of financing is, in any part, the anticipated payment from title V (Maternal and Child Health Services Block Grant) or title XVIII (Medicare) or title XIX (Medicaid) of the Social Security Act, the plan specifies the following:

> **(A) Whether the proposed capital expenditure is required to conform, or is likely to be required to conform, to current standards, criteria, or plans developed in accordance with the Public Health Service Act or the Mental Retardation Facilities and Community Mental Health Centers Construction Act of 1963.**
>
> **(B) Whether a capital expenditure proposal has been submitted to the designated planning agency for approval in accordance with section 1122 of the Act (42 U.S.C. 1320a-1) and implementing regulations.**

(C) Whether the designated planning agency has approved or disapproved the proposed capital expenditure if it was presented to that agency.

(3) *Preparation of plan and budget.* The overall plan and budget is prepared under the direction of the governing body of the HHA by a committee consisting of representatives of the governing body, the administrative staff, and the medical staff (if any) of the HHA.

(4) *Annual review of plan and budget.* The overall plan and budget is reviewed and updated at least annually by the committee referred to in paragraph (i)(3) of this section under the direction of the governing body of the HHA.

G1008
(Rev.)

§484.110 Condition of participation: Clinical records.

The HHA must maintain a clinical record containing past and current information for every patient accepted by the HHA and receiving home health services. Information contained in the clinical record must be accurate, adhere to current clinical record documentation standards of practice, and be available to the physician(s) *or allowed practitioner(s)* issuing orders for the home health plan of care, and appropriate HHA staff. This information may be maintained electronically.

Interpretive Guidelines §484.110

The HHA must use the information contained in each medical record to assure that safe care is delivered to each HHA patient. In accordance with the provisions of the Patient rights Condition at §484.50(c)(6), the HHA must ensure the confidentiality of each patient's clinical record.

The manner and degree of noncompliance identified in relation to the standard level tags for §484.110 may result in substantial noncompliance with this CoP, requiring citation at the condition level.

G1012
(Rev.)

§484.110(a) Standard: Contents of clinical record. The record must include:

(1) The patient's current comprehensive assessment, including all of the assessments from the most recent home health admission, clinical notes, plans of care, and physician *or allowed practitioner* orders;

G1014
(Rev.)

[§484.110(a) Standard: Contents of clinical record. The record must include:]

(2) All interventions, including medication administration, treatments, and services, and responses to those interventions;

Interpretive Guidelines §484.110(a)(2)

"All interventions" refers to those interventions performed by the HHA.

G1016
(Rev.)

[§484.110(a) Standard: Contents of clinical record. The record must include:]

(3) Goals in the patient's plans of care and the patient's progress toward achieving them;

G1018
(Rev.)

[§484.110(a) Standard: Contents of clinical record. The record must include:]

(4) Contact information for the patient, the patient's representative (if any), and the patient's primary caregiver(s);

G1020
(Rev.)

[§484.110(a) Standard: Contents of clinical record. The record must include:]

(5) Contact information for the primary care practitioner or other health care professional who will be responsible for providing care and services to the patient after discharge from the HHA; and

Interpretive Guidelines §484.110(a)(5)

If the patient identifies an attending physician (whether it is the responsible HHA physician or another physician) who will resume their care after the HHA episode, the contact information of the physician should be included in the clinical record.

G1022
(Rev.)

[§484.110(a) Standard: Contents of clinical record. The record must include:]

(6)(i) A completed discharge summary that is sent to the primary care practitioner or other health care professional who will be responsible for providing care and services to the patient after discharge from the HHA (if any) within 5 business days of the patient's discharge; or

(ii) A completed transfer summary that is sent within 2 business days of a planned transfer, if the patient's care will be immediately continued in a health care facility; or

(iii) A completed transfer summary that is sent within 2 business days of becoming aware of an unplanned transfer, if the patient is still receiving care in a health care facility at the time when the HHA becomes aware of the transfer.

Interpretive Guidelines §484.110(a)(6)

Discharge summaries typically contain the following items:

- Admission and discharge dates;
- Physician responsible for the home health plan of care;
- Reason for admission to home health;
- Type of services provided and frequency of services;
- Laboratory data;
- Medications the patient is on at the time of discharge;
- Patient's discharge condition;
- Patient outcomes in meeting the goals in the plan of care; and
- Patient and family post-discharge instructions.

A discharge summary must be sent to the primary care practitioner or other health care professional who will be responsible for providing care and services to the patient after discharge from the HHA (if any) within five (5) business days of the date of the order for discharge from the responsible physician.

The contents of a transfer summary typically contain the same components as a discharge summary.

G1024
(Rev.)

§484.110(b) Standard: Authentication.

All entries must be legible, clear, complete, and appropriately authenticated, dated, and timed. Authentication must include a signature and a title (occupation), or a secured computer entry by a unique identifier, of a primary author who has reviewed and approved the entry.

G1026
(Rev.)

§484.110(c) Standard: Retention of records.

(1) Clinical records must be retained for 5 years after the discharge of the patient, unless state law stipulates a longer period of time.

(2) The HHA's policies must provide for retention of clinical records even if it discontinues operation. When an HHA discontinues operation, it must inform the state agency where clinical records will be maintained.

G1028
(Rev.)

§484.110(d) Standard: Protection of records.

The clinical record, its contents, and the information contained therein must be safeguarded against loss or unauthorized use. The HHA must be in compliance with the rules regarding personal health information set out at 45 CFR parts 160 and 164.

Interpretive Guidelines §484.110(d)

HHA staff (whether employed directly or under arrangement) who carry documents and/or electronic devices containing Protected Health Information from patient's homes to the HHA office, or to and from the HHA staff member's home, create additional confidentiality/protection concerns with patient records.

Section 45 CFR Parts 160 and 164, generally known as the Health Insurance Portability and Accountability Act (HIPAA) Privacy and Security rules, establish standards for health care providers and suppliers that conduct covered electronic transactions, such as HHAs, among others, for the privacy of protected health information (PHI), as well as for the security of electronic phi (ePHI).

*In accordance with 45 CFR 164.530, a*ll HHA staff must receive comprehensive and periodic training on the protection of patient clinical records. HHAs must *also* establish policies and procedures to ensure the security of clinical records and the privacy of information contained within such records to prevent loss or unauthorized use in the patient's home, in transit*, in* the office setting*, or any other location.*

Survey Procedures §484.110(d)

During the home visit, observe how agency staff maintain the confidentiality of protected health information that they transport and use for patient care encounters as well as safeguard it against loss or unauthorized use.

CMS does not interpret or enforce the HIPAA Privacy and Security Rules, which fall under the jurisdiction of the Office for Civil Rights (OCR). Because there are a number of scenarios that

allow for using or disclosing PHI in full compliance with the HIPAA Privacy and Security Rules, surveyors must defer to OCR on whether the manner in which the HHA uses, discloses, maintains or destroys PHI is consistent with these requirements. Information on how to file a HIPAA Privacy or Security complaint with OCR may be found at http://www.hhs.gov/ocr/privacy/hipaa/complaints/index.html.

G1030
(Rev.)

§484.110(e) Standard: Retrieval of clinical records.

A patient's clinical record (whether hard copy or electronic form) must be made available to a patient, free of charge, upon request at the next home visit, or within 4 business days (whichever comes first).

G1050
(Rev.)

§484.115 Condition of participation: Personnel qualifications.

HHA staff are required to meet the following standards:

Interpretive Guidelines §484.115

The manner and degree of noncompliance identified in relation to the standard level tags for §484.115 may result in substantial noncompliance with this CoP, requiring citation at the condition level.

G1052
(Rev.)

§484.115 (a) Standard: Administrator, home health agency.

(1) For individuals that began employment with the HHA prior to January 13, 2018, a person who:

(i) Is a licensed physician;

(ii) Is a registered nurse; or

(iii) Has training and experience in health service administration and at least 1 year of supervisory administrative experience in home health care or a related health care program.

(2) For individuals that begin employment with an HHA on or after January 13, 2018, a person who:

(i) Is a licensed physician, a registered nurse, or holds an undergraduate degree; and

(ii) Has experience in health service administration, with at least 1 year of supervisory or administrative experience in home health care or a related health care program.

Interpretive Guidelines §484.115(a)

An "undergraduate degree" means a bachelor's or associate's degree.

G1054
(Rev.)

§484.115(b) Standard: Audiologist. A person who:

(1) Meets the education and experience requirements for a Certificate of Clinical Competence in audiology granted by the American Speech-Language-Hearing Association; or

(2) Meets the educational requirements for certification and is in the process of accumulating the supervised experience required for certification.

G1056
(Rev.)

§484.115(c) Standard: Clinical manager.

A person who is a licensed physician, physical therapist, speech-language pathologist, occupational therapist, audiologist, social worker, or a registered nurse.

G1058
(Rev.)

§484.115(d) Standard: Home health aide.

A person who meets the qualifications for home health aides specified in section 1891(a)(3) of the Act and implemented at §484.80.

G1060
(Rev.)

§484.115(e) Standard: Licensed practical (vocational) nurse.

A person who has completed a practical (vocational) nursing program, is licensed in the state where practicing, and who furnishes services under the supervision of a qualified registered nurse.

G1062
(Rev.)

§484.115(f) Standard: Occupational therapist. A person who—

(1)(i) Is licensed or otherwise regulated, if applicable, as an occupational therapist by the state in which practicing, unless licensure does not apply; or
(ii) Graduated after successful completion of an occupational therapist education program accredited by the Accreditation Council for Occupational Therapy Education (ACOTE) of the American Occupational Therapy Association, Inc. (AOTA), or successor organizations of ACOTE; and
(iii) Is eligible to take, or has successfully completed the entry-level certification examination for occupational therapists developed and administered by the National Board for Certification in Occupational Therapy, Inc. (NBCOT).

(2) On or before December 31, 2009—
(i) Is licensed or otherwise regulated, if applicable, as an occupational therapist by the state in which practicing; or
(ii) When licensure or other regulation does not apply—
(A) Graduated after successful completion of an occupational therapist education program accredited by the accreditation Council for Occupational Therapy Education (ACOTE) of the American Occupational Therapy Association, Inc. (AOTA) or successor organizations of ACOTE; and
(B) Is eligible to take, or has successfully completed the entry-level certification examination for occupational therapists developed and administered by the National Board for Certification in Occupational Therapy, Inc., (NBCOT).

(3) On or before January 1, 2008—
(i) Graduated after successful completion of an occupational therapy program accredited jointly by the Committee on Allied Health Education and Accreditation of the American Medical Association and the American Occupational Therapy Association; or
(ii) Is eligible for the National Registration Examination of the American Occupational Therapy Association or the National Board for Certification in Occupational Therapy.

(4) On or before December 31, 1977—
(i) Had 2 years of appropriate experience as an occupational therapist; and
(ii) Had achieved a satisfactory grade on an occupational therapist proficiency examination conducted, approved, or sponsored by the U.S. Public Health Service.

(5) If educated outside the United States, must meet both of the following:

(i) Graduated after successful completion of an occupational therapist education program accredited as substantially equivalent to occupational therapist entry level education in the United States by one of the following:

(A) The Accreditation Council for Occupational Therapy Education (ACOTE).

(B) Successor organizations of ACOTE.

(C) The World Federation of Occupational Therapists.

(D) A credentialing body approved by the American Occupational Therapy Association.

(E) Successfully completed the entry level certification examination for occupational therapists developed and administered by the National Board for Certification in Occupational Therapy, Inc. (NBCOT).

(ii) On or before December 31, 2009, is licensed or otherwise regulated, if applicable, as an occupational therapist by the state in which practicing.

G1064

(Rev.)

§484.115(g) Standard: Occupational therapy assistant. A person who—

(1) Meets all of the following:

(i) Is licensed or otherwise regulated, if applicable, as an occupational therapy assistant, by the state in which practicing, unless licensure does apply; or

(ii) Graduated after successful completion of an occupational therapy assistant education program accredited by the Accreditation Council for Occupational Therapy Education, (ACOTE) of the American Occupational Therapy Association, Inc. (AOTA) or its successor organizations.

(iii) Is eligible to take or successfully completed the entry-level certification examination for occupational therapy assistants developed and administered by the National Board for Certification in Occupational Therapy, Inc. (NBCOT).

(2) On or before December 31, 2009—

(i) Is licensed or otherwise regulated as an occupational therapy assistant, if applicable, by the state in which practicing; or any qualifications defined by the state in which practicing, unless licensure does not apply; or

(ii) Must meet both of the following:

(A) Completed certification requirements to practice as an occupational therapy assistant established by a credentialing organization approved by the American Occupational Therapy Association.

(B) After January 1, 2010, meets the requirements in paragraph (f)(1) of this section.

G1066
(Rev.)

§484.115(h) Standard: Physical therapist.

A person who is licensed, if applicable, by the state in which practicing, unless licensure does not apply and meets one of the following requirements:

(1)(i) Graduated after successful completion of a physical therapist education program approved by one of the following:

(A) The Commission on Accreditation in Physical Therapy Education (CAPTE).

(B) Successor organizations of CAPTE.

(C) An education program outside the United States determined to be substantially equivalent to physical therapist entry level education in the United States by a credentials evaluation organization approved by the American Physical Therapy Association or an organization identified in 8 CFR 212.15(e) as it relates to physical therapists.

(ii) Passed an examination for physical therapists approved by the state in which physical therapy services are provided.

(2) On or before December 31, 2009—

(i) Graduated after successful completion of a physical therapy curriculum approved by the Commission on Accreditation in Physical Therapy Education (CAPTE); or

(ii) Meets both of the following:

(A) Graduated after successful completion of an education program determined to be substantially equivalent to physical therapist entry level education in the United States by a credentials evaluation organization approved by the American Physical Therapy Association or identified in 8 CFR 212.15(e) as it relates to physical therapists.

(B) Passed an examination for physical therapists approved by the state in which physical therapy services are provided.

(3) Before January 1, 2008 graduated from a physical therapy curriculum approved by one of the following:

(i) The American Physical Therapy Association.

(ii) The Committee on Allied Health Education and Accreditation of the American Medical Association.

(iii) The Council on Medical Education of the American Medical Association and the American Physical Therapy Association.

(4) On or before December 31, 1977 was licensed or qualified as a physical therapist and meets both of the following:

(i) Has 2 years of appropriate experience as a physical therapist.
(ii) Has achieved a satisfactory grade on a proficiency examination conducted, approved, or sponsored by the U.S. Public Health Service.

(5) Before January 1, 1966—

(i) Was admitted to membership by the American Physical Therapy Association;

(ii) Was admitted to registration by the American Registry of Physical Therapists; or
(iii) Graduated from a physical therapy curriculum in a 4-year college or university approved by a state department of education.

(6) Before January 1, 1966 was licensed or registered, and before January 1, 1970, had 15 years of fulltime experience in the treatment of illness or injury through the practice of physical therapy in which services were rendered under the order and direction of attending and referring doctors of medicine or osteopathy.

(7) If trained outside the United States before January 1, 2008, meets the following requirements:

(i) Was graduated since 1928 from a physical therapy curriculum approved in the country in which the curriculum was located and in which there is a member organization of the World Confederation for Physical Therapy.

(ii) Meets the requirements for membership in a member organization of the World Confederation for Physical Therapy.

G1068
(Rev.)

§484.115(i) Standard: Physical therapist assistant.

A person who is licensed, registered or certified as a physical therapist assistant, if applicable, by the state in which practicing, unless licensure does not apply and meets one of the following requirements:

(1)(i) Graduated from a physical therapist assistant curriculum approved by the Commission on Accreditation in Physical Therapy Education of the American Physical Therapy Association; or if educated outside the United States or trained in the United

States military, graduated from an education program determined to be substantially equivalent to physical therapist assistant entry level education in the United States by a credentials evaluation organization approved by the American Physical Therapy Association or identified at 8 CFR 212.15(e); and

(ii) Passed a national examination for physical therapist assistants.

(2) On or before December 31, 2009, meets one of the following:

> **(i) Is licensed, or otherwise regulated in the state in which practicing.**
>
> **(ii) In states where licensure or other regulations do not apply, graduated before December 31, 2009, from a 2-year college-level program approved by the American Physical Therapy Association and after January 1, 2010, meets the requirements of paragraph (h)(1) of this section.**

(3) Before January 1, 2008, where licensure or other regulation does not apply, graduated from a 2-year college level program approved by the American Physical Therapy Association.

(4) On or before December 31, 1977, was licensed or qualified as a physical therapist assistant and has achieved a satisfactory grade on a proficiency examination conducted, approved, or sponsored by the U.S. Public Health Service.

G1070
(Rev.)

§484.115(j) Standard: Physician.

A person who meets the qualifications and conditions specified in section 1861(r) of the Act and implemented at §410.20(b) of this chapter.

G1072
(Rev.)

§484.115(k) Standard: Registered nurse.

A graduate of an approved school of professional nursing who is licensed in the state where practicing.

G1074
(Rev.)

§484.115(l) Standard: Social Work Assistant.

A person who provides services under the supervision of a qualified social worker and:

(1) Has a baccalaureate degree in social work, psychology, sociology, or other field related to social work, and has had at least 1 year of social work experience in a health care setting; or

(2) Has 2 years of appropriate experience as a social work assistant, and has achieved a satisfactory grade on a proficiency examination conducted, approved, or sponsored by the U.S. Public Health Service, except that the determinations of proficiency do not apply with respect to persons initially licensed by a state or seeking initial qualification as a social work assistant after December 31, 1977.

G1076
(Rev.)

§484.115(m) Standard: Social worker.

A person who has a master's or doctoral degree from a school of social work accredited by the Council on Social Work Education, and has 1 year of social work experience in a health care setting.

G1078
(Rev.)

§484.115(n) Standard: Speech-language pathologist.

A person who has a master's or doctoral degree in speech-language pathology, and who meets either of the following requirements:

(1) Is licensed as a speech-language pathologist by the state in which the individual furnishes such services; or

(2) In the case of an individual who furnishes services in a state which does not license speech-language pathologists:

(i) Has successfully completed 350 clock hours of supervised clinical practicum (or is in the process of accumulating supervised clinical experience);

(ii) Performed not less than 9 months of supervised full-time speech-language pathology services after obtaining a master's or doctoral degree in speech-language pathology or a related field; and

(iii) Successfully completed a national examination in speech-language pathology approved by the Secretary.

DEPARTMENT OF HEALTH & HUMAN SERVICES

7500 Security Boulevard, Mail Stop C2-21-16
Baltimore, Maryland 21244-1850

Center for Clinical Standards and Quality

Ref: QSO-24-11-HHA & Hospice

DATE: May 3, 2024

TO: State Survey Agency Directors

FROM: Directors, Quality, Safety & Oversight Group (QSOG) and Survey & Operations Group (SOG)

SUBJECT: Revisions to the State Operations Manual (SOM) Chapter 10 –Informal Dispute Resolution (IDR) and Enforcement Procedures for Home Health Agencies and Hospice Programs

Memorandum Summary

- The Centers for Medicare & Medicaid Services (CMS) has revised the State Operations Manual (SOM) chapter 10 to provide procedures regarding the informal dispute resolution (IDR) process for both Home Health Agencies (HHAs) and hospice programs.
- Revisions also include guidance for State Agencies (SAs) and CMS Survey & Operations Group (SOG) Locations on recommending and imposing HHA alternative sanctions and hospice enforcement remedies.

Background:

On November 8, 2012, we published the Calendar Year (CY) 2013 Home Health Prospective Payment System (HH PPS) final rule (77 FR 67068) that set forth an IDR process for HHAs and alternative sanctions that can be imposed instead of, or in addition to, termination of an HHA's participation. On November 9, 2021, we published the CY 2022 HH PPS final rule (86 FR 62240) that set forth enforcement remedies that can be imposed instead of, or in addition to, termination of a hospice program's participation. Under these rules, CMS has the authority to impose the alternative sanctions or enforcement remedies of civil money penalties, directed in-service training, directed plans of correction, suspension of payment for new admissions, and temporary management on HHAs or hospice programs found to have condition-level deficiencies. A new hospice IDR process was also published in the CY 2024 HH PPS final rule (88 FR 77676) that offers hospice providers an informal opportunity to dispute any condition-level findings.

Discussion:

The survey and certification process provides a method for CMS to evaluate HHA and hospice programs' compliance with the Conditions of Participation (CoPs), ensuring that patient services

provided meet the minimum health and safety standards. This process is explained in Appendix B of the SOM for HHAs and Appendix M of the SOM for hospice programs. Chapter 10 provides guidance for the HHA and hospice program enforcement regulations and IDR processes at 42 CFR Part 488.

The regulations for IDR offer HHAs and hospice programs the option to request an informal opportunity to dispute condition-level survey findings warranting an alternative sanction or enforcement remedy following a facility's receipt of the Statement of Deficiencies (Form CMS-2567). Effective January 1, 2024, the IDR processes for hospices follow the same existing processes for HHAs, and Chapter 10 was updated to include hospices in the guidance.

We have also revised the SOM Chapter 10 guidance for the HHA and hospice program enforcement regulations at 42 CFR Part 488. The guidance will assist SAs in recommending, and Locations in imposing, an alternative sanction(s) or enforcement remedy(ies). CMS may terminate the provider agreement and should consider the imposition of one or more of the following sanctions/remedies. This guidance is outlined in the chapter revisions.

- Civil money penalties;
- Suspension of payment for all new admissions;
- Temporary management;
- Directed plan of correction; and
- Directed in-service training.

CMS training for Location enforcement staff on imposing the HHA alternative sanctions and the hospice program enforcement remedies is available on the CMS Quality, Safety, and Education Portal (QSEP) website. The training is titled *Enforcement Process for Home Health Agency and Hospice Programs.*

Contact:

For questions or concerns regarding HHAs, please contact hhasurveyprotocols@cms.hhs.gov.
For questions or concerns regarding hospices, please contact QSOG_Hospice@cms.hhs.gov.

Effective Date:

Immediately. Please communicate to all appropriate staff within 30 days.

Resources to Improve Quality of Care:

Check out CMS's new Quality in Focus interactive video series. The series of 10–15-minute videos are tailored to provider types and intend to reduce the deficiencies most commonly cited during the CMS survey process, like infection control and accident prevention. Reducing these common deficiencies increases the quality of care for people with Medicare and Medicaid. Learn to:

- *Understand surveyor evaluation criteria*
- *Recognize deficiencies*
- *Incorporate solutions into your facility's standards of care*

Transmittals for Chapter 10

10000 - Introduction
(Rev.)

The Secretary has the responsibility to promote quality of care and the health and safety of patients receiving services through Medicare certified home health agencies (HHA) and hospice programs by ensuring that providers maintain compliance with the Conditions of Participation (CoP). The survey and certification process provides a method for CMS to evaluate HHA and hospice programs' compliance with the CoPs, ensuring that patient services provided meet the minimum health and safety standards and a basic level of quality. This process is explained in Appendix B of this manual for HHAs and Appendix M of this manual for hospice programs.

Chapter 10 provides guidance for the HHA and hospice program enforcement regulations at 42 CFR Part 488. No provisions contained in this chapter are intended to create any rights or sanctions not otherwise provided in law or regulation.

In accordance with 42 CFR §488.800 – §488.865 for HHAs and §488.1200-§488.1265 for hospice programs, in addition to termination of the HHA's or hospice program's provider agreement, sanctions such as civil money penalties (CMP), suspension of payment for all new admissions, temporary management, directed plans of correction, and directed in-service training can be imposed when an HHA or hospice program are out of compliance with Federal requirements.

Alternative sanctions in HHAs and enforcement remedies in hospice programs are recommended by the State survey agency (SA), and the CMS Location reviews the SA recommendation to ensure that it is supported by the SA findings. However, the CMS Location does not have the authority to delegate the imposition of sanctions to the State.

It should be noted that failure of CMS or the State to act timely does not invalidate otherwise legitimate survey and enforcement determinations.

10001 - Definitions and Acronyms
(Rev.)

Abbreviated standard *survey means a focused survey other than a standard survey that gathers information on an HHA's or hospice program's compliance with fewer specific standards or CoPs. An abbreviated standard survey may be based on complaints received or other indicators of specific concern such as reapplication for Medicare billing privileges following a deactivation. (HHA: 42 CFR §488.705; Hospice: SOM Appendix M, Task I)*

An abbreviated standard survey is a focused survey that examines any standard(s) related to the reason for the survey.

AO *– National Accreditation Organization whose program is approved by CMS. (42 CFR §488.1)*

Certification of compliance *means that the HHA or hospice program is in compliance with the CoPs and is eligible to participate in the Medicare program. (HHA: 42 CFR §488.740)*

CFR *- Code of Federal Regulations.*

CMP *- Civil money penalty. (HHA: 42 CFR 488.845; Hospice: 42 CFR §488.1245)*

CMS Location*- previously known as CMS Regional Office(s), the CMS Location(s) are part of the Survey & Operations Group (SOG) within CMS.*

Complaint investigation*, previously known as a complaint survey, means an onsite review that is conducted to investigate specific allegations of noncompliance.*

Condition-level deficiency *means noncompliance as described in 42 CFR §488.24. A condition-level deficiency is any deficiency of such character that substantially limits the provider's or supplier's capacity to furnish adequate care or which adversely affects the health or safety of patients.*

Credible allegation of compliance *is a statement or documentation that is realistic in terms of the possibility of the corrective action being accomplished between the exit conference and the date of the allegation; and that indicates resolution of the problems.*

Deficiency *is a violation of the Act and regulations contained in part 484 for HHAs, subparts A through C of this chapter, and §418 for hospice programs, subparts C and D of this chapter, is determined as part of a survey, and can be either standard or condition-level.*

Directed plan of correction *means CMS or the temporary manager (with CMS/SA approval) may direct the HHA or hospice program to take specific corrective action to achieve specific outcomes within specific timeframes. (HHA: 42 CFR §488.805; Hospice: 42 CFR §488.1250)*

Enforcement action *means the process of imposing one or more of the following alternative sanctions for HHAs or enforcement remedies for hospice programs: termination of a provider agreement; suspension of payment for all new admissions; temporary manager; civil money penalty; directed plan of correction; or directed in-service training. (HHA: 42 CFR §488.810-865; Hospice: 42 CFR §488.1200-1265)*

Extended survey (HHA only) *means a survey that reviews additional CoPs not examined during a standard survey. It may be conducted at any time but must be conducted when substandard care is identified. (42 CFR §488.705)*

Immediate jeopardy *means a situation in which the provider's noncompliance with one or more requirements of participation has caused, or is likely to cause serious injury, harm, impairment, or death to a patient(s).*

iQIES *– Internet Quality Improvement and Evaluation System.*

New admission *means an individual who becomes a patient or is readmitted to the HHA or hospice on or after the effective date of a suspension of payment sanction. (HHA: 42 CFR §488.805)*

Noncompliance *means any deficiency found at the condition-level or standard-level.*

Partial extended survey (HHA only) *means a survey conducted to determine if deficiencies and/or deficient practice(s) exist that were not fully examined during the standard survey. The surveyors may review any additional requirements which would assist in making a compliance finding. (42 CFR §488.705)*

Per day *means a CMP imposed for the number of days a facility is not in substantial compliance with the CoPs.*

Per instance *means a single event of noncompliance identified and corrected through a survey, for which the Act authorizes CMS to impose a sanction or remedy. (HHA: 42 CFR §488.805; Hospice: 42 CFR §488.1245(b)(6))*

Plan of correction *means a plan developed by the HHA or hospice program and approved by CMS that is the HHA's or hospice program's written response to survey findings detailing corrective actions to cited deficiencies and specifies the date by which those deficiencies will be corrected.*

Repeat deficiency *means a condition-level citation that is cited on the current survey and is substantially the same as or similar to, a finding of a standard-level or condition-level deficiency cited on the most recent previous standard survey or on any intervening survey since the most recent standard survey. Repeated non-compliance is not on the basis that the exact regulation (that is, tag number) for the deficiency was repeated. (HHA: 42 CFR §488.805; Hospice: 42 CFR 488.1205)*

Standard-level deficiency *means noncompliance with one or more of the standards that make up each condition of participation.*

Standard survey *means a survey conducted in which the surveyor reviews the HHA's or hospice program's compliance with a select number of standards and/or CoPs to determine the quality of care and services furnished by an HHA or hospice program. (HHA: 42 CFR §488.705)*

State survey agency (SA) *means the entity responsible for conducting most surveys to certify compliance with the Medicare participation requirements.*

Substandard care *means noncompliance with one or more CoPs identified on a standard survey, including deficiencies which could result in actual or potential harm to patients. (HHA: 42 CFR §488.705)*

Substantial compliance *means compliance with all condition-level requirements, as determined by CMS, the SA, or AO. (HHA: 42 CFR §488.705; Hospice: 42 CFR 488.1105)*

Temporary management *means the temporary appointment by CMS or by a CMS authorized agent, of a substitute manager or administrator. The HHA's or hospice program's governing body must ensure that the temporary manager has authority to hire, terminate or reassign staff, obligate funds, alter procedures, and manage the HHA or hospice program to correct deficiencies identified in the HHA's or hospice program's operation. (HHA: 42 CFR §488.805; Hospice 42 CFR 488.1235)*

Validation survey *means a survey of an accredited provider or supplier to validate the accrediting organization's CMS-approved accreditation process. These surveys are conducted on a representative sample basis, or in response to substantial allegations of non-compliance. (42 CFR 488.9(a))*

10002 – Informal Dispute Resolution (IDR) for Home Health Agencies & Hospice Programs

10002.1 – IDR Introduction & Purpose
(Rev.)

Section 488.745 and 488.1130 offers HHAs and hospice programs the option to request an informal opportunity to dispute condition-level survey findings warranting an alternative sanction following a facility's receipt of the official statement of deficiencies (Form CMS-2567). Whenever possible, we want to provide every opportunity to settle disagreements at the earliest stage, prior to a formal hearing, conserving time and money potentially spent by the facility, the SA, and CMS. The goal of IDR is to offer the facility an opportunity to refute one or more condition-level deficiencies cited on the statement of deficiencies. An IDR between an HHA or hospice program and the SA or CMS Location, as appropriate, will allow the facility an opportunity to provide an explanation of any material submitted to the SA and respond to the reviewer's questions (77 FR 67141).

This IDR will occur with the agency who conducted the survey. The IDR process, as established by the State or CMS Location, must be in writing so that it is available for review upon request.

If the survey is conducted by the CMS Location, the CMS Location may conduct the IDR.

CMS has adopted the following elements to be incorporated in all cases involving deficiencies cited as a result of Federal surveys. They are designed to clarify and expedite the resolution process. States are free to incorporate these elements into their procedures.

1. *Notice to the facility will indicate that the IDR, including any face-to-face meetings, constitutes an informal administrative process that in no way is to be construed as a formal evidentiary hearing.*

2. *Notice to the facility will indicate that counsel may accompany the HHA or hospice program. If the facility chooses to be accompanied by counsel, then it must indicate that in its request for IDR, so that CMS may also have counsel present.*

3. *CMS will verbally advise the facility of CMS's decision relative to the informal dispute, with written confirmation to follow.*

10002.2 – IDR Process
(Rev.)

When survey findings indicate a condition-level deficiency (or deficiencies), CMS or the State, as appropriate, will notify the facility in writing of its opportunity to request an IDR of those deficiencies. This notice will be provided at the time the Statement of Deficiencies is issued to the facility. The facility's request for IDR must be submitted in writing, should include the specific deficiencies that are disputed, and should be submitted within the same 10 calendar day period that the facility has for submitting an acceptable plan of correction.

A facility's initiation of the IDR process will not postpone or otherwise delay the effective date of any enforcement action. The failure to complete an IDR will not delay the effective date of any enforcement action. Further, if any findings are revised or removed based on IDR, the official Statement of Deficiencies is revised accordingly, and any enforcement actions imposed solely because of those revised or removed deficiencies are adjusted accordingly.

10002.3 - Mandatory Elements of IDR
(Rev.)

Upon their receipt of the official Form CMS-2567, agencies must be offered one informal opportunity, if they request it in writing, to dispute condition level deficiencies. Deficiencies cited at the standard level are not subject to the IDR process.

The following elements must be included in each IDR process offered:

1. *Agencies may not use the IDR process to delay the formal imposition of sanctions or to challenge any other aspect of the survey process, including:*

- *The severity assessment of a deficiency(s) at the standard level that constitutes substandard care or immediate jeopardy (IJ);*

- *Sanctions imposed by the enforcing agency;*

- *Alleged failure of the survey team to comply with a requirement of the survey process;*

- *Alleged inconsistency of the survey team in citing deficiencies among agencies; and*

- *Alleged inadequacy or inaccuracy of the IDR process.*

2. *HHAs or hospice programs must be notified of the availability of IDR in the letter transmitting the official Form CMS-2567. The letter should inform the facility of the following:*

- *It may request the opportunity for IDR, and that if it requests the opportunity, the request must be submitted in writing;*
- *The written request for IDR, from the facility, must include an explanation of the specific condition-level deficiencies that are being disputed;*
- *The written request must be made within the same 10 calendar day period the facility has for submitting an acceptable plan of correction to the surveying entity;*
- *The name and address, e-mail, and phone number of the person to contact at the CMS Location or the SA to request the IDR;*
- *The IDR process that is followed in that State, e.g., telephone conference, written communication, or face-to-face meeting; and*
- *The name and/or position title of the person who will be conducting the IDR, if known.*

***NOTE**: IDR is a process in which State agency officials make determinations of noncompliance. SAs should be aware that CMS holds them accountable for the legitimacy of the process including the accuracy and reliability of conclusions that are drawn with respect to survey findings. This means that while the SA may have the option to involve outside persons or entities they believe to be qualified to participate in this process, it is the SA, not outside individuals or entities that are responsible for IDR decisions. When an outside entity conducts IDR, the results of the IDR process may serve only as a recommendation of noncompliance or compliance to the SA. The SA will then make the IDR decision and notify the facility of that decision. CMS will look to the SA to assure the viability of these decision-making processes, and holds the SA accountable for them.*

Since CMS has ultimate oversight responsibility relative to a SA's performance, it may be appropriate for CMS to examine specific IDR decisions or the overall IDR process to determine whether the decision is consistent with CMS policy. For dually participating or Medicare-only agencies, informal dispute findings are in the manner of recommendations to CMS and, if CMS has reason to disagree with those findings, it may reject the conclusions from IDR and make its own binding determinations of noncompliance.

3. *Failure to complete IDR timely will not delay the effective date of any enforcement action against the facility.*

4. *When a facility is unsuccessful during the process at demonstrating that a deficiency should not have been cited, the SA must notify the facility in writing that it was unsuccessful.*

5. *When a facility is successful during the IDR process at demonstrating that a deficiency should not have been cited or should be revised:*

- *The deficiency citation should be marked "deleted," or "revised" as appropriate, and signed and dated by a supervisor of the surveying entity; and*

- *Any enforcement action(s) imposed solely because of that deleted or revised deficiency citation should be rescinded.*

***NOTE**: The facility has the option to request a clean (new) copy of the Form CMS-2567. However, the clean copy will be the releasable copy only when a clean (new) plan of correction is both provided and signed by the facility. The original Form CMS-2567 is disclosable when a clean plan of correction is not submitted and signed by the facility. Deficiencies pending IDR should be entered into iQIES but will not be uploaded to the national database system until IDR has been completed.*

6. *An agency may request IDR for each survey that cites condition-level deficiencies. However, if IDR is requested for deficiencies cited at a subsequent survey, a facility may not challenge the survey findings of a previous survey for which the facility either received IDR or had an opportunity for it. Condition-level deficiencies that are not corrected and that are carried forward on a subsequent survey are not eligible for the IDR process. Condition-level deficiencies identified on a subsequent survey that are new are eligible to be reviewed through the IDR process.*

Additional information related to the effect of IDR on HHA alternative sanctions and hospice program enforcement remedies, including CMPs, is addressed in the appropriate sections of this chapter.

10003 – Enforcement Actions for Home Health Agencies and Hospice Programs
(Rev.)

CMS certifies HHAs and hospice programs for participation in Medicare. The SAs then conduct standard and complaint surveys of certified providers to determine compliance with the CMS conditions of participation. If an HHA or hospice program is not in compliance with the Medicare conditions, CMS may impose an alternative sanction or enforcement remedy. The following sections describe the statutory authorities, considerations, and process for imposition of sanctions/remedies.

10003.1 - Statutory Basis
(Rev.)

Alternative Sanctions for Home Health Agencies
Sections 1891(c) through (f) establish requirements for surveying and certifying HHAs as well as authorizes the Secretary to utilize varying enforcement mechanisms to terminate participation in the Medicare program and to impose alternative sanctions if HHAs are found out of compliance with the Medicare home health CoPs. The imposition of alternative sanctions

specified in §488.820 allows for non-compliant HHAs to have additional time to come into compliance with the CoPs before being terminated.

Enforcement Remedies for Hospice Programs

Division CC, section 407 of the Consolidated Appropriations Act 2021, amended Part A of Title XVIII of the Act to add a new section 1822 of the Act, and amended sections 1864(a) and 1865(b) of the Act, establishing new hospice program survey and enforcement requirements. Section 1822(c)(5) of the Act authorizes the Secretary to utilize varying enforcement mechanisms to terminate participation in the Medicare program and to impose enforcement remedies if hospice programs are found out of compliance with the Medicare CoPs. The imposition of enforcement remedies specified in §488.1220 allows for non-compliant hospice programs to have additional time to come into compliance with the CoPs before being terminated.

10003.2 - General Provisions

(Rev.)

Under section 1891(e)(1) of the Act for HHAs and section 1822(c)(5) of the Act for hospice programs, if CMS or a SA determines that condition-level deficiencies immediately jeopardize the health or safety of its patients, then CMS must take immediate action to notify the provider of the jeopardy situation and the provider must correct the deficiencies. If the IJ is not removed because the provider is unable or unwilling to correct the deficiencies, CMS will terminate the provider's provider agreement. In addition, CMS may impose one or more specified alternative sanctions or enforcement remedies, respectively, including but not limited to CMPs and suspension of all Medicare payments before the effective date of termination.

If CMS finds that the provider is not in compliance with the Medicare CoPs and the deficiencies involved do not immediately jeopardize the health and safety of the individuals to whom the HHA or hospice program furnishes items and services, CMS may terminate the provider agreement and should consider the imposition of an alternative sanction(s)/enforcement remedy(ies)

The decision to impose one or more alternative sanctions for HHAs or enforcement remedies for hospice programs would be based on condition-level deficiencies or repeat deficiencies found in the provider during a survey.

While SAs are not required to recommend the types of sanction/remedies to be imposed, they are encouraged to do so since States may be more familiar with a facility's history and the specific circumstances in the case at hand. To ensure effective communication and exchange of information, CMS encourages that all documentation is included in iQIES or any subsequent system. The CMS Location will consider these recommendations but ultimately makes the enforcement determination.

Not all situations require the same sanctions/remedies. The CMS Location should use the enforcement sanction/remedy most appropriate in considering the level/degree of harm, the

context behind the facility noncompliance, and the type of enforcement that has the best chance of the facility achieving future compliance. While a range of sanctions/remedies are available, suspension of payment for all new admissions is likely to be the most effective at rapidly returning the provider to compliance.

10003.3 - Effect of Sanctions/Remedies on HHAs and Hospice Programs that Participate in Medicare via Deemed Status through an Accrediting Organization
(Rev.)

A deemed HHA or hospice program loses its deemed status when a condition-level finding is cited on a complaint or validation survey. When a condition-level deficiency (ies) is found, the CMS Location returns oversight of the accredited HHA or hospice program back to the SA until the HHA or hospice program can demonstrate compliance with the CoPs. During the time that the SA has jurisdiction over the HHA or hospice program, the SA, not the Accrediting Organization (AO), will follow the procedures for recommending the imposition of sanctions/remedies, if appropriate. Once the HHA or hospice program returns to compliance with the Medicare conditions and has not been terminated, the CMS Location will restore its deemed status and return oversight to the AO.

AOs are not authorized to impose federal sanctions/remedies. Therefore, HHAs or hospice programs participating in Medicare through deemed status are not directly subject to sanctions/remedies by the AO while under jurisdiction of the AO. However, the CMS location may, after reviewing the AO's survey findings and related information, authorize the SA to conduct a focused validation survey to determine whether condition-level deficiencies, cited by the AO, have been corrected. If deemed status is withdrawn and/or the HHA or hospice program is placed under the jurisdiction of the SA, as may occur following a complaint investigation by the SA, the CMS Location may impose alternative sanctions/remedies on the HHA or hospice program per the usual procedures.

10003.4 - Effect of Sanctions/Remedies on HHA Branches and Hospice Multiple Locations
(Rev.)

Regardless of whether the condition level non-compliance is identified at the branch (HHA), multiple location (hospice), or the parent location, all sanctions/remedies imposed would apply to the parent HHA or hospice and its respective branches or multiple locations.

10003.5 - Enforcement Action When IJ Exists
(Rev.)

When there is IJ to patient health or safety, CMS must complete termination procedures within 23 days from the last day of the survey which found the IJ if it is not removed before then (following guidelines in Appendix Q of the State Operations Manual). The procedure must not be postponed or stopped unless the IJ is removed, as verified through onsite verification. If there

is a written and timely credible allegation that the IJ has been removed, CMS or the State will conduct a revisit prior to termination, if possible.

In addition to termination, one or more alternative sanctions for HHAs or enforcement remedies for hospice programs may be imposed. While the use of alternative sanctions or enforcement remedies in addition to termination is permitted, the Act makes it clear that the enforcement action for noncompliant agencies with IJ deficiencies is intended to be swift. The imposition of alternative sanctions for HHAs or enforcement remedies for hospice programs in addition to termination does not extend the timeframe that the HHA or hospice program has to remove the IJ situation.

10003.6 – Enforcement Action When Condition-Level Deficiencies Exist That Do Not Pose IJ
(Rev.)

If the HHA or hospice program is no longer in compliance with the CoPs, either because the deficiency(ies) substantially limit the HHA's or hospice program's capacity to furnish adequate care but do not pose IJ, or because the HHA or hospice program has repeat noncompliance that results in a condition level deficiency based on the HHA's or hospice program's failure to correct and sustain compliance, CMS will either terminate the provider agreement following the 90 day termination track or impose one or more alternative sanctions for HHAs or enforcement remedies for hospice programs as an alternative to termination. If alternative sanctions or enforcement remedies are imposed, CMS terminates the HHA's or hospice program's provider agreement within 6 months of the last day of the survey if the HHA or hospice program is not in substantial compliance with the CoPs and the condition level deficiencies are not corrected.

10003.7 - Effect of Termination on the Patients
(Rev.)

If an HHA or hospice program fails to correct deficient practices and sustain compliance, CMS may terminate the provider agreement. When this happens, an HHA or hospice program is required to appropriately and safely transfer its patients to another local HHA or hospice within 30 days of termination (see §488.825(c) & §488.830(e) for HHAs & §488.1225(c) & §488.1230(e) for hospice programs). The HHA or hospice is responsible for providing information, assistance, and any arrangements necessary for the safe and orderly transfer of its patients. The SA is required to provide oversight for all HHAs or hospices that are terminated to ensure the safe discharge and orderly transfer of all patients to another Medicare-approved HHA or hospice. Payment to terminated HHAs or hospices for services for current patients is provided up to 30 days after termination pursuant to §489.55.

10004- Available Sanctions/Remedies
(Rev.)

To the greatest extent possible, the time between the identification of deficiencies and imposition of sanctions/remedies should be minimized. In accordance with §488.820 for HHA and §488.1220

for hospice programs, the following sanctions/remedies in addition to termination of the provider agreement are available:

- *Civil money penalties;*
- *Suspension of payment for all new admissions;*
- *Temporary management;*
- *Directed plan of correction; and*
- *Directed in-service training.*

It is important to note that imposition of an alternative sanction or enforcement remedy is an available enforcement action, but it is not required when CMS may ultimately determine that termination is the most appropriate enforcement action to ensure patient health and safety. When CMS believes that an agency cannot promptly return to compliance, termination may be preferable.

10004.1 - Factors to be Considered in Selecting Sanctions/Remedies (Rev.)

When making sanction/remedy choices, the CMS Location should consider the extent to which the noncompliance is the result of a one-time mistake, larger systemic concerns, or an action of disregard for patient health and safety. CMS bases its choice of sanction(s)/remedy(ies) on consideration of one or more factors that include, but are not limited to, the following:

- *The extent to which the deficiencies pose IJ to patient health and safety.*
- *The nature, incidence, manner, degree, and duration of the deficiencies or noncompliance.*
- *The presence of repeat deficiencies, the HHA's or hospice program's overall compliance history and any history of repeat deficiencies at either the parent or branch or multiple locations.*
- *The extent to which the deficiencies are directly related to a failure to provide quality patient care.*
- *The extent to which the HHA or hospice program is part of a larger organization with performance problems.*
- *An indication of any system-wide failure to provide quality care.*

In addition, CMS reviews other factors including, but not limited to, the history of the HHA's or hospice program's compliance with the CoPs, specifically with reference to the cited deficiencies.

Once a sanction/remedy is imposed, it becomes effective as of the date specified in the notice letter for the sanction/remedy being imposed. All sanctions/remedies remain in effect and

continue until the facility has demonstrated and is determined to be in substantial compliance with all CoPs.

The summary table below gives a high-level overview of the available sanctions/remedies and factors to consider for selection. Each of these are discussed in greater detail throughout the rest of this chapter.

Summary Table of Available Sanctions/Remedies for HHAs & Hospice Programs

Available Sanction/Remedies	***Factors to Consider for Selection***
For All Sanctions/Remedies	• *The extent to which the deficiencies pose IJ to patient health and safety.* • *The nature, incidence, manner, degree, and duration of the deficiencies or noncompliance.* • *The presence of repeat deficiencies, the hospice program's overall compliance history and any history of repeat deficiencies at either the parent hospice program or any of its multiple locations.* • *The extent to which the deficiencies are directly related to a failure to provide quality patient care.* • *The extent to which the hospice program is part of a larger organization with performance problems.* • *An indication of any system-wide failure to provide quality care.*
Civil Money Penalty (CMP)*	*When repeat deficiencies exist.* • *Upper range of CMPs for IJ situations.* • *Middle range of CMPs for noncompliance that is directly related to poor quality patient care outcomes (non-IJ).* • *Lower range of CMPs for noncompliance that is related predominately to structure or process-oriented conditions.*
Suspension of payment for all new admissions (SPNA)*	*When condition-level deficiencies relate to poor patient care outcomes.*
Temporary Management*	*When failure to comply with the CoPs is directly related to management limitations, or* *When current management oversight is likely to impair the facility's ability to return to full compliance, or* *When needed, based on the above situations, to oversee orderly involuntary termination/closure and safe transfer of patients to another local HHA or hospice.*

Directed Plan of Correction (DPOC)	*When the HHA or hospice program has deficiencies that warrant direction for the provider to take specific actions, or* *When the HHA or hospice program fails to develop an acceptable plan of correction for condition-level deficiencies.*
Directed In-Service Training	*When education is likely to correct the deficiencies and help the HHA or hospice program achieve substantial compliance.*
** For HHAs only: Please note that the imposition of one or more of these sanctions could prohibit an HHA from conducting home health aide training and competency evaluation program as noted in 42 CFR 484.80(f).*	

The following sections describe each possible alternative sanction or enforcement remedy and procedures for imposing them. In addition, the CMS Location and SA follow the procedures in Chapter 3 of the SOM if an adverse action is likely to be initiated against a Medicare participating provider.

10005 - Civil Money Penalties
(Rev.)

10005.1 - Basis for Imposing Civil Money Penalties
(Rev.)

CMS may impose a CMP against an HHA or hospice program based on noncompliance with one or more CoPs found through a survey or on the presence of repeat deficiencies (i.e., looking at the HHA's or hospice program's overall compliance history per 42 CFR 488.815(c) and 42 CFR 488.1215(c)).

Enforcement sanctions/remedies may be applied regardless of whether the HHA's or hospice program's deficiencies pose IJ to patient health and safety. CMS may impose a CMP for the number of days that an HHA or hospice program is not in substantial compliance with one or more CoPs, or for each instance that an HHA or hospice program is not in substantial compliance. In the case of unremoved IJ situations, the existing 23-day termination timeline still applies (See also Appendix Q of the State Operations Manual for IJ timelines).

The CMP amounts are based on §488.845 for HHAs and §488.1245 for hospice programs which lay out the ranges and amounts for CMPs. However, CMS is required by law to annually adjust the CMP amounts based on inflation in accordance with 45 CFR part 102. Therefore, while the original CMP amounts are located in the regulations, CMS Location staff will use the annually adjusted amounts that CMS posts on its website on the Quality, Safety & Oversight Group webpage (https://www.cms.gov/Medicare/Provider-Enrollment-and-Certification/SurveyCertificationGenInfo/Civil-Monetary-Penalties-Annual-Adjustments.html) to calculate the penalty. The maximum CMP amount is also posted on this website and will be regularly updated when annual inflation adjustments are made.

CMS may impose a CMP against an HHA or hospice program for either the number of days (per day CMP) the facility is not in compliance with one or more CoPs or for each instance (per instance CMP) that the facility is not in compliance.

Per Day CMP

"Per day" means a CMP imposed for the number of days a facility is not in substantial compliance with the CoPs.

Surveyors may come across information during the survey that identifies past noncompliance, but evidence exists that the noncompliance was corrected and is not an issue during the current survey. While we do not cite to past noncompliance (deficiencies identified and corrected since the last survey), if a surveyor finds current noncompliance and can trace the start of noncompliance back to a specific date prior to this current survey, a per day CMP may be imposed. In general, the CMS Location may impose a per day CMP from the time when the noncompliance occurred through the time when the noncompliance was corrected. For example, CMS may impose a CMP for the number of days an IJ situation exists.

The range of per day penalties is set forth at §488.845(b)(3)-(5) for HHAs and §488.1245(b)(3)-(5) for hospice programs. These base amounts are adjusted annually for inflation and are posted on the CMS website.

The CMP range amounts are based on three levels of seriousness—upper, middle, and lower. The lower range of permitted per day CMP amounts enables CMS to better correlate the seriousness of noncompliance with the amount of the CMP. The expanded lower end of the range may be particularly important if CMS imposes a CMP that begins at the lower or middle range and then increases in amount over time the longer the noncompliance remains uncorrected. In such a case, prompt remedial action by the HHA or hospice program can limit the total amount of per day CMP that accrues (See also 77 FR 67150).

Per Instance CMP

"Per instance" is defined at §488.805 and 42 CFR 488.1205 and means a single event of noncompliance identified and corrected during a survey, for which the statute authorizes CMS to impose a sanction/remedy.

For example, during a survey, CMS or a state may identify several instances of noncompliance, each in distinct regulatory areas. Generally, we anticipate imposing per instance penalties only in the situation where a surveyor identifies a condition-level deficiency during the survey and the HHA or hospice program took sufficient action to correct the deficiency during the time of the survey (see also 77 FR 67150).

The range of per instance penalties is set forth at §488.845(b)(6) for HHA and §488.1245(b)(6) for hospice programs, and the penalty amounts are adjusted annually for inflation and are posted on the CMS website. The terminology "per instance" is not used to suggest that only one instance of condition-level noncompliance may be assigned a CMP. There can be more than one instance of condition-level noncompliance identified during a survey where the SA/CMS Location utilizes the per instance CMP as a sanction/remedy. However, the total dollar amount of the CMP for the instance or multiple instances of condition-level noncompliance may not exceed the maximum $10,000 (as adjusted for inflation) for each day of that specific survey, and may not be less than $1,000 (as adjusted for inflation) per instance.

***NOTE:** A per day and a per instance civil money penalty cannot be used simultaneously for the same deficiency in conjunction with a survey (i.e., standard, revisit, complaint). However, both types of CMPs may be used during a noncompliance cycle if more than one survey takes place, and the per day CMP was not the CMP initially imposed. When a per day CMP is the CMP sanction initially imposed, a per instance CMP cannot be imposed on a subsequent survey within the same noncompliance cycle.*

***For HHAs Only:** Please note that the imposition of a $5,000 or more CMP on an HHA would prohibit that HHA from conducting health aide training and competency evaluation program for 2 years from the date this sanction is imposed (see also 42 CFR 484.80(f)). See Appendix B of the State Operations Manual for additional information for eligible home health aide training and competency evaluation organizations at §484.80(f).*

10005.2 - Determining Amount of Civil Money Penalty
(Rev.)

CMPs are intended as a tool to encourage the HHA or hospice program to rapidly return to compliance with program requirements to protect the health and safety of individuals under their care. As with all other enforcement sanctions/remedies, CMPs are a discretionary enforcement action and not required. CMS may ultimately determine that termination is the most appropriate enforcement action to ensure patient health and safety. While a provider may be given an opportunity to correct their deficiencies and return to compliance, if CMS determines that an agency cannot promptly return to compliance, termination may be preferable to an alternative sanction or enforcement remedy.

CMS bases its choice of sanction/remedy on consideration of one or more factors that include, but are not limited to the following:

- *The extent to which the deficiencies pose IJ to patient health and safety.*
- *The nature, incidence, manner, degree, and duration of the deficiencies or noncompliance.*
- *The presence of repeat deficiencies, the HHA's or hospice program's overall compliance history and any history of repeat deficiencies at either the parent or branch or multiple location.*

- *The extent to which the deficiencies are directly related to a failure to provide quality patient care.*

- *The extent to which the HHA or hospice program is part of a larger organization with performance problems.*

- *An indication of any system-wide failure to provide quality care.*

In determining the amount of the civil money penalty, CMS considers certain factors in addition to those listed above which include:

- *The size of the HHA or the hospice program and its resources;*

- *Accurate and credible resources, such as PECOS, Medicare cost reports and Medicare/Medicaid claims information that provide information on the operation and resources of the HHA; and*

- *Evidence that the HHA or hospice program has a built-in, self-regulating quality assessment and performance improvement system to provide proper care, prevent poor outcomes, control patient injury, enhance quality, promote safety, and avoid risks to patients on a sustainable basis that indicates the ability to meet the conditions of participation and to ensure patient health and safety.*

In collaboration with other CMS components, CMS may consider an agency's financial condition on a case-by-case basis, and this evaluation may be made in part by considering the HHA's or hospice program's size and its resources. The CMS Location may need to consult with other CMS components such as Center for Program Integrity (CPI), Centers for Medicare (CM), and/or Office of Financial Management (OFM) as part of the process to consider the above factors. CMS considers whether the HHA or hospice program has the ability to pay the CMP without having to go out of business or compromise patient health and safety. An HHA or hospice program may be expected to satisfy its obligations to the federal government before making payments to its owners.

Information on the operations and resources of the HHA or hospice program may include items such as, but not limited to, historical patient census, staffing levels, and claims paid. Additionally, CMS may consider other aspects such as enforcement actions taken by CMS for enrollment or payment related issues (e.g., overpayment, pre/post-pay audits, suspensions, and revocations) and the impact these can have on HHA or hospice program resources.

When several instances of noncompliance are identified at a survey, either a per day or per instance civil money penalty could be imposed. By law, CMPs may not exceed a set maximum amount per day. The maximum is a total, comprising per day and per instance penalties. This maximum amount is set forth at §488.845(b)(2)(iii) and at §488.845(b)(6) for HHA and §488.1245(b)(2)(iii) and at §488.1245(b)(6) for hospice programs, and the current adjusted maximum amount is posted on CMS's website on the Quality, Safety & Oversight Group

webpage at https://www.cms.gov/Medicare/Provider-Enrollment-and-Certification/SurveyCertificationGenInfo/Civil-Monetary-Penalties-Annual-Adjustments.

Per the Federal Civil Penalties Inflation Adjustment Improvements Act of 2015, inflationary adjustments to the CMPs are published annually and are effective immediately upon publication. The first of these adjustments was published in the Federal Register on September 6, 2016, at 81 FR 61538. A table located at 45 CFR 102.3 shows how the CMPs are adjusted for inflation. In addition, these adjusted CMP amounts are posted on the CMS website on the Survey and Certification Group webpage and are updated when future inflation adjustments are made. Adjusted amounts that are in effect when the CMP is imposed by CMS shall be applied, regardless of when noncompliance is identified. This means that the CMP amount per day or per instance imposed should be calculated using the most current adjusted amount noted in 45 CFR 102.3. For example, if a survey identifies condition-level noncompliance but CMS has not imposed a CMP yet (i.e., sent notice of intent to impose a CMP) and the next annual adjustment is published, then CMS must impose a CMP amount, either per day or per instance, using the newly adjusted amounts. For example: During a survey, a situation of IJ that is unremoved at survey exit, is identified, and CMS sends notice of the intent to impose a CMP. Upon receipt of an acceptable plan of correction, a revisit survey is completed, revealing the situation of IJ was removed but noncompliance at the condition level remains. CMS would move to lower the amount of the CMP imposed per day considering the survey findings and changes to the severity of identified noncompliance. However, if the daily penalty assessment of the CMP is adjusted under existing Federal law prior to CMS notifying the facility of the reduction in the per day amount of the CMP, CMS must lower the amount per day only to an amount that meets the newly adjusted totals (see also 42 CFR 488.845(b)(2)(iii) for HHAs and 42 CFR 488.1245(b)(2)(iii) for hospice programs).

In the event the ranges, minimum, and/or maximum amount of a CMP is adjusted for inflation during an entity's cycle of noncompliance, CMS must calculate the amount based upon the date the notice of intent is issued, not the date noncompliance was identified. These adjusted amounts shall be used until the next effective date for CMP inflation adjustments occurs.

The CMS Location consults with the regional attorney's office to ensure compliance with section 1128A of the Act and Department of Justice requirements. Section 1128A of the Act requires CMS to offer a hearing before collecting, but not before imposing, a CMP.

10005.3 - Penalty Amounts
(Rev.)

The current adjusted penalty amounts are posted annually on the CMS website on the Quality, Safety & Oversight Group webpage at https://www.cms.gov/Medicare/Provider-Enrollment-and-Certification/SurveyCertificationGenInfo/Civil-Monetary-Penalties-Annual-Adjustments and are regularly updated when inflation adjustments are made.

10005.4 - Range of Penalty Amounts
(Rev.)

CMS bases the range of civil money penalty amounts on three levels of seriousness—upper, middle, and lower. The range of CMPs is identified at §484.485(b)(3) – (6) for HHA and §488.1245(b)(3) – (6) for hospice programs, and the amounts are adjusted annually for inflation and are posted on the CMS website. The specified CMP ranges mark the starting point in CMS's determination of the CMP amount. First, CMS looks to the specific circumstances of the survey findings to determine whether a per day or per instance CMP is warranted and whether the facts point to a CMP rate in an Upper, Middle, or Lower range. After the CMP type and range are determined, CMS considers the additional factors described above at 10012.2.

When CMS is determining the rates for multiple CMPs, the rates must be evaluated collectively. By law, CMPs may not exceed a set maximum amount per day. The maximum is a total, comprising per day and per instance penalties. This maximum is set forth at §488.845(b)(2)(iii) and at §488.845(b)(6) for HHA and at §488.1245(b)(2)(iii) and at §488.1245(b)(6) for hospice programs.

Current information on the range of CMPs and the maximum amount per day is posted on the CMS website on the Quality, Safety & Oversight Group webpage at https://www.cms.gov/Medicare/Provider-Enrollment-and-Certification/SurveyCertificationGenInfo/Civil-Monetary-Penalties-Annual-Adjustments.html.

10005.5 - Upper Range of Penalty
(Rev.)

Upper range penalty amounts are imposed for a condition-level deficiency that is IJ. The CMP upper ranges are set forth in §§488.845(b)(3)(i), (ii), and (iii) for HHA and §488.1245(b)(3)(i), (ii), and (iii) for hospice programs and will vary based on the following:

a. *If the IJ is cited for actual harm;*

b. *If the IJ is cited for potential for harm; and*

c. *If the IJ is cited for a violation of established HHA or hospice program policies and procedures*

Note: *The following examples contain findings that could become a part of an HHA's or hospice program's IJ citation. Please note that the citation of IJ is only made after careful investigation of all relevant factors as detailed in Appendix Q. An IJ decision requires a determination that the situation meets all required IJ components.*

1. *Section 488.845(b)(3)(i) for HHAs and §488.1245(b)(3)(i) for hospice programs address CMPs for a deficiency or deficiencies that are determined to be IJ and that results in actual harm.* ***Examples:*** *The facility fails to report to a physician, episodes of severe hyperglycemia, resulting in ketoacidosis and hospitalization of diabetic patient; and the facility fails to timely and accurately assess a patient's pressure ulcers, which deteriorate to Stage 4 and sepsis prior to their recognition.*

2. *Section 488.845(b)(3)(ii) for HHAs and §488.1245(b)(3)(ii) for hospice programs address CMPs for a deficiency or deficiencies that are determined to be IJ and that result in a potential for harm.* ***Examples:*** *The facility fails to intervene after patient verbalizes threats of suicide, resulting in potential for self-harm; and the facility fails to administer ordered intravenous antibiotic to patient with diagnosed infection, resulting in potential for development of sepsis.*

3. *Section 488.845(b)(3)(iii) for HHAs and §488.1245(b)(3)(iii) for hospice programs address per day penalties for an isolated incident of noncompliance that is in violation of the HHA's or hospice program's established policies and procedures.* ***Example:*** *One of the facility's nurses did not follow the infection control policies and procedures when performing wound care requiring sterile technique on an immunocompromised patient.*

Current information on the range of CMPs and the maximum amounts is posted on the CMS website on the Quality, Safety & Oversight Group webpage at https://www.cms.gov/Medicare/Provider-Enrollment-and-Certification/SurveyCertificationGenInfo/Civil-Monetary-Penalties-Annual-Adjustments.html

The penalty in this upper range will continue until the IJ is removed and substantial compliance can be determined per the usual procedures. (See Appendix Q for IJ removal process and timelines)

During the revisit survey, the SA will determine if the IJ is removed. If the IJ situation has been removed, but condition level deficiencies still exist, the penalty amount may be decreased to the middle or lower range of penalties based on the deficiency.

Note*: In accordance with 42 CFR 488.830(a)(2) for HHAs and 42 CFR 488.1230(c) for hospice programs, if one or more alternative sanctions are imposed as an alternative to termination, the delay in termination may not exceed 6 months from the last day of the survey identifying condition-level noncompliance.*

10005.6 - Middle Range of Penalty
(Rev.)

Section 488.845(b)(4) for HHA and §488.1245(b)(4) for hospice programs set forth the middle range of penalties. Middle range amounts are imposed for a repeat and/or condition-level deficiency that does not constitute IJ but is directly related to poor quality patient care outcomes.

10005.7 - Lower Range of Penalty
(Rev.)

Section 488.845(b)(5) for HHA and §488.1245(b)(5) for hospice programs set forth the lower range of penalties. CMPs in the lower range are imposed for a repeat and/or condition-level

deficiency that does not constitute IJ and that is related predominately to structure or process-oriented conditions (such as OASIS submission requirements) rather than directly related to patient care outcomes.

10005.8 – CMP Imposition and IDR in HHAs and Hospices
(New)

Per §488.745 for HHAs and §488.1130, CMS's or the State's failure to complete IDR (as described in section 10002 of this manual) shall not delay the effective date of any enforcement action, including the imposition of CMPs. In those occasions where an IDR may occur after a CMP is imposed, the IDR results will nevertheless be considered in the enforcement action. We specify at §488.745(c) for HHAs and §488.1130(c) for hospices that if any findings are revised or removed by CMS or the State (for surveys conducted by the SA) based on IDR, the CMS-2567 is revised accordingly and any enforcement actions imposed solely because of those cited deficiencies are adjusted accordingly.

10005.9 - Adjustments to Penalties
(Rev.)

CMS has the discretion to increase or reduce the amount of the CMP during the period of noncompliance depending on whether the level of noncompliance changed at the time of a revisit survey.

CMS may increase a CMP based on the following:

- *The HHA's or hospice program's inability or failure to correct deficiencies;*
- *The presence of a system-wide failure in the provision of quality care; or*
- *A determination of IJ with actual harm versus IJ with potential for harm.*

CMS may decrease a CMP to the extent that it finds, pursuant to a revisit, that substantial and sustainable improvements have been implemented even though the HHA or hospice program is not yet in full compliance with the conditions of participation.

10005.10 - Decreased Penalty Amounts
(Rev.)

If a penalty was imposed in the upper range and the IJ is removed or abated but the HHA or hospice program continues to have condition-level noncompliance that is not IJ, CMS will shift the penalty amount imposed per day from the upper range to the middle or lower range based on the conditions that are out of compliance. SAs and CMS Locations should follow the same guidelines above to determine new penalty amount. An earnest effort to correct any systemic causes of deficiencies and sustain improvement must be evident.

10005.11 - Increased Penalty Amounts
(Rev.)

Following the imposition of a lower level penalty amount (either the middle range or the lower range), CMS may increase the per day penalty amount for any condition-level deficiency or deficiencies which become sufficiently serious to pose potential harm or IJ.

CMS increases the per day penalty amount for deficiencies that are not corrected and found again at the time of revisit survey(s) for which a lower level penalty was imposed.

For repeated noncompliance with the same condition-level deficiency or for uncorrected deficiencies from a prior survey, CMS may impose an increased CMP amount.

10005.12 - Accrual and Duration of Per Day Penalty
(Rev.)

Available Sanction/Remedies	***Timeframe for Notice of Imposition***
Civil Money Penalties (CMP)*	*Notice of intent to impose – provided with statement of deficiencies* *Notice includes: the amount of the CMP being imposed, the basis for such imposition and the proposed effective date of the sanction.*

10005.13 - Duration of Per Day Penalty when there is IJ
(Rev.)

The per day CMP would begin to accrue on the last day of the survey that identified the noncompliance and would continue to accrue until the HHA or hospice program achieves substantial compliance with all requirements or the date of termination, whichever occurs first. In the case of noncompliance that poses IJ, CMS must terminate the provider agreement within 23 calendar days after the last date of the survey if the IJ is not removed.

10005.13A - Duration of Penalty when there is no IJ
(Rev.)

In the case of noncompliance that does not pose IJ, the daily accrual of per day CMP is imposed for the days of noncompliance, i.e., from the day the penalty starts (based on the survey completion date and this may be prior to the notice), until the HHA or hospice program achieves substantial compliance based on a revisit or the provider agreement is terminated, but for a period of no longer than 6 months following the last day of the survey.

If the HHA or hospice program has not achieved substantial compliance with all the conditions of participation, CMS will terminate the provider agreement. The accrual of civil

money penalty stops on the day the HHA or hospice program agreement is terminated or the HHA or hospice program achieves substantial compliance, whichever is earlier.

10005.14 – Range of Penalty Amounts - Per Instance
(Rev.)

Penalties imposed per instance of noncompliance may be assessed for one or more singular events or instances of condition-level noncompliance that are identified and where the noncompliance was corrected during the onsite survey. The terminology "per instance" is not used to suggest that only one instance of noncompliance may be the basis to assess a CMP. There can be more than one instance of noncompliance identified during a survey. The current adjusted range for per instance CMPs, as well as the adjusted maximum amount per day, is posted on the CMS website on the Quality, Safety & Oversight Group webpage at https://www.cms.gov/Medicare/Provider-Enrollment-and-Certification/SurveyCertificationGenInfo/Civil-Monetary-Penalties-Annual-Adjustments.

10005.15 – Accrual and Duration of Per Instance Penalty
(Rev.)

As set forth in §488.845(b)(6) for HHA and §488.1245(b)(6) for hospice programs, a per instance CMP is imposed for each instance of noncompliance based on a deficiency(ies) during a specific survey. It is applied to as many instances as is deemed appropriate and in a specific amount for that deficiency(ies). The current adjusted range for per instance CMPs, as well as the maximum adjusted amount per day, is posted on the CMS website on the Quality, Safety & Oversight Group webpage.

***NOTE:** The per day and per instance CMP would not be imposed simultaneously for the same CoPs in a survey. In no instance will the period of noncompliance be allowed to extend beyond 6 months from the last day of the original survey that determined the HHA's or hospice program's noncompliance. If the HHA or hospice program has not achieved substantial compliance with all the participation requirements within those 6 months, CMS will terminate the HHA or hospice program. The accrual of the per day CMP stops on the day the HHA's or hospice program's provider agreement is terminated or the HHA or hospice program achieves substantial compliance, whichever is earlier.*

***Example:** When the per instance CMP is used on the original survey, the revisit survey is used to determine compliance. If noncompliance is identified at the revisit survey and a CMP is selected as the enforcement remedy/sanction, either the per instance or per day remedy may be selected.*

10005.16 - Accrual and Duration Examples
(Rev.)

a. *Revisit Survey Identifies New Noncompliance and Same Data Tag is Selected - If the same data tag is selected to identify noncompliance, the State (or CMS Location) could choose to utilize either the per instance or per day CMP. It would not matter whether the same data tag was selected to identify the new noncompliance. The issue is whether*

noncompliance is present and whether the deficient practice rises to a level that will support selecting a CMP as a sanction. For example, noncompliance was identified at HHA Tag G406 (Condition of participation: Patient rights) during the original survey. During the revisit survey, a different problem dealing with the patient rights of three patients was cited at Tag G406. The per instance or per day CMP would be selected for the noncompliance identified at Tag G406. If the per instance civil money penalty was used, the amount of the CMP might be influenced by factors relating to the violations of patient rights. However, only one per instance CMP would be appropriate. It would not be appropriate to assign a separate CMP for each of the violations related to patient rights (findings) identified at Tag G406.

b. *Revisit Survey Identifies New Noncompliance and a Different Data Tag is Selected - If a revisit identifies new deficiencies at a different data tag, either a per instance or per day CMP could be selected as a sanction.*

c. *Noncompliance - IJ Does Not Exist (Per Day)- For noncompliance that does not pose IJ, the per day CMP is imposed for the days of noncompliance, i.e., from the day the penalty starts (and this may start accruing as early as the beginning of the last day of the survey that determines the HHA or hospice program was out of compliance), until the HHA or hospice program achieves substantial compliance, or the provider agreement is terminated. However, if the HHA or hospice program has not achieved substantial compliance at the end of 6 months from the last day of the original survey, the CMS Location terminates the provider agreement. The accrual of the CMP stops on the date that the provider agreement is terminated.*

d. *Noncompliance - IJ Does Not Exist (Per Instance)- For noncompliance that does not pose IJ, the per instance CMP is imposed for the number of deficiencies during a survey for which the per instance CMP is determined to be an appropriate sanction. For example, HHA Tag G510 (Condition of participation: Comprehensive assessment of patients) and HHA Tag G370 were cited on a survey. A per instance CMP of $2,000 is imposed for Tag G370 and a per instance CMP of $8,000 is imposed for Tag G510. No civil money penalty could then be imposed for additional deficiencies because the total "per instance CMP" may not exceed $10,000 as adjusted annually for each day of noncompliance.*

e. *Noncompliance - IJ Exists - For noncompliance that poses IJ, CMS must terminate the provider agreement within 23 calendar days after the last day of the survey that identified the IJ if the IJ is not removed. The accrual of the per day CMP stops on the date that the provider achieves substantial compliance, or the provider agreement is terminated.*

10005.17 - Computation and Notice of Total Penalty Amount
(Rev.)

*When a CMP is imposed on a **per day** basis and the HHA or hospice program achieves compliance with the conditions of participation as determined by an onsite revisit survey, CMS sends a final notice to the HHA or hospice program containing all the following information:*

- *The amount of penalty assessed per day.*
- *The total number of days of noncompliance.*
- *The total amount due.*
- *The due date of the penalty.*
- *The rate of interest to be assessed on any unpaid balance beginning on the due date. The rate of interest is the higher of either the rate fixed by the Secretary of the Treasury after taking into consideration private consumer rates of interest prevailing on the date of the notice of the penalty amount due and this rate is published quarterly in the "Federal Register" by the Department of Health and Human Services under 45 CFR 30.13(a); or the current value of funds rate which is published annually in the "Federal Register" by the Secretary of the Treasury, subject to quarterly revisions. (The CMS Locations are notified by the CMS Office of Financial Management for the rate of interest information.)*
- *Instructions for submitting payment (see also "Method of Payment" section).*

When a CMP is imposed on a ***per day*** *basis and the HHA's or hospice program's provider agreement has been involuntarily terminated, CMS will send the penalty information, including the total amount of the CMP due, after one of the following actions has occurred:*

- *A final administrative decision is made;*
- *The HHA or hospice program has waived its right to a hearing in accordance with the regulations; or,*
- *The time for requesting a hearing has expired and CMS has not received a hearing request from the HHA or hospice program.*

When a ***per instance*** *CMP is assessed, a notice is sent to the HHA or hospice program containing all of the following information after the provider is in substantial compliance or its provider agreement has been terminated:*

- *The amount of the penalty or penalties that was assessed;*
- *The total amount due;*
- *The due date of the penalty;*
- *The rate of interest to be assessed on any unpaid balance beginning on the due date. The rate of interest is the higher of either the rate fixed by the Secretary of the Treasury after taking into consideration private consumer rates of interest prevailing on the date of the notice of the penalty amount due and this rate is published quarterly in the "Federal Register" by the Department of Health and Human Services under 45 CFR*

30.13(a); or the current value of funds rate which is published annually in the "Federal Register" by the Secretary of the Treasury, subject to quarterly revisions. (The CMS Locations are notified by the CMS Division of Financial Management for the annual rate of interest information); and

- *Instructions for submitting payment (see also "Method of Payment" section).*

10005.18 - Notice of Imposition of Civil Money Penalty
(Rev.)

If CMS or the SA imposes a CMP, it provides the HHA or hospice program with written notice of the intent to impose the sanction/remedy, including the amount of the CMP being imposed, the basis for such imposition and the proposed effective date of the sanction/remedy. The notice includes:

I. *The nature of the noncompliance (regulatory requirements not met);*

II. *The statutory basis for the CMP;*

III. *The amount of the penalty per day of noncompliance or the amount of the penalty per instance of noncompliance during a survey;*

IV. *The factors that were considered in determining the amount of the CMP;*

V. *The date on which the per day CMP begins to accrue;*

VI. *A statement that the per day CMP will accrue until substantial compliance is achieved or until termination from participation in the program occurs.*

VII. *When the CMP payment is due;*

VIII. ***For HHAs only**: Implications of the CMP imposition on the home health aide training and competency evaluation program (see also 42 CFR 484.80(f)).*

IX. *Instructions for responding to the notice, including a statement of the HHA's or hospice program's right to a hearing and information about how to request a hearing; and*

X. *Implications of waiving the right to a hearing and information about how to waive the right to a hearing (see §10013.20 below).*

10005.19 - Sending the Notice
(Rev.)

The notice of CMP imposition shall be in writing and shall be addressed directly to the HHA or hospice program, or to an individual, an officer, managing or general agent, or other agent authorized by appointment or law to receive the notice.

The notice shall be dispatched through first-class mail, or other reliable means. Other reliable means refers to the use of alternatives to the United States mail in sending notices. Electronic communication, such as facsimile transmission or email, is equally reliable and on occasion more convenient than the United States mail. If electronic means are employed to send notice, the sender should maintain a record of the transmission to assure proof of transmission if receipt is denied.

It should be noted that in cases where the State is authorized by the CMS location, the State may send the initial notice of imposition of certain sanctions on CMS's behalf, within applicable notice requirements.

10005.20 - Appeal of Noncompliance That Led to Imposition of Civil Money Penalty

(Rev.)

Before collecting a CMP, section 1128A of the Act requires the Secretary (CMS) to conduct a hearing when properly requested by the HHA or hospice program pursuant to §498.40. An HHA or hospice program may request a hearing with the Administrative Law Judge (ALJ) on the determination of the noncompliance that is the basis for imposition of the CMP.

The procedures to request a hearing specified in 42 C.F.R. § 498.40 are followed when CMS imposes a CMP on an HHA or hospice program. Once an appeal hearing is requested, CMS cannot collect the CMP until a final agency determination. Additional procedures are set forth at 42 CFR 488.845(h) for HHA and at 42 CFR 488.1245(g) for hospice programs. Per these regulations, when an ALJ or state hearing officer (or higher administrative review authority) finds that the basis for imposing a CMP exists, the reviewing authority may not— (1) Set a penalty of zero or reduce a penalty to zero; (2) Review the exercise of discretion by CMS to impose a CMP; and (3) Consider any factors in reviewing the amount of the penalty other than those specified at §488.845(b) for HHA or §488.1245(b) for hospice programs.

10005.20A – HHA or Hospice Program Waives Right to a Hearing

(Rev.)

An HHA or hospice program may waive the right to a hearing, in writing, within 60 days from the date of the notice imposing the CMP. If an HHA or hospice program timely waives its right to an appeal hearing within 60 calendar days of their receipt of CMS' notice imposing the CMP, CMS will approve the waiver and reduce the CMP by thirty five percent (35%). Payment of the reduced CMP must be made within 15 days of the HHA's or hospice program's receipt of CMS's notice approving the waiver and reducing the CMP. If the HHA or hospice program does not waive its right to an appeal hearing in writing within 60 calendar days of their receipt of CMS original request for payment under §488.845(c)(2)(ii) for HHA and §488.1245(c)(2)(ii) for hospice programs, it will not receive the CMP reduction.

NOTE: *Each time a survey is conducted within an already running noncompliance cycle and a CMP is imposed, the HHA or hospice program is given appeal rights and may exercise its waiver of right to a hearing.*

When a per day CMP is imposed and then is increased or decreased at subsequent surveys during an already running noncompliance cycle, an HHA or hospice program may elect to either appeal each separate CMP imposition or waive the right to appeal each imposition. Each CMP imposition is computed separately for a set number of days. The final CMP amount is established after the final administrative decision.

Example: *An HHA is cited on the original recertification survey for non-compliance with 42 CFR 484.60 Condition of participation: Care planning, coordination of services, and quality of care. Findings include evidence that the HHA did not follow the plan of care, the plan of care did not include all pertinent diagnoses, and the HHA failed to notify the physician of changes in the patient's condition. On the first revisit survey, the incidence of these deficiencies increased. On both surveys, the condition is cited as out of compliance and CMPs are imposed. The CMP will be increased following the revisit survey. The HHA may choose to appeal one or both citations, or waive one or both citations, or waive one citation and appeal the other.*

When several per instance CMPs are imposed during a noncompliance cycle, an HHA or hospice program may choose to appeal or waive the right to appeal one or more of the CMPs, in the same manner as illustrated above for the per day CMPs.

After the facility achieves substantial compliance or its provider agreement is terminated, it is notified of the revised CMP amount due.

10005.21 - When a CMP is Due and Payable
(Rev.)

In accordance with HHA (42 CFR 488.845(f)) and hospice program (42 CFR 488.1245(f)) regulations, payments are due for all CMPs within 15 days from any of the following:

- *After a final administrative decision when the HHA or hospice program achieves substantial compliance before the final decision or the effective date of termination before final decision,*
    - *A final administrative decision includes an ALJ decision and review by the Departmental Appeals Board, if the HHA or hospice program requests a review of the ALJ decision.*
- *After the time to appeal has expired and the HHA or hospice program does not appeal or fails to timely appeal the initial determination,*
- *After CMS receives a written request from the HHA or hospice program requesting to waive its right to appeal the determinations that led to the imposition of a CMP,*

- *After substantial compliance is achieved, or*

- *After the effective date of termination.*

Note: *The regulations at §488.845 for HHA and §488.1245 for hospice programs do not include a provision for extended payment plans for HHA or hospice program CMPs.*

An HHA or hospice program has two options for action following the imposition of a CMP:

- *The HHA or hospice program could pay the amount due for all CMPs imposed prior to the date a CMP is due and payable; or*

- *The HHA or hospice program could request a hearing based on the determination of noncompliance with Medicare CoPs.*

When an HHA or hospice program provides timely notice waiving its right to a hearing, CMS reduces the final CMP amount by 35%. This reduction is reflected once the CMP stops accruing, that is, when the HHA or hospice program achieves substantial compliance before CMS receives its request to waive a hearing, or the effective date of the termination occurs before CMS received the waiver request.

Impact of Hearing Requests:
Within 60 days of receipt of the notice of imposition of a penalty, the HHA or hospice program may file a request directly to the Departmental Appeals Board in the Office of the Secretary, Department of Health and Human Services with a copy to the State and CMS. In accordance with §498.40(b), the HHA's or hospice program's appeal request would identify the specific issues of contention, the findings of fact and conclusions of the law with which the HHA or hospice program disagreed, and the specific basis for contending that the survey findings and determinations were invalid. A hearing would be completed before any penalty was collected. However, sanctions/remedies would continue regardless of the timing of any appeals proceedings if the HHA or hospice program had not met the CoPs.

Requesting an appeal would not delay or end the imposition of a sanction/remedy but can only affect the collection of any final CMP amounts due. A CMP would begin to accrue on the last day of the survey which identified the noncompliance. These include penalties imposed on a per day basis, as well as penalties imposed per instance of noncompliance.

10005.22 - Method of Payment
(Rev.)

HHAs and hospices may select one of the following payment options: (1) Pay.gov; or (2) Electronic transfer of funds. CMS Office of Financial Management (OFM) prefers the use of Pay.gov because it is the federal government's secure portal for web-based collection and billing services which has been implemented by OFM to collect any money due to CMS. Questions

related to use of pay.gov, please contact the OFM's Division of Collections via email at OFMDPBCCMPGeneralMailBox@cms.hhs.gov.

HHAs and hospices are not to send CMP payment checks to the CMS Locations. If an HHA or hospice requests to pay by check, it will be considered on a case-by-case basis with collaboration from the CMS Location's division of financial management.

10005.23 - Settlement of Civil Money Penalty
(Rev.)

The CMS Location has the authority to settle CMP cases at any time prior to a final administrative decision. If a decision is made to settle, the settlement should not be for a better term than had the HHA or hospice program opted for a 35 percent reduction.

10005.24 - Offsets
(Rev.)

If payment was not received by the established due date, CMS will collect the CMP through offset of monies then owed or later owing to the HHA or hospice program. To initiate such an offset, CMS will instruct the appropriate Medicare Administrative Contractors (MAC), when applicable, the State Medicaid agencies, to deduct unpaid CMP balances from any money owed to the HHA or hospice program. To maintain consistency in recovering a CMP among other types of providers who are subject to a CMP, the amount of any penalty can be deducted (offset) from any sum CMS or the State Medicaid Agency owes to the HHA or hospice program.

Interest would be assessed on the unpaid balance of the penalty beginning on the due date. The rate of interest assessed on any unpaid balance would be based on the Medicare interest rate published quarterly in the Federal Register, as specified in §405.378(d). CMS Locations are notified by CMS OFM of the current interest rate and any changes.

10005.25 - Debt Referral to the Department of the Treasury via the Debt Collection System
(New)

Those CMP amounts not recovered due to HHA or hospice program failure to pay or inadequate funds for offset will be collected through the Debt Collection Improvement Act of 1996 which requires all debt owed to any Federal agency that is more than 180 days delinquent to be transferred to the Department of the Treasury for debt collection services. Prior to initiating a CMP debt referral to the Department of the Treasury, the CMS Location must first exhaust all collection options through the MAC and the State Medicaid Agency.

The Debt Collection System (DCS) is the data system that is used by the Division of Medicare Debt Management (DMDM) in OFM to transmit debt referrals to the Department of the Treasury via the Program Support Center (PSC), a separate component within the Department of Health and Human Services.

10005.26 - Disbursement of Recovered CMP funds
(Rev.)

The CMP amounts and any corresponding interest recovered from HHAs, and hospice programs will be divided between the Medicare and Medicaid programs, based on a proportion that is commensurate with the comparative Federal expenditures under Titles XVIII and XIX of the Act, using Medicaid Statistical Information System (MSIS) and HHA or hospice program Prospective Payment System (PPS) data for a three-year fiscal period. The amounts are disbursed in accordance with § 488.845(g). Penalty funds may not be used for survey and certification operations nor can they be used as the State's Medicaid non-Federal medical assistance or administrative match. The CMS Locations are not responsible for disbursement of recovered CMP funds.

10006 - Suspension of Payment for All New Medicare Admissions
(Rev.)

10006.1 - Introduction
(Rev.)

Suspension of payment for all new Medicare admissions is conducted in accordance with §488.840 for HHA or §488.1240 for hospice programs when the provider is not in substantial compliance with the CoPs. The SA should consider recommending this sanction/remedy for deficiencies related to poor patient care outcomes, regardless of whether cited deficiencies pose IJ to patient health and safety. Suspension of payment for new admissions is likely to be the most effective sanction/remedy to influence rapid change to facilitate compliance with the CoPs and may be imposed alone or in combination with other sanctions/remedies.

10006.2 - Notice of Sanction
(Rev.)

Suspension of payment for new Medicare admissions may be imposed anytime an HHA or hospice program is found to be out of substantial compliance, as long as the HHA or hospice program is given written notice at least 2 calendar days before the effective date in IJ situations and at least 15 calendar days before the effective date in non-IJ situations. The notice of suspension of payment for new admissions must include the following: the nature of the non-compliance; the effective date of the sanction/remedy; and the right to appeal the determination leading to the sanction. In addition to notifying the HHA or hospice program of this proposed sanction/remedy, CMS will also notify the State Medicaid Agency, if applicable.

For HHAs Only: *Please note that the imposition of suspension of payment for new admissions on an HHA would prohibit that HHA from conducting health aide training and competency evaluation program for 2 years from the date this sanction is imposed (see also 42 CFR 484.80(f)). See Appendix B of the State Operations Manual for additional information for eligible home health aide training and competency evaluation organizations at §484.80(f).*

10006.3 - Effect of Sanction/Remedy on Patients Admitted before the Effective Date of Sanction/Remedy
(Rev.)

The patient's status on the effective date of the suspension of payment sanction/remedy is the controlling factor. This sanction/remedy would not apply to patients who have been receiving care from the HHA or hospice program before the effective date of this sanction/remedy. This sanction/remedy would apply only to new Medicare admissions. CMS will suspend payments for new Medicare patient admissions to the HHA or hospice program that are made on or after the effective date of the imposition of the sanction/remedy for the duration of the sanction/remedy. Payments for individuals who are already receiving services could continue. CMS defines a "new admission" as the following:

- *A patient who is admitted to the HHA or hospice program under Medicare on or after the effective date of a suspension of payment sanction/remedy; or*

- *A patient who was admitted and discharged before the effective date of the suspension of payment and is readmitted under Medicare on or after the effective date of suspension of payment sanction/remedy.*

As part of this sanction/remedy, the HHA or hospice program would be required to notify any new patient admission, before care is initiated, of the fact that Medicare payment would not be available to this HHA or hospice program because of the imposed suspension. The HHA or hospice program would be precluded from charging the Medicare patient for those services unless it could show that, before initiating the care, it had notified the patient or representative both orally and in writing in a language that the patient or representative can understand that Medicare payment is not available.

The suspension of payment sanction/remedy will end when CMS finds that the HHA or hospice program is in substantial compliance with all the CoPs or when the HHA or hospice program is terminated. That is, the suspension of payment sanction/remedy would end when the HHA or hospice program has corrected all condition-level deficiencies, and the correction has been verified by the SA. Any Medicare patients admitted during the suspension of payment period would require a new start of care (SOC) date after the suspension of payment for new admissions has ended. This is required for the HHA or hospice program to begin receiving payments for those patients.

10006.4 - Duration
(Rev.)

The suspension of payment would end when CMS terminates the provider agreement or when CMS finds the HHA or hospice program to be in substantial compliance with all of the CoPs. No payments are made to reimburse the HHA or hospice program for the time between the date the sanction/remedy was imposed and the date that substantial compliance was achieved. CMS accomplishes the suspension of payment sanction/remedy through written instructions to the appropriate MAC. The CMS Location will send the letter with instructions to the MAC

indicating the beginning or ending date of the payment suspension. Generally, if the HHA or hospice program achieves substantial compliance and it is verified by CMS, CMS will resume payments to the HHA or hospice program prospectively from the date it determines that substantial compliance was achieved.

If CMS terminates the provider agreement or determines that the HHA or hospice program is in substantial compliance with the CoPs, the HHA or hospice program would not be able to recoup any payments for services provided to Medicare patients admitted during the time the suspension was in place.

10007 - Temporary Management
(Rev.)

10007.1 – Introduction, Purpose & Imposition
(Rev.)

Temporary management is established in accordance with §488.835 for HHAs and §488.1235 for hospice programs. The following situations should be used as a general guide for imposing temporary management when:

- *CMS determines the failure to comply with the CoPs is directly related to management limitations, or*
- *Deficient management oversight that is likely to impair the HHA's or hospice program's ability to correct deficiencies and return the HHA or hospice program to full compliance within the necessary timeframe, and*
- *When needed, based on the above situations, to oversee orderly involuntary termination/closure of an HHA or hospice program including the proper and safe transfer of patients to another local HHA or hospice program.*

Notice of intent to appoint a temporary manager must be given at least 15 calendar days before the effective date of the enforcement action. When there is an IJ, notice of intent must be given at least two calendar days before the effective date of the enforcement action. The notice of intent from CMS provides the intent to impose the enforcement action, the statutory basis for the enforcement action, the nature of the noncompliance, the proposed effective date of the enforcement action, and the appeal rights. The final notice will be provided once the administrative determination is final.

***For HHAs only:** Please note that the imposition of temporary management on an HHA would prohibit that HHA from conducting health aide training and competency evaluation program for 2 years from the date this sanction is imposed (see also 42 CFR 484.80(f)). See Appendix B of the State Operations Manual for additional information for eligible home health aide training and competency evaluation organizations at §484.80(f).*

The maximum period for use of the temporary manager is six months. It is the temporary manager's responsibility to oversee correction of the deficiencies and assure the health and safety of the HHA's or hospice program's patients while the corrections are being made. An HHA or hospice program that fails to relinquish authority and control to a temporary

manager will have its provider agreement terminated in accordance with §488.865 (HHA) or §488.1265 (Hospice).

10007.2 - Selection of Temporary Manager
(Rev.)

Each SA should compile a list of individuals who are eligible to serve as temporary managers. When CMS decides to impose this sanction or remedy, it considers the SA's recommendation for a temporary manager whose work experience and education qualify the individual to oversee the correction of deficiencies to achieve substantial compliance. The temporary manager must have the experience and education that qualifies the individual to oversee the HHA or hospice program. The temporary manager can be either internal or external to the HHA/hospice program and will be appointed by CMS or the SA based on qualifications described in §§ 484.105(b) and 484.115 for HHAs and §§ 418.100 and 418.114 for hospice programs. The SA should reject a candidate who has demonstrated difficulty maintaining compliance in the past.

10007.3 – Authority and Conditions of Temporary Management
(Rev.)

CMS notifies the HHA or hospice program that a temporary manager is being appointed. The temporary manager must have the authority to hire, terminate, or reassign staff; obligate the provider's funds; alter provider policies and procedures; and otherwise manage an HHA or hospice program to correct deficiencies identified in the provider's operation. The HHA's or hospice program's management must agree to relinquish authority and control to the temporary manager and to pay his/her salary before the temporary manager can be installed in the HHA or hospice program. A contract or memorandum of understanding should be completed between the temporary manager and the HHA or hospice program prior to the temporary manager beginning any work or incurring any costs. Failure to relinquish authority and control to the temporary manager will result in termination of the HHA or hospice program.

The HHA or hospice program cannot retain final authority to approve changes of personnel or expenditures of HHA or hospice program funds and be considered to have relinquished control to the temporary manager. The temporary manager must be given access to all HHA or hospice program bank accounts. If the HHA or hospice program does not relinquish control to the temporary manager and/or provide access to bank accounts and available assets, the HHA or hospice program will be terminated. It should be noted that the HHA's or hospice program's governing body remains ultimately responsible for achieving compliance. The responsibility does not transfer to the temporary manager, SA, or CMS.

The temporary manager's salary must be at least equivalent to the prevailing annual salary of HHA or hospice program administrators in the HHA's or hospice program's geographic area based on the bureau of labor statistics, plus any additional costs that would have reasonably been incurred by the HHA or hospice program if the temporary manager had been in an employment relationship, e.g., the cost of a benefits package, prorated for the amount of time that the temporary manager spends in the HHA or hospice program. The

HHA or hospice program is also responsible for any other costs incurred by the temporary manager in furnishing services under such an arrangement or as otherwise set by the State. Failure to pay the salary and other costs is considered a failure to relinquish authority and control to temporary management and will result in termination of the provider agreement.

The State should provide the temporary manager with an appropriate orientation that includes a review of the HHA's or hospice program's deficiencies and compliance history. The State may request that the temporary manager periodically report on the actions taken to achieve compliance and, on the expenditures associated with these actions.

10007.4 - Duration of Temporary Management
(Rev.)

Temporary management continues until an HHA or hospice program is terminated by CMS, or achieves substantial compliance via an onsite survey, and is capable of remaining in substantial compliance, or decides to discontinue the sanction/remedy and reassume management control before it has achieved substantial compliance. If the HHA or hospice program reassumes control before achieving substantial compliance, CMS would initiate termination of the provider agreement and could impose additional sanctions or remedies during the time period between HHA or hospice program resumption of management and termination. Temporary management will not exceed six months from the date of the survey identifying noncompliance.

10008 - Directed Plan of Correction (DPOC)
(Rev.)

10008.1 – Purpose
(Rev.)

The purpose of the DPOC is to achieve correction and continued compliance with Federal requirements. A DPOC is a plan that the State, with CMS Location approval, or the CMS Location develops to require an HHA or hospice program to take corrective action to achieve specific outcomes within specified time frames. The requirements for DPOC are specified at §488.850 for HHA and §488.1250 for hospice programs.

10008.2 - Imposition of a Directed Plan of Correction
(Rev.)

Whether the facility has standard-level or condition-level deficiencies, an HHA or hospice program must submit an acceptable plan of correction to CMS. If the HHA or hospice program is unable to develop an acceptable plan of correction, CMS may impose a DPOC for condition level deficiencies. CMS must provide written notification of the intent to impose a DPOC sanction/remedy.

Notice of intent to impose a DPOC must be given at least 15 calendar days before the effective date of the enforcement action in non-IJ situations and at least 2 calendar days before the

effective date in IJ situations. The date the DPOC is imposed, that is, the date the sanction/remedy becomes effective, does not mean that all corrections must be completed by that date.

10008.3 - Elements of a Directed Plan of Correction
(Rev.)

A DPOC should address all of the elements required for an HHA- or hospice program-developed plan of correction. These elements include, but are not limited to, the following:

I. How an HHA or hospice program will correct each deficiency;
II. How the HHA or hospice program will act to protect patients in similar situations;
III. How the HHA or hospice program will ensure that each deficiency does not recur;
IV. How the HHA or hospice program will monitor performance to sustain solutions; and
V. The timeframe in which corrective actions will be taken.

10008.4 - Achieving Compliance
(Rev.)

Achieving compliance is the HHA's or hospice program's responsibility, whether or not a DPOC is followed. If the HHA or hospice program fails to achieve compliance within the timeframes specified in the DPOC, CMS may impose one or more additional alternative sanctions/remedies until the HHA or hospice program achieves compliance or is terminated from the Medicare program.

10009 - Directed In-Service Training
(Rev.)

10009.1 – Purpose & Imposition
(Rev.)

Directed in-service training may be used when the State, CMS, or the temporary manager believes that education is likely to correct the deficiencies and help the HHA or hospice program achieve substantial compliance. The requirements for directed in-service training are specified at §488.855 for HHA and §488.1255 for hospice programs.

Directed in-service training requires the staff of the HHA or hospice program to attend a specific in-service training program(s). The purpose of directed in-service training is to provide knowledge to achieve and remain in compliance with Federal requirements. For example, in circumstances where some, but not all, compliance problems are a result of a lack of knowledge on the part of the health care provider relative to advances in health care technology and expectations of favorable patient outcomes, directed in-service training would benefit the agency. Also, directed in-service could be used in situations where staff performance results in deficient practice. A directed in-service training program would correct

this deficient practice through retraining the staff in the use of clinically and professionally sound methods to produce quality outcomes.

Notice of intent to impose directed in-service training must be given at least 15 calendar days before the effective date of the enforcement action in non-IJ situations and at least 2 calendar days before the effective date in IJ situations.

10009.2 - Appropriate Resources for Directed In-Service Training Programs
(Rev.)

HHAs or hospice program should use programs developed by well-established centers of health education and training such as continuing education programs offered by schools of medicine, nursing, public health, community colleges, state health departments, centers for the aging, and other available area centers which have established continuing education programs for health professionals. The programs may also be conducted by consultants with background in education and training with Medicare HHA or hospice program providers, as applicable, or as deemed acceptable by CMS and/or the SA (by review of a copy of the curriculum vitas and/or resumes/references in order to determine the educator's qualifications). The SA or CMS Location may also compile a list of resources that can provide directed in-service training and may make this list available to HHAs or hospice programs.

10009.3 - Further Responsibilities
(Rev.)

The HHA or hospice program bears the expense of the directed in-service training for its staff. After the training has been completed, the SA will assess whether substantial compliance has been achieved. If directed in-service training was the sanction imposed and the HHA or hospice program does not achieve substantial compliance, CMS may impose one or more additional sanctions/remedies as specified at §488.820 for HHA or at §488.1220 for hospice programs.

Home Health (HH) Quality Reporting Program (QRP) Quick Reference Guide

The HH QRP creates Home Health Agency (HHA) quality reporting requirements, as mandated by Section 1895(b)(3)(B)(v)(II) of the Social Security Act ("the Act") and the Medicare regulations at 42 C.F.R.§484.250(a).

HHAs must report on both Consumer Assessment of Healthcare Providers and Systems (CAHPS®) Home Health Care Survey data (HHCAHPS Survey) and Outcome and Assessment Information Set (OASIS) data. Additional data is gathered through Medicare claims. Information on measures required for the Home Health QRP can be found on the CMS Home Health Quality Measures webpage.

If the required quality data is not reported by each designated submission deadline, the HHA will be subject to a two (2) percentage point reduction in their Annual Payment Update (APU).

Frequently Asked Questions

Q: What are the data submission deadlines for OASIS data?

OASIS data must be transmitted within 30 days of the assessment date. OASIS data submitted within 30 days of the assessment date is considered to have met the requirements of submitting quality data.

The comprehensive assessment must be updated and revised (including the administration of OASIS) no less frequently than one of the following:

- The last five days of every 60 days begin with the start of care date, unless there is a beneficiary-elected transfer, significant change in condition, or discharge and return to the same HHA during the 60-day episode.
- The comprehensive assessment must be completed within 48 hours of returning home after discharge from inpatient facility, or within 48 hours of knowledge of qualifying stay in an inpatient facility. When the physician specifies a date that home care services must resume (a physician-ordered Resumption of Care date), the agency is expected to conduct the ROC (Resumption of Care) visit on that date.
- At discharge.

More information on OASIS submission deadlines can be found in the OASIS User Manual available in the Downloads section of the OASIS User Manuals webpage.

Q: What are the data submission deadlines for HHCAHPS survey data?

HHCAHPS Survey data must be reported for eligible patients monthly for four consecutive quarters. HHCAHPS Survey vendors must submit HHCAHPS data files on the third Thursday in the months of January, April, July, and October. You can view a list of HHCAHPS submission deadlines on the HHCAHPS website, homehealthcahps.org.

Q: How do I verify my submissions?

OASIS validation reports are available in the iQIES reporting application. Instructions for running these reports can be found on the iQIES portal or via the iQIES References & Manuals webpage.

HHCAHPS Survey data submission reports are available under the tab "For HHAs" on the homehealthcahps.org website. HHAs are required to check the HHCAHPS Survey data submission reports to confirm that their HHCAHPS Survey data files have been entered successfully (and conversely, entered unsuccessfully) by their respective HHCAHPS survey vendors. Additionally, under "For HHAs" home health agencies can check their quarterly HHCAHPS preview reports for data that will be posted on Care Compare. On the same website, we post the current HHCAHPS Protocols and Guidelines Manual, which contains information about public reporting measures and the public reporting schedule.

Q: How do I submit an HHCAHPS exemption request?

HHCAHPS Survey participation for every Calendar Year Annual Payment Update (CY APU) runs for a 12-month period from April 1st through March 31st. If an HHA has 59 or fewer HHCAHPS-eligible patients in the previous 12 months of April through March, then the HHA should complete an HHCAHPS Survey Participation Exemption Request (PER) form by 11:59 pm March 31 of the current CY APU period. The PER form is accessible in the "For HHAs" portal on the private side of the website https://homehealthcahps.org. The PER form is replaced annually to coincide with the data collection dates of the current CY APU period.

Help Desk Assistance

HHAPUreconsiderations@cms.hhs.gov (APU/Reconsiderations Help Desk)
For reconsideration requests and follow-up questions after the facility has received a CMS determination of non-compliance letter or for extension/exception requests.

homehealthqualityquestions@cms.hhs.gov (Home Health Quality Help Desk)
For questions about the QAO metric or the content of the QAO Historical Reports and submission of comments, questions, and suggestions about the Quality of Patient Care Star Ratings.

HHCAHPS@RTI.org or 1-866-354-0985 (HHCAHPS Technical Assistance Help Desk)
Answers to all questions about the HHCAHPS Survey.

iqies@cms.hhs.gov or 1-877-201-4721 (iQIES Help Desk)
For questions about OASIS submission reports and other provider reports.

July 2024 CMS Quarterly OASIS Q&As

Category 4b

A1005, A1010, A1250, B1300, D0700

Question 1: If a patient is confused and consistently does not respond appropriately to questions, is the assessing clinician required to ask the questions for the social determinants of health (SDOH) OASIS items, such as A1005 - Ethnicity, A1010 - Race, A1250 - Transportation, B1300 - Health Literacy, and D0700 - Social Isolation?

Answer 1: Each OASIS item should be considered individually and coded based on guidance specific to that item.

For A1005 - Ethnicity, use clinical judgment to determine if the patient is able to respond. If it is determined that the patient is unable to respond, then code X - Patient unable to respond. If it is determined that the patient is unable to respond, a proxy response may be used. If neither the patient nor a proxy is able to provide a response to this item, medical record documentation may be used.

For A1010 - Race, use clinical judgment to determine if the patient is able to respond. If it is determined that the patient is unable to respond, then code X - Patient unable to respond. If it is determined that the patient is unable to respond, a proxy response may be used. If neither the patient nor a proxy is able to provide a response to this item, medical record documentation may be used.

For A1250 - Transportation, use clinical judgment to determine if the patient is able to respond. If it is determined that the patient is unable to respond, then code X - Patient unable to respond. If it is determined that the patient is unable to respond, a proxy response may be used. If neither the patient nor a proxy is able to provide a response to this item, medical record documentation may be used.

For B1300 - Health Literacy, use clinical judgment to determine if the patient is able to respond. If it is determined that the patient is unable to respond, then code 8 - Patient unable to respond. This item is intended to be a patient self-report item. No other source should be used to identify the response for this item.

For D0700 - Social Isolation, use clinical judgment to determine if the patient is able to respond. If it is determined that the patient is unable to respond, then code 8 - Patient unable to respond. This item is

intended to be a patient self-report item. No other source should be used to identify the response for this item.

M1306 - M1324

Question 2: Would a Kennedy Ulcer be considered a pressure ulcer for the purposes of coding the pressure ulcer items on the OASIS?

Answer 2: If an ulcer/injury arises from a combination of factors that are primarily caused by pressure, then the ulcer/injury should be included in pressure ulcer items as a pressure ulcer/injury.

End of life ulcers (also known as Kennedy ulcers or terminal ulcers) result from organ failure and are not considered pressure ulcers and therefore not reported on the OASIS pressure ulcer items.

M1311

Question 3: Can you please provide guidance on how to stage a pressure ulcer on the OASIS when the deepest anatomic soft tissue damage is unknown? We have a newly admitted patient who has had a pressure ulcer for over a year, but there is no documentation available to indicate the highest stage of the ulcer.

Answer 3: For M1311 - Current Number of Unhealed Pressure Ulcers/Injuries at Each Stage, code based on the findings from the first skin assessment that is conducted on or after and as close to the actual time of the SOC/ROC as possible. Do not reverse stage. Consider current and historical levels of tissue involvement.

If the pressure ulcer/injury was previously classified at a higher numerical stage than what is observed now, as long as it remains stageable, it should continue to be classified at the higher numerical stage until healed.

If historical information is not available to inform the assessment of whether the ulcer/injury was previously classified at a higher numerical stage than what it is observed as now, code based on the current observation of the wound.

Expanded Home Health Value-Based Purchasing (HHVBP) Model

QUARTERLY NEWSLETTER - SEPTEMBER 2024

This newsletter contains information for home health agencies (HHAs) related to the expanded Home Health Value-Based Purchasing (HHVBP) Model, including Model highlights, training updates, new insights, reminders, resources, and contact information.

IN THIS ISSUE:

Instructions for Accessing HHVBP Model Reports in iQIES

Preliminary And Final Annual Performance Report (APR) For CY 2024

An agency must believe they have found an error in the Preview Report in order to submit a recalculation request.

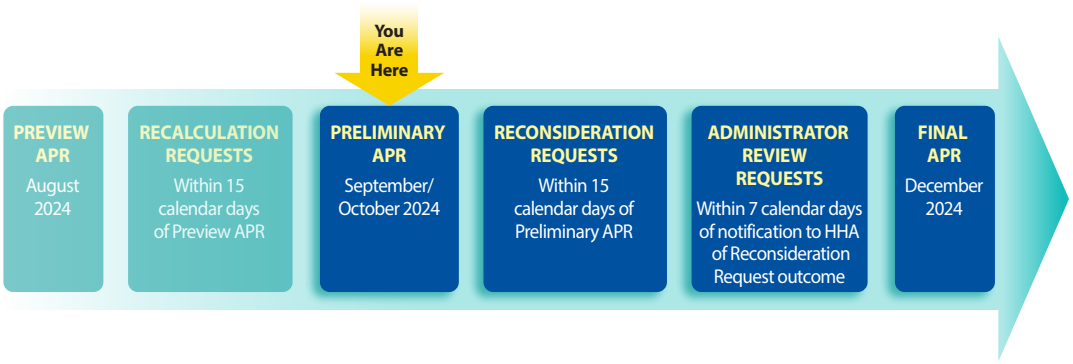
Agencies will receive their Preliminary APR in September/October 2024. This report will identify how an agency is performing with their quality measures (QMs) and expected payment adjustments. Note: HHAs can expect that this report will look the same as their Preview APR (available in August 2024), unless a recalculation request was submitted and the Centers for Medicare & Medicaid Services (CMS) made adjustments/corrections if needed and notified the HHA of the decision (i.e., request granted or denied). The Preliminary APR would reflect any of those changes granted by CMS.

Agencies that requested a recalculation (within 15 days of their August Preview APR) and do not agree with the outcome of CMS' decision may submit a reconsideration request within 15 days of the publication of their Preliminary APR. CMS will investigate the submitted request, make adjustments/corrections if needed, and notify the HHA of the decision (i.e., request granted or denied). The agency may once more appeal this decision by submitting a Request for CMS Administrator Review within 7 days of receiving the outcome notification from CMS regarding the Reconsideration Request. Requests for recalculation and reconsideration must be submitted to HHVBP_Recalculation_Requests@abtassoc.com.

Final APRs will be available in December 2024, at least 30 days before the applicable payment year (CY 2025). This report will reflect agency performance for the QMs and identify the Achievement and Improvement Points that will impact individual payment adjustments in 2025.

APR Recalculation And Reconsideration 2024 Timeline

To learn more about HHA Recalculation Requests, click here.



HHVBP Public Reporting

The expanded HHVBP Model data will be publicly reported beginning in 2025.

HHA-level HHVBP performance metrics for CY 2023 as reported in the CY 2024 APR will be published in the Provider Data Catalog (PDC) in mid-January 2025. For each CY thereafter, CMS anticipates following the same approximate timeline for public reporting.

The metrics that will be made available include but are not limited to:

- Applicable measure benchmarks and achievement thresholds for each small- and large-volume cohort.
- For each HHA that qualified for a payment adjustment based on the data for the applicable performance year:
  - ✔ The HHA's applicable measure results and improvement thresholds,
  - ✔ The HHA's Total Performance Score (TPS),
  - ✔ The HHA's TPS Percentile Ranking, and
  - ✔ The HHA's payment adjustment for a given year.

Help Desk Highlights

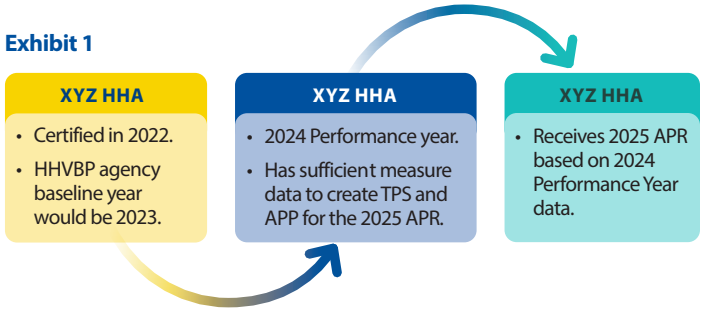
Common Help Desk questions are added to the expanded HHVBP Model FAQs. To access the updated FAQs, click here.

Who receives a CY 2024 APR?

Only active HHAs that were Medicare-certified prior to January 1, 2022, and had sufficient measure data to generate a TPS and Annual Payment Percentage (APP) will receive a CY 2024 APR. The cadence for receiving an APR is the same for an agency achieving Medicare certification in subsequent years.

For example, HHAs that were Medicare certified in 2022 would not be eligible to receive a CY 2024 APR but may be eligible to receive a CY 2025 APR based on CY 2024 performance if they have sufficient measure data to generate a TPS and APP for the CY 2025 APR (see **Exhibit 1**). Similarly, HHAs that were Medicare-certified in 2021 but did not have sufficient measure data to create a TPS and APP may be eligible to receive a CY 2025 APR based on CY 2024 performance if they meet the minimum measure data requirement for that APR.

Exhibit 1



If your agency did NOT receive a Preview APR in August 2024, this might be why…

Understanding Agency APR Eligibility

Though it is understood that the expanded HHVBP Model participation is mandatory for all HHAs, agencies may not receive a 2024 APR. For CY 2024, HHAs will receive an APR ***only*** if they were Medicare-certified prior to January 1, 2022, ***and*** had sufficient data for at least five QMs to calculate their TPS.

The APR reflects the agency's performance year data.

HHAs that become Medicare-certified must have provided a full CY of services (beginning after the date of Medicare certification) to be eligible for an APR. That first CY of services will become their HHA baseline year. This is to allow adequate time for the agency to collect the necessary data used to calculate QMs and to ensure that enough data are collected to most accurately reflect an agency's performance as displayed on an APR.

Updating Demographic Data

"I noticed that my agency name appears different on each of the reports. How can I request that it is changed so it appears the same on each?"

Information on how to update an HHA's demographic data can be found on the Home Health Quality Reporting web page: How to Update Home Health Demographic Data | CMS, and additional instructions are outlined in Provider Demographic Update Process that can be found in the Downloads section.

All HH providers are responsible for ensuring their latest demographic data are updated and available in both the iQIES and PECOS systems.

1. Complete form CMS-855A in PECOS with the updated demographic information: Welcome to the Medicare Provider Enrollment, Chain, and Ownership System (PECOS) (hhs.gov).
   - If you need assistance, contact your Medicare Administrative Contractor (MAC).
2. Contact your State OASIS Automation Coordinator (OAC) or State OASIS Education Coordinator (OEC) and request an update of your demographic data in iQIES.
   - A list of OAC/OECs and their contact information can be found here: OASIS Coordinators | CMS.

Updates to HH provider demographic information do not happen in real time and can take up to 6 months to appear on Care Compare. Should you have questions regarding this process, please contact the iQIES help desk by email at iQIES@cms.hhs.gov or by phone at (800) 339-9313.

HHVBP Training Updates

On August 13, 2024, CMS hosted a webinar, The HHVBP CY 2024 Annual Performance Report (APR) – What You Need to Know! A recording of this webinar and more can be found on the Expanded HHVBP Model website under Model Reports. The purpose of this webinar is to educate HH providers about the Preview APR that came out in August 2024. The webinar includes a discussion of the CY 2024 APR, how to interpret the report, the recalculation and reconsideration process, the applicable QM results and corresponding payment adjustment amounts determined by CY 2023 performance, and how the APP will be applied to Medicare Fee-For-Service (FFS) payments in CY 2025, the payment year.

In addition, CMS is offering a web-based training course that provides an overview of changes to the expanded HHVBP Model Applicable Measure Set for CY 2025 based on the HH CY 2024 Prospective Payment System (PPS) final rule. The changes to the expanded HHVBP Model's applicable measure set categories, reflecting QMs that were removed and added, are discussed. A review of measure specifications and measure weighting is also provided. The course includes interactive exercises to help you understand and apply the content presented. This program is part of a comprehensive strategy to ensure HH providers have access to the education necessary to understand and comply with changes in requirements associated with the expanded HHVBP Model.

Advancing Agency Achievement

In addition to the trainings found on the expanded HHVBP Model website, other training resources that agencies may find helpful are on the HH QRP Training Web Page.

HH QRP Education Spotlight: Section GG Training

HH providers have been collecting self-care and mobility data for several years. Since the advent of Section GG in 2017, agencies have witnessed how these data elements have impacted them in a multitude of ways. Since the Discharge Function Score measure baseline data collection began in 2023, agencies will need to ensure that accurate assessments for self-care and mobility are being conducted.

To assist agencies in the promotion of accurate data collection, CMS is offering an updated web-based training series on the *Assessment and Coding of Section GG: Functional Abilities*. This training (originally posted in 2019), has been updated to reflect OASIS-E1 guidance as of August 2024.
This training series consists of five courses:

- **Course 1:** Section GG Data Accuracy and Quality Measures.
- **Course 2:** Prior Functioning and Prior Device Use Items.
- **Course 3:** Accurate Coding for GG0130. Self-Care and GG0170. Mobility.
- **Course 4:** Understanding Admission and Discharge Performance for GG0130. Self-Care Items.
- **Course 5:** Understanding Admission and Discharge Performance for GG0170. Mobility Items.

Each of the courses contains interactive exercises to test your knowledge related to the assessment and coding of Section GG data elements. This "Train-the-Trainer" program is part of a comprehensive strategy to ensure HH providers have access to the education necessary to understand and comply with changes in Section GG guidance associated with the HH Quality Reporting Programs (QRPs).
This training series can be found on the HH QRP Training Web Page.

HH QRP Education Spotlight: HH QRP Key Program Updates Training

Is your agency up to date on the changes to the HH QRP that are being implemented this year? Some of these updates will have an impact on HHVBP. CMS has posted a web-based training specifically addressing these recent changes. What You Need to Know: PAC QRP Key Program Updates – FY/CY 2025 provides an overview of key HH QRP updates, targeting new, removed and revised QMs. There is a discussion on the Discharge Function Score measure, including a description of how the measure is calculated. This training can be found on the HH QRP Training Web Page.

CMS
CENTERS FOR MEDICARE & MEDICAID SERVICES

HHVBP
EXPANDED HOME HEALTH VALUE-BASED PURCHASING MODEL

PUBLIC REPORTING TIP SHEET

Home Health Value-Based Purchasing

IN THIS TIP SHEET:

Home health agencies (HHAs) will find a brief background and overview of public reporting for the expanded Home Health Value-Based Purchasing (HHVBP) Model, including:

HHVBP Background

As authorized by Section 1115A of the Social Security Act and finalized in the Calendar Year (CY) 2016 HH Prospective Payment System (PPS) final rule (80 FR 68624), the Center for Medicare and Medicaid Innovation (CMMI) implemented the original Model in nine States on January 1, 2016. The specific goals of the original HHVBP Model were to accomplish the following:

1. Provide incentives for better quality care with greater efficiency.
2. Study new potential quality and efficiency measures for appropriateness in the HH setting.
3. Enhance the current public reporting process.

On January 8, 2021, the Centers for Medicare & Medicaid Services (CMS) announced the nationwide expansion of the HHVBP Model, which began on January 1, 2022. The expanded Model is mandatory for all Medicare-certified HHAs with a CMS Certification Number (CCN) in all 50 States, the District of Columbia, and U.S. territories. Under this expanded Model, HHAs receive adjustments to their Medicare fee-for-service (FFS) payments based on their performance against a set of applicable QMs relative to their peers' performance. For further background information regarding the expanded HHVBP Model, including the descriptions for smaller- and larger-volume-based cohorts, please refer to the expanded HHVBP Model webpage: Expanded Home Health Value-Based Purchasing Model | CMS.

Inaugural Release of HHVBP Data for Public Reporting

HHA-level performance metrics reported in the Final CY 2024 Annual Performance Report (APR) issued to HHAs in December 2024 (see **Figure 1**), will be published in the Provider Data Catalog (PDC) in January 2025. The PDC is an online data repository that provides public access to view and download official CMS data used on Care Compare and other general information.

HHA performance data will be reported annually for each HHA based on the data for the applicable performance year. Reporting of this data is important because it provides the public with insight into the quality and efficiency of care offered by Medicare-certified HHAs.

Publicly reported data for all HHAs will

- Applicable QM benchmark and achievement threshold by volume-based cohort (see **Figure 1** for applicable measures).

For HHAs that qualified for a payment adjustment, publicly reported data will also include:

- The HHA's Total Performance Score (TPS) and TPS Percentile Ranking.
- The HHA's annual Adjusted Payment Percentage (APP) for the applicable payment year.

Which HHAs will have data displayed?

- Active HHAs that were Medicare-certified prior to January 1, 2022, and had sufficient data for at least five QMs to calculate a TPS and APP.

Figure 1. Summary of Applicable QMs for CY 2023, 2024, and 2025 Performance Years

Measure Type	Quality Measure	CY 2023 & 2024	CY 2025
OASIS-based	Discharged to Community	X	
	Improvement in Dyspnea	X	X
	Improvement in Management of Oral Medications	X	X
	Total Normalized Composite (TNC) Change in Mobility	X	
	Total Normalized Composite (TNC) Change in Self-Care	X	
	Discharge Function Score (DC Function)		X
Claims-based	Acute Care Hospitalizations (ACH)	X	
	Emergency Department Use Without Hospitalization (ED)	X	
	Home Health Within-Stay Potentially Preventable Hospitalization (PPH)		X
	Discharge to Community-Post Acute Care (DTC-PAC)*		X
HHCAHPS® Survey-based	Care of Patients (Professional Care)	X	X
	Communication Between Providers and Patients	X	X
	Specific Care Issues	X	X
	Overall Rating of Home Health Care	X	X
	Willingness to Recommend the Agency	X	X
This measure spans two CYs: 2024/2025			

Which HHAs will not have their data displayed?

- Inactive HHAs.
- HHAs that were Medicare-certified on or after January 1, 2022.
- HHAs that were Medicare-certified prior to January 1, 2022, and lack sufficient data (fewer than five QMs) to calculate a TPS and APP.

Annual Performance Reports

The HHVBP APR is a confidential feedback report provided and available to HHAs via the Internet Quality Improvement & Evaluation System (iQIES). The HHVBP APR provides HHAs with their QM performance data and the APP—including how the adjustment was determined—relative to the HHA's performance, as well as when the adjustment will be applied to the HHA's Medicare FFS claims for the respective payment year.

To receive a QM score, HHAs must meet the following minimum thresholds per reporting period for each QM:

- OASIS-based measures: 20 HH quality episodes.
- Claims-based measures: 20 HH stays.
- HHCAHPS Survey-based measures: 40 completed surveys.

The HHVBP APR has three versions: Preview, Preliminary, and Final. The Preview APR is released to HHAs in August. The Preliminary APR is released to HHAs in September/October, and a Final APR is released by December. The HHVBP APRs provide HHAs with performance data they can use to help track their quality improvement efforts and offer a preview of the data prior to PR.

In August 2024, Preview CY 2024 APRs were released in iQIES for competing and eligible HHAs. This Preview APR reflected HHA performance in CY 2023 and included each HHA's APP to be applied to CY 2025, an explanation of when the payment adjustment will apply, and how CMS determined the adjustment relative to the HHA's final TPS. An example of the APR can be found here: Sample APR.

Recalculation and Reconsideration Requests

HHAs may submit requests for ***recalculation*** within 15 days after publication of the Preview APR if they wish to dispute the calculation of the Annual TPS and/or the APP.

RECONSIDERATION REQUESTS
Only HHAs that submit a recalculation request can submit a reconsideration request to CMS.

Changes resulting from CMS-approved recalculation(s) will be reflected in the Preliminary APR, which will be available to the requesting HHA via iQIES in September/October. HHAs that do not agree with the recalculation request decision can submit a request for ***reconsideration*** of that decision within 15 calendar days after CMS issues the Preliminary APR.

Upon notification to the HHA contact of CMS' reconsideration request outcome, an HHA that disagrees with CMS' decision may request an ***administrator review*** within 7 days of the CMS notification. A final decision will be issued to the HHA, and a Final APR will be available in iQIES 30 days before the applicable payment year for all HHAs regardless of whether they submitted a recalculation, reconsideration, and/or administrator review request.

CMS Manual System	**Department of Health & Human Services (DHHS)**
Pub 100-04 Medicare Claims Processing	**Centers for Medicare & Medicaid Services (CMS)**
Transmittal 12577	**Date: April 11, 2024**
	Change Request 13543

SUBJECT: Additional Enforcement of Required County Codes on Home Health Claims

I. SUMMARY OF CHANGES: The purpose of this Change Request (CR) is to create an edit in Original Medicare systems to ensure required county codes are reported on all home health claims.

EFFECTIVE DATE: October 1, 2024 - Claims processed on or after this date.
**Unless otherwise specified, the effective date is the date of service.*
IMPLEMENTATION DATE: October 7, 2024

Disclaimer for manual changes only: The revision date and transmittal number apply only to red italicized material. Any other material was previously published and remains unchanged. However, if this revision contains a table of contents, you will receive the new/revised information only, and not the entire table of contents.

Manual Instruction

Attachment - Business Requirements

Pub. 100-04	Transmittal: 12577	Date: April 11, 2024	Change Request: 13543

SUBJECT: Additional Enforcement of Required County Codes on Home Health Claims

EFFECTIVE DATE: October 1, 2024 - Claims processed on or after this date.
**Unless otherwise specified, the effective date is the date of service.*
IMPLEMENTATION DATE: October 7, 2024

I. GENERAL INFORMATION

A. Background: The purpose of this Change Request (CR) is to create an edit in Original Medicare systems to ensure required county codes are reported on all home health claims.

Section 50208 Bipartisan Budget Act (BBA) of 2018 required that "in the case of home health services furnished on or after January 1, 2019, the claim contains the code for the county (or equivalent area) in which the home health service was furnished." The National Uniform Billing Committee created value code 85 defined "County Where Service is Rendered" effective January 1, 2019, to enable home health agencies and Medicare to meet this requirement. Original Medicare billing instructions have required reporting value code 85 on all Home Health Prospective Payment System (HH PPS) claims (Type of Bill (TOB) 032x) since January 1, 2019. However, enforcement edits in Medicare systems returned claims to the provider when value code 85 was absent only when a rural add-on payment adjustment applied to the claim.

A recent report (A-05-20-00031) from the Office of Inspector General (OIG) noted that county code reporting on HH PPS claims was incomplete and recommended Medicare edit claims to ensure the county code is present on all claims. OIG noted that the Social Security Act at 1895(c)(3) retains a permanent requirement to report the county code on all home health claims regardless of whether a rural add-on payment adjustment is in effect.

This CR creates an edit in the Fiscal Intermediary Shared System (FISS) to require the presence of value code 85 and a Federal Information Processing System (FIPS) county code on all claims with Type of Bill 032x. Such an edit is consistent with how Medicare has implemented the other statutory payment information requirements for HH PPS claims, such as 1985(c)(2) for 15-minute increment reporting of home health visits.

This CR also makes clarifications to home health billing instructions regarding Notice of Admission timeliness exceptions, charge reporting for telehealth visits and diagnosis code reporting.

B. Policy: This CR contains no new policy. It improves enforcement of an existing statutory requirement.

II. BUSINESS REQUIREMENTS TABLE

"Shall" denotes a mandatory requirement, and "should" denotes an optional requirement.

Number	Requirement	Responsibility								
		A/B MAC			DME MAC	Shared-System Maintainers				Other
		A	B	HHH		FISS	MCS	VMS	CWF	
13543.1	The contractor shall return to the provider home health claims (TOB 032x other than 032A or 032D) if value code 85 and a corresponding FIPS state and county code value are not present.			X		X				
13543.1.1	The contractor shall ensure editing for the presence of value code 85 on all home health claims is performed before the claim is sent to the HH Pricer.					X				

III. PROVIDER EDUCATION TABLE

Number	Requirement	Responsibility				
		A/B MAC			DME MAC	CEDI
		A	B	HHH		
13543.2	Medicare Learning Network® (MLN): CMS will develop and release national provider education content and market it through the MLN Connects® newsletter shortly after we issue the CR. MACs shall link to relevant information on your website and follow IOM Pub. No. 100-09 Chapter 6, Section 50.2.4.1 for distributing the newsletter to providers. When you follow this manual section, you don't need to separately track and report MLN content releases. You may supplement with your local educational content after we release the newsletter.			X		

IV. SUPPORTING INFORMATION

Section A: Recommendations and supporting information associated with listed requirements:

"Should" denotes a recommendation.

X-Ref Requirement Number	Recommendations or other supporting information:
13543.1	The current list of FIPS state and county codes is available at www.census.gov/geographies/reference-files/2022/demo/popest/2022-fips.html.
13543.1.1	Existing editing (return code 31) for valid FIPS code values when a rural CBSA code is present will continue to be performed by the HH Pricer.

Section B: All other recommendations and supporting information: N/A

V. CONTACTS

Post-Implementation Contact(s): Contact your Contracting Officer's Representative (COR).

VI. FUNDING

Section A: For Medicare Administrative Contractors (MACs):
The Medicare Administrative Contractor is hereby advised that this constitutes technical direction as defined in your contract. CMS does not construe this as a change to the MAC Statement of Work. The contractor is not obligated to incur costs in excess of the amounts allotted in your contract unless and until specifically authorized by the Contracting Officer. If the contractor considers anything provided, as described above, to be outside the current scope of work, the contractor shall withhold performance on the part(s) in question and immediately notify the Contracting Officer, in writing or by e-mail, and request formal directions regarding continued performance requirements.

10.1.10.3 - Submission of the Notice of Admission (NOA)

(Rev. 12577; Issued: 04-11-24, Effective:10-01-24; Implementation: 10-07-24)

For each admission to home health, the HHA notifies Medicare systems via submission of a Notice of Admission (NOA).

HHAs shall send the NOA to the A/B MAC (HHH) by mail, electronic data interchange (EDI), or direct data entry (DDE). EDI submissions require additional data not required by the NOA itself, to satisfy transaction standards. This data is described in a companion guide available on the CMS website. HHAs may voluntarily agree to adopt the companion guide and use it to submit EDI NOAs at any time.

The HHA can submit an NOA to Medicare when:

- The HHA has obtained a verbal or written order from the physician that contains the services required for the initial visit, and
- The HHA has conducted an initial visit at the start of care.

Only one NOA is required for any series of HH periods of care beginning with admission to home care and ending with discharge. After a discharge has been reported to Medicare, a new NOA is required before the HHA submits any additional claims.

NOAs must be submitted timely. A timely-filed NOA is submitted to and accepted by the A/B MAC (HHH) within five calendar days after admission date.

In instances where an NOA is not timely-filed, Medicare shall reduce the payment for a period of care, including outlier payment, by the number of days from the home health admission date to the date the NOA is submitted to, and accepted by, the A/B MAC (HHH), divided by 30. No LUPA per-visit payments shall be made for visits that occurred on days that fall within the period of care prior to the submission of the NOA. This reduction shall be a provider liability, and the provider shall not bill the beneficiary for it.

If an HHA fails to file a timely-filed NOA, it may request an exception, which, if approved, waives the consequences of late filing. The four circumstances that may qualify the HHA for an exception are as follows:

1. fires, floods, earthquakes, or other unusual events that inflict extensive damage to the HHA's ability to operate;

2. an event that produces a data filing problem due to a CMS or A/B MAC (HHH) systems issue that is beyond the control of the HHA;

3. a newly Medicare-certified HHA that is notified of that certification after the Medicare certification date, or which is awaiting its user ID from its A/B MAC (HHH); or,

4. other circumstances determined by the A/B MAC (HHH) or CMS to be beyond the control of the HHA.

When an NOA is submitted within the five day timely filing period, but the NOA contains inadvertent errors (such as a beneficiary identifier that has recently changed), the error may not trigger the NOA to be immediately returned to the HHA for correction. In these instances, the HHA must wait until the incorrect information is fully processed by Medicare systems before the NOA is returned for correction. Such delays in Medicare systems could cause the NOA to be late. Delays due to Medicare system constraints are outside the control of the HHA and may qualify for an exception to the timely filing requirement.
Medicare contractors shall grant an exception for the late NOA if the HHA is able to provide documentation showing:

(1) When the original NOA was submitted;
(2) When the NOA was returned for correction or was accepted and available for correction and;
(3) Evidence the HHA resubmitted the returned NOA within two business days of when it was available for correction or cancelled an accepted NOA within two business days and submitted the new NOA within two business days after the date that the cancellation NOA finalized.
The HHA shall provide sufficient information in the Remarks section of its claim to allow the contractor to research the case. If the remarks are not sufficient, Medicare contractors shall request documentation. Documentation should consist of printouts or screen images of any Medicare systems screens that contain the information shown above.
HHAs can reduce the number of errors and exception requests related changes to the beneficiary identifier by performing an eligibility check immediately before admission. This can confirm that the Medicare Beneficiary Identifier (MBI) is active and accurate since the eligibility inquiry system contains an MBI End Date field. If there is a date in that field, the MBI is not valid after that date. The HHA can contact the beneficiary or use the MBI Lookup tool to determine the current MBI to use on the NOA.

Since correct beneficiary identifier information is available to the HHA, only changes that occur shortly before the admission are beyond the HHA's control. A/B MAC (HHH) MACs will not grant exceptions based on MBI changes that were accessible to the HHA more than two weeks prior to the admission date.

An admission period will be opened on CWF with the receipt and processing of the NOA. NOAs are submitted using TOB 032A. After this admission period is recorded, the HHA can submit claims for HH periods of care in the admission.

See section 40.1 for detailed submission instructions and required information for the NOA.

40.2 - HH PPS Claims

(Rev. 12577; Issued: 04-11-24, Effective:10-01-24; Implementation: 10-07-24)

The following data elements are required to submit a claim under home health PPS. For billing of home health claims not under an HH plan of care (not under HH PPS), see §90. Home health services under a plan of care are paid based on a 30-day period of care. HHAs submit an NOA at the beginning of an admission and then submit one claim for each 30-day period of care. Claims submitted before an NOA has been received for the beneficiary will be returned to the provider.

Billing Provider Name, Address, and Telephone Number

Required – The HHA's minimum entry is the agency's name, city, state, and ZIP Code. The post office box number or street name and number may be included. The state may be abbreviated using standard post office abbreviations. Five or nine-digit ZIP Codes are acceptable. A/B MACs (HHH) use this information in connection with the provider identifier to verify provider identity.

Patient Control Number and Medical/Health Record Number

Required - The patient's control number may be shown if the patient is assigned one and the number is needed for association and reference purposes.

The HHA may enter the number assigned to the patient's medical/health record. If this number is entered, the A/B MAC (HHH) must carry it through their system and return it on the remittance record.

Type of Bill

Required - This 4-digit alphanumeric code gives two pieces of information. The first three digits indicate the base type of bill. The fourth digit indicates the sequence of this bill in this particular period of care. The types of bill accepted for HH PPS claims are:

032x - Home Health Services under a Plan of Treatment

4th Digit - Definition

> 7 - Replacement of Prior Claim - HHAs use to correct a previously submitted bill. Apply this code for the corrected or "new" bill. These adjustment claims must be accepted at any point within the timely filing period after the payment of the original claim.
>
> 8 - Void/Cancel of a Prior Claim - HHAs use this code to indicate this bill is an exact duplicate of an incorrect bill previously submitted. A replacement claim must be submitted for the period of care to be paid.
>
> 9 - Final Claim for an HH PPS Period – This code indicates an HH original bill to be processed following the submission of an HH PPS Notice of Admission (TOB 032A)

HHAs must submit HH PPS claims with the 4th digit of "9." These claims may be adjusted with code "7" or cancelled with code "8." A/B MACs (HHH) do not accept late charge bills, submitted with code "5," on HH PPS claims. To add services within the period of a paid HH claim, the HHA must submit an adjustment.

Statement Covers Period

Required - The beginning and ending dates of the period covered by this claim. For continuous care periods, the "through" date must be 29 days after the "From" date for a 30-day period of care

In cases where the beneficiary has been discharged or transferred within the period, HHAs will report the date of discharge in accordance with internal discharge procedures as the "through" date. If the beneficiary has died, the HHA reports the date of death in the "through date."

The HHA may submit claims for payment immediately after the claim "through" date. It is not required to hold claims until the end of the period of care unless the beneficiary continues under care.

Patient Name/Identifier

Required - The HHA enters the patient's last name, first name, and middle initial.

Patient Address

Required - The HHA enters the patient's full mailing address, including street number and name, post office box number or RFD, City, State, and ZIP Code.

Patient Birth Date

Required - The HHA enters the month, day, and year of birth of patient. If the full correct date is not known, leave blank.

Patient Sex

Required - “M” for male or “F” for female must be present. This item is used in conjunction with diagnoses and surgical procedures to identify inconsistencies.

Admission/Start of Care Date

Required - The HHA enters a date of admission matching the From date on the first period of care in an admission. On subsequent periods of care, the HHA continues to submit the admission date reported on the first period of care.

Point of Origin for Admission or Visit

Required - The HHA enters the appropriate NUBC point of origin code.

Patient Discharge Status

Required - The HHA enters the code that most accurately describes the patient’s status as of the “Through” date of the billing period. Any applicable NUBC approved code may be used.

Patient status code 06 should be reported in all cases where the HHA is aware that the period of care will be paid a partial period payment adjustment. These are cases in which the agency is aware that the beneficiary has transferred to another HHA within the 30-day period, or the agency is aware that the beneficiary was discharged with the goals of the original plan of care met and has been readmitted within the period. Situations may occur in which the HHA is unaware at the time of billing the discharge that these circumstances exist. In these situations, Medicare claims processing systems will adjust the discharge claim automatically to reflect the partial period payment adjustment, changing the patient status code on the paid claims record to 06.

In cases where the ownership of an HHA is changing and the CMS certification number (CCN) also changes, the service dates on the claims must fall within the effective dates of the terminating CCN. To ensure this, all periods of care with “from” dates before the termination date of the CCN that would extend beyond the termination date must be resolved by the provider submitting claims with “through” dates on or before the termination date. The provider must code the claim with patient status 06. Billing for the beneficiary is being “transferred” to the new agency ownership. In changes of ownership which do not affect the CCN, billing is unaffected.

In cases where an HHA is aware in advance that a beneficiary will become enrolled in a Medicare Advantage (MA) Organization as of a certain date, the provider should submit a claim for the shortened period prior to the MA Organization enrollment date. The provider must code the claim with patient status 06. Payment responsibility for the beneficiary is being “transferred” from Medicare fee-for-service to MA Organization, since HH PPS applies only to Medicare fee-for-service.

In cases where an HHA provides care in a 30-day period of care and then discharges the beneficiary in the next 30-day period of care, but does not provide any billable visits in the next 30-day period, special handling of the patient status code may be needed. Normally, the patient status code for 30-day period before the discharge would be 30, since the beneficiary has not yet been discharged. However, since there will not be a claim for the period in which the discharge occurred, this would result in the HH admission period remaining open in Medicare systems and prevent billing for any later HH services.

In order to close the HH admission period in these cases, the HHA should report patient status 01 on the claim for the last 30-day period in which visits occurred. This will trigger Medicare systems to close the HH admission period. If the claim has been submitted with patient status 30 before the discharge occurred, the HHA should adjust the claim to change the patient status to 01.

If the cause of the discharge in the next 30-day period is a transfer to another HHA before any visits were provided, the HHA should take care not to report patient status 06 on the claim. This would result in an

incorrect partial period payment adjustment. If the cause of the discharge in the next 30-day period is the beneficiary's death, the HHA should take care not to report patient status 20 on the claim. This would result in an incorrect date of death being recorded in Medicare systems and potentially affect claims from other providers.

Condition Codes

Conditional – The HHA enters any NUBC approved code to describe conditions that apply to the claim.

If the claim is for a patient transferred from another HHA, the HHA enters condition code 47.

If the claim is for a period of care in which there are no skilled HH visits in the billing period, but a policy exception that allows billing for covered services is documented at the HHA, the HHA enters condition code 54.

As a result of disaster conditions (such as hurricane or wildfire) that render submission of OASIS assessments impossible, Medicare may issue a waiver indicating OASIS submission is waived. In this case, HHAs should report condition code DR on their claim to indicate billing under the waiver. Since the OASIS assessment cannot be submitted, the HHA cannot report occurrence code 50 to show the assessment completion date. Claims without occurrence code 50 will be accepted if condition code DR is present.

When a provider is unable to submit a start of care OASIS for an admission period of care, they should submit the HIPPS code weighted closest to 1. For a period of continuing care, when a provider is unable to submit a follow-up OASIS, they should carry forward the last HIPPS code generated from the previous OASIS.

If as a result of disaster conditions, OASIS submission timeframes are relaxed, HHAs should submit claims without condition code DR as soon as the OASIS was submitted. In this case, matching OASIS assessment information and the occurrence code 50 date are required to ensure Medicare pays the claim accurately.

HHAs that are adjusting previously paid claims enter one of the condition codes representing Claim Change Reasons (code values D0 through E0). If adjusting the claim to correct a HIPPS code, HHAs use condition code D2 and enter "Remarks" indicating the reason for the HIPPS code change. HHAs use D9 if multiple changes are necessary.

When submitting an HH PPS claim as a demand bill, HHAs use condition code 20. See §50 for more detailed instructions regarding demand billing.

When submitting an HH PPS claim for a denial notice, HHAs use condition code 21. See §60 for more detailed instructions regarding no-payment billing.

Required - If canceling the claim (TOB 0328), HHAs report the condition codes D5 or D6 and enter "Remarks" indicating the reason for cancellation of the claim.

Occurrence Codes and Dates

Required – The HHA enters occurrence code 50 and the date the OASIS assessment corresponding to the period of care was completed (OASIS item M0090). If occurrence code 50 is not reported on a claim or adjustment, the claim will be returned to the provider for correction, unless condition code DR is present to indicate a waiver of OASIS reporting is in effect.

On claims for initial periods of care (i.e. when the From and Admission dates match), the HHA reports an inpatient admission that ended within 14 days of the "From" date by using one of the following codes.

Code	Short Descriptor	Long Descriptor

61	Hospital Discharge Date	The Through date of a hospital stay that ended within 14 days prior to the From date this HHA claim.
62	Other Institutional Discharge Date	The Through date of skilled nursing facility (SNF), inpatient rehabilitation facility (IRF), long term care hospital (LTCH) or inpatient psychiatric facility (IPF) stay that ended within 14 days prior to this HHA admission.

On claims for continuing periods of care, the HHA reports an inpatient hospital admission that ended within 14 days of the "From" date by using occurrence code 61.

To determine the 14 day period, include the "From" date, then count back using the day before the "From" date as day 1. For example, if the "From" date is January 20th, then January 19th is day 1. Counting back from January 19th, the 14 day period is January 6 through January 19. If an inpatient discharge date falls on any date in that period or on the admission day itself (January 20), it is eligible to be reported on the claim.

If more than one inpatient discharge occurs during the 14 day period, the HHA reports only the most recent applicable discharge date. Claims reporting more than one of any combination of occurrence codes 61 and 62 will be returned to the provider for correction.

Conditional - The HHA enters any other NUBC approved code to describe occurrences that apply to the claim.

Occurrence Span Code and Dates

Conditional - The HHA enters any NUBC approved Occurrence Span code to describe occurrences that apply to the claim. Reporting of occurrence span code 74 is not required to show the dates of an inpatient admission.

Value Codes and Amounts

Required - Home health payments must be based upon the site at which the beneficiary is served, *as described by a CBSA code.* For certain dates of service when required by law, payments may be further adjusted if the site is in a rural CBSA or rural county. *Value codes reporting both the CBSA and the State and County code where the beneficiary received home health services are required on all claims.*

For periods of care in which the beneficiary's site of service changes from one CBSA or county to another within the period, HHAs should submit the CBSA code or State and County code corresponding to the site of service at the end of the period.

Provider-submitted codes:

Code	Title	Definition
61	Location Where Service is Furnished (HHA and Hospice)	HHAs report the Core Based Statistical Area (CBSA) number (or rural state code) of the location where the home health or hospice service is delivered. The HHA reports the number in dollar portion of the form locator right justified to the left of the dollar/cents delimiter, add two zeros to the cents field if no cents.
85	County Where Service is Rendered	Where required by law or regulation, report the Federal Information Processing Standards (FIPS)

Code	Title	Definition
		State and County Code of the place of residence where the home health service is delivered.

Medicare-applied codes: The following codes are added during processing and may be visible in the A/B MAC (HHH)'s online claim history. They are never submitted by the HHA.

Code	Title	Definition
17	Outlier Amount	The amount of any outlier payment returned by the Pricer with this code. A/B MACs (HHH) always place condition code 61 on the claim along with this value code.
62	HH Visits - Part A	The number of visits determined by Medicare to be payable from the Part A trust fund to reflect the shift of payments from the Part A to the Part B trust fund as mandated by §1812 (a)(3) of the Social Security Act.
63	HH Visits - Part B	The number of visits determined by Medicare to be payable from the Part B trust fund to reflect the shift of payments from the Part A to the Part B trust fund as mandated by §1812 (a)(3) of the Social Security Act.
64	HH Reimbursement - Part A	The dollar amounts determined to be associated with the HH visits identified in a value code 62 amount. This Part A payment reflects the shift of payments from the Part A to the Part B trust fund as mandated by §1812 (a)(3) of the Social Security Act.
65	HH Reimbursement - Part B	The dollar amounts determined to be associated with the HH visits identified in a value code 63 amount. This Part B payment reflects the shift of payments from the Part A to the Part B trust fund as mandated by §1812 (a)(3) of the Social Security Act.
QF	Late-filed NOA penalty amount	The dollar amount that the claim payment was reduced due to the NOA being filed more than 5 days after the HH From date.
QV	Value-based purchasing adjustment amount	The dollar amount of the difference between the HHA's value-based purchasing adjusted payment and the payment amount that would have otherwise been made. May be a positive or a negative amount.

If information returned from the CWF indicates all visits on the claim are Part A, the shared system must place value codes 62 and 64 on the claim record, showing the total visits and total PPS payment amount as the values, and send the claim to CWF with RIC code V.

If information returned from CWF indicates all visits on the claim are Part B, the shared system must place value codes 63 and 65 on the claim record, showing the total visits and total PPS payment amount as the values, and send the claim to CWF with RIC code W.

If information returned from CWF indicates certain visits on the claim are payable from both Part A and Part B, the shared system must place value codes 62, 63, 64, and 65 on the claim record. The shared system also must populate the values for code 62 and 63 based on the numbers of visits returned from CWF and prorate

the total PPS reimbursement amount based on the numbers of visits to determine the dollars amounts to be associated with value codes 64 and 65. The shared system will return the claim to CWF with RIC code U.

Revenue Code and Revenue Description

Required

HH PPS claims must report a 0023 revenue code line which contains a HIPPS code. HHAs enter only one 0023 revenue code per claim in all cases.

Claims must also report all services provided to the beneficiary within the period of care. All services must be billed on one claim for the entire period. The A/B MAC (HHH) will return to the provider TOB 0329 when submitted without any visit charges.

Each service must be reported in line item detail. Each service visit (revenue codes 042x, 043x, 044x, 055x, 056x and 057x) must be reported as a separate line. Any of the following revenue codes may be used:

027x	Medical/Surgical Supplies (Also see 062x, an extension of 027x) Required detail: With the exception of revenue code 0274 (prosthetic and orthotic devices), only service units and a charge must be reported with this revenue code. If also reporting revenue code 0623 to separately identify specific wound care supplies, not just supplies for wound care patients, ensure that the charge amounts for revenue code 0623 lines are mutually exclusive from other lines for supply revenue codes reported on the claim. Report only nonroutine supply items in this revenue code or in 0623. Revenue code 0274 requires an HCPCS code, the date of service units and a charge amount. NOTE: Revenue Codes 0275 through 0278 are not used for Medicare billing on HH PPS claims.
042x	Physical Therapy Required detail: One of the physical therapy HCPCS codes defined below in the instructions for the HCPCS code field, the date of service, service units which represent the number of 15 minute increments that comprised the visit, and a charge amount.
043x	Occupational Therapy Required detail: One of the occupational therapy HCPCS codes defined below in the instructions for the HCPCS code field, the date of service, service units which represent the number of 15 minute increments that comprised the visit, and a charge amount.
044x	Speech-Language Pathology Required detail: One of the speech-language pathology HCPCS codes defined below in the instructions for the HCPCS code field, the date of service, service units which represent the number of 15 minute increments that comprised the visit, and a charge amount.

055x	Skilled Nursing Required detail: One of the skilled nursing HCPCS codes defined below in the instructions for the HCPCS code field, the date of service, service units which represent the number of 15 minute increments that comprised the visit, and a charge amount.
056x	Medical Social Services Required detail: The medical social services HCPCS code defined below in the instructions for the HCPCS code field, the date of service, service units which represent the number of 15 minute increments that comprised the visit, and a charge amount.
057x	Home Health Aide (Home Health) Required detail: The home health aide HCPCS code defined below in the instructions for the HCPCS code field, the date of service, service units which represent the number of 15 minute increments that comprised the visit, and a charge amount.

NOTE: A/B MACs (HHH) will return claims to the provider if revenue codes 058x or 059x are submitted with covered charges on Medicare home health claims. They also return to the provider if revenue code 0624, investigational devices is reported on HH claims

Revenue Codes for Optional Billing of DME

Billing of DME provided in the period of care is not required on the HH PPS claim. Home health agencies retain the option to bill these services to their A/B MAC (HHH) processing home health claims or to have the services provided under arrangement with a supplier that bills these services to the DME MAC. Agencies that choose to bill DME services on their HH PPS claims must use the revenue codes below. These services will be paid separately in addition to the HH PPS amount, based on the applicable Medicare fee schedule. For additional instructions for billing DME services see chapter 20 of this manual.

0274	Prosthetic/Orthotic Devices Required detail: The applicable HCPCS code for the item, a date of service, a number of service units, and a charge amount.
029x	Durable Medical Equipment (DME) (Other Than Renal) Required detail: The applicable HCPCS code for the item, a date of service indicating the purchase date or the beginning date of a monthly rental, a number of service units, and a charge amount. Monthly rental items should be reported with a separate line for each month's rental and service units of one. Revenue code 0294 is used to bill drugs/supplies for the effective use of DME.
060x	Oxygen (Home Health) Required detail: The applicable HCPCS code for the item, a date of service, a number of service units, and a charge amount.

Revenue Code for Optional Reporting of Wound Care Supplies

0623	Medical/Surgical Supplies - Extension of 027x Required detail: Only service units and a charge must be reported with this revenue code. If also reporting revenue code 027x to identify nonroutine supplies other than those used for wound care, the HHA must ensure that the charge amounts for the two revenue code lines are mutually exclusive.

HHAs may voluntarily report a separate revenue code line for charges for nonroutine wound care supplies, using revenue code 0623. Notwithstanding the standard abbreviation "surg dressings," HHAs use this code to report charges for ALL nonroutine wound care supplies, including but not limited to surgical dressings.

Pub. 100-02, Medicare Benefit Policy Manual, chapter 7, defines routine vs. nonroutine supplies. HHAs use that definition to determine whether any wound care supply item should be reported in this line because it is nonroutine.

HHAs can assist Medicare's future refinement of payment rates if they consistently and accurately report their charges for nonroutine wound care supplies under revenue center code 0623. HHAs should ensure that charges reported under revenue code 027x for nonroutine supplies are also complete and accurate.

HCPCS/Accommodation Rates/HIPPS Rate Codes

Required - On the 0023 revenue code line, the HHA may submit the HIPPS code they expect will be used for payment if they choose to run grouping software at their site for internal accounting purposes. If not, they may submit any valid HIPPS code in order to meet this requirement.

HHAs enter only one HIPPS code per claim in all cases. Claims submitted with additional HIPPS codes will be returned to the provider.

Medicare will determine the appropriate HIPPS code for payment based on claims and OASIS data and will replace the provider-submitted HIPPS code as necessary. If the HIPPS code further changes based on medical review or other processes, the code used for payment is recorded in the APC-HIPPS field of the electronic claim record.

For revenue code lines other than 0023, the HHA reports HCPCS codes as appropriate to that revenue code. The G- and Q- HCPCS codes listed below are for use by HHAs on Type of Bill 032x only. Claims with these HCPCS codes will be returned to the provider if submitted with Type of Bill 034x.

To report HH visits, the HHA reports one of the following HCPCS codes to represent a visit by each HH care discipline:

<u>Physical Therapy (revenue code 042x)</u>

G0151 Services performed by a qualified physical therapist in the home health or hospice setting, each 15 minutes.

G0157 Services performed by a qualified physical therapist assistant in the home health or hospice setting, each 15 minutes.

G0159 Services performed by a qualified physical therapist, in the home health setting, in the establishment or delivery of a safe and effective physical therapy maintenance program, each 15 minutes.

G2168 Services performed by a physical therapist assistant in the home health setting in the delivery of a safe and effective physical therapy maintenance program, each 15 minutes.

<u>Occupational Therapy (revenue code 043x)</u>

G0152 Services performed by a qualified occupational therapist in the home health or hospice setting, each 15 minutes.

G0158 Services performed by a qualified occupational therapist assistant in the home health or hospice setting, each 15 minutes.

G0160 Services performed by a qualified occupational therapist, in the home health setting, in the establishment or delivery of a safe and effective occupational therapy maintenance program, each 15 minutes.

G2169 Services performed by an occupational therapist assistant in the home health setting in the delivery of a safe and effective occupational therapy maintenance program, each 15 minutes.

Speech-Language Pathology (revenue code 044x)

G0153 Services performed by a qualified speech-language pathologist in the home health or hospice setting, each 15 minutes.

G0161 Services performed by a qualified speech-language pathologist, in the home health setting, in the establishment or delivery of a safe and effective speech-language pathology maintenance program, each 15 minutes.

Note that modifiers indicating services delivered under a therapy plan of care (modifiers GN, GO or GP) are not required on HH PPS claims.

Skilled Nursing (revenue code 055x)

General skilled nursing:

G0299 Direct skilled nursing services of a registered nurse (RN) in the home health or hospice setting

G0300 Direct skilled nursing of a licensed practical nurse (LPN) in the home health or hospice setting.

Care plan oversight:

G0162 Skilled services by a licensed nurse (RN only) for management and evaluation of the plan of care, each 15 minutes (the patient's underlying condition or complication requires an RN to ensure that essential non-skilled care achieves its purpose in the home health or hospice setting).

G0493 Skilled services of a registered nurse (RN) for the observation and assessment of the patient's condition, each 15 minutes (the change in the patient's condition requires skilled nursing personnel to identify and evaluate the patient's need for possible modification of treatment in the home health or hospice setting).

G0494 Skilled services of a licensed practical nurse (LPN) for the observation and assessment of the patient's condition, each 15 minutes (the change in the patient's condition requires skilled nursing personnel to identify and evaluate the patient's need for possible modification of treatment in the home health or hospice setting).

Training:

G0495 Skilled services of a registered nurse (RN), in the training and/or education of a patient or family member, in the home health or hospice setting, each 15 minutes.

G0496 Skilled services of a licensed practical nurse (LPN), in the training and/or education of a patient or family member, in the home health or hospice setting, each 15 minutes.

Medical Social Services (revenue code 056x)

G0155 Services of a clinical social worker under a home health plan of care, each 15 minutes.

Home Health Aide (revenue code 057x)

G0156 Services of a home health aide under a home health plan of care, each 15 minutes.

Regarding all skilled nursing and skilled therapy visits

In the course of a single visit, a nurse or qualified therapist may provide more than one of the nursing or therapy services reflected in the codes above. HHAs must not report more than one G-code for each visit regardless of the variety of services provided during the visit. In cases where more than one nursing or therapy service is provided in a visit, the HHA must report the G-code which reflects the service for which the clinician spent most of his/her time.

For instance, if direct skilled nursing services are provided, and the nurse also provides training/education of a patient or family member during that same visit, Medicare would expect the HHA to report the G-code which reflects the service for which most of the time was spent during that visit. Similarly, if a qualified therapist is performing a therapy service and also establishes a maintenance program during the same visit, the HHA should report the G-code that reflects the service for which most of the time was spent during that visit. In all cases, however, the number of 15-minute increments reported for the visit should reflect the total time of the visit.

Telehealth Service Reporting

Beginning on or after January 1, 2023, HHAs may voluntarily report the use of telecommunications technology in the provision of home health services on claims. This information is required on home health claims beginning on July 1, 2023. HHAs shall submit the use of telecommunications technology when furnishing home health services, on the home health claim via three G-codes.

G0320: home health services furnished using synchronous telemedicine rendered via a real-time two-way audio and video telecommunications system

G0321: home health services furnished using synchronous telemedicine rendered via telephone or other real-time interactive audio-only telecommunications system

G0322: the collection of physiologic data digitally stored and/or transmitted by the patient to the home health agency (i.e., remote patient monitoring).

HHAs shall submit services furnished via telecommunications technology in line item detail *and with covered charges*. Each service must be reported as a separately dated line under the appropriate revenue code for each discipline furnishing the service. Two occurrences of G0320 or G0321 on the same day for the same revenue code shall be reported as separate line items *with the same date of service and with service units reporting 1. Services furnished via telecommunications technology are not considered by Medicare systems when enforcing requirements for matching visit dates on home health claims.*

The use of remote patient monitoring that spans a number of days shall be reported as a single G0322 line item reporting the beginning date of monitoring and the number of days of monitoring in the service units field. If more than one discipline is using the remote monitoring information during the billing period, the HHA may choose which revenue code to report on the remote monitoring line item.

Claims with no billable visits are not submitted to Mediare, including claims for billing periods where only telehealth services are provided.

Site of Service Reporting

HHAs must report where home health services were provided. The following codes are used for this reporting:

Q5001: Hospice or home health care provided in patient's home/residence

Q5002: Hospice or home health care provided in assisted living facility

Q5009: Hospice or home health care provided in place not otherwise specified

The location where services were provided must always be reported along with the first visit reported on the claim. In addition to reporting a visit line using the G codes as described above, HHAs must report an additional line item with the same revenue code and date of service, reporting one of the three Q codes (Q5001, Q5002, and Q5009), one unit and a nominal covered charge (e.g., a penny). If the location where services were provided changes during the period of care, the new location should be reported with an additional line corresponding to the first visit provided in the new location.

Disposable Negative Pressure Wound Therapy Services

Effective for claims with statement covers Through dates on or after January 1, 2024, Medicare makes a separate payment amount for a disposable negative pressure wound therapy (NPWT) device for a patient under a home health plan of care. Payment is equal to the supply price used to determine the relative value for the service under the Medicare Physician Fee Schedule (as of January 1, 2022) for the applicable disposable device and updated by the consumer price index for all urban consumers minus the productivity adjustment for each future year.

Disposable NPWT services are billed using the following HCPCS code:

- A9272 - wound suction, disposable, includes dressing, all accessories and components, any type, each.

The HHA reports the HCPCS code with revenue code 027x (other than 0274), units representing the number of disposable devices provided during the billing period and a charge amount. Since Medicare payment no longer includes the services of the practitioner applying the device, revenue codes 042x, 043x or 0559 are not used for dNPWT HCPCS codes on Type of Bill 032x.

Modifiers

If the NOA that corresponds to a claim was filed late and the HHA is requesting an exception to the late-filing penalty (see section 10.1.10.3), append modifier KX to the HIPPS code reported on the revenue code 0023 line.

Service Date

Required - For initial periods of care, the HHA reports on the 0023 revenue code line the date of the first covered visit provided during the period. Claims and provider-submitted adjustments where the Admission Date and From Date match but the 0023 revenue code line date does not also match are returned to the provider. Contractor-submitted adjustments are excluded from this edit.

For subsequent periods, the HHA reports on the 0023 revenue code the date of the first visit provided during the period, regardless of whether the visit was covered or non-covered.

For other line items detailing all services within the period, the HHA reports service dates as appropriate to that revenue code. For service visits that begin in 1 calendar day and span into the next calendar day, report one visit using the date the visit ended as the service date.

When the claim Admission Date matches the Statement Covers "From" Date, Medicare systems ensure that the Service Date on the 0023 revenue code line also matches these dates.

Service Units

Required - Transaction standards require the reporting of a number greater than zero as the units on the 0023 revenue code line. However, Medicare systems will disregard the submitted units in processing the claim. For line items detailing all services within the period, the HHA reports units of service as appropriate to that revenue code. Coding detail for each revenue code under HH PPS is defined above under Revenue Codes.

For the revenue codes that represent home health visits (042x, 043x, 044x, 055x, 056x, and 057x), the HHA reports as service units a number of 15 minute increments that comprise the time spent treating the beneficiary. Time spent completing the OASIS assessment in the home as part of an otherwise covered and billable visit and time spent updating medical records in the home as part of such a visit may also be reported.

Visits of any length are to be reported, rounding the time to the nearest 15-minute increment. If any visits report over 96 units (over 24 hours) on a single line item, Medicare systems return the claim returned to the provider.

Covered and noncovered increments of the same visit must be reported on separate lines. This is to ensure that only covered increments are included in the per-unit based calculation of outlier payments.

Telehealth services with HCPCS codes G0320 or G0321 are reported with units of 1.

Total Charges

Required - The HHA must report zero charges on the 0023 revenue code line (the field must contain zero).

For line items detailing all services within the period of care, the HHA reports charges as appropriate to that revenue code. Coding detail for each revenue code under HH PPS is defined above under Revenue Codes. Charges may be reported in dollars and cents (i.e., charges are not required to be rounded to dollars and zero cents). Medicare claims processing systems will not make any payments based upon submitted charge amounts.

Non-covered Charges

Required – The HHA reports the total non-covered charges pertaining to the related revenue code here. Examples of non-covered charges on HH PPS claims may include:

- Visits provided exclusively to perform OASIS assessments
- Visits provided exclusively for supervisory or administrative purposes
- Therapy visits provided prior to the required re-assessments

Payer Name

Required - See chapter 25.

Release of Information Certification Indicator

Required - See chapter 25.

National Provider Identifier – Billing Provider

Required - The HHA enters their provider identifier.

Insured’s Name

Required only if MSP involved. See Pub. 100-05, Medicare Secondary Payer Manual.

Patient’s Relationship To Insured

Required only if MSP involved. See Pub. 100-05, Medicare Secondary Payer Manual.

Insured’s Unique Identifier

Required only if MSP involved. See Pub. 100-05, Medicare Secondary Payer Manual.

Insured’s Group Name

Required only if MSP involved. See Pub. 100-05, Medicare Secondary Payer Manual.

Insured’s Group Number

Required only if MSP involved. See Pub. 100-05, Medicare Secondary Payer Manual.

Treatment Authorization Code

Conditional - Treatment authorization codes are not required on all claims. The HHA submits a code in this field only if the period is subject to Pre-Claim Review. In that case, the required tracking number is submitted in the first position of the field in all submission formats.

Document Control Number (DCN)

Required - If submitting an adjustment (TOB 0327) to a previously paid HH PPS claim, the HHA enters the control number assigned to the original HH PPS claim here.

Employer Name

Required only if MSP involved. See Pub. 100-05, Medicare Secondary Payer Manual.

Principal Diagnosis Code

Required - The HHA enters the ICD code for the principal diagnosis. The code must be reported according to Official ICD Guidelines for Coding and Reporting, as required by the HIPAA. The code must be the full diagnosis code, including all five digits for ICD-9-CM or all seven digits for ICD-10 CM where applicable. Where the proper code has fewer than the maximum number of digits, the HHA does not fill it with zeros.

Medicare systems may return claims to the provider when the principal diagnosis code is not sufficient to determine the HHRG assignment under the PDGM.

Other Diagnosis Codes

Required - The HHA enters the full diagnosis codes for additional conditions if they coexisted at the time of the establishment of the plan of care. These codes may not duplicate the principal diagnosis as an additional or secondary diagnosis.

In listing the diagnoses, the HHA places them in order to best reflect the seriousness of the patient's condition and to justify the disciplines and services provided in accordance with the Official ICD Guidelines for Coding and Reporting. The sequence of codes should follow ICD guidelines for reporting manifestation codes. Medicare does not have any additional requirements regarding the reporting or sequence of the codes beyond those contained in ICD guidelines.

The following instructions apply to both Principal and Other Diagnosis Code reporting.

Diagnosis coding and claim dates:

Diagnosis codes that reflect the patient's condition as of the start of a period of care *(the claim From date)* are reflected on the claim for the current period of care. Diagnosis codes that reflect a change in the patient's condition during a period of care should be reflected on the claim for the next period.

ICD diagnosis codes are updated each year on October 1 and April 1. While the claim describes the patient's condition as of the From date, if the claim Through date spans across an ICD update, the codes that are valid after the update are reported on the claim.

For example, the HHA submits a claim spanning September 15, 2023 to October 14, 2023, for a patient that has Parkinson's Disease as a secondary diagnosis, The code in effect on September 15, 2023 is G20 (Parkinson's Disease) but effective October 1, the code that applies to the patient's condition changed to G20.C (Parkinsonism, unspecified). The G20.C code is reported on the claim.

The version of the HH Grouper logic applied to each claim is determined is based on the claim From date. In the case of a claim with a From date of September 15, 2023 and Through date of October 14, 2023, the Grouper applies the logic and codes in effect for dates of service before September 30, 2023 and not the logic and codes effective October 1. When a diagnosis code changes as describe above, the HH Grouper maps the new code back to its predecessor code to correctly determine the case-mix scoring and the HIPPS code for the claim (e.g. maps G20.C back to G20 and uses the G20 code to assign the HIPPS code).

Claim and assessment diagnosis codes:

The diagnosis codes used for payment grouping are determined from claim coding rather than the OASIS assessment. As a result, the claim and OASIS diagnosis codes are not expected to match in all cases.

Typically, the codes will match between the first claim in an admission and the start of care (Reason for Assessment –RFA 01) assessment and claims corresponding to recertification (RFA 04) assessments. Second 30-day claims in any 60-day period will not necessarily match the OASIS assessment. When diagnosis codes change between one 30-day claim and the next, there is no absolute requirement for the HHA to complete an 'other follow-up' (RFA 05) assessment to ensure that diagnosis coding on the claim matches to the assessment. However, the HHA would be required to complete an 'other follow-up' (RFA 05) assessment when such a change would be considered a major decline or improvement in the patient's health status.

Attending Provider Name and Identifiers

Required - The HHA enters the name and national provider identifier (NPI) of the attending physician who signed the plan of care.

Other Provider (Individual) Names and Identifiers

Required - The HHA enters the name and NPI of the physician who certified/re-certified the patient's eligibility for home health services.

NOTE: Both the attending physician and other provider fields should be completed unless the patient's designated attending physician is the same as the physician who certified/re-certified the patient's eligibility. When the attending physician is also the certifying/re-certifying physician, only the attending physician is required to be reported.

Remarks

Conditional – If the NOA that corresponds to a claim was filed late and the HHA is requesting an exception to the late-filing penalty (see section 10.1.10.3), enter information supporting the exception category that applied to the NOA.

The HHA shall provide sufficient information in the Remarks section of its claim to allow the contractor to research the case. If the remarks are not sufficient, Medicare contractors shall request documentation. Documentation should consist of printouts or screen images of any Medicare systems screens that contain the information shown above.

Medicare contractors shall not grant exceptions if:
• the HHA can correct the NOA without waiting for Medicare systems actions
• the HHA submits a partial NOA to fulfill the timely-filing requirement, or
• HHA with multiple provider identifiers submit the identifier of a location that did not actually provide the service

In the great majority of cases, the five day timely filing period allows enough time to submit NOAs on a day when Medicare systems are available (i.e. the period allows for ("dark days"). Additionally, the receipt date is typically applied to the NOA immediately upon submission to Medicare systems, so subsequent dark days would not affect the determination of timeliness. However, if the HHA can provide documentation showing an NOA is submitted on the day before a dark day period and the NOA does not receive a receipt date until the day following the dark days, the contractor shall grant an exception to the timely filing requirement. CMS expects these cases to be very rare.

Remarks are otherwise required only in cases where the claim is cancelled or adjusted. adjusted.

CMS Manual System	**Department of Health & Human Services (DHHS)**
Pub 100-04 Medicare Claims Processing	**Centers for Medicare & Medicaid Services (CMS)**
Transmittal 12888	**Date: October 10, 2024**
	Change Request 13812

SUBJECT: Allowing Home Health (HH) Telehealth Services During an Inpatient Stay

I. SUMMARY OF CHANGES: The purpose of this Change Request (CR) is to revise Original Medicare claims editing to allow non-paid telehealth visits to be reported while a beneficiary is hospitalized.

EFFECTIVE DATE: April 1, 2025 - For claims processed on or after this date.
**Unless otherwise specified, the effective date is the date of service.*
IMPLEMENTATION DATE: April 7, 2025

Disclaimer for manual changes only: The revision date and transmittal number apply only to red italicized material. Any other material was previously published and remains unchanged. However, if this revision contains a table of contents, you will receive the new/revised information only, and not the entire table of contents.

II. CHANGES IN MANUAL INSTRUCTIONS: (N/A if manual is not updated)
R=REVISED, N=NEW, D=DELETED-*Only One Per Row.*

R/N/D	CHAPTER / SECTION / SUBSECTION / TITLE
R	10/30.9/Coordination of HH PPS Claims Episodes With Inpatient Claim Types

III. FUNDING:

For Medicare Administrative Contractors (MACs):
The Medicare Administrative Contractor is hereby advised that this constitutes technical direction as defined in your contract. CMS does not construe this as a change to the MAC Statement of Work. The contractor is not obligated to incur costs in excess of the amounts allotted in your contract unless and until specifically authorized by the Contracting Officer. If the contractor considers anything provided, as described above, to be outside the current scope of work, the contractor shall withhold performance on the part(s) in question and immediately notify the Contracting Officer, in writing or by e-mail, and request formal directions regarding continued performance requirements.

Business Requirements
Manual Instruction

Attachment - Business Requirements

Pub. 100-04	Transmittal: 12888	Date: October 10, 2024	Change Request: 13812

SUBJECT: Allowing Home Health (HH) Telehealth Services During an Inpatient Stay

EFFECTIVE DATE: April 1, 2025 - For claims processed on or after this date.
**Unless otherwise specified, the effective date is the date of service.*
IMPLEMENTATION DATE: April 7, 2025

I. SUMMARY OF CHANGES: The purpose of this Change Request (CR) is to revise Original Medicare claims editing to allow non-paid telehealth visits to be reported while a beneficiary is hospitalized.

II. GENERAL INFORMATION

A. Background: Medicare beneficiaries cannot be inpatients in a hospital or skilled nursing facility and receive home health care simultaneously. If an HH Prospective Payment System (PPS) claim is received, and Medicare systems find dates of service on the HH claim that falls within the dates of an inpatient, skilled nursing facility or swing bed claim (not including the dates of admission and discharge and the dates of any leave of absence), the Common Working File (CWF) will reject the HH claim with edit 7080. The Home Health Agency (HHA) may submit a new claim removing any dates of service within the inpatient stay that were billed in error.

This date overlap editing should not apply to HH telehealth reporting, Healthcare Common Procedure Coding System (HCPCS) codes G0320, G0321 or G0322. These services are non-payable reporting items so they do not create any duplicate payment. The codes may represent the HHA remaining in contact with caregivers while the beneficiary is an inpatient. CMS has learned that these codes are currently rejecting with CWF edit 7080 in error, requiring HHAs to remove the reporting lines in order to process the claim. The requirement below corrects this error and allows HCPCS G0320, G0321 or G0322 dates on an HH PPS claim to overlap inpatient stays.

B. Policy: This CR does not contain any new policy. It corrects the implementation of existing HH telehealth reporting policy.

III. BUSINESS REQUIREMENTS TABLE

"Shall" denotes a mandatory requirement, and "should" denotes an optional requirement.

Number	Requirement	Responsibility								
		A/B MAC			DME MAC	Shared-System Maintainers				Other
		A	B	HHH		FISS	MCS	VMS	CWF	
13812.1	The contractor shall allow an HH claim (Type of Bill 032x other than 032A or D) with line item dates of service falling within an inpatient stay if HCPCS G0320, G0321 or G0322 are present on the line.								X	

IV. PROVIDER EDUCATION

Medicare Learning Network® (MLN): CMS will develop and release national provider education content and market it through the MLN Connects® newsletter shortly after we issue the CR. MACs shall link to relevant information on your website and follow IOM Pub. No. 100-09 Chapter 6, Section 50.2.4.1 for distributing the newsletter to providers. When you follow this manual section, you don't need to separately track and report MLN content releases. You may supplement with your local educational content after we release the newsletter.

Impacted Contractors: A/B MAC Part HHH

V. SUPPORTING INFORMATION

Section A: Recommendations and supporting information associated with listed requirements:

"Should" denotes a recommendation.

X-Ref Requirement Number	Recommendations or other supporting information:
.1	This requirement creates a bypass condition for CWF edit 7080. All other conditions for handling dates in the edit are unchanged.

Section B: All other recommendations and supporting information:N/A

VI. CONTACTS

Post-Implementation Contact(s): Contact your Contracting Officer's Representative (COR).

VII. FUNDING

Section A: For Medicare Administrative Contractors (MACs):
The Medicare Administrative Contractor is hereby advised that this constitutes technical direction as defined in your contract. CMS does not construe this as a change to the MAC Statement of Work. The contractor is not

obligated to incur costs in excess of the amounts allotted in your contract unless and until specifically authorized by the Contracting Officer. If the contractor considers anything provided, as described above, to be outside the current scope of work, the contractor shall withhold performance on the part(s) in question and immediately notify the Contracting Officer, in writing or by e-mail, and request formal directions regarding continued performance requirements.

ATTACHMENTS: 0

30.9 - Coordination of HH PPS Claims Episodes With Inpatient Claim Types

(Rev. 12888; Issued:10-10-24; Effective:04-01-25; Implementation: 04-07-25)

Beneficiaries cannot be institutionalized and receive home health care simultaneously. Therefore claims for institutional inpatient services (inpatient hospital, skilled nursing facility (SNF) and swing bed claims), have priority in Medicare claims editing over claims for home health services.

If an HH PPS claim is received, and *Medicare systems find* dates of service on the HH claim that falls within the dates of an inpatient, SNF or swing bed claim (not including the dates of admission and discharge and the dates of any leave of absence), Medicare systems will reject the HH claim. The HHA may submit a new claim removing any dates of service within the inpatient stay that were billed in error.

Medicare systems allow an exception for HH telehealth reporting, HCPCS codes G0320, G0321 or G0322. An HH PPS claim may be processed if dates of service with these codes fall within an inpatient stay. This is because the services are non-payable reporting items, so they do not create any duplicate payment. The codes may represent the HHA remaining in contact with caregivers while the beneficiary is an inpatient.

If the HH PPS claim is received first and the inpatient hospital, SNF or swing bed claim comes in later, but contains dates of service duplicating dates of service on the HH PPS claim, Medicare systems will adjust the previously paid HH PPS claim to non-cover the duplicated dates of service, *excluding telehealth services*.

SUPPORT RATE INCREASES FOR NURSES

BACKGROUND

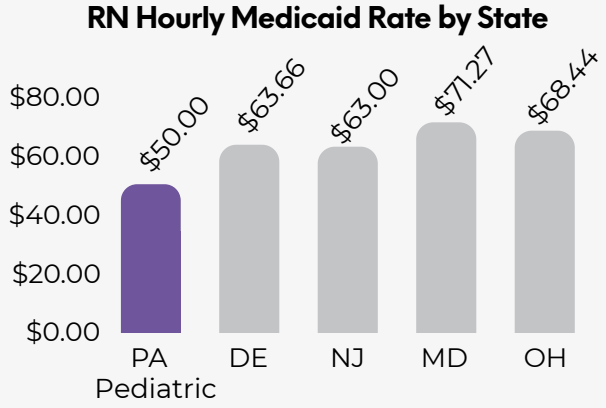
Private Duty Nursing services provide in-home long-term care for medically fragile children and adults living with chronic illness, injury or disability. Care is provided in shifts by an LPN, RN or Home Health Aide.

Pennsylvania's private duty nursing program supports more than 10,000 medically-complex and vulnerable children and more than 3,000 adults and seniors each year.

In the 2021 Mercer report titled "U.S. Health Labor Market," **Pennsylvania was ranked as having the most severe shortage of nurses in the nation.** Projections indicate that this situation will continue to deteriorate each year unless steps are taken to bolster the workforce.

OUR POSITION

- The Nursing Licensure Compact exacerbated PA's nursing crisis by allowing license reciprocity among states. PA nurses can now cross the border to states with higher rates.
- Pennsylvania's RN reimbursement rate is 46% below the weighted average of neighboring states.



- Lack of standardized rates in PA results in nurses prioritizing patient populations with higher reimbursement rates.

HOURLY NURSING REIMBURSEMENT RATES BY PROGRAM

	OMAP	OLTL	ODP
Population	*Pediatric*	*Aging and Physical Disability*	*Intellectual and Developmental Disability*
RN	$ 50.00	$ 66.20	$ 76.28
LPN	$ 50.00	$ 44.08	$ 55.08

- In the last 30 years, rate increases for pediatric care (OMAP) occurred only three times. For adults (OLTL), only once.
- Reimbursement rates have not kept pace with inflation and increased cost of care.
- Failing to adequately support in-home care WILL result in more costly Medicaid funded institutional care!

CALL TO ACTION

- **Support standardized reimbursement rates of $55.00/hour for nursing** in the Office of Medical Assistance Providers (OMAP) and Office of Long-Term Living (OLTL) programs.

  Approximate impact: $32.4M annually

- Support an increase in home health aide reimbursement rates in the same program from $27.36 to $30.10/hour.

  Approximate impact: $5.7M annually

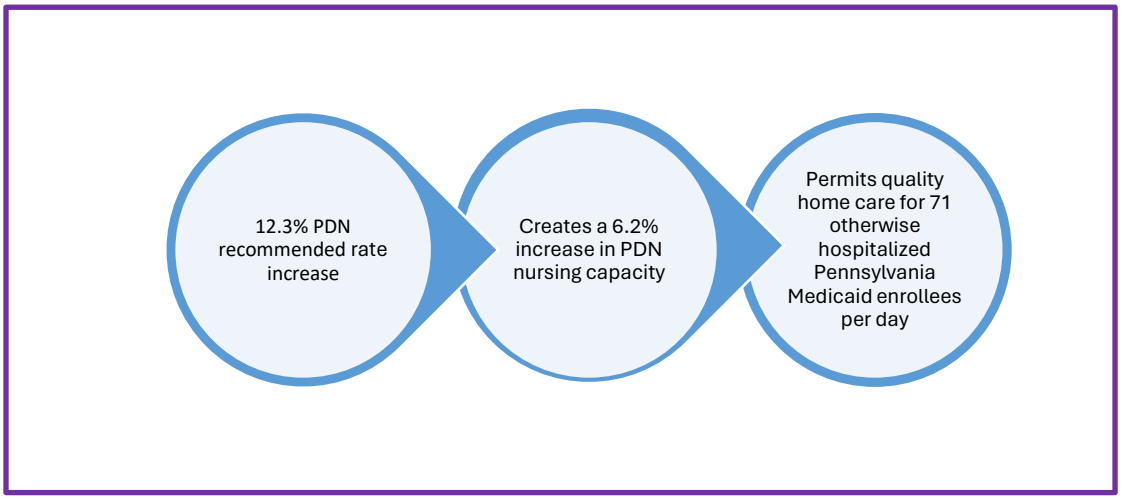
Costs and Benefits of Enhancing Shift Nursing, or Private Duty Nursing, Payment Rates in Pennsylvania's Medicaid Program

A recent study by the Menges Group, an expert in Medicaid health policy and care coordination analysis, considered a portion of Pennsylvania's Medicaid population, children and adults with complex medical conditions who require specialized home health nursing from a Shift Nurse or Private Duty Nurse (PDN), to determine potential cost savings to the state through expanded reimbursement rates.

These individuals, some of the most acute and medically fragile patients in the state, are currently being forced to spend time in costly hospital beds rather than in a more comfortable and affordable setting at home with their families.

Due to lagging Medicaid reimbursement rates, there are not enough nurses to care for the medically fragile children and adults who are able to leave the hospital. Lack of in-home nursing drives up costs through:

- Discharge delays
- Longer overall hospital stays while waiting for adequate in-home nursing coverage
- Increased chances of readmission within 90 days
- Overall increased chances of hospital admissions for individuals who are being cared for at home but not receiving enough treatment due to lack of adequate nursing coverage



The study found:

- Pennsylvania's Medicaid payment rates for shift nursing services are lower than typical Medicaid rates nationally, ranking behind New Jersey, Maryland, Delaware, and Ohio for LPN services.
- The state is (12.5%) below the average across the four peer states (using each state's Medicaid enrollment to derive the weighted average).
- 30 states have higher average Medicaid FFS payments for PDN services than Pennsylvania (when combining/averaging each state's RN and LPN rates when separate rates are used).
- Enhanced rates will add substantial capacity to deliver shift nursing services.
- 97% of the added costs to the state from increased reimbursement rates are offset with decreased inpatient hospital days.
- The remaining net annual cost of the rate increase after these offsets is estimated to be only $600,000 in state funds.
- Considerable potential cost savings exists for the rate increases to be budget neutral or even yield cost savings. If the PDN nursing capacity increases by seven percent (instead of the estimated 6.16%), for example, a net overall annual savings of $3.9 million will occur, including a $1.7 million savings in state funds.

Current and Recommended Hourly Medicaid PDN Rates

Program	Office of Long Term Living (OLTL - Adult)	Office of Medical Assistance Program (OMAP – Pediatric)
RN Rate	$66.20	$50.00
LPN Rate	$44.08	$50.00
Recommended Rates	$59.05 (blended)**	$59.05 (blended)**
Recommended Dollar Increase	*$3.91*	*$9.05*

Based on state utilization data, managed care data, and hospital costs, the study recommends changing payment methodology for Pennsylvania adult shift nursing and creating a blended rate for both RN and LPN services at $59.05. On a percentage basis, these recommended rates are 12.3 percent above the current weighted average between all of Pennsylvania's shift nursing programs.

Nearby eastern and Mid-Atlantic states are investing in PDN services to reduce Medicaid costs, increase patient access, and provide for a higher quality of life for medically fragile children and adults. Maryland raised PDN rates by 12 percent between 2023 and 2024, Delaware by 7.5 percent in 2022, and New Jersey by 2 dollars in 2023.

Medicaid rate increases for PDN nurses will allow providers to receive fair market wages and incentivize more individuals into the profession, thus providing more private duty nurses to care for Pennsylvania's medically fragile children and adults.

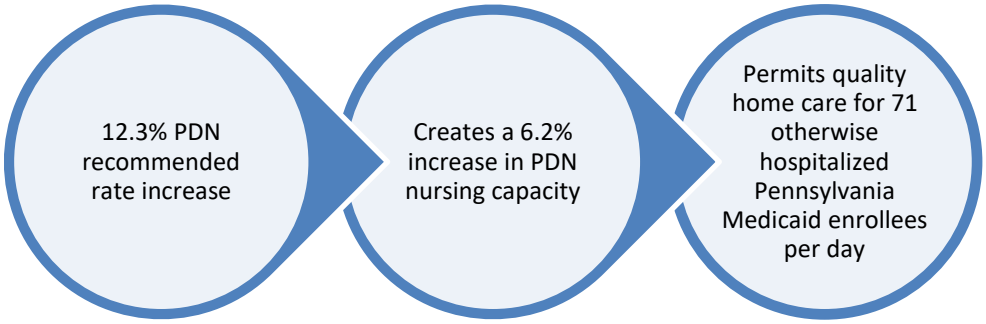
I. Executive Summary

Private Duty Nursing (PDN), often referred to as "shift nursing" in Pennsylvania, is essential in enabling many high-need Medicaid beneficiaries to be supported at home rather than via long-term hospitalization. For patients who are at home, PDN is also valuable in delivering expert care that averts clinical crises requiring hospitalization, and in freeing up family members to work and experience a better quality of life.

However, average Medicaid payment rates are below the amounts needed to attract and retain nurses into the PDN sector, and Pennsylvania's Medicaid payment rates for PDN services are *even lower* than typical Medicaid rates nationally and in the northeastern US. Many different types of organizations compete for nurses, and Pennsylvania's Medicaid rates put PDN providers at a significant disadvantage.

This report derives the payment rate increase needed to achieve a significant gain in PDN service capacity in Pennsylvania, and the net costs of taking these actions. The key components of our estimates are summarized in Exhibit ES-1 below.

Exhibit ES-1. An Essentially Cost-Neutral Path to Better Outcomes



The report also demonstrates the quality of life value of transitioning persons home when it is clinically appropriate to do so. The quote below provides an example.

> The mother of an infant/child, who came home after more than two years in the hospital, expressed that: "We spent over two years surviving and now we get to live."

Pennsylvania's current Medicaid fee-for-service (FFS) rates for PDN services, and the structure currently used for these rates, are shown in the top rows of Exhibit ES-2. The bottom rows of Exhibit ES-2 convey the report's recommended blended rate.

Exhibit ES-2. Current and Recommended Hourly Medicaid PDN Rates

Program	Office of Long Term Living (OLTL - Adult)	Office of Medical Assistance Program (OMAP – Pediatric)
RN Rate	$66.20	$50.00
LPN Rate	$44.08	$50.00
Recommended Rates	$59.05 (blended)**	$59.05 (blended)**
Recommended Dollar Increase	*$3.91*	*$9.05*

An average current hourly rate of $52.57 was derived through the following steps:

- Calculating an average adult rate of $55.14 (across the DHS Office of Long Term Living rates of $66.20 for RN services and $44.08 for LPN services); and
- Then averaging the adult figure with the DHS Office of Medical Assistance Programs pediatric rate of $50.00 (which is used for both RN and LPN services).

The above recommended blended payment rate of $59.05 simplifies the structure by averaging together current payment rates that are in some cases sending mixed signals. For example, some current rates are higher for adults than children whereas others are higher for children than adults. Also, the RN and LPN services being rendered are often identical to one another but are often generating differential payment levels.

The recommended increases were derived by:

a) tabulating an average regional Medicaid fee-for-service (FFS) payment rate for PDN services across four of Pennsylvania's neighboring peer states;

b) adjusting this average for Pennsylvania's cost of living; and

c) adjusting the rate based on an average percentage differential in Medicaid managed care organization (MCO) payments for PDN services relative to Medicaid FFS rates based on a sample of Pennsylvania's PDN providers.

The MCO payment rates represent a market-driven benchmark for balancing cost containment, access to PDN services, and quality objectives.

Based on reported experience of PDN providers in other states where rate increases were implemented, we estimate that the enhanced rates will create a 6.16% increase in the supply of PDN labor available to provide care to Pennsylvania's Medicaid population.

The combination of the increased rates and the increased labor are projected to create a 19% increase in Pennsylvania's Medicaid PDN expenditures, increasing annual Medicaid PDN costs by approximately $42 million in total Medicaid funds (federal and state share combined). However, we estimate that the above costs of the PDN rate increase will be almost entirely (97%) offset by the combination of increased PDN capacity, more home-based care, and fewer hospital days.

The inpatient savings are so large at the patient level (approximately $580,000 per person annually), that they essentially "pay for" elevating the PDN rates for the entire body of PDN care that is currently occurring at the FFS rate level. The net annual Medicaid costs are estimated to be $1.4 million for the Medicaid program overall, and $0.6 million in state funds.

Considerable cost savings potential exists for the rate increases to be budget neutral or even yield cost savings. A slight favorable variation in any of the derivation assumptions in this report will yield a net savings. For example, if the PDN nursing capacity increases by 7.0% (instead of the estimated 6.16%), a net overall annual savings of $3.9 million will occur -- including a $1.7 million savings in state funds.

II. Introduction

The Menges Group has been enlisted by the Pennsylvania Homecare Association to evaluate the state's Medicaid Private Duty Nursing (PDN) payment rates. The purpose of this report is to seek to remedy the challenges that many Pennsylvania stakeholders are currently experiencing in serving Medicaid-covered persons, particularly children with special healthcare needs who are in the inpatient setting rather than the home setting when a transition home is deemed clinically appropriate. A few statistics from a national survey are presented below:[1]

- 36% of households with a medically complex family member have experienced a hospital stay that was longer than clinically necessary due to home-based nursing support not being available.
- 87% of medically complex families had to make significant employment changes due to limited home-based nursing care being available.
- 25% of inpatient discharges for patients in medically complex families occurred with no home-based nursing care being lined up.

One nationwide PDN provider framed their challenges in Pennsylvania by noting that, "The currently established fee schedule … has prevented us from providing PDN services at scale because we simply can't afford to hire and retain nurses."

A 2019 study focused on children, published in Health Affairs, Home Health Care For Children With Medical Complexity: Workforce Gaps, Policy, and Future Directions, summarized the situation as follows:[2]

> "Home health care for children and youth with medical complexity in the United States is a patchwork of policies and programs that does not currently meet the medical needs of many patients; unnecessarily prolongs hospitalizations; and relies on an insufficient, inadequately trained workforce…. it is evident from several national surveys that family caregivers are frequently shouldering enormous burdens that lead them away from their own gainful employment and create social, emotional, and financial hardship."

In healthcare support and direct patient care occupations nationwide, workers experienced either stagnant or negative wage growth from 2001-2017[3]. According to a

[1] 2023 State of Home Health Nursing Survey, authored by K. Knight, G. Knight, and B. Jordan.
[2] Foster, Agrwal, and Davis, Children's Hospital of Chicago, published in Health Affairs, June 2019
[3] Real wage growth in the U.S. health workforce and the narrowing of the gender pay gap, authored by Janis Barry, published in Human Resources for Health, August 2021

state-specific study published by Mercer in 2021[4], Pennsylvania is currently in the top five states experiencing the most severe shortage of health care labor at the low end of the wage spectrum, limiting access to home care. Additionally, the Mercer report names Pennsylvania as the state that will experience the greatest nursing shortage over the next few years, illuminating the need for greater compensation.

Additional research in this topic area has been consistent in identifying the shortcomings of current care delivery and models, and in finding that the key opportunities for improvement involve increasing the supply of home-based care.

Examples of these research community contributions are conveyed below.

Components of This Report

Our report conveys an array of analyses that assess the following dynamics:

a) Where Pennsylvania's Medicaid PDN payment rates compare to those in neighboring states.

b) The payment increase that would be needed to bring Pennsylvania's PDN payments in line with the neighboring peer group states' average on a cost-of-living adjusted basis for CY2024, estimating the rates paid by Medicaid MCOs.

c) The degree to which the costs of implementing this payment increase would be offset by triggering the following chain of events:

    a. Increasing the supply of PDN nurses serving Medicaid enrollees.

    b. Reducing the degree to which Medicaid-covered children are served in the inpatient setting – transitioning these patients to home-based care leveraging the additional PDN supply.

    c. Permitting additional hours of PDN care to occur at home, freeing up parents/caregivers to work more and attain a better, more multi-dimensional, quality of life.

The report also presents a compilation of patient-specific case examples demonstrating the value of PDN to patients and to their families.

III. Comparison of Medicaid PDN Payment Rates With Geographic and Demographic Peer States

We obtained Medicaid PDN payment rates for all 50 states and the District of Columbia. Exhibit 1 compares Pennsylvania's current hourly payment rates for registered nurse (RN) and licensed practical nurse (LPN) services with four neighboring states – Delaware, Maryland, New Jersey, and Ohio.[5]

Exhibit 1. 2023 Medicaid PDN Payment Rates – Pennsylvania and Neighboring Peer States

Jurisdiction	2023 PDN Hourly Payment Rate		
	RN	LPN	Average Across RN and LPN
Pennsylvania	Adult: $66.20 Pediatric: $50.00	Adult: $44.08 Pediatric: $50.00	$52.57
Delaware	$63.66	$57.04	$60.35
Maryland	$77.18	$50.02	$63.60
New Jersey	$63.00	$51.00	$57.00
Ohio	$68.44	$48.00	$58.22
Weighted Average Across Neighboring Peer States (DE, MD, NJ, OH)	**$68.60**	**$49.72**	**$59.16**

Pennsylvania currently has an array of payment rates for PDN services. The average of $52.57 was derived by first calculating an average adult rate of $55.14 (across the DHS Office of Long Term Living rates of $66.20 for RN services and $44.08 for LPN services), then averaging that with the DHS Office of Medical Assistance Programs pediatric rate of $50.00.

[5] Note that two additional neighboring states, New York and West Virginia, were not included in this peer state comparison. New York's published FFS rates are not used to a significant extent, as PDN services occur predominantly through MCOs and an array of waiver programs (with these payment levels not tied to the FFS rates). West Virginia is geographically and demographically different than all of Pennsylvania's neighboring states, with the nation's lowest cost of living and third largest percentage of its population residing in rural areas.

Note that an additional, tailored PDN rate structure for persons with developmental disabilities was not included in this average due to the relatively small volume of care that occurs at these specialized rates.

Pennsylvania's average Medicaid PDN payment rate – across RN and LPN rates, and across pediatric and adult rates – is $6.59 (12.5%) below the average across the four peer states (using each state's Medicaid enrollment to derive the weighted average).

30 states have higher average Medicaid FFS payments for PDN services than Pennsylvania (when combining/averaging each state's RN and LPN rates when separate rates are used).

"Overall, a rate of at least $60/hour is necessary to provide adequate pay to qualified staff. This rate is even higher when working with high-acuity clients ($70/hour+)"

– Pennsylvania PDN Provider

IV. Recommended Payment Increases in Pennsylvania

We made three adjustments to the figures in Table 1 to estimate appropriate Medicaid hourly rates in Pennsylvania. First, we factored in cost of living, which is 8.75% *lower* in Pennsylvania than across the four neighboring peer states.

Second, the Medicaid rates in each state were obtained as of calendar year 2023. To translate the buying power of these 2023 payments to 2024, we applied an average cost of living adjustment of 2.7% based on national Congressional Budget Office projections.[6]

Third, under Pennsylvania's Medicaid program, PDN services are often paid by managed care organizations (MCOs) rather than through the fee-for-service (FFS) setting.

The MCOs that are at dollar-for-dollar risk for health care costs have no incentive to "overpay" for PDN services. Their price differential is indicative that the health plans see/expect net value in paying above Medicaid FFS in order to secure adequate PDN nurse capacity for their enrollees requiring these services.

Data shared by more than ten PDN providers, indicates that some Medicaid MCO payment rates for PDN services are typically above – and often far above – Medicaid FFS rates in the same state. Averaging the information together, we derived Medicaid MCO payments for PDN services to be 6.0% above Medicaid FFS (for both RN and LPN services). Notwithstanding the derivation of this average differential, many Pennsylvania MCOs are paying for PDN care at the Medicaid FFS rate. It is therefore important to elevate the FFS rate, so that the health plans that are "indexing to the FFS rate" also pay the PDN providers at a level that helps deliver adequate staffing capacity.

The above rate adjustments are shown in Exhibit 2. After taking all the above factors into account, our calculations derive the recommended Medicaid FFS hourly payment rate to be $59.05. The single blended payment rate across RN and LPN services addresses the dynamic that the PDN care being rendered by RNs and LPNs is often identical – and it is more appropriate to structure the reimbursement to deliver "equal pay for equal work."

The $59.05 blended rate would actually reduce Pennsylvania's current Medicaid FFS payments when PDN services for adults are rendered by RNs, but would increase payments for those services rendered by LPNs. The recommended rate of $59.05 represents an overall rate increase of 12.33% across all PDN services that are currently reimbursed at the FFS rate levels.

[6] https://www.cbo.gov/publication/59431

The Menges Group
Strategic Health Policy & Care Coordination Consulting

Exhibit 2. Recommended Payment Rate Derivation

Item #	Description	Blended Rate (for RN and LPN Services)	Derivation
1	Average Rate Across 4 Neighboring Peer States (DE, MD, NJ, OH)	$59.16	Straight Average Calculated Within Each State's RN and LPN Rates; Medicaid Enrollment of Each State Then Used to Derive Weighted Average Across the Four States
2	Pennsylvania Cost of Living Index (relative to the four peer states' weighted average)	0.920	Source: Missouri Economic Research and Information Center, Cost of Living Data Series, Q3 2023
3	Pennsylvania Payment Rate Needed to Provide Nurses with Buying Power Equivalent to Peer State Average	$54.43	Item 1 x Item 2
4	National CPI Increase, Q4 2023 to Q4 2024	2.7%	Source: Congressional Budget Office publication
5	Payment Rate Needed to Also Capture Inflation from 2023 to 2024	$55.90	Item 3 x 1.027
6	Current Pennsylvania Payment Rate	$52.57	Exhibit 1 (averages adult and pediatric rates together)
7	Overall % Rate Increase Needed for Regional Medicaid FFS Parity	6.3%	Item 5 / Item 6 (minus 1)
8	Additional Market Increase Needed to Match Medicaid MCO Payment Rates	6.0%	Average of 15 Pennsylvania PDN providers' reported differential
9	Total Recommended Percentage Increase	12.33%	Item 7 + Item 8
10	**Recommended Payment Rate**	**$59.05**	**Item 6 x (1 + Item 9)**

We have also recommended a single blended rate across pediatric and adult patients. Pennsylvania's current rate structure creates differing rates for adults and pediatric, and these differences are in opposite directions for RN services (where adult payments are higher) and LPN services (where pediatric payments are higher). A blended rate addresses these contradictions and resolves the concerns expressed in the quotes below.

"A home health provider should not be expected to take a significant drop in reimbursement when an individual turns 21." – Pennsylvania PDN Provider

"Pediatric care pays 12% higher of a reimbursement than adult care is currently paying. If pediatric care low level is paying at a higher rate they are naturally going to choose to work where the highest money will be offered. This leaves adults across the board with having more open shifts and less viable options to cover their care, especially if they are trach and vent!"
– Pennsylvania PDN Provider

Similar Policy Approaches in Other States

The recommended payment rate increases for PDN services in Pennsylvania align with the payment policy approach being taken in multiple other states who are seeking to enhance front-line capacity to deliver quality home-based care. Two specific examples are conveyed below.

- Massachusetts recently increased its RN rate 10.8% from $64.36 to $71.32, while increasing its LPN rates by 9.3% from $53.08 to $58.00. Care delivery hours in Massachusetts increased by 22% for one PDN provider. An additional increase to these rates is pending before the Massachusetts assembly with a proposed effective date of August 14, 2024.

- Virginia increased its PDN rates in July 2022 by an average of 79%, now paying $81.62 for RN services in Northern Virginia, $71.29 for RN services in the rest of the state, $63.43 for LPN services in Northern Virginia, and $52.40 for LPN services in the rest of the state. These four current rates average to $67.19 an hour.

Overall Cost Estimates for Pennsylvania PDN Services

Pennsylvania's current Medicaid PDN costs are estimated in Exhibit 3. These costs during 2021 were provided to us by the Pennsylvania Homecare Association and a 3.0% annual cost trend was used to estimate 2024 costs.

Exhibit 3. Estimated Baseline Pennsylvania Medicaid PDN Costs

Medicaid Program Setting	SFY2021	2024 Estimate (annual 3% increase)
Fee-For-Service	$9,251,475	$10,109,337
Community HealthChoices	$115,671,533	$126,397,407
Physical HealthChoices	$461,477,264	$504,268,666
Total	**$586,400,272**	**$640,775,410**

We estimate that Pennsylvania's current Medicaid PDN costs will increase in future years for two reasons – the implementation of higher rates (in the FFS setting and which several Pennsylvania MCOs will then likely match), plus the higher volume of PDN services that occur under the higher rates (as PDN providers are able to compete more effectively for nursing labor). The key advantage of the PDN rate increases will be that they will foster greater service capacity, with PDN providers better able to attract and retain nursing labor.

Working with the data in Exhibit 3, we estimate that the 2024 baseline Medicaid PDN cost that will be affected by the increased FFS rate is $220.3 million. This estimated figure was derived through the following components:

- 100% of FFS PDN costs
- One-third of Community HealthChoices PDN costs[7]
- One-third of Physical HealthChoices PDN costs

We estimate that one-third of the PDN services paid by Medicaid MCOs is tied exactly to the Pennsylvania Medicaid FFS rate structure and amounts.

Based on information we received from PDN providers operating in other states where

[7] The Community HealthChoices (CHC) program is Pennsylvania's Long-Term Services and Supports mandatory managed care for dual-eligible individuals and individuals with physical disabilities. The Physical HealthChoices program is a separate Medicaid managed care program focused on physical health services for more than two million Medicaid adult and pediatric enrollees who are eligible for Medicaid for reasons other than disability or being age 65 or above.

significant rate increases were implemented, we have estimated that every percentage point rate increase can be expected to create roughly half this percentage in increased PDN labor capacity. Therefore, we project that a 6.16% increase in PDN service volume will occur in conjunction with a 12.33% hourly rate increase.

The additional annual Pennsylvania Medicaid payments for PDN services at these enhanced rates – including the enhanced PDN support these rates will create – are estimated in Exhibit 4 to be $42 million overall, with $17 million coming from state funds.

The overall Medicaid PDN percentage cost increase for services paid at the FFS rates, including the volume impacts, is projected at 19.3%. No cost impact is projected for PDN care that is currently being paid (by MCOs) above the FFS rate.

Exhibit 4. Pennsylvania Medicaid PDN Costs at 12.33% Rate Enhancement (Including Estimated 6.16% Increase in Supply of PDN Services)

	Pennsylvania PDN Medicaid	State Share of Costs	State Share %
Payment Rate and Current Labor Supply)	$220,331,361	$99,149,112	45.0%
SFY2024 Estimate at 12.33% Rate Enhancment	$247,498,197	$111,374,189	45.0%
Total Cost Assuming 6.16% Service Capacity Increase Occurs	$262,756,450	$118,240,402	45.0%
Additional PDN Cost at Enhanced Rate, SFY2024	**$42,425,089**	**$19,091,290**	**45.0%**

Note that the general Federal matching rate for Pennsylvania is approximately 54.12% in FY2024, and 55.09% in FY2025 -- creating a state share of approximately 45%.

V. Offsetting Savings From Inpatient Care Reductions

The previous section estimated the "gross" costs of a PDN rate increase, looking only within the silo of PDN costs. This section estimates the net costs of this increase in Pennsylvania by also taking into account what the rate increase can reasonably be expected to yield via the reduction in the volume of inpatient bed days that becomes possible when enhanced PDN nursing capacity is available.

A. Additional Persons Who Can be Supported at Home Via PDN Due to Payment Increase

As estimated in the top rows of Exhibit 5, approximately 4.2 million hours of PDN support are delivered under Pennsylvania's current Medicaid program structure at the FFS rates. A 6.16% increase in this capacity – the amount we project in conjunction with the recommended rate increases – is estimated to yield approximately 258,000 new hours of annual Medicaid PDN support in Pennsylvania.

Exhibit 5. Derivation of Number of Medicaid FFS Hospital Transition Cases that Enhanced PDN Capacity Will Be Able to Serve

Statistic	Amount
Current Pennsylvania Program Structure	
Estimated Medicaid PDN Expenditures Currently Occurring at Medicaid FFS Rate	$220,331,361
Estimated Average Hourly Payment Rate	$52.57
Estimated Annual PDN Hours Currently Provided	4,191,200
Enhanced Program	
Additional Annual PDN Hours Available (6.16% increase)	258,387
Average PDN Hours Per Patient Per Day (inpatient substitution cases)	10
Additional FFS Patients Who Can Be Served Via PDN Each Day (inpatient substitution cases: 258,387 / 365 / 12	71

The bottom half of Exhibit 5 estimates that this additional PDN labor will be sufficient to serve 71 Pennsylvania Medicaid enrollees at home who would otherwise be

hospitalized (at an assumed support level of 8 hours per calendar day). This substitution of home care for inpatient care includes two groups:

a) Hospitalized persons who can be discharged and cared for at home if additional PDN services are available; and

b) Persons receiving home-based care who can now obtain additional PDN support that prevents clinical crises and hospitalizations from occurring.

This estimate assumes the patients receiving PDN in lieu of inpatient care will receive an average of 10 hours of PDN support per day throughout the year.

C. Degree to Which Currently Hospitalized Pennsylvania Medicaid Enrollees Can be Transitioned Home (if additional PDN capacity is available)

It is challenging to discern the total number of Pennsylvania Medicaid patients who can be served safely and effectively at home in lieu of inpatient care. Piecing together the information we were able to obtain (summarized in the bulleted text below), we anticipate that there are likely over 500 persons who are in this situation at a given point in time. Therefore, the recommended rate increase – and corresponding expected increase in PDN nursing capacity – is not going to be sufficient to serve all persons who are hospitalized in Pennsylvania who could be served effectively at home. The rate increase will move Pennsylvania into a considerably better position, however.

- Another PDN provider indicated that they declined 174 referrals in the most recent calendar quarter (second quarter of 2023) where they had tabulated this information.

- Current referrals with pending or decline status since December 2023 are roughly 250 within our PDN population.

- The MCOs send weekly needs spreadsheets which is very evident of the PDN shortage crisis across the state. One MCO alone typically has more than 400 patients on its list.

- Specific to pediatrics, we currently have 10+ referrals in our division (Western Pennsylvania) that are able to come home from a facility. However, staffing is a barrier.

- Our [PDN Provider's] primary focus is pediatrics and is 95% of our service

volume. High acuity patients are the biggest risk for being stuck in hospitalizations and not being discharged to home even when they are ready for discharge. Hospitals want these patients to have full staffing before they will be discharged. The agency begins to piece staffing together but before full staffing can be secured the staffing that was secured becomes anxious at how long the discharge is taking that they bow out and the staffing that was secured falls apart. It is a vicious cycle that repeats itself.

- Our [PDN Provider's] offices receive daily referrals for both adult and pediatric clients (facility and home based) that are not able to either be discharged and start receiving PDN services or receive the full amount of service hours already authorized. These referrals are not able to be immediately accepted and often remain inpatient or not serviced status for several weeks or months until a provider is able to start care. We also have many current clients (many already shared with other agencies) who are not receiving their fully authorized PDN hours due to lack of staffing which leads to a higher hospital re-admission rate. We have also seen children sent to LTC instead of being able to remain at home due to lack of staffing.

- Approximately 50% of our Medicaid population would benefit from additional services which could decrease the number of hospitalizations. Our current Medicaid census is 210 patients.

- Our agency receives approximately 3-5 calls per day requesting skilled nursing services (PDN) for Medicaid participants in PA (children), who are unable to be discharged from the hospital due to a need for home care. Parents are trained and ready to take their children home. However, we do not have nurses available to meet their needs, due to the nursing shortage, and particularly due to the low reimbursement rates which do not allow us to attract nurses to home care.

- A considerable number of new hospitalizations will be avoided through the professional care enrollees receive at home via enhanced PDN service delivery.

D. Per Case Medicaid Savings When Home-Based PDN Is Used In Lieu of Inpatient Hospital Care

This section estimates the Medicaid savings that accrue when an individual is served at home with PDN support, in lieu of remaining hospitalized. Exhibit 6 estimates costs in the home-based setting.

Exhibit 6. Derivation of In-Home Cost Per Day Estimate

At Home Cost	Amount	Derivation
PDN Cost Per Day		
Average Hourly Rate	$59.05	Assumes 50/50 split between RN and LPN services at this report's recommended payment rates
Estimated Average Hours Per Day	10	University of Michigan publication conveys that average PDN hours are 8-12 per day (we used mid-point of 10). https://www.med.umich.edu/1libr/PedHomeVent/PrivateDutyNursing.pdf
Daily Cost, PDN	$590.52	Multiply above two rows
Estimated Pharmacy Cost/Day	$150.00	Average Medicaid cost per prescription (post rebate) in 2021 was $46; our estimate assumes average at-home patient receives 3 medications at a $50 average net cost
Estimated Other Services Cost/Day (e.g, DME)	$70.00	Ventilator cost is approximately $30/day (one-third of persons are estimated to require ventilators); other DME (hospital bed, wheelchair, etc.) estimated at approximately $30/day; other services estimated at $30/day
Total Cost/Day at Home	**$810.52**	**Sum of above three rows**

We derived an average *inpatient* daily cost of $2,400 to compare with the figures in Exhibit 6. We were not able to obtain Pennsylvania-specific data on Medicaid costs per admission or per day, and therefore used data from another state to establish this estimate – focusing on average payments within long-stay DRGs where patient transfers to home can often occur.

Exhibit 7 derives Pennsylvania's net annual Medicaid costs based on all the above figures and estimates. The cost tabulations indicate that an annual per person savings of approximately $537,000 will accrue to Pennsylvania's Medicaid program when an individual is served at home in lieu of inpatient care.

Exhibit 7. Derivation of Net Savings Impacts of PDN Rate Increase

Medicaid Cost Comparison	Daily Cost	Annualized Amount
In-Home Care	$811	$295,839
Inpatient Care	$2,400	$876,000
In-Home Savings Per Transitioned Person Per Year	$1,589	$580,161
Gross Annual Cost of PDN Rate Increase		$42,425,089
Number of Transitions Needed for Breakeven		73.1
Estimated Transitions that Recommended PDN Rate Increase Enables		70.8
Offsetting Savings Through Transitions to Home		$41,070,170
Estimated Net Annual Medicaid Cost Associated with PDN Rate Increase		**$1,354,919**
State Fund Annual Cost (45% of total)		**$609,713**

To fully offset the $42.4 million cost of the PDN payment rate increase would require that on an average day, 73 additional Pennsylvania Medicaid enrollees are cared for at home rather than in the hospital. The increased PDN capacity associated with this report's recommended rate increase is estimated to support 71 additional Pennsylvania Medicaid enrollees at home per day.

These figures result in an estimate that the costs of the PDN rate increase will be almost entirely (97%) offset by the combination of increased PDN capacity, more home-based care, and fewer hospital days.

The inpatient savings are so large at the patient level (approximately $580,000 per person annually), that they essentially "pay for" elevating the PDN rates for the entire body of PDN care that is currently occurring at the FFS rate level. The net annual Medicaid costs are estimated to be $1.4 million for the Medicaid program overall, and $0.6 million in state funds.

Considerable cost savings potential exists for the rate increases to be budget neutral or even yield cost savings. A slight favorable variation in any of the derivation assumptions in this report will yield a net savings. For example, if the PDN nursing capacity increases by 7.0% (instead of the estimated 6.16%), a net overall annual savings of $3.9 million will occur -- including a $1.7 million savings in state funds.

VI. Advantages of Home-Based Care for Patients and Families – Case Examples

High quality care delivered at home rather than in a facility setting, is the preferred model of support. From a policy perspective, the case for home-based care is furthered by the cost advantages. The following pages convey a set of case examples demonstrating the importance and value of private duty nursing in permitting effective (and cost-effective) care at home rather than in an institutional setting.

In each of these case examples, the advantages of receiving care at home versus continued hospitalization are clear, highlighting the importance of home-based care in enhancing patients' quality of life, reducing financial burden on families, and supporting workforce participation. We have grouped these case examples into three categories:

1. Patient success stories with PDN
2. PDN's positive impact on caregivers and familial socioeconomic status
3. Harmful consequences of going without PDN

1. Patient Success Stories with PDN Across the Life Course

"We have 3 babies who require a ventilator/tracheostomy to survive. In all 3 examples they have come home and been able to thrive and improve on their breathing ability and quality of life as opposed to having to spend the first 6-12 months or their lives in a hospital, away from their family and the parents having to travel back and forth daily to spend time with their newborn child." -- Pennsylvania PDN Provider

Decades-Long Use of PDN Services Allows Patient to Excel as an Educated Advocate

At 6 months of age, an individual with a genetic disease went home as one of the first tracheostomy/ventilator cases in Pennsylvania 40 years ago. At the age of 40 this individual -- who has been cared for by many stakeholders over four decades -- has thrived. This individual has earned their PHD, owns a consulting company, serves as a leader for advocacy of individuals with special needs in the state, and has a family of their own. This person continues to receive in-home PDN services, with minimal hospitalizations and continuity of PDN care across 40 years. Given the ongoing special needs (trach/vent), without in-community services over 40 years, this individual would not be healthy and living their best life today.

Long, Successful Recovery from Gunshot Injuries

At age 11 during 2019, "Brian" was an innocent bystander who got caught in the middle of gunfire while sitting in a car. He suffered a gunshot wound to the face. He was initially taken to Reading Hospital but then was transferred and admitted to two other hospitals through November of 2019. Brian underwent numerous surgeries that resulted in him being trached/vented and required a g-tube for feeding.

Brian was transferred to Good Shepherd Rehabilitation Hospital in Allentown, PA, and primarily remained there from November 2019- March 31st, 2020, until he could be discharged back home with the support of [PDN Provider's] skilled nursing services, which were coordinated through our internal RN Nursing Supervisors/Manager and Operational support teams. Our Nurses (RN/LPN) provided Brian 1 to 1 hourly private duty skilled nursing services delivering the necessary clinical oversight and medical intervention while partnering with his physician and the family to keep him safe in the comfort of his home.

Through years of excellent nursing care that Brian received in the home setting, as of March 2024, we are happy to report that he no longer requires his vent/trach or feeding tube. This is a testament to the incredibly talented nurses who provided care to him from day one, immediately following his long stint in the hospital and rehab center.

Brian was successfully transitioned to our hourly Home Health Aide (1 to 1) services, where he continues to receive the necessary level of care and service within the home setting but no longer requires that higher level of private duty nursing due to his progress and achievement of the goals outlined in his care plan.

Improved Quality of Life for Adult with Significant Respiratory Challenges

"Sarah" is a 45-year-old woman with a chronic respiratory condition that requires frequent hospitalizations for acute exacerbations. After her most recent hospitalization, Sarah's healthcare team and family members explored the option of transitioning her care to home-based management with the support of home health services.

By receiving care at home, Sarah experiences a significant improvement in her quality of life. She can sleep in her own bed, maintain a familiar routine, and enjoy the comfort and privacy of her home environment. With the support of home health nurses and respiratory therapists, Sarah can manage her condition effectively at home, reducing the need for repeated hospitalizations and allowing her to remain more independent.

"The potential for infection is reduced in the home since there are less people in and out of the home compared to being inpatient." – Pennsylvania PDN Provider

Premature Infant Successfully Transitions Out of PDN

A premature infant who was tracheostomy and ventilator dependent was transitioned home for PDN after a full year in a NICU. The in-home nurses assisted with ventilation weaning, leading to tracheostomy decannulation (removal of the tracheostomy tube). Early intervention support included working on developmental targets. At the age of 4, this child no longer required PDN support.

A similar case was highlighted in a Williamsport Sun-Gazette article.[8] The mother of the infant/child, who came home after more than two years in the hospital, expressed that: "We spent over two years surviving and now we get to live."

Supporting an Adult Diagnosed with ALS

An individual was diagnosed in their 40's with ALS leading to tracheostomy, ventilator dependency, a feeding tube and 24/7 care. The patient's significant other needs to work full-time, raise teenage daughters and maintain a home that is able to accommodate all of the patient's needs. A team of support combines to keep the individual healthy, at home and out of the hospital. PDN has been instrumental in preventing hospitalizations and averting the need to live in a long term care facility. The individual has been continually able to live with his family.

Supporting an Adolescent/Adult with Cerebral Palsy and Scoliosis

"Fred" has been diagnosed with cerebral palsy and scoliosis. Only part of his lungs function, and he has a tracheostomy and is ventilator dependent. At age 17, Fred was retained inside of the Children's Home for 359 days due to lack of nursing coverage. The lack of nursing coverage caused the patient's mother to have to quit her job and drain the family's entire life savings. Now 23 years old, Fred has progressed greatly since he has been supported by PDN at home. He hasn't been hospitalized in over 2 years.

HCBS Providing Stability for Mental and Physical Health to Thrive

A patient who, prior to receiving home and community based (HCBS) services, was hospitalized 4 times in a 12 month period (once per quarter). Since he has been receiving HCBS, he has maintained his stability at home and has not returned to inpatient status. His mental and emotional condition has improved and his family has been able to resume their lives with ease.

[8] Loyalsock 2-year-old comes home after 831 days in the hospital | News, Sports, Jobs - Williamsport Sun-Gazette (sungazette.com)

Helping Children Grow and Thrive

"Kevin", a pediatric cardio case, lives with his grandmother and grandfather, who are also his foster parents. Previously, he was unable to sit-up, stand, or walk; struggled with social interactions; and was tube-feed dependent. Since receiving one-on-one nursing, he has thrived; he is ambulatory, goes to school, interacts with children his own age and eats many foods.

Gaining Safety and Stability through Receiving PDN Services

A pediatric client with Cerebral Palsy, who was previously abused by her family, was in foster care when she began receiving skilled nursing. Nursing staff assisted with making it possible for her to attend school and helped her assimilate into the foster family. PDN allowed her to live with this loving, supportive foster family and begin healing. Due to this she was able to thrive and reach developmental milestones that she would otherwise not have met.

2. PDN's Positive Impact on Caregivers and Families

Alleviating the Financial Impact on Families

The "Sanchez" family has a young son, "Miguel," who was born prematurely and requires ongoing medical care due to complications from his premature birth. Miguel has spent the first few years of his life in and out of the hospital, placing a significant financial strain on the family.

With the assistance of a Pediatric Day Nursing (PDN) program, Miguel is able to receive the necessary medical care at home, allowing his parents to avoid the high costs associated with prolonged hospital stays. The family no longer faces expenses such as hospital parking fees, meals outside the home, and lost wages due to extended absences from work. Serving Miguel at home not only improves his health outcomes but also alleviates the financial burden on the Rodriguez family.

Allowing Caregivers to Lead Fulfilling Professional Lives

"John" is a 60-year-old man who suffered a severe stroke that left him with significant physical disabilities and requiring around-the-clock care. Initially, John was admitted to a long-term care facility, where his wife visited him daily, struggling to balance her caregiving responsibilities with her full-time job.

Recognizing the strain on their family and the desire to keep John at home, his wife explored the option of transitioning John's care to a home-based setting with the support of skilled nursing and therapy services. With the assistance of a PDN program, John can receive the necessary care at home, allowing his wife to continue working full-time without the added stress of managing John's care at a facility.

3. Negative Consequences of Going Without PDN: Case Examples

1. "George" was hospitalized in October and was re-hospitalized in December. He came home from the hospital for one week before being re-hospitalized again. Due to the lack of nurses, he has to remain in the hospital until he can be transferred to Boston. His mother has been out of work this entire time.
2. Even with significant effort made to maintain staffing, PDN services were not able to be secured in a rural area. In turn, the patient's primary guardian and single parent lost her employment since she had to work as a caregiver. This resulted in financial hardship and struggles with life resources.
3. A long-term skilled nursing admission without adequate staffing resulted in a drastic decline in health. The patient was admitted to a hospital and received surgeries resulting in tracheostomy which then necessitated much higher skilled staff in home than would initially have been required.
4. A female juvenile patient has been unnecessarily hospitalized for over 6 months due to homecare staff not being available. The patient's behavioral needs were not being met while hospitalized; her self-harming behaviors have exacerbated and become more difficult to control. The parents lost their jobs due to being at the hospital with their daughter.
5. A child was hospitalized since birth. Financially and due to distance to the facility, the family could come and go for visitation but could not be there as often as they wanted to be. This adversely affected bonding. In addition, the family suffered considerable financial strain as the child remained in the hospital, due to the loss of work, the costs of trips to the hospital, etc.
6. This patient wishes to remain at home with their family, but as their parents age, they are growing fearful that if we are unable to recruit and attract nurses for their case, they may have to placed in a facility. One of the biggest benefits of home care, is that patients are able to receive care in the safety and comfort of their own homes surrounded by their loved ones. If we as an agency are unable to remain competitive with our wages, we will not be able to attract and retain the staff we need to continue to meet the needs of our home care clients.
7. "Lauren", a SN case, t/v patient, was admitted to the hospital when loss of care occurred due to routine staffing issues. This resulted in an extended hospital stay, as her primary guardian had other work commitments and no other caregiver was identified that was trained for 24/7 high-tech care.

VII. Importance of Adequate Payments for PDN Providers to Attract and Retain an Optimal Staff Team

Pennsylvania PDN providers were asked to describe the dynamics they are confronting in terms of attracting and retaining staff to serve Medicaid patients. Excerpts from the input we received are shared below.

- We receive a weekly spread sheet from one of our MCOs that has over 400 members that are without medically warranted services due to the staffing shortage. Increase rates would draw nurses to the homecare field and help provide care for many of those members!
- We are losing staff to facilities who are paying more.
- Nurses are going to gravitate to where the money pays.
- The homecare industry has long been underpaid and therefore unable to compete with surrounding facilities which ultimately leads to an access to care problem because we are not able to attract the quality nurses needed to keep people safe while aging in place at home or allowing babies with special needs to come home from the hospital.
- A higher rate leads to more and better qualified nurses. We currently need a rate increase of $10 per hour to be competitive. We speak to several nurses every week but are unable to provide a competitive wage and benefits for them to go into Home Care.
- Home healthcare is very competitive in Western Pennsylvania and ultimately, our ability to recruit/retain staff is determined by what we can pay them.
- A $10 per hour increase in nursing rates is needed to be able to increase hourly wages and be competitive. Hundreds of cases come over from Insurance Company A each week, requesting skilled nursing hours. However, we do not have the additional staff needed to help these families.
- In instances where the reimbursement rate is greater than the Medicaid FFS fee schedule staffing levels are improved. MCO 1 High-Tech rate, ODP Waiver services, single case agreements (SCAs) for clients that face staffing challenges, and our HICU program all yield better staffing outcomes for our clients.

- In 2023, our organization received 1,227 calls or emails directly from Managed Care plans, seeking services for individual patients. 27% of these direct requests came from a plan that does not offer enhanced rates (i.e. above the current Medicaid FFS rate).

- As of 3/26/24, there are 2,266 pediatric patients statewide in need of additional hours or services (needs currently unmet).

- Just look at what hospital are offering for nurses on Indeed. This should be proof enough the [Medicaid] rates are insufficient.

"100% of clients receiving care in the home are at risk of hospitalization if we are unable to secure adequate staff to keep them home safely."
-- Pennsylvania PDN Provider

Appendix A: Methodological Observations and Limitations

This Appendix conveys further context around the quantitative estimates included in the report.

Average Medicaid PDN Payments in Fee-For-Service Setting: We have no reason to doubt the accuracy of the data the PDN providers assembled and shared with us. Data were provided from two sources and the state-by-state payment amounts were nearly identical. In several states, Medicaid PDN rates varied between RN and LPN services, urban/rural counties, high technology and low technology patients (also sometimes termed as specialty or non-specialty patients), weekday and weekend rates, and/or pediatric and adult patients. In these states, we averaged the published rates together by license (RN and LPN) by taking a straight average of the two, by urban/rural in approximate concert with a state's overall population distribution, and by severity using a 50/50 assumption (e.g., between high technology and low technology). The national average rate was derived by weighting each state's payment rates by their overall Medicaid enrollment level as of September 2023.

Average Medicaid PDN Payments in MCO Setting Relative to Fee-For-Service Setting: While it was important to understand Medicaid MCO payment rate dynamics for PDN services, we did not want to obtain or disclose the specific payment rates that PDN providers have negotiated with Medicaid MCOs. We therefore surveyed PDN providers requesting that they provide factors by which Medicaid MCO rates differed from Medicaid FFS rates in the states they serve. The data we received back were averaged within a PDN company (averaging their information across states and/or MCO data points), and these figures were then averaged together such that each PDN company contributing data received an equal weighting.

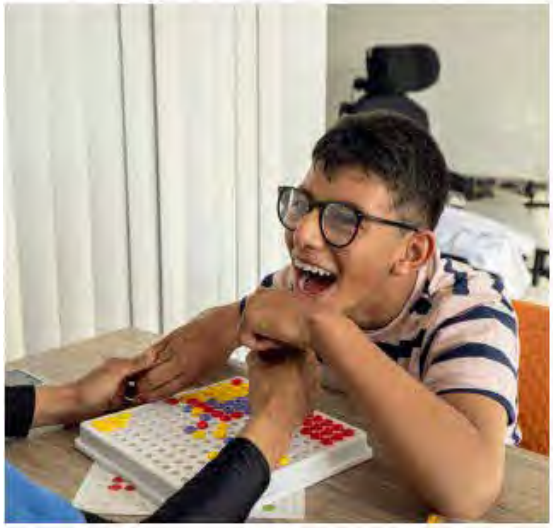
Estimated Degree to Which PDN Service Capacity Will Grow Under Enhanced Pennsylvania Medicaid Payment Rates: We received information from different PDN providers on their experience with staffing before and after Medicaid payment rate increases went into effect. There were only a few situations where large rate increases occurred, and the data we received supported a ratio of roughly 60% (i.e., any given percentage payment rate increase would yield 60% of that percentage in increased PDN nursing capacity). Due to the modest amount of data available, we lowered our estimated ratio to 50% in this report.

Number of Medicaid Enrollees Who Can Be Served Via PDN In Lieu of Inpatient Care: This is the component of our estimates that we felt least confident about. The data available on this issue came from too few sources to extrapolate to a reliable statewide number. The body of the report conveys this data, and our opinions around what these data mean (e.g., that there are at least 100 Pennsylvania Medicaid

enrollees in the hospital on a typical day who could be safely cared for at home if enhanced PDN capacity were available.).

Average Daily Cost of Inpatient Care: We were not able to obtain Pennsylvania data on Medicaid costs per admission (or per day). We therefore relied on the approximate figure ($2,400) from another state where we were able to tabulate costs per day within DRGs that were deemed to have a strong potential for "transferrable" days to home care.

Average Daily Cost of Home Care: Our estimates sought to match up the services that still need to be provided at home to those that occur in the inpatient setting, and these go beyond nursing care. We did not have a sound data set to estimate the daily cost for "all other services" and our assumptions – often crude ones – are conveyed in the body of the report. While these service estimates were somewhat of a "forced guess," we viewed them to be reasonable and made them objectively.



IMPROVING THE LIVES OF CHILDREN, YOUTH, AND YOUNG ADULTS WITH COMPLEX NEEDS AND THEIR FAMILIES

A report from the Blueprint Workgroup

pennsylvania
DEPARTMENT OF HUMAN SERVICES

TABLE OF CONTENTS

Acknowledgements

The creation of this document is the culmination of months of intensive discussion, hard work, honest reflection, and challenging conversations. It is the embodiment of the determination and spirit of the families and professionals who continuously strive to provide a better life for all children, youth, and young adults. A very special thank you is owed to the families and professionals who participated as members of the Blueprint Workgroup and who continually give of themselves to improve the lives of their children and those they support.

I am especially grateful to Russ Cripps and Colleen Cox from the Child Welfare Resource Center, Kaitlin Koffer and Molly Sadowsky from the ASERT Collaborative, and the DHS Team: Michael Hershey, Roseann Perry, Jenn Newman, Courtney Malecki, Emily Burger, and the many members of the DHS Complex Needs Planning Team. None of this would have been possible without their leadership, knowledge, support, and dedication.

Thank you.

Jonathan McVey

Executive Summary

A growing number of Pennsylvania's children, youth, and young adults with complex needs and their families often experience significant barriers to treatment, supports, and services. The current child serving systems struggle to support young people who have the most complex needs. In this report, stakeholders have come together to discuss those barriers and to identify recommendations that will improve outcomes for these youth and their families.

Consider the following three stories as an illustration of what youth with complex needs, their families, and the systems supporting them often experience. Although the stories do not capture many of the complexities, or unique circumstances, it is important to start here because these scenarios happen every day, in many different ways, across all of our child-serving systems.

> One young woman experienced significant trauma and hurt long before she reached the system. Adopted and then abandoned, bounced from placement to placement her pain manifested more and more often as aggression and anger. She landed squarely in the system with people all around her who cared and were trying to help, but they didn't know what to do next. Her team recognized she was talented and bright with her own goals. With the right support and guidance, the team talked with her about what she wanted and what her vision for her future would look like. Through that process, she chose a provider to live with, services she would use and a path in her education. She worked to catch up academically and to work towards her dreams. Because her team listened, saw her strengths, and looked for who she was beyond the heartache and pain, she now has stability and a path toward a future she controls, feels safe within, and that is her own.
>
> A young man enters a residential treatment facility because his needs have reached the point where his community-based services and family can no longer safely support him in his home. His needs are significant and cross multiple domains: behavioral, developmental, and medical. The young man's team works diligently with him, and his family is continuously supportive and engaged. As this young man grows, the team sees some positive progress. However, this young man continues to need supports beyond what his family can provide to live a full and safe life in the community. He nears adulthood and the team begins preparing and planning for the next chapter of his life. Again, despite wanting to, his family still cannot bring him home safely. The team searches for assistance and contacts many other professionals and systems, but there are delays in planning, difficulties with funding and misunderstandings between each system. All systems are engaged, but the young man is still in the same place as no provider is able to step forward to support him. Frequent and targeted outreach is completed as the days, weeks, and months pass. Eventually a provider is engaged, but additional resources are required to meet him as his level of need. The process is slow and challenging for all, but most of all for the young man and his family. There is a new home on the horizon, but there are many steps and potential missteps along the way. To the young man and his family, the journey feels like it will never end.

Planning for the future will be an evolving and ongoing process as his needs change throughout his life.

Consider another young man who was abandoned as a young child and then placed with relatives who abused him. Lacking in support and understanding, his behaviors escalated, and he became a ward of the state. Placement after placement failed him until the team connected with his true need - healing and stability. His team worked together to plan for supports in the community, developing a crisis plan and school plan, partnering with intensive services and engaging in frequent multi-system and multi-disciplinary meetings. Even when things were rough, he said he knew it would be okay because he had so many people that cared about him. His team saw his unmet needs, not just the services, but the everyday life needs that are important to everyone. The team came together and worked alongside this young man to build a life he wants to live. He has held jobs, made friends, and started to plan for his future. The process took time away from important developmental years and milestones, and he was nearly an adult by the time enough stability, treatment, and communication occurred to support him in creating this life. We wonder what trauma could have been spared if we had intervened earlier, recognized his deep needs earlier, and helped him to work towards healing sooner.

The work of supporting these three young people is by no means at an end; however, they have the support they need and deserve and are on a positive trajectory toward an everyday life. Two of these stories show us that, with the inclusion of the youth and teaming of all involved systems, it is possible. The other story shows us that even with an engaged and supportive family and a team wrapped around the young man, systems still struggle to effectively and timely support young people. All of these stories illustrate the resilience of youth with complex needs and their families.

There are other youth with complex needs and families in Pennsylvania, right now and in the future, with similar stories of hope and challenges. All of these children and families deserve assistance in navigating these challenges, and we must ease barriers and avoid delays to care and supports whenever possible. Understanding that each youth with complex needs and their families are unique, there are several characteristics that differentiate the population we seek to help through this report. The following are the most often-encountered characteristics of youth (ages 0-21) with complex needs:[1]

- Complex trauma including abuse, neglect, developmental and institutional trauma;
- Multiple and complex diagnoses across the developmental, physical, and mental health domains;
- Potential diagnostic overshadowing due to an intellectual disability and/or autism diagnosis;
- Complex communication needs;
- Inconsistent presentation of behaviors and symptoms across settings;

[1] Not all of these characteristics are required; there is wide variability in the combinations, experiences, and level of acuity of these youth. Additionally, some youth may have very few of these characteristics, but because of complex social dynamics in their lives, are considered to be a youth with complex needs.

- Lack of diagnostic clarity;
- Disrupted education;
- Limited, strained, or no natural supports;
- Multiple system involvement including justice systems; and,
- An extensive history of out-of-home care.

The following national statistics further illustrate some of the complexity of the needs of youth with disabilities, their increasing vulnerabilities, and the prevalence of these youth in our communities. Youth with disabilities are significantly more likely to experience abuse, live in institutional care and not live with kin during a child welfare placement. Research shows that youth with developmental disabilities are more likely to have co-occurring mental health needs. On top of all of that, all of these youth have experienced some form of trauma in their life. As with the stories above, these statistics do not provide a complete picture of need or prevalence.[2]

- 1 in 6 U.S. children aged 2–8 years (17.4%) had a diagnosed mental, behavioral, or developmental disorder.[3]
- Among children living below 100% of the federal poverty level, more than 1 in 5 (22%) had a mental, behavioral, or developmental disorder.[3]
- Depression and anxiety have increased over time: ever having been diagnosed with either anxiety or depression among children aged 6-17 years increased from 5.4% in 2003 to 8% in 2007 and to 8.4% in 2011-2012.[4]
- An estimated 33.6% of individuals with intellectual disabilities have co-occurring mental health conditions.[5]
- Children diagnosed with an intellectual disability were 3.7 times more likely to be neglected, 3.8 times as likely to be emotionally abused, 3.8 times as likely to be physically abused, and 4.0 times as likely to be sexually abused.[6]
- Youth aged 17+ with disabilities experience higher rates of placement instability and longer stays in placement than peers without disabilities.[7]

[2] Efforts are underway in Pennsylvania to use data to better understand the scope of need for youth with complex needs and their families.

- Youth with disabilities were 2.47 times more likely to live in an institution and 2.22 times more likely to live in community-based group homes.[8]

In Pennsylvania, a good foundation of services and supports exists across all child-serving systems. However, that foundation is primarily designed around the broader population, youth who have less acute and fewer multi-system needs. As a result, well-intended systems can still miss the wants and needs of youth with complex needs and their families – meaning they are not consistently supported on a positive, personalized trajectory.

In recognition of this problem, the Pennsylvania Department of Human Services (DHS) partnered with the Autism Services, Education, Resources and Training Collaborative[9] (ASERT) to conduct a series of focus groups and surveys. Youth, families, and the child-serving systems supporting them were engaged to better understand current and future needs. These convenings highlighted common challenges these youth, families, and child-serving systems experience. Five key themes emerged across these groups:

1. Communication
2. Services and programs
3. Resource Navigation
4. Staffing / Workforce
5. Trauma-informed supports

Overarching all of the themes above is family engagement. With this new understanding, DHS partnered with the University of Pittsburgh's Child Welfare Resource Center[10] to establish and sponsor a blueprint workgroup with families with lived experience, and a multi-system and multi-disciplinary membership.[11] The workgroup kicked-off in July 2023 to develop recommendations that will improve outcomes for youth with complex needs and their families.

The workgroup met until November 2023 and using the DAPIM framework,[12] identified the recommendations starting on page 12. The foundation for the workgroup's discussion and the recommendations were the five themes from the focus groups and surveys, and the "desired future state" objective provided below:

[8] Slayter, Elspeth, 2016. "Youth with disabilities in the United States Child Welfare System," Children and Youth Services Review, Elsevier, vol. 64(C), pages 155-165.
[9] PAAutism.org
[10] University of Pittsburgh: Pennsylvania Child Welfare Resource Center
[11] Despite efforts to recruit young adults with lived experience, none were able to participate in the Blueprint Workgroup. The Department and the Blueprint Workgroup agreed to delay the release of this report to again seek the valuable input of these young adults; however, few were able to review. Any further work on this topic must include significant efforts to gain the voice of youth with lived experience.
[12] See Appendix C – DAPIM Model

Desired Future State

In Pennsylvania, we believe all youth with complex needs and their families[13] will have the opportunity to access timely supports and services that are individualized, trauma-informed, holistic, respectful of race and culture, family- and youth- driven, and available in their own communities. This will be evidenced by:

- A focus on youth and family engagement while honoring their voice and choice;
- Establishing and maintaining a well-supported and qualified workforce;
- Collaboration and shared understanding across systems to support planning and shared goals;
- Systems that prioritize early identification, proactive intervention, and service options that support family stability, safety, and the youth's healthy development and meaningful relationships which support life-long connections;
- Teams that engage in ongoing and integrated planning that supports the everyday needs of a family and youth (housing, education, transportation, scheduling, access to medical care, etc.); and,
- Service delivery that is coordinated, accessible, timely and includes support throughout the process.

Using the desired future state, the information gathered through the focus groups and surveys, the blueprint workgroup's own assessments, identification of strengths and gaps, and root cause analyses, the blueprint workgroup identified 18 recommendations which help achieve the desired future state.[14] Each numbered recommendation is connected to one or more of the five themes mentioned previously and a supporting rationale is provided. The recommendations are not listed in priority order, rather they are grouped together based on interdependencies or common threads as reflected in the table of contents.

The recommendations address a wide variety of challenges and barriers encountered by youth with complex needs, their families, and the systems supporting them. Some recommendations involve the provision of direct services, such as establishing a multi-disciplinary team of professionals for treatment and stability in the community or developing a unified and proactive approach to transitions for youth. Other recommendations reflect the need for administrative efficiencies, like improving information sharing, establishing greater uniformity in processes and forms among all insurers and health care payors, or finding a better balance in provider credentialing. Still other recommendations focus on building system capacity[15] through uniformity in trauma training, developing trainings and tools to help teams build a complete picture of the child and family, and, very importantly, the need to build and retain a qualified workforce.

All of the recommendations are intended to push the conversation forward in specific critical areas. Due to the time limited nature of the workgroup, the recommendations require further development before implementation can be achieved.[16] For example, the suggested amendments to Act 212 for Early Intervention screening and

[13] "Family" is defined by the individual.

[14] For more detailed information on the background of this effort, please see Appendix A – Background, Analysis, and Findings; and Appendix B – ASERT Final Report.

[15] The Department of Human Services is also launching the first annual Pediatric Capacity Building Institute in January 2024 to increase clinical and administrative capacity for all child-serving systems supporting youth with complex needs and their families. For more information please visit: Complex Behavioral Health Blueprint (pa.gov)

[16] For a brief list of ideas and discussion points that, due to the time limited nature of the workgroup, were not fully conceived and merit future discussion, please see Appendix D – Parking Lot Concepts.

tracking are not intended to provide exact statutory language. The blueprint workgroup recognizes that the categories in the recommendation are conceptual and that there are other potential categories and language that may be preferable. Ultimately, the blueprint workgroup seeks to ensure children with complex needs are identified as early as possible so they and their parents or caregivers can access the services and supports they need through childhood.

The blueprint workgroup also identified four recommendations that deserve separate attention because of their importance to this work:

1. Broadly, there are many young people with complex needs who are receiving interventions but are at a point in their life when they have already faced extreme challenges and adversity, have experienced significant trauma and loss, and are developing in a world without friends or family. By growing up in such an environment, imprints are being made all along the way, the challenges and adversity they were already going to experience because of their disabilities, or the circumstances of their birth are exponentially magnified and new ones are added. Many times, families, practitioners, planning team members ask themselves, what more could we have done? What could we have done differently?

   A broad systematic restructuring is needed with a commitment to implement diverse and holistic prevention activities. States, such as California and Washington, have undertaken massive initiatives to transform their systems of care for youth:

   - A statement from California's Vision for Prevention: "California is committed to the reformation of the child welfare system by shifting the mindset from a child protection and foster care system to a child and family well-being system."[17]

   A multi-year task force should be established to design and implement this restructuring to ensure all child-serving systems of care become prevention focused first and foremost.

2. Persons in state leadership roles (Governor's Office, General Assembly, regulators and/or funders) who seek to implement any of these recommendations should solicit input[18] from youth and families with lived experience. **"Nothing about us, without us."**

3. A multi-disciplinary steering team of state and system leaders, as well as youth and families, should be formed to carry these recommendations forward. Due to the breadth of this work and the time limitation on the blueprint workgroup, these recommendations require further development. Many members of the workgroup expressed a strong desire to continue developing these ideas and carrying them forward to fruition. Additionally, this steering team should leverage the knowledge and expertise of other statewide partners, such as the various associations and advocacy groups, who did not directly participate in the Blueprint Workgroup.

[17] California's Vision for Prevention
[18] In soliciting input from those with lived experience, it is critical to ensure those individuals are supported throughout that process. Safe spaces that meet their developmental, emotional, safety, and accessibility needs are required.

4. Broadly, there are two groups of youth and families in need: those who require help right now and those who will. The blueprint workgroup's recommendations will help both groups, however, the recommendations will also take time to implement. As such, the workgroup recognized the growing number of youth with complex needs who may not be in the most appropriate location for treatment and urges state, local, and system leaders to find solutions which can be implemented right now.

Ultimately, children, youth, and young adults with complex needs and their families deserve solutions that are creative, flexible, and consistently reflect the needs of the whole child and family – the following recommendations can help us achieve that.

Recommendations 1 – 3: Prioritizing Prevention and Strengthening System Response			
	Themes	**Rationale**	**Recommendation**
1.	Services & Programs, Resource Navigation	Not all children and youth with complex needs are identified at an early age and as a result, without appropriate interventions, services, and family engagement, their needs and behaviors increase requiring greater services and supports from other systems as they get older. Children who are engaged in Early Intervention services consistently experience better outcomes over the course of their life. The first opportunity to identify these children is through screening and tracking a child's development. Act 212 (Early Intervention) established six categories of children who are at particularly high-risk of requiring early intervention services, those categories include: low birth weight, neonatal intensive care, prenatal substance exposure, referral by county children and youth agency, lead exposure, or experiencing homelessness. These categories mean the child automatically qualifies for regularly occurring developmental screenings and tracking until age three. Participation is voluntary, parents or caregivers may decline at any time. Regardless of whether a	Amend Act 212 (Early Intervention) to add new categories for screening and tracking up to age 3. The following five categories[19] should be added to Act 212 for screening and tracking: 1. Children with a parent or caregiver with mental illness or SMI; 2. Children with a parent or caregiver with intellectual disabilities and/or ASD; 3. Children who live in extreme poverty; 4. Children with a parent or caregiver currently incarcerated; and, 5. Children born to individuals who had previous involvement with a county children and youth agency within the past two, three, or four years. Notably, the first four categories are all considered Adverse Childhood Experiences (ACEs) for which there is significant data showing positive outcomes when interventions are implemented. Additionally, although prenatal substance exposure (including alcohol), is a critical category that is already in use, it should be re-examined to consider a broader range of scenarios. Some examples may include: where the mother was not using substances during pregnancy, but relapses following child birth or where the father has a history of substance use.

[19] These five eligibility categories were identified without the intent of excluding other potential categories, such as Intimate Partner Violence or Domestic Violence. It should also be noted that each one of these categories can be interpreted and defined in many different ways. Lastly, there are additional methods that should be strengthened to supplement the EI screenings and tracking required in Act 212. For example, providing training to pediatricians to conduct brief screenings like ages and stages during standard well-child visits birth to three.

Recommendations 1 – 3: Prioritizing Prevention and Strengthening System Response			
	Themes	**Rationale**	**Recommendation**
		child is determined eligible for Early Intervention services as a result of these screenings and tracking, the child and family are also referred to other supports and services as they are identified. There is growing interest in expanding EI tracking categories. Children experiencing homelessness was added in 2017 and legislation has been introduced in recent years to add post-partum depression as a category. The six categories in use now should be expanded upon to ensure no children and families slip through the cracks and do not get the help they need as early as possible. The earlier a high-risk child is identified, the more likely the child will experience greater positive outcomes and require less costly supports and services later in life. Although expanding screening and tracking categories is a good start, more is needed to ensure these children do not fall through the cracks. A strong family engagement and education component is needed combined with a bridge between early childhood services and school age services. Even if these children qualify for developmental screenings and tracking, without their families engaged and without a strong bridge between systems, these children may still fall through the cracks.	In implementing these, family engagement and education is critical. Assessments should be respectful of the family culture and conducted in a thoughtful and empathetic manner. Related to family engagement and education, services like Home Visiting and Nurse Family Partnership should be examined with the goal of increasing system capacity and expanding availability to every new parent or caregiver, including access to virtual home visitation. Lastly, it is important that we also increase and strengthen the connection between Early Intervention services and school-age services – this is a critical transition period which can make a world of difference. A warm hand-off is needed between these systems – an individual who can manage this transition and ensure the holistic approach of Early Intervention is not lost.

Recommendations 1 – 3: Prioritizing Prevention and Strengthening System Response			
	Themes	**Rationale**	**Recommendation**
2.	Services & Programs, Resource Navigation	Traditional funding structures and processes were identified as a root cause of challenges related to service provision, access to services, and navigation of resources. Youth with complex needs and their families have needs that require many different types of services and support – as a result, they have to interact with many different systems and entities. Each of those systems have their own goals, rules, and processes for eligibility, service provisions, admission/discharge criteria, target ages, etc. As a result, instead of youth and families getting services to meet their unique needs, the systems try to "fit" them into each of their boxes because that is what the funding stream dictates. The current structures are designed for the general population or youth and families with low to moderate acuity. They are not flexible enough and do not allow for a more holistic approach that youth with complex needs and their families actually need.	Establish a single, dedicated funding stream outside of the human services block grant that addresses all of the developmental, physical, and mental/behavioral health requirements of youth with complex needs. By placing these domains within the same funding stream, there is greater flexibility to create programs that better meet the needs of these youth. A fully holistic approach becomes more feasible because everything will be funded and coordinated under the same funding stream. This also creates the opportunity to establish new and innovative approaches which may not be currently available or at least not available with consistency across the Commonwealth. Until this can happen, develop written guidance to all child serving systems that will aid county agencies and funders to develop programming which crosses multiple systems. Additionally, fiscal experts are needed to provide direct technical assistance to local planning entities as requested for specific youth with complex needs. (See Recommendation 14 - Needs/Gap Analysis, Recommendation 11 - Insurer Processes, Recommendation 4 – Statewide Clearinghouse, Recommendation 6 – Integrated Child/Family Team, Recommendation 7 – Integrated Family Peer Specialist, and Recommendation 13 – Billing During Teaming)

Recommendations 1 – 3: Prioritizing Prevention and Strengthening System Response			
	Themes	**Rationale**	**Recommendation**
3.	Services & Programs, Resource Navigation	Children with complex needs and families often encounter multiple providers in the community and many more through inpatient or residential treatment. Each professional provides their own assessment of the child and family, and each doctor or psychologist typically provides diagnoses or recommendations. As a result, children frequently carry multiple and sometimes conflicting diagnoses and there are no clear recommendations for the next steps. Additionally, the quality of evaluations, the reasoning for diagnoses, treatments, and recommendations may vary. Evaluations represent a snapshot in time for that child and family and there is no mechanism to revisit and revise or eliminate diagnoses that are not accurate. Standards for each profession vary by license, setting, and service, which can lead to confusing and unclear next steps. When inaccurate diagnoses remain or unclear recommendations follow the child, the child and family are at greater risk of receiving inappropriate services or not being eligible for services that are needed. There is a risk of polypharmacy at a young age and long-term impacts to the child and youth.	Form a time-limited workgroup to complete a root cause analysis on unclear and conflicting diagnoses and recommendations. Review the current standards across professions and payors to find areas of consistency and differences, and develop best practice standards for assessments, evaluations, and recommendations. Develop a guide for planning team members to use when reviewing these types of records to foster greater understanding of the content. Establish a process through which children and families can request re-evaluation or question evaluation outcomes without retribution. Provide a mechanism to provide second opinions when requested that is consistent and can be implemented across settings. (See Recommendation 14 - Needs/Gap Analysis, Recommendation 4 – Statewide Clearinghouse, Recommendation 17 – Healing Centered State, Recommendation 6 - Integrated Child/Family Team, Recommendations 11 - Insurance Processes)

Recommendations 4 – 5: Information Sharing and Resource Navigation			
	Themes	**Rationale**	**Recommendation**
4.	Resource Navigation	Finding and accessing services and supports can be very challenging for a variety of reasons. For example, many child-serving systems are structured differently between state and local levels, these different structures result in different mechanisms to find and access services. Many systems have some iteration of how to access resources, but they also have serious limitations such as compatibility with other systems, ease of navigation, or are not always up to date. As a result, it is very challenging for professionals and families to identify what resources are available near them and to access them.	Develop a statewide, comprehensive and holistic clearinghouse of information on supports, services, and program availability in Pennsylvania. This clearinghouse should compile resources from all systems[20] into a "one-stop-shop." The platform should be accessible, easy to navigate for families and professionals, and should support referrals by professionals to services and supports specific to the needs of the youth being supported. PA Navigate[21] is scheduled to launch in January 2024. PA Navigate is currently structured around social determinants of health (transportation, food insecurity, housing, homelessness, financial strain, clothing, utilities, etc.). A logical next step for PA Navigate is to expand that platform to support the service and support domains identified in the paragraph above.
5.	Communication, Services & Programs, Resource Navigation, Family Engagement	Information critical to support planning efforts is often missed or delayed when concerns about confidentiality prevent systems and planning team members from sharing information. For example, some agencies/entities/providers will not accept another entity's release form. Families are required to sign releases of information repeatedly as new systems, practitioners, and team members join the treatment and planning efforts. This is burdensome,	A time-limited, specialized workgroup with subject matter experts from across systems, including legal counsel, is needed to examine current laws, policies, practices, and tools (including infrastructure) across systems and identify opportunities to support more effective and efficient information sharing across all child serving systems.

[20] References refer to "all systems" includes, but is not limited to medical, developmental, educational, child welfare, early intervention, juvenile justice, mental health, drug and alcohol.

[21] Please visit FindHelp.org to view the platform used by PA Navigate. Please visit PA NAVIGATE - HealthShare Exchange to read a description about PA Navigate.

Recommendations 4 – 5: Information Sharing and Resource Navigation			
	Themes	**Rationale**	**Recommendation**
		frustrating, and time consuming to all parties. Meanwhile the youth is awaiting their next steps. Systems and planning teams need to be able to quickly and completely share information among themselves to make informed decisions with the family.	Potential solutions may include providing template memorandums of understanding or template releases of information, which should include the ability for families to exclude specific parties as they choose. For example, the Centers for Disease Control and Prevention provided a template Memorandum of Understanding[22] to states participating in the Autism and Developmental Disabilities Monitoring Grant program. The template designates state development disability agencies "as an authorized representative of Data Provider for the purposes of collecting information from early intervention or education records." (See Recommendation 14 - Needs/Gap Analysis, Recommendation 8 - Comprehensive Tool, and Recommendation 9 - Transitions)

[22] Memorandum of Understanding between the State Agency under the Individuals with Disabilities Act (IDEA) and the State Autism Developmental Disabilities Monitoring Program (State ADDM) (cdc.gov)

Recommendations 6 – 9: Guidance and Supporting County Multi-System Planning Efforts

	Themes	Rationale	Recommendation
6.	Communication, Resource Navigation, Family Engagement	A significant challenge for effective planning, when multiple systems are involved, is the lack of a consistent central figure or structure at the local level. This results in a variety of issues, which include, but are not limited to key partners/resources missing from the table, key information/background missing from the discussion, information being dispersed across multiple people/systems instead of centralized within the team, lack of accountability, confusion around goals, lack of effective transition planning (as described in Recommendation 9), significant family stress related to not knowing who to talk to, etc. Additionally, although there are many highly skilled individuals across various counties and in some cases successful multi-system structures that some counties have built, it isn't consistent across the state and in some cases those successful areas could still use additional support and training.	Develop guidance to counties with funding to support an Integrated Child and Family Team. The guidance should provide a template which encourages counties to utilize evidence-based teaming models to be selected at a county's discretion. Regardless of the teaming model selected, team membership should include the youth and family, a family peer specialist, all child and family serving system partners, and be multi-disciplinary. The guidance should leverage existing structures/principles (for example Child and Adolescent Service System Program (CASSP)[23] / Systems of Care (SOC)[24]; identify best practices from across the state; provide training, tools, and templates for facilitating multi-system planning meetings. Within this structure a single person/s should be identified to organize, schedule, and facilitate planning meetings. This individual/s is also responsible for maintaining the complete biopsychosocial profile of the youth and their family. (See Recommendation 8 – Comprehensive Tool, Recommendation 5 – Information Sharing, Recommendation 2 – Single Dedicated Funding, Recommendation 5 – Information Sharing, and Recommendation 13 – Billing During Teaming)
7.	Communication, Resource Navigation, Family Engagement	Families are expected to navigate extremely complex systems and communicate clearly and effectively when they are also trying to manage their own emotions, particularly coming out of crisis situations.	Catalogue and assess the types of peer supports that currently exist, identifying their role, the context and system they work within, and what types of supports and training they are provided.

[23] Child and Adolescent Service System Program (pa.gov)
[24] Systems of Care (pa.gov)

Recommendations 6 – 9: Guidance and Supporting County Multi-System Planning Efforts			
	Themes	**Rationale**	**Recommendation**
		Families struggle with having the right support to assist them when they enter system(s). Two key features of that struggle relate to emotional support and navigation. Overlapping both is the importance of clear and effective communication. Having someone who has lived experience, who knows the systems and can help families engage effectively while avoiding re-traumatization is critical. There are peer and family-peer support services currently available, however, not all are available statewide, some exist in pockets, some are more robust than others, and it is unclear whether these peer supports are available across systems to meet the needs of youth with complex needs and their families. Systems need to more broadly recognize the value of peer supports and expand resources and availability of peer support positions across the Commonwealth	Using the information from the catalogue, develop an Integrated Family Peer Specialist role to participate in the Integrated Child and Family Team (see Recommendation 6 – Integrated Child and Family Team and Recommendation 14 - Needs/Gap Analysis) to support the youth and family as they engage with that team. Consistent funding to support this role must be identified and broadly supported by all systems.
8.	Communication, Trauma-Informed Care	Children and families often must tell their stories over and over. This leads to re-traumatization and a feeling of distrust or disconnect from supports. Children and families often give up when they feel like no one knows them or understands their history. Additionally, because of having so many different systems and supports involved, contextual or historical information is frequently lost, behaviors and symptoms are misinterpreted, or inaccurate information is carried forward with no ability to confirm/correct or fully	Establish a small, time-limited work group of providers, counties, those with lived experience, and DHS staff to review available tools and assessments that chronicle a child and family's life. This should include reviewing tools like the biographical timeline, wellness recovery action plan, child profile, Early Intervention assessment, Life Course, and functional behavioral assessment.

Recommendations 6 – 9: Guidance and Supporting County Multi-System Planning Efforts			
	Themes	**Rationale**	**Recommendation**
		understand what happened. Without a thorough understanding of the child and family, we cannot support them effectively and say a child "failed" when in fact, we were missing the reason the issue was occurring or we were not addressing the root cause.	The workgroup's goal is to select or develop a process and tool that can synthesize critical contextual/historical information and be used and understood across all child-serving systems and professions. This process and tool can then be used by families to tell their story without re-traumatization and ensure a full and complete picture of the youth and the family is presented consistently to new providers or team members. This workgroup would also offer recommendations around training and support for each of these tools so that a team can choose the best tool to meet the needs of the child/family. Create a consortium of specialists across the state and across systems who are fully trained and can support the use of this tool and process in the Integrated Child and Family Team. (See Recommendation 6 - Integrated Child/Family Team, Recommendation 5 – Information Sharing, Recommendation 17 – Healing Centered State, Recommendation 9 - Transitions)
9.	Services & Programs	Transitions are consistently a time of challenges and high risks for youth and their families. This can include seemingly small transitions like graduating from a service to much larger changes such as transitioning back to their home from a residential treatment facility or group home, returning home from a juvenile justice facility, from EI to school age services, or from child serving systems to adult serving systems. Planning Team members and providers are often challenged to think about transitions as more than a move	Develop a unified and proactive approach to transitions across systems which addresses the unique needs of each child and family and considers existing regulatory requirements. Support the idea that transition is not just the move from one placement or system to another but rather any change or transition in the child and family's life – a change in therapist, change in teacher, etc. Proactive transition planning should be integral to a youth and family's long-term goals and address the immediate changes and plan for the future. Transition planning is an evolving process, the plan

Recommendations 6 – 9: Guidance and Supporting County Multi-System Planning Efforts

	Themes	Rationale	Recommendation
		from a physical location to another location rather than globally like the change from one therapist to the next, or from one teacher to another teacher. Each of these impacts the child and family, and they often find themselves in crisis afterward because the transition was not carefully thought out and prepared for and the needs of the child and family were not addressed adequately. Youth with complex needs and their families often need clearer and more supportive transition plans due to their level of need, which may not always be recognized by the larger team. Without thoughtful transition planning, we risk destabilizing a child and family further and may restart a cycle toward crisis before supports and services can be fully implemented in the home (or other settings). Every youth is unique, and their transition plan must recognize that uniqueness. Although some transition plan templates or approaches exist, they are typically limited to a particular system and do not necessarily account for the level of complexity some youth present.	should be a living document and be re-evaluated regularly with input from the child and family. Planning should establish expectations in preparation for transition, ensuring a complete understanding of the supports, interventions, and tools to be used – including family supports, managing communication, transfer of information and teaming ahead of these transitional times. Transition planning should also prepare the team for ongoing support after the transition and continuously work to identify challenges as they arise, such as during emergencies, and identify solutions for those new challenges. Establish strong and open communication between the child, family, and team to ensure supports can be fully implemented. Transition planning should also be reviewed after each transition for lessons learned and ways to prepare for transitions in the future. (See Recommendation 5 – Information Sharing and Recommendation 7 - Integrated Child/Family Peer Specialist)

Recommendations 10 – 13: Administrative Efficiencies and Supporting Our Systems			
	Themes	**Rationale**	**Recommendation**
10.	Staffing/Workforce, Trauma Informed, Services & Programs	Human service fields across service sectors are struggling to maintain a well-qualified workforce across all systems. Challenges with recruitment and staff retention impact all levels of services from case management to direct delivery. Vacancies are at an all-time high. Colleges and universities have also seen a sharp decline in the number of students enrolling in programs related to human service fields. When entities can fill a vacancy, the ability to maintain the entry level staff remains a challenge. The extensive turnover does not solely exist with entry level positions, entities are also losing long-term experienced staff. This has, at times, resulted in staff being promoted before they're ready for greater responsibility, further exacerbating staffing challenges. The ability to recruit and retain staff is impacted by the lack of a livable wage, discrepancies between wages and the cost of higher education, and inconsistencies in wages across geographic areas and between public and private agencies. Additionally, the danger of the work, the nature of the job, and the impacts of vicarious trauma	Create strong incentives to build a qualified workforce willing to enter and remain in human service fields. Consider programs that assist those who are interested in the human services field to commit to that area of study such as: • Collaboration with high schools and colleges to create innovative programming that includes opportunities for workforce training and apprenticeships, with credit. • Develop programs similar to Child Welfare Education[25] and Leadership and Child Welfare Education for Baccalaureates[26] to support broader cross-system efforts to attract candidates into the human services field. • Collaborate with colleges and universities to develop targeted and rigorous courses of study in the human services field. • Fund loan forgiveness options for child and family service providers and/or human services providers. • Identify flexibilities for employment qualifications without compromising on quality such as military service, related fields of work, and lived experience. • Create opportunities across practices and positions which support licensing and career advancement tracks. Many disciplines require advanced training or supervision that is costly and difficult to acquire. For example, social work and counseling require supervisory hours for licensing, if an employer can provide those supervisory hours in the context of the job, then employees can stay with the organization and obtain licensure. This could also look like providing an avenue for

	Themes	**Rationale**	**Recommendation**
		on staff all compound the ability to retain staff. Formal education and job-related training are insufficient in preparing the workforce and equipping staff with the skills and knowledge necessary.	frontline personnel to advance such as moving from a direct support professional to a more advanced position by supporting tuition reimbursement or incentives. Supporting employee career pathways and advancement helps everyone and will increase recruitment and retention rates. Support staff already employed in the human services field through: • Standardized livable wages across the state that are equitable from county to county. • Provide retention incentives for all levels of staff such as: o Tuition assistance or comparable salary adjustments for staff pursuing higher education and/or necessary credentials; or o Longevity increases for staff who remain with their employer for certain periods of time. • Strengthen and expand upon existing benefit options for hourly and low-income workers. • Develop standards and career benchmarks that can promote competency and career advancement. • Provide staff with support and resources for self-care and work/life balance. Work with current child serving systems to develop and implement support and training opportunities for better supervision and retention of staff. Encourage the use of models of positive support, such as Sanctuary, Reflective Supervision, or Person-Centered Thinking across the board.
11.	Resource Navigation, Services & Programs	A root cause for many challenges faced by children and families is the variability with insurance coverage, navigating complex insurance mechanisms – especially	Establish a time-limited workgroup to identify challenging areas of interactions with and between insurers/healthcare payors and potential solutions to support easier and more efficient navigation of these already

Recommendations 10 – 13: Administrative Efficiencies and Supporting Our Systems			
	Themes	**Rationale**	**Recommendation**
		between insurers and healthcare payors, lack of consistency between insurers (forms, nomenclature, processes, etc.), and geographic disparities (partially a function of some system structures). The variation of responses from insurance companies results in lag times for service provision, often resulting in decompensation, thus requiring higher levels of service. This is seen in both child and adult-serving systems. While it is recognized that parent companies for insurances guide much of this, exploring this area to see what can be streamlined may provide opportunities for simplifying interactions with insurance.	complex systems. A structure is needed that supports greater consistency and alignment among insurers/healthcare payors. This recommendation applies to all insurers/healthcare payors and the relationships between those insurers: private insurers, Medicaid managed care organizations, between physical and behavioral health, between managed care entities within the same system, etc. Some examples of challenging areas to address include forms, approval/denial processes, processes in general, collaboration between insurers/healthcare payors, sharing data between insurers/healthcare payors, and nomenclature. One potential solution could be the creation of a universal form used by all insurers/healthcare payors to streamline the approval/denial process across systems. (See Recommendation 13 – Billing During Teaming, Recommendation 14 - Needs/Gap Analysis, Recommendation 12 - Provider Credentialing)
12.	Resource Navigation, Communication, Services & Programs	An important benchmark for high-quality healthcare is "credentialing," which is the process of assessing the academic qualifications and clinical practice history of a healthcare provider. This helps ensure providers have the	A better balance is needed between the burden on providers to prove their qualifications and the interests of insurers/healthcare payors to ensure funding is going toward high-quality healthcare. A time-limited workgroup of subject matter experts and stakeholders is needed to catalogue what requirements and practices are currently in place and identify potential solutions which help to balance these interests. Below are two potential solutions:

Recommendations 10 – 13: Administrative Efficiencies and Supporting Our Systems			
	Themes	**Rationale**	**Recommendation**
		appropriate qualifications, training, licensure, and ability to practice medicine.[27] In Pennsylvania, in accordance with state and federal laws, insurers/healthcare payors establish their own parameters for the types of credentials they require for a provider to enroll in their network. Notably, many, if not all, insurers in Pennsylvania are subsidiaries of larger, national companies that determine the credentialing practices and rules for their subsidiary. In addition to the variety of credentialing requirements providers must meet, the processes themselves vary from insurer to insurer. This variability is problematic because it results in providers spending a significant amount of time and resources complying with each insurer's requirements and processes, it also results in significant duplication. Rapid changes in personnel exacerbate this issue resulting in additional time away from the important work providers were trained to do.	• Establish uniform credentialing requirements across insurance companies; or, • Centralize the credentialing process for all providers and insurers. A "one-stop-shop" for providers and insurers to go for credentialing purposes. Notably, there are number of other states that have already established a centralized credentialing system and process.[28]
13.	Services & Programs,	Currently, certain practitioners cannot bill for time with a child and family if they see them concurrently with other practitioners. This results in a child and family having to	Federal and state rules and policies should be closely examined to identify and apply funding flexibilities to appropriately fund practitioner time spent

Recommendations 10 – 13: Administrative Efficiencies and Supporting Our Systems			
	Themes	**Rationale**	**Recommendation**
	Resource Navigation, Staffing/Workforce, Communication	share their story multiple times – something that can retraumatize all parties. This has a negative effect on the mutual understanding of the practitioners and systems interacting with the child and family. For children with complex needs and multi-system involvement, the negative impacts are compounded because of the number of practitioners with whom they interact. The teaming and planning efforts required for these children are extensive and it is reasonable to expect, especially during the staffing shortage, to compensate these practitioners when they participate in teaming efforts. Some examples of these teaming and planning scenarios include: the earlier recommendation regarding forming an Integrated Child and Family Team at the county, Family Based Mental Health Services, Intensive Interagency Meetings, Complex Needs Planning Meetings.	during intensive teaming and planning efforts specifically for youth with complex needs. Potential solutions may be teaming or bundled rates. Early Intervention uses teaming codes allowing different disciplines to meet with the child and family and to bill under that code. The Early Intervention model should be considered when examining this recommendation. (See Recommendation 11 Insurance Processes)

Recommendations 14 – 16: Understanding System Capacity and Direct Service Solutions

	Themes	Rationale	Recommendation
14.	Services & Programs	It is currently unclear what the true need for and availability of services and supports is at the local and statewide levels. We know there is disparity between rural/urban, large/small counties, etc. This is particularly true for youth with specialized treatment needs. Planners at all levels need better information to make data driven decisions regarding the services and supports needed by youth with complex needs and their families.	Conduct a comprehensive needs and gaps analysis across all relevant child serving systems. The analysis should address: • Whether there are particularly successful services or models and where they are available; • Whether and where demand may outstrip the availability of services and supports; • Whether there is a need for additional levels of care, step downs, or adjusting existing levels of care for a better bridge between facility-based care and community-based care / return to home (e.g. a setting for young adults which supports independent living, but also incorporates intensive behavior supports; • Whether there are evidence-based practices missing or which need to be expanded upon; and, • Whether and where specialty programming is needed and for what specialties (genetic disorders, fire setting, PICA, etc.). This analysis should also move beyond quantitative analysis, it should also include qualitative analysis to determine what services, supports, and models are most effective. In addition to helping local and state level planners make informed decisions, this analysis can also be used to inform the implementation of many of the recommendations contained in this report. (See Recommendation 5 – Statewide Clearinghouse, Recommendation – 2 Single Dedicated Funding)

Recommendations 14 – 16: Understanding System Capacity and Direct Service Solutions			
	Themes	**Rationale**	**Recommendation**
15.	Services & Programs	The continuum of care and transitions from facility-based care and back to the community, or moving from the child to adult system, is a consistent challenge for many youth with complex needs. Family-based services are not always equipped to respond to the myriad or acuity of the challenges these young people face. A program is needed to provide intensive supports around recovery, coordination, medication management, behavior support, and crisis support, in addition to other supports as needed. This intensive level of service can be successful in preventing re-institutionalization, loss of placement, support children and families in maintaining in the community setting and help bridge transitions to the adult system.	Create a multi-disciplinary team of professionals (e.g. a treatment service like a Dual Diagnosis Treatment Team) who are well equipped to treat and coordinate services and supports for youth with intensive multi-system needs. At a minimum this team would include a medical professional (nurse or similar), a mental health professional, behavior support, and a care coordination component. This multi-disciplinary team could be used to support individuals with complex needs. (See Recommendation 14 - Needs/Gap Analysis, Recommendation 6 - Integrated/Child Family Team)
16.	Services & Programs	Children with complex needs and their families often present to services during a crisis. They have often tried other services or have cycled through emergency rooms and inpatient hospitalizations with little time in between. They could be reintegrating into the family setting from another out of home setting and that transition can present unique needs and considerations. Family-based mental health services (FBMHS) are designed for children who are at significant risk of out of home placement. This presumes that the child has either had or is imminently at risk of no longer living in a family setting. Because of this, families with younger children may not be able to access the service and those with older children (generally, 11 years and older) may already have a long history of struggles. Because of the particular model that	Increase the flexibility and scope of Family Based Mental Health Services by: Reviewing the medical necessity criteria for FBMHS and exploring if the "at risk of out of home placement" is a required criteria or if there is a more flexible interpretation that can be applied for younger children who would benefit from this service. Consider developing tiers within FBMHS: one that is for the traditional FBMHS structure, one for a more advanced acuity and one for specialized needs such as significant trauma, problematic sexual behaviors, developmental disabilities, psychosis, etc. Explore ways to work with broader groups more consistently across the state, such as younger children or those with ID/ASD. Provide additional adjunct services within a tiered system of FBMHS to better support the family such as the addition of IBHS/ABA type supports or more robust crisis planning.

Recommendations 14 – 16: Understanding System Capacity and Direct Service Solutions			
	Themes	**Rationale**	**Recommendation**
		FBMHS uses (Eco System Structural Family Therapy) patience is needed to build relationships with a strong emphasis on gathering history, etc. Accomplishing those things takes time and may not meet the immediate needs of the family. This model also does not address behavioral interventions and parent or caregiver training around those which can be necessary when working with children with complex needs. Additionally, FBMHS does not typically provide supports for younger children (below 10) or those with ID/ASD, each of which present unique challenges to the structure of FBMHS. There also is no tract for children and families with significantly complex needs such as trauma or sexually problematic behaviors and families may be reluctant to use the service if they feel their needs are too complex for the service.[29]	The comprehensive needs and gaps analysis in recommendation 14 will inform the implementation of this recommendation. With that said it may be easier and more expedient to adjust this service as described in the meantime. (See Recommendation 14 - Needs/Gap Analysis, Recommendation – 11 - Insurance Process, Recommendation 13 – Billing During Teaming)

[29] There are FBMHS providers who do serve younger children or children with specialized needs; however, it is not consistent or widespread.

Recommendations 17 – 18: Strengthen Trauma Comprehension and Application

	Themes	Rationale	Recommendation
17.	Trauma-Informed, Services & Programs, Staffing/Workforce, Communication	Nearly all children and families that we support have experienced some level of trauma, many have experienced extreme trauma over the years. It is important that children and families are treated with a positive regard that is respectful of their lived experience. A healing-centered environment at all levels recognizes that some behaviors and outcomes that have been seen as negative are actually symptoms of underlying and unhealed trauma and must be addressed to assist the child and family in moving forward. Currently, there are many interpretations of trauma informed care across all system partners. As children and families move through these systems, they may receive trauma informed care that has been implemented with varying levels of fidelity. This inconsistency makes it difficult for children and families to find a path toward healing and engage with supports and services.	Develop uniform standards to make Pennsylvania a healing-centered state. This should include shared language, cultural competence, definitions, and technical support to ensure fidelity. Entities across all levels of service systems should commit to providing basic and advanced trauma training as well as developing internal assessment training standards and supervision consistent with trauma informed care. Additionally, recent statewide efforts, such as HEAL PA,[30] have resulted in significant forward movement with trauma-informed care in Pennsylvania. There continues to be many different groups working on trauma-informed care, and continued leadership at the highest levels is needed to bring these groups together to ensure consistency and resources are brought to bear. (See Recommendation 5 – Information Sharing, Recommendation 6 - Integrated Child/Family Team, Recommendation 18 – Judiciary Trauma Training & Application) 

[30] HEAL PA

Recommendations 17 – 18: Strengthen Trauma Comprehension and Application			
	Themes	**Rationale**	**Recommendation**
18.	Trauma Informed Communication	County judges operate differently from county to county. This applies to the use of trauma-informed language and application. Allegheny County is an example of a family court system that has applied trauma-informed strategies and could provide input to other counties.	Training should be made available for judges in both juvenile justice and child welfare systems regarding trauma and how to apply trauma-informed strategies consistently county to county. This training should include continuous opportunities for review, monitoring, and coaching to ensure fidelity. The culture of the particular workforce being trained should be accounted for with respect to content and trainer – consider whether the audience is comprised of juvenile justice professionals or child welfare professionals. (See Recommendation 17 – Healing Centered State)

Appendix A: Background, Analysis, and Findings

Background

The Pennsylvania Department of Human Services (DHS) recognized a need to understand and improve service delivery to children, youth, and young adults with complex needs and their families. Prior to making any changes, it was crucial to gather information from those families and children, as well as child and family serving systems across Pennsylvania, to learn what is and is not working. A series of surveys were sent and focus groups conducted from December 2022-May 2023 with families and youth, residential providers, behavioral health managed care organizations (BHMCO), county agencies, education system representatives, behavioral health primary contractors, and hospital systems. The surveys and focus groups were managed by ASERT (Autism Services, Education, Resources and Training)

Commissioned by DHS, ASERT is a partnership of medical centers, centers of autism research and services, universities, and other providers involved in the treatment and care of individuals of all ages with autism and their families. ASERT was developed to bring together resources locally, regionally, and statewide. Their mission is to innovate, collaborate, and lead to improve access to quality services, data, and information; to provide support, training, and education in best practices; and to facilitate the connection between individuals with autism, developmental disabilities, and special populations, families and key stakeholders at local, state, and national levels.

ASERT utilized two methods to gather data; surveys and focus groups. Data was collected around eight areas to inform this work moving forward:

- Identification of children, youth, and young adults with complex needs and the changes in this population over time;
- Barriers in service planning and provision;
- Service array;
- Education;
- Transition and discharge planning;
- Family and youth engagement;
- Social and diagnostic history; and,
- Successful strategies and opportunities for improvement.

DHS identified representatives from each of the participating child and family serving systems, as well as connections to family and child advocacy groups across PA to which ASERT sent invitations to online discussion boards and surveys. Surveys were sent to child and family organizations like Youth Advisory Board and National Alliance on Mental Illness (NAMI), then sent directly to youth and families. Hospital systems received surveys and inclusion in the focus groups through the Hospital Association of Pennsylvania (HAP). There were 97 people who participated in focus groups, 45 hospital staff respondents, and 138 family/youth

respondents. From this data collected, five themes emerged, which are communication, resource navigation, services and programs, trauma informed support, and staffing/workforce. Family engagement was included in all of the themes.

The full ASERT report can be found in **Appendix B**.

The Complex Needs Steering Committee identified what the ideal system would look. Through this process, the following Desired Future State was developed:

In Pennsylvania, we believe all youth with complex needs and their families* will have the opportunity to access timely supports and services that are individualized, trauma-informed, holistic, respectful of race and culture, family and youth driven, and available in their own communities.
This will be evidenced by:

- A focus on youth and family engagement while honoring their voice and choice.
- Establishing and maintaining a well-supported and qualified workforce.
- Collaboration and shared understanding across systems to support planning and shared goals.
- Systems which prioritize early identification, proactive intervention, and service options that support family stability, safety, and the youth's healthy development and meaningful relationships which support life-long connections.
- Teams engage in ongoing and integrated planning that supports the everyday needs of a family and youth (housing, education, transportation, scheduling, access to medical care, etc.).
- Service delivery is coordinated, accessible, timely and includes support throughout the process.

** Family is defined by the individual*

Once data collection was complete, DHS, in partnership with the University of Pittsburgh Child Welfare Resource Center (CWRC), collaborated to facilitate discussion regarding children, youth, and young adults with complex needs and their families to improve all family and youth serving systems. To ensure family and youth, as well as the systems that serve them, had a role and voice in the process, DHS provided CWRC with a large workgroup of people dedicated to working through the five theme areas.

The kickoff was held at the CWRC in Mechanicsburg on July 19-20, 2023, with small workgroup meetings held weekly thereafter. Blueprint workgroup members were facilitated through a change management framework to identify strengths and barriers, identify root causes, and make recommendations for change. Blueprint workgroup members came together at the CWRC on October 19-20, 2023, to finalize recommendations.

Themes

As discussed in Section II, focus groups and surveys were used to gather data around the needs of children and families across the state. Through the focus groups and surveys, five themes emerged from all the child and family systems. They are:

- Communication
- Services and programs
- Resource navigation
- Staffing/workforce
- Trauma informed supports

A key consideration for all five themes is the importance of family engagement throughout all five themes. Using the data collected during small workgroup meetings, employing a crosswalk of common data across all four of the groups and focus group/survey data, strengths and barriers were identified. The data collected is directly from the field and shared in the language used by those providing it, either through direct quotes or paraphrased with their permission. This is broken down by theme below and include strengths and barriers identified:

Strengths & Barriers Analysis

Communication:

- **Strengths**:
  - Systems recognize the challenges and want to work to improve communication.
  - There are mutual goals across systems to more intentionally communicate and collaborate.
  - Pennsylvania is diverse with a variety of providers and local level associations and advocacy groups, offering opportunities to come together for information sharing.
  - Child and family serving system partners value families with lived experiences.
  - Technology innovations have been implemented that can support enhanced communication.
  - Resources and access to interpreters to assist with language barriers.
  - When team members are together at the table everyone does well communicating issues and what has been tried. The passion for helping the child is there, and there is a willingness to ask and answer hard questions.
  - CASSP system when working as designed. There are other meetings similar to this that work when there is not a CASSP coordinator.
  - County team getting alerts from the Managed Care Organizations (MCO) when there is a child that is experiencing a 24 hr. Emergency Room (ER) stay.
  - Complex case conferences, and other regularly scheduled venues that bring systems together.
  - Draft OCYF regulations have been expanded to include the family and youth voice.

- **Barriers**:
  - Meeting procedures – Roles & Responsibilities
    - Not all systems are invited to the table at times and/or only those currently involved with the family. Impact on decision making and associated costs.
    - Lack of identifying roles and responsibilities of those at the table. Why are they there and what can they do? Builds trust.
    - Scripted information on what they do, but not how they can help that particular family.
    - Prioritization of stakeholders and system partners varies resulting in a certain lack of urgency.
    - Correspondence and presence in meetings don't always lead with positives. Focus on what you can bring to the table rather than what you cannot offer.
    - Definition of complex case is different between systems. Education vs. Child Welfare vs. Mental Health, etc. View on diagnosis can vary and lead to a different approach to services.
  - Confidentiality and Privacy Restrictions
    - Systems & Departments limited in what they can share with each other. Sometimes it is a perceived inability to share. Negativity can enter the collaboration.
    - Lack of sharing can lead to key information missing which may impact the services being recommended.
    - Age of consent varies from system to system.
  - Centralized Resources/Hub for Information
    - Need for an integrated plan, prioritizing needs and goals shared between systems.
    - Lack of a centralized location where cross-system and cross-county information can be stored and accessed (i.e., electronic records). System/organization databases are isolated.
    - Confusion on who regional system leadership is and how to contact them.
    - State initiatives that conflict and/or confuse professionals and families. (i.e., Trauma-informed approach).
    - Lack of a message board or listserv to reach out to system partners to share success and needs.
  - Family/Youth Engagement
    - We start with the professional's schedules, not the families.
    - Assumptions that families understand something if they are not asking about it.
    - Lack of information about the family (i.e., primary language, impairments, processing ability) leads to poor communication.
    - Lack of preparation for families prior to meetings.
    - Families/Youth feel excluded from service planning and don't feel they have a voice in services being offered.
    - Lack of purposeful and intentional check-ins with families to get feedback on how services are going for them and prioritization of services.
    - Need to consider when there are too many services in place for families.

Services and programs:

- **Strengths**:
  - There is a desire to implement successful and creative programming and supports
  - Systems share the goal to collaborate and learn about other systems' services and programs.
  - There are some very successful high-quality services and programs available in some counties for children and families (e.g., early intervention, IBHS, emotional support school placement, trauma therapy).
  - Funding to support children with complex needs exists, we just need to develop strategies to use it more effectively.
  - Pennsylvania has a robust early childhood service array.
  - Pennsylvania's five (5) children's hospitals. Some states do not have one (1) children's hospital.
  - Expansion of beds with in some 24-hour levels of care of note the beds for youth with Autism and Intellectual Diagnosis
  - The Tips program at Hershey where Primary Care physicians (PCP) can consult with a psychiatrist to triage the PCP's med management of the child until a psych appointment is available.
  - Evidence based child welfare practices like multi systemic therapy (MST) and Functional Family Parenting (FFP)
  - School based behavioral health and prevention programming.
  - Federal shift in funding (Family First) leading to increase and more services related to prevention.

- **Barriers**:
  - Service and Program availability
    - Limitation of appropriate placements and services.
    - Long waiting lists often result in decompensation and a need for higher levels of care.
    - Limited service and program availability in locations geographically close to families.
    - A lot of youth with behavioral health problems because of home challenges. If caretakers' mental health needs are addressed, it would impact challenges for youth.
    - Frequent denials or refusal of services based on the need being "too acute."
  - Transition to Adult Serving Systems
    - Moving from child to adult serving systems is a big challenge for families and older youth.
    - Many programs, including evidence-based programs, don't cross over to adult system.
    - Needs of transition-age youth are complex and include the need for housing complicated by the grey area of 18–21-year-olds caught between child and adult serving systems.
  - Funding
    - Lack of Funding flexibility to use practice to show progress and allow for new funding opportunities.
    - Funding needs to follow individual and unique family needs instead of fitting families into limited EBPs.
    - Base-funding increase needed.

- Private insurance not funding crisis services.
- Need an integrated funding model to create a stabilization home/group home that assessments can be done and not necessarily fit into a Medicaid treatment service.
- Lack of direction from State agencies about moving forward to support a child/family and making the funding work. Need for state agency action to have an impact on this work.
- Who is ultimately responsible for ensuring that the child gets what they need, funding available, waive whatever needs to be waived to secure funding?
- Is there a better way to work with counties to share funding/programs that require large populations. Ex. EBPs that cycle through children quickly and may need a large number of children serviced to secure staff/resources.

o Rules & Regulations
- Different parts of DHS licensing the same entity/provider.
- Lack of cross-system education and training.
- Various interpretations of regulations cause inconsistencies in service provision, delivery, and access.

o Assessments
- Assessments are not conducted from a holistic approach, considering the lifespan of the child and family. Child is "patient" and family dynamics are not always incorporated into the assessment and service provision. "Medical Model"
- Lack of focus on attachment and ability to establish relationships. Need to identify root causes for children and families.
- Missed diagnosis and how one system partner will translate the information.

o Education
- Servicing students' MH needs in the Least Restrictive Environment (LRE) is often limited to the availability and/or strength of a Community School-Based Behavioral Health (CSBBH) Model in schools; some schools have partnered with agencies to support this level of care, while other districts used finite ESSER Funds to develop the model, and now it's likely to be pulled from many students accessing this supports found within it.
- Others have relied heavily on other referral-based services such as School Assistance Program (SAP), and possibly outpatient care available in school to help students in need of MH (or other counseling). But as with many things, it is largely a siloed practice.
- Education around the strengths/limitations regarding med management should be more robust so that educators have a better sense of their efficacy for students accessing that as part of a treatment plan.

Resource Navigation:

o **Strengths**:
- The system can be effective with transparency and a willingness to be open, seeing families and youth holistically.
- Pennsylvania's Department of Human Services-wide Child Welfare Information System and its potential to integrate with all systems.
- Openness of PA Department of Human Services (DHS) in acknowledging insurance challenges.

- Influx of capacity building institutes and potential to enhance cross-system awareness and training.
- Insurance companies are making progress in connecting social, behavioral, and physical health services.

- **Barriers**:
  - *By professionals:*
    - Regulatory requirements, including documentation, place unnecessary burdens on staff's efforts to navigate various systems. System regulations are, at times, in conflict with one another, ex. School-based Mental Health and Education.
    - Lack of consistency in staff qualifications and need for training support.
    - Need for professionals and families to know about resources early on (preventative).
    - Evaluators/psychiatrists do not know the actual availability or timeline of the recommended service. There is often not someone who helps the family with the set-up/finding of these services and the family is left confused. No designated person to assist, similar to someone in a CASSP Coordinator role.
    - Education System – Schools are cautious in suggesting a community-based service. If it is recommended but not approved, the school may be liable to pay for the service. This can create frustration when it is a home-based service and can lead to trust and relationship challenges with the family.
    - Schools without a model that employs something like a dedicated social worker or MH liaison often struggle to bridge support across settings such as the educational environment and the community. School counselors do not have the time to provide 1:1 counseling as if often believed by the public. Often, classroom teachers do not possess adequate knowledge of systems beyond their role as educators. This is a limiting factor when we consider that educators are second only to families with time spent working with youth.
  - *By families:*
    - Need to build capacity of families early, first couple of years of parenting. Build community support and self-advocacy, natural support.
    - Families are unable to find providers who are trained and also covered by their insurance in a location that is geographically close.
    - Lack of explanation to families (what the services are, trajectory of services, why are they being referred to, etc.). IBHS vs. ABA services, combinations, etc. Informed decision-making. Services on Autism side and IDD side, families are confused about what system to access services. Complicated further by child vs. Adult serving systems. Lack of explanation around recovery and resiliency.
    - Families get lost in the system with no awareness of what is available, what is needed to access services, or how to get them in a timely manner. Identification of what resources exist and how to access them is key. Often don't understand the relationship between family and youth systems and services, as well as the role of insurance, and vice versa, system providers understanding the family needs and how it corresponds to available services and if those services are covered by insurance.

- Burden falls on families expected to repeatedly inform the school, providers, agencies and insurance about the past and current circumstances. Different points of entry to systems, this also means their story must be told multiple times.
- Multiple waiver supports in the family and no ability bring them altogether. Need someone who can understand and be broker for family in helping navigate and pull together.
- Overwhelming and Complex - Lack of information shared and also not explained in a way that a family can understand. Treatment plans are being worded too clinical and the need for them to be more family friendly.
- Resources exist, but not comprehensive and/or accessible as needed. (Ex. 211 – but does not have everything) No longer hard copies, online only. It can also be inaccurate and leads to frustration for family and workers. Need for a resource list that can be shared with providers/facilities that are located at a distance.
- Aftercare planning considerations and sharing across Counties. Central repository. Ex. Interagency coordinating council (IU 3-5) OCDEL requirement. Ex. Finding Your Way in PA. Initial intention of PA 211. If a database and repository is developed it needs to be clear about where resources are available and keep information up to date and have a warm hand off is in place.
- Complex needs children from adoption disruptions – there is limited support provided during the foster to adopt process. Following finalizing the adoption there is only a few months of support if that and then post permanency support most often can only be found through the Statewide Adoption and Permanency Network.

o *Insurance Impact:*

- Lack of awareness in navigating complex insurance processes for both families and providers with limited experience. This can create silos.
- Insurance can be a barrier due to multiple entities, geographic parameters, etc.
- MA providers not allowed in network- third-party will not provide appropriate documentation to allow MA to pay.
- HIPP- Health Insurance Premium Payment Program- have private and qualify for MA- struggles with billing when families "flip to HIPPP"- agencies passing the buck to one another, can rise to state needing to sort it out. Once involved with HIPP, getting back to managed care is nearly impossible.
- Level of clinician that can bill MA for private insurance will vary. Multiple occasions of insurance willing to pay for certain services on increased services and provider not willing to do so.
- Private insurance doesn't provide letters to confirm that a service is not covered. School and insurance play tag and there are many barriers in getting services.

Staffing/Workforce:

- **Strengths**:
  - There are dedicated practitioners striving to provide services across the state and improve the experiences for children, youth and families.
  - There are innovative efforts being made to retain and recruit staff amid the current staffing crisis.

- System partners are reassessing the qualifications of the workforce as a result of staffing shortages. Ex. Minimum requirements and how regulations impact hiring.
- Peer support in certain areas of the system allows those with lived experience to enter the workforce.
- The younger workforce encourages leaving work at work, setting better boundaries for the workday, leaving on time

- **Barriers**:

  - Lack of qualified staff results in a reluctance to take more complex cases. Turn away children due to a lack of confidence in staff's ability to manage complex youth.
  - Regulation and licensing barriers to who can provide behavioral health services and what is prohibited within that service.
  - Misconceptions around regulations and impact on staffing.
  - Care teams need more EBP trainings (not just clinicians)
  - Some young people with complex needs understand how to have staff investigated. This can then impact on other staff needing to step in to work that youth. This can lead to a youth being denied in future settings due to the history of this behavior. Complex and multilayered....one decision can have ripple effect.
  - Barriers around clinical training, workshops on actual cases, critical thinking, and clinical support on the front end of CPSL issues.
  - Impact of regulations requiring certain number of hours, topic areas. Can be up for interpretation by organization leadership. Qualifications required for what we need staff to do, BA level degree and all they do is paperwork.
  - Promotions to supervisor earlier than possibly ready due to a lack of staff, retention challenges. Situations where staff can't grow as supervisors and/or clinicians due to still carrying caseloads, managing non-supervisory work. Individuals are apprehensive, possibly do not have developed skills (ex. soft skills), and do not always have understanding for the system and families.
  - Providers have relatively low pay compared to other careers with a lack of pathways to licensure and career advancement that others in the helping field may have.
  - Salaries can't compete with other sectors.
  - Staff have debt and are unable to repay student loans in certain areas of the child/family serving system.
  - Work is dangerous, stressful, low paying.
  - Front-line work is not a career anymore. Diminishing number of students entering high ed. in general, but specifically education programs. Decrease in number of students entering human service academic programs and the field. Similar for graduate programs.
  - Professionalism is not clearly defined, resulting in a breakdown of facilitation of interventions. Profession is not valued or promoted. Need to professionalize areas of this field. Certifications in areas. Curriculum-based track towards a certification that leads to recognition, higher pay. Residential program positions are not viewed through a professional lens. They are not given the same respect or compensation as those with the "title" or "licensure,", yet they are the staff who are with the youth more than the other staff and have the greatest opportunity to impact the youth.

- Psychiatrists, even those trained in PA, are often leaving PA to work in other states. Many reporting costs of liability insurance in PA is too expensive to practice in our state.
- Lack of training focused specifically on Family Engagement, holistically looking at family dynamics and roles. Professionals not engaging in true engagement due to fear and/or capacity challenges.
- *Supervision:*
  - Lack of strong clinical supervision.
  - Need for reflective supervision to support workers, supporting families.
  - Self-care needs to be prioritized for staff, especially direct service staff, to understand their own baggage/ privilege/ trauma and how it impacts their work with families.
  - Need enhanced recruitment efforts for diverse staff.
  - Lack of shadowing and coaching of new staff. Sometimes what they learn in an academic setting doesn't translate to skills needed in the workforce.

Trauma informed supports:

- **Strengths**:
  - There are training courses available across the state to support this need.
  - There is a desire to implement creative programming and support using a trauma-informed approach.
  - Pennsylvania's plan to become trauma informed, Heal PA
  - The education system acknowledges trauma through social/emotional learning awareness. CASEL – Collaborative for Academic Social Emotional Learning. PA uses model and PA Career Ready Skills Continuum
  - Getting better at providing behavioral health support prenatally when moms are experiencing trauma, reduce cortisol levels.
  - By looking through a trauma-informed lens we are diving deeper into also looking through cultural lenses and understanding things from a point of view never acknowledged before- increased cultural humility- this leads to empowerment of the families/youth we work with.

- **Barriers**:
  - Supports and the protected time dedicated to that. Move from theoretical approach to implementation and modeling.
  - Different definitions and perspectives around trauma informed. Not accepted by all providers/staff- both in MH/SUD and outside other professional fields. There is not enough consideration of trauma history in the planning and provision of care for children and youth with complex needs. There is a lack of holistic approach to providing care. Families and children who present with complex needs often have extensive trauma histories that affect behavior, mental health, and other issues. Lack of connecting the 'dots' over the lifeline that can help understand all the adversities that a child/family may go through resulting in possible misdiagnosis and lack of appropriate treatment interventions.

- Educators have embraced this concept, but many have fallen short of applying its tenets to their school policies and classroom management styles. Public embrace of "Zero Tolerance" does not allow for a truly trauma-informed approach to thrive. "Consequences" must be dealt with for restitution to occur. Neither of these practices is trauma-sensitive, and it compounds issues for many of our youth experiencing some sort of MH concerns along the continuum of need.
- Impact on Staffing theme area: Kids with trauma are more likely to try to sever attachments which can lead to accusations and reporting. Staff who are not well trained are more likely to take this very personally and leave. It's like a cycle that cannot be broken until the root cause is addressed.
- Translating the trauma and its impact on children, youth and families is a skill that requires more cultivation. For example, no one understands the concept of 'disenfranchised grief' when children are removed from their homes and put into placement resulting in a fractured spirit, becoming identified by a diagnosis or by system status, and not ever grieving the losses associated with placement.
- Little to no support for staff in dealing with vicarious trauma or compassion fatigue Sometimes we don't acknowledge the need to take care of ourselves and give permission to colleagues to say they are not okay.
- So focused on the maladaptive or abnormal behavior, we forget what is going well, what works for families and youth, what is important for critical development for children/youth (negative things follow children for life at times)
- Lack of acknowledgement further exploration into the intersection of culture and trauma.
- Particularly for kids with complex needs, attachment is really lacking in a lot of service provision. Limitations placed on time for therapy to address trauma. Bare minimum being provided even if it is in the scope of service to extend time.

Key Findings

Once the groups identified the barriers, they were prioritized based on the areas which, if improved, would lead to the desired future state for services to children and families with complex needs (See Section III). Root cause analysis was completed with all four groups around the prioritized barriers. It should be noted, many of the root causes identified crossed over multiple theme areas with impacts intersecting between systems. These findings are highlighted below:

- Legislation impacting child and family serving systems is interpreted rigidly by system partners, resulting in the development of regulations that limit flexibility in funding.
- There is a lack of knowledge by system partners on what other systems can offer children and families, and what limitations or opportunities may exist. This may be interpreted by system partners as a reciprocal lack of cooperation and resistance.
- A family's choice in determining which system partner is engaged in the planning process is an often-overlooked barrier to working collaboratively across systems. Stigmas related to system involvement may limit the desire for family to engage with professionals.
- Expertise in navigating and supporting families in Pennsylvania's child and family serving system is underutilized. System partners value the philosophy and principles of the Child and Adolescent Service System Program (CASSP); however, they acknowledge many counties across the commonwealth are no longer resourcing the CASSP Coordinator position or have varied interpretation of the position and related duties.

- System partners define and approach children with “complex needs” differently, often driven by a diagnosis impacting service and program provisions.
- Interpretation of confidentiality laws by professionals serving children and families create communication barriers. Confidentiality laws are often not connected at the federal level (Ex. HIPPA, FERPA are not aligned with state laws). Litigious society results in a conservative approach by professionals when sharing information to support families. Engagement and communication with families around age consent laws and their impact on service delivery are areas needing particular attention.
- Cross-system, integrated plans to prioritize the needs and goals of families are underutilized. There is no centralized hub of information and/or ability for system partner’s case management systems to interact with one another. The use of data and targeted reports to identify trends and needs within the community is not occurring consistently across counties.
- Inconsistencies in types of programs available and/or willingness to fund programs from one county to the next exist, and the staffing crisis has impacted the innovation of new programming.
- Early, preventative measures to identify children and families with complex needs exist; however, those programs identifying needs can feel siloed from the child and family serving systems with an inability to navigate the most appropriate referrals for families. (ex. Early Intervention (EI) programs)
- Bridge and step-down programming exists across the Commonwealth but is not universally accessible or successful.
- There are decision-making complexities with providers determining if they have the capacity and/or space to accept children with complex needs. Children with aggressive and high-risk behaviors may be involved in confrontations with front-line staff, potentially leading to staff placed on leave while internal and CPS (Child Protective Services) investigations occur. This interaction can lead to a lack of staffing needed to support an appropriate staff/child ratio and a provider’s willingness to accept children with particular behaviors due to concerns for staff/child safety and minimizing risk. This situation can result in children being labeled as high risk, which negatively impacts their ability to be serviced in the most appropriate setting. These concerns are shared by the juvenile justice system partners and can result in children being detained in secure settings with subsequent charges being filed.
- There is a perceived lack of flexibility regarding the DSM-V meeting a family's diagnostic needs. Family and child experiences are considered and made to fit into DSM-V categories to initiate services and program eligibility. The impact of diagnosis can follow a child throughout their lifetime and impact them well into adulthood. (Ex. Military enrollment). More accountability is needed around differentiating trauma and the need for additional diagnosis to pull down funding. Outreach to the PA Psychiatric Leadership Council would be beneficial in further addressing these challenges.
- There is a perception that funding does not follow the child/family to best meet their needs, but rather the child/family needs to follow the funding to determine what program/services will best meet their needs.
- The Medicaid program does not allow for an integrated funding model to create stabilization settings for youth while comprehensive assessments are conducted as necessary to access treatment services.
- Servicing students with mental health needs is limited to availability of Community School-Based Behavioral Health models in schools. The level of funding and resources to support this service can vary throughout the community.
- Family and youth voice is often overlooked in the planning process. There is a system-wide lack of preparation of families prior to meetings, assumptions are made on the child/family’s knowledge and planning meetings often start with the coordination of professional's schedules rather than ensuring family availability first.

- While system partners value those with lived experience, there is a need to implement system-wide strategies to incorporate peer support into services and programing to help families better understand and navigate complex systems.
- There is an unspoken culture within treatment facilities that seems to support a hesitancy in complex discharge planning.
- Medicaid funding is acknowledged as the largest amount of funding supporting youth with complex needs; however, there is a lack of flexibility in funding due to the "medical model" approach, focusing on the child as the "patient" and limitations in treating treat the family through a holistic approach.
- Communication gaps exist between state and local system partners and providers regarding 3800 regulations. Feedback was solicited from county and providers; however, there has been a lack of follow-up communication around potential regulation changes.
- Quality, holistic assessments of children/families are not occurring consistently among all providers. There is a perception that assessments are completed to validate pre-conceived recommendations rather than allowing for quality assessments to inform recommendations.
- Managed Care Organizations (MCOs) do not have a standard denial process across MCOs, and they often do not honor one another's decisions. Gaps in services and extended stays in treatment settings exist when waiting through denial and appeal processes.
- Challenges exist when navigating MCOs and getting services in place for families. Non-participant agreements can take multiple weeks to get finalized and waiting lists are often identified after the agreement is in place. System partners often meet with providers who may not work with non-participant agreements and/or recommendations for a child may expire during the wait.
- There are communication gaps between The Health Insurance Premium Payment (HIPP) program and MCOs. MCOs can see when the insurance changes to the HIPP program, but they are limited in the support they can provide families moving forward.
- Challenges exist for juvenile justice partners in balancing restorative justice, keeping the community safe, while acknowledging trauma and working from a trauma-informed lens. Similar challenges exist in educational settings with zero-tolerance policies and related consequences to balance the learning environment for all students while addressing the needs and impact of trauma on students.
- The academic status of youth residing in residential settings can be challenging to identify. Academic progress with respect to credits earned towards successfully advancing academically can be impeded during transitions from inpatient and residential education settings to community-based settings.
- Many child and family-serving system partners struggle to recruit qualified front-line staff. The lack of qualified staff has a direct impact on some service providers' ability to service children with complex needs, citing a limited number of competent and qualified staff to meet the needs of the child.

System partners acknowledge that supervisors are an integral component to addressing the staffing crisis in Pennsylvania, however because of their expertise and the ongoing challenges in retaining direct-service staff, many supervisors are carrying caseloads and lack the ability to provide clinical coaching-focused strategies to develop staff skills and support retention.

Appendix B: ASERT Final Report

Final Report: Improving the Statewide System of Care for Children, Youth, and Young Adults with Complex Needs

JUNE 2023

Table of Contents

Executive Summary

This project assessed the current state of health and health-related services and programs in Pennsylvania and identified barriers in supporting children, youth, and young adults with complex needs and their families. Convenings of behavioral health managed care organizations (BHMCO), behavioral health primary contractors, county agencies, and education system representatives and surveys of hospital system staff and families and youth highlighted common challenges these groups experience. Five key themes emerged across these groups:

1. **Communication**
2. **Availability of services and programs**
3. **Awareness and navigation of resources**
4. **Staffing**
5. **Trauma-informed supports**

These themes and the barriers identified within them are interrelated. As DHS moves to the next phase of strategic planning for supporting this population, it may be helpful to consider these relationships and prioritize addressing these barriers.

Introduction and Background

The Autism Services, Education, Resources, & Training Collaborative (ASERT) Eastern Region was commissioned by the Pennsylvania Department of Human Services (DHS) to conduct an assessment to better understand current and future needs of children, youth, and young adults with complex needs, and the systems supporting them.

To support this project, focus groups and surveys were conducted with residential providers, behavioral health managed care organizations (BHMCO), behavioral health primary contractors, county agencies, education system representatives, hospital systems, and families and youth. The feedback collected through these focus groups and surveys will be used to inform DHS in future systems planning.

Methodology and Study Design

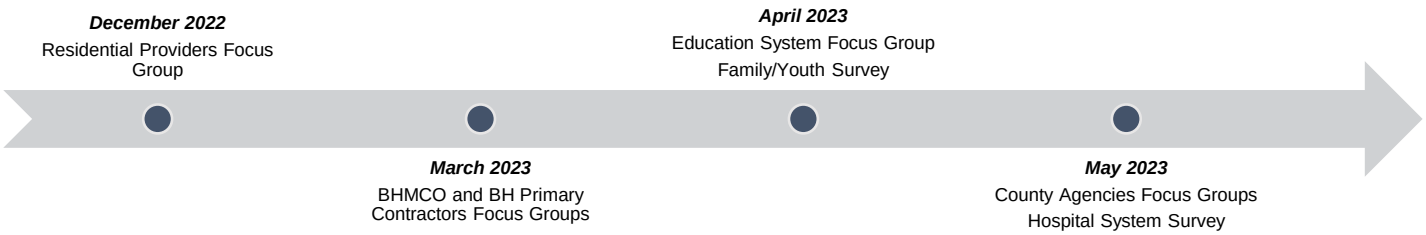
Focus groups and surveys were intentionally selected as the methodology for this project. Focus groups offer a broader and more open-ended forum for participants to describe their experiences and reactions to the topic of discussion compared to other qualitative and quantitative research methods. Qualitative research by nature, "is interactive: context dependent; holistic; flexible; evolving; inductive and descriptive. It has as its foci, perspectives, meanings, uniqueness, and subjective lived experiences. Its aim is to provide understanding" (Trudeau-Hern & Daneshpour, 2012). Focus groups are particularly useful because the moderator(s) can ask follow-up questions and probe for additional answers; this is not possible in a survey or questionnaire. There also may be topics or issues that were unknown when the initial guide questions were developed but can be probed to aid in future planning.

Surveys were intentionally selected as the methodology for emergency department personnel and family and youth for different reasons: for family and youth, the survey provided an anonymous, private way to communicate sensitive information (e.g., suicidal ideation, justice system interaction); for emergency department staff, the survey offered a more efficient method to collect information from a hard-to-reach population (DeVon et al., 2013). Focus groups would have been challenging to convene for hospital system personnel due to competing clinical priorities and limited schedule availability. Surveys were thus an appropriate alternative to collect feedback from these important stakeholder groups.

Data Collection

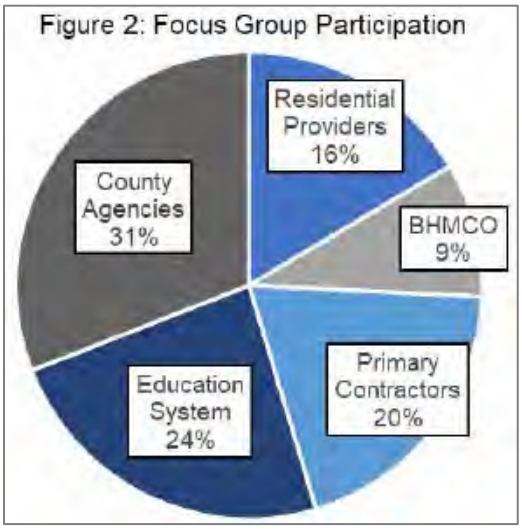
ASERT facilitated focus groups between December 2022 and May 2023 (*see Figure 1 below)* using an online discussion board through the online qualitative software, iTracks. Each iTracks online discussion board remained open for two days with each day's questions posted from the focus group moderator's guide. Participants then had the flexibility to respond to the day's (or previous day's) questions, the posts of their fellow participants, and probes or follow-ups from the moderator(s) at any time of day or night. The online discussion board forum allowed

Figure 1: Focus Group and Survey Timeline



for beneficial aspects of the focus group methodology (follow-up, probing, interaction among the group, etc.) while also accommodating for differing locations across the state, diverse schedules, and competing priorities.

Questions posed in the focus groups covered a variety of domains, including identifying children, youth, and young adults with complex needs and the changes in this population over time, barriers in service planning and provision, service array, education, transition and discharge planning, family and youth engagement, social and diagnostic history, and successful strategies and opportunities for improvement.



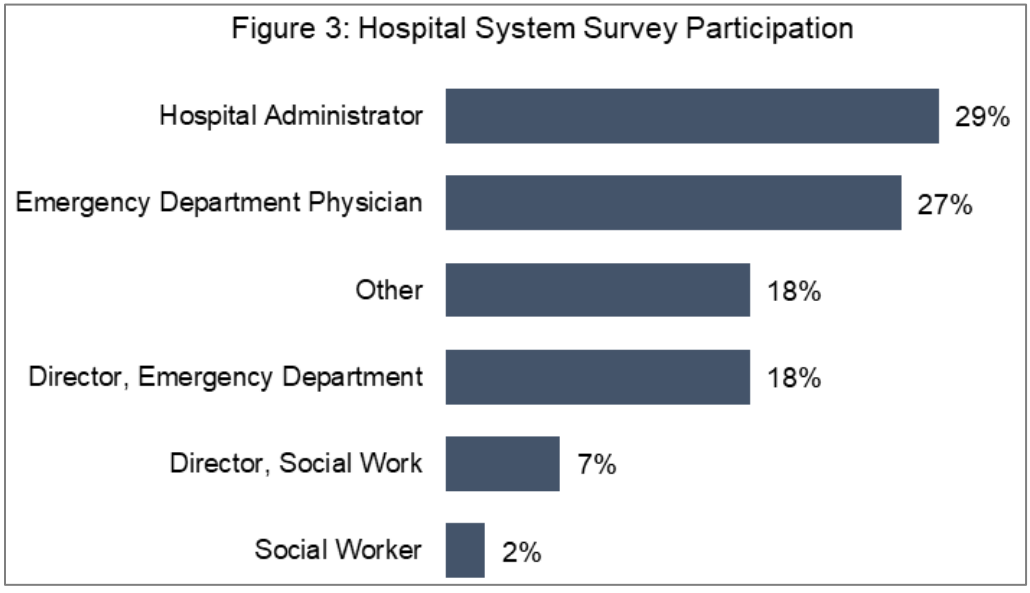
In April and May 2023, using snowball sampling methods, surveys were shared via Qualtrics links with family and youth as well as with hospital systems that serve children, youth, and young adults with complex needs. Surveys were designed with both open- and closed-ended questions to allow participants to provide detailed feedback about their experiences.

Participant Recruitment

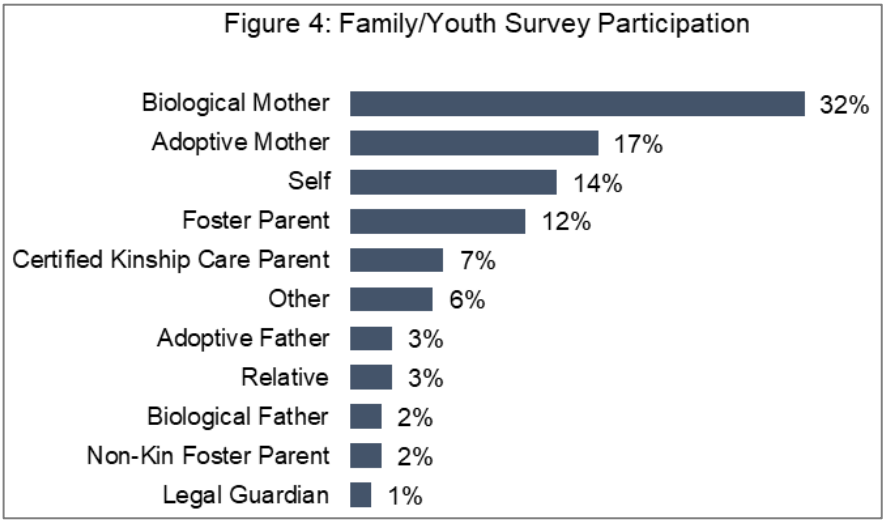
DHS identified appropriate representatives from each of the participating systems for the focus groups and ASERT invited them to participate in the online discussion boards via email link. For the youth and family survey, survey links were distributed to organizations serving this population (e.g., NAMI, YAB, Youth Move) and then sent directly to family and youth. The hospital system survey was shared with the Hospital Association of Pennsylvania (HAP) and then distributed directly to appropriate hospital system staff.

Participant Demographics

Overall, 97 people participated in six focus groups: 16 residential providers, 9 BHMCO representatives, 19 primary contractors, 23 education system representatives, and 30 county agency representatives. The county agency group was divided into two focus groups to account for its larger size (*See Figure 2*). Among the survey respondents, 45 represented hospital system staff and 138 participated as family or youth. Of the hospital system participants, 29% were administrators, 27% were Emergency Department physicians, and 18% were Emergency Department directors (*See Figure 3*). Within the "Other" category, participants identified as Operations Managers, Case and Care Management Directors, Clinical Directors, and Behavioral Health Directors. Another 10% of participants reported as Directors of Social Work or Social Workers. Of the 138



family and youth participants, 118 (86%) were family members and 20 (14%) identified as youth with complex needs (*See Figure 4*). About half of the respondents identified as biological or adoptive mothers while nearly 20% responded as foster or certified kinship care parents. The remaining 17% of participants represented adoptive and biological fathers, other relatives, non-kin foster parents, and legal guardians.



Conduct of Focus Groups

In accordance with standard focus group methodology and practice, moderators' guides were developed in collaboration with DHS to facilitate the flow of two-day online discussion boards with each participating group.

ASERT moderators posted a series of questions on the first day of the discussion boards, and participants logged on and responded to questions at times that were convenient for them. Participants were also permitted to comment on other participants' responses, allowing for a collaborative discussion. Participants were asked to log on at least three times per day during the two-day period to respond to any follow-up questions from moderators or fellow participants. DHS observed the discussions and periodically sent prompting follow-up questions to ASERT moderators to post on their behalf.

Analysis and Report Generation

The questions and responses from the moderators and focus group participants automatically generated a transcript that was used as the basis to report findings and to provide recommendations. Transcripts were read, summarized, and key themes were identified. Themes were documented after each focus group and evaluated together to inform the findings and recommendations presented in this report.

Limitations

Focus groups are a useful tool for qualitative research. However, focus group methodology has several limitations. It is important to note that the focus group findings are not generalizable to the entire target population nor are they quantitative in nature. The focus group was comprised of a targeted sample of people and does not represent an entire population. Similarly, the hospital system and family and youth surveys were distributed to a targeted sample of stakeholders belonging to these groups. Therefore, while quantitative, their responses are also not generalizable to the entire population of interest.

Findings

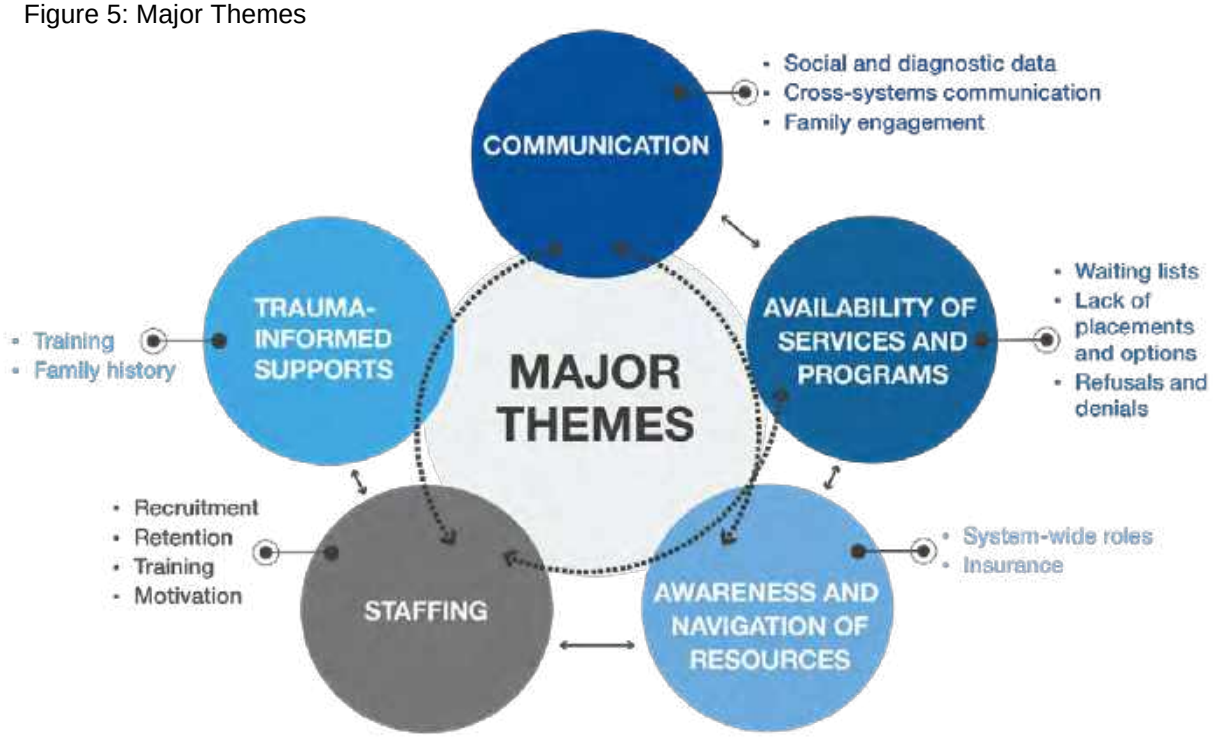
Five major themes were conceptualized across all stakeholder groups: communication, availability of services and programs, awareness and navigation of resources, staffing, and trauma-informed supports. These thematic concepts dominated discussions and were most frequently mentioned as barriers and facilitators of service planning and provision for this population.

It is also notable that many participants described existing strengths of their respective systems and of the impact of the collaborative efforts across systems to best serve children, youth, and young adults with complex needs and their families. Some strengths included:

- Staff dedicated to improving the experiences of system-involved children, youth, and young adults with complex needs and their families
- Mutual goals across systems to more intentionally collaborate, communicate, and learn about other services and programs
- Ability Desire to implement and some successful examples of creative programming and supports (e.g., peer support programs)
- Innovative efforts to retain and motivate staff amid staffing crises
- Some successful high-quality services and programs provided to children and families (e.g., ongoing therapy, early intervention, IBHS, emotional support school placements, trauma therapy)

While these strengths were mentioned in each of the groups, due to the nature of the question prompts most of the discussion and feedback was focused on the system-wide barriers that prevent them from achieving the most success. Additionally, participants recognized that the COVID-19 pandemic exacerbated existing barriers that impede system efforts to support children, youth, and young adults with complex needs which serve as a backdrop and consideration to understand the context of these findings.

Figure 5: Major Themes



Theme 1: Communication

Participants consistently noted a **lack of communication and coordination across systems** serving children, youth, and young adults with complex needs. These silos were particularly prominent throughout the initial information gathering stages and the transition and discharge processes. Participants reported that as children enter different systems or move across them, critical information is often missing or incomplete. They suggested

that improving the quality of clinical, diagnostic, social, family, and trauma histories, including the ways in which the information is shared across systems, would allow them to better serve this population.

> *"We do not always have a clear diagnosis picture for these children. Each system (MH, ID, CYFS, medical, educational, probation, etc.) have their own criteria for what they need to make them eligible for services within their program. This makes it very hard. Their needs are different for each system, and we are siloed."* – ***County Representative***

In addition to the siloes across systems, participants frequently reported barriers in communicating and engaging with families. For example, in discussing service planning, participants noted occasional disagreement about placements and levels of services across support teams and families. Focus group participants further noted that training opportunities for families to support their child with complex needs are limited.

> *"Additionally, there are times when teams will disagree with the level of supports and services that a student requires. Our IEP teams are required to make the recommendations that are most appropriate for the child based on the evaluations. At times a parent will have a differing opinion. For example, if the District recommends that a child requires an Autistic Support program, but a parent wants their child included in general education, we would need to continue to make the appropriate recommendation."* – ***School District Representative***

Families of children, youth, and young adults with complex needs echoed this sentiment of disengagement, and emphasized **feeling excluded from the service planning and provision processes**. About a quarter of family respondents (23%) disagreed or strongly disagreed that they had a voice in their child's treatment planning and the services received; similarly, among youth respondents, 23% felt they did not have a voice in their own treatment planning and the services they received.

Theme 2: Availability of services and programs

Participants noted the dearth of available services and programs as one of the most significant barriers in adequately supporting children, youth, and young adults with complex needs. They cited a **lack of appropriate placements and services, long waiting lists,** and **limited service and program availability** in locations that are geographically close to families. Similarly, across all groups, participants mentioned frequent denials or refusals of services based on individuals being "too acute."

> *"In terms of appropriate out of home placements, we see children who are recommended for RTF sitting on waitlists or being denied due to being too acute or not acute enough. We see the same with inpatient hospitalizations. We see kids who have ID or MH diagnosis unable to find an appropriate foster care placement because they are too young, too old, or their needs are too intense resulting in them being in a group home or congregate setting until a foster home can be located."* –***County Representative***

Many participants reported that they had observed or identified children who should have received other services or programming that could have prevented the need for higher levels of care or crisis placements. Specifically, they noted that residential treatment and inpatient facilities tend to become the default when other options are not available. However, participants consistently reported an overall lack of availability in both residential and community-based settings and a lack of beds available in both inpatient and RTF settings.

> *"We had a child wait over a year for ABA services and in the meantime received FBMH services but unfortunately ended up going to residential treatment. FBMH model of addressing relationships is*

*not always effective when the behaviors are not driven by relational deficits but require an ABA approach. The wait is so long to access ABA treatment that the behaviors continue to increase and the family require higher levels of care. Quicker access to the treatment, respite, parent support groups, increase the family connections within the community are all services/supports that aid better outcomes if accessed in a timely manner. a lot of our services are reactive and not preventive- the problem must manifest itself to enact services. If services can be accessed in a timely manner, have the proper training, be more creative with supports being delivered- combining FBMH and BC on cases when necessary, increase PA consults when barriers and challenges are being met, increase parent peer supports to provide insight and feedback from lived experiences." – **County Representative***

A majority (76%) of hospital system representatives reported that they have observed increases in the number of children, youth, and young adults using Emergency Department (ED) services within the past year. Almost all (91%) attributed these increases to limited resources and supports for children with complex needs. Further, they shared that they do not believe the ED is the most appropriate environment to provide services to this population.

"The ED should never be where these patients are treated. The ED is triage not ongoing care." – ***Hospital Administrator***

"It is worse than incarceration when they are in the ED." – ***Emergency Department Physician***

Families and youth reiterated challenges associated with long waiting times for services, lack of service availability entirely, and a lack of service options tailored to their needs. Nearly half (48%) of family respondents reported that they strongly disagreed or disagreed that the services provided to their child met their child's needs when they needed them. Similarly, half (47%) of the family respondents felt they did not receive services in a timely manner because there was no provider availability either among the providers in their area or staffing within an agency.

Theme 3: Awareness and navigation of resources

Family and youth respondents reported that they experience significant challenges navigating the systems they encounter. Almost half (41%) of family respondents shared that they did not have a clear understanding of the services and supports available for their child; 47% did not have a clear understanding of what the available services and supports could offer their child. Similar responses were observed among youth respondents: over one-third (36%) did not have a clear understanding of the available services and 40% did not have a clear understanding of what those services could offer. When asked to share specific challenges related to services, families and youth offered the following:

"Finding what services might be available to help our adult child is a continued challenge." – ***Biological Mother***

"We had been unable to reach our case manager and had trouble finding people to guide us in the process of finding services. My mom had to do a lot of that work on her own." – ***Young Adult***

In addition to siloes across systems, focus group participants reported a general lack of awareness and understanding about the function of the other systems that also serve children, youth, and young adults with complex needs. While some participants reported that cross-systems meetings have been effective at times,

others mentioned that they were not aware of regional partnerships that they could use to pool resources to support youth with complex needs. There was an identified need for better cross-system planning to facilitate early identification, appropriate provider training, and consistent follow-up.

> *"The system CAN be effective if all parties are open and transparent about all of the needs. At times families do not fully disclose all of their needs so we only know what we know and can assist with what we know. Involving the physical healthcare system could be improved. We always take a look at the person as a whole, not just as in need of one particular system or service. Getting everyone to the meeting is a struggle but the most beneficial and successful meetings happen when everyone is on the same page and supporting the family where they are at in their treatment process. I think holding teams meeting earlier is always a way to improve the system." –* ***County Representative***

Participants also reported a general **lack of awareness in navigating complex insurance processes**. Some noted that having multiple types of insurance introduces unique challenges for both families and providers. The lack of coordination between private insurance and Medicaid especially has at times prevented families from accessing services. Providers experience challenges submitting claims due to limited training, which then creates barriers for them to receive compensation for the services they provided.

> *"Many private insurances don't include the same levels of care within their benefit packages or have much more limited provider options. I have also learned that private MCO speak a different language regarding some levels of care." –* ***Behavioral Health Primary Contractor***

Theme 4: Staffing

Participants reported significant staffing challenges as barriers in supporting children, youth, and young adults with complex needs. They emphasized **provider availability and qualifications, burnout, recruitment and retention, training, and motivation** as primary areas of concern. Participants occasionally noted that while there is intent to meet the needs of this population, staffing challenges prevent them from doing so.

> *"Currently I see that educators are working extremely hard to meet these children's needs. However. these efforts often fall short due to overloaded schedules, lack of staffing, appropriate training opportunities, etc." –* ***IU Representative***

Further, challenges related to staffing have exacerbated shortages in services and programming.

> *"We certainly have shifted programming due to staffing. This can primarily be seen in the reduction of census. There is a delicate daily balancing of filling open beds while at the same time keeping in mind the staffing expertise and staffing levels in each treatment location. Ultimately decisions are made regarding reduction of census in each treatment location and/or closing a treatment unit." –* ***Residential Provider***

Families shared their frustrations in being able to find appropriately trained providers and caregivers for their children and emphasized that they experience challenges finding providers whose services are covered under their insurance. Approximately one-third (36%) of family respondents reported that their child did not receive timely access to services and supports due to staff not being available at a provider agency.

In addition to a lack of provider availability, many participants noted challenges related to workforce recruitment and retention. They attributed these issues to the intensity of the job, relatively low wages compared to other

roles, limited training opportunities, and a lack of opportunities for career advancement and pathways to licensure.

Theme 5: Trauma-informed supports

Across all groups, participants cited the importance of **considering trauma history in the planning and provision of care** for children, youth, and young adults with complex needs to ensure a holistic approach. Although trauma was included in the definition provided, many participants suggested that it would be helpful to have more specific information about type of trauma, including family- and community-related trauma.

> "*I would like to see under the history of trauma, a mention that not only do the youth/young adults we serve having a history of trauma, but this history of trauma is often best categorized as complex and chronic trauma. Additionally, there should be some emphasis placed on historical trauma that has occurred within the youth/young adult's support system. I also believe that noting any community trauma or violence is impactful for their treatment." – **Residential Provider***

Participants also noted an **increase in children and families with extensive trauma histories**, increases in behaviors and their intensity, and increases in mental health diagnoses like anxiety and depression. Some attributed these increases to the trauma caused by the pandemic.

> *"Yes - I think the collective and complex trauma associated with the COVID pandemic and the opioid epidemic continue to have a detrimental impact on the children we serve. We have seen an increase in critical incidents relating to suicidal ideation, emergency room referrals for psychiatric reasons and suicide attempts. In regard to suicide attempts, we are seeing attempts at younger ages, and the lethality of attempts in our adolescent population has seemed to have increased. We're also seeing a higher prevalence of anxiety, and they are often treated as behavioral problems until recognized as severe anxiety or symptoms of trauma exposure." – **Residential Provider***

Additionally, participants expressed the need for staff to receive more trauma-informed training to better understand the social and diagnostic pictures of the youth they support. County agency participants also reported that due to turnover, many providers lack the experience and knowledge to help the youth they serve with the challenges they face.

> *"We need a more holistic approach which includes qualified professionals who understand how to provide trauma informed care to both the child and their family." – **County Representative***

Conclusions

To understand how to best support children, youth, and young adults with complex needs, it is critical to periodically evaluate the systems that serve them and their families. Through focus groups and surveys, barriers across these systems were identified. Based on a reported lack of communication, limitations in service and program availability, resource awareness constraints, staffing issues, and a dearth of trauma-informed supports, DHS may wish to focus on these areas to improve the overall system of care.

The relationships between the themes presented in this report are noteworthy and may also inform future program and system planning. Challenges related to communication and coordination across systems may lead to a lack of awareness about system-wide roles and available service and program options. Relatedly, staffing concerns may impact service and program availability and the ways in which systems communicate with each other and engage with families. The availability of trauma-informed supports and related training opportunities

may affect recruitment and retention of qualified staff as well as family and youth perspectives on the availability of appropriate services and programs.

These findings are consistent with feedback DHS has previously collected from a variety of stakeholders regarding children, youth, and young adults with complex needs. The challenges that currently exist across the Pennsylvania system of care have been further exacerbated by the public health emergency. Challenges related to staffing, funding, service availability, and cross-system understanding have been previously identified. Their perceived importance by all stakeholder groups in this assessment suggests these areas could be prioritized and addressed to better serve this population.

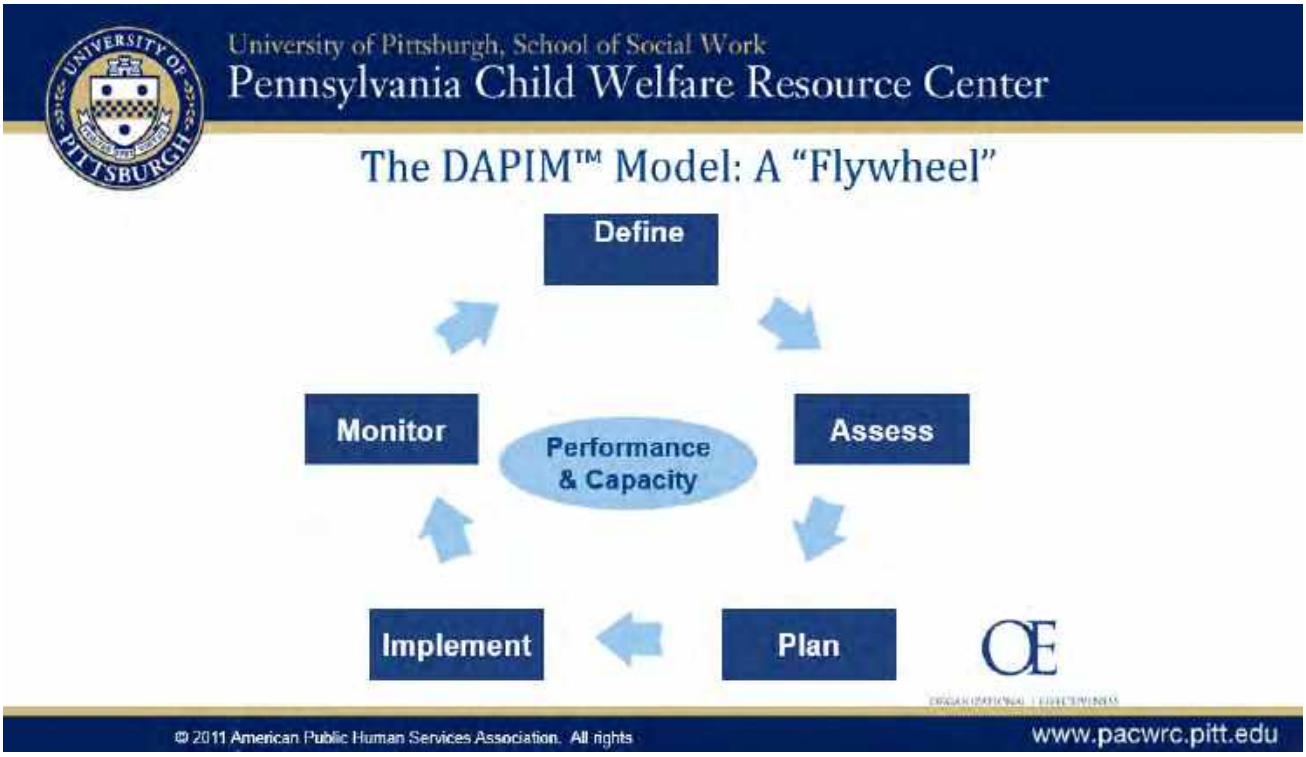
Appendix C: DAPIM Model

Blueprint for Youth with Complex Needs

A Continuous Improvement Approach

The Pennsylvania Department of Human Services (DHS), in partnership with the University of Pittsburgh - Child Welfare Resource Center (CWRC) collaborated to facilitate the Blueprint for Youth with Complex Needs Workgroup through a systemic continuous improvement approach, utilizing the American Public Human Services Association's (APHSA) DAPIM™ model.

APHSA has found that to close the gap between where we are today and achieving the results and vision we desire, we must follow a step-by-step process. It was this DAPIM process that the Complex Needs workgroup stepped through to identify system partner strengths and gaps and establish recommendations to ensure Pennsylvania's youth with complex needs and their families have access to timely supports and individualized services.



Step One: **Define** priority improvements in operational terms. Development of a Desired Future State (DFS), i.e. when child and family serving systems are working at an optimal level, supporting youth and families with timely and individualized services.

Step Two: **Assess** observable, measurable strengths, and gaps. Prioritize gaps and identify root causes.

Step Three: **Plan** and develop recommendations and remedies for priority gaps. Identify quick wins, mid-term, and longer-term improvements.

Step Four: **Implement** action plans while managing communication and capacity.

Step Five: **Monitor** progress, impact, and lessons learned for accountability and on-going adjustments.

Appendix D: Parking Lot Concepts

The Blueprint Workgroup recognized that the concerns and issues that face youth, families, and systems are multi-faceted and require more than we could offer within the time constraints of the workgroup. The workgroup developed a "parking lot" to capture ideas and potential solutions that were not completely developed. The list below captures those ideas and potential solutions for future consideration.

	Parking Lot Items
1	Explore opportunities for improvements with school-based access to mental health services, including more comprehensive service availability. There are some federal level changes in development now that may offer opportunities to strengthen services in Pennsylvania. Other states are pushing on this front as well, for example, Vermont is now allowing schools to bill Medicaid for services in school.
2	Youth with complex needs often require providers with specialized knowledge and training. Not all counties have access to providers with every specialty, it is important to develop a mechanism to share resources across counties so children and families can get what they need, when they need it. Given the specialty needs of youth with complex needs, unique approaches like regionalization of specialty services or broad access to specialist via telehealth services, including being able to consult with the onsite team may be beneficial. PA TiPS (Telephonic Psychiatric Consultation Service Program (TiPS) (pa.gov) may be a resource for youth with Medicaid, but there needs to be consideration for those with private insurance as well.
3	There is a pending state legislative bill that would prevent juvenile probation involvement for a child until age 13, which could increase the burden on other systems. New York recently implemented something similar; see House Bill 1831. It was noted that it may be challenging for this Bill to get through the Senate.
4	Other systems are developing satellite-based outpatient licenses to allow for more flexibility in providing services in the home and community environment. This could be something to explore with children's services particularly when children are located in a non-clinical setting such as a licensed group home. We would need to carefully consider how to implement this in many respects, but particularly to ensure that the setting does not become a clinical setting, but rather that the services are auxiliary in nature and have a plan to transition to a different setting.
5	Consider the accountability of team members to create environments that are conducive/favorable to change, creative, constructive, and solution focused. Notably, this also has workforce implications. Family and professional perceptions are important, and everyone involved has a responsibility to be part of the solution.

	Parking Lot Items
6	Liability is a challenge in a variety of service arenas. Some providers cannot afford the liability insurance necessary to serve certain high-risk populations. The liability issue(s) can include a need for workers compensation, litigation, and other support, particularly around CPSL. Consider offering a pool of funding to support workers comp, litigation, etc. regarding CPSL. Additionally, there needs to be a consensus on handling of incidents and reports and creation of acceptable protocols where minimal facts interviewing can help determine risk. Supporting providers in their ability to afford the insurance needed. Impact on providers' ability to accept referrals, meet staffing needs. Some insurance companies are not insuring some providers. This affects foster care and other providers, like RTF.
7	Develop statewide systems services training to support better cross-systems understanding and provide more comprehensive supports for the child and family. It promotes that the children are "our children" and not just that of one system or another. Promoting knowledge and connection among systems via learning opportunities could be a rich opportunity to connect. Several models exist for this in pocket and could be explored (DHS training systems, ASERT training etc.). These opportunities could be live and archived so they are accessible to all in the human services system. Incorporate planning with pediatric CBI as possible to engage those efforts as well.
8	Develop a mechanism for "after action reviews" of efforts to support youth/families with complex needs. This would be done in conjunction with the team and family to consider lessons learned and ways to improve experiences moving forward. Several models exist within the various systems already (e.g. Act 35 - child fatality and near fatality reviews), but it is likely a new one would need to be developed for this group and a way to manage that information that makes it applicable not only to the particular youth and family, but also benefits the broader system.
9	Children and families who are part of the adoption system experience challenges as they adjust to their new family structure. Ongoing education, resources and support are needed for both adoptive families, including siblings, as well as the adopted child. The current system does not consistently provide these opportunities and it is believed with the appropriate on-going supports such as case management, in home visitors, educational opportunities and support networks the number of failed adoptions would decrease. Providing support to everyone in the family could assist with understanding how to build the new family structure, potential challenges that might arise and specialized topics at all stages of family development.
10	Explore giving people with lived experience preference on the Civil Service just like they do for military veterans. This could improve our ability to support people through the lens of lived experience and provide more comprehensive supports informed by real life experience. There are pockets of this occurring across the state at the local level.

	Parking Lot Items
11	The safety of staff and youth supported are often an important subject of discussion. Things like accusations or reports of inappropriate treatment add trauma to an already challenging time. Can we improve safety supports using technology, training, and ongoing support for staff for how to get through false accusations, and how to get back to a healthy relationship with a youth? For example, videos could be reviewed and used as learning tools for staff.
12	How can we support providers better to take youth with these challenging behaviors? Is there a way, from a data perspective, to understand which diagnoses are resulting in the primary behaviors and/or challenges increasing incidents with staff, resulting in investigations, and so on. This, along with insurance considerations (mentioned in #6), may decrease providers refusing services due to challenging behaviors. Is there a connection to rate setting/differential rates for the level of service needed, high acuity needs, to encourage and support providers in taking youth with challenging behaviors, complex MH needs, Support staff/child ratio, education, etc.
13	More transparency is needed about those who accept Pennsylvania's Health Insurance Premium Payment program (HIPP). A close examination to ensure greater transparency is needed. Some counties/providers don't accept HIPP leaving families without resources they need. It is important to see how this is benefiting families and children and their access to services and support.

Appendix E: Blueprint Workgroup Charter and Organizational Chart

Charter: Blueprint Complex Case Planning 2023

Rationale:

The Pennsylvania Department of Human Services (DHS), in partnership with Child Welfare Resource Center (CWRC) are collaborating to facilitate discussion regarding children, youth, and young adults with complex needs and their families to improve all family and youth serving systems.

A Desired Future State was developed to guide the work and move it forward:

In Pennsylvania we believe all youth with complex needs and their families* will have the opportunity to access timely supports and services that are individualized, trauma-informed, holistic, respectful of race and culture, family and youth driven, and available in their own communities.

This will be evidenced by:

- A focus on youth and family engagement while honoring their voice and choice.
- Establishing and maintaining a well-supported and qualified workforce.
- Collaboration and shared understanding across systems to support planning and shared goals.
- Systems which prioritize early identification, proactive intervention, and service options that support family stability, safety, and the youth's healthy development and meaningful relationships which support life-long connections.
- Teams engage in ongoing and integrated planning that supports the everyday needs of a family and youth (housing, education, transportation, scheduling, access to medical care, etc.).
- Service delivery is coordinated, accessible, timely and includes support throughout the process.

* Family is defined by the individual.

The goal is to facilitate discussion with the Blueprint workgroups in identifying strengths and gaps in the system of care for youth with complex needs, identify root cause issues with gaps, and develop recommendations around strengthening those gap areas to reduce silos and streamline services to youth with complex needs.

Four groups have been identified to collaborate and include representatives from all child and family serving systems as well as families and youth with lived experience. Focus groups conducted with these systems identified five key areas for development recommendations. These are communication, services and programs, resource navigation, staffing/workforce, and trauma informed supports. Family engagement is a crucial part of the success of this work and will be highlighted in each of the five key areas.

Draft recommendations will be presented to the State Leadership (Governor's Office, Secretary of Education, Secretary of Human Services, Legislators, County Administration) by the end of November

2023.

Facilitators - University of Pittsburgh, School of Social Work, Child Welfare Resource Center (CWRC), Organization Effectiveness (OE) Staff:
Russ Cripps- Southeast (SE) OE Regional Team Supervisor, CWRC
Colleen Cox, SE OE Practice Improvement Specialist, CWRC

DHS Steering Team:
Jonathan McVey, Complex Needs Planning, Office of the Secretary, PA DHS

Roseann Perry, Regional Special Projects Manager, OCYF, PA DHS

Jennifer Newman, Human Services Analyst, OCYF, PA DHS

Emily Burger, Special Populations Clinical Support, ODP, PA DHS

Courtney Malecki, Children's MH Program Rep, OMHSAS, PA DHS

Michael Hershey, Project Manager, Office of the Secretary, PA DHS

DHS Complex Needs Planning Team:

Office	Name	Title
OCDEL	Andrea Algatt	Executive Assistant
OCYF	Roseann Perry	Regional Special Projects Manager
OCYF	Jennifer (Jenn) Newman	Human Services Analyst
OCYF	Gerry Lynn Butler	Human Services Supervisor
ODP	Nina Wall	Bureau Director Supports for Autism & Special Populations
ODP	Emily Burger	Special Populations Clinical Support
ODP	Heidi Arva	Clinical Consultant
OMAP	Katrina Becker	Manager, Special Needs/Complaints, Grievances and Fair Hearings
OMAP	Julie Escobar	Human Services Program Specialist Supervisor
OMHSAS	Scott Talley	Bureau Director Children's Behavioral Health Services
OMHSAS	Courtney Malecki	Division Director
OMHSAS	Crystal Doyle	Human Services Program Representative
Policy	Jameekia Barnett	Executive Policy Specialist
Sec. Office	Jonathan McVey	Special Assistant – Complex Needs Planning

Blueprint Workgroups:
Please see attached organizational chart.

Boundaries:
Using several change management strategies, CWRC staff will host meetings with the Blueprint Workgroups and Steering teams to help identify strengths and gaps in meeting the needs of youth with complex needs. The role of Organizational Effectiveness (OE) staff is to schedule and facilitate these meetings at the request of the Steering Team. Initial meetings will be held in person with the rest being scheduled virtually.

Non-negotiables:
- Workgroups to remain solution-focused and stay within the scope of this charter and defined expectations.
- Everyone will respect the opinions and ideas of others.
- Everyone will be open-minded, ready to learn, and willing to be inclusive of others' experience and expertise.
- Steering and Blueprint workgroups will be mindful of proprietary and intellectual properties of programs and organizations as part of the development of recommendations.
- All workgroups and subgroups will respect sensitive discussions, adhering to privacy and confidentiality expectations.

Goals:
For the group to:
- Provide an open forum for all participants to share their ideas and solutions in a collaborative manner.
- Using the information collected in the focus groups and the collective knowledge of the Blueprint workgroup, develop recommendations to improve the system of care for youth with complex needs across the state, and
- to bring families and youth with lived experience, service providers, and agencies together as a team to support better access to services for children and families with a focus on continuous quality improvement.

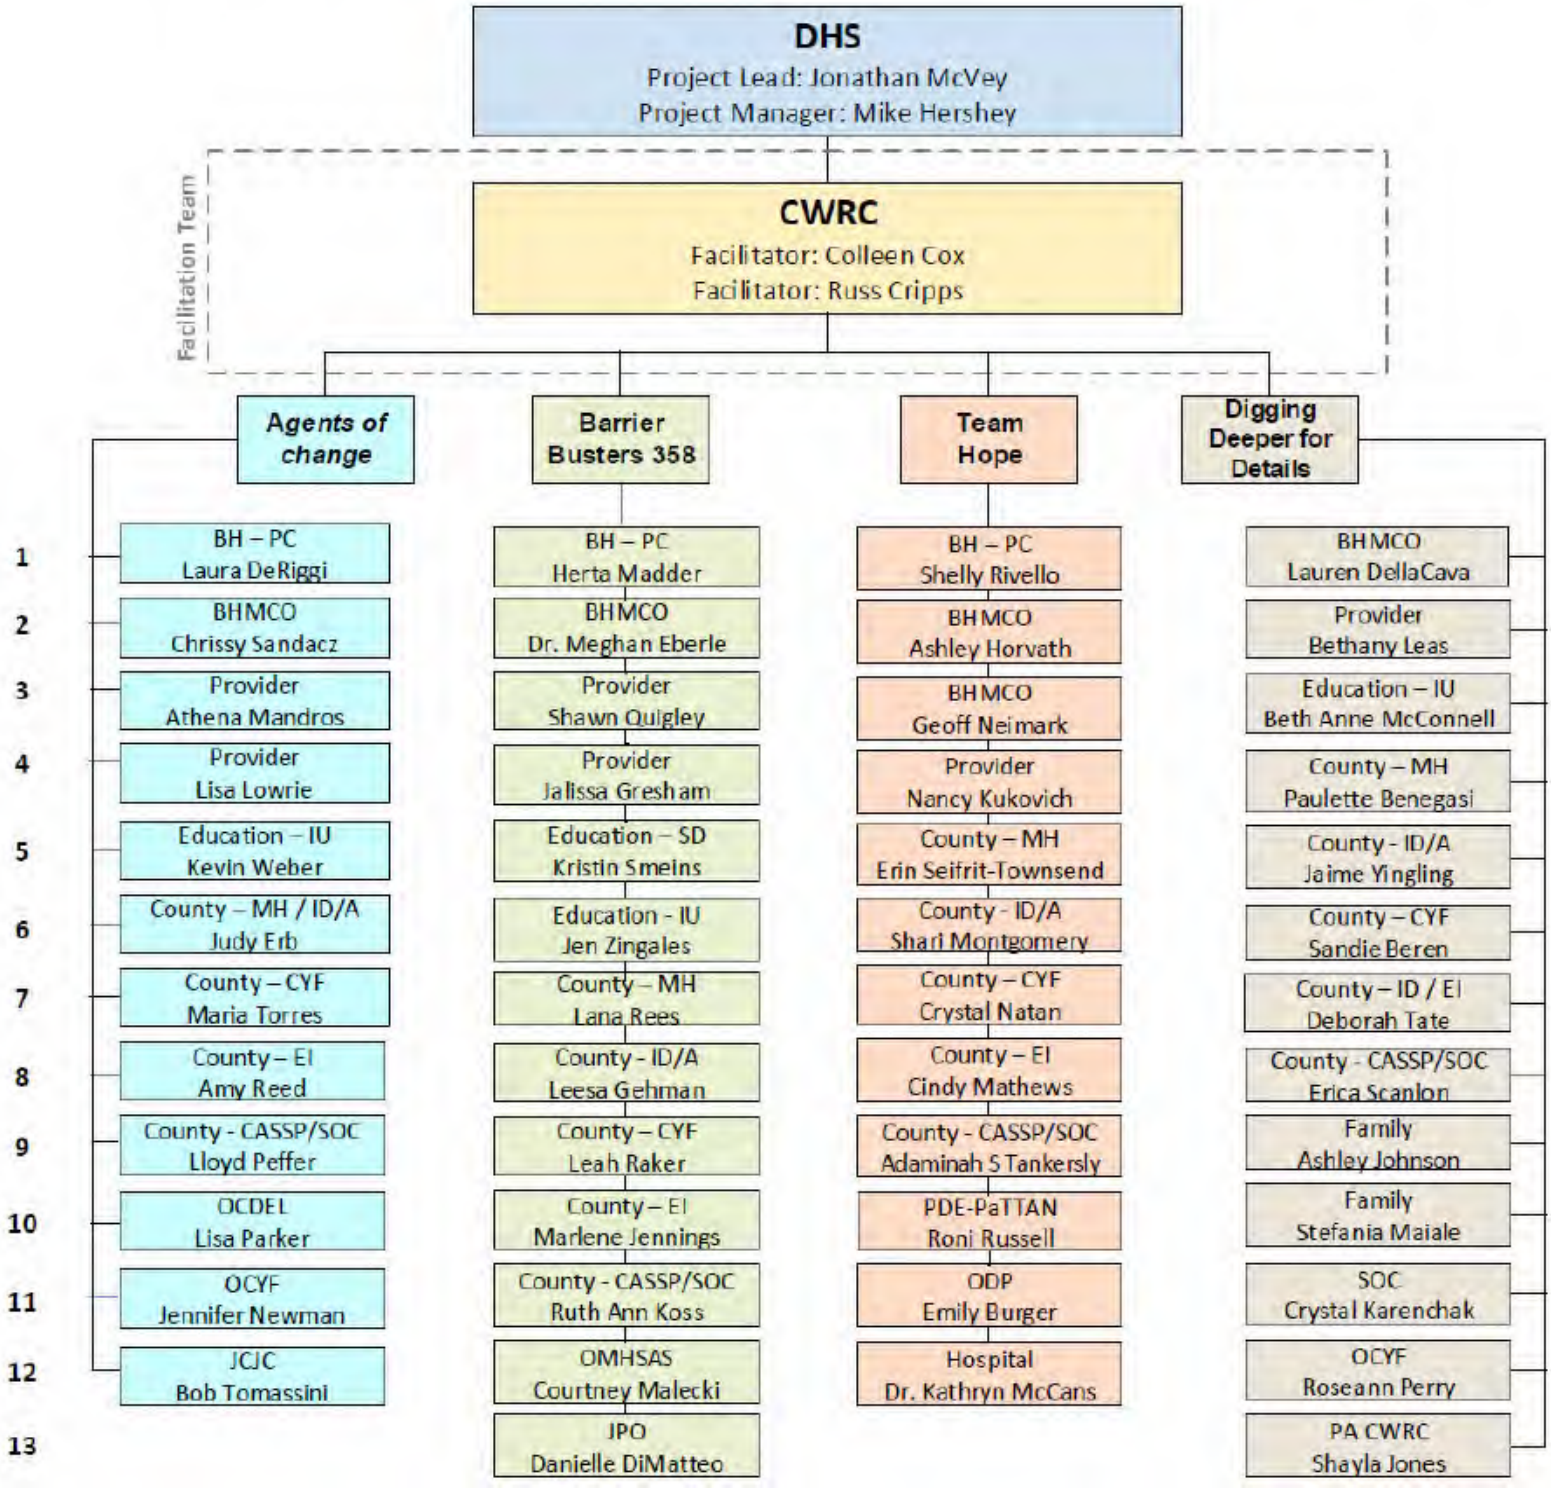
Completion Date:
The Steering and Blueprint Workgroups will be identified by April 21, 2023, with meetings to begin July 19, 2023. An initial draft of recommendations will be completed and ready for submission to the State Leadership (Governor's Office, Secretary of Education, Secretary of Human Services, Legislators, County Administration) by the end of December 2023.

Impact:
The work is designed to improve services to those youth with complex needs, bringing agencies and providers together to eradicate the silos and work collaboratively as a team to serve the children and families in need.

Commitments:
Members will be expected to prioritize meeting attendance and intersession work as needed to meet the deadline. The project will start with an in person kick off on July 19 and 20, 2023 and continue through mid- October with the groups identified. Virtual meetings will occur every other week for 2 hours. It is anticipated that groups will be assigned intersession work between meetings. A second in person wrap up is scheduled for October 19 and 20, 2023 to review and finalize recommendations to be submitted.

Communication:
There will be fluid communication from the Blueprint workgroup to the Steering Team, with key messages developed at every meeting. Information will be shared both in-person at meetings, as necessary and through email updates. Key messages after every meeting may be used to solicit feedback from external stakeholders, such as associations, advocacy organizations, and other state agencies. This will not be done without approval from the groups. Finalized recommendations will be presented to the State Leadership at the conclusion of this chartered work.

Small Workgroups Organizational Chart



Fact Sheets Jul 30, 2024

Fiscal Year (FY) 2025 Hospice Payment Rate Update Final Rule (CMS-1810-F)

Policy

Share

On July 30, 2024, the Centers for Medicare & Medicaid Services (CMS) issued a final rule (CMS-1810-F) updating Medicare hospice payment rates and the aggregate cap amount, for fiscal year (FY) 2025, in accordance with existing statutory and regulatory requirements. This rule also finalizes the proposal to adopt the most recent Office of Management and Budget (OMB) statistical area delineations, which impacts the hospice wage index and clarifies current policy related to the hospice "election statement" and the "notice of election" (NOE), as well as adds clarifying language regarding hospice admission and certification of terminal illness. The final rule summarizes public comments received related to the request for information regarding implementing a separate payment mechanism to account for high-intensity palliative care services.

This rule also finalizes that Hospice Quality Reporting Program (HQRP) measures be collected through a new collection instrument, the Hospice Outcomes and Patient Evaluation (HOPE), and finalizes two HOPE-based measures and discusses the anticipated trajectory for future refinement. The rule summarizes public comments received on the request for information regarding potential social determinants of health (SDOH) elements and provides updates on health equity, future quality measures (QMs), and public reporting requirements. Finally, the rule makes changes to the Consumer Assessment of Healthcare Providers and Systems (CAHPS) Hospice Survey.

Medicare Hospice Payment Policies

This rule finalizes the policy to adopt the most recent OMB statistical area delineations,which revise the existing core-based statistical areas (CBSA) based on data collected during the 2020 Decennial Census. Hospices negatively affected by the change to their geographic wage index will only experience a maximum 5% reduction to their 2024 wage index, as there is a 5% cap on any decrease to the wage index from the prior year. This permanent cap, finalized in the FY 2023 Hospice Final Rule, prevents a geographic area's wage index from falling below 95% of its wage index calculated in the prior FY.

The rule also summarizes comments from the public related to the comment solicitation in the proposed rule, on the potential implementation of a separate payment mechanism to account for high-intensity palliative care services (e.g., palliative dialysis, chemotherapy, radiation, and transfusions) provided under the hospice benefit.

FY 2025 Routine Annual Rate Setting Changes

The FY 2025 hospice payment update percentage is 2.9% (an estimated increase of $790 million in payments from FY 2024). This results from the 3.4% inpatient hospital market basket percentage increase, reduced by a 0.5 percentage point productivity adjustment. The FY 2025 payment rates for hospices that do not submit the required quality data would reflect the finalized FY 2025 hospice payment update percentage of 2.9%, minus four percentage points, which results in a -1.1% update.

The hospice payment update includes a statutory aggregate cap that limits the overall payments per individual that may be made annually to a hospice. The finalized hospice cap amount for FY 2025 is $34,465.34 (FY 2024 cap amount

of $33,494.01, increased by the FY 2025 hospice payment update percentage of 2.9%).

Hospice Quality Reporting Program (HQRP)

This rule finalizes two new process measures to HQRP, *Timely Follow-up for Pain Impact* and *Timely Follow-up for Non-Pain Symptom Impact,* expected to begin in FY 2028. The reporting of these two measures would be through the new HOPE instrument discussed below. These process measures address hospice care delivery as they document whether a follow-up visit occurred within 48 hours of an initial assessment where there was an impact of moderate or severe symptoms with and without pain.

The rule also adopts and implements the HOPE patient-level data collection tool, beginning with FY 2025, and functionally replaces, upon implementation, the existing Hospice Item Set (HIS) structure. HOPE will collect data at multiple time points across the hospice stay, including admission, the HOPE Update Visit (HUV), and discharge. Compared to the HIS (which only collects data at hospice admission and discharge), HOPE will enable CMS to gather patient-level data during their hospice stay to improve patient quality of care. In addition, HOPE includes several domains that are new or expanded relative to HIS, including:

- Sociodemographic (updated)
- Diagnoses (expanded)
- Symptom Impact Assessment
- Skin Conditions
- Imminent death

In addition, this rule finalizes changes to the Hospice CAHPS Survey based on the results of a mode experiment conducted in 2021. Specifically, the changes being finalized are:

- The addition of a web-mail mode (email invitation to a web survey, with mail follow-up to non-responders).
- A shortened and simplified survey.
- Modifications to survey administration protocols to include a pre-notification letter and extension of the field period from 42 to 49 days.
- The addition of a new, two-item Care Preferences measure.
- Revisions to the existing Hospice Team Communication measure and the existing Getting Hospice Care Training measure.
- The removal of three nursing home items and additional survey items impacted by other proposed changes in this rule.

The CMS Hospice Special Focus Program (SFP) will monitor hospices identified as poor performers based on selected quality indicators. Hospices selected for the SFP will be under additional oversight to enable continuous improvement.

The Hospice Special Focus Program (SFP) algorithm uses data from four measures related to caregiver experience collected by the CAHPS Hospice Survey, including Help for Pain and Symptoms, Getting Timely Help, Willingness to Recommend this Hospice, and Overall Rating of this Hospice. This final rule includes changes to the Overall Rating of this Hospice measure that are non-substantive and will not impact the SFP algorithm.

Finally, this final rule summarizes stakeholder input on potential data collection items related to four Social Determinants of Health items relevant to the HQRP (housing instability, food insecurity, utilities, and transportation challenges).

Hospice Conditions of Participation (CoPs) and Payment Requirements Technical Updates

CMS identified language discrepancies in the existing requirements for hospices as they relate to the medical director and physician designee in the Conditions of Participation (CoPs), and physician member of the interdisciplinary group

(IDG), in the payment requirements for the certification of the terminal illness and the admission to hospice care. Therefore, to align the medical director CoP and the hospice payment requirements for both clarity and consistency, CMS is finalizing technical changes to the CoPs by adding the physician member of the hospice IDG as an individual who may review the clinical information for each patient and provide written certification that it is anticipated that the patient's life expectancy is six months or less, if the illness runs its normal course. CMS made one additional change to the CoPs based on public comment: replacing “physician designated by” with “physician designee.” The finalized changes also include an update to provisions regarding certification and admission to hospice care in the hospice payment regulations to clarify that, if the medical director is unavailable, the physician designee (as defined in § 418.3) may certify the terminal illness and determine admission to hospice.

Additionally, CMS is finalizing regulation text changes to clarify the requirements related to the election statement and notice of election (NOE) in the payment regulations. These regulation text changes do not change current policy but are intended to reorganize and more clearly distinguish the separate requirements for the election statement and the NOE.

Lastly, a technical error was noted and corrected in this rule regarding the CoPs in the hospice personnel requirements. The regulation text refers to “marriage and family counselor;” however, the correct term is “marriage and family therapist.”

The final rule can be viewed at the *Federal Register* at: https://www.federalregister.gov/public-inspection.

For further information, see the hospice webpage here: http://www.cms.gov/Center/Provider- Type/Hospice-Center.html.

Pennsylvania Homecare Association

May 27, 2024

The Honorable Chiquita Brooks-LaSure, Administrator
Centers for Medicare & Medicaid Services
P.O. Box 8010
Baltimore, Maryland 21244-1850
Via Electronic Submission

Re: File Code CMS-1810-P: **Medicare Program; Fiscal Year 2025 Hospice Wage Index and Payment Rate Update, Hospice Conditions of Participation, and Hospice Quality Reporting Program Requirements**

Dear Administrator Brooks-LaSure:

The Pennsylvania Homecare Association (PHA) is a statewide membership association with approximately 700 home health, homecare and hospice members across Pennsylvania. On behalf of our hospice provider members, we offer the following comments on the Medicare Program; FY 2025 Hospice Wage Index and Payment Rate Update, Hospice Conditions of Participation, and Hospice Quality Reporting Program Requirements," CMS-1810-P.

Proposed 2.6% Rate Increase

Although we recognize that CMS is limited in hospice rate setting, hospice providers are very concerned that the proposed 2.6% increase to the hospice payment rate is not fiscally sustainable in the current climate. Current and ongoing challenges include:

- **Workforce:** Hospices are facing significant staffing challenges, including difficulties recruiting and retaining nurses, social workers, aides, and other members of the interdisciplinary team/ Hospices are challenged with increased turnover and staff burnout while competing with hospitals and other healthcare providers in their communities.
- **Inflation:** Inflation has hit unprecedented levels, especially following the COVID-19 PHE. Costs for gas, drugs, supplies, PPE, and other prices continue to significantly increase each year, leaving hospices in Pennsylvania with massive cost increases. Primarily Medicare and Medicaid-paid, they are unable to pass along increased costs to patients.
- **Hospice Drives Cost Savings:** As the seminal NORC analysis showed, utilization of the hospice benefit saves the overall Medicare program billions of dollars a year – CMS

needs to recognize this dynamic value and provide appropriate and sufficient payment updates that encourage and support greater access to high-quality hospice care.

- **CMS Market Basket Forecast Errors:** CMS' own estimates of how much costs would increase over the last three fiscal years have been below the actual rate of increase. From FY2021-FY2023, the cumulative market basket forecast error is negative 4.6 percent, which creates additional cost pressures that challenges hospices' ability to serve all patients and families in need of their services and support. This further escalates the need for adequate increases to promote and continue the critical care that hospices deliver.

Updated labor market designations based on 2020 Census data (impacts hospices' wage indexes)

- PHA agrees that updating labor market designations based on the most recent Census data is a valid and appropriate step.
- However, the absence of both the rural floor and geographic reclassification protections that are afforded to hospitals leaves hospices comparatively more vulnerable to dramatic decreases in their wage indices. This means that hospices in certain counties are at a significant disadvantage, for example, where providers must contend with metropolitan costs but receive payments based on a wage index that fails to account for actual market conditions. We encourage CMS to work with PHA and similar organizations to examine the wage index development process for hospices to avoid these pitfalls.

Proposal to Implement the Hospice Outcomes & Patient Evaluation (HOPE) Assessment Instrument and Two HOPE-based Quality Measures

- PHA supports the expansion of the HQRP to include the HOPE, contributing to hospice patients receiving high quality and safe care.
- PHA urges CMS to include the full scope of patient and family services by specifically including telehealth visits and visits from all members of the IDG in the HQRP.
- PHA urges CMS to provide feedback to hospices about possible errors or problems with the completion of the tool and allow for ample time for any necessary corrections to be made. This feedback could be in the form of confidential reports for each hospice and/or a public retrospective analysis report.
- PHA asks CMS to consider its timeline, especially given the involvement of EMR providers. EMR companies need the final HOPE technical specifications before they can develop and implement the tool in their software programs. The final HOPE instrument will not be available until at least the final rule is posted and the technical specifications will likely not be available until later this year. Software vendors may need 12 months after the technical specifications are available to make the necessary software changes to their programs.

- PHA also requests that adequate time for testing of electronic submissions be allowed to ensure providers can mediate errors and issues that are bound to happen in this large-scale implementation.
- PHA seeks clarity in the final rule whether hospices are to complete the HOPE for all patients or only those over the age of 18.

Proposed CAHPS Hospice Survey and Measure Changes

- PHA commends the proposed revisions to the CAHPS Hospice Survey instrument!
- PHA asks CMS to consider using race and ethnicity in the adjusting the Hospice CAHPS case-mix to accurately reflect service experience and quality across diverse patient groups.
- The final rule is expected to be available at the beginning of August 2024, however, CMS states that the technical provisions of any finalized CAHPS Hospice Survey revisions would be available in fall 2024. This provides less than four months before the first set of decedents would be required to be collected to conduct the surveys. CAHPS Hospice Survey vendors report that the volume and complexity of the anticipated finalized changes would take far more than 4 months. We ask that implementation of the revised survey and administration protocols not begin prior to January 1, 2026 to allow for a seamless implementation and adequate planning.

Proposed Clarifying Regulation Text Changes

- CMS proposes to align regulatory and condition of participation text to clarify which physicians are able to certify terminal illness and recommend admission to hospice care. PHA supports these changes as they will bring clarity for hospice providers as well as audit contractors.
- CMS proposes to make regulatory changes to clarify and differentiate the Notice of Election (NOE) and election statement. PHA supports these changes as they will bring clarity for hospice providers as well as audit contractors.

RFI Regarding Future HQRP Social Determinants of Health (SDOH) Items

- PHA supports the addition of the following social determinants of health into the HQRP: housing instability, food insecurity, utility challenges, and barriers to transportation access.
- PHA would support language that allows the clinician gathering this data to collect feedback through verbal questioning of the patient OR through observation of the patient home for the most reliable data – this would additionally ensure trust between the patient and clinician and address cultural or language barriers that may exist.

Thank you for your consideration and the opportunity to offer comments on this proposed rule.

Sincerely,

Mia Haney, CEO
Pennsylvania Homecare Association
MHaney@pahomcare.org

Hospice Payments: FY 2025 Update

Related CR Release Date: September 11, 2024	MLN Matters Number: MM13707 Revised
Effective Date: October 1, 2024	Related Change Request (CR) Number: CR 13707
Implementation Date: October 7, 2024	Related CR Transmittal Number: R12831CP

Related CR Title: Update to Hospice Payment Rates, Hospice Cap, Hospice Wage Index and Hospice Pricer for Fiscal Year (FY) 2025

What's Changed: We made no substantive changes to the Article other than to update the related CR release date, the CR transmittal number, and the web address of the CR transmittal.

Affected Providers

- Hospices
- Other providers billing Medicare Administrative Contractors (MACs) for hospice services they provide to Medicare patients

Action Needed

Learn about updates effective October 1, 2024:

- Payment rates
- Inpatient and aggregate caps
- Wage index

Background

CMS updates payment rates for hospice care, the hospice cap amount, and the hospice wage index annually. We use the inpatient hospital market basket, adjusted for multifactor productivity (MFP) and other adjustments to get the hospice payment update percentage.

CMS CENTERS FOR MEDICARE & MEDICAID SERVICES
Medicare Learning Network®
377

Division G, Section 308 of the Consolidated Appropriations Act of 2024 (CAA, 2024) (Pub. L. 118–42) amended Section 1814(i)(2)(B) of the Social Security Act (the Act) and extended the provision that currently mandates the hospice cap be updated by the hospice payment update percentage (hospital market basket update percentage increase reduced by the MFP adjustment), rather than the Consumer Price Index for All Urban Consumers (CPI-U) for accounting years that end after September 30, 2016, and before October 1, 2033. Before the enactment of this provision, the hospice cap update was set to revert to the original methodology of updating the annual cap amount by the CPI-U starting on October 1, 2032.

We use the hospice wage index to adjust payment rates to show local differences in wages.

Section 407(b) of the CAA, 2021 changed the payment reduction for failing to meet hospice quality reporting requirements from 2% to 4% starting with FY 2024 and reduce the market basket update by 4% for any hospice that doesn't comply with the quality data submission requirements for that FY.

FY 2025 Hospice Payment Rates

We base the hospice payment update percentage for FY 2025 on the inpatient hospital market basket update of 3.4%. We then adjust the inpatient hospital market basket update of 3.4% with an MFP adjustment, which is an estimated 0.5% for FY 2025. This makes the hospice payment update for FY 2025 to be 2.9%. The final FY 2025 rates for hospices that don't submit the required quality data would be the FY 2025 hospice payment update of 2.9% minus 4%, which results in an update of –1.1%.

The FY 2025 hospice payment rates are effective for care and services you provide from October 1, 2024–September 30, 2025. We discuss the hospice payment rates further in Section 30.2 of the Medicare Claims Processing Manual, Chapter 11.

Table 1 of CR 13707 shows your FY 2025 hospice payment rates if you submit the required quality data. Table 2 of CR 13707 shows your payment rates if you don't submit the required quality data.

Hospice Inpatient and Aggregate Caps

The 2025 cap year will be October 1, 2024–September 30, 2025.

For the 2025 inpatient cap year, we'll calculate the percentage of all hospice days provided as inpatient days, including general inpatient care (GIP) and respite care, from October 1, 2024–September 30, 2025.

The hospice cap amount for the 2025 cap year is equal to the FY 2024 cap amount, which was $33,494.01, updated by the FY 2025 hospice payment update of 2.9%. This makes the FY 2025 cap amount $34,465.34.

Hospice Wage Index

The FY 2023 hospice final rule finalized the application of a permanent 5% cap on any decrease to a geographic area's wage index from its wage index in the prior year, regardless of the circumstances causing the decline starting in FY 2023. In other words, we finalized that a geographic area's wage index for FY 2023 and subsequent years wouldn't be less than 95% of its wage index calculated in the prior FY.

For FY 2025 as a transition helping reduce any significant negative impacts that hospices may experience because of the adoption of the revised Office of Management & Budget (OMB) areas, we'll calculate the permanent 5% cap on decreases on the county level and the core-based statistical area (CBSA) level, so that individual counties moving to a new area don't experience more than a 5% decrease in wage index from the previous FY.

Some counties that change OMB designations have a wage index value that's different than the wage index value assigned to the other constituent counties that make up the CBSA or statewide rural area that they're moving into because of the application of the 5% cap.

Starting in FY 2025 for hospice claims processing, counties with a different wage index value than the CBSA or rural area into which they're designated after the application of the 5% cap will use a wage index transition code to identify the county's appropriate wage index value for hospice claims. These special codes are 5 digits in length and begin with "50." The 50xxx wage index transition codes will only be used in specific counties; counties located in CBSAs and rural areas that don't correspond to a different transition wage index value will still use the CBSA number.

These counties are listed in Table 3 of CR 13707. These special 50xxx codes are also in the last column of the FY 2025 hospice wage index file.

We'll incorporate the revised payment rates and wage index in the Hospice Pricer and forward them to your MAC.

Hospice Labor Shares

The FY 2022 hospice final rule revised labor shares used to wage-adjust hospice payments for each level of care. The revised labor share for:

- Routine home care is 66.00% and the corresponding non-labor share is 34.00%
- Continuous home care is 75.20% and the corresponding non-labor share is 24.80%
- Inpatient respite care is 61.00% and the corresponding non-labor share is 39.00%
- GIP care is 63.50% and the corresponding non-labor share is 36.50%

More Information

We issued CR 13707 to your MAC as the official instruction for this change.

Center for Clinical Standards and Quality

Ref: QSO-25-02-Hospice

DATE: October 4, 2024

TO: State Survey Agency Directors

FROM: Directors, Quality, Safety & Oversight Group (QSOG) and Survey & Operations Group (SOG)

SUBJECT: Overview of the Hospice Special Focus Program (SFP)

Memorandum Summary

- Through increased regulatory oversight and enforcement, the SFP will address issues that could place hospice beneficiaries at risk of receiving poor quality of care.
- The memo outlines the hospice SFP criteria and the roles and responsibilities for CMS, the state survey agencies, and the accrediting organizations.
- Hospice programs that are unable to resolve the deficiencies that brought them into the SFP and cannot meet the SFP completion criteria, may be considered for termination from the Medicare program.

Background:

As required under Division CC, section 407 of the Consolidated Appropriations Act of 2021 (CAA, 2021), as codified in section 1822(b) of the Social Security Act (the "Act") and amending sections 1864(a) and 1865(b) of the Act, CMS has established a hospice special focus program (SFP) in the Calendar Year (CY) 2024 Home Health Prospective Payment System (HH PPS) final rule (88 FR 77676). Through increased regulatory oversight and enforcement of the selected poor performing hospice programs, the SFP will address issues that could place hospice beneficiaries at risk of receiving poor quality of care through increased oversight.

CMS convened a Technical Expert Panel (TEP) in the fall of CY 2022 to gain input from key partners on various aspects of the SFP development and to identify the most appropriate indicators to identify poor-performing hospices. CMS finalized the SFP methodology and an algorithm with criteria for identifying poor-performing hospices in the CY 2024 HH PPS final rule.

CMS believes the SFP will establish an equitable approach utilizing hospice survey findings and other quality indicators related to performance to ensure that hospices are accountable for providing unsafe or poor-quality care to patients. Hospice programs that do not meet the SFP

completion criteria may be considered for additional enforcement actions, including termination from the Medicare program.

Discussion:

SECTION I: SFP IDENTIFICATION AND SELECTION

To identify hospices for consideration in the SFP, CMS will use the most recent Medicare hospice data from the following sources:
1) Hospice surveys (recertification and substantiated complaint) from the last 3 consecutive years;
2) Hospice Care Index (HCI) Overall Score, based on Medicare claims data; and
3) The four Consumer Assessment of Healthcare Providers and Systems (CAHPS®) Hospice Survey Index measures most aligned with caregiver experience: Help for Pain and Symptoms, Getting Timely Help, Willingness to Recommend the Hospice, and Overall Rating of the Hospice.

In the last quarter of each CY, CMS will apply the algorithm to all active hospice providers (i.e., has billed at least one claim to Medicare FFS in the last 12 months) and generate a list of potential SFP-eligible candidates. CMS will use this list to select the SFP participants for that CY. CMS will select 50 hospices during the fourth quarter of each calendar year for participation in the SFP during the next calendar year. The first cohort of hospices will be selected in November 2024.

If selected, the hospice will receive a letter from CMS notifying them of their inclusion in the SFP and the expectations for successful program completion. If the hospice selected is deemed by an Accrediting Organization (AO), their deemed status will be suspended, and the hospice will be placed under CMS jurisdiction until its completion of the SFP or termination from the Medicare program.

SECTION II: SFP SURVEY AND ENFORCEMENT

Hospice programs selected for the SFP will receive a standard survey not less than every six months, follow-up surveys as needed, as well as surveys for existing or new complaints.

For a hospice in the SFP that has condition-level deficiency findings, CMS may impose one or more alternate enforcement remedies, in addition to placing the provider on a termination track, and may be subject to progressive enforcement remedies, as appropriate. Please refer to the guidance in the State Operations Manual, Chapter 10 – "Informal Dispute Resolution and Enforcement Procedures for Home Health Agencies and Hospice Programs" for information on enforcement actions.

SECTION III: SFP COMPLETION OR TERMINATION

An SFP hospice that has two SFP surveys within 18 months with no uncorrected Condition Level Deficiencies (CLDs) for any survey and no pending complaint investigations triaged at the immediate jeopardy (IJ) or condition-level, or that has returned to substantial compliance with all

requirements would meet the criteria for completion of the SFP. The SFP completion date would be the date of the CMS letter informing the hospice of its removal from the SFP and reinstatement under the SA or AO jurisdiction.

Any hospice that does not achieve substantial compliance with all requirements within the prescribed timeframes may be considered for termination from the Medicare program. CMS will issue the termination letter to the hospice program in accordance with 42 CFR 489.53.

SECTION IV: PUBLIC REPORTING

CMS will post the following information at least annually on the CMS SFP website:

1) A list of eligible candidates for potential selection in the Hospice SFP;
2) Hospices selected for the SFP; and
3) Hospice status in the SFP indicated by one of the following classifications: a) In Progress; b) Completed; c) Terminated from the Medicare Program.

SECTION V: POST-SFP COMPLETION

After completing the SFP, hospice programs will receive a recertification survey within one-year from the SA or AO (as applicable), which would start a new standard 36-month survey cycle.

SECTION VI: ROLES AND RESPONSIBILITIES

The entities below are responsible for the outlined tasks for hospices selected for the SFP.

State Survey Agency

- Continue to process certification actions initiated by Form CMS-855 in accordance with Admin Memo 22-02-ALL.
- Conduct complaint investigations for allegations triaged at an IJ and Non-IJ high while the hospice program is in the SFP.
- Inform the CMS Survey and Operations Group (SOG) hospice subject-matter expert (SME) at CMS_HospiceSFP@cms.hhs.gov about all outstanding non-IJ medium and non-IJ low-level complaints (pending prior to selection in the SFP). Please include "complaint" in the subject line.
- Inform the CMS SOG hospice SME at the email address noted above when any complaint allegation is received while the provider is in the SFP for triage and investigation by the appropriate surveying entity.
- Conduct a survey within one year post-SFP completion for non-deemed hospice providers, which will start a new standard 36-month survey cycle.

CMS

- Communicate to hospice providers on their selection into SFP and copy the SAs and AOs (as applicable).

- Update applicable iQIES fields until the hospice provider has completed the SFP.
- Process informal dispute resolutions (IDRs) for hospices selected in the SFP as requested for condition-level findings.
- Impose enforcement remedies and process enforcement actions.
- Communicate the outcome of the hospice's SFP status (completion or termination) to hospice providers and copy the SAs and AOs (as applicable).

CMS Contractor

- Update applicable iQIES fields until the hospice has completed the SFP.
- Conduct SFP surveys and any applicable revisit surveys.
- Conduct complaint investigations for non-IJ medium and non-IJ low-level complaints.

Accrediting Organization

- Forward complaints received for any accredited hospice deemed provider selected for participation in the SFP to the CMS SOG hospice SME (CMS_HospiceSFP@cms.hhs.gov) and include "complaint" in the subject line.
- Conduct a survey to recommend deemed status (to the CMS Location) within one year post-SFP completion, which will start a new standard 36-month survey cycle, realigning accreditation and deeming, if requested by the hospice provider.

Resources to Improve Quality of Care:

Check out CMS's new Quality in Focus interactive video series. The series of 10–15 minute videos are tailored to provider types and aim to reduce the deficiencies most commonly cited during the CMS survey process, like infection control and accident prevention. Reducing these common deficiencies increases the quality of care for people with Medicare and Medicaid. Learn to:

- *Understand surveyor evaluation criteria*
- *Recognize deficiencies*
- *Incorporate solutions into your facility's standards of care*

See the Quality, Safety, & Education Portal Training Catalog, and select Quality in Focus

Get guidance memos issued by the Quality, Safety and Oversight Group by going to CMS.gov page and entering your email to sign up. Check the box next to "CCSQ Policy, Administrative, and Safety Special Alert Memorandums" to be notified when we release a memo.

TO: State Survey Agency Directors

FROM: Directors, Quality, Safety & Oversight Group (QSOG) and Survey & Operations Group (SOG)

SUBJECT: Revisions to the State Operations Manual (SOM) Chapter 10 –Informal Dispute Resolution (IDR) and Enforcement Procedures for Home Health Agencies and Hospice Programs

Memorandum Summary

- The Centers for Medicare & Medicaid Services (CMS) has revised the State Operations Manual (SOM) chapter 10 to provide procedures regarding the informal dispute resolution (IDR) process for both Home Health Agencies (HHAs) and hospice programs.
- Revisions also include guidance for State Agencies (SAs) and CMS Survey & Operations Group (SOG) Locations on recommending and imposing HHA alternative sanctions and hospice enforcement remedies.

Background:

On November 8, 2012, we published the Calendar Year (CY) 2013 Home Health Prospective Payment System (HH PPS) final rule (77 FR 67068) that set forth an IDR process for HHAs and alternative sanctions that can be imposed instead of, or in addition to, termination of an HHA's participation. On November 9, 2021, we published the CY 2022 HH PPS final rule (86 FR 62240) that set forth enforcement remedies that can be imposed instead of, or in addition to, termination of a hospice program's participation. Under these rules, CMS has the authority to impose the alternative sanctions or enforcement remedies of civil money penalties, directed in-service training, directed plans of correction, suspension of payment for new admissions, and temporary management on HHAs or hospice programs found to have condition-level deficiencies. A new hospice IDR process was also published in the CY 2024 HH PPS final rule (88 FR 77676) that offers hospice providers an informal opportunity to dispute any condition-level findings.

Discussion:

The survey and certification process provides a method for CMS to evaluate HHA and hospice programs' compliance with the Conditions of Participation (CoPs), ensuring that patient services

provided meet the minimum health and safety standards. This process is explained in Appendix B of the SOM for HHAs and Appendix M of the SOM for hospice programs. Chapter 10 provides guidance for the HHA and hospice program enforcement regulations and IDR processes at 42 CFR Part 488.

The regulations for IDR offer HHAs and hospice programs the option to request an informal opportunity to dispute condition-level survey findings warranting an alternative sanction or enforcement remedy following a facility's receipt of the Statement of Deficiencies (Form CMS-2567). Effective January 1, 2024, the IDR processes for hospices follow the same existing processes for HHAs, and Chapter 10 was updated to include hospices in the guidance.

We have also revised the SOM Chapter 10 guidance for the HHA and hospice program enforcement regulations at 42 CFR Part 488. The guidance will assist SAs in recommending, and Locations in imposing, an alternative sanction(s) or enforcement remedy(ies). CMS may terminate the provider agreement and should consider the imposition of one or more of the following sanctions/remedies. This guidance is outlined in the chapter revisions.

- Civil money penalties;
- Suspension of payment for all new admissions;
- Temporary management;
- Directed plan of correction; and
- Directed in-service training.

CMS training for Location enforcement staff on imposing the HHA alternative sanctions and the hospice program enforcement remedies is available on the CMS Quality, Safety, and Education Portal (QSEP) website. The training is titled *Enforcement Process for Home Health Agency and Hospice Programs.*

Transmittals for Chapter 10

10000 - Introduction
(Rev.)

The Secretary has the responsibility to promote quality of care and the health and safety of patients receiving services through Medicare certified home health agencies (HHA) and hospice programs by ensuring that providers maintain compliance with the Conditions of Participation (CoP). The survey and certification process provides a method for CMS to evaluate HHA and hospice programs' compliance with the CoPs, ensuring that patient services provided meet the minimum health and safety standards and a basic level of quality. This process is explained in Appendix B of this manual for HHAs and Appendix M of this manual for hospice programs.

Chapter 10 provides guidance for the HHA and hospice program enforcement regulations at 42 CFR Part 488. No provisions contained in this chapter are intended to create any rights or sanctions not otherwise provided in law or regulation.

In accordance with 42 CFR §488.800 – §488.865 for HHAs and §488.1200-§488.1265 for hospice programs, in addition to termination of the HHA's or hospice program's provider agreement, sanctions such as civil money penalties (CMP), suspension of payment for all new admissions, temporary management, directed plans of correction, and directed in-service training can be imposed when an HHA or hospice program are out of compliance with Federal requirements.

Alternative sanctions in HHAs and enforcement remedies in hospice programs are recommended by the State survey agency (SA), and the CMS Location reviews the SA recommendation to ensure that it is supported by the SA findings. However, the CMS Location does not have the authority to delegate the imposition of sanctions to the State.

It should be noted that failure of CMS or the State to act timely does not invalidate otherwise legitimate survey and enforcement determinations.

10001 - Definitions and Acronyms
(Rev.)

Abbreviated standard *survey means a focused survey other than a standard survey that gathers information on an HHA's or hospice program's compliance with fewer specific standards or CoPs. An abbreviated standard survey may be based on complaints received or other indicators of specific concern such as reapplication for Medicare billing privileges following a deactivation. (HHA: 42 CFR §488.705; Hospice: SOM Appendix M, Task I)*

An abbreviated standard survey is a focused survey that examines any standard(s) related to the reason for the survey.

AO *– National Accreditation Organization whose program is approved by CMS. (42 CFR §488.1)*

Certification of compliance *means that the HHA or hospice program is in compliance with the CoPs and is eligible to participate in the Medicare program. (HHA: 42 CFR §488.740)*

CFR *- Code of Federal Regulations.*

CMP *- Civil money penalty. (HHA: 42 CFR 488.845; Hospice: 42 CFR §488.1245)*

CMS Location*- previously known as CMS Regional Office(s), the CMS Location(s) are part of the Survey & Operations Group (SOG) within CMS.*

Complaint investigation*, previously known as a complaint survey, means an onsite review that is conducted to investigate specific allegations of noncompliance.*

Condition-level deficiency *means noncompliance as described in 42 CFR §488.24. A condition-level deficiency is any deficiency of such character that substantially limits the provider's or supplier's capacity to furnish adequate care or which adversely affects the health or safety of patients.*

Credible allegation of compliance *is a statement or documentation that is realistic in terms of the possibility of the corrective action being accomplished between the exit conference and the date of the allegation; and that indicates resolution of the problems.*

Deficiency *is a violation of the Act and regulations contained in part 484 for HHAs, subparts A through C of this chapter, and §418 for hospice programs, subparts C and D of this chapter, is determined as part of a survey, and can be either standard or condition-level.*

Directed plan of correction *means CMS or the temporary manager (with CMS/SA approval) may direct the HHA or hospice program to take specific corrective action to achieve specific outcomes within specific timeframes. (HHA: 42 CFR §488.805; Hospice: 42 CFR §488.1250)*

Enforcement action *means the process of imposing one or more of the following alternative sanctions for HHAs or enforcement remedies for hospice programs: termination of a provider agreement; suspension of payment for all new admissions; temporary manager; civil money penalty; directed plan of correction; or directed in-service training. (HHA: 42 CFR §488.810-865; Hospice: 42 CFR §488.1200-1265)*

Extended survey (HHA only) *means a survey that reviews additional CoPs not examined during a standard survey. It may be conducted at any time but must be conducted when substandard care is identified. (42 CFR §488.705)*

Immediate jeopardy *means a situation in which the provider's noncompliance with one or more requirements of participation has caused, or is likely to cause serious injury, harm, impairment, or death to a patient(s).*

iQIES *– Internet Quality Improvement and Evaluation System.*

New admission *means an individual who becomes a patient or is readmitted to the HHA or hospice on or after the effective date of a suspension of payment sanction. (HHA: 42 CFR §488.805)*

Noncompliance *means any deficiency found at the condition-level or standard-level.*

Partial extended survey (HHA only) *means a survey conducted to determine if deficiencies and/or deficient practice(s) exist that were not fully examined during the standard survey. The surveyors may review any additional requirements which would assist in making a compliance finding. (42 CFR §488.705)*

Per day *means a CMP imposed for the number of days a facility is not in substantial compliance with the CoPs.*

Per instance *means a single event of noncompliance identified and corrected through a survey, for which the Act authorizes CMS to impose a sanction or remedy. (HHA: 42 CFR §488.805; Hospice: 42 CFR §488.1245(b)(6))*

Plan of correction *means a plan developed by the HHA or hospice program and approved by CMS that is the HHA's or hospice program's written response to survey findings detailing corrective actions to cited deficiencies and specifies the date by which those deficiencies will be corrected.*

Repeat deficiency *means a condition-level citation that is cited on the current survey and is substantially the same as or similar to, a finding of a standard-level or condition-level deficiency cited on the most recent previous standard survey or on any intervening survey since the most recent standard survey. Repeated non-compliance is not on the basis that the exact regulation (that is, tag number) for the deficiency was repeated. (HHA: 42 CFR §488.805; Hospice: 42 CFR 488.1205)*

Standard-level deficiency *means noncompliance with one or more of the standards that make up each condition of participation.*

Standard survey *means a survey conducted in which the surveyor reviews the HHA's or hospice program's compliance with a select number of standards and/or CoPs to determine the quality of care and services furnished by an HHA or hospice program. (HHA: 42 CFR §488.705)*

State survey agency (SA) *means the entity responsible for conducting most surveys to certify compliance with the Medicare participation requirements.*

Substandard care *means noncompliance with one or more CoPs identified on a standard survey, including deficiencies which could result in actual or potential harm to patients. (HHA: 42 CFR §488.705)*

Substantial compliance *means compliance with all condition-level requirements, as determined by CMS, the SA, or AO. (HHA: 42 CFR §488.705; Hospice: 42 CFR 488.1105)*

Temporary management *means the temporary appointment by CMS or by a CMS authorized agent, of a substitute manager or administrator. The HHA's or hospice program's governing body must ensure that the temporary manager has authority to hire, terminate or reassign staff, obligate funds, alter procedures, and manage the HHA or hospice program to correct deficiencies identified in the HHA's or hospice program's operation. (HHA: 42 CFR §488.805; Hospice 42 CFR 488.1235)*

Validation survey *means a survey of an accredited provider or supplier to validate the accrediting organization's CMS-approved accreditation process. These surveys are conducted on a representative sample basis, or in response to substantial allegations of non-compliance. (42 CFR 488.9(a))*

10002 – Informal Dispute Resolution (IDR) for Home Health Agencies & Hospice Programs

10002.1 – IDR Introduction & Purpose
(Rev.)

Section 488.745 and 488.1130 offers HHAs and hospice programs the option to request an informal opportunity to dispute condition-level survey findings warranting an alternative sanction following a facility's receipt of the official statement of deficiencies (Form CMS-2567). Whenever possible, we want to provide every opportunity to settle disagreements at the earliest stage, prior to a formal hearing, conserving time and money potentially spent by the facility, the SA, and CMS. The goal of IDR is to offer the facility an opportunity to refute one or more condition-level deficiencies cited on the statement of deficiencies. An IDR between an HHA or hospice program and the SA or CMS Location, as appropriate, will allow the facility an opportunity to provide an explanation of any material submitted to the SA and respond to the reviewer's questions (77 FR 67141).

This IDR will occur with the agency who conducted the survey. The IDR process, as established by the State or CMS Location, must be in writing so that it is available for review upon request.

If the survey is conducted by the CMS Location, the CMS Location may conduct the IDR.

CMS has adopted the following elements to be incorporated in all cases involving deficiencies cited as a result of Federal surveys. They are designed to clarify and expedite the resolution process. States are free to incorporate these elements into their procedures.

1. *Notice to the facility will indicate that the IDR, including any face-to-face meetings, constitutes an informal administrative process that in no way is to be construed as a formal evidentiary hearing.*

2. *Notice to the facility will indicate that counsel may accompany the HHA or hospice program. If the facility chooses to be accompanied by counsel, then it must indicate that in its request for IDR, so that CMS may also have counsel present.*

3. *CMS will verbally advise the facility of CMS's decision relative to the informal dispute, with written confirmation to follow.*

10002.2 – IDR Process
(Rev.)

When survey findings indicate a condition-level deficiency (or deficiencies), CMS or the State, as appropriate, will notify the facility in writing of its opportunity to request an IDR of those deficiencies. This notice will be provided at the time the Statement of Deficiencies is issued to the facility. The facility's request for IDR must be submitted in writing, should include the specific deficiencies that are disputed, and should be submitted within the same 10 calendar day period that the facility has for submitting an acceptable plan of correction.

A facility's initiation of the IDR process will not postpone or otherwise delay the effective date of any enforcement action. The failure to complete an IDR will not delay the effective date of any enforcement action. Further, if any findings are revised or removed based on IDR, the official Statement of Deficiencies is revised accordingly, and any enforcement actions imposed solely because of those revised or removed deficiencies are adjusted accordingly.

10002.3 - Mandatory Elements of IDR
(Rev.)

Upon their receipt of the official Form CMS-2567, agencies must be offered one informal opportunity, if they request it in writing, to dispute condition level deficiencies. Deficiencies cited at the standard level are not subject to the IDR process.

The following elements must be included in each IDR process offered:

1. *Agencies may not use the IDR process to delay the formal imposition of sanctions or to challenge any other aspect of the survey process, including:*

- *The severity assessment of a deficiency(s) at the standard level that constitutes substandard care or immediate jeopardy (IJ);*

- *Sanctions imposed by the enforcing agency;*

- *Alleged failure of the survey team to comply with a requirement of the survey process;*

- *Alleged inconsistency of the survey team in citing deficiencies among agencies; and*

- *Alleged inadequacy or inaccuracy of the IDR process.*

2. *HHAs or hospice programs must be notified of the availability of IDR in the letter transmitting the official Form CMS-2567. The letter should inform the facility of the following:*

- *It may request the opportunity for IDR, and that if it requests the opportunity, the request must be submitted in writing;*
- *The written request for IDR, from the facility, must include an explanation of the specific condition-level deficiencies that are being disputed;*
- *The written request must be made within the same 10 calendar day period the facility has for submitting an acceptable plan of correction to the surveying entity;*
- *The name and address, e-mail, and phone number of the person to contact at the CMS Location or the SA to request the IDR;*
- *The IDR process that is followed in that State, e.g., telephone conference, written communication, or face-to-face meeting; and*
- *The name and/or position title of the person who will be conducting the IDR, if known.*

***NOTE**: IDR is a process in which State agency officials make determinations of noncompliance. SAs should be aware that CMS holds them accountable for the legitimacy of the process including the accuracy and reliability of conclusions that are drawn with respect to survey findings. This means that while the SA may have the option to involve outside persons or entities they believe to be qualified to participate in this process, it is the SA, not outside individuals or entities that are responsible for IDR decisions. When an outside entity conducts IDR, the results of the IDR process may serve only as a recommendation of noncompliance or compliance to the SA. The SA will then make the IDR decision and notify the facility of that decision. CMS will look to the SA to assure the viability of these decision-making processes, and holds the SA accountable for them.*

Since CMS has ultimate oversight responsibility relative to a SA's performance, it may be appropriate for CMS to examine specific IDR decisions or the overall IDR process to determine whether the decision is consistent with CMS policy. For dually participating or Medicare-only agencies, informal dispute findings are in the manner of recommendations to CMS and, if CMS has reason to disagree with those findings, it may reject the conclusions from IDR and make its own binding determinations of noncompliance.

3. *Failure to complete IDR timely will not delay the effective date of any enforcement action against the facility.*

4. *When a facility is unsuccessful during the process at demonstrating that a deficiency should not have been cited, the SA must notify the facility in writing that it was unsuccessful.*

5. *When a facility is successful during the IDR process at demonstrating that a deficiency should not have been cited or should be revised:*

- *The deficiency citation should be marked "deleted," or "revised" as appropriate, and signed and dated by a supervisor of the surveying entity; and*

- *Any enforcement action(s) imposed solely because of that deleted or revised deficiency citation should be rescinded.*

***NOTE**: The facility has the option to request a clean (new) copy of the Form CMS-2567. However, the clean copy will be the releasable copy only when a clean (new) plan of correction is both provided and signed by the facility. The original Form CMS-2567 is disclosable when a clean plan of correction is not submitted and signed by the facility. Deficiencies pending IDR should be entered into iQIES but will not be uploaded to the national database system until IDR has been completed.*

6. *An agency may request IDR for each survey that cites condition-level deficiencies. However, if IDR is requested for deficiencies cited at a subsequent survey, a facility may not challenge the survey findings of a previous survey for which the facility either received IDR or had an opportunity for it. Condition-level deficiencies that are not corrected and that are carried forward on a subsequent survey are not eligible for the IDR process. Condition-level deficiencies identified on a subsequent survey that are new are eligible to be reviewed through the IDR process.*

Additional information related to the effect of IDR on HHA alternative sanctions and hospice program enforcement remedies, including CMPs, is addressed in the appropriate sections of this chapter.

10003 – Enforcement Actions for Home Health Agencies and Hospice Programs
(Rev.)

CMS certifies HHAs and hospice programs for participation in Medicare. The SAs then conduct standard and complaint surveys of certified providers to determine compliance with the CMS conditions of participation. If an HHA or hospice program is not in compliance with the Medicare conditions, CMS may impose an alternative sanction or enforcement remedy. The following sections describe the statutory authorities, considerations, and process for imposition of sanctions/remedies.

10003.1 - Statutory Basis
(Rev.)

Alternative Sanctions for Home Health Agencies
Sections 1891(c) through (f) establish requirements for surveying and certifying HHAs as well as authorizes the Secretary to utilize varying enforcement mechanisms to terminate participation in the Medicare program and to impose alternative sanctions if HHAs are found out of compliance with the Medicare home health CoPs. The imposition of alternative sanctions

specified in §488.820 allows for non-compliant HHAs to have additional time to come into compliance with the CoPs before being terminated.

Enforcement Remedies for Hospice Programs
Division CC, section 407 of the Consolidated Appropriations Act 2021, amended Part A of Title XVIII of the Act to add a new section 1822 of the Act, and amended sections 1864(a) and 1865(b) of the Act, establishing new hospice program survey and enforcement requirements. Section 1822(c)(5) of the Act authorizes the Secretary to utilize varying enforcement mechanisms to terminate participation in the Medicare program and to impose enforcement remedies if hospice programs are found out of compliance with the Medicare CoPs. The imposition of enforcement remedies specified in §488.1220 allows for non-compliant hospice programs to have additional time to come into compliance with the CoPs before being terminated.

10003.2 - General Provisions
(Rev.)

Under section 1891(e)(1) of the Act for HHAs and section 1822(c)(5) of the Act for hospice programs, if CMS or a SA determines that condition-level deficiencies immediately jeopardize the health or safety of its patients, then CMS must take immediate action to notify the provider of the jeopardy situation and the provider must correct the deficiencies. If the IJ is not removed because the provider is unable or unwilling to correct the deficiencies, CMS will terminate the provider's provider agreement. In addition, CMS may impose one or more specified alternative sanctions or enforcement remedies, respectively, including but not limited to CMPs and suspension of all Medicare payments before the effective date of termination.

If CMS finds that the provider is not in compliance with the Medicare CoPs and the deficiencies involved do not immediately jeopardize the health and safety of the individuals to whom the HHA or hospice program furnishes items and services, CMS may terminate the provider agreement and should consider the imposition of an alternative sanction(s)/enforcement remedy(ies)

The decision to impose one or more alternative sanctions for HHAs or enforcement remedies for hospice programs would be based on condition-level deficiencies or repeat deficiencies found in the provider during a survey.

While SAs are not required to recommend the types of sanction/remedies to be imposed, they are encouraged to do so since States may be more familiar with a facility's history and the specific circumstances in the case at hand. To ensure effective communication and exchange of information, CMS encourages that all documentation is included in iQIES or any subsequent system. The CMS Location will consider these recommendations but ultimately makes the enforcement determination.

Not all situations require the same sanctions/remedies. The CMS Location should use the enforcement sanction/remedy most appropriate in considering the level/degree of harm, the

context behind the facility noncompliance, and the type of enforcement that has the best chance of the facility achieving future compliance. While a range of sanctions/remedies are available, suspension of payment for all new admissions is likely to be the most effective at rapidly returning the provider to compliance.

10003.3 - Effect of Sanctions/Remedies on HHAs and Hospice Programs that Participate in Medicare via Deemed Status through an Accrediting Organization
(Rev.)

A deemed HHA or hospice program loses its deemed status when a condition-level finding is cited on a complaint or validation survey. When a condition-level deficiency (ies) is found, the CMS Location returns oversight of the accredited HHA or hospice program back to the SA until the HHA or hospice program can demonstrate compliance with the CoPs. During the time that the SA has jurisdiction over the HHA or hospice program, the SA, not the Accrediting Organization (AO), will follow the procedures for recommending the imposition of sanctions/remedies, if appropriate. Once the HHA or hospice program returns to compliance with the Medicare conditions and has not been terminated, the CMS Location will restore its deemed status and return oversight to the AO.

AOs are not authorized to impose federal sanctions/remedies. Therefore, HHAs or hospice programs participating in Medicare through deemed status are not directly subject to sanctions/remedies by the AO while under jurisdiction of the AO. However, the CMS location may, after reviewing the AO's survey findings and related information, authorize the SA to conduct a focused validation survey to determine whether condition-level deficiencies, cited by the AO, have been corrected. If deemed status is withdrawn and/or the HHA or hospice program is placed under the jurisdiction of the SA, as may occur following a complaint investigation by the SA, the CMS Location may impose alternative sanctions/remedies on the HHA or hospice program per the usual procedures.

10003.4 - Effect of Sanctions/Remedies on HHA Branches and Hospice Multiple Locations
(Rev.)

Regardless of whether the condition level non-compliance is identified at the branch (HHA), multiple location (hospice), or the parent location, all sanctions/remedies imposed would apply to the parent HHA or hospice and its respective branches or multiple locations.

10003.5 - Enforcement Action When IJ Exists
(Rev.)

When there is IJ to patient health or safety, CMS must complete termination procedures within 23 days from the last day of the survey which found the IJ if it is not removed before then (following guidelines in Appendix Q of the State Operations Manual). The procedure must not be postponed or stopped unless the IJ is removed, as verified through onsite verification. If there

is a written and timely credible allegation that the IJ has been removed, CMS or the State will conduct a revisit prior to termination, if possible.

In addition to termination, one or more alternative sanctions for HHAs or enforcement remedies for hospice programs may be imposed. While the use of alternative sanctions or enforcement remedies in addition to termination is permitted, the Act makes it clear that the enforcement action for noncompliant agencies with IJ deficiencies is intended to be swift. The imposition of alternative sanctions for HHAs or enforcement remedies for hospice programs in addition to termination does not extend the timeframe that the HHA or hospice program has to remove the IJ situation.

10003.6 – Enforcement Action When Condition-Level Deficiencies Exist That Do Not Pose IJ
(Rev.)

If the HHA or hospice program is no longer in compliance with the CoPs, either because the deficiency(ies) substantially limit the HHA's or hospice program's capacity to furnish adequate care but do not pose IJ, or because the HHA or hospice program has repeat noncompliance that results in a condition level deficiency based on the HHA's or hospice program's failure to correct and sustain compliance, CMS will either terminate the provider agreement following the 90 day termination track or impose one or more alternative sanctions for HHAs or enforcement remedies for hospice programs as an alternative to termination. If alternative sanctions or enforcement remedies are imposed, CMS terminates the HHA's or hospice program's provider agreement within 6 months of the last day of the survey if the HHA or hospice program is not in substantial compliance with the CoPs and the condition level deficiencies are not corrected.

10003.7 - Effect of Termination on the Patients
(Rev.)

If an HHA or hospice program fails to correct deficient practices and sustain compliance, CMS may terminate the provider agreement. When this happens, an HHA or hospice program is required to appropriately and safely transfer its patients to another local HHA or hospice within 30 days of termination (see §488.825(c) & §488.830(e) for HHAs & §488.1225(c) & §488.1230(e) for hospice programs). The HHA or hospice is responsible for providing information, assistance, and any arrangements necessary for the safe and orderly transfer of its patients. The SA is required to provide oversight for all HHAs or hospices that are terminated to ensure the safe discharge and orderly transfer of all patients to another Medicare-approved HHA or hospice. Payment to terminated HHAs or hospices for services for current patients is provided up to 30 days after termination pursuant to §489.55.

10004- Available Sanctions/Remedies
(Rev.)

To the greatest extent possible, the time between the identification of deficiencies and imposition of sanctions/remedies should be minimized. In accordance with §488.820 for HHA and §488.1220

for hospice programs, the following sanctions/remedies in addition to termination of the provider agreement are available:

- *Civil money penalties;*
- *Suspension of payment for all new admissions;*
- *Temporary management;*
- *Directed plan of correction; and*
- *Directed in-service training.*

It is important to note that imposition of an alternative sanction or enforcement remedy is an available enforcement action, but it is not required when CMS may ultimately determine that termination is the most appropriate enforcement action to ensure patient health and safety. When CMS believes that an agency cannot promptly return to compliance, termination may be preferable.

10004.1 - Factors to be Considered in Selecting Sanctions/Remedies (Rev.)

When making sanction/remedy choices, the CMS Location should consider the extent to which the noncompliance is the result of a one-time mistake, larger systemic concerns, or an action of disregard for patient health and safety. CMS bases its choice of sanction(s)/remedy(ies) on consideration of one or more factors that include, but are not limited to, the following:

- *The extent to which the deficiencies pose IJ to patient health and safety.*
- *The nature, incidence, manner, degree, and duration of the deficiencies or noncompliance.*
- *The presence of repeat deficiencies, the HHA's or hospice program's overall compliance history and any history of repeat deficiencies at either the parent or branch or multiple locations.*
- *The extent to which the deficiencies are directly related to a failure to provide quality patient care.*
- *The extent to which the HHA or hospice program is part of a larger organization with performance problems.*
- *An indication of any system-wide failure to provide quality care.*

In addition, CMS reviews other factors including, but not limited to, the history of the HHA's or hospice program's compliance with the CoPs, specifically with reference to the cited deficiencies.

Once a sanction/remedy is imposed, it becomes effective as of the date specified in the notice letter for the sanction/remedy being imposed. All sanctions/remedies remain in effect and

continue until the facility has demonstrated and is determined to be in substantial compliance with all CoPs.

The summary table below gives a high-level overview of the available sanctions/remedies and factors to consider for selection. Each of these are discussed in greater detail throughout the rest of this chapter.

Summary Table of Available Sanctions/Remedies for HHAs & Hospice Programs

Available Sanction/Remedies	***Factors to Consider for Selection***
For All Sanctions/Remedies	• *The extent to which the deficiencies pose IJ to patient health and safety.* • *The nature, incidence, manner, degree, and duration of the deficiencies or noncompliance.* • *The presence of repeat deficiencies, the hospice program's overall compliance history and any history of repeat deficiencies at either the parent hospice program or any of its multiple locations.* • *The extent to which the deficiencies are directly related to a failure to provide quality patient care.* • *The extent to which the hospice program is part of a larger organization with performance problems.* • *An indication of any system-wide failure to provide quality care.*
Civil Money Penalty (CMP)*	*When repeat deficiencies exist.* • *Upper range of CMPs for IJ situations.* • *Middle range of CMPs for noncompliance that is directly related to poor quality patient care outcomes (non-IJ).* • *Lower range of CMPs for noncompliance that is related predominately to structure or process-oriented conditions.*
Suspension of payment for all new admissions (SPNA)*	*When condition-level deficiencies relate to poor patient care outcomes.*
Temporary Management*	*When failure to comply with the CoPs is directly related to management limitations, or* *When current management oversight is likely to impair the facility's ability to return to full compliance, or* *When needed, based on the above situations, to oversee orderly involuntary termination/closure and safe transfer of patients to another local HHA or hospice.*

Directed Plan of Correction (DPOC)	*When the HHA or hospice program has deficiencies that warrant direction for the provider to take specific actions, or* *When the HHA or hospice program fails to develop an acceptable plan of correction for condition-level deficiencies.*
Directed In-Service Training	*When education is likely to correct the deficiencies and help the HHA or hospice program achieve substantial compliance.*
** For HHAs only: Please note that the imposition of one or more of these sanctions could prohibit an HHA from conducting home health aide training and competency evaluation program as noted in 42 CFR 484.80(f).*	

The following sections describe each possible alternative sanction or enforcement remedy and procedures for imposing them. In addition, the CMS Location and SA follow the procedures in Chapter 3 of the SOM if an adverse action is likely to be initiated against a Medicare participating provider.

10005 - Civil Money Penalties
(Rev.)

10005.1 - Basis for Imposing Civil Money Penalties
(Rev.)

CMS may impose a CMP against an HHA or hospice program based on noncompliance with one or more CoPs found through a survey or on the presence of repeat deficiencies (i.e., looking at the HHA's or hospice program's overall compliance history per 42 CFR 488.815(c) and 42 CFR 488.1215(c)).

Enforcement sanctions/remedies may be applied regardless of whether the HHA's or hospice program's deficiencies pose IJ to patient health and safety. CMS may impose a CMP for the number of days that an HHA or hospice program is not in substantial compliance with one or more CoPs, or for each instance that an HHA or hospice program is not in substantial compliance. In the case of unremoved IJ situations, the existing 23-day termination timeline still applies (See also Appendix Q of the State Operations Manual for IJ timelines).

The CMP amounts are based on §488.845 for HHAs and §488.1245 for hospice programs which lay out the ranges and amounts for CMPs. However, CMS is required by law to annually adjust the CMP amounts based on inflation in accordance with 45 CFR part 102. Therefore, while the original CMP amounts are located in the regulations, CMS Location staff will use the annually adjusted amounts that CMS posts on its website on the Quality, Safety & Oversight Group webpage (https://www.cms.gov/Medicare/Provider-Enrollment-and-Certification/SurveyCertificationGenInfo/Civil-Monetary-Penalties-Annual-Adjustments.html) to calculate the penalty. The maximum CMP amount is also posted on this website and will be regularly updated when annual inflation adjustments are made.

CMS may impose a CMP against an HHA or hospice program for either the number of days (per day CMP) the facility is not in compliance with one or more CoPs or for each instance (per instance CMP) that the facility is not in compliance.

Per Day CMP

"Per day" means a CMP imposed for the number of days a facility is not in substantial compliance with the CoPs.

Surveyors may come across information during the survey that identifies past noncompliance, but evidence exists that the noncompliance was corrected and is not an issue during the current survey. While we do not cite to past noncompliance (deficiencies identified and corrected since the last survey), if a surveyor finds current noncompliance and can trace the start of noncompliance back to a specific date prior to this current survey, a per day CMP may be imposed. In general, the CMS Location may impose a per day CMP from the time when the noncompliance occurred through the time when the noncompliance was corrected. For example, CMS may impose a CMP for the number of days an IJ situation exists.

The range of per day penalties is set forth at §488.845(b)(3)-(5) for HHAs and §488.1245(b)(3)-(5) for hospice programs. These base amounts are adjusted annually for inflation and are posted on the CMS website.

The CMP range amounts are based on three levels of seriousness—upper, middle, and lower. The lower range of permitted per day CMP amounts enables CMS to better correlate the seriousness of noncompliance with the amount of the CMP. The expanded lower end of the range may be particularly important if CMS imposes a CMP that begins at the lower or middle range and then increases in amount over time the longer the noncompliance remains uncorrected. In such a case, prompt remedial action by the HHA or hospice program can limit the total amount of per day CMP that accrues (See also 77 FR 67150).

Per Instance CMP

"Per instance" is defined at §488.805 and 42 CFR 488.1205 and means a single event of noncompliance identified and corrected during a survey, for which the statute authorizes CMS to impose a sanction/remedy.

For example, during a survey, CMS or a state may identify several instances of noncompliance, each in distinct regulatory areas. Generally, we anticipate imposing per instance penalties only in the situation where a surveyor identifies a condition-level deficiency during the survey and the HHA or hospice program took sufficient action to correct the deficiency during the time of the survey (see also 77 FR 67150).

The range of per instance penalties is set forth at §488.845(b)(6) for HHA and §488.1245(b)(6) for hospice programs, and the penalty amounts are adjusted annually for inflation and are posted on the CMS website. The terminology "per instance" is not used to suggest that only one instance of condition-level noncompliance may be assigned a CMP. There can be more than one instance of condition-level noncompliance identified during a survey where the SA/CMS Location utilizes the per instance CMP as a sanction/remedy. However, the total dollar amount of the CMP for the instance or multiple instances of condition-level noncompliance may not exceed the maximum $10,000 (as adjusted for inflation) for each day of that specific survey, and may not be less than $1,000 (as adjusted for inflation) per instance.

***NOTE:** A per day and a per instance civil money penalty cannot be used simultaneously for the same deficiency in conjunction with a survey (i.e., standard, revisit, complaint). However, both types of CMPs may be used during a noncompliance cycle if more than one survey takes place, and the per day CMP was not the CMP initially imposed. When a per day CMP is the CMP sanction initially imposed, a per instance CMP cannot be imposed on a subsequent survey within the same noncompliance cycle.*

***For HHAs Only:** Please note that the imposition of a $5,000 or more CMP on an HHA would prohibit that HHA from conducting health aide training and competency evaluation program for 2 years from the date this sanction is imposed (see also 42 CFR 484.80(f)). See Appendix B of the State Operations Manual for additional information for eligible home health aide training and competency evaluation organizations at §484.80(f).*

10005.2 - Determining Amount of Civil Money Penalty
(Rev.)

CMPs are intended as a tool to encourage the HHA or hospice program to rapidly return to compliance with program requirements to protect the health and safety of individuals under their care. As with all other enforcement sanctions/remedies, CMPs are a discretionary enforcement action and not required. CMS may ultimately determine that termination is the most appropriate enforcement action to ensure patient health and safety. While a provider may be given an opportunity to correct their deficiencies and return to compliance, if CMS determines that an agency cannot promptly return to compliance, termination may be preferable to an alternative sanction or enforcement remedy.

CMS bases its choice of sanction/remedy on consideration of one or more factors that include, but are not limited to the following:

- *The extent to which the deficiencies pose IJ to patient health and safety.*
- *The nature, incidence, manner, degree, and duration of the deficiencies or noncompliance.*
- *The presence of repeat deficiencies, the HHA's or hospice program's overall compliance history and any history of repeat deficiencies at either the parent or branch or multiple location.*

- *The extent to which the deficiencies are directly related to a failure to provide quality patient care.*

- *The extent to which the HHA or hospice program is part of a larger organization with performance problems.*

- *An indication of any system-wide failure to provide quality care.*

In determining the amount of the civil money penalty, CMS considers certain factors in addition to those listed above which include:

- *The size of the HHA or the hospice program and its resources;*

- *Accurate and credible resources, such as PECOS, Medicare cost reports and Medicare/Medicaid claims information that provide information on the operation and resources of the HHA; and*

- *Evidence that the HHA or hospice program has a built-in, self-regulating quality assessment and performance improvement system to provide proper care, prevent poor outcomes, control patient injury, enhance quality, promote safety, and avoid risks to patients on a sustainable basis that indicates the ability to meet the conditions of participation and to ensure patient health and safety.*

In collaboration with other CMS components, CMS may consider an agency's financial condition on a case-by-case basis, and this evaluation may be made in part by considering the HHA's or hospice program's size and its resources. The CMS Location may need to consult with other CMS components such as Center for Program Integrity (CPI), Centers for Medicare (CM), and/or Office of Financial Management (OFM) as part of the process to consider the above factors. CMS considers whether the HHA or hospice program has the ability to pay the CMP without having to go out of business or compromise patient health and safety. An HHA or hospice program may be expected to satisfy its obligations to the federal government before making payments to its owners.

Information on the operations and resources of the HHA or hospice program may include items such as, but not limited to, historical patient census, staffing levels, and claims paid. Additionally, CMS may consider other aspects such as enforcement actions taken by CMS for enrollment or payment related issues (e.g., overpayment, pre/post-pay audits, suspensions, and revocations) and the impact these can have on HHA or hospice program resources.

When several instances of noncompliance are identified at a survey, either a per day or per instance civil money penalty could be imposed. By law, CMPs may not exceed a set maximum amount per day. The maximum is a total, comprising per day and per instance penalties. This maximum amount is set forth at §488.845(b)(2)(iii) and at §488.845(b)(6) for HHA and §488.1245(b)(2)(iii) and at §488.1245(b)(6) for hospice programs, and the current adjusted maximum amount is posted on CMS's website on the Quality, Safety & Oversight Group

webpage at https://www.cms.gov/Medicare/Provider-Enrollment-and-Certification/SurveyCertificationGenInfo/Civil-Monetary-Penalties-Annual-Adjustments.

Per the Federal Civil Penalties Inflation Adjustment Improvements Act of 2015, inflationary adjustments to the CMPs are published annually and are effective immediately upon publication. The first of these adjustments was published in the Federal Register on September 6, 2016, at 81 FR 61538. A table located at 45 CFR 102.3 shows how the CMPs are adjusted for inflation. In addition, these adjusted CMP amounts are posted on the CMS website on the Survey and Certification Group webpage and are updated when future inflation adjustments are made. Adjusted amounts that are in effect when the CMP is imposed by CMS shall be applied, regardless of when noncompliance is identified. This means that the CMP amount per day or per instance imposed should be calculated using the most current adjusted amount noted in 45 CFR 102.3. For example, if a survey identifies condition-level noncompliance but CMS has not imposed a CMP yet (i.e., sent notice of intent to impose a CMP) and the next annual adjustment is published, then CMS must impose a CMP amount, either per day or per instance, using the newly adjusted amounts. For example: During a survey, a situation of IJ that is unremoved at survey exit, is identified, and CMS sends notice of the intent to impose a CMP. Upon receipt of an acceptable plan of correction, a revisit survey is completed, revealing the situation of IJ was removed but noncompliance at the condition level remains. CMS would move to lower the amount of the CMP imposed per day considering the survey findings and changes to the severity of identified noncompliance. However, if the daily penalty assessment of the CMP is adjusted under existing Federal law prior to CMS notifying the facility of the reduction in the per day amount of the CMP, CMS must lower the amount per day only to an amount that meets the newly adjusted totals (see also 42 CFR 488.845(b)(2)(iii) for HHAs and 42 CFR 488.1245(b)(2)(iii) for hospice programs).

In the event the ranges, minimum, and/or maximum amount of a CMP is adjusted for inflation during an entity's cycle of noncompliance, CMS must calculate the amount based upon the date the notice of intent is issued, not the date noncompliance was identified. These adjusted amounts shall be used until the next effective date for CMP inflation adjustments occurs.

The CMS Location consults with the regional attorney's office to ensure compliance with section 1128A of the Act and Department of Justice requirements. Section 1128A of the Act requires CMS to offer a hearing before collecting, but not before imposing, a CMP.

10005.3 - Penalty Amounts
(Rev.)

The current adjusted penalty amounts are posted annually on the CMS website on the Quality, Safety & Oversight Group webpage at https://www.cms.gov/Medicare/Provider-Enrollment-and-Certification/SurveyCertificationGenInfo/Civil-Monetary-Penalties-Annual-Adjustments and are regularly updated when inflation adjustments are made.

10005.4 - Range of Penalty Amounts
(Rev.)

CMS bases the range of civil money penalty amounts on three levels of seriousness—upper, middle, and lower. The range of CMPs is identified at §484.485(b)(3) – (6) for HHA and §488.1245(b)(3) – (6) for hospice programs, and the amounts are adjusted annually for inflation and are posted on the CMS website. The specified CMP ranges mark the starting point in CMS's determination of the CMP amount. First, CMS looks to the specific circumstances of the survey findings to determine whether a per day or per instance CMP is warranted and whether the facts point to a CMP rate in an Upper, Middle, or Lower range. After the CMP type and range are determined, CMS considers the additional factors described above at 10012.2.

When CMS is determining the rates for multiple CMPs, the rates must be evaluated collectively. By law, CMPs may not exceed a set maximum amount per day. The maximum is a total, comprising per day and per instance penalties. This maximum is set forth at §488.845(b)(2)(iii) and at §488.845(b)(6) for HHA and at §488.1245(b)(2)(iii) and at §488.1245(b)(6) for hospice programs.

Current information on the range of CMPs and the maximum amount per day is posted on the CMS website on the Quality, Safety & Oversight Group webpage at https://www.cms.gov/Medicare/Provider-Enrollment-and-Certification/SurveyCertificationGenInfo/Civil-Monetary-Penalties-Annual-Adjustments.html.

10005.5 - Upper Range of Penalty
(Rev.)

Upper range penalty amounts are imposed for a condition-level deficiency that is IJ. The CMP upper ranges are set forth in §§488.845(b)(3)(i), (ii), and (iii) for HHA and §488.1245(b)(3)(i), (ii), and (iii) for hospice programs and will vary based on the following:

a. *If the IJ is cited for actual harm;*

b. *If the IJ is cited for potential for harm; and*

c. *If the IJ is cited for a violation of established HHA or hospice program policies and procedures*

***Note:** The following examples contain findings that could become a part of an HHA's or hospice program's IJ citation. Please note that the citation of IJ is only made after careful investigation of all relevant factors as detailed in Appendix Q. An IJ decision requires a determination that the situation meets all required IJ components.*

1. *Section 488.845(b)(3)(i) for HHAs and §488.1245(b)(3)(i) for hospice programs address CMPs for a deficiency or deficiencies that are determined to be IJ and that results in actual harm. **Examples:** The facility fails to report to a physician, episodes of severe hyperglycemia, resulting in ketoacidosis and hospitalization of diabetic patient; and the facility fails to timely and accurately assess a patient's pressure ulcers, which deteriorate to Stage 4 and sepsis prior to their recognition.*

2. *Section 488.845(b)(3)(ii) for HHAs and §488.1245(b)(3)(ii) for hospice programs address CMPs for a deficiency or deficiencies that are determined to be IJ and that result in a potential for harm.* ***Examples:*** *The facility fails to intervene after patient verbalizes threats of suicide, resulting in potential for self-harm; and the facility fails to administer ordered intravenous antibiotic to patient with diagnosed infection, resulting in potential for development of sepsis.*

3. *Section 488.845(b)(3)(iii) for HHAs and §488.1245(b)(3)(iii) for hospice programs address per day penalties for an isolated incident of noncompliance that is in violation of the HHA's or hospice program's established policies and procedures.* ***Example:*** *One of the facility's nurses did not follow the infection control policies and procedures when performing wound care requiring sterile technique on an immunocompromised patient.*

Current information on the range of CMPs and the maximum amounts is posted on the CMS website on the Quality, Safety & Oversight Group webpage at https://www.cms.gov/Medicare/Provider-Enrollment-and-Certification/SurveyCertificationGenInfo/Civil-Monetary-Penalties-Annual-Adjustments.html

The penalty in this upper range will continue until the IJ is removed and substantial compliance can be determined per the usual procedures. (See Appendix Q for IJ removal process and timelines)

During the revisit survey, the SA will determine if the IJ is removed. If the IJ situation has been removed, but condition level deficiencies still exist, the penalty amount may be decreased to the middle or lower range of penalties based on the deficiency.

Note*: In accordance with 42 CFR 488.830(a)(2) for HHAs and 42 CFR 488.1230(c) for hospice programs, if one or more alternative sanctions are imposed as an alternative to termination, the delay in termination may not exceed 6 months from the last day of the survey identifying condition-level noncompliance.*

10005.6 - Middle Range of Penalty
(Rev.)

Section 488.845(b)(4) for HHA and §488.1245(b)(4) for hospice programs set forth the middle range of penalties. Middle range amounts are imposed for a repeat and/or condition-level deficiency that does not constitute IJ but is directly related to poor quality patient care outcomes.

10005.7 - Lower Range of Penalty
(Rev.)

Section 488.845(b)(5) for HHA and §488.1245(b)(5) for hospice programs set forth the lower range of penalties. CMPs in the lower range are imposed for a repeat and/or condition-level

deficiency that does not constitute IJ and that is related predominately to structure or process-oriented conditions (such as OASIS submission requirements) rather than directly related to patient care outcomes.

10005.8 – CMP Imposition and IDR in HHAs and Hospices
(New)

Per §488.745 for HHAs and §488.1130, CMS's or the State's failure to complete IDR (as described in section 10002 of this manual) shall not delay the effective date of any enforcement action, including the imposition of CMPs. In those occasions where an IDR may occur after a CMP is imposed, the IDR results will nevertheless be considered in the enforcement action. We specify at §488.745(c) for HHAs and §488.1130(c) for hospices that if any findings are revised or removed by CMS or the State (for surveys conducted by the SA) based on IDR, the CMS-2567 is revised accordingly and any enforcement actions imposed solely because of those cited deficiencies are adjusted accordingly.

10005.9 - Adjustments to Penalties
(Rev.)

CMS has the discretion to increase or reduce the amount of the CMP during the period of noncompliance depending on whether the level of noncompliance changed at the time of a revisit survey.

CMS may increase a CMP based on the following:

- *The HHA's or hospice program's inability or failure to correct deficiencies;*
- *The presence of a system-wide failure in the provision of quality care; or*
- *A determination of IJ with actual harm versus IJ with potential for harm.*

CMS may decrease a CMP to the extent that it finds, pursuant to a revisit, that substantial and sustainable improvements have been implemented even though the HHA or hospice program is not yet in full compliance with the conditions of participation.

10005.10 - Decreased Penalty Amounts
(Rev.)

If a penalty was imposed in the upper range and the IJ is removed or abated but the HHA or hospice program continues to have condition-level noncompliance that is not IJ, CMS will shift the penalty amount imposed per day from the upper range to the middle or lower range based on the conditions that are out of compliance. SAs and CMS Locations should follow the same guidelines above to determine new penalty amount. An earnest effort to correct any systemic causes of deficiencies and sustain improvement must be evident.

10005.11 - Increased Penalty Amounts
(Rev.)

Following the imposition of a lower level penalty amount (either the middle range or the lower range), CMS may increase the per day penalty amount for any condition-level deficiency or deficiencies which become sufficiently serious to pose potential harm or IJ.

CMS increases the per day penalty amount for deficiencies that are not corrected and found again at the time of revisit survey(s) for which a lower level penalty was imposed.

For repeated noncompliance with the same condition-level deficiency or for uncorrected deficiencies from a prior survey, CMS may impose an increased CMP amount.

10005.12 - Accrual and Duration of Per Day Penalty
(Rev.)

Available Sanction/Remedies	***Timeframe for Notice of Imposition***
Civil Money Penalties (CMP)*	*Notice of intent to impose – provided with statement of deficiencies* *Notice includes: the amount of the CMP being imposed, the basis for such imposition and the proposed effective date of the sanction.*

10005.13 - Duration of Per Day Penalty when there is IJ
(Rev.)

The per day CMP would begin to accrue on the last day of the survey that identified the noncompliance and would continue to accrue until the HHA or hospice program achieves substantial compliance with all requirements or the date of termination, whichever occurs first. In the case of noncompliance that poses IJ, CMS must terminate the provider agreement within 23 calendar days after the last date of the survey if the IJ is not removed.

10005.13A - Duration of Penalty when there is no IJ
(Rev.)

In the case of noncompliance that does not pose IJ, the daily accrual of per day CMP is imposed for the days of noncompliance, i.e., from the day the penalty starts (based on the survey completion date and this may be prior to the notice), until the HHA or hospice program achieves substantial compliance based on a revisit or the provider agreement is terminated, but for a period of no longer than 6 months following the last day of the survey.

If the HHA or hospice program has not achieved substantial compliance with all the conditions of participation, CMS will terminate the provider agreement. The accrual of civil

money penalty stops on the day the HHA or hospice program agreement is terminated or the HHA or hospice program achieves substantial compliance, whichever is earlier.

10005.14 – Range of Penalty Amounts - Per Instance
(Rev.)

Penalties imposed per instance of noncompliance may be assessed for one or more singular events or instances of condition-level noncompliance that are identified and where the noncompliance was corrected during the onsite survey. The terminology "per instance" is not used to suggest that only one instance of noncompliance may be the basis to assess a CMP. There can be more than one instance of noncompliance identified during a survey. The current adjusted range for per instance CMPs, as well as the adjusted maximum amount per day, is posted on the CMS website on the Quality, Safety & Oversight Group webpage at https://www.cms.gov/Medicare/Provider-Enrollment-and-Certification/SurveyCertificationGenInfo/Civil-Monetary-Penalties-Annual-Adjustments.

10005.15 – Accrual and Duration of Per Instance Penalty
(Rev.)

As set forth in §488.845(b)(6) for HHA and §488.1245(b)(6) for hospice programs, a per instance CMP is imposed for each instance of noncompliance based on a deficiency(ies) during a specific survey. It is applied to as many instances as is deemed appropriate and in a specific amount for that deficiency(ies). The current adjusted range for per instance CMPs, as well as the maximum adjusted amount per day, is posted on the CMS website on the Quality, Safety & Oversight Group webpage.

***NOTE:** The per day and per instance CMP would not be imposed simultaneously for the same CoPs in a survey. In no instance will the period of noncompliance be allowed to extend beyond 6 months from the last day of the original survey that determined the HHA's or hospice program's noncompliance. If the HHA or hospice program has not achieved substantial compliance with all the participation requirements within those 6 months, CMS will terminate the HHA or hospice program. The accrual of the per day CMP stops on the day the HHA's or hospice program's provider agreement is terminated or the HHA or hospice program achieves substantial compliance, whichever is earlier.*

***Example:** When the per instance CMP is used on the original survey, the revisit survey is used to determine compliance. If noncompliance is identified at the revisit survey and a CMP is selected as the enforcement remedy/sanction, either the per instance or per day remedy may be selected.*

10005.16 - Accrual and Duration Examples
(Rev.)

a. *Revisit Survey Identifies New Noncompliance and Same Data Tag is Selected - If the same data tag is selected to identify noncompliance, the State (or CMS Location) could choose to utilize either the per instance or per day CMP. It would not matter whether the same data tag was selected to identify the new noncompliance. The issue is whether*

noncompliance is present and whether the deficient practice rises to a level that will support selecting a CMP as a sanction. For example, noncompliance was identified at HHA Tag G406 (Condition of participation: Patient rights) during the original survey. During the revisit survey, a different problem dealing with the patient rights of three patients was cited at Tag G406. The per instance or per day CMP would be selected for the noncompliance identified at Tag G406. If the per instance civil money penalty was used, the amount of the CMP might be influenced by factors relating to the violations of patient rights. However, only one per instance CMP would be appropriate. It would not be appropriate to assign a separate CMP for each of the violations related to patient rights (findings) identified at Tag G406.

b. *Revisit Survey Identifies New Noncompliance and a Different Data Tag is Selected - If a revisit identifies new deficiencies at a different data tag, either a per instance or per day CMP could be selected as a sanction.*

c. *Noncompliance - IJ Does Not Exist (Per Day)- For noncompliance that does not pose IJ, the per day CMP is imposed for the days of noncompliance, i.e., from the day the penalty starts (and this may start accruing as early as the beginning of the last day of the survey that determines the HHA or hospice program was out of compliance), until the HHA or hospice program achieves substantial compliance, or the provider agreement is terminated. However, if the HHA or hospice program has not achieved substantial compliance at the end of 6 months from the last day of the original survey, the CMS Location terminates the provider agreement. The accrual of the CMP stops on the date that the provider agreement is terminated.*

d. *Noncompliance - IJ Does Not Exist (Per Instance)- For noncompliance that does not pose IJ, the per instance CMP is imposed for the number of deficiencies during a survey for which the per instance CMP is determined to be an appropriate sanction. For example, HHA Tag G510 (Condition of participation: Comprehensive assessment of patients) and HHA Tag G370 were cited on a survey. A per instance CMP of $2,000 is imposed for Tag G370 and a per instance CMP of $8,000 is imposed for Tag G510. No civil money penalty could then be imposed for additional deficiencies because the total "per instance CMP" may not exceed $10,000 as adjusted annually for each day of noncompliance.*

e. *Noncompliance - IJ Exists - For noncompliance that poses IJ, CMS must terminate the provider agreement within 23 calendar days after the last day of the survey that identified the IJ if the IJ is not removed. The accrual of the per day CMP stops on the date that the provider achieves substantial compliance, or the provider agreement is terminated.*

10005.17 - Computation and Notice of Total Penalty Amount
(Rev.)

*When a CMP is imposed on a **per day** basis and the HHA or hospice program achieves compliance with the conditions of participation as determined by an onsite revisit survey, CMS sends a final notice to the HHA or hospice program containing all the following information:*

- *The amount of penalty assessed per day.*
- *The total number of days of noncompliance.*
- *The total amount due.*
- *The due date of the penalty.*
- *The rate of interest to be assessed on any unpaid balance beginning on the due date. The rate of interest is the higher of either the rate fixed by the Secretary of the Treasury after taking into consideration private consumer rates of interest prevailing on the date of the notice of the penalty amount due and this rate is published quarterly in the "Federal Register" by the Department of Health and Human Services under 45 CFR 30.13(a); or the current value of funds rate which is published annually in the "Federal Register" by the Secretary of the Treasury, subject to quarterly revisions. (The CMS Locations are notified by the CMS Office of Financial Management for the rate of interest information.)*
- *Instructions for submitting payment (see also "Method of Payment" section).*

*When a CMP is imposed on a **per day** basis and the HHA's or hospice program's provider agreement has been involuntarily terminated, CMS will send the penalty information, including the total amount of the CMP due, after one of the following actions has occurred:*

- *A final administrative decision is made;*
- *The HHA or hospice program has waived its right to a hearing in accordance with the regulations; or,*
- *The time for requesting a hearing has expired and CMS has not received a hearing request from the HHA or hospice program.*

*When a **per instance** CMP is assessed, a notice is sent to the HHA or hospice program containing all of the following information after the provider is in substantial compliance or its provider agreement has been terminated:*

- *The amount of the penalty or penalties that was assessed;*
- *The total amount due;*
- *The due date of the penalty;*
- *The rate of interest to be assessed on any unpaid balance beginning on the due date. The rate of interest is the higher of either the rate fixed by the Secretary of the Treasury after taking into consideration private consumer rates of interest prevailing on the date of the notice of the penalty amount due and this rate is published quarterly in the "Federal Register" by the Department of Health and Human Services under 45 CFR*

30.13(a); or the current value of funds rate which is published annually in the "Federal Register" by the Secretary of the Treasury, subject to quarterly revisions. (The CMS Locations are notified by the CMS Division of Financial Management for the annual rate of interest information); and

- *Instructions for submitting payment (see also "Method of Payment" section).*

10005.18 - Notice of Imposition of Civil Money Penalty
(Rev.)

If CMS or the SA imposes a CMP, it provides the HHA or hospice program with written notice of the intent to impose the sanction/remedy, including the amount of the CMP being imposed, the basis for such imposition and the proposed effective date of the sanction/remedy. The notice includes:

I. The nature of the noncompliance (regulatory requirements not met);

II. The statutory basis for the CMP;

III. The amount of the penalty per day of noncompliance or the amount of the penalty per instance of noncompliance during a survey;

IV. The factors that were considered in determining the amount of the CMP;

V. The date on which the per day CMP begins to accrue;

VI. A statement that the per day CMP will accrue until substantial compliance is achieved or until termination from participation in the program occurs.

VII. When the CMP payment is due;

*VIII. **For HHAs only**: Implications of the CMP imposition on the home health aide training and competency evaluation program (see also 42 CFR 484.80(f)).*

IX. Instructions for responding to the notice, including a statement of the HHA's or hospice program's right to a hearing and information about how to request a hearing; and

X. Implications of waiving the right to a hearing and information about how to waive the right to a hearing (see §10013.20 below).

10005.19 - Sending the Notice
(Rev.)

The notice of CMP imposition shall be in writing and shall be addressed directly to the HHA or hospice program, or to an individual, an officer, managing or general agent, or other agent authorized by appointment or law to receive the notice.

The notice shall be dispatched through first-class mail, or other reliable means. Other reliable means refers to the use of alternatives to the United States mail in sending notices. Electronic communication, such as facsimile transmission or email, is equally reliable and on occasion more convenient than the United States mail. If electronic means are employed to send notice, the sender should maintain a record of the transmission to assure proof of transmission if receipt is denied.

It should be noted that in cases where the State is authorized by the CMS location, the State may send the initial notice of imposition of certain sanctions on CMS's behalf, within applicable notice requirements.

10005.20 - Appeal of Noncompliance That Led to Imposition of Civil Money Penalty

(Rev.)

Before collecting a CMP, section 1128A of the Act requires the Secretary (CMS) to conduct a hearing when properly requested by the HHA or hospice program pursuant to §498.40. An HHA or hospice program may request a hearing with the Administrative Law Judge (ALJ) on the determination of the noncompliance that is the basis for imposition of the CMP.

The procedures to request a hearing specified in 42 C.F.R. § 498.40 are followed when CMS imposes a CMP on an HHA or hospice program. Once an appeal hearing is requested, CMS cannot collect the CMP until a final agency determination. Additional procedures are set forth at 42 CFR 488.845(h) for HHA and at 42 CFR 488.1245(g) for hospice programs. Per these regulations, when an ALJ or state hearing officer (or higher administrative review authority) finds that the basis for imposing a CMP exists, the reviewing authority may not— (1) Set a penalty of zero or reduce a penalty to zero; (2) Review the exercise of discretion by CMS to impose a CMP; and (3) Consider any factors in reviewing the amount of the penalty other than those specified at §488.845(b) for HHA or §488.1245(b) for hospice programs.

10005.20A – HHA or Hospice Program Waives Right to a Hearing

(Rev.)

An HHA or hospice program may waive the right to a hearing, in writing, within 60 days from the date of the notice imposing the CMP. If an HHA or hospice program timely waives its right to an appeal hearing within 60 calendar days of their receipt of CMS' notice imposing the CMP, CMS will approve the waiver and reduce the CMP by thirty five percent (35%). Payment of the reduced CMP must be made within 15 days of the HHA's or hospice program's receipt of CMS's notice approving the waiver and reducing the CMP. If the HHA or hospice program does not waive its right to an appeal hearing in writing within 60 calendar days of their receipt of CMS original request for payment under §488.845(c)(2)(ii) for HHA and §488.1245(c)(2)(ii) for hospice programs, it will not receive the CMP reduction.

NOTE: *Each time a survey is conducted within an already running noncompliance cycle and a CMP is imposed, the HHA or hospice program is given appeal rights and may exercise its waiver of right to a hearing.*

When a per day CMP is imposed and then is increased or decreased at subsequent surveys during an already running noncompliance cycle, an HHA or hospice program may elect to either appeal each separate CMP imposition or waive the right to appeal each imposition. Each CMP imposition is computed separately for a set number of days. The final CMP amount is established after the final administrative decision.

Example: *An HHA is cited on the original recertification survey for non-compliance with 42 CFR 484.60 Condition of participation: Care planning, coordination of services, and quality of care. Findings include evidence that the HHA did not follow the plan of care, the plan of care did not include all pertinent diagnoses, and the HHA failed to notify the physician of changes in the patient's condition. On the first revisit survey, the incidence of these deficiencies increased. On both surveys, the condition is cited as out of compliance and CMPs are imposed. The CMP will be increased following the revisit survey. The HHA may choose to appeal one or both citations, or waive one or both citations, or waive one citation and appeal the other.*

When several per instance CMPs are imposed during a noncompliance cycle, an HHA or hospice program may choose to appeal or waive the right to appeal one or more of the CMPs, in the same manner as illustrated above for the per day CMPs.

After the facility achieves substantial compliance or its provider agreement is terminated, it is notified of the revised CMP amount due.

10005.21 - When a CMP is Due and Payable
(Rev.)

In accordance with HHA (42 CFR 488.845(f)) and hospice program (42 CFR 488.1245(f)) regulations, payments are due for all CMPs within 15 days from any of the following:

- *After a final administrative decision when the HHA or hospice program achieves substantial compliance before the final decision or the effective date of termination before final decision,*
    - *A final administrative decision includes an ALJ decision and review by the Departmental Appeals Board, if the HHA or hospice program requests a review of the ALJ decision.*
- *After the time to appeal has expired and the HHA or hospice program does not appeal or fails to timely appeal the initial determination,*
- *After CMS receives a written request from the HHA or hospice program requesting to waive its right to appeal the determinations that led to the imposition of a CMP,*

- *After substantial compliance is achieved, or*

- *After the effective date of termination.*

Note: *The regulations at §488.845 for HHA and §488.1245 for hospice programs do not include a provision for extended payment plans for HHA or hospice program CMPs.*

An HHA or hospice program has two options for action following the imposition of a CMP:

- *The HHA or hospice program could pay the amount due for all CMPs imposed prior to the date a CMP is due and payable; or*

- *The HHA or hospice program could request a hearing based on the determination of noncompliance with Medicare CoPs.*

When an HHA or hospice program provides timely notice waiving its right to a hearing, CMS reduces the final CMP amount by 35%. This reduction is reflected once the CMP stops accruing, that is, when the HHA or hospice program achieves substantial compliance before CMS receives its request to waive a hearing, or the effective date of the termination occurs before CMS received the waiver request.

Impact of Hearing Requests:
Within 60 days of receipt of the notice of imposition of a penalty, the HHA or hospice program may file a request directly to the Departmental Appeals Board in the Office of the Secretary, Department of Health and Human Services with a copy to the State and CMS. In accordance with §498.40(b), the HHA's or hospice program's appeal request would identify the specific issues of contention, the findings of fact and conclusions of the law with which the HHA or hospice program disagreed, and the specific basis for contending that the survey findings and determinations were invalid. A hearing would be completed before any penalty was collected. However, sanctions/remedies would continue regardless of the timing of any appeals proceedings if the HHA or hospice program had not met the CoPs.

Requesting an appeal would not delay or end the imposition of a sanction/remedy but can only affect the collection of any final CMP amounts due. A CMP would begin to accrue on the last day of the survey which identified the noncompliance. These include penalties imposed on a per day basis, as well as penalties imposed per instance of noncompliance.

10005.22 - Method of Payment
(Rev.)

HHAs and hospices may select one of the following payment options: (1) Pay.gov; or (2) Electronic transfer of funds. CMS Office of Financial Management (OFM) prefers the use of Pay.gov because it is the federal government's secure portal for web-based collection and billing services which has been implemented by OFM to collect any money due to CMS. Questions

related to use of pay.gov, please contact the OFM's Division of Collections via email at OFMDPBCCMPGeneralMailBox@cms.hhs.gov.

HHAs and hospices are not to send CMP payment checks to the CMS Locations. If an HHA or hospice requests to pay by check, it will be considered on a case-by-case basis with collaboration from the CMS Location's division of financial management.

10005.23 - Settlement of Civil Money Penalty
(Rev.)

The CMS Location has the authority to settle CMP cases at any time prior to a final administrative decision. If a decision is made to settle, the settlement should not be for a better term than had the HHA or hospice program opted for a 35 percent reduction.

10005.24 - Offsets
(Rev.)

If payment was not received by the established due date, CMS will collect the CMP through offset of monies then owed or later owing to the HHA or hospice program. To initiate such an offset, CMS will instruct the appropriate Medicare Administrative Contractors (MAC), when applicable, the State Medicaid agencies, to deduct unpaid CMP balances from any money owed to the HHA or hospice program. To maintain consistency in recovering a CMP among other types of providers who are subject to a CMP, the amount of any penalty can be deducted (offset) from any sum CMS or the State Medicaid Agency owes to the HHA or hospice program.

Interest would be assessed on the unpaid balance of the penalty beginning on the due date. The rate of interest assessed on any unpaid balance would be based on the Medicare interest rate published quarterly in the Federal Register, as specified in §405.378(d). CMS Locations are notified by CMS OFM of the current interest rate and any changes.

10005.25 - Debt Referral to the Department of the Treasury via the Debt Collection System
(New)

Those CMP amounts not recovered due to HHA or hospice program failure to pay or inadequate funds for offset will be collected through the Debt Collection Improvement Act of 1996 which requires all debt owed to any Federal agency that is more than 180 days delinquent to be transferred to the Department of the Treasury for debt collection services. Prior to initiating a CMP debt referral to the Department of the Treasury, the CMS Location must first exhaust all collection options through the MAC and the State Medicaid Agency.

The Debt Collection System (DCS) is the data system that is used by the Division of Medicare Debt Management (DMDM) in OFM to transmit debt referrals to the Department of the Treasury via the Program Support Center (PSC), a separate component within the Department of Health and Human Services.

10005.26 - Disbursement of Recovered CMP funds
(Rev.)

The CMP amounts and any corresponding interest recovered from HHAs, and hospice programs will be divided between the Medicare and Medicaid programs, based on a proportion that is commensurate with the comparative Federal expenditures under Titles XVIII and XIX of the Act, using Medicaid Statistical Information System (MSIS) and HHA or hospice program Prospective Payment System (PPS) data for a three-year fiscal period. The amounts are disbursed in accordance with § 488.845(g). Penalty funds may not be used for survey and certification operations nor can they be used as the State's Medicaid non-Federal medical assistance or administrative match. The CMS Locations are not responsible for disbursement of recovered CMP funds.

10006 - Suspension of Payment for All New Medicare Admissions
(Rev.)

10006.1 - Introduction
(Rev.)

Suspension of payment for all new Medicare admissions is conducted in accordance with §488.840 for HHA or §488.1240 for hospice programs when the provider is not in substantial compliance with the CoPs. The SA should consider recommending this sanction/remedy for deficiencies related to poor patient care outcomes, regardless of whether cited deficiencies pose IJ to patient health and safety. Suspension of payment for new admissions is likely to be the most effective sanction/remedy to influence rapid change to facilitate compliance with the CoPs and may be imposed alone or in combination with other sanctions/remedies.

10006.2 - Notice of Sanction
(Rev.)

Suspension of payment for new Medicare admissions may be imposed anytime an HHA or hospice program is found to be out of substantial compliance, as long as the HHA or hospice program is given written notice at least 2 calendar days before the effective date in IJ situations and at least 15 calendar days before the effective date in non-IJ situations. The notice of suspension of payment for new admissions must include the following: the nature of the non-compliance; the effective date of the sanction/remedy; and the right to appeal the determination leading to the sanction. In addition to notifying the HHA or hospice program of this proposed sanction/remedy, CMS will also notify the State Medicaid Agency, if applicable.

For HHAs Only: *Please note that the imposition of suspension of payment for new admissions on an HHA would prohibit that HHA from conducting health aide training and competency evaluation program for 2 years from the date this sanction is imposed (see also 42 CFR 484.80(f)). See Appendix B of the State Operations Manual for additional information for eligible home health aide training and competency evaluation organizations at §484.80(f).*

10006.3 - Effect of Sanction/Remedy on Patients Admitted before the Effective Date of Sanction/Remedy
(Rev.)

The patient's status on the effective date of the suspension of payment sanction/remedy is the controlling factor. This sanction/remedy would not apply to patients who have been receiving care from the HHA or hospice program before the effective date of this sanction/remedy. This sanction/remedy would apply only to new Medicare admissions. CMS will suspend payments for new Medicare patient admissions to the HHA or hospice program that are made on or after the effective date of the imposition of the sanction/remedy for the duration of the sanction/remedy. Payments for individuals who are already receiving services could continue. CMS defines a "new admission" as the following:

- *A patient who is admitted to the HHA or hospice program under Medicare on or after the effective date of a suspension of payment sanction/remedy; or*

- *A patient who was admitted and discharged before the effective date of the suspension of payment and is readmitted under Medicare on or after the effective date of suspension of payment sanction/remedy.*

As part of this sanction/remedy, the HHA or hospice program would be required to notify any new patient admission, before care is initiated, of the fact that Medicare payment would not be available to this HHA or hospice program because of the imposed suspension. The HHA or hospice program would be precluded from charging the Medicare patient for those services unless it could show that, before initiating the care, it had notified the patient or representative both orally and in writing in a language that the patient or representative can understand that Medicare payment is not available.

The suspension of payment sanction/remedy will end when CMS finds that the HHA or hospice program is in substantial compliance with all the CoPs or when the HHA or hospice program is terminated. That is, the suspension of payment sanction/remedy would end when the HHA or hospice program has corrected all condition-level deficiencies, and the correction has been verified by the SA. Any Medicare patients admitted during the suspension of payment period would require a new start of care (SOC) date after the suspension of payment for new admissions has ended. This is required for the HHA or hospice program to begin receiving payments for those patients.

10006.4 - Duration
(Rev.)

The suspension of payment would end when CMS terminates the provider agreement or when CMS finds the HHA or hospice program to be in substantial compliance with all of the CoPs. No payments are made to reimburse the HHA or hospice program for the time between the date the sanction/remedy was imposed and the date that substantial compliance was achieved. CMS accomplishes the suspension of payment sanction/remedy through written instructions to the appropriate MAC. The CMS Location will send the letter with instructions to the MAC

indicating the beginning or ending date of the payment suspension. Generally, if the HHA or hospice program achieves substantial compliance and it is verified by CMS, CMS will resume payments to the HHA or hospice program prospectively from the date it determines that substantial compliance was achieved.

If CMS terminates the provider agreement or determines that the HHA or hospice program is in substantial compliance with the CoPs, the HHA or hospice program would not be able to recoup any payments for services provided to Medicare patients admitted during the time the suspension was in place.

10007 - Temporary Management
(Rev.)

10007.1 – Introduction, Purpose & Imposition
(Rev.)

Temporary management is established in accordance with §488.835 for HHAs and §488.1235 for hospice programs. The following situations should be used as a general guide for imposing temporary management when:

- *CMS determines the failure to comply with the CoPs is directly related to management limitations, or*
- *Deficient management oversight that is likely to impair the HHA's or hospice program's ability to correct deficiencies and return the HHA or hospice program to full compliance within the necessary timeframe, and*
- *When needed, based on the above situations, to oversee orderly involuntary termination/closure of an HHA or hospice program including the proper and safe transfer of patients to another local HHA or hospice program.*

Notice of intent to appoint a temporary manager must be given at least 15 calendar days before the effective date of the enforcement action. When there is an IJ, notice of intent must be given at least two calendar days before the effective date of the enforcement action. The notice of intent from CMS provides the intent to impose the enforcement action, the statutory basis for the enforcement action, the nature of the noncompliance, the proposed effective date of the enforcement action, and the appeal rights. The final notice will be provided once the administrative determination is final.

***For HHAs only:** Please note that the imposition of temporary management on an HHA would prohibit that HHA from conducting health aide training and competency evaluation program for 2 years from the date this sanction is imposed (see also 42 CFR 484.80(f)). See Appendix B of the State Operations Manual for additional information for eligible home health aide training and competency evaluation organizations at §484.80(f).*

The maximum period for use of the temporary manager is six months. It is the temporary manager's responsibility to oversee correction of the deficiencies and assure the health and safety of the HHA's or hospice program's patients while the corrections are being made. An HHA or hospice program that fails to relinquish authority and control to a temporary

manager will have its provider agreement terminated in accordance with §488.865 (HHA) or §488.1265 (Hospice).

10007.2 - Selection of Temporary Manager
(Rev.)

Each SA should compile a list of individuals who are eligible to serve as temporary managers. When CMS decides to impose this sanction or remedy, it considers the SA's recommendation for a temporary manager whose work experience and education qualify the individual to oversee the correction of deficiencies to achieve substantial compliance. The temporary manager must have the experience and education that qualifies the individual to oversee the HHA or hospice program. The temporary manager can be either internal or external to the HHA/hospice program and will be appointed by CMS or the SA based on qualifications described in §§ 484.105(b) and 484.115 for HHAs and §§ 418.100 and 418.114 for hospice programs. The SA should reject a candidate who has demonstrated difficulty maintaining compliance in the past.

10007.3 – Authority and Conditions of Temporary Management
(Rev.)

CMS notifies the HHA or hospice program that a temporary manager is being appointed. The temporary manager must have the authority to hire, terminate, or reassign staff; obligate the provider's funds; alter provider policies and procedures; and otherwise manage an HHA or hospice program to correct deficiencies identified in the provider's operation. The HHA's or hospice program's management must agree to relinquish authority and control to the temporary manager and to pay his/her salary before the temporary manager can be installed in the HHA or hospice program. A contract or memorandum of understanding should be completed between the temporary manager and the HHA or hospice program prior to the temporary manager beginning any work or incurring any costs. Failure to relinquish authority and control to the temporary manager will result in termination of the HHA or hospice program.

The HHA or hospice program cannot retain final authority to approve changes of personnel or expenditures of HHA or hospice program funds and be considered to have relinquished control to the temporary manager. The temporary manager must be given access to all HHA or hospice program bank accounts. If the HHA or hospice program does not relinquish control to the temporary manager and/or provide access to bank accounts and available assets, the HHA or hospice program will be terminated. It should be noted that the HHA's or hospice program's governing body remains ultimately responsible for achieving compliance. The responsibility does not transfer to the temporary manager, SA, or CMS.

The temporary manager's salary must be at least equivalent to the prevailing annual salary of HHA or hospice program administrators in the HHA's or hospice program's geographic area based on the bureau of labor statistics, plus any additional costs that would have reasonably been incurred by the HHA or hospice program if the temporary manager had been in an employment relationship, e.g., the cost of a benefits package, prorated for the amount of time that the temporary manager spends in the HHA or hospice program. The

HHA or hospice program is also responsible for any other costs incurred by the temporary manager in furnishing services under such an arrangement or as otherwise set by the State. Failure to pay the salary and other costs is considered a failure to relinquish authority and control to temporary management and will result in termination of the provider agreement.

The State should provide the temporary manager with an appropriate orientation that includes a review of the HHA's or hospice program's deficiencies and compliance history. The State may request that the temporary manager periodically report on the actions taken to achieve compliance and, on the expenditures associated with these actions.

10007.4 - Duration of Temporary Management
(Rev.)

Temporary management continues until an HHA or hospice program is terminated by CMS, or achieves substantial compliance via an onsite survey, and is capable of remaining in substantial compliance, or decides to discontinue the sanction/remedy and reassume management control before it has achieved substantial compliance. If the HHA or hospice program reassumes control before achieving substantial compliance, CMS would initiate termination of the provider agreement and could impose additional sanctions or remedies during the time period between HHA or hospice program resumption of management and termination. Temporary management will not exceed six months from the date of the survey identifying noncompliance.

10008 - Directed Plan of Correction (DPOC)
(Rev.)

10008.1 – Purpose
(Rev.)

The purpose of the DPOC is to achieve correction and continued compliance with Federal requirements. A DPOC is a plan that the State, with CMS Location approval, or the CMS Location develops to require an HHA or hospice program to take corrective action to achieve specific outcomes within specified time frames. The requirements for DPOC are specified at §488.850 for HHA and §488.1250 for hospice programs.

10008.2 - Imposition of a Directed Plan of Correction
(Rev.)

Whether the facility has standard-level or condition-level deficiencies, an HHA or hospice program must submit an acceptable plan of correction to CMS. If the HHA or hospice program is unable to develop an acceptable plan of correction, CMS may impose a DPOC for condition level deficiencies. CMS must provide written notification of the intent to impose a DPOC sanction/remedy.

Notice of intent to impose a DPOC must be given at least 15 calendar days before the effective date of the enforcement action in non-IJ situations and at least 2 calendar days before the

effective date in IJ situations. The date the DPOC is imposed, that is, the date the sanction/remedy becomes effective, does not mean that all corrections must be completed by that date.

10008.3 - Elements of a Directed Plan of Correction
(Rev.)

A DPOC should address all of the elements required for an HHA- or hospice program-developed plan of correction. These elements include, but are not limited to, the following:

I. *How an HHA or hospice program will correct each deficiency;*
II. *How the HHA or hospice program will act to protect patients in similar situations;*
III. *How the HHA or hospice program will ensure that each deficiency does not recur;*
IV. *How the HHA or hospice program will monitor performance to sustain solutions; and*
V. *The timeframe in which corrective actions will be taken.*

10008.4 - Achieving Compliance
(Rev.)

Achieving compliance is the HHA's or hospice program's responsibility, whether or not a DPOC is followed. If the HHA or hospice program fails to achieve compliance within the timeframes specified in the DPOC, CMS may impose one or more additional alternative sanctions/remedies until the HHA or hospice program achieves compliance or is terminated from the Medicare program.

10009 - Directed In-Service Training
(Rev.)

10009.1 – Purpose & Imposition
(Rev.)

Directed in-service training may be used when the State, CMS, or the temporary manager believes that education is likely to correct the deficiencies and help the HHA or hospice program achieve substantial compliance. The requirements for directed in-service training are specified at §488.855 for HHA and §488.1255 for hospice programs.

Directed in-service training requires the staff of the HHA or hospice program to attend a specific in-service training program(s). The purpose of directed in-service training is to provide knowledge to achieve and remain in compliance with Federal requirements. For example, in circumstances where some, but not all, compliance problems are a result of a lack of knowledge on the part of the health care provider relative to advances in health care technology and expectations of favorable patient outcomes, directed in-service training would benefit the agency. Also, directed in-service could be used in situations where staff performance results in deficient practice. A directed in-service training program would correct

this deficient practice through retraining the staff in the use of clinically and professionally sound methods to produce quality outcomes.

Notice of intent to impose directed in-service training must be given at least 15 calendar days before the effective date of the enforcement action in non-IJ situations and at least 2 calendar days before the effective date in IJ situations.

10009.2 - Appropriate Resources for Directed In-Service Training Programs
(Rev.)

HHAs or hospice program should use programs developed by well-established centers of health education and training such as continuing education programs offered by schools of medicine, nursing, public health, community colleges, state health departments, centers for the aging, and other available area centers which have established continuing education programs for health professionals. The programs may also be conducted by consultants with background in education and training with Medicare HHA or hospice program providers, as applicable, or as deemed acceptable by CMS and/or the SA (by review of a copy of the curriculum vitas and/or resumes/references in order to determine the educator's qualifications). The SA or CMS Location may also compile a list of resources that can provide directed in-service training and may make this list available to HHAs or hospice programs.

10009.3 - Further Responsibilities
(Rev.)

The HHA or hospice program bears the expense of the directed in-service training for its staff. After the training has been completed, the SA will assess whether substantial compliance has been achieved. If directed in-service training was the sanction imposed and the HHA or hospice program does not achieve substantial compliance, CMS may impose one or more additional sanctions/remedies as specified at §488.820 for HHA or at §488.1220 for hospice programs.

Hospice Certification / Recertification Requirements

CMS Medicare Benefit Policy Manual (Pub. 100-02), chapter 9 PDF, section 20.1

To be eligible to elect hospice care under Medicare, an individual must be entitled to Medicare Part A benefits and certified as terminally ill. An individual is considered to be terminally ill if the medical prognosis is that the individual's life expectancy is 6 months or less if the illness runs its normal course.

Timeframe for Certification/Recertification

The hospice must obtain, no later than 2 calendar days (that is, by the end of the third day), and after the start of each benefit period an oral or written certification of the terminal illness. Initial certifications may be completed up to 15 days before hospice care is elected. For the subsequent periods, recertifications may be completed up to 15 days before the next benefit period begins.

If the hospice cannot obtain written certification within 2 calendar days, it must obtain oral certification within 2 calendar days. When making an oral certification, the certifying physician(s) should state that the patient is terminally ill, with a prognosis of 6 months or less. In addition, the hospice must ensure the written certification/recertification is signed and dated prior to billing Medicare, or their claim(s) may be denied.

Content of the Certification/Recertification

Section 1814(a)(7) of the Social Security Act (the Act) specifies that certification of terminal illness for hospice benefits shall be based on the clinical judgment of the hospice medical director or physician member of the interdisciplinary group (IDG) and the individual's attending physician, if he/she has one, regarding the normal course of the individual's illness. Nurse practitioners and physician assistants cannot certify or re-certify an individual as terminally ill. In the event that a beneficiary's attending physician is a nurse practitioner or a physician assistant, the hospice medical director or the physician member of the hospice IDG certifies the individual as terminally ill. In addition to the initial certification for hospice, the patient must be recertified for each subsequent hospice benefit period.

The written certification/recertification must include:

- The statement that the individual's medical prognosis is that their life expectancy is 6 months or less if the terminal illness runs its normal course
- The physician's brief narrative explanation of the clinical findings that supports a life expectancy of 6 months or less as part of the certification and recertification forms, or as an addendum to the certification and recertification forms
  - If the narrative is part of the certification or recertification form, then the narrative must be located immediately above the physician's signature.
  - If the narrative exists as an addendum to the certification or recertification form, in addition to the physician's signature on the certification or recertification form, the physician must also sign immediately following the narrative in the addendum.
  - The narrative must reflect the patient's individual clinical circumstances and cannot contain check boxes or standard language used for all patients. The physician must synthesize the patient's comprehensive medical information in order to compose this brief clinical justification narrative.
  - The narrative shall include a statement directly above the physician signature attesting that by signing, the physician confirms that he/she composed the narrative based on his/her review of the patient's medical record or, if applicable, his or her examination of the patient. The physician may dictate the narrative.
- The signature(s) of the physician(s), the date signed, and the benefit period dates that the certification or recertification covers (for more on signature requirements, see the CMS Medicare Program Integrity Manual (Pub. 100-08), chapter 3 PDF, section 3.3.2.4).
- For recertifications on or after January 1, 2011, the narrative associated with the third benefit period recertification and every subsequent recertification must include an explanation of why the clinical findings of the face-to-face encounter support a life expectancy of 6 months or less. Documentation must include the date of the encounter, an attestation by the physician or nurse practitioner that he/she had an encounter with the beneficiary. If the encounter was done by a nurse practitioner, he/she must attest that clinical findings were provided to the certifying physician.

Signature Requirements for Certification

- CMS Medicare Benefit Policy Manual (Pub. 100-02), chapter 9 PDF, section 20.1
- CMS Medicare Program Integrity Manual (Pub. 100-08), chapter 3 PDF, section 3.3.2.4

Acceptable signatures

- Handwritten signatures
- Electronic signatures
- Facsimile of original written or electronic signatures

NOTE: All signatures must be dated. Handwritten signatures must be hand dated.

Unacceptable signatures

- Stamped signatures

Signatures for Initial Certifications

For the first benefit period after election of the Medicare hospice benefit, the certification must be signed and dated by the:

- Medical director of the hospice or the physician member of the hospice interdisciplinary group (IDG); and

- The beneficiary's attending physician (if they have one).

Note: To sign the certification, the attending physician must be a Doctor of Medicine or osteopathy and be identified by the beneficiary at the time he/she elects to receive hospice care as having the most significant role in the determination and delivery of the individual's medical care.

Signatures for Recertifications

For the recertification (and subsequent hospice benefit periods), only the hospice medical director or the physician member of the IDG is required to sign and date the certification. The beneficiary's attending physician is not required to sign and date the recertification.

Face-to-Face Encounter

For recertifications on or after January 1, 2011, a hospice physician or hospice nurse practitioner must have a face-to-face encounter with each hospice patient prior to the beginning of the patient's third benefit period, and each subsequent benefit period.

Face-to-Face Timeframe

The encounter must occur no more than 30 calendar days before the third benefit period recertification and each subsequent recertification.

Timeframe exceptional circumstances

For new hospice admissions in the third or later benefit period: In cases where a hospice newly admits a patient who is in the third or later benefit period, exceptional circumstances may prevent a face-to-face encounter prior to the start of the benefit period.

An emergency weekend admission and the patient cannot be seen by the hospice physician or the nurse practitioner (NP) until the following Monday.

Unavailable CMS data systems resulting in the inability for the hospice to determine if the patient is in the 3rd benefit period.

In addition, if the patient dies within 2 days of admission, a FTF encounter is considered to be complete.

Untimely Face-to-Face Encounter

When a required face-to-face (FTF) encounter does not occur timely, the beneficiary is no longer certified as terminally ill, and therefore, is not eligible for the Medicare hospice benefit. In these cases, the hospice must discharge the beneficiary from the Medicare hospice benefit because he/she is no longer considered terminally ill for Medicare purposes. When a discharge occurs due to failure to perform a required FTF encounter timely, the claim should include appropriate billing information. For additional information about how to bill correctly, refer to the CGS "Untimely Face-To-Face Encounter" Web page.

Who Performs and Signs the FTF Encounter

The FTF encounter must be performed by a hospice physician or a hospice NP. The hospice physician must be employed by the hospice, a volunteer, or working under contract. The hospice NP must be employed by the hospice (receives a W-2 form from the hospice or volunteers for the hospice). Physician Assistants (PAs), clinical nurse specialists, and outside attending physicians are not authorized by section 1814(a)(7)(D)(i) of the Act to perform the face-to-face encounter for recertification.

FTF Requirements

The hospice physician or NP must attest in writing that he or she had a FTF encounter with the patient, including the date of the encounter. The attestation, which must be a separate and distinct part of the recertification, or as an addendum to the recertification associated with the 3rd benefit period, must meet the following criteria:

- Clearly titled
- Accompanying signature, and date signed by the individual who performed the visit
- Date of the visit
- Clinical findings to determine continued hospice eligibility
- When the hospice NP/non-certifying physician performs the FTF, the attestation must also state that the clinical findings were provided to the certifying physician.

Billing Responsibilities

Before submitting claims to CGS, hospice agencies should ensure:

- All FTF requirements are met; and
- The written certification, including the narrative and FTF, is signed prior to billing the claim.

Additional Resources

- "Hospice Face-to-Face (FTF) Encounters for Recertification PDF" Quick Resource Tool

Common Hospice Certification Errors

Medicare cannot make appropriate payment without correct dates, signatures and identifying roles of the physician(s). The following list identifies the common types of missing and inadequate information:

- Predating physician(s) certification signatures.
- Not having both the hospice medical director and attending physician (if applicable) sign the initial certification as required.
- The physician's narrative is missing.
- The physician's narrative does not include a statement attesting that it was composed by the physician.
- The attestation statement is missing.
- Not having verbal certifications by both the medical director and attending physician (if applicable).
- No physician(s) signatures.
- Illegible physician signatures.
- Physician did not date his/her signature.
- Not clearly stating the dates the certification period encompasses.

Hospice Claims Edits for Certifying Physicians

Related CR Release Date: September 13, 2024	MLN Matters Number: MM13531 Revised
Effective Date: June 3, 2024	Related Change Request (CR) Number: CR 13531
Implementation Date: October 7, 2024, for all BRs except 13531.3, 13531.3.1, and 13531.4; November 18, 2024, for remaining BRs	Related CR Transmittal Number: R12847CP

Related CR Title: Additional Implementation Edits on Hospice Claims for Hospice Certifying Physician Medicare Enrollment

What's Changed: We added an exception to the edit logic for when a nurse practitioner or physician assistant is serving as an attending. We also revised the CR implementation date, CR release date, transmittal number, and CR link. Substantive content changes are in dark red.

Affected Providers

- Hospices
- Physicians and other providers billing Medicare Administrative Contractors (MACs) for hospice services they provide to Medicare patients

Action Needed

Make sure your billing staff knows about these updates effective June 3, 2024:

- We pay for hospice services if certifying physicians, including hospice physicians and hospice attending physicians, are enrolled in or opted-out of Medicare
- We subject the hospice attending and certifying physicians to ordering and referring denial edits except if the designated attending is a nurse practitioner (NP) or a physician assistant (PA)
- Updates to Sections 20 and 30 in the Medicare Claims Processing Manual, Chapter 11

Background

We're making sure certifying physicians, including hospice physicians and hospice attending physicians, are enrolled in or opted-out of Medicare before paying for their hospice services. This requirement is in the FY 2024 Hospice Payment Rate Update Final Rule.

CMS CENTERS FOR MEDICARE & MEDICAID SERVICES
Medicare Learning Network®
422

We'll deny hospice claims if the certifying physician, including hospice physician and hospice attending physician, isn't on our PECOS hospice ordering and referring files. This addresses hospice program integrity and quality of care per Section 6405 of the Affordable Care Act.

We're implementing these changes on October 7, 2024, unless noted in CR 13531. For claims you submit on or after October 7, 2024, with dates of service as of June 3, 2024, or later, we'll check the REF PHYS NPI field and the ATT PHYS NPI field on hospice claims to make sure the certifying physicians, including hospice physicians and hospice attending physicians, are enrolled in or opted-out of Medicare. We'll subject both physicians, if different, to the ordering and referring denial edits for the initial certification period. If an NP or a PA is serving as the designated attending, we will only subject the certifying physician in the REF PHYS NPI field to the ordering and referring denial edits.

If the certifying or recertifying physician and the attending physician are the same individual, we apply the edits only to the "Attending" field.

For subsequent certifications, if both physicians are listed, we'll check the REF PHYS NPI field for the certifying physician. You should enter the attending physician in the ATT PHYS NPI field and the certifying physician in the REF PHYS NPI field. If the patient doesn't have an attending physician, you should report the hospice certifying or recertifying physician in the ATT PHYS NPI field.

CR 13531 also makes the following changes for claims reporting to Section 20.1.1 of the Medicare Claims Processing Manual, Chapter 11:

- Attending Physician I.D. – The hospice enters the name and provider identifier of the attending physician designated by the patient at the time of election as having the most significant role in the determination and delivery of the patient's medical care. The patient's designated attending physician could be an independent physician, a hospice physician, an NP, or a PA. If there is no attending physician listed, then the hospice shall report the hospice certifying or recertifying physician.
- Other Physician I.D. – A hospice enters the name and NPI of the hospice physician responsible for certifying or recertifying that the patient is terminally ill, with a life expectancy of 6 months or less if the disease runs its normal course. For electronic claims, this information is reported in Loop ID 2310F – Referring Provider Name. You should complete both the attending physician and other physician fields unless the patient's designated attending physician is the same as the physician certifying or recertifying the terminal illness. When the attending physician is also the physician certifying or recertifying the terminal illness, then you should only populate the attending physician field; the other physician field isn't required.

More Information

We issued CR 13531 to your MAC as the official instruction for this change. For more information, find your MAC's website.

Document History

Date of Change	Description
September 19, 2024	We added an exception to the edit logic for when a nurse practitioner or physician assistant is serving as an attending. We also revised the CR implementation date, CR release date, transmittal number, and CR link.
May 14, 2024	We revised the effective date and the web address of CR 13531. We also added coding information for the referring provider name on page 2.
April 18, 2024	Initial article released.

Hospice Certifying Enrollment

Questions and Answers (Q & A) Document

September 19, 2024

NOTE: In the event of any inconsistency, the policies in this Q & A document supersede those in the March 26, 2024, Medicare Learning Network update regarding the hospice certifying requirement at https://www.cms.gov/Outreach-and-Education/Medicare-Learning-NetworkMLN/MLNProducts/html/medicare-payment-systems.html#Hospice.

Q: What is the hospice certifying requirement?

A: Starting June 3, 2024, under Section 6405 of the Affordable Care Act, the following physicians must be enrolled in or opted-out of Medicare for the service to be paid:

1. Hospice medical director or the physician member of the hospice interdisciplinary group who certifies the patient's terminal condition (hereafter occasionally referenced as "hospice physician").
2. Patient-designated attending physician (if they have one) who certifies their terminal condition. The attending physician must meet the definition of "physician" specified in 42 CFR § 410.20(b).

Under 42 CFR § 418.22(c), these two categories of physicians must initially certify the patient's terminal condition. For subsequent coverage periods, only the hospice physician must certify the patient's terminal condition.

Q: Does this new requirement change who can certify for hospice services?

A: Except for the new enrollment or opt-out requirement, nothing is changing under 42 CFR § 418.22 regarding who may certify the patient's terminal illness.

Q: If the physician is enrolling in Medicare to satisfy the new requirement, which enrollment form should be submitted?

A: Unless the physician is planning to also bill Medicare for Part B services (in which case the Form CMS-855I should be submitted), he/she should submit the Form CMS-855O. In other words, if the physician is enrolling solely to certify hospice services under § 418.22(c) and will not bill Medicare for services furnished, the Form CMS-855O should be submitted.

Q: To further clarify the prior Q/A, is a physician (Physician X) employed by or under contracted with a hospice and not performing any services outside of the hospice ineligible for enrollment via the Form CMS-855I or the Form CMS-855O?

A:

- Form CMS-855I - If Physician X will not bill Medicare Part B for services and only Part A hospice services are involved, he/she cannot enroll via the Form CMS-855I.

- Form CMS-855O – Since Form CMS-855O enrollment is for physicians who wish to order/certify services (including providing the § 418.22(c) certifications) but do not intend to bill Medicare for services, Physician X can enroll via the Form CMS-855O.

Q: What, if anything, do currently enrolled or opted-out physicians need to do regarding this requirement?

A: If the physician is currently enrolled or opted-out, the physician does not need to do anything. The physician already meets the enrollment/opt-out requirement. In addition, it is unnecessary for the physician to have designated "hospice" as their specialty on their enrollment application. If the physician is enrolled or opted-out, they meet the new enrollment/opt-out requirement regardless of the specialty listed on their application.

Q: How can one check to see: (1) whether a physician is enrolled or opted-out; and (2) when a physician is due to revalidate his/her enrollment? Also, concerning the latter, the Medicare Revalidation List webpage at https://data.cms.gov/tools/medicare-revalidation-list includes the following note: "*No revalidation due dates will be issued for individual practitioners starting with the January 2024 due dates until further notice*." Does CMS have an expected timeframe for when revalidation due dates will be issued for physicians?

A: Hospices can verify a physician's enrollment or opt-out status using the CMS ordering and referring data file (ORDF), which lists all Medicare-enrolled and opted-out physicians. The ORDF has a separate column for hospice enrolled/opted-out physicians.

The Revalidation List will be updated (and the physician himself/herself will be notified by the MAC) when it is time for the physician to revalidate his/her enrollment. CMS does not have an expected timeframe for issuing revalidation due dates for physicians.

Q: A physician is enrolled and intends to certify for hospice services. However, the "Y" box in the Hospice column next to the physician's name in the ORDF is not checked. Does this mean the physician cannot certify for hospice services?

A: If an individual is listed on the ORDF, it means that he/she meets the requirement to enroll or opt-out as a prerequisite for ordering or certifying the services/items outlined in 42 CFR 424.507. These are hospice services, home health services, DMEPOS items, clinical laboratory services, and imaging services. Meeting the requirement to enroll/opt-out under 42 CFR § 424.507 is different, however, than the individual qualifying as a provider/supplier type under Medicare regulations that can order or certify the service/item. For example, suppose an individual provider – Practitioner Smith -- is enrolled in Medicare to order/certify. He/she may meet the regulatory requirements to order DMEPOS items for patients but not to certify for hospice services per § 418.22(c). Whether an enrolled/opted-out individual listed in the ORDF is of a provider type that can order/certify for the services/items in § 424.507 may be denoted by a "Y" or "N" in the ORDF column for that service. Using our above example, the ORDF DMEPOS column next to Smith's name may indicate "Y" while the Hospice column may indicate "N."

To reiterate, it is critical to distinguish the enrollment/opt-out requirement under § 424.507 from the ability of a certain provider type to order or certify a particular service or item. Simply because a non-physician practitioner type is enrolled or opted-out does not in and of itself mean that said type can order/certify a service/item under Medicare regulations. Moreover, although the ODRF will often indicate whether an individual is of a provider/supplier type that can order/certify services, hospices should NOT rely exclusively on the ORDF for this determination. It is ultimately the hospice's responsibility to ensure that the individuals who certify the services the hospice furnishes are eligible to do so under § 418.22(c).

Q: Must the certifying or recertifying physician remain enrolled for the patient's entire certification and benefit period?

A: The hospice physician and attending physician only need to be enrolled or opted-out at the time they make the certification or recertification. The physician does not need to remain enrolled or opted-out during the patient's entire certification and benefit period. Moreover, if the physician becomes unenrolled and non-opted-out, the hospice does not need to get a new certification to replace the one the previously enrolled or opted-out physician signed.

In a similar vein, the edits will only apply to claims with dates of service on or after June 3, 2024. If the service began prior to June 3 but continues through and after June 3, the edits will not apply until a claim is submitted with dates of services on or after June 3.

Q: For the enrollment/opt-out requirement, how should the claim form be completed and what will be validated?

A: We address this matter at CMS Pub. 100-04, Chapter 11, Section 30.3 and CMS Change Request (CR) 13531.

(1) Attending Physician field - The hospice shall enter the name and provider identifier of the attending physician, which could be an independent physician, hospice physician, a nurse practitioner, or physician assistant. If there is no attending physician listed, the hospice shall report the hospice certifying/recertifying physician.

(2) Other Physician field - The hospice shall enter the name and provider identifier of the hospice physician responsible for certifying/recertifying that the patient is terminally ill.

Both the attending physician and other physician fields should be completed unless the patient's designated attending physician is the same as the physician certifying/recertifying the terminal illness. When the attending physician is also the physician certifying/recertifying the terminal illness, only the attending physician field is required to be populated; the other physician field would not need to be populated.

From June 3, 2024, through October 6, 2024, CMS is only verifying the enrollment/opt-out status of the physician listed in the claim's "Attending Physician" field when the claim is submitted for the initial certification/recertification. Accordingly, hospices should enter the certifying physician in the "Attending Physician" field. So long as the hospice enters a physician in the "Attending Physician" field and that physician is in the PECOS record that is valid for edit dates, the claim will not edit.

Beginning October 7, 2024, CMS will begin verifying the enrollment/opt-out status of physicians listed in the "Other Physician" field. Once that occurs, CMS will check both the "Attending Physician" field and the "Other Physician" field. Additional details regarding the verification checks beginning on October 7, 2024, are in CR 13531.

Q: When is occurrence code 27 and the date required?

A: The OC 27 code/date is only required on claims where initial certification or recertification occurs. CMS will not be conducting certifying/recertifying physician enrollment checks on physicians reported on claims that do not have occurrence code 27 and date reported.

Q: Are physician assistants (PAs) and nurse practitioners (NPs) subject to this new enrollment/opt-out requirement concerning hospice services?

A: PAs and NPs cannot certify or recertify a patient for hospice as referenced in § 418.22(c). We stated this in CMS-1787-F, which is the regulation that finalized our new provision (88 FR 51164). Accordingly, they need not be enrolled for purposes of meeting the enrollment/optout requirements of § 424.507(b) regarding hospice certifications under § 418.22(c).

Q: Do VA physicians need to do anything other than apply using the Form CMS-855O to certify hospice services?

A: If the VA physician (1) is not currently enrolled in/opted-out of Medicare, (2) wishes to furnish the Medicare certifications described in § 418.22(c), and (3) will not bill Medicare for services furnished, he/she need only submit the Form CMS-855O.

Provider Enrollment Changes to the Medicare Program Integrity Manual

Related CR Release Date: November 9, 2023
MLN Matters Number: MM13331
Effective Date: January 1, 2024
Related Change Request (CR) Number: CR 13331
Implementation Date: January 2, 2024
Related CR Transmittal Number: R12356PI
Related CR Title: Incorporation of Recent Provider Enrollment Regulatory Changes into Chapter 10 of CMS Publication (Pub.) 100-08 - Physician Fee Schedule (PFS) Final Rule

Affected Providers

- Marriage and family therapists (MFTs)
- Mental health counselors (MHCs)
- Physicians and other practitioners paid under the PFS
- All other Medicare provider and supplier types

Action Needed

Make sure your billing staff knows about these changes effective January 1, 2024:

- Medicare enrollment of MFTs and MHCs
- Other provider enrollment policy updates like denial reasons and revocations

Background

CR 13331 updates Chapter 10 of the Medicare Program Integrity Manual. These changes for MFTs, MHCs, and other regulatory changes are in the CY 2024 PFS final rule.

The key updates are:

- Section 10.1.1.1:
    - Authorized official (per 42 CFR 424.502) is currently defined as an appointed official (for example, chief executive officer, chief financial officer, general partner, chairman of the board, or direct owner) to whom the organization has granted the legal authority to:
        - Enroll it in the Medicare Program
        - Make changes or updates to the organization's status in Medicare

- Commit the organization to fully abide by the statutes, regulations, and program instructions of Medicare

The PFS rule clarifies that, for the authorized official definition only, the term organization means the enrolling entity as identified by its legal business name and tax identification number.

- Indirect ownership interest means any ownership interest in an entity that has an ownership interest in the enrolling or enrolled provider or supplier, or any ownership interest in an indirect owner of the enrolling or enrolled provider or supplier.
- Supplier means all of the following:
  - The individuals and entities that qualify as suppliers
  - Physical therapists in private practice
  - Occupational therapists in private practice
  - Speech-language pathologists

- Section 10.2.3.17: Medicare covers services that MFTs provide, effective January 1, 2024. An MFT is a person who:
  - Possesses a master's or doctor's degree which qualifies for licensure or certification as an MFT pursuant to state law of the state in which such a person provides MFT services
  - Has performed at least 2 years or 3,000 hours of post master's degree clinical supervised experience in marriage and family therapy in an appropriate setting such as a hospital, skilled nursing facility (SNF), private practice, or clinic after obtaining such degree
  - Is licensed or certified as an MFT by the state in which the MFT performs the services

- Section 10.2.3.18: Medicare covers MHC services effective January 1, 2024. An MHC is person who:
  - Possesses a master's or doctor's degree which qualifies for licensure or certification as an MHC, clinical professional counselor, or professional counselor under the state law of the state in which such person provides the MHC services
  - Has performed at least 2 years or 3,000 hours of post master's degree clinical supervised experience in mental health counseling in an appropriate setting such as a hospital, SNF, private practice, or clinic after obtaining such a degree
  - Is licensed or certified as an MHC, clinical professional counselor, professional counselor, addiction counselor, or alcohol and drug counselor by the state in which the services are performed.

Like certain other practitioners, MFTs and MHCs may:

- Opt-out of Medicare
- Form groups
- Reassign their benefits

- Receive reassigned benefits
- Order or certify services to the extent otherwise permitted by law

They'll complete the Form CMS-855I to bill for services and be subject to limited-risk screening. Section 10.6.12 has more details.

Other changes in Chapter 10 regarding provider enrollment regulations include:

- Section 10.4.2.2 has complete details on 2 more denial reasons
- Section 10.4.7.2 has new details on revocations and their effective dates

More Information

We issued CR 13331 to your MAC as the official instruction for this change. CMS encourages providers to review all the updates to Chapter 10, which is part of CR 13331.

For more information, find your MAC's website.

Center for Clinical Standards and Quality

Ref: QSO-24-12-Hospice & FQHC/RHC

DATE: May 28, 2024

TO: State Survey Agency Directors

FROM: Directors, Quality, Safety & Oversight Group (QSOG) and Survey & Operations Group (SOG)

SUBJECT: **State Operations Manual (SOM) Appendix M-Hospice and Appendix G-Rural Health Clinic (RHC) and Federally Qualified Health Center (FQHC) Revisions to Include Marriage and Family Therapists (MFTs) and Mental Health Counselors (MHCs)**

Memorandum Summary

- The Calendar Year 2024 Physician Fee Schedule final rule updated the Hospice Conditions of Participations, the Rural Health Clinic Conditions for Certification, and the Federally Qualified Health Center Conditions for Coverage to implement provisions of the Consolidated Appropriations Act, 2023.
- The hospice interdisciplinary team must now include at least one social worker, marriage and family therapist or mental health counselor as part of the team and the hospice personnel requirements were also updated to add these disciplines. The Rural Health Clinic and Federally Qualified Health Center staffing and personnel requirements were updated to include marriage and family therapists and mental health counselors as part of the collaborative team approach to providing services. Additionally, definitions of several health care professionals who are already eligible to provide services at RHCs and FQHCs were updated, including the definition of "nurse practitioner," to align with current standards of professional practice.
- The State Operations Manual appendices are being updated to reflect the final rule requirements.

Background:

The Calendar Year (CY) 2024 Physician Fee Schedule (PFS) final rule was published on November 16, 2023, titled *Medicare and Medicaid Programs; CY 2024 Payment Policies Under the Physician Fee Schedule and Other Changes to Part B Payment and Coverage Policies; Medicare Shared Savings Program Requirements; Medicare Advantage; Medicare and Medicaid Provider and Supplier Enrollment Policies; and Basic Health Program* (88 FR 78818). The regulations in the final rule became effective as of January 1, 2024.

Among other things, the final rule provides updates to the Hospice Conditions of Participation (CoPs), and the Rural Health Clinic (RHC) Conditions for Certification (CfCs), and the Federally Qualified Health Center (FQHC) Conditions for Coverage (CfCs) to implement provisions included in the Consolidated Appropriations Act (CAA), 2023 (Pub. L. 117–328, December 29, 2022).

The hospice CoPs were updated to implement division FF, section 4121(b) of the CAA, 2023, that requires the hospice interdisciplinary group to include at least one social worker, marriage and family therapist (MFT) or mental health counselor (MHC). Additionally, the hospice personnel requirements were updated to add the MFT and MHC as new disciplines along with the education and training qualifications required for each discipline.

Additionally, the RHC and FQHC CfCs were updated to implement section 4121(b) of the CAA, 2023 modifying the staffing and personnel requirements to include MFTs and MHCs as part of the collaborative team approach to providing services. The RHC and FQHC CfC definitions were updated to include MFTs and MHCs as recognized staff alongside other healthcare professionals who are already eligible to provide services, and the definition of "nurse practitioner" was revised to align with current standards of professional practice.

Discussion:

Hospice

The hospice interdisciplinary group (IDG), care planning, and coordination of services CoP at 42 CFR 418.56 was updated to require that the IDG must include at least a social worker (SW), MFT, or MHC. The hospice is not required to include all three of these professions as members of the IDG and may choose (though is not required) to select more than one of these professions to serve as member(s) of the IDG. The definitions of the MFT and MHC disciplines (as defined at 42 CFR 410.53 and 410.54, respectively) have also been added to the hospice personnel qualifications CoP at 42 CFR 418.114(b).

RHC and FQHC

The RHC and FQHC CfC definitions at 42 CFR 491.2 were updated to add the terms "clinical psychologist (CP)," "clinical social worker," and "certified nurse midwife (CNM)." This rule also finalizes changes to the CfCs to define MFT and MHC services to indicate that RHCs and FQHCs can offer these services under their Medicare certification. Additionally, the existing "nurse practitioner (NP)" definition was revised to accurately reflect current professional standards by removing the reference to specific certifying bodies as they are now outdated. This revision will ensure the requirement reflects the breadth of currently available certifications.

Finally, the RHC and FQHC CfCs at 42 CFR 491.8 was updated to add MFT and MHC to the list of practitioners who may be the owner or an employee of the clinic or center, or may furnish services under contract to the clinic or center, as well as included as staff available to furnish patient care services at all times the clinic or center operates. If an

RHC or FQHC provides services furnished by an MFT or MHC, they will be required to update their patient care policy, as set out in 42 CFR 491.9(b)(2).

SOM Updates
An advance copy of the State Operations Manual (SOM) Appendix M – Hospice and Appendix G – RHC is attached, reflecting updates to the regulation text.

The revisions to Appendix M and Appendix G indicating the regulation changes made by the final rule will be reflected in the SOM's online version shortly following the release of this memorandum.

Resource:
On November 29, 2023, CMS hosted a Hospice Open Door Forum call. On that call, questions were asked regarding the new requirements for marriage and family therapists and mental health counselors effective January 1, 2024. The responses provided to the hospice stakeholders are available as a resource at https://www.cms.gov/files/document/hospice-open-door-forum-qa.pdf.

Contact:
For questions or concerns relating to this memorandum for hospice, please contact QSOG_Hospice@cms.hhs.gov.
For questions or concerns relating to this memorandum for RHC/FQHC, please contact QSOG_RHC-FQHC@cms.hhs.gov.

Effective Date:
Immediately. Please communicate to all appropriate staff immediately.

Resources to Improve Quality of Care:
Check out CMS's new Quality in Focus interactive video series. The series of 10–15 minute videos are tailored to provider types and aim to reduce the deficiencies most commonly cited during the CMS survey process, like infection control and accident prevention. Reducing these common deficiencies increases the quality of care for people with Medicare and Medicaid. Learn to:

- *Understand surveyor evaluation criteria*
- *Recognize deficiencies*
- *Incorporate solutions into your facility's standards of care*

See the Quality, Safety, & Education Portal Training Catalog, and select Quality in Focus

Get guidance memos issued by the Quality, Safety and Oversight Group by going to CMS.gov page and entering your email to sign up. Check the box next to "CCSQ Policy, Administrative, and Safety Special Alert Memorandums" to be notified when we release a memo.

State Operations Manual
Appendix M - Guidance to Surveyors: Hospice
Advance Copy

L541
(Rev.)

§418.56(a)(1) …The interdisciplinary group must include, but is not limited to, individuals who are qualified and competent to practice in the following professional roles:

(i) A doctor of medicine or osteopathy (who is an employee or under contract with the hospice).
i. (ii) A registered nurse.
ii. (iii) A social worker*, marriage and family therapist, or a mental health counselor*.
iii. (iv) A pastoral or other counselor.

Interpretive Guidelines §418.56(a)(1)(i)-(iv)

The number of individuals on the IDG is not as important as their qualifications and abilities. For example, if a group member meets the hospice criteria and is licensed as a RN and also meets the Medicare criteria to be considered a social worker under the hospice benefit, he/she would be qualified to serve on the IDG as both a nurse and a social worker.

State Operations Manual
Appendix G - Guidance for Surveyors: Rural Health Clinics (RHCs)
Advance Copy

J-0082
(Rev.)

[§ 491.8(a) Staffing.]

(1) . . . Rural health clinic staffs must also include one or more physician's assistants or nurse practitioners.

(3) The physician assistant, nurse practitioner, . . . may be the owner or an employee of the clinic . . ., or may furnish services under contract to the clinic . . . In the case of a clinic, at least one physician assistant or nurse practitioner must be an employee of the clinic.

§491.2 Definitions. As used in this subpart, unless the context indicates otherwise:

Nurse practitioner means a *person* who meets the *applicable* State requirements governing the qualifications of nurse practitioners, and who meets *at least* one of the following conditions:

(1) Is certified as a nurse practitioner by *a recognized national certifying body that has established standards for nurse practitioners and possesses a master's or doctoral degree in nursing practice*; or

(2) Has satisfactorily completed a formal 1 academic year educational program that:

(i) Prepares registered nurses to perform an expanded role in the delivery of primary care;

(ii) Includes at least 4 months (in the aggregate) of classroom instruction and a component of supervised clinical practice; and

(iii) Awards a degree, diploma, or certificate to persons who successfully complete the program; or

(3) Has successfully completed a formal educational program (for preparing registered nurses to perform an expanded role in the delivery of primary care) that does not meet the requirements of paragraph (2) of this definition, and has been performing an expanded role in the delivery of primary care for a total of 12 months during the 18-month period immediately preceding the effective date of this subpart.

Physician assistant means a person who meets the applicable State requirements governing the qualifications for assistants to primary care physicians, and who meets at least one of the following conditions:

(1) Is currently certified by the National Commission on Certification of Physician Assistants to assist primary care physicians; or

(2) Has satisfactorily completed a program for preparing physician's assistants that:

(i) Was at least 1 academic year in length;

(ii) Consisted of supervised clinical practice and at least 4 months (in the aggregate) of classroom instruction directed toward preparing students to deliver health care; and

(iii) Was accredited by the American Medical Association's Committee on Allied Health Education and Accreditation; or

(3) Has satisfactorily completed a formal educational program (for preparing physician assistants) that does not meet the requirements of paragraph (2) of this definition and assisted primary care physicians for a total of 12 months during the 18-month period that ended on December 31, 1986.

Interpretative Guidelines § 491.8(a)(1) & (3)

In addition to having a physician on staff, the RHC's health care staff must also include one or more nurse practitioner(s) (NP) or physician assistant(s) (PA), as defined at § 491.2. The RHC's NP and/or PA must meet the Medicare definition of an NP or PA and be licensed in accordance with the law of the State in which the RHC is located and practicing within their permitted State scope of practice.

At least one NP or PA must be an employee of the RHC (note that a clinic's owner may also be an employee; this is at the owner's discretion). CMS interprets an "employee" to mean an individual to whom the clinic issues an IRS Form W-2, Wage and Tax Statement. (See 79 FR 25462, May 2, 2014). However, once the clinic has employed at least one NP or PA, the other practitioners may furnish services under contract to the clinic instead of being employees. These

other NPs or PAs may contract directly with the clinic or may have an arrangement with a third party that contracts with the clinic to furnish the practitioner's services.

In all cases the RHC must have sufficient practitioners, both physician and non-physician, to furnish the volume of RHC services it provides to its patients, consistent with accepted standards of practice.

- As provided by § 1861(aa)(7) of the Act, and implemented in Section 2248 of the SOM, an existing RHC may request a waiver of the requirement to employ a NP or PA. The mid-level staffing waiver is applicable to Medicare-participating RHCs only. Initial applicants to participate in Medicare as an RHC are **not** eligible for staffing waivers. CMS grants a currently certified RHC a one-year waiver of the requirement to employ a NP or PA if:

- The RHC submits the written request for a waiver to the appropriate SA;

- The RHC demonstrates that it has been unable, despite reasonable efforts, to hire a NP or PA in the previous 90-day period; and

- The RHC's request is submitted six months or more after the date of the expiration of any previous such waiver for the RHC.

The SA is responsible for reviewing the evidence the RHC provides regarding its efforts to hire an NP or PA in the previous 90 days and recommending approval or disapproval of the requested waiver to the RO. The SA must complete its review and recommendation within 30 calendar days of receiving the written waiver request from the RHC.

The waiver is deemed to have been granted, unless the waiver request is denied by the RO within 60 calendar days after the date the SA received the RHC's waiver request. In cases where the waiver request is deemed to have been approved, the effective date of the 1-year waiver is the 61st day after the date the request was received by the SA.

See Section 2248 for more details on the waiver process and the expectations for RHCs and SAs

Survey Procedures § 491.8(a)(1) & (3)

- Determine that the clinic has at the time of the survey at least one NP or PA who is an employee of the clinic, as evidenced by the clinic issuing a W-2.

- If the clinic already participates in Medicare as an RHC and does not employ a NP or PA, check whether there is a valid waiver in effect.

J-0083
(Rev.)

[§ 491.8(a) Staffing.]

(3) The . . . *certified* nurse-midwife, clinical social worker, clinical psychologist, *marriage and family therapist, or mental health counselor* member of the staff may be the owner or an employee of the clinic or center, or may furnish services under contract to the clinic . . . .

§491.2 Definitions. As used in this subpart, unless the context indicates otherwise:

Certified nurse-midwife (CNM) means an individual who meets the applicable education, training, and other requirements at § 410.77(a) of this chapter.

Clinical psychologist (CP) means an individual who meets the applicable education, training, and other requirements of § 410.71(d) of this chapter.

Clinical social worker means an individual who meets the applicable education, training, and other requirements at § 410.73(a) of this chapter.

*****

Marriage and family therapist means an individual who meets the applicable education, training, and other requirements at § 410.53 of this chapter.

Mental health counselor means an individual who meets the applicable education, training, and other requirements at § 410.54 of this chapter.

*****

Interpretative Guidelines § 491.8(a)(3)

The clinic is not required to have a nurse-midwife, clinical social worker or clinical psychologist on staff. If it does have any of these on staff, they must be licensed as required by State law of the State in which the clinic is located, and must be practicing within their permitted scope of practice.

A nurse midwife, clinical social worker or clinical psychologist who is on the clinic's staff may be the clinic's owner (who may also be an employee at the same time), an employee of the clinic, or providing services to the clinic under a contractual agreement. These types of practitioners may contract directly with the clinic or may have an arrangement with a third party that contracts with the clinic to furnish the practitioner's services.

Survey Procedures § 491.8(a)(3)

- If the clinic has a nurse midwife, clinical social worker, or clinical psychologist on staff, verify that the individual has a current State license when one is required under State law.

J-0085
(Rev.)

[§ 491.8(a) Staffing.]

(5) The staff is sufficient to provide the services essential to the operation of the clinic . . . .

(6) A physician, nurse practitioner, physician assistant, certified nurse-midwife, clinical social worker, clinical psychologist*, marriage and family therapist, or a mental health counselor* is available to furnish patient care services at all times the clinic . . . operates. . . .

Interpretative Guidelines § 491.8(a)(5) & (6)

The clinic must be sufficiently staffed to provide the services offered by the RHC. Specifically, this means that the clinic has sufficient staff practicing within their permitted scope of practice to provide RHC services to the clinic's patients at all hours that the clinic is open and operating. Consistent with § 491.9(c), the RHC services the clinic furnishes are diagnostic and therapeutic services and supplies similar to those furnished in a physician office, including, but not limited to, performing history and physical examinations, assessment of health status, and treatment for a variety of medical conditions. The clinic must also furnish specified laboratory services and first responder-type emergency services to individuals in the clinic experiencing a medical emergency. The clinic must have sufficient staff members who are qualified to furnish these services to the volume of patients the RHC sees. Even when staffing meets the minimum requirement in terms of practitioner time at the RHC, the staffing may be insufficient for the volume of services the RHC provides.

The clinic may only be open and furnishing RHC services if there is a physician, NP, PA, certified nurse midwife, clinical social worker, or clinical psychologist on site and available to furnish services. Although the physician medical director may perform many, not all, of his/her responsibilities remotely via telecommunications, this does not mean the clinic can be open and furnishing services without any practitioner on-site. With the exception of services, the clinic's medical director or other MDs or DOs may provide by telemedicine, the clinic may only furnish those services that are within the scope of practice of the practitioners who are on site at the time the services are offered. The loss of a PA or NP staff member may require the RHC to request a temporary staffing waiver via its SA. It may also require a temporary adjustment of the clinic's operating hours or services and an adjustment in visits by the physician(s) providing medical direction. It is the responsibility of the clinic to promptly advise the SA of any changes in staffing which would affect its certification status.

(NOTE: See the guidance for § 491.8(a)(3) and Section 2248 for more details on the waiver process and the expectations for RHCs and SAs.)

RHCs may allow beneficiary entry to the waiting room or other non-patient care areas to handle billing inquiries or to get out of the weather when the mid-level practitioner as defined in §493.2, clinical social worker, clinical psychologist or physician staff member is not present to provide health care services. However, the clinic is not considered to be in operation as an RHC during this period. No health care services may be provided until a mid-level practitioner, clinical social worker, clinical psychologist or physician staff member is present onsite. There should be a reasonable timeframe between administrative transactions conducted on the premises outside the hours of operation of the RHC and the commencement of RHC operations with the healthcare professional's arrival. Any RHC that choose to exercise this flexibility should post the hours of administrative services only versus the hours of RHC operations. Signage should clearly delineate times the healthcare professional staff member is present onsite. If State law does not allow access to the RHC premises when the clinic is not in operation as an RHC, the facility must adhere to such laws.

Survey Procedures § 491.8(a)(5) & (6)

- Determine whether there is a physician or a non-physician practitioner on-site at all times the RHC is open. Review staff schedules and the clinic's hours of operation to confirm. Ask staff members if the RHC is ever open and providing services when no practitioner is present.
- Verify posted hours to confirm appropriate professional healthcare staffing within the RHC's hours of operation.

MFT and MHC Benefit

1. Does Medicare recognize Marriage and Family Therapists (MFTs) and Mental Health Counselors (MHCs)?

Section 4121 of Division FF of the Consolidated Appropriations Act, 2023 (CAA, 2023), establishes a new Medicare benefit category for MFT and MHC services furnished by and directly billed by MFTs and MHCs. Payment for MFT and MHC services under Part B of the Medicare program will begin January 1, 2024.

2. How does Medicare define MFTs?

Section 4121 Division FF of the CAA, 2023, defines MFT services as services for the diagnosis and treatment of mental illnesses (other than services furnished to an inpatient of a hospital). An MFT is an individual who:

- Possesses a master's or doctor's degree which qualifies for licensure or certification as a MFT pursuant to State law of the State in which the individual furnishes the services defined as marriage and family therapist services,
- Performed at least 2 years or 3,000 hours of post master's degree clinical supervised experience in marriage and family therapy in an appropriate setting such as a hospital, skilled nursing facility, private practice, or clinic,
- Is licensed or certified as a marriage and family therapist by the State in which you perform services.

3. How does Medicare define MHCs?

Section 4121 Division FF of the CAA, 2023, defines MHC services as services for the diagnosis and treatment of mental illnesses (other than services furnished to an inpatient of a hospital). An MHC is an individual who:

- Possesses a master's or doctor's degree which qualifies for licensure or certification as a MHC, clinical professional counselor, or professional counselor under State law of the State in which the individual furnishes the services defined as mental health counselor services,
- Performed at least 2 years or 3,000 hours of post master's degree clinical supervised experience in mental health counseling in an appropriate setting such as a hospital, SNF, private practice, or clinic
- Is licensed or certified as an MHC, clinical professional counselor, or professional counselor by the State in which you perform services

Additionally, addiction counselors and alcohol and drug counselors who meet all the applicable requirements of an MHC may enroll in Medicare as MHCs and bill Medicare for MHC services.

4. Where can I find more information about Medicare coverage for MFTs/MHCs?

Providers can refer to the MFT/MHC webpage and the Medicare and Mental Health Coverage MLN Booklet.

National Provider Identifier (NPI) and Taxonomy Codes

5. What is an NPI?

The NPI is a unique, 10-digit identification number for covered health care providers and must be used in the administrative and financial transactions adopted under HIPAA.

To enroll in Medicare, you must first obtain an NPI and provide it on the Medicare enrollment application. NPIs are issued through the National Plan & Provider Enumeration System (NPPES). You can apply for an NPI on the NPPES website. If you are not sureif you have an NPI, search the NPI Registry.

6. What taxonomy code do I select in NPPES for MFTs and MHCs?

A taxonomy code is a unique 10-character code that designates your classification and specialization. You will select this code when applying for an NPI in NPPES. The MFT taxonomy code is 106H00000X. The MHC taxonomy code is 101YM0800X.

7. I'm currently enrolled in Medicaid and have an NPI. Do I need a new NPI for Medicare?

Practitioners may only have one Type 1 NPI. Use your existing NPI to enroll in Medicare.

Enrolling as an MFT or MHC

8. What is a Medicare Administrative Contractor (MAC)?

A MAC is a private health care insurer that has been awarded a geographic jurisdiction to process Medicare Part A and Part B (A/B) enrollment applications and Medicare Fee-For-Service (FFS) claims, respond to provider inquiries, and educate providers about Medicare FFS enrollment and billing requirements.

Find your designated MAC and their contact and mailing address at MAC Contact Information.

9. When can I start enrolling in Medicare?

MFTs and MHCs can begin submitting their enrollment applications after the Calendar Year (CY) 2024 Physician Fee Schedule (PFS) final rule is displayed at the Federal Register, usually around November 1, 2023. However, as the new benefits authorized by Section 4121(a) of the

Division FF of CAA, 2023, do not take effect until January 1, 2024, MFTs/MHCs will not be granted an effective date earlier than January 1, 2024, and claims with dates of service prior to January 1, 2024, will not be payable.

10. What enrollment application do I complete to enroll in Medicare?

MFTs and MHCs can enroll electronically using the Provider Enrollment, Chain, and Ownership System (PECOS) or the paper CMS-855I enrollment application.

PECOS is the online Medicare enrollment system. It offers a scenario-driven application, asking questions to obtain the required information for your specific enrollment scenario. Use PECOS for faster and easier enrollment into Medicare.

The CMS-855I application is completed by physicians and non-physician practitioners who render Medicare Part B services to beneficiaries. This includes a physician or practitioner who (1) is the sole owner of a professional corporation, professional association, or limited liability company and (2) will bill Medicare through this business entity.

11. How do I access PECOS?

You must create a user account in the Identity & Access Management System (I&A). The I&A system allows you to:

- Use NPPES to apply for and manage NPIs
- Use PECOS to enroll in Medicare, update or revalidate your current enrollment information
- Register to get EHR incentive payments for eligible professionals and hospitals that adopt, use and upgrade, or show meaningful use of certified EHR technology

12. The paper CMS-855I application does not list the MFT and MHC specialties. How do I identify my specialty on the application?

MFTs and MHCs should select the Undefined Non-Physician Practitioner Specialty option in section 2H of the CMS-855I application and specify MFT or MHC in the space provided. A future update of the paper CMS-855I will include the MFT and MHC specialties.

The specialties are available in PECOS for online application submissions.

13. Can mental health professionals enroll as MHCs?

Per 42 CFR § 410.54(a)(3), an MHC must be licensed or certified as an MHC, clinical professional counselor, professional counselor, addiction counselor, or alcohol and drug counselor

by the state in which the services are performed. Individuals who meet all the applicable statutory and regulatory qualifications to be an MHC --- even though they may be licensed or certified by their state under a different title to furnish mental health counseling --- may enroll as an MHC. This list of mental health professionals is not exhaustive and will vary by state.

These individuals should select the Undefined Non-Physician Practitioner Specialty option in section 2H of the CMS-855I application and specify MHC in the space provided instead of the title they are licensed or certified by their state.

14. Do I have to submit multiple applications if I render services in multiple states?

A separate CMS-855I enrollment is required in each state where services are rendered. For example, the MAC's jurisdiction consists of States X, Y, and Z. Dr. Jones is enrolled in State X with 2 locations. He wants to add a third location in State Y. A separate, initial CMS-855I application is required for the State Y location.

In addition, the practitioner must be licensed and/or certified in each state where services are rendered. The applicable license must be included on the application.

15. Does Medicare recognize compact licenses?

Medicare recognizes licenses obtained through the interstate license compact pathway as valid, full licenses for the purposes of meeting federal license requirements. For more information on compact licenses refer to SE20008.

16. Who can sign the PECOS application or paper CMS-855I?

The enrolling or enrolled practitioner is the only person who can sign the PECOS application or paper CMS-855I. A practitioner may not delegate the authority to sign the CMS-855I on his/her behalf to any other person.

17. How long does it take to process an enrollment application?

Generally, all clean web applications will be processed within 15 calendar days following receipt, and all clean paper applications will be processed within 30 calendar days following receipt. The timeframes may be extended if the application is incomplete or missing information or documentation.

The MAC will send a development letter to the provider requesting the additional information. The provider will have 30 calendar days to respond. If no response is received, the application will be rejected. Providers should respond to all MAC requests for additional information timely, to avoid further delays.

18. Who can be listed as the contact person on the enrollment application?

If questions arise during the processing of the enrollment application, your MAC will contact the individual reported in the contact person section of PECOS or the paper CMS-855I. The individual practitioner may choose to designate themselves as the contact person or someone with knowledge of the application (e.g., office staff, credentialing staff).

The contact person will only be authorized to discuss issues concerning the pending enrollment application. Your MAC will not discuss any other Medicare issues about you with the contact person.

If the section is left blank, the MAC will contact the practitioner directly using the information in Section 2: Correspondence Mailing Address.

19. What risk category are MFTs and MHCs?

CMS established three levels of provider and supplier enrollment risk-based screening: limited, moderate, high. The risk levels denote the MAC's level of screening when the provider initially enrolls in Medicare, adds a new practice location, revalidates its enrollment information, or, in certain circumstances, changes all or part of its ownership.

MFTs and MHCs are limited risk. Providers and suppliers designated in the limited risk category undergo verification of licensure and a wide range of database checks to ensure compliance with all provider or supplier specific requirements.

20. Do MFTs/ MHCs have to pay an application fee?

MFTs and MHCs are not required to pay an application fee.

21. What is a Provider Transaction Access Number (PTAN)?

A PTAN is a Medicare-only number issued to providers by MACs upon enrollment. The Medicare approval letter will include the assigned PTAN.

The approval letter will note that the NPI must be used to bill the Medicare program and that the PTAN will be used to authenticate the provider when using MAC self-help tools such as the Interactive Voice Response (IVR) phone system, internet portal, on-line application status, etc.

The PTAN's use should generally be limited to the provider's interactions with their MAC.

If you enroll in multiple states, you will receive separate PTANs.

22. Am I required to receive payment through Electronic Funds Transfer (EFT)?

CMS requires that providers and suppliers, who are enrolling in the Medicare program or making a change in their enrollment data, receive payments via electronic funds transfer. Submit the EFT

Agreement with your enrollment application, along with a voided check or bank letter confirming your account information.

If you reassign all Medicare benefits you do not need to submit an EFT agreement.

23. If I am enrolled in Medicaid, do I have to separately enroll in Medicare?

If you plan to provide services to Medicare beneficiaries, you must separately enroll in Medicare. Enrolling in Medicaid does not automatically enroll you in Medicare.

Reassigning Medicare Benefits

24. What does it mean to reassign your Medicare benefits?

Reassigning your Medicare benefits allows an eligible organization/group to submit claims and receive payment for Medicare Part B services that you have provided as a member of the organization/group. An eligible organization/group may be an individual, a clinic/group practice or other health care organization.

25. How do I report a reassignment on the CMS-855I?

You can report a reassignment through PECOS or the CMS-855I paper application. If submitting via paper, select the submittal reason, "You are reporting a change to your Medicare enrollment information" and complete the applicable sections. The reassignment information is reported in section 4F. The practitioner must sign section 15B and the Authorized or Delegated Official of the organization/group must sign Section 15C to establish the reassignment. If you reassign benefits to multiple organizations/groups, copy and complete section 4F and 15C, as applicable.

Both the individual practitioner and the eligible organization/group must be currently enrolled or concurrently enrolling in the Medicare program to establish the reassignment. The organization/group must be enrolled or enrolling through PECOS or the CMS-855B.

26. I render services in a private practice and as an employee of a group. How do I report this in PECOS or on the paper CMS-855I?

In PECOS report your private practice in the Physical Location and Specialty Payments Address topic and the reassignment in the Reassignment topic. Complete the appropriate signatures for the practitioner and the Authorized or Delegated Official of the organization/group accepting the reassigned benefits during the submission process.

On the paper CMS-855I report your private practice in section 4B and the reassignment in 4F of the CMS-855I. Complete section 15 with the appropriate signatures for the practitioner and the Authorized or Delegated Official of the organization/group accepting the reassigned benefits.

27. Can I practice independently as an MFT/MHC but also be an owner of a group?

Yes. A provider can be enrolled as an individual practitioner and an owner of a group. The practitioner completes the CMS-855I application. The group completes the CMS-855B. Ownership information is reported in sections 5 and 6 of the CMS-855B.

28. My group is currently enrolled with a PTAN we use to bill for Licensed Clinical Social Worker (LCSW) services. Do we need a new PTAN to bill for MFTs/MHCs services as part of the group?

The group's PTAN will not change. The MAC will issue a PTAN to the individual practitioner that links them to your group once they have enrolled as an MFT/MHC.

29. Can I work for a rural health clinic and federally qualified health center and be paid by Medicare?

Services furnished by an MFT and MHC are covered when furnished in a rural health clinic and federally qualified health center.

30. Are MFT and MHC services excluded from consolidated billing requirements under the skilled nursing facility prospective payment system (SNF PPS)?

Section 4121(a)(4) of the CAA 2023, requires Medicare to exclude MFT and MHC services from SNF consolidated billing. Exclusion from consolidated billing allows these services to be billed separately by the performing clinician rather than being included in the Medicare Part A SNF payment. We finalized the regulatory text changes required to codify this new legislative requirement to exclude MFT and MHC services from SNF consolidated billing for services furnished on or after January 1, 2024, in the FY 2024 SNF PPS final rule (88 FR 53200).

31. Can MFTs and MHCs serve as members of the hospice interdisciplinary team?

Yes, the hospice interdisciplinary team is required to include at least one social worker, MFT or MHC.

32. Is Medicare enrollment mandatory?

Section 1848(g)(4)(A) of the Social Security Act requires that you submit claims for all your Medicare patients for services rendered. This requirement applies primarily to physicians, non-physician practitioners and suppliers who provide covered services to Medicare beneficiaries. To submit Medicare claims and receive payment for covered Medicare items or services, you must be enrolled under Medicare regulations.

For the mandatory claim submission requirements refer to Medicare Claims Processing Manual, Chapter 1.

Telehealth

33. Can MFTs and MHCs perform telehealth services?

Yes. MFTs and MHCs have been added to the list of practitioners who can furnish Medicare telehealth services.

During the COVID-19 public health emergency (PHE), CMS used emergency waiver and other regulatory authorities so you could provide more services to your patients via telehealth. Section 4113 of the CAA, 2023 extended many of these flexibilities through December 31, 2024, and made some of them permanent. For more information refer to Telehealth Services Fact Sheet.

34. How do I enroll to perform telehealth services to patients located in my home state or another state?

Practitioners who perform telehealth services should enroll based on their enrollment scenario. Refer to the scenarios below as a guide for completing the paper application. For faster and easier enrollment, providers are encouraged to submit their applications electronically through PECOS.

a. **Practitioner Only Renders Services in a Private Practice:** The practitioner renders telehealth services from his/her home in Florida. The practitioner completes all applicable sections of the paper CMS-855I. In section 4B of the CMS-855I, enter the location where the telehealth service is performed (e.g., office, home). Select the practice location type as "Business Office for Administrative/Telehealth Use Only" or "Home Office for Administrative/Telehealth Use Only." This option prevents the practitioner's home address from being published on Care Compare, a tool for Medicare beneficiaries to find and compare different Medicare providers.

   The practitioner submits the completed application to First Coast Services Options, the MAC that processes enrollment applications for Florida.

b. **Practitioner reassigns all benefits to a group. Practitioner and group are in the same state:** The practitioner reassigns benefits to a group In Maryland but will be rendering telehealth services from his/her home in Maryland. The practitioner completes all applicable sections of the CMS-855I. In section 4F of the CMS-855I, the practitioner lists the group accepting the new reassignment of benefits from the practitioner. If the group is already enrolled, no further action is needed. If the group is not enrolled, they will complete all applicable sections of the CMS-855B and list their office locations in section 4A. The practitioner does not list his/her home address on the CMS-855I or on the group's CMS-855B application. Physicians/practitioners who bill for Medicare telehealth services should report place of service (POS) code 02 or 10 beginning January 1, 2024.

The practitioner and group submit the CMS-855I and CMS-855B to Novitas Solutions, the MAC that processes enrollment applications for Maryland.

c. **Practitioner reassigns all benefits to a group. Practitioner and Group are in different states:** The practitioner reassigns benefits to a group in Maryland but will be rendering telehealth services from his/her home in Florida. The practitioner must enroll in the state where the group is located because they are submitting claims on behalf of the practitioner. The practitioner completes all applicable sections of the CMS-855I. In section 4F of the CMS-855I, the practitioner lists the group accepting the new reassignment of benefits from the practitioner. If the group is already enrolled, no further action is needed. If the group is not enrolled, they will complete all applicable sections of the CMS-855B and list their office locations in section 4A. The practitioner does not list his/her home address on the CMS-855I or on the group's CMS-855B application. The practitioner can continue to bill as if he/she furnished the service in person, through December 31, 2024.

   The practitioner and group submit the CMS-855I and CMS-855B to Novitas Solutions, the MAC that processes enrollment applications for Maryland.

Supervision Requirements

35. Do I need two years of supervision prior to enrolling in Medicare?

Section 4121 of the CAA, 2023 requires MFTs and MHCs have 2 years of clinical supervised experience to enroll in Medicare.

36. What documentation should I submit to verify I meet the clinical supervision requirements?

Some states require the clinical supervised experience as a requirement to be fully licensed. In this case no additional action is necessary. The MAC will validate your license and clinical supervised experience during application processing.

If the clinical experience is not part of obtaining a license, the practitioner will need to submit documentation with their application confirming the 2-year requirement is met. Such documentation must include:

- A statement from the provider/supplier where the MFT/MHC performed the services (e.g., hospital, clinic) verifying that the MFT/MHC performed services at that setting for the required number of years. The statement must be:
  - On the provider's/supplier's letterhead (e-mail is not acceptable); and
  - Signed by: (1) the supervisor under whom the MFT/MHC performed the services; (2) an applicable department head (e.g., chief of psychology) of the provider/supplier; or (3) a current authorized or delegated official of the provider/supplier (i.e., the AO/DO

has already been approved as such in the provider/supplier's enrollment record if the provider/supplier is Medicare-enrolled).

- A statement verifying that the MFT/MHC meets the year or hour requirements from a: (1) licensing or credentialing body for the state in which the MFT/MHC is enrolling; or (2) national MFT/MHC credentialing organization. The statement can be signed by any official of the state licensing/credentialing or national credentialing body and must be on the body's letterhead (email is not acceptable).

Revalidation

37. What does it mean to revalidate?

You are required to revalidate—or renew—your enrollment record periodically to maintain Medicare billing privileges. In general, providers and suppliers revalidate every five years, but DMEPOS suppliers revalidate every three years. CMS also reserves the right to request off-cycle revalidations.

38. How are providers notified when it's time to revalidate?

You can search the Medicare Revalidation List to find your revalidation due date. CMS posts revalidation due dates seven months in advance.

Your MAC will also send a revalidation notice to you via email or U.S. postal mail about three to four months prior to your due date.

39. What happens if I don't revalidate on time?

Failing to revalidate on time could result in a hold on your Medicare reimbursement or deactivation of your Medicare billing privileges.

If your Medicare billing privileges are deactivated, you'll need to submit a complete Medicare enrollment application to reactivate your billing privileges. Medicare won't reimburse you for any services during the period that you were deactivated.

Opt-Out of Medicare

40. If I don't enroll, do I need to opt-out to continue to see Medicare beneficiaries**?**

Physicians and non-physician practitioners who see Medicare beneficiaries but do not want to enroll and submit claims to Medicare, are required to opt-out. Opting out means that you do not want to bill Medicare for your services, but instead want your Medicare patients to pay out-of-pocket. You enter private contracts with your Medicare patients where you agree that nobody will submit the bill to Medicare for reimbursement. To opt-out you must submit an opt-out

affidavit to your MAC. For more information refer to Opt Out of Medicare.

Some Medicare Advantage (MA) plans and/or State Medicaid Agencies may require you to enroll in Medicare before enrolling in their programs. Opting out of Medicare could impact your participation in these programs. Refer to https://www.cms.gov/Medicare/Provider-Enrollment-and-Certification/MedicareProviderSupEnroll/Downloads/opt-out-decision-matrix-%5BOctober-2015%5D.pdf for the impacts of opting out.

Physicians and non-physician practitioners who will not see Medicare patients, are not required to enroll or opt-out of Medicare.

41. Is there a standard opt-out form?

A standard opt-out form is not available. However, some MACs have a template on their website that you can use. Find your designated MAC and their contact and mailing address at MAC Contact Information.

42. How long does the opt-out period last?

The opt-out period lasts for 2 years. Your opt-out status will automatically renew every 2-years unless you terminate. To terminate your opt-out status, you must submit a written notice (no later than 30 days before the end of your current 2 year opt-out period) to your MAC indicating that you do not want to extend his opt-out status for a subsequent 2-year period. Otherwise, your opt-out will automatically renew for another 2-year period.

Physicians or practitioners who have not previously opted out may terminate their opt-out period early, but notification must be given to the MAC(s) no later than 90 days after the effective date of the initial 2-year opt-out period.

For more information on opting-out refer to Opting Out of Medicare.

Getting Started with the Hospice Quality Reporting Program

This document provides detailed information on the requirements of the Hospice Item Set (HIS) and Consumer Assessment of Healthcare Providers and Systems® (CAHPS®) Hospice Survey. It is designed especially for new hospice providers and staff and provides comprehensive detail on the background of each requirement, data submission deadlines, possible exemptions, tips for compliance, and links to useful resources, including Help Desks.

The Hospice Quality Reporting Program (HQRP) promotes the delivery of person-centered, high-quality, and safe care by hospice providers. Currently, the HQRP uses three data sources for the calculation of quality measures (QMs):

1. Hospice Item Set (HIS)
2. Consumer Assessment of Healthcare Providers and Systems® (CAHPS®) Hospice Survey
3. Administrative Data (Claims)*

*The data source for the claims-based measures will be Medicare claims data that are already collected and submitted to CMS.

There are four (QMs) associated with the HQRP, one from HIS data, two from Medicare claims, and one from CAHPS® Hospice Survey.

The HQRP was established under section 1814(i)(5) of the Social Security Act (SSA). Data collection of the HIS began on July 1, 2014. To be compliant with the HQRP currently, hospices must comply with both the individual requirements of HIS and CAHPS®, and the submission of administrative data (Medicare claims). Individual compliance requirements for HIS and CAHPS® are discussed in greater detail, below. Since administrative data is collected from claims, hospices are automatically considered 100% compliant with this requirement. The SSA also directed the Secretary to reduce the market basket update (also known as the Annual Payment Update, or APU) for any hospice that does not comply with the quality data submission requirements with respect to that FY. Effective with the FY 2022 Final Rule, beginning with the

FY 2024 APU and for each subsequent year, the reduction increased from 2 to 4 percentage points for hospices who do not comply with the HQRP for that FY. The CMS HQRP website is the official website of the HQRP. Hospices should bookmark this website and check it often for updates.

Section 1: HIS

Who is required to submit data: As of July 1, 2014, all Medicare-certified hospice providers must submit HIS data (HIS-Admission and HIS-Discharge records) on all patient admissions and discharges. HIS data are collected and submitted on all patient admissions, regardless of the payer, patient's age, or location of the receipt of hospice services.

For new hospice providers: There are two considerations: when to begin submitting HIS data and when you may be subject to the APU reduction for HIS purposes.

- When to begin HIS data submission: New hospice providers must submit HIS data (HIS-Admission and HIS Discharge records) for all patient admissions on or after the date in the CMS Certification Number (CCN) notification letterhead.
- APU determination: New hospice providers are required to submit HIS data for patient admissions on or after the date in the CCN letterhead. A new hospice with a CCN notification letter dated on or after November 1st will not be subject to the 4 percentage-point APU reduction for that first year only. In this situation, if a hospice is found non-compliant, then it will need to follow the reconsideration process and attach the CCN notification letter and any other relevant documents to support their new status.

- **HIS Data Collection:** HIS data collection consists of collecting or abstracting data from patient clinical records to complete HIS Items. To ensure successful HIS data collection, hospices should review materials available on the CMS HQRP website, including:
  - Read the HIS Manual (available on the HIS webpage), which provides instructions for completing HIS items, as well as clinical examples for each item.
  - Watch HIS data collection trainings, which are available on the HQRP Training and Education Library webpage.
  - Contact the Quality Help Desk at HospiceQualityQuestions@cms.hhs.gov for questions about HIS data collection processes.

- **HIS Data Submission:** Hospices must convert HIS data into the proper electronic file format (XML) and submit all HIS records to CMS via Quality Improvement and Evaluation System (QI ES) Assessment Submission and Processing (ASAP). Hospice providers do not need to have an electronic medical record to convert/submit HIS data.
  - To convert HIS records, acquire the appropriate software either Hospice Abstraction Reporting Tool (HART) or a vendor-designed software. The decision to use HART or a vendor software is your decision. Hospices who wish to use the free of charge HART should refer to the HIS Technical webpage to download the latest version.
  - To submit HIS data to QIES ASAP, hospices need to register for two User IDs: a CMSNet User ID and a QIES User ID.

- Register for the CMSNet User ID here using the "Hospice CMSNet Online Registration" application link.
- Once successfully logged onto the CMS Network using the CMSNet User ID, providers can register for a QIES User ID. Further information on registering for the QIES User ID can be found here under "QIES User ID."
- For questions about registering for User IDs and the HART or QIES ASAP systems, contact the Technical Help Desk at (877) 201-4721 (Monday–Friday from 7:00 AM – 7:00 PM CT), or by email at iqies@cms.hhs.gov.

- **Ensuring Successful Data Submission:** After each data submission to QIES ASAP, providers MUST verify that the data submitted were **ACCEPTED** by QIES ASAP.
  - When an HIS file is uploaded to QIES ASAP, you will receive two confirmation messages: an "Upload Completed" message and a "Submission Received" message. These initial two confirmation messages only indicate that the file has been **SUBMITTED** to QIES ASAP; they do not indicate that the file has been successfully **ACCEPTED** by QIES ASAP and CMS.
  - To ensure a file has been **ACCEPTED** without error, check the Final Validation Report in Certification And Survey Provider Enhances Reports (CASPER). For instructions on how to check the submission status of a file in the Final Validation Report, please refer to the CASPER Reporting Hospice Provider User's Guide located on the Hospice provider page of the QIES technical support office (QTSO) website.
  - If, 1) a Final Validation Report is not received following the submission of HIS records; or 2) a Final Validation Report is received with fatal errors listed, the data submission was not successful, and you must correct any errors and resubmit relevant HIS records to QIES ASAP.
  - Print and retain your Final Validation Reports as evidence of successful submission and processing of HIS records.
  - Contact the QTSO Help Desk at iQIES@cms.hhs.gov or call 1-877-201-4721, for questions about verifying that a submission was successfully received and processed.

- **Data Submission Deadlines:** HIS data is submitted on a rolling basis; HIS-Admission records and HIS Discharge records must be **SUBMITTED** and **ACCEPTED** by the Admission Date + 30 calendar days and the Discharge Date + 30 calendar days, respectively.

- **HIS Compliance:** HIS compliance for APU is based on timeliness of data submission. To be compliant for all reporting years, **hospices must submit at least 90% of their HIS records in accordance with the 30-day submission deadline specified above.**

Determinations of timeliness compliance are made based on records with a target date within the appropriate calendar year (Jan 1 – Dec 31). For example, for the FY 2026 APU reporting year, hospices must submit a minimum of 90% of records with a target date within the reporting period (HIS records with a target date 1/1/24 – 12/31/24) on time.

For more information on HIS timeliness requirements, please refer to the "Timeliness Compliance Threshold Fact Sheet" located in the Downloads section of the HQRP Requirements and Best Practices webpage.

Section 2: Hospice CAHPS®

Who is required to submit data: All Medicare-certified hospices are required to submit Hospice CAHPS® data. However, there are two exemptions for Hospice CAHPS® reporting: newness exemption and size exemption.

- **Newness exemption:** For hospices who received their CCN on/after January 1st of the data collection year. This is a one-time exemption that will be automatically granted by CMS, no action is required from hospice providers to receive this exemption. We recommend that you keep the CMS letter informing you of the assignment of your CCN.
- **Size Exemption:** For hospices with fewer than 50 survey-eligible decedents in the prior calendar year. This exemption is not automatically granted; hospices must complete the request form annually by the size exemption form deadline. The size exemption form is available on the CAHPS® Hospice Survey website. Hospice providers must submit the form annually, by the specified deadline, to be eligible for the exemption.
- For questions about the CAHPS® Hospice Survey and data submission requirements, please contact the CAHPS® Help Desk at hospicecahpssurvey@hsag.com or call 1-844-472-4621.

Data Collection and Submission: Eligible hospices must contract with a CMS-approved vendor to conduct their CAHPS® surveys and submit their CAHPS® data. CAHPS® data is submitted by your vendor to the CAHPS® data warehouse.

- A list of approved survey vendors can be found by accessing the Approved Vendor List navigation button on the left-hand side of the CAHPS® Hospice Survey website.
- After contracting with an approved survey vendor, the hospice will need to complete and submit a CAHPS® Hospice Survey Vendor Authorization Form. To view or download the CAHPS® Hospice Survey Vendor Authorization Form, visit the Technical Specifications webpage.

Data Submission Deadlines: Your vendor must submit data quarterly. The deadlines are the second Wednesday of February, May, August, and November.

Ensuring Successful Data Submission: Maintain close contact with your vendor to ensure it is meeting quarterly deadlines and to ensure data submitted by the vendor has been **ACCEPTED** by CMS.

- Contact your vendor to ensure it is submitting data in ample time to meet the quarterly deadlines. We cannot accept late submissions.
- Sign up for data submission reports at the Information for Hospices webpage to monitor your vendor's actions and ensure submitted data have been accepted.

CAHPS® Compliance: CAHPS® compliance is determined based on whether your vendor successfully submits a total of 12 months of data to the CAHPS® data warehouse, with each submission made by the quarterly deadline. This means:

- Each quarterly submission must be complete (have 3 months or 1 quarter's worth of data)
- Each quarterly submission must be **SUBMITTED AND ACCEPTED** by the quarterly data submission deadline

For More Information: For more information about the CAHPS® Hospice Survey, please access the survey website or contact the technical assistance project team at hospicecahpssurvey@hsag.com or call 1- 844472-4621.

Getting Started with Hospice CASPER Quality Measure Reports

This fact sheet contains information about the two Certification and Survey Provider Enhanced Reporting (CASPER) Quality Measure (QM) reports available to hospice providers. Additionally, this fact sheet includes one potential model hospices could employ to use the QM reports for quality improvement.

I. Understanding the Hospice CASPER Quality Measure Reports

Two Confidential Provider Feedback Reports are available in the CASPER reporting application: **Hospice-Level Quality Measure Report** and **Hospice Patient Stay-Level Quality Measure Report**. These two reports fall under the class of CASPER reports known as "QM reports." CASPER QM reports are on-demand and are intended to provide hospice providers with feedback on their quality measure scores, helping them to improve the quality of care delivered. The information available in these reports in CASPER is for internal purposes only and is not for public display.

- **The Hospice-Level QM Report** includes the Hospice item Set (HIS) Comprehensive Assessment at Admission (CBE #3235), Hospice Care Index (HCI), and Hospice Visits in the Last Days of Life (HVLDL-CBE #3645) measure scores. The claims-based measures were added in September 2021. The report includes hospice specific scores, national and state averages. Details of the seven component process measures are included for the HIS Comprehensive Assessment at Admission Measure, as well as the details for the 10 individual HCI indicators.
- **The Hospice Patient-Level QM Report** identifies each patient with a qualifying HIS record used to calculate the hospice-level quality measure values for a select period. The report displays each patient's name and indicates how/if the patient's assessment affected the hospice's quality measure. The details of the seven component process measures are also included at the patient level for the HIS Comprehensive Assessment at Admission Measure. Claims-based measures are not included in these reports.

What measures are reported and how are these data collected?

The Hospice Quality Reporting Program (HQRP) was established under Section 1814(i)(5) of the Social Security Act. Since 2014, Medicare-certified hospice providers are required to submit an HIS Admission record for all patient admissions and an HIS-Discharge record for their subsequent discharges. Hospices are required to submit the appropriate HIS record for each patient admission and discharge, regardless of the patient's payer source, age, or location where hospice services are received. Hospices submit HIS data to CMS through the Quality Improvement and Evaluation System (QIES) Assessment Submission and Processing (ASAP), or it's replacement system.

HIS data are used to calculate one HQRP process measure, and administrative data (i.e., Medicare claims) are used to calculate two claims-based quality measures *(Table 1).* These three of the four HQRP quality measures are reported on the Hospice CASPER Quality Measure Reports. The Consumer

Assessment of Healthcare Providers and Systems (CAHPS®) Hospice Survey (Consensus-Based Entity (CBE) # 2651) [1] measure is not included on these QM reports.

Table 1. Quality Measures Reported on CASPER QM Reports

Measure Title (CBE ID)	Measure Description
HIS Comprehensive Assessment at Admission (CBE #3235)	The percentage of hospice stays during which patients received a comprehensive patient assessment at hospice admission.
Hospice Visits in the Last Days of Life (HVLDL) (CBE #3645) *	A claims-based measure indicating visits in the last 3 days of life
Hospice Care Index (HCI)	A single score measure that combines the results of 10 claims-based indicators

Hospice-Level Quality Measure Report

This report enables hospice providers to review their QM scores at the hospice-level and compare their organization's overall performance to their state and national average scores. *Figure 1A illustrates how to read this report.*

- Use as a quality improvement tool:
  - Hospice providers can identify which QMs they perform well on and which they might develop quality improvement interventions to improve performance.
  - QM results can be trended by comparing QM scores and percentiles across multiple reporting periods. Trending QM scores enables hospice providers to monitor the progress of their quality improvement interventions.
  - For the HIS Comprehensive Assessment at Admission, providers can trend consecutive quarters, while for the claims-based measures, providers can trend by the eight quarters (2 years) of data.
- Understanding data calculations:
  - For the HIS Comprehensive Assessment at Admission, the data are calculated monthly, approximately mid-month. Any assessments submitted after the calculation date will be included in the next monthly calculation. The *"Data was calculated on"* date shows you the most recent calculation date.
  - For claims-based measure scores, the data is updated annually in November.

[1] For information about the CAHPS® Hospice Survey, a description of the survey, its measures, and requirements visit the survey webpage, www.hospicecahpssurvey.org.

Table 3. Claims-based Quality Measure-Hospice Care Index

Hospice Care Index-Measure Overview

Hospice Observed Score (higher is better)	**9 out of 10**
National Average	8.8 out of 10
State Average	9.6 out of 10

The Hospice Care Index (HCI) Measure observed score is the number of times a hospice earns a point across 10 indicators. The highest possible score is 10. Please see Table 3B which presents the hospice score on each of the 10 indicators that make up the HCI observed score. When a hospice receives an HCI score below 10, the hospice can identify which indicator(s) did not achieve a positive result. The HCI is Measure H012.01.

Overview with National and State averages

Table 3A. Hospice Care Index-Provider's Points Earned on Each Indicator and Total HCI Score

Care Indicator Used To Calculate HCI[2]	Provider Points Earned
CHC/GIP Provided (% days)	1
Gaps in nursing visits (% elections)	1
Early live discharges (% live discharges)	0
Late live discharges (% live discharges)	1
Burdensome transitions, Type 1 (% live discharges)	1
Burdensome transitions, Type 2 (% live discharges)	1
Per-beneficiary spending (U.S. dollars $)	1
Nurse care minutes per routine home care days (minutes)	1
Skilled nursing minutes on weekends (% minutes)	1
Visits near death (% decedents)	1
Hospice Care Index Observed Score (out of 10)	**9**

[2]Indicators are publicly reported within the Provider Data Catalog but are not displayed on Care Compare

Indicator Names

Individual indicator scores

Score reported on Care Compare

Figure 1c. depicts Table 3 and 3A of the report for the HCI claims-based measure. The top box highlighted in blue displays the hospice's score, 9 out of 10. For reference, the national and state averages are also given; (8.8 out of 10), and (9.6 out of 10) respectively. For this measure, a higher observed score is better; a hospice with a 10 out of 10 would have the highest score. Since the HCI score is an index reflecting multiple indicators, the report also contains indicator-level data in the chart shown at the bottom. Table 3A shows that the provider earned 1 point for 9 of the ten indicators, resulting in the 9 out of 10 Hospice Observed Score. This provider did not meet the criteria for one of the indicators, thus did not earn a point for that indicator.

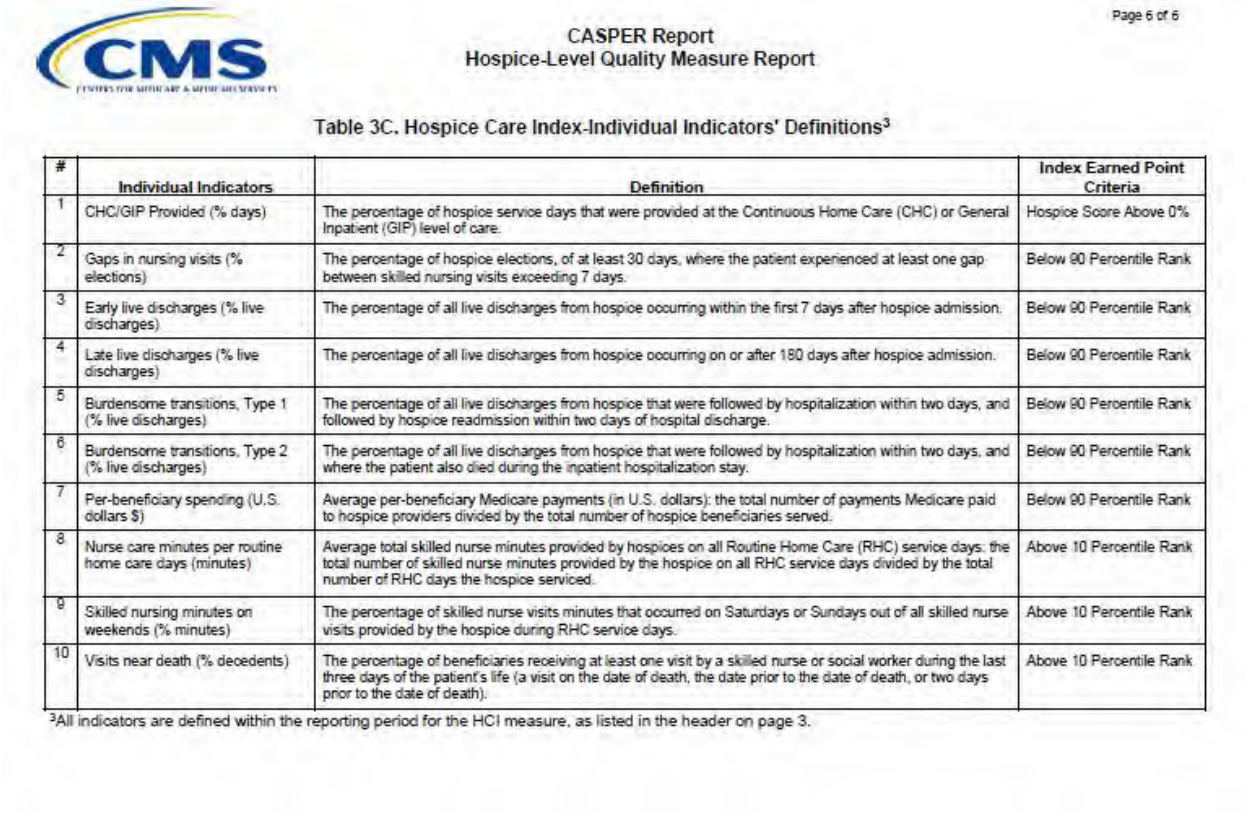
9	Skilled nursing minutes on weekends (% minutes)	438,735	1,612,530	27.2%	9.4%	8.9%	99	Above 10 Percentile Rank	Yes	1
10	Visits near death (% decedents)	180	181	99.4%	89.7%	93.7%	95	Above 10 Percentile Rank	Yes	1
	Hospice Care Index Total Observed Score (out of 10)									9

Figure 1d depicts an example of Table 3B in the report. This table presents the detail for each indicator of the HCI measure. Each row represents one of the ten indicators.

Figure 1e. HCI Definitions



Page 6 of 6

CASPER Report
Hospice-Level Quality Measure Report

Table 3C. Hospice Care Index-Individual Indicators' Definitions[3]

#	Individual Indicators	Definition	Index Earned Point Criteria
1	CHC/GIP Provided (% days)	The percentage of hospice service days that were provided at the Continuous Home Care (CHC) or General Inpatient (GIP) level of care.	Hospice Score Above 0%
2	Gaps in nursing visits (% elections)	The percentage of hospice elections, of at least 30 days, where the patient experienced at least one gap between skilled nursing visits exceeding 7 days.	Below 90 Percentile Rank
3	Early live discharges (% live discharges)	The percentage of all live discharges from hospice occurring within the first 7 days after hospice admission.	Below 90 Percentile Rank
4	Late live discharges (% live discharges)	The percentage of all live discharges from hospice occurring on or after 180 days after hospice admission.	Below 90 Percentile Rank
5	Burdensome transitions, Type 1 (% live discharges)	The percentage of all live discharges from hospice that were followed by hospitalization within two days, and followed by hospice readmission within two days of hospital discharge.	Below 90 Percentile Rank
6	Burdensome transitions, Type 2 (% live discharges)	The percentage of all live discharges from hospice that were followed by hospitalization within two days, and where the patient also died during the inpatient hospitalization stay.	Below 90 Percentile Rank
7	Per-beneficiary spending (U.S. dollars $)	Average per-beneficiary Medicare payments (in U.S. dollars): the total number of payments Medicare paid to hospice providers divided by the total number of hospice beneficiaries served.	Below 90 Percentile Rank
8	Nurse care minutes per routine home care days (minutes)	Average total skilled nurse minutes provided by hospices on all Routine Home Care (RHC) service days: the total number of skilled nurse minutes provided by the hospice on all RHC service days divided by the total number of RHC days the hospice serviced.	Above 10 Percentile Rank
9	Skilled nursing minutes on weekends (% minutes)	The percentage of skilled nurse visits minutes that occurred on Saturdays or Sundays out of all skilled nurse visits provided by the hospice during RHC service days.	Above 10 Percentile Rank
10	Visits near death (% decedents)	The percentage of beneficiaries receiving at least one visit by a skilled nurse or social worker during the last three days of the patient's life (a visit on the date of death, the date prior to the date of death, or two days prior to the date of death).	Above 10 Percentile Rank

[3]All indicators are defined within the reporting period for the HCI measure, as listed in the header on page 3.

Figure 1e depicts Table 3c, which includes the definition for each HCI indicator along with the corresponding Index Earned Point Criterion.

Note: *For more information on how the numerator and denominator are determined and how quality measures are calculated, see the QM User's Manual ("Current Measures" link provided in Resources section, below)*

Hospice Patient Stay-Level Quality Measure Report

This report enables hospice providers to review the quality measure outcomes for the HIS Comprehensive Assessment at Admission for all patient stays during the reporting period. The report shows which patient stays triggered each quality measure. *Figure 2* illustrates how to read this report.

- As a companion report to the Hospice-Level Quality Measure Report, this report drills down to patient-stay level information for each of the seven component quality measures that comprise the HIS Comprehensive Assessment at Admission.
- Use as a quality improvement tool:
    - This report can assist a hospice to review the individual components for the HIS Comprehensive Assessment at Admission measure, should results on the Hospice-Level Quality Measure Report be less favorable than anticipated. Providers can quickly assess which patient stays contributed to the unfavorable results. Hospices can then implement process improvements to address the issues identified.

- Quality of care concerns for specific patient populations can also be assessed (e.g., based upon length of stay). For example, to look at short stay patients, a hospice provider could review cases in which the admission and discharge date were within the same month and year. It can then be determined which patients did not achieve three or more of the component process measures. Thus, the hospice could decide whether there are general quality of care concerns for patients with a short length of stay.
- Missing records: This report indicates when an admission record was not submitted with a corresponding HIS discharge record (Type 2 Stay). This information could assist a provider to identify when a missing admission record should be submitted to the QIES ASAP system. A link to the HIS Manual is provided in the Resources section below.

- Claims-based measures are not included in these reports.

Date of hospice discharge (for any reason)

Date of most recent hospice election

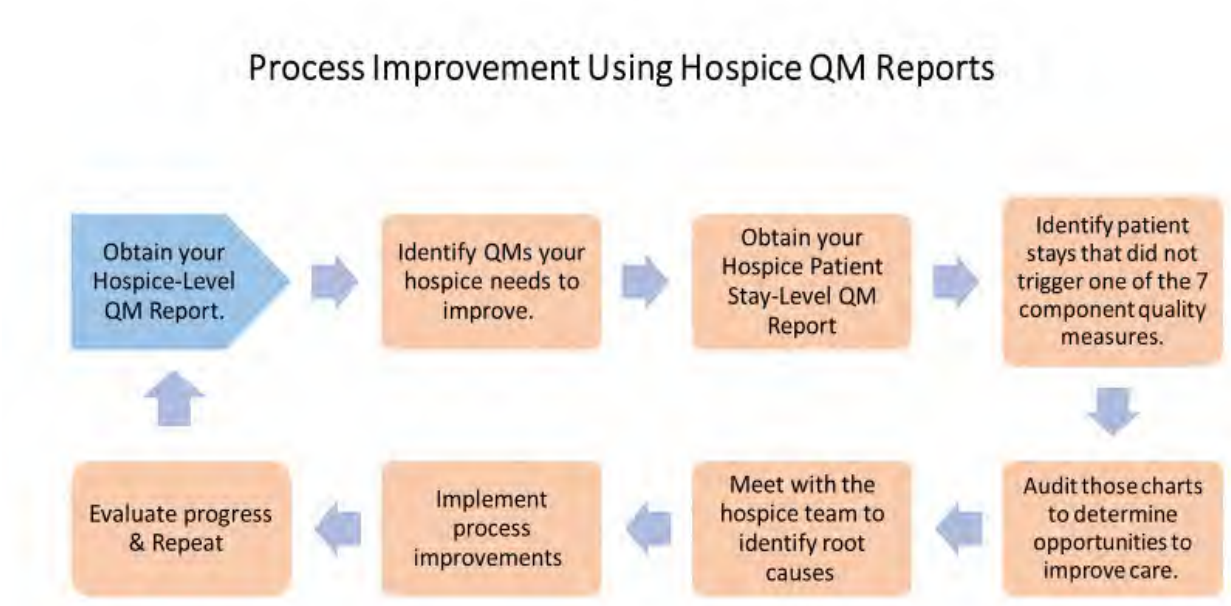
"c" = admission record is missing – this admission date is extracted from the discharge record

Triggers/outcomes for HIS Comprehensive Assessment at Admission (CBE #3235)

outcomes triggered during the patient stay

II. Sample Process for Using the Measure Reports for Quality Improvement

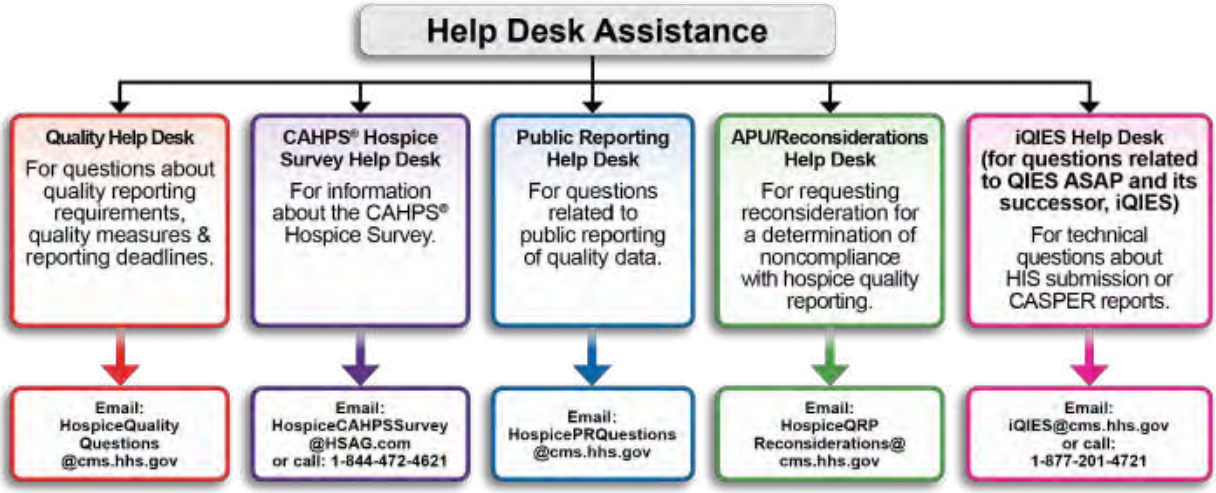
1) Obtain your Hospice-Level QM Report.
2) Use this report to identify which QMs need improvement.
3) Obtain the Hospice Patient Stay-Level QM Report for the same report period that was selected for the Hospice-Level QM Report to analyze the details for the HIS Comprehensive Assessment at Admission.
4) Analyze your Hospice Patient Stay-Level QM Report.
5) Identify a sample of patient stays that did not trigger (i.e., did not meet the numerator criteria) for one of the seven component quality measures for the HIS Comprehensive Assessment at Admission. This may reflect opportunities for quality improvement.
6) Audit the medical records for those patient stays that did not trigger the measure. This will help to determine where the opportunities are to improve care and where a defined care process may not have been followed.
7) Meet with your hospice team to identify root causes. Ask why these care processes were not followed? This may require looking beyond chart data.
   a) For example, if all patient stays in a poor-performing component measure were found to be under the care of one nurse, explore with the nurse why this occurred and why sub-optimal care may have been delivered.
   b) In cases where excellent care was identified (patient stays triggered the measure), explore with the hospice team how those processes could be replicated.
8) Implement process improvements related to the findings of the chart audits.
9) Repeat this cycle regularly to drive quality improvement



III. Resources Available to Hospice Providers

- For more detailed instruction on accessing CASPER reports, please view the CASPER Reporting Hospice Provider User's Guide.
- For Training on all topics related to the HQRP, including how to use provider reports, visit the HQRP Training and Education Library.
- For more information, resources, and updates related to HIS data submission specifications and other technical information, visit the HIS Technical Information webpage on the CMS HQRP website.
- For more information on the QMs and how the measures are calculated review the current HQRP QM User's Manual located in the Downloads section of the Current Measures webpage on the CMS HQRP website.

IV. Help Desk Resources



Getting Started with Hospice CASPER Review and Correct Reports

This overview of the Review and Correct Reports is intended to help providers understand what they are and how to interpret and use the Hospice Item Set (HIS) data contained within them. These reports are confidential and contain details about the HIS-based quality measure (QM), Comprehensive Assessment at Admission (Consensus-Based Entity (CBE) #3235). Review and Correct Reports provide information at the hospice-level, and about individual patients, if desired.

Sections

I. Understanding the Hospice CASPER Review and Correct Reports

The CASPER Review and Correct Reports are designed to give hospices an opportunity to:

- Confirm the accuracy of their HIS-based QM data
- Track quarterly data cumulatively
- View data that is both "Open" and "Closed" for data correction over 12 months
- Access QM data prior to the Data Correction Deadline for public reporting.

What information does the hospice-level Review and Correct Report display?

The hospice level Review and Correct Report displays the number of patient-stays that trigger the quality measure (the numerator) and the number of eligible patient discharges (the denominator) for the HIS Comprehensive Assessment at Admission in the Hospice Quality Reporting program (HQRP), as well as the seven individual components for the measure. It also displays the observed performance rate, which is simply the numerator divided by the denominator multiplied by 100. These results are not risk-adjusted. While the seven individual component measures are publicly reported within the Provider Data Catalog, these are not displayed on Care Compare. The report also includes the status of the data correction period determined by the Data Correction Deadline for each quarter. The correction period will be either Open or Closed depending on whether the Data Correction Deadline for the displayed data has passed.

Any corrections hospice providers make to the HIS data during an Open data correction period will be reflected in public reporting of the QM. Please see *Figure 1* below for an example of the hospice- level Review and Correct Report display, with data for four quarters that would typically be included.

Q2 2021	H008.01	04/01/2021	06/30/2021	11/15/2021	Closed	17	23	73.9%
Cumulative	-	**04/01/2021**	**03/31/2022**	-	-	**91**	**112**	**81.3%**

What patient stay-level information is displayed on the Review and Correct Report?

If included in the report request, patient-stay level results will display along with the hospice-level aggregated data in the same report. The patient-stay level information displayed includes a list of individual hospice patients with their admission and discharge dates for the stay and for whom the HIS data was submitted. The report indicates whether or not each patient was included in the numerator for the QM. *Table 1* below shows the letters used in the "Status" column to communicate information about each stay in relation to the measure included in the report. *Figure 2* presents an example of a patient-level information.

Table 1: Letters used in Review and Correct Reports

Letter	What the Information Indicates
X	The patient-stay *triggered the measure* (included in both the numerator and the denominator)
b	The patient-stay *did NOT trigger the measure* (included in the denominator, but not the numerator)
e	This patient was *excluded* from the denominator
c	The admission record is missing; the *Admission Date listed was extracted from the discharge record.*
d	The measure was not implemented based on patient's admission and/or discharge date(s).

When can providers run their Review and Correct Reports? And for what quarters?

Providers can run their Review and Correct Reports on-demand – that is, *at any time*. Reports display four consecutive quarters of data. Hospices can select which four quarters they would like to include. The reports populate data based on the user-specified "quarter end date" and automatically fills the "begin date" to include the three quarters preceding the specified "end date" quarter. For example, if the user selects Q1 2024 as the end date, the report will populate and display HIS QM results for discharges that occurred during Q2 2023 – Q1 2024. *Table 2* below shows this and other examples of how the Review and Correct Report data may be displayed for four possible quarterly end dates.

Table 2: Data Display by User-Selected End Date

User-Specified Quarter End Date	Quarters Included in Report
Q1 2024	Q1 2024, Q4 2023, Q3 2023, Q2 2023
Q2 2024	Q2 2024, Q1 2024, Q4 2023, Q3 2023
Q3 2024	Q3 2024, Q2 2024, Q1 2024, Q4 2023
Q4 2024	Q4 2024, Q3 2024, Q2 2024, Q1 2024

How often are the Review and Correct Reports updated?

New quarterly data are available for these reports on the first business day following the last day of the calendar year quarter.[1] As new quarterly data become available, hospices can include them in their Review and Correct Reports. HIS-based QM data are updated weekly. The updates reflect any changes made by providers, including modifications, as well as HIS records submitted and accepted after the

[1]For admission and discharge record data submitted at the end of the preceding quarter, data from these records will be included in the quarterly data after a subsequent weekly refresh. *Example: a provider may have a patient who is discharged at the end of the Q1 on March 31st, and will submit the HIS discharge record April 3rd, which is already in Q2. In this example, the discharge record will not appear if the report is run during the first week of April but will appear if the report is run during the following weeks.*

HQRP's 30-day submission deadline.[2] For all user-specified end quarter displayed in *Table 2* above, *Table 3* shows the date when those quarterly data become available in the Review and Correct Reports.

[2] As stated in the FY2018 Hospice Wage Index and Payment Rate Update and Hospice Quality Reporting Requirements Final Rule (FR36670), 90% of all required HIS records must be submitted and accepted within the 30- day submission deadline to avoid the percentage point reduction in the FY 2020 Annual Payment Unit (APU) and beyond. Starting with FY 2024, the penalty increased from 2% to 4%.

Table 3: Data Release Dates and Associated Quarterly Data

User-Specified Quarter End Date	Quarters Included in Report	Release Date
Q1 2024	Q1 2024, Q4 2023, Q3 2023, Q2 2023	**April 1, 2024**
Q2 2024	Q2 2024, Q1 2024, Q4 2023, Q3 2023	**July 1, 2024**
Q3 2024	Q3 2024, Q2 2024, Q1 2024, Q4 2023	**October 1, 2024**
Q4 2024	Q4 2024, Q3 2024, Q2 2024, Q1 2024	**January 1, 2025**

How can hospice providers use the Review and Correct reports?

If you access your reports early, you have more opportunity to make changes. For example, hospices may identify a need to correct data, and thus submit, modify, and/or inactivate HIS records in the Quality Improvement and Evaluation System (QIES) Assessment Submission And Processing (ASAP) system. In some cases, hospices may identify opportunities to provide staff education to ensure the accuracy of HIS data submissions or to initiate or update quality improvement strategies. A hospice can follow this sequence of activities to make use of the Review and Correct Reports:

1. Access the reports and investigate measure results
2. Identify opportunities for data correction and/or initiating or updating quality improvement strategies
3. Submit, modify, and/or inactivate HIS records in the ASAP system, as needed
4. Access the reports again to verify updates or corrections from the previous week

How do the CASPER Review and Correct Reports differ from QM Reports and Preview Reports?

The CASPER reports all have specific functions**.**

- **QM Reports** provide hospices with data to support quality improvement, including throughcomparison of hospice-level QM data with the national and state averages
- **Review and Correct Reports** give hospice providers a resource to monitor performance rates andthe opportunity to make required edits or corrections to their submitted HIS data
- **Preview Reports** provide previews of QM results prior to public display on Care Compare. Corrections to the underlying data for the measure calculations can no longer be made. A provider may request a CMS review of the calculations contained within the Provider Preview Report, should they believe the denominator or another quality metric to be inaccurate. Once reviewed, if CMS agrees that one or all of the data components are inaccurate, CMS may grant suppression of those measure results on Care Compare.

The reports differ in specific ways to fulfill these functions. *Table 4* highlights some of the key similarities and differences QM Reports and Preview Reports have with the Review and Correct Reports.

Table 4. Overview of Reports for Hospice Quality Reporting

Report Title	Always includes a full year of data	Includes patient stay-level data	Includes hospice-level data	Affected by data correction deadlines	Underlying data can be changed	Run on-demand
CASPER QM Reports	No*	Yes	Yes	No	Yes	Yes
Review and Correct Reports	Yes	Yes	Yes	Yes	**	Yes
HIS Provider Preview Reports	Yes	No	Yes	Yes	No	No

* The report may include a full year of data if requested by the provider. ** If the data correction period is "Open," provider corrections to HIS records will appear in a future release of the Review and Correct Reports. If the data correction period is "Closed," provider corrections to HIS records will NOT appear in a future release.

II. Report Example and Overview

Please see a mock-up example of Review and Correct Report sections below. Providers are encouraged to keep the following points in mind when reviewing their reports:

- Hospice Level Data Section: Includes the QM numerator, denominator, and score for patients who have been *discharged* within the selected four quarter reporting period. This section doesnot include patient records which are ongoing at the end of the selected four quarter reportingperiod.

- The Patient Stay-Level Section: Includes record-level data and provides an opportunity to quickly identify records that may require further investigation by the hospice, such as possible data inaccuracies or quality of care concerns.

The examples below include records that are still "Open" for data correction prior to the public reporting deadline on Care Compare at which time records are "Closed" or "frozen" for any data correction. In addition, the mock-up example includes:

- Twelve months of data indicating when the data is re-calculated (on a weekly basis) so providerscan capture edits or changes to HIS records submitted prior to the data correction deadline.
- Filters providers can select when running this report. For example, if a provider would like to see only data for patients without a discharge assessment, a selected filter will provide those records.
- The hospice-level section shows the number of discharged patients during the indicated quarter that met the QM's denominator criteria and numerator criteria and provides a *quarterly and cumulative* QM score.

Example of Hospice-Level Section on the Review and Correct Report

Report shows a rolling 12 months of data. This is the newest quarter of data that will appear on this report. The newest quarter of data doesn't automatically display; data for that quarter and the date in the requested quarter end date only display the latest quarter if it was selected by the user.

CASPER Report
Hospice Review and Correct Report

Provider ID: 000000
CCN: 000000
Hospice Name: XXXX
City/State: XXXX, XX

Shows the date on which this data was recalculated.

Requested Quarter End Date: Q1 2022
Report Release Date: 04/01/2022
Report Run Date: 06/23/2022
Data Calculation Date: 06/20/2022
Report Version Number: 2.1

Quality Measures: Hospice Comprehensive Assessment, Treatment Preferences*, Beliefs/Values*, Pain Screening*, Pain Assessment*, Dyspnea Screening*, Dyspnea Treatment*, Bowel Regimen*
Reporting Quarter: Q1 2022, Q4 2021, Q3 2021, Q2 2021
Patients Without a Discharge Assessment: No
Admission Record Data Correction Period as of Report Run Date: All
Discharge Record Data Correction Period as of Report Run Date: All
Measure Status: Triggered, Not Triggered, Measure not Implemented, Excluded

Providers can select certain filters when running this report (e.g., if the provider would like to see only data for patients without a discharge assessment). Selected filters will appear.

Hospice Item Set (HIS) Quality Measure: Hospice Comprehensive Assessment (NQF #3235)

Measure or component measure being reviewed

Table Legend
Dash (-): Data not available
X: Triggered
b: Not Triggered
e: Excluded from the QM denominator
c: Admission date extracted from the discharge record because admission record is missing
d: Measure not implemented based on patient's admission and/or discharge date(s)

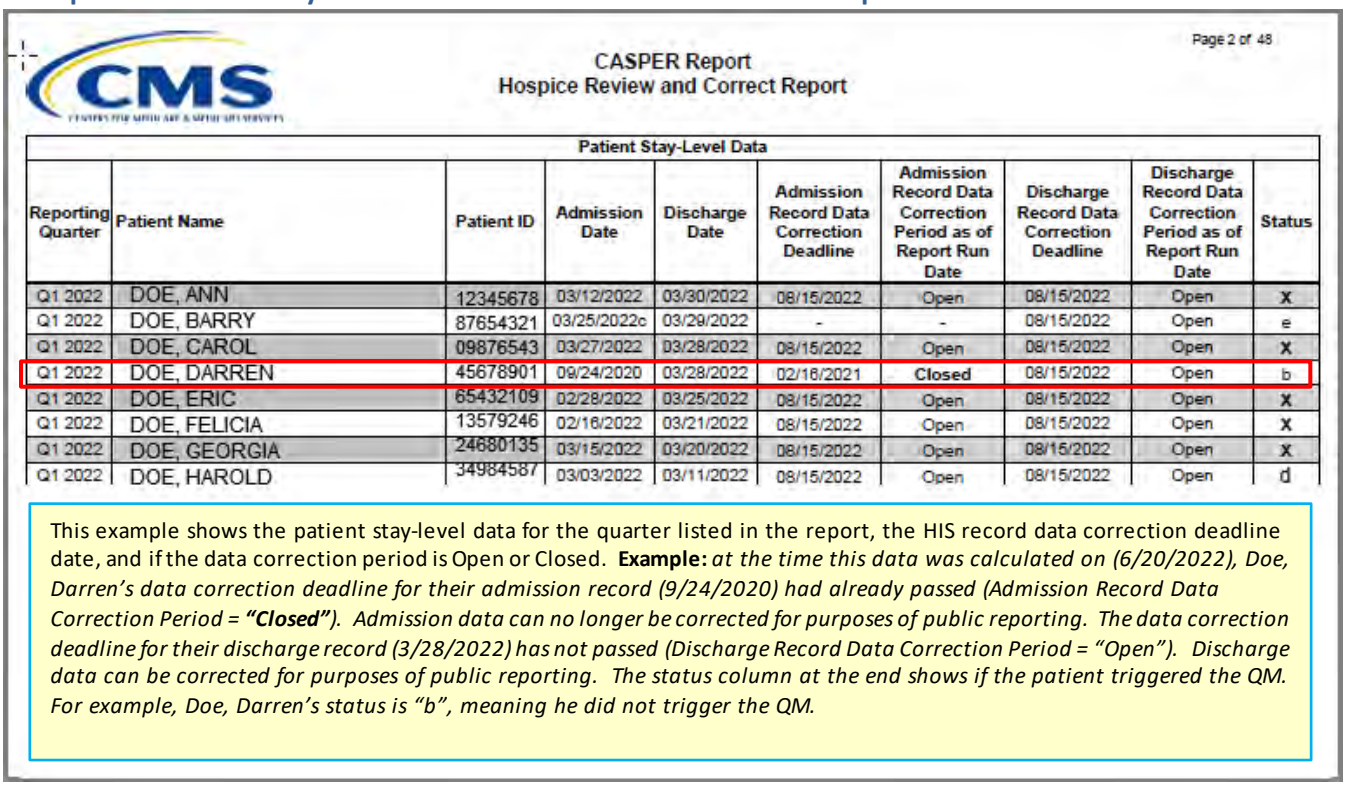
Shows the number of discharged patients during the indicated quarter that met the QMs denominator and numerator criteria. Provides a quarterly QM score.

Hospice-Level Data

Reporting Quarter	CMS ID	Start Date	End Date	Data Correction Deadline	Data Correction Period as of Report Run Date	Number of Discharged Hospice Stays that Triggered the Quality Measure	Number of Discharged Hospice Stays Included in the Denominator	Hospice Percent
Q1 2022	H008.01	01/01/2022	03/31/2022	08/15/2022	Open	29	32	90.6%
Q4 2021	H008.01	10/01/2021	12/31/2021	05/16/2022	Closed	25	31	80.6%
Q3 2021	H008.01	07/01/2021	09/30/2021	02/15/2022	Closed	20	26	76.9%
Q2 2021	H008.01	04/01/2021	06/30/2021	11/15/2021	Closed	17	23	73.9%
Cumulative	-	**04/01/2021**	**03/31/2022**	-	-	**91**	**112**	**81.3%**

Shows the number of discharged patients during the indicated 4 quarters that met the QMs denominator and numerator criteria. Provides a cumulative QM score.

Example of a Patient Stay-Level Section of the Review and Correct Report



CASPER Report
Hospice Review and Correct Report

Patient Stay-Level Data

Reporting Quarter	Patient Name	Patient ID	Admission Date	Discharge Date	Admission Record Data Correction Deadline	Admission Record Data Correction Period as of Report Run Date	Discharge Record Data Correction Deadline	Discharge Record Data Correction Period as of Report Run Date	Status
Q1 2022	DOE, ANN	12345678	03/12/2022	03/30/2022	08/15/2022	Open	08/15/2022	Open	x
Q1 2022	DOE, BARRY	87654321	03/25/2022c	03/29/2022	-	-	08/15/2022	Open	e
Q1 2022	DOE, CAROL	09876543	03/27/2022	03/28/2022	08/15/2022	Open	08/15/2022	Open	x
Q1 2022	DOE, DARREN	45678901	09/24/2020	03/28/2022	02/16/2021	Closed	08/15/2022	Open	b
Q1 2022	DOE, ERIC	65432109	02/28/2022	03/25/2022	08/15/2022	Open	08/15/2022	Open	x
Q1 2022	DOE, FELICIA	13579246	02/16/2022	03/21/2022	08/15/2022	Open	08/15/2022	Open	x
Q1 2022	DOE, GEORGIA	24680135	03/15/2022	03/20/2022	08/15/2022	Open	08/15/2022	Open	x
Q1 2022	DOE, HAROLD	34984587	03/03/2022	03/11/2022	08/15/2022	Open	08/15/2022	Open	d

This example shows the patient stay-level data for the quarter listed in the report, the HIS record data correction deadline date, and if the data correction period is Open or Closed. **Example:** *at the time this data was calculated on (6/20/2022), Doe, Darren's data correction deadline for their admission record (9/24/2020) had already passed (Admission Record Data Correction Period =* ***"Closed"****). Admission data can no longer be corrected for purposes of public reporting. The data correction deadline for their discharge record (3/28/2022) has not passed (Discharge Record Data Correction Period = "Open"). Discharge data can be corrected for purposes of public reporting. The status column at the end shows if the patient triggered the QM. For example, Doe, Darren's status is "b", meaning he did not trigger the QM.*

III. Resources Available to Hospice Providers

For specifics about the HQRP QMs, including access to the current HQRP QM User's Manual, visit the Current Measures page of the CMS HQRP website: https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Hospice-Quality-Reporting/Current-Measures.

For helpful documents about the CASPER QM Reports, or to just get started with the HQRP, visit the *"Provider Toolkit section"* of the Requirements and Best Practice webpage: https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Hospice-Quality-Reporting/HQRP-Requirements-and-Best-Practices.

For technical information including questions about registration for User IDs, technical questions regarding HIS data transmission, error messages, or accessing reports in the CASPER Reporting application, contact the iQIES Technical Help Desk at: iQIES@cms.hhs.gov or by phone: 800-339-9313.

For the current HIS Manual, visit the Downloads section of the Hospice Item Set webpage on the HQRP website at https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Hospice-Quality-Reporting/Hospice-Item-Set-HIS.

For general questions about the HQRP program, reporting requirements, quality measures, and reporting deadlines, contact the Quality Help Desk at: hospicequalityquestions@cms.hhs.gov

Hospice Quality Reporting Program (HQRP) Quick Reference Guide

This document is for HQRP data impacting FY2023 payment updates and all subsequent years.

The Hospice QRP creates hospice quality reporting requirements, as established under section 1814(i)(5) of the Social Security Act (SSA). Each year, by October 1, CMS publishes the quality measures a hospice must report.

Hospices must submit the required Hospice Item Set (HIS) data to CMS. HIS includes HIS-Admission and HIS-Discharge records. The HIS data must be transmitted to CMS via the Quality Improvement Evaluation System (QIES) through the Assessment Submission and Processing (ASAP) system.

In addition, hospices are required to participate in the Consumer Assessment of Healthcare Providers and Systems (CAHPS®) Hospice Survey. The CAHPS® Hospice Survey was designed to measure and assess the experiences of patients who died while receiving hospice care, as well as the experiences of their informal primary caregivers.

The HQRP also includes administrative data (Medicare claims). The FY 2022 Final Rule added administrative data to the HQRP, and these are used to calculate two claims-based measures (Hospice Visits in Last Days of Life (HVLDL) and Hospice Care Index (HCI)). Since CMS obtains this data through claims submitted by hospice providers, hospices with claims are 100% compliant with this requirement.

If the required quality data is not reported by each designated submission deadline, the hospice will be subject to a four (4) percentage point reduction in their Annual Payment Update (APU).

Frequently Asked Questions

Q: What are the data submission deadlines for CAHPS® Hospice Survey data?

The data submission deadlines for *CAHPS® Hospice Survey data* are the second Wednesday of the month for the months of February, May, August, and November. It is important for hospices to submit their patient counts to their selected vendor monthly. Approved CAHPS vendors submit data on behalf of their client hospices on or before that date. Late data is not accepted. More information is available on the official CAHPS® Hospice Survey website.

Q: What are the data submission deadlines for HIS data?

The submission deadline for HIS records is 30 days from the event date (admission or discharge). More information is available on the Timeliness Compliance Threshold Fact Sheet, available in the Downloads box on the CMS Hospice Item Set (HIS) webpage. For FY2022 and all subsequent fiscal years, the HIS threshold is 90%. This means 90% of all HIS assessments must be submitted within 30 days of the event date (admission or discharge).

Q: How do I verify my submissions?

One of the best methods to monitor successful HIS submissions is through Final Validation Reports. Instructions on reports for validating HIS are available on the iQIES portal.

A hospice and its vendors can monitor CAHPS® Hospice Survey data submissions through reports posted to the CAHPS® Hospice Survey Data Warehouse. These reports are available by 5:00 PM Eastern Time on the next business day after submission. More details on the CAHPS® Hospice Survey, including podcasts about data submission and other key items, can be found in the Information for Hospices section of the CAHPS® Hospice Survey website.
CMS provides multiple educational resources and training opportunities on Hospice Quality Reporting Program and CAHPS® Hospice Survey websites to help providers be successful.

Q: How do I submit a CAHPS® Hospice Survey size exemption request?

In order to file a size exemption request, go to the CAHPS® Hospice Survey Participation Exemption for Size webpage. There is more information on the page and a form to fill out and submit online.
Exemption requests must be submitted on an annual basis.

Q: How do I submit the data for the claims-based measures?

The data source for the claims-based measures will be Medicare claims data that is already collected and submitted to CMS. There is no additional submission requirement for administrative data (Medicare claims).

Help Desk Assistance

iqies@cms.hhs.gov or 1-877-201-4721 (iQIES Help Desk)
For questions about HIS submission reports and CASPER reports.

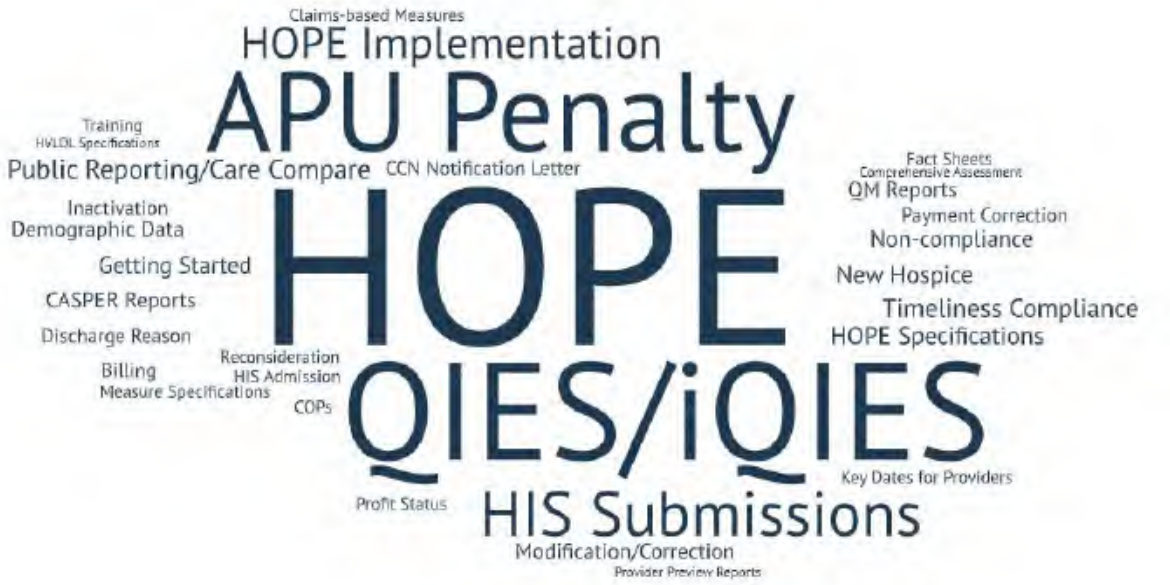
Hospice Quality Reporting Program (HQRP)



Help Desk Questions and Answers: Quarter 2, 2024

Word cloud reflects frequency of keywords for questions received during the quarter.

The HQRP Help Desk responded to **66** questions in the second quarter of 2024. This quarter covers questions received between April 1 and June 30, 2024. The questions below reflect newer and/or more common questions.

Question 1:

Low Scores on Hospice and Palliative Care Composite Process Measure - Comprehensive Assessment at Admission (CBE #3235)

Our hospice is very small with a low average daily census (ADC). Although we conduct a complete and comprehensive assessment on every new patient, (including pain, spiritual, and psychosocial assessments), our scores do not reflect the care and services we deliver. Does a low ADC affect the scores on this measure?

Answer 1:

We suggest you review your **Patient Stay-Level Quality Measure Report** in CASPER to understand the details of the *Hospice and Palliative Care Composite Process Measure – Comprehensive Assessment at Admission (CBE #3235)* QM. You can learn about these QM reports in the document - Getting Started with Hospice CASPER Quality Measure Reports: August 2022**,** which is located on the Requirements and Best Practices webpage in the Provider Toolkit or Downloads section. There are also other useful fact sheets on this webpage.

Additionally, a training on the composite measure was conducted in June 2021 - ***Understanding the Composite Quality Measure.*** This training discussed how individual scores differ from composite scoring and it can be found in the *Downloads* section of the HQRP Training and Education Library page.

Lastly, to understand how CBE #3235 is actually calculated, you can refer to the HQRP Quality Measure Specifications User's Manual which can be found in the *Downloads* section of the Current Measures page.

Question 2:

Data Specifications for HOPE Implementation

Software vendors need technical data specifications to program EHR software for HOPE implementation. When will CMS publish the data specifications for HOPE, and does the user interface in our software need to look like the forms in the draft HOPE Guidance Manual?

Answer 2:

The technical data specifications and other materials related to HOPE, including the final HOPE Guidance Manual and the item sets will be available soon **after the publication of the FY2025 Hospice Final Rule (CMS-1810-F).** Regarding your EHR user interface, CMS does not provide guidance on what that interface should look like. CMS requires that the software comply with the final HOPE data specifications.

Question 3:

HIS Timeliness Compliance Threshold Report

I am able to access my hospice's FY2025 and FY2026 HIS threshold reports in CASPER, however I am looking for the previous reports from FY2024 and FY2023. Is there any way to retrieve these older reports?

Answer 3:

The **HIS threshold report is only available for the current and prior year** within CASPER. Therefore, the FY2024 and FY2023 Timeliness Compliance Threshold Reports are not available. For these reports, there is no access to historical CY data.

Question 4:

HIS Submission Process

Does CMS have instructions or a checklist available to ensure that we are submitting all of the items required for the HQRP?

Answer 4:

Please visit the HQRP Requirements and Best Practices webpage and review the document, ***Getting Started with the HQRP*** available under "Provider Toolkit." This document provides information about the HQRP, HIS, and CAHPS® Hospice Survey submissions. For more detailed information about HIS submission, you can refer to the *HIS Submission Users Guide* available on the QIES Technical Support Office website under "References & Manuals."

There are also useful resources on the HQRP Training and Education Library. We suggest Course 1: Getting Started with the HQRP and Public Reporting which provides a general overview of the HQRP and Course 2: HQRP Data Submissions and Reports provides an introduction to the HQRP data submission requirements and reports available to providers.

If you have any further questions, please reach out to the Technical Help Desk. They provide assistance with technical issues and questions regarding data transmission and submission, error messages, and registration for User IDs. The Technical Help Desk email is: iqies@cms.hhs.gov. You can also reach them by phone at: 1-877-201-4721, Monday-Friday from 7:00 a.m. – 7:00 p.m. Central Time.

Question 5:

Hospice Provider Preview Reports and Claims-based Measures

I have a question about our May 2024 Hospice Provider Preview Report. The Claims based measures reporting period still says January 1, 2021, through December 31, 2022. Why is this the same reporting period used for the last hospice provider preview report?

Answer 5:

The claims-based measures are only updated annually, in November. The data will not change until November 2024. To understand the dates for Public Reporting, we suggest you access the Key Dates for Providers webpage.

Hospice Quality Reporting Program Quality Measure Specifications User's Manual

Draft HOPE-Based Timely Reassessment Process Measures

Process Measures Calculated from the Hospice Outcome & Patient Evaluation (HOPE): Timely Follow-up for Pain Impact (#01795-02-C-HQR) and Timely Follow-up for Non-Pain Symptom Impact (#01796-01-C-HQR)

Section 1: Measure Description

The purpose of this chapter is to describe *Timely Follow-up for Pain Impact* (#01795-02-C-HQR) and *Timely Follow-up for Non-Pain Symptom Impact* (#01796-01-C-HQR). These quality measures are calculated from data collected through the Hospice Outcomes & Patient Evaluation (HOPE) and submitted to CMS under the Hospice Quality Reporting Program (HQRP). Both measures capture the percent of hospice patient assessments that have a symptom follow-up visit within two (2) days when the symptom impact was initially assessed as moderate or severe, as follows:

- *Timely Follow-up for Pain Impact* measure captures the percent of hospice patient assessments that have a symptom follow-up visit within two (2) days after pain impact was initially assessed as moderate or severe; and
- *Timely Follow-up for Non-Pain Symptom Impact* measure captures the percent of assessments that have a symptom follow-up visit within two (2) days after non-pain symptom impact was initially assessed as moderate or severe.

Data for these measures are collected by hospice clinicians using HOPE. Symptom impact assessments are administered at fixed timepoints during a hospice election: at admission (ADM) and the two HOPE Update Visits (HUVs). The Symptom Impact item (J2051) may trigger the need for the Symptom Follow-up Visit (SFV). When the patient's pain or non-pain symptom impact is assessed as moderate or severe, a HOPE SFV is expected within two (2) calendar days. For these measures, the measurement time window is defined as the date of the symptom impact screening (J2050B) where the impact is assessed as moderate or severe to two (2) calendar days thereafter. Depending upon responses to the Symptom Impact item (J2051) at ADM and the two HUVs (each at specified timeframes), up to three SFVs may be required over the course of the hospice stay. If during an SFV, there is evidence of ongoing moderate or severe symptom impact, no additional HOPE SFV is required. Although multiple SFVs are not required for the purpose of the HQRP, it is expected that the hospice staff will continue to follow up with the patient, based on their clinical and symptom management needs.

Section 2 below describes the method in which eligible records are selected. **Section 3** describes the steps for calculating the measure. **Section 4** and **Section 5** discuss considerations for public reporting, the minimum quality denominator threshold count for a hospice to have publicly reported data, and methods for calculating state and national measure scores, respectively.

Section 2: Data Sources

The eligible records for both hospice process measures are selected as follows (note that bold italic text indicates terms defined in **Appendix 1: Definitions**):

1. Determine the two-year/eight-quarter ***reporting period.***
2. Identify ADM records (A0250. = 01) and HUV records (A0250. = 02 or 03).
3. Select ADM and HUV records to be included in the ***hospice process measure sample*** if the record has an assessment completion date (Z0350.) within the ***reporting period***. A patient can have multiple records included in the sample (up to three records per hospice admission).
4. Apply the measure specifications (see Section 3 below) to the selected ADM and HUV records. Round all measure scores using the rounding rule.

Section 3: Measure Calculation

Steps to calculate each measure and data elements used in each step are as follows. Note that in the notation, numbers in brackets index a data element located on the ADM or HUV record (initial assessments) [1] or on the SFV record [2].

Step	Calculation of *Timely Follow-up for Pain Impact*	Calculation of *Timely Follow-up for Non-Pain Symptom Impact*
Step 1: Calculate the denominator	Total number of HOPE ADM or HUV assessments where pain impact was assessed as moderate or severe. • At ADM or HUV (A0250. = 1. Admission, 2. HUV #1, or 3. HUV #2) [1], o Symptom Impact - Pain (J2051.A.) [1] = 2. Moderate or 3. Severe	Total number of HOPE ADM or HUV assessments where any non-pain symptom impact was assessed as moderate or severe. • At ADM or HUV (A0250. = 1. Admission, 2. HUV #1, or 3. HUV #2) [1], o Symptom Impact - Shortness of Breath (J2051.B.) [1] = 2. Moderate or 3. Severe, or o Symptom Impact - Anxiety (J2051.C.) [1] = 2. Moderate or 3. Severe, or o Symptom Impact - Nausea (J2051.D.) [1] = 2. Moderate or 3. Severe, or o Symptom Impact - Vomiting (J2051.E.) [1] = 2. Moderate or 3. Severe, or o Symptom Impact - Diarrhea (J2051.F.) [1] = 2. Moderate or 3. Severe, or o Symptom Impact - Constipation (J2051.G.) [1] = 2. Moderate or 3. Severe, or o Symptom Impact - Agitation (J2051.H.) [1] = 2. Moderate or 3. Severe
Step 2: Remove any denominator exclusions	Remove if: • Patient was discharged from hospice for any reason before an SFV could be completed → exclude o Symptom Follow-up in-person visit was not completed (Symptom Follow-up Visit (J2052.A.) [2] = 0, and o Discharge Date (A0270.) [2] ≤ Date of Symptom Impact Screening (J2050.B.) [1] + two days • Hospice was unable to complete the SFV → exclude o Symptom Follow-up in-person visit was not completed (Symptom Follow-up Visit (J2052.A.) [2] = 0, and	Remove if: • Patient was discharged from hospice for any reason before an SFV could be completed → exclude o Symptom Follow-up in-person visit was not completed (Symptom Follow-up Visit (J2052.A.) [2] = 0, and o Discharge Date (A0270.) [2] ≤ Date of Symptom Impact Screening (J2050.B.) [1] + two days • Hospice was unable to complete the SFV → exclude o Symptom Follow-up in-person visit was not completed (Symptom Follow-up Visit (J2052.A.) [2] = 0, and

Step	Calculation of *Timely Follow-up for Pain Impact*	Calculation of *Timely Follow-up for Non-Pain Symptom Impact*
	○ Hospice Unable to Visit (J2052.C.) [2] = 1. Patient and/or caregiver declined an in-person visit, 2. Patient unavailable (e.g., in ED, hospital, travel outside of service area), or 3. Attempts to contact patient and/or caregiver were unsuccessful.	○ Hospice Unable to Visit (J2052.C.) [2] = 1. Patient and/or caregiver declined an in-person visit, 2. Patient unavailable (e.g., in ED, hospital, travel outside of service area), or 3. Attempts to contact patient and/or caregiver were unsuccessful.
Step 3: Calculate the numerator	Number of HOPE ADM or HUV assessments for which a symptom follow-up visit date was within two days of the initial/triggering assessment date. • Date of in-person SFV (J2052.B.) [2] - Date of Symptom Impact Screening (J2050.B.) [1] ≤ Two (2) days when a Symptom Impact Screening occurred (J2050.A. = 1. yes) [1]	Number of HOPE ADM or HUV assessments for which a symptom follow-up visit date was within two days of the initial/triggering assessment date. • Date of in-person SFV (J2052.B.) [2] - Date of Symptom Impact Screening (J2050.B.) [1] ≤ Two (2) days when a Symptom Impact Screening occurred (J2050.A. = 1. yes) [1]
Step 4: Express the measure score as a proportion	Divide the hospice's numerator count by its denominator count to obtain the hospice's observed score; that is, divide the result of step 3 by the result of step 2. The score is converted to a percent value by multiplying by 100. Round the score using the rounding rule, as defined in Appendix 1.	Divide the hospice's numerator count by its denominator count to obtain the hospice's observed score; that is, divide the result of step 3 by the result of step 2. The score is converted to a percent value by multiplying by 100. Round the score using the rounding rule, as defined in Appendix 1.

Section 4: Public Reporting Threshold

Hospices must have at least 20 qualifying denominator cases (i.e., 20 HOPE ADM or HUV assessments where symptom impact was assessed as moderate or severe) during the reporting period in each respective measure for scores to be publicly reported on the Care Compare site. Hospices that do not meet this threshold will have measure scores suppressed. If there are 20 qualifying denominator cases for one measure but not the other, then the measure above the threshold will be reported but the other with below 20 qualifying denominator cases will be suppressed.

Section 5: National and Average State Calculation

To calculate the national average for each measure, take the national sum of all the hospices' individual numerators and divide by the total summation of nationwide hospices' individual denominators. Statewide averages are calculated by dividing the statewide summations of numerators by statewide summation of denominators among all hospices located in that state. Round the national and state averages using the ***rounding rule***, as defined in **Appendix 1**. Note that both state and national averages include the numerators and denominators of hospices that are publicly suppressed individually because the denominator size did not meet the minimum threshold for public reporting.

Value-Based Insurance Design Model: Hospice Benefit Component

Calendar Year (CY) 2024 Technical and Operational Guidance on the Conclusion of the Hospice Benefit Component

Table of Contents

1. Background

In 2021, the Centers for Medicare & Medicaid Services (CMS) began testing the inclusion of the Part A Hospice Benefit within the Medicare Advantage (MA) benefits package through the Hospice Benefit Component of the Value-Based Insurance Design (VBID) Model. This test has allowed CMS to assess the impact on costs, care delivery and quality of care, especially for palliative and hospice care, when participating MA plans are financially responsible for Medicare-covered hospice care along with the vast majority of other Parts A and B benefits. On March 4, 2024, CMS announced that the Hospice Benefit Component will conclude as of December 31, 2024 at 11:59 PM.[1]

This document serves as technical guidance for Medicare Advantage Organizations (MAOs) currently participating or that formerly participated in the Hospice Benefit Component and Medicare certified hospice providers ("hospice providers").

This document covers the following topics:

- Financial Responsibility for Care Provided During and Immediately After a Hospice Election
- Network Adequacy Requirements
- MAO Communication to Enrollees and Providers
- Transitional Concurrent Care
- Hospice Supplemental Benefits
- Palliative Care
- Operations and Claims
- Monitoring and Data Collection

The guidance covers CMS's requirements and expectations for the remainder of the Hospice Benefit Component's operations through Calendar Year (CY) 2024 along with requirements and expectations for operations on and after January 1, 2025. This document supplements the Amendment to Addendum to Medicare Managed Care Contract for Participation in the Medicare Advantage Value-Based Insurance Design Model CY 2024 ("Amendment to the CY 2024 Contract Addendum"). Certain sections from the Amendment to the CY 2024 Contract Addendum are referenced below, but note that these references may not be applicable to the amendments to the CY 2021, CY 2022, and/or CY 2023 contract addenda because those provisions are either labelled differently or do not exist in the other versions. Defined terms used in this guidance have the meanings given in the Addendum.

Unless explicitly identified and revised by this guidance, the various guidance about the Hospice Benefit Component remains in effect through CY 2024. This includes the CY 2024 Request for Applications for the Hospice Benefit Component of the VBID Model, VBID Hospice Benefit Component Monitoring Guidelines, VBID Model Hospice Benefit Component Phase 2 Network Adequacy Guidance, VBID Communications and Marketing Guidelines, and Final Hospice Capitation Payment Rate Actuarial Methodology. The most recent versions of these documents can be found here:
https://innovation.cms.gov/innovation-models/vbid.

MAOs, hospice providers, and others are encouraged to email the VBID Model team (VBID@cms.hhs.gov) directly with questions on this technical and operational guidance.

[1] https://www.cms.gov/priorities/innovation/innovation-models/vbid/vbid-hospice-announcement

2. Financial Responsibility for Care Provided During and Immediately After a Hospice Election

As per the CY 2024 Addendum to the Medicare Managed Care Contract for Participation in the MA VBID Model (CY 2024 Addendum), throughout CY 2024 participating MAOs must continue to provide the full scope of hospice care, as defined at Section 1861(dd) of the Act and required by implementing regulations at 42 CFR Part 418 to all hospice enrollees in VBID Plan Benefit packages (PBPs) participating in the Hospice Benefit Component; provide hospice care in accordance with each enrollee's choice to elect or revoke the hospice benefit in accordance with Section 1812(d) of the Act and 42 CFR §§ 418.24 and 418.28; and treat hospice care as a basic benefit for purposes of compliance with regulations in 42 CFR Part 422, except for regulations that have been expressly waived.

Per Article I Section D of the Amendment to the CY 2024 Contract Addendum, MAOs participating in the Hospice Benefit Component must continue to cover all hospice elections for beneficiaries in participating PBPs for care delivered through December 31, 2024. Starting with services provided on or after January 1, 2025, financial responsibility for hospice coverage for MA enrollees that were covered through the Hospice Benefit Component will revert to Original Medicare (that is, the Medicare FFS program). More details are available in the Operations and Claims section of this document. For any hospice election on or after January 1, 2025, by an MA enrollee, Medicare-covered hospice benefits will be through the Medicare FFS program, consistent with applicable law, including 42 CFR §§ 418.1 through 418.405.

CMS will continue to make the hospice capitation payment to MAOs for hospice enrollees whose Hospice Election started under the Model as per Appendix 3 of the CY 2024 Addendum. CMS shall pay the Hospice capitation amount in a lump-sum retrospectively to the MAO on a periodic basis determined at CMS's sole discretion.

Beginning January 1, 2025, the regulation at 42 CFR § 422.320 will apply as to payment to MAOs that have participated in the Hospice Benefit Component for any MA enrollee that elects or has elected hospice.

3. Network Adequacy Requirements

In CY 2024, MAOs with Mature-Year PBPs will no longer be subject to the Model Phase 2 Network Adequacy requirements minimum number of providers for mature year PBPs.[2] All Model participants will be held to the Model Phase 1 network adequacy requirements as outlined in the Section 2.6 of the CY 2024 VBID Hospice Request for Applications (RFA). To satisfy Model Phase 1 Network Adequacy Requirements, participating MAOs must offer access to in-network hospice providers by contracting with at least one hospice provider for the service area, regardless of whether the MAO has a Mature-Year PBP, and by covering hospice care furnished by out-of-network hospice providers consistent with Article III of the Amendment to the CY 2024 Contract Addendum.[3]

All participating MAOs must continue through CY 2024 to provide access to a network of hospice providers that are certified by Medicare to provide hospice care. Participating MAOs must cover all hospice care furnished by either in-network hospice providers or out-of-network (non-contracted) hospice providers to a hospice enrollee who is enrolled in a VBID PBP that is participating in the Hospice Benefit Component. MAOs must notify CMS of any hospice provider terminations that meet any of the following:

(i) go beyond individual or limited provider terminations that occur during the routine course of plan operations; or

[2] https://www.cms.gov/files/document/vbidhospicephase2networkadequacyguidance.pdf
[3] https://www.cms.gov/priorities/innovation/media/document/vbid-cy-2024-rfa

(ii) affect or would affect the MAO's ability to meet the minimum requirement of one in-network hospice provider for a PBP.

Notification to CMS must happen at least 90 calendar days prior to the effective date of the termination in the same manner as if the change were a significant change to the provider network under Chapter 4, Section 110.1.2 of the Medicare Managed Care Manual[4] regardless of whether such changes are considered "significant" with respect to the network-at-large. This notice must be provided via email to VBID@cms.hhs.gov. More communication details can be found in the Communication Requirements section below.

4. MAO Communications to Enrollees and Providers

All MAOs participating in the Hospice Benefit Component in CY 2024, as well as MAOs that participated in previous years and have hospice enrollees with ongoing hospice elections that have continued into 2024, are required to notify all hospice providers that have billed them about the conclusion of the Hospice Benefit Component. For beneficiaries who are on hospice while covered by previously or currently participating PBPs, the MAO must notify beneficiaries of changes to hospice coverage through personalized outreach. Additionally, MAOs will be required to notify beneficiaries of changes to hospice coverage through the annual notice of change (ANOC) for CY 2025 as per the CY 2025 Communication and Marketing Guidelines. As part of the ANOC, as described in the CY 2025 Communication and Marketing Guidelines, MAOs must communicate differences in cost-sharing between the plan's cost-sharing structure for hospice care, supplemental benefits, transitional concurrent care, and/or palliative care in CY 2024 compared to CY 2025 in Original Medicare. Article IV of the Amendment to the CY 2024 Contract Addendum contains these requirements. Please reference Appendix 3 of the CY 2025 VBID Model Communications and Marketing Guidelines for more information.[5]

MAOs must comply with 42 CFR 422.111(e) and make a good faith effort to provide written notice of a termination of a contracted hospice provider at least 30 calendar days before the termination effective date to all enrollees who are patients seen on a regular basis by the provider whose contract is terminating, irrespective of whether the termination is for or without cause. The Model-participating MAO must provide documentation to the enrollee, their representative, and providers as needed to ensure a smooth transition without interruptions to care or billing.

Under 42 CFR 422.112(b), MAOs offering coordinated care plans, including Model-participating MAOs, must ensure continuity of care and integration of services through arrangements with contracted providers, including policies that specify under what circumstances services are coordinated and the methods for coordination that include specific items listed in the regulation. Model-participating MAOs must ensure that such policies include notifying the enrollee's hospice provider and other providers that the MAO's coverage of the hospice election has ended, including for any transitional concurrent care or hospice supplemental benefits. CMS encourages hospice and other healthcare providers furnishing services to an enrollee who has elected hospice to participate actively in the continuity of care process to ensure the enrollee faces limited disruptions and no barriers to care. The enrollee's access to the Medicare-participating hospice provider of their choice must be maintained.

In addition to communications with enrollees and hospice providers, transitioning MAOs are required to inform other members of their provider network about the MAO's transition out of the Hospice Benefit

[4] https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/mc86c04.pdf
[5] https://www.cms.gov/files/document/vbid-cy25-marketing-guidelines.pdf

Component VBID Model participation if notification could enhance or increase beneficiary engagement and care transitions such as around the availability of continuity of care for a period of time.

5. Transitional Concurrent Care

Transitional concurrent care must continue to be provided to qualifying beneficiaries until the termination of the Hospice Benefit Component on December 31, 2024. Due to the termination of the Hospice Benefit Component, transitional concurrent care will not be available after December 31, 2024. As set forth in section 1812(d)(2) of the Act and reflected at 42 CFR 418.24(b)(2), beneficiaries who elect hospice care waive all rights to have payment made for any services "related to the treatment of the individual's condition with respect to which a diagnosis of terminal illness has been made" except for services provided by the beneficiary's designated hospice, or another hospice under arrangements made by his or her designated hospice or the individual's attending physician (if the attending physician is not an employee of the designated hospice).

As per the CY 2024 VBID Hospice RFA, and as reflected in participating MAOs' approved proposals for participation in the Hospice Benefit Component for CY 2024, participating MAOs must continue to offer transitional concurrent care throughout CY 2024. Participating MAOs must work with in-network hospice providers and in-network non-hospice providers to make available transitional concurrent care services necessary to address continuing care needs, as clinically appropriate, for the treatment of hospice enrollees' terminal illness and related conditions. Section 2.3 of the CY2024 VBID Hospice RFA and Appendix 3, section 4(a) of the CY2024 Addendum include additional details on the transitional concurrent care strategy and network limitation. Model-participating MAOs may only provide coverage for transitional concurrent care services when an enrollee chooses an in-network hospice provider, as such services are intended to be provided to the enrollee on a transitional basis in a setting where the enrollee's care can be closely coordinated.

6. Hospice Supplemental Benefits

Hospice Supplemental Benefits must continue to be provided to qualifying beneficiaries through the termination of the Hospice Benefit Component on December 31, 2024. As per section 2.4 of the CY 2024 VBID Hospice Benefit Component RFA, participating MAOs may offer a broad set of mandatory supplemental benefits for enrollees who elect hospice (hereafter "hospice supplemental benefits") in addition to any mandatory supplemental benefits offered to all or other targeted enrollees in the plan. Hospice supplemental benefits will only be available through the termination of the Hospice Benefit Component on December 31, 2024.

Under the Hospice Benefit Component, CMS may, consistent with the waiver of uniformity in the Addendum, Appendix 1, permit participating MAOs to limit these hospice supplemental benefits to enrollees who have elected hospice and use in-network hospice providers. If approved in an MAOs application that hospice supplemental benefits are to be available to enrollees who have elected hospice and use in-network hospice providers, then these supplemental benefits must continue to be limited to in-network providers as per the approved CY 2024 application.

7. Palliative Care

As required by Appendix 3, section B(3) of the CY 2024 Addendum, Model-participating MAOs must develop and implement a strategy regarding access to and delivery of palliative care services for enrollees with serious illness who are either not eligible for or who have chosen not to (or not yet chosen to) receive hospice services. Participating MAOs must continue to provide palliative care services as described in their approved proposals for participation in the Hospice Benefit Component throughout CY 2024.

In April 2018, CMS provided guidance for all MAOs that home-based palliative care services not covered under Original Medicare could instead be covered as a supplemental benefit.[6] Specifically, this guidance continues to apply to stand-alone services provided to enrollees of Model-participating MAOs with serious illness who are not eligible for hospice services (e.g., stand-alone palliative nursing and social work services in the home not covered by Medicare Part A or Part B). Palliative care offerings through the Model will only be available through the termination date of December 31, 2024. If MAOs are interested in continuing to offer palliative care in future years, CMS can offer technical guidance upon request.

8. Operations and Claims

For hospice care that began under a participating PBP, for services provided prior to January 1, 2025, hospices should follow current Model billing procedures and requirements. Consistent with the Model to date, Notices of Election (NOE), Notices of Termination/Revocation (NOTR), and all hospice claims must be submitted (1) to the Medicare contractor for informational purposes, monitoring and evaluation (irrespective of network status), and (2) to Model-participating plans so that they can to make timely payment to hospice providers (in the case of in-network hospice providers, if in alignment with contractual agreements). Aligned with Original Medicare claims processing, Model-participating MAOs may include similar timely filing requirements for hospice providers stated in 42 CFR 418.24 and described in further guidance within the Medicare Claims Processing Manual, Ch. 11.

For hospice elections that extend beyond the termination date (December 31, 2024), of the Hospice Benefit Component, hospice providers should not discharge any patient solely because of their coverage in a plan participating in the Hospice Benefit Component prior to CY 2025. For those hospice elections that continue, no new NOEs will be required, and timely filing requirements for hospice providers stated in 42 CFR 418.24 and described in further guidance within the Medicare Claims Processing Manual, Ch. 11 will continue to apply. For hospice elections that began under the Model and continue into CY 2025, for services that occur in CY 2025 and beyond hospices must follow the requirements under Original Medicare as described in the Medicare Claims Processing Manual, Ch. 11.

Under Original Medicare, hospice providers are subject to two payment caps—one for inpatient care, and another for aggregate payments. The number of days of inpatient care a hospice provider furnishes is limited to not more than 20% of total patient care days. The hospice aggregate cap amount limits payments to a hospice provider to the cap amount (updated annually by CMS pursuant to 42 CFR 418.309) multiplied by the number of Medicare patients served. Of importance, Model-participating MAOs' enrollees' hospice experience will not be included in either payment cap calculation. In CY 2025, Original Medicare retains responsibility for the hospice coverage and the payment caps will apply.

9. Monitoring and Data Collection

Participating MAOs continue to be required to submit all monitoring data and information as described in the CY 2024 VBID Hospice benefit Component Monitoring Guidelines.[7] As per the CY 2024 Addendum, participating MAOs shall ensure the timely transfer of any data or files to CMS necessary for evaluation, transition or close-out of the MAO's model-related activities, and shall comply with all other CMS-specified close-out procedures and related Model Technical and Operational Guidance. This data reporting may continue into CY 2025 and beyond until all participation data has been collected.

[6] CMS HPMS Memo. Reinterpretation of "Primarily Health Related" for Supplemental Benefits. April 27, 2018. https://www.cms.gov/Research-Statistics-Data-and-Systems/Computer-Data-and-Systems/HPMS/HPMS-Memos-Archive-Weekly-Items/SysHPMS-Memo-2018-Week4-Apr-23-27

[7] https://www.cms.gov/files/document/vbid-cy24-hospice-monitoring-guidelines.pdf

CMS will continue to make Hospice Utilization Reports for CY 2024 hospice enrollee detailed claim data available to participating MAOs as per Appendix 3 section G(2) of the CY 2024 Addendum.

HOUSE AMENDED

PRIOR PRINTER'S NO. 1396 PRINTER'S NO. 1940

THE GENERAL ASSEMBLY OF PENNSYLVANIA

SENATE BILL

No. 1080 Session of 2024

INTRODUCED BY CULVER, PENNYCUICK, CAPPELLETTI, J. WARD, SCHWANK AND FARRY, FEBRUARY 23, 2024

AS AMENDED ON SECOND CONSIDERATION, HOUSE OF REPRESENTATIVES, OCTOBER 7, 2024

AN ACT

Amending the act of June 29, 1953 (P.L.304, No.66), entitled "An act providing for the administration of a statewide system of vital statistics; prescribing the functions of the State Department of Health, the State Advisory Health Board and local registrars; imposing duties upon coroners, prothonotaries, clerks of orphans' court, physicians, midwives and other persons; requiring reports and certificates for the registration of vital statistics; regulating the disposition of dead bodies; limiting the disclosure of records; prescribing the sufficiency of vital statistics records as evidence; prescribing fees and penalties; and revising and consolidating the laws relating thereto," ~~in death and fetal death registration, providing for pronouncement of death by a practical nurse.~~ IN GENERAL PROVISIONS, FURTHER PROVIDING FOR DEFINITIONS; IN DEATH AND FETAL DEATH REGISTRATION, PROVIDING FOR PRONOUNCEMENT OF DEATH BY A PRACTICAL NURSE; AND, IN RECORDS, FURTHER PROVIDING FOR FEES FOR COPIES. <-- <--

The General Assembly of the Commonwealth of Pennsylvania hereby enacts as follows:

~~Section 1. The act of June 29, 1953 (P.L.304, No.66), known as the Vital Statistics Law of 1953, is amended by adding a section to read:~~ <--

SECTION 1. SECTION 105 INTRODUCTORY PARAGRAPH OF THE ACT OF JUNE 29, 1953 (P.L.304, NO.66), KNOWN AS THE VITAL STATISTICS <--

LAW OF 1953, IS AMENDED TO READ:

SECTION 105. GENERAL PROVISIONS: DEFINITIONS.--AS USED IN THIS ACT, THE FOLLOWING WORDS AND PHRASES SHALL HAVE THE MEANINGS GIVEN TO THEM IN THIS SECTION UNLESS THE CONTEXT CLEARLY INDICATES OTHERWISE--

* * *

SECTION 2. THE ACT IS AMENDED BY ADDING A SECTION TO READ:

Section 508. Death and Fetal Death Registration: Pronouncement of Death by a Practical Nurse.--(a) A practical nurse shall have the authority to pronounce death if all of the following are met:

(1) The patient is in the care of a licensed hospice.

(2) The patient has a valid Do Not Resuscitate Order issued in accordance with the laws of this Commonwealth.

(3) The practical nurse is conducting a focused assessment to identify the cessation of circulatory and respiratory functions as provided under the act of December 17, 1982 (P.L.1401, No.323), known as the "Uniform Determination of Death Act."

(4) The practical nurse has received training in accordance with subsection (e).

(b) A practical nurse shall have the authority to release the body of the deceased to a funeral director after notice has been given to the attending physician or certified registered nurse practitioner, if the deceased has an attending physician or certified registered nurse practitioner, and to a family member, as soon as practicable.

(c) If circumstances surrounding the nature of death are not anticipated and require a coroner's investigation, the practical nurse shall notify the county coroner, and the

authority to release the body of the deceased to the funeral director shall be that of the coroner.

(d) Except as provided for under sections 502 and 503, this section provides for the pronouncement of death by a practical nurse in accordance with the "Uniform Determination of Death Act," but in no way authorizes a nurse to determine the cause of death. The responsibility for determining the cause of death remains with the physician, certified registered nurse practitioner or the coroner as provided under this act.

(e) The following shall apply to training:

(1) In accordance with 42 CFR 418.100 (relating to condition of participation: organization and administration of services) in effect on the effective date of this clause, a hospice shall conduct an initial training upon hiring, an annual training and an annual assessment of the skills and competence of a practical nurse who will assess the vital signs of a patient to determine cessation of circulatory and respiratory function.

(2) Each practical nurse must be trained for a minimum of three hours in vital signs training, postmortem care, grief training and circumstances requiring a coroner's investigation.

(3) A hospice shall have written policies and procedures describing its method of assessment of competency and maintain a written description of the in-service training provided during the previous twelve months.

(f) The following shall apply:

(1) A practical nurse and an employing agency of a practical nurse acting in good faith and in compliance with the provisions of this act, THE REGULATIONS OF the State Board of Nursing and THE REGULATIONS OF the Department of Health shall be immune from liability claims by reason of pronouncing death under this <-- <--

section.

(2) Nothing under this section shall impose an obligation on a practical nurse to carry out the function authorized by this section.

(3) Nothing under this section is intended to relieve a practical nurse of civil or criminal liability that might otherwise be incurred for failing to follow the rules and regulations of the State Board of Nursing.

(4) Nothing under this section shall preempt the requirements of 20 Pa.C.S. Ch. 86 (relating to anatomical gifts).

(g) A practical nurse shall have the authority to pronounce death in accordance with ~~procedural~~ regulations as may be promulgated by the State Board of Nursing within eighteen months of the effective date of this subsection. <--

(h) As used in this section, the term "practical nurse" shall mean a practical nurse who is employed by a licensed hospice, involved in the direct care of a patient of the licensed hospice and is:

(1) licensed under the act of March 2, 1956 (1955 P.L.1211, No.376), known as the "Practical Nurse Law"; or

(2) authorized to practice practical nursing in this Commonwealth.

SECTION 3. SECTION 807(C) OF THE ACT IS AMENDED AND THE SECTION IS AMENDED BY ADDING SUBSECTIONS TO READ: <--

SECTION 807. RECORDS: FEES FOR COPIES.--* * *

[(C) NO FEE SHALL BE CHARGED FOR CERTIFIED COPIES OF RECORDS OR PARTS THEREOF FURNISHED MEMBERS OF THE ARMED FORCES OF THE UNITED STATES AND THEIR DEPENDENTS DURING THEIR TERM OF ACTIVE SERVICE AND AFTER THEIR DEATH IN SERVICE OR HONORABLE DISCHARGE

THEREFROM.]

(D) SUBJECT TO SUBSECTION (E), NO FEE SHALL BE CHARGED FOR CERTIFIED COPIES OF RECORDS OR PARTS THEREOF FOR ANY OF THE FOLLOWING:

(1) AN INDIVIDUAL WHO CURRENTLY SERVES IN THE UNITED STATES ARMED FORCES, INCLUDING A RESERVE COMPONENT OR THE NATIONAL GUARD.

(2) A MEMBER OF THE UNITED STATES ARMED FORCES, INCLUDING A RESERVE COMPONENT OR THE NATIONAL GUARD, WHO WAS KILLED OR DIES AS A RESULT OF INJURIES RECEIVED WHILE ON OFFICIAL DUTY STATUS AUTHORIZED UNDER FEDERAL OR STATE LAW.

(3) A VETERAN.

(4) A SPOUSE OF AN INDIVIDUAL SPECIFIED UNDER PARAGRAPH (1), (2) OR (3).

(5) A DEPENDENT OF AN INDIVIDUAL SPECIFIED UNDER PARAGRAPH (1), (2) OR (3).

(E) THE FEE WAIVER UNDER SUBSECTION (D) SHALL ONLY APPLY TO THE FOLLOWING APPLICANTS FOR CERTIFIED COPIES OF RECORDS OR PARTS THEREOF:

(1) AN APPLICANT WHO IS AN INDIVIDUAL SPECIFIED UNDER SUBSECTION (D)(1) OR (3).

(2) AN APPLICANT WHO IS A SPOUSE OF AN INDIVIDUAL SPECIFIED UNDER SUBSECTION (D)(1), (2) OR (3).

(3) AN APPLICANT WHO IS A REPRESENTATIVE OF A DEPENDENT CHILD OF A DECEASED VETERAN OR AN INDIVIDUAL SPECIFIED UNDER SUBSECTION (D)(2). THIS PARAGRAPH SHALL ONLY APPLY TO A REQUEST MADE FOR A CERTIFIED COPY OF A CERTIFICATE OF DEATH.

(4) AN APPLICANT WHO IS A REPRESENTATIVE OF THE ESTATE OF AN INDIVIDUAL SPECIFIED UNDER SUBSECTION (D)(1), (2), (3) OR (4). THIS PARAGRAPH SHALL ONLY APPLY TO A REQUEST MADE FOR A

CERTIFIED COPY OF A CERTIFICATE OF DEATH.

(5) AN APPLICANT THAT IS A FUNERAL ESTABLISHMENT RESPONSIBLE FOR FILING THE DEATH RECORD OF AN INDIVIDUAL SPECIFIED UNDER SUBSECTION (D). THIS PARAGRAPH SHALL ONLY APPLY TO A REQUEST MADE FOR A CERTIFIED COPY OF A CERTIFICATE OF DEATH.

(F) THE FEE WAIVER UNDER SUBSECTION (D) SHALL APPLY REGARDLESS OF WHETHER AN INDIVIDUAL SPECIFIED UNDER SUBSECTION (D)(2) OR (3) PREDECEASED OR SURVIVED ANY OTHER INDIVIDUAL WHO QUALIFIES FOR THE FEE WAIVER.

(G) THE FEE WAIVER UNDER SUBSECTION (D) SHALL APPLY TO THE FIRST TEN (10) CERTIFIED COPIES OF THE SAME RECORD OR PARTS THEREOF ISSUED BY, OR ON BEHALF OF, THE DEPARTMENT DURING A CALENDAR YEAR FOR AN APPLICANT UNDER SUBSECTION (E).

(H) AS USED IN THIS SECTION, THE TERM "VETERAN" MEANS AN INDIVIDUAL WHO SERVED IN THE UNITED STATES ARMED FORCES, INCLUDING A RESERVE COMPONENT OR THE NATIONAL GUARD, AND WHO WAS DISCHARGED OR RELEASED FROM SERVICE UNDER CONDITIONS OTHER THAN DISHONORABLE.

Section ~~2~~ 4. This act shall take effect in 60 days. **<--**

ALLOW HOSPICE LPNS TO PERFORM DEATH PRONOUNCEMENTS

BACKGROUND

Licensed practical nurses (LPNs) provide critical, hands-on-care for hospice patients across the Commonwealth. However, they are unable to make death pronouncements for their hospice patients.

The Vital Statistics Law of 1953 currently limits the ability to pronounce death to registered nurses (RNs), medical doctors, physician assistants, and coroners.

CALL TO ACTION

Support Senate Bill 1080 sponsored by Sen. Lynda Culver allowing hospice LPNs to make death pronouncements for their patients.

This will help to alleviate workforce strains and allow agencies to allocate care and resources to best meet the needs of their patients and families.

OUR POSITION

- LPNs are not prohibited from pronouncing death in the applicable scope of practice law, deeming them competent to perform this work.
- Hospices across the state face workforce shortages and must allocate finite resources to best serve their patients.
- LPNs are more than qualified to perform death pronouncements, allowing hospices to allocate resources as deemed most appropriate for patient care.
- Virginia enacted legislation in 2022 to permit hospice nurses to pronounce death for hospice patients.

Pennsylvania Homecare Association

The Honorable Michele Brooks
Chairwoman
Health & Human Services Committee
Pennsylvania State Senate
Room 168 Main Capitol
Harrisburg, PA 17120-3050

The Honorable Art Haywood
Chairman
Health & Human Services Committee
Pennsylvania State Senate
Room 10 East Wing
Harrisburg, PA 17120-3004

Dear Chairpersons Brooks and Haywood,

We are writing to express the Pennsylvania Homecare Association's strong support for Senate Bill (SB) 1080, sponsored by Sen. Lynda Schlegal Culver, which addresses an important issue for hospice care across the Commonwealth. SB 1080 is currently pending consideration by the Senate Health and Human Services Committee. The Pennsylvania Homecare Association, representing over 700 home health, hospice, and homecare members, advocates for policies that enhance the quality of care for patients and support the dedicated professionals who provide this care.

Licensed Practical Nurses (LPNs) provide intimate, hands-on care for hospice patients throughout Pennsylvania. Their role is critical, offering compassionate and essential services to patients and families during the hospice experience. However, under the current Vital Statistics Law of 1953, the ability to pronounce a patient's death is restricted to Registered Nurses (RNs), medical doctors, physician assistants, and coroners. This limitation prevents LPNs from performing a function for which they are more than qualified, causing unnecessary delays and resource allocation challenges for hospice providers.

LPNs are not prohibited from pronouncing death under the applicable scope of practice law and are competent to serve this function. Virginia enacted legislation in 2022 to permit hospice LPNs to pronounce death for hospice patients, setting a precedent for similar action in Pennsylvania.

Hospices across the state are facing workforce shortages and must allocate finite resources efficiently to serve their patients best. We urge you to support Senate Bill 1080. This legislative change will help alleviate workforce strains and allow hospice agencies to allocate care and resources more effectively, ultimately benefiting patients and their families during a most critical time.

Thank you for your attention to this matter and your commitment to improving hospice care in Pennsylvania. We appreciate your support for this important legislation.

Sincerely,

Mia Haney

Ensuring Access to Medicaid Services (CMS 2442-P) Notice of Proposed Rulemaking

Medicaid & CHIP

Share

Summary of Key Home and Community-Based Services (HCBS) Provisions

Ensuring beneficiaries can access covered services is a critical function of the Medicaid program and a top priority of the Centers for Medicare & Medicaid Services (CMS). The proposed rule, *Ensuring Access to Medicaid Services,* outlined in this fact sheet, includes both proposed changes to current requirements and newly proposed requirements that would advance CMS's efforts to improve access to care, quality, and health outcomes, and better promote health equity for Medicaid beneficiaries across fee-for-service (FFS) and managed care delivery systems, including for home and community-based services (HCBS) provided through those delivery systems. These proposed requirements are intended to increase transparency and accountability, standardize data and monitoring, and create opportunities for states to promote active beneficiary engagement in their Medicaid programs. Medicaid and CHIP are the nation's largest health coverage programs. If adopted as proposed, these rules would build on Medicaid's already strong foundation as an essential program for millions of families and individuals, especially children, pregnant people, older adults, and people with disabilities.

To advance the President's long-term care priorities, President Biden's Executive Order on Increasing Access to High-Quality Care and Supporting Caregivers directs the Department of Health and Human Services (HHS) to consider issuing several regulations and guidance documents to improve the quality of home care jobs, including by leveraging Medicaid funding to ensure there are enough home care workers to provide care to seniors and people with disabilities enrolled in Medicaid. Through this proposed rule, CMS is also fulfilling the directive for HHS to consider rulemaking to improve access to HCBS under Medicaid.

Public comments are requested on the Notice of Proposed Rulemaking (NPRM), including in response to specific questions articulated throughout the publication.

A substantive component of this proposed rule focuses on improving access to, and the quality of HCBS. Over the past several decades, HCBS have become a critical component of the Medicaid program and are part of a larger framework of progress toward community integration of older adults and people of all ages with disabilities that spans efforts across the Federal government. The proposed changes in this rule are intended to strengthen necessary safeguards to ensure health and welfare, promote health equity for people receiving Medicaid-covered HCBS, and achieve a more consistent and coordinated approach to the administration of policies and procedures across Medicaid HCBS programs. Specifically, the proposed rule seeks to:

- Establish a new strategy for oversight, monitoring, quality assurance, and quality improvement for HCBS programs;
- Strengthen person-centered service planning and incident management systems in HCBS;
- Require states to establish grievance systems in FFS HCBS programs;
- Require that at least 80% of Medicaid payments for personal care, homemaker, and home health aide services be spent on compensation for the direct care workforce (as opposed to administrative overhead or profit);
- Require states to publish the average hourly rate paid to direct care workers delivering personal care, home health aide, and homemaker services;
- Require states to establish an advisory group for interested parties to advise and consult on provider payment rates and direct compensation for direct care workers;
- Require states to report on waiting lists in section 1915(c) waiver programs; service delivery timeliness for personal care, homemaker and home health aide services; and a standardized set of HCBS quality measures; and

- Promote public transparency related to the administration of Medicaid-covered HCBS through public reporting of quality, performance, and compliance measures.

Key HCBS Provisions of the "Access" Rule

If finalized, the HCBS requirements in this proposed rule, , are intended to supersede and fully replace the reporting and performance expectations described in March 2014 guidance for section 1915(c) waiver programs. To ensure consistency and alignment across HCBS authorities, CMS proposes to apply the new HCBS requirements to section 1915(c) waiver programs and to section 1915(i), (j), and (k) state plan services, except where it is noted that a proposed requirement would only apply to certain services. In addition, except where noted, the proposed requirements would apply to services delivered through both FFS and managed care delivery services. Further, we clarify in the rule that, consistent with the applicability of other HCBS regulatory requirements to section 1115 demonstration projects, the proposed requirements for section 1915(c) waiver programs and section 1915(i), (j), and (k) state plan services would apply to these same services included in demonstration projects, unless we explicitly waive or make not applicable one or more of the requirements as part of the approval of the demonstration project.

Person-Centered Planning

To ensure a more consistent application of person-centered service plan requirements across states and to protect the health and welfare of people receiving HCBS, this rule proposes to codify a minimum performance level for states to demonstrate that a reassessment of functional need, including changes in circumstances, is conducted annually for at least 90 percent of individuals continuously enrolled in the state's HCBS programs for 365 days or longer. In addition, states would be required to demonstrate that they reviewed the person-centered service plan and revised the plan as appropriate based on the results of the required reassessment of functional need every 12 months, for at least 90 percent of individuals continuously enrolled in the state's HCBS programs for 365 days or longer.

The rule proposes that States report annually on the percent of beneficiaries continuously enrolled in the State's HCBS programs for 365 days or longer for whom a reassessment of functional need was completed within the past 12 months. States would also be required to report on the percent of beneficiaries continuously enrolled in the state's HCBS programs for 365 days or longer who had a service plan updated as a result of a re-assessment of functional need within the past 12 months. For both metrics, CMS proposes allowing states to report on a statistically valid random sample of beneficiaries, rather than for all individuals continuously enrolled in the State's HCBS programs for 365 days or longer. We proposed that these new performance levels and reporting requirements, if finalized, would be effective three years after the effective date of the final rule.

HCBS Grievance System

This rule proposes to require that states establish grievance procedures for Medicaid beneficiaries receiving HCBS through an FFS delivery system. This grievance process would give beneficiaries an opportunity to file an "expression of dissatisfaction," or complaint, related to the State's or a provider's compliance with person-centered planning and service plan requirements, and the HCBS settings requirements. The rule includes proposed recordkeeping requirements related to grievances, including that the record of each grievance contains a minimum set of elements, that states maintain records of grievances and review the information as part of their ongoing monitoring procedures, and that they are maintained in a manner that would be available upon CMS request. While CMS intends to apply these requirements across HCBS programs to avoid duplication with the existing grievance requirements for managed care at part 438, subpart F, we do not propose applying these requirements to managed care delivery systems. We proposed that these new grievance system requirements would be effective two years after the effective date of the final rule.

Incident Management Systems

In the rule, CMS proposes establishing a minimum definition of "critical incident" and minimum State performance and reporting requirements for investigation and action related to critical incidents. CMS also proposes to require that states operate and maintain an incident management system that identifies, reports, triages, investigates, resolves, tracks, and trends critical incidents.

Further, through this rule, we are proposing that states' incident management systems include an electronic information system that collects, tracks, and trends data and that states identify critical incidents through required provider reporting and other data sources (e.g., claims, Medicaid Fraud Control Units, Adult Protective Services, Child Protective Services, law enforcement). If an entity other than the State investigates critical incidents, we are proposing that states must have an information-sharing agreement with the investigating entity to share the status and resolution of investigations and that states must investigate separately if the investigating entity fails to report on a resolution within state-specified timeframes. In addition, CMS proposes

to require that States report every 24 months on the results of an incident management system assessment to demonstrate that they meet the new proposed incident management system requirements. We proposed that these requirements would be effective three years after the effective date of the final rule.

HCBS Payment Adequacy and Transparency

Access to most HCBS generally requires hands-on and in-person services to be delivered by direct care workers. However, direct care worker shortages are impacting beneficiaries' access to services. In an effort to address direct care workforce shortages, CMS proposes to require that at least 80 percent of Medicaid payments in a State for homemaker, home health aide, and personal care services be spent on compensation for direct care workers. We are also proposing to require that states report annually, in the aggregate for each service, on the percent of payments for homemaker, home health aide, and personal care services that are spent on compensation for direct care workers, and separately report on payments for such services when they are self-directed. We proposed that these requirements would be effective four years after the effective date of the final rule.

To ensure that HCBS stakeholders have increased awareness of how states establish Medicaid payment rates for personal care, homemaker, and home health aide services, CMS is proposing to require states to publish, every other year, the average hourly rate paid to direct care workers delivering these services. This information would separately compare rates for individual direct care providers and direct care providers employed by an agency. In addition, this proposed rule would require the establishment of an interested parties advisory group, to advise and consult with the State on payment rates for direct care workers. This group would include, at a minimum, direct care workers, beneficiaries and their authorized representatives, and other interested parties.

HCBS Quality Measure Set

On July 21, 2022, CMS issued State Medicaid Director Letter #22-003 to release the first official version of the HCBS Quality Measure Set. The HCBS Quality Measure Set is a set of nationally standardized quality measures for Medicaid-covered HCBS. This voluntary measure set is intended to promote more common and consistent use within and across states of nationally standardized quality measures in HCBS programs, create opportunities for CMS and states to have comparative quality data on HCBS programs, drive improvement in quality of care and outcomes for people receiving HCBS, and support states' efforts to promote equity in their HCBS programs.

This rule proposes to require states to report every other year on the HCBS Quality Measure Set for their HCBS programs. We are also proposing to update the measure set at least every other year through a process in consultation with states and other interested parties. Through this process to update the measure set, CMS is proposing to include mandatory measures, measures that the Secretary of HHS will report on states' behalf, measures that states can elect to have the Secretary of HHS report on their behalf, and measures that the Secretary will provide States with additional time to report.

As part of the reporting requirements proposed in the rule, states would be required to establish performance targets, subject to CMS review and approval, for each of the mandatory measures in the HCBS Quality Measure Set, and to describe the quality improvement strategies that they will pursue to achieve the performance targets for those measures. States would also be required to stratify data for certain measures by race, ethnicity, Tribal status, sex, age, rural/urban status, disability, language, or other factors in order to enable us to measure health disparities and advance health equity. We proposed that these requirements would be effective three years after the effective date of the final rule. However, considering the level of complexity required for such state reporting, CMS proposed that reporting for certain mandatory measures and reporting for certain populations of beneficiaries proposed in the rule may be phased-in over time. Further, the requirements for states to report stratified data would be phased in over a seven-year period after the effective date of the final rule.

Access Reporting

To improve public transparency, CMS proposes to require states that have a limit on the size of their waiver program to describe annually how they maintain the list of individuals who are waiting to enroll in the waiver program, including whether the State screens individuals on the waiting list for eligibility for the waiver program, whether the State periodically re-screens individuals on the waiting list for eligibility, and the frequency of re-screening if applicable. States would also be required to report the number of people on the waiting list and the average amount of time that individuals newly enrolled in the waiver program in the past 12 months were on the waiting list.

To improve oversight efforts to ensure access to care and services, CMS proposes to require states, for section 1915(c) waiver programs and section 1915(i), (j), and (k) state plan services, to report annually on the average amount of time from when homemaker, home health aide, or personal care services are initially approved to when those services began for individuals newly approved to begin receiving services within the past 12 months. We also propose to require states to report annually on the

percent of authorized hours for homemaker, home health aide, and personal care services that are provided within the past 12 months. These reporting requirements would be effective three years after the effective date of the final rule.

Standardization of HCBS Reporting Requirements and Transparency

To promote public transparency related to the administration of Medicaid-covered HCBS, this rule proposes to add requirements for states to compile and post required reporting data referenced above to a dedicated public HCBS webpage that meets certain availability and accessibility requirements. We also propose that CMS report on its website the information reported by states. We proposed that these provisions would be effective three years after the effective date of the final rule, with the exception of the payment adequacy provision which would be effective four years after the effective date of the final rule.

There will be a 60-day comment period for the notice of proposed rulemaking, and comments must be submitted to the Federal Register no later than July 3, 2023. For more information on how to submit comments or to review the entire rule, visit the Federal Register.

[CMS–2442–F]

RIN 0938–AU68

Medicaid Program; Ensuring Access to Medicaid Services

AGENCY: Centers for Medicare & Medicaid Services (CMS), Department of Health and Human Services (HHS).

ACTION: Final rule.

SUMMARY: This final rule takes a comprehensive approach to improving access to care, quality and health outcomes, and better addressing health equity issues in the Medicaid program across fee-for-service (FFS), managed care delivery systems, and in home and community-based services (HCBS) programs. These improvements increase transparency and accountability, standardize data and monitoring, and create opportunities for States to promote active beneficiary engagement in their Medicaid programs, with the goal of improving access to care.

DATES: These regulations are effective on July 9, 2024.

FOR FURTHER INFORMATION CONTACT:

Karen LLanos, (410) 786–9071, for Medicaid Advisory Committee.

Jennifer Bowdoin, (410) 786–8551, for Home and Community-Based Services.

Jeremy Silanskis, (410) 786–1592, for Fee-for-Service Payment.

SUPPLEMENTARY INFORMATION:

I. Background

A. Overview

Title XIX of the Social Security Act (the Act) established the Medicaid program as a joint Federal and State program to provide medical assistance to eligible individuals, including many with low incomes. Under the Medicaid program, each State that chooses to participate in the program and receive Federal financial participation (FFP) for program expenditures must establish eligibility standards, benefits packages, and payment rates, and undertake program administration in accordance with Federal statutory and regulatory requirements. The provisions of each State's Medicaid program are described in the Medicaid ''State plan'' and, as applicable, related authorities, such as demonstration projects and waivers of State plan requirements. Among other responsibilities, CMS approves State plans, State plan amendments (SPAs), demonstration projects authorized under section 1115 of the Act, and waivers authorized under section 1915 of the Act; and reviews expenditures for compliance with Federal Medicaid law, including the requirements of section 1902(a)(30)(A) of the Act relating to efficiency, economy, quality of care, and access to ensure that all applicable Federal requirements are met.

The Medicaid program provides essential health coverage to tens of millions of people, covering a broad array of health benefits and services critical to underserved populations,[1] including low-income adults, children, parents, pregnant individuals, older adults, and people with disabilities. For example, Medicaid pays for approximately 41 percent of all births in the U.S.[2] and is the largest payer of long-term services and supports (LTSS),[3] the largest, single payer of services to treat substance use disorders,[4] and services to prevent and treat the Human Immunodeficiency Virus.[5]

On January 28, 2021, the President signed Executive Order (E.O.) 14009,[6] ''Strengthening Medicaid and the Affordable Care Act,'' which established the policy objective to protect and strengthen Medicaid and the Affordable Care Act and to make high-quality health care accessible and affordable for every American. The E.O. also directed executive departments and agencies to review existing regulations, orders, guidance documents, and policies to determine whether such agency actions are inconsistent with this policy. On April 5, 2022, E.O. 14070,[7] ''Continuing To Strengthen Americans' Access to Affordable, Quality Health Coverage,'' directed Federal agencies with responsibilities related to Americans' access to health coverage to review agency actions to identify ways to continue to expand the availability of affordable health coverage, to improve the quality of coverage, to strengthen benefits, and to help more Americans enroll in quality health coverage. Consistent with CMS' authorities under the Act, this final rule implements E.O.s 14009 and 14070 by helping States to strengthen Medicaid and improve access to and quality of care provided.

Ensuring that beneficiaries can access covered services is necessary to the basic operation of the Medicaid program. Depending on the State and its Medicaid program structure, beneficiaries access their health care services using a variety of care delivery systems (for example, FFS, fully-capitated managed care, partially capitated managed care, etc.), including through demonstrations and waiver programs. The volume of Medicaid beneficiaries enrolled in a managed care program in Medicaid has grown from 81 percent in 2016 to 85 percent in 2021, with 74.6 percent of Medicaid beneficiaries enrolled in comprehensive managed care organizations.[8] [9] The remaining individuals received all of their care or some services that have been carved out of managed care through FFS.

Current access regulations are neither comprehensive nor consistent across delivery systems or coverage authority (for example, State plan and demonstration authority). For example, regulations at 42 CFR 447.203 and 447.204 relating to access to care, service payment rates, and Medicaid provider participation in rate setting apply only to Medicaid FFS delivery systems and focus on ensuring that payment rates are consistent with the statutory requirements in section 1902(a)(30)(A) of the Act. The regulations do not apply to services

[8] Medicaid Managed Care Enrollment Report. *https://www.medicaid.gov/medicaid/managed-care/enrollment-report/index.html*.

[9] Throughout this document, the use of the term ''managed care plan'' includes managed care organizations (MCOs), prepaid inpatient health plans (PIHPs), and prepaid ambulatory health plans (PAHPs) [as defined in 42 CFR 438.2] and is used only when the provision under discussion applies to all three arrangements. An explicit reference is used in the preamble if the provision applies to primary care case managers (PCCMs) or primary care case management entities (PCCM entities).

delivered under managed care. These regulations are also largely procedural in nature and rely heavily on States to form an analysis and reach conclusions on the sufficiency of their own payment rates.

With a program as large and complex as Medicaid, access regulations need to be multi-factorial to promote consistent access to health care for all beneficiaries across all types of care delivery systems in accordance with statutory requirements. Strategies to enhance access to health care services should reflect how people move through and interact with the health care system. We view the continuum of health care access across three dimensions of a person-centered framework: (1) enrollment in coverage; (2) maintenance of coverage; and (3) access to services and supports. Within each of these dimensions, accompanying regulatory, monitoring, and/or compliance actions may be needed to ensure access to health care is achieved and maintained.

In the spring of 2022, we released a request for information (RFI) [10] to collect feedback on a broad range of questions that examined topics such as: challenges with eligibility and enrollment; ways we can use data available to measure, monitor, and support improvement efforts related to access to services; strategies we can implement to support equitable and timely access to providers and services; and opportunities to use existing and new access standards to help ensure that Medicaid and Children's Health Insurance Program (CHIP) payments are sufficient to enlist enough providers.

Some of the most common feedback we received through the RFI related to ways that we can promote health equity through cultural competency. Commenters shared the importance that cultural competency plays in how beneficiaries access health care and in the quality of health services received by beneficiaries. The RFI respondents shared examples of actions that we could take, including collecting and analyzing health outcomes data by sociodemographic categories; establishing minimum standards for how States serve communities in ways that address cultural competency and language preferences; and reducing barriers to enrollment and retention for racial and ethnic minority groups.

In addition to the topic of cultural competency, commenters also commonly shared that they viewed reimbursement rates as a key driver of provider participation in Medicaid and CHIP programs. Further, commenters noted that aligning payment approaches and setting minimum standards for payment regulations and compliance across Medicaid and CHIP delivery systems, services, and benefits could help ensure that beneficiaries' access to services is as similar as possible across beneficiary groups, delivery systems, and programs.

As mentioned previously in this final rule, the first dimension of access focuses on ensuring that eligible people are able to enroll in the Medicaid program. Access to Medicaid enrollment requires that a potential beneficiary know if they are or may be eligible for Medicaid, be aware of Medicaid coverage options, and be able to easily apply for and enroll in coverage. The second dimension of access in this continuum relates to maintaining coverage once the beneficiary is enrolled in the Medicaid program initially. Maintaining coverage requires that eligible beneficiaries are able to stay enrolled in the program without interruption, or that they know how to and can smoothly transition to other health coverage, such as CHIP, Exchange coverage, or Medicare, when they are no longer eligible for Medicaid coverage but have become eligible for other health coverage programs. In September 2022, we published a proposed rule, *Streamlining the Medicaid, Children's Health Insurance Program, and Basic Health Program Application, Eligibility, Determination, Enrollment, and Renewal Processes* to simplify the processes for eligible individuals to enroll and retain eligibility in Medicaid, CHIP, and the Basic Health Program (BHP) (87 FR 54760). This proposed rule was finalized in two parts, the *Streamlining Medicaid; Medicare Savings Program Eligibility Determination and Enrollment Final Rule* (88 FR 65230) and the *Streamlining Eligibility & Enrollment final rule* (89 FR 22780).

The third dimension, which is the focus of this final rule, is access to services and supports. This rule addresses additional critical elements of access: (1) potential access, which refers to a beneficiary's access to providers and services, whether or not the providers or services are used; (2) beneficiary utilization, which refers to beneficiaries' actual use of the providers and services available to them; and (3) beneficiaries' perceptions and experiences with the care they did or were not able to receive. These terms and definitions build upon previous efforts to examine how best to monitor access.[11]

We completed an array of regulatory activities, including three rules: the aforementioned Streamlining Eligibility & Enrollment final rules and a final rule entitled Medicaid and Children's Health Insurance Program (CHIP) Managed Care Access, Finance, and Quality (as published elsewhere in this issue of the **Federal Register**, Managed Care final rule), on managed care including matters of access, and this final rule on access. Additionally, we are taking non-regulatory actions to improve beneficiary access to care (for example, best practices toolkits and technical assistance to States) to improve access to health care services across Medicaid delivery systems.

As noted earlier, we issued the Streamlining Eligibility & Enrollment final rules to address the first two dimensions of access to health care: (1) enrollment in coverage and (2) maintenance of coverage. Through those final rules, we streamline Medicaid, CHIP and BHP eligibility and enrollment processes, reduce administrative burden on States and applicants/enrollees toward a more seamless eligibility and enrollment process, and increase the enrollment and retention of eligible individuals.

The Managed Care final rule improves access to care and quality outcomes for Medicaid and CHIP beneficiaries enrolled in managed care by: creating standards for timely access to care and States' monitoring and enforcement efforts; reducing burden for some State directed payments and certain quality reporting requirements; adding new standards that will apply when States use in lieu of services and settings (ILOSs) to promote effective utilization, and specifying the scope and nature of ILOS; specifying medical loss ratio (MLR) requirements, and establishing a quality rating system for Medicaid and CHIP managed care plans.

Through the Managed Care final rule and this final rule (Ensuring Access to Medicaid Services), we finalize additional requirements to address the third dimension of the health care access continuum: access to services. The requirements outlined later in this section focus on improving access to services in Medicaid by utilizing tools such as FFS rate transparency,

Washington, DC: The Urban Institute. August 2016. Accessed at *https://www.urban.org/sites/default/files/publication/88081/2001143-medicaid-access-measurement-and-monitoring-plan_0.pdf.*

standardized reporting for HCBS, and improving the process for interested parties, especially Medicaid beneficiaries, to provide feedback to State Medicaid agencies and for Medicaid agencies to respond to the feedback (also known as a feedback loop).

Through a combination of these four final rules, we address a range of access-related challenges that impact how beneficiaries are served by Medicaid across all of its delivery systems. FFP will be available for expenditures that are necessary to implement the activities States will need to undertake to comply with the provisions of these final rules.

Finally, we also believe it is important to acknowledge the role of health equity within this final rule. Medicaid plays a disproportionately large role in covering health care for people from underserved communities in this country.[12] Consistent with E.O. 13985 on ''Advancing Racial Equity and Support for Underserved Communities Through the Federal Government (January 20, 2021),'' [13] which calls for advancing equity for underserved populations, we are working to ensure our programs consistently provide high-quality care to all beneficiaries, and thus advance health equity, consistent with the goals and objectives we have outlined in the CMS Framework for Health Equity 2022–2032 [14] and the HHS Equity Action Plan.[15] That effort includes increasing our understanding of the needs of those we serve to ensure that all individuals have access to equitable coverage and care.

We recognize that each State faces a unique set of challenges related to the resumption of its normal program activities after the end of the COVID–19 public health emergency (PHE). More specifically, the expiration of the Medicaid continuous enrollment condition authorized by the Families First Coronavirus Response Act (FFCRA) presents the single largest health coverage transition event since the first open enrollment period of the Affordable Care Act. As a condition of receiving a temporary 6.2 percentage point Federal Medical Assistance Percentage (FMAP) increase under the FFCRA, States were required to maintain enrollment of nearly all Medicaid enrollees. This continuous enrollment condition expired on March 31, 2023, after which States began completing renewals for all individuals enrolled in Medicaid, CHIP, and the BHP. Additionally, many other temporary authorities adopted by States during the COVID–19 PHE expired at the end of the PHE, and States are returning to regular operations across their programs. The resumption of normal Medicaid operations is generally referred to as ''unwinding'' and the period for States to initiate all outstanding eligibility actions that were delayed because of the FFCRA continuous enrollment condition is called the ''unwinding period.'' We considered States' unwinding responsibilities when finalizing the dates for States to begin complying with the requirements being finalized in this rule, but, as noted in the Ensuring Access to Medicaid Services proposed rule, we solicited State feedback on whether our proposals struck the correct balance.

We considered adopting an effective date of 60 days following publication of this final rule and separate compliance dates for various provisions, which we note where relevant in our discussion of specific proposals in this final rule. We solicited comment on whether an effective date of 60 days following publication would be appropriate when combined with later dates for compliance for some provisions.

We also solicited comment on the timeframe that would be most achievable and appropriate for compliance with each proposed provision and whether the compliance date should vary by provision.

B. Medical Care Advisory Committees (MCAC)

We obtained feedback during various public engagement activities conducted with States and other interested parties, which supports research findings that the beneficiary perspective and lived Medicaid experience [16] should be considered when making policy decisions related to Medicaid programs.[17] [18] A 2022 report from the HHS Assistant Secretary of Planning and Evaluation (ASPE) noted that including people with lived experience in the policy-making process can lead to a deeper understanding of the conditions affecting certain populations, facilitate identification of possible solutions, and avoid unintended consequences of potential policy or program changes that could negatively impact the people the program aims to serve.[19] We have concluded that beneficiary perspectives need to be central to operating a high-quality health coverage program that consistently meets the needs of all its beneficiaries.

However, effective community engagement is not as simple as planning a meeting and requesting feedback. To create opportunities that facilitate true engagement, it is important to understand and honor strengths and assets that exist within communities; recognize and solicit the inclusion of diverse voices; dedicate resources to ensuring that engagement is done in culturally meaningful ways; ensure timelines, planning processes, and resources that support equitable participation; and follow up with communities to let them know how their input was utilized. Ensuring optimal health outcomes for all beneficiaries served by a program through the design, implementation, and operationalization of policies and programs requires intentional and continuous effort to engage people who have historically been excluded from the process.

Section 1902(a)(4) of the Act is a longstanding statutory provision that, as implemented in part in regulations currently codified at 42 CFR 431.12,[20] requires States to have a Medical Care

[20] The regulatory provision was originally established in 36 FR 3793 at 3870.

Advisory Committee (MCAC) in place to advise the State Medicaid agency about health and medical care services. Under section 1903(a)(7) of the Act, expenditures made by the State agency to operate the MCAC are eligible for Federal administrative match.

The current MCAC regulations at § 431.12 require States to establish such a committee and describe high-level requirements related to the composition of the committee, the scope of topics to be discussed, and the support the Committee can receive from the State in its administration. Due to the lack of specificity in the current regulations, these regulations have not been consistently implemented across States. For example, there is no mention of how States should approach meeting periodicity or meeting structure in ways that are conducive to including a variety of Medicaid interested parties. There is also no mention in the regulations about how States can build accountability through transparency with their interested parties by publicly sharing meeting dates, membership lists, and the outcomes of these meetings. The regulations also limit the required MCAC discussions to topics about health and medical care services—which in turn limits the benefits of using the MCAC as a vehicle that can provide States with varied ideas, suggestions, and experiences on a range of issues related to the effective administration of the Medicaid program.

As such, we have determined the requirements governing MCACs need to be more robust to ensure all States are using these committees optimally to realize a more effective and efficient Medicaid program that is informed by the experiences of beneficiaries, their caretakers, and other interested parties. The current regulations have been in place without change for over 40 years.[21] Over the last four decades, we have learned that the current MCAC requirements are insufficient in ensuring that the beneficiary perspective is meaningfully represented on the MCAC. Recent research regarding soliciting input from individuals with lived experience, including our recent discussions with States about their MCAC, provide a unique opportunity to re-examine the purpose of this committee and update the policies to reflect four decades of program experience.

In 2022, we gathered feedback from various public engagement activities conducted with States, other interested parties, and directly from a subset of State Medicaid agencies that described a wide variation in how States are operating MCACs today. The feedback suggested that some MCACs operate simply to meet the broad Federal requirements. As discussed previously in this section, we have discovered that our current regulations do not further the statutory goal of meaningfully engaging Medicaid beneficiaries and other low-income people in matters related to the operation of the Medicaid program. Meaningful engagement can help develop relationships and establish trust between the communities served and the Medicaid agency to ensure States receive important information concerning how to best provide health coverage to their beneficiary populations. The current MCAC regulations establish the importance of broad feedback from interested parties, but they lack the specificity that can ensure States use MCACs in ways that facilitate that feedback.

The current regulations require that MCACs must include Medicaid beneficiaries as committee members. However, the regulations do not mention or account for the reality that other interested parties can stifle beneficiary contribution in a group setting. For example, when there are a small number of beneficiary representatives in large committees with providers, health plans, and professional advocates, it can be uncomfortable and intimidating for beneficiaries to share their perspective and experience. Based on these reasons, several States already use beneficiary-only groups that feed into larger MCACs.

Improvements to the MCACs are critical to ensuring a robust and accurate understanding of beneficiaries' challenges to health care access. The current regulations value State Medicaid agencies having a way to get feedback from interested parties on issues related to the Medicaid program. However, the current regulations lack specificity related to how MCACs can be used to benefit the Medicaid program more expressly by more fully promoting the beneficiary voice. MCACs need to provide a forum for beneficiaries and people with lived experience with the Medicaid program to share their experiences and challenges with accessing health care, and to assist States in understanding and better addressing those challenges. These committees also represent unique opportunities for States to include representation by members that reflect the demographics of their Medicaid program to ensure that the program is best serving the needs of all beneficiaries, but not all States are utilizing that opportunity.

This final rule strikes a balance that reflects how States currently use advisory committees (such as MCACs or standalone beneficiary groups). We know that some States approach these committees as a way to meet a Federal requirement while other States are using them in much more innovative ways. As a middle ground, this final rule seeks to: (1) address the gaps in the current regulations described previously in this section; and (2) establish requirements to implement more effective advisory committees. States will select members in a way that reflects a wide range of Medicaid interested parties (covering a diverse set of populations and interests relevant to the Medicaid program), place a special emphasis on the inclusion of the beneficiary perspective, and create a meeting environment where each voice is empowered to participate equally.

The changes we are making in this rule are rooted in best practices learned from States' experiences implementing the existing MCAC provisions and from other State examples of community engagement that support getting the type of feedback and experiences from beneficiaries, their caretakers, providers, and other interested parties that can then be used to positively impact care delivered through the Medicaid program.

Accordingly, this final rule includes changes that will support the implementation of the principles of bi-directional feedback, transparency, and accountability. We are making changes to the features of the new committee that can most effectively ensure member engagement, including the staff and logistical support that is required for beneficiaries and individuals representing beneficiaries to meaningfully participate in these committees. We are also making changes to expand the scope of topics to be addressed by the committee, address committee membership composition, prescribe the features of administration of the committee, establish requirements of an annual report, and underscore the importance of beneficiary engagement through the addition of a related beneficiary-only group.

C. Home and Community-Based Services (HCBS)

While Medicaid programs are required to provide medically necessary nursing facility services for most eligible individuals age 21 or older, coverage for

[21] 43 FR 45091 at 45189.

HCBS is a State option.[22] As a result of this ''institutional bias'' in the statute, Medicaid reimbursement for LTSS was primarily spent on institutional care, historically, with very little spending for HCBS.[23] However, over the past several decades, States have used several Medicaid authorities,[24] as well as CMS-funded grant programs,[25] to develop a broad range of HCBS to provide alternatives to institutionalization for eligible Medicaid beneficiaries and to advance person-centered care. Consistent with many beneficiaries' preferences for where they would like to receive their care, HCBS have become a critical component of the Medicaid program and are part of a larger framework of progress toward community integration of older adults and people with disabilities that spans efforts across the Federal government. In fact, total Medicaid HCBS expenditures surpassed the long-standing benchmark of 50 percent of LTSS expenditures in FY 2013 and has remained higher than 50 percent since then, reaching 55.4 percent in FY 2017 and 62.5 percent in FY 2020.[26] A total of 35 States spent at least 50 percent of Medicaid LTSS expenditures on HCBS in FY 2020.

Furthermore, HCBS play an important role in States' efforts to achieve compliance with Title II of the Americans with Disabilities Act (ADA) of 1990, section 504 of the Rehabilitation Act of 1973 (section 504),[27] section 1557 of the Affordable Care Act, and the Supreme Court's decision in *Olmstead* v. *L.C.,*[28] in which the Court held that unjustified segregation of persons with disabilities is a form of unlawful discrimination under the ADA [29] and States must ensure that persons with disabilities are served in the most integrated setting appropriate to their needs.[30] Section 9817 of the American Rescue Plan Act of 2021 (ARP) (Pub. L. 117–2) recently made a historic investment in Medicaid HCBS by providing qualifying States with a temporary 10 percentage point increase to the FMAP for certain Medicaid expenditures for HCBS that States must use to implement or supplement the implementation of one or more activities to enhance, expand, or strengthen HCBS under the Medicaid program.[31]

Medicaid coverage of HCBS varies by State and can include a combination of medical and non-medical services, such as case management, homemaker, personal care, adult day health, habilitation (both day and residential), and respite care services. HCBS programs serve a variety of targeted population groups, such as older adults, and children and adults with intellectual or developmental disabilities, physical disabilities, mental health/substance use disorders, and complex medical needs. HCBS programs provide opportunities for Medicaid beneficiaries to receive services in their own homes and communities rather than in institutions.

CMS and States have worked for decades to support the increased availability and provision of high-quality HCBS for Medicaid beneficiaries. While there are quality and reporting requirements for Medicaid HCBS, the requirements vary across authorities and are often inadequate to provide the necessary information for ensuring that HCBS are provided in a high-quality manner that best protects the health and welfare of beneficiaries. Consequently, quality measurement and reporting expectations are not consistent across and within services, but instead vary depending on the authorities under which States are delivering services. Additionally, States have flexibility to determine the quality measures they use in their HCBS programs. While we support State flexibility, a lack of standardization has resulted in thousands of metrics and measures currently in use across States, with different metrics and measures often used for different HCBS programs within the same State. As a result, CMS and States are limited in the ability to compare HCBS quality and outcomes within and across States or to compare the performance of HCBS programs for different populations.

In addition, although there are differences in rates of disability among demographic groups, there are very limited data currently available to assess disparities in HCBS access, utilization, quality, and outcomes. Few States have the data infrastructure to systematically or routinely report data that can be used to assess whether disparities exist in HCBS programs. This lack of available data also prevents CMS and States from implementing interventions to make improvements in HCBS programs designed to consistently meet the needs of all beneficiaries. Compounding these concerns have been notable and high-profile instances of abuse and neglect in recent years, which have been shown to result from poor quality care and inadequate oversight of HCBS in Medicaid. For example, a 2018 report, ''Ensuring Beneficiary Health and Safety in Group Homes Through State Implementation of Comprehensive Compliance Oversight,'' [32] (''Joint Report''), which was jointly developed by the U.S. Department of Health Human Services' Administration for Community Living (ACL), Office for Civil Rights (OCR), and the Office of

[32] Ensuring Beneficiary Health and Safety in Group Homes Through State Implementation of Comprehensive Compliance Oversight. US Department of Health and Human Services, Office of the Inspector General, Administration for Community Living, and Office for Civil Rights. January 2018. Accessed at *https://oig.hhs.gov/reports-and-publications/featured-topics/group-homes/group-homes-joint-report.pdf*.

Inspector General (OIG), found systemic problems with health and safety policies and procedures being followed in group homes and that failure to comply with these policies and procedures left beneficiaries in group homes at risk of serious harm. In addition, while existing regulations provide safeguards for all Medicaid beneficiaries in the event of a denial of Medicaid eligibility or an adverse benefit determination by the State Medicaid agency and, where applicable, by the beneficiary's managed care plan, there are no safeguards related to other issues that HCBS beneficiaries may experience, such as the failure of a provider to comply with the HCBS settings requirements or difficulty accessing the services in the person-centered service plan unless the individual is receiving those services through a Medicaid managed care arrangement.

Finally, through our regular interactions with State Medicaid agencies, provider groups, and beneficiary advocates, we observed that all these interested parties routinely cite a shortage of direct care workers and high rates of turnover in direct care workers among the greatest challenges in ensuring access to high-quality, cost-effective HCBS for people with disabilities and older adults. Some States have also indicated that a lack of direct care workers is preventing them from transitioning individuals from institutions to home and community-based settings. While workforce shortages have existed for years, they have been exacerbated by the COVID–19 pandemic, which has resulted in higher rates of direct care worker turnover (for instance, due to higher rates of worker-reported stress), an inability of some direct care workers to return to their positions prior to the pandemic (for instance, due to difficulty accessing child care or concerns about contracting COVID–19 for people with higher risk of severe illness), workforce shortages across the health care sector, and wage increases in types of retail and other jobs that tend to draw from the same pool of workers.[33] [34] [35]

To address the list of challenges outlined in this section, we proposed Federal requirements to improve access to care, quality of care, and health and quality of life outcomes; promote health equity for people receiving Medicaid-covered HCBS; and ensure that there are safeguards in place for beneficiaries who receive HCBS through FFS delivery systems. We solicited comment on other areas for rulemaking consideration. The requirements we are finalizing in this rule are intended, individually and as a whole, to promote public transparency related to the administration of Medicaid HCBS programs.

D. Fee-For-Service (FFS) Payment

Section 1902(a)(30)(A) of the Act requires States to ''assure that payments are consistent with efficiency, economy, and quality of care and are sufficient to enlist enough providers so that care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area.'' Regulations at § 447.203 require States to develop and submit to CMS an access monitoring review plan (AMRP) for a core set of services. Currently, the regulations rely on available State data to support a determination that the State's payment rates are sufficient to ensure access to care in Medicaid FFS that is at least as great for beneficiaries as is generally available to the general population in the geographic area, as required under section 1902(a)(30)(A) of the Act.

In the May 6, 2011, **Federal Register**, we published the Medicaid Program; Methods for Assuring Access to Covered Medicaid Services proposed rule (76 FR 26341; hereinafter ''2011 proposed rule''), which outlined a data-driven process for States with Medicaid services paid through a State plan under FFS to follow in order to document their compliance with section 1902(a)(30)(A) of the Act. We finalized the 2011 proposed rule in the November 2, 2015, **Federal Register** when we published the ''Medicaid Program; Methods for Assuring Access to Covered Medicaid Services'' final rule with comment period (80 FR 67576; hereinafter ''2015 final rule with comment period''). Among other requirements, the 2015 final rule with comment period required States to develop and submit to CMS an AMRP for certain Medicaid services that is updated at least every 3 years. Additionally, the rule required that when States submit a SPA to reduce or restructure provider payment rates, they must consider the data collected through the AMRP and undertake a public process that solicits input on the potential impact of the proposed reduction or restructuring of Medicaid FFS payment rates on beneficiary access to care. We published the ''Medicaid Program; Deadline for Access Monitoring Review Plan Submissions'' final rule in the April 12, 2016 **Federal Register** (81 FR 21479; hereinafter ''2016 final rule'') with a revised deadline for States' AMRPs to be submitted to us.

Following the implementation of the AMRP process, numerous States have expressed concern regarding the administrative burden associated with the 2015 final rule with comment period requirements, especially those States with high rates of beneficiary enrollment in managed care. In an attempt to address some of the States' concerns regarding unnecessary administrative burden, we issued a State Medicaid Director letter (SMDL) on November 16, 2017 (SMDL #17–004), which clarified the circumstances in which provider payment reductions or restructurings would likely not result in diminished access to care, and therefore, would not require additional analysis and monitoring procedures described in the 2015 final rule with comment period.[36] Subsequently, in the March 23, 2018 **Federal Register**, we published the ''Medicaid Program; Methods for Assuring Access to Covered Medicaid Services-Exemptions for States With High Managed Care Penetration Rates and Rate Reduction Threshold'' proposed rule (83 FR 12696; hereinafter ''2018 proposed rule''), which would have exempted States from requirements to analyze certain data or monitor access when the vast majority of their covered beneficiaries receive services through managed care plans. That proposed rule, if it had been finalized, would have provided similar flexibility to all States when they make nominal rate reductions or restructurings to FFS payment rates. Based on the responses received during the public comment period, we decided not to finalize the proposed exemptions.

In the July 15, 2019, **Federal Register**, we published the ''Medicaid Program; Methods for Assuring Access to Covered Medicaid Services-Rescission'' proposed rule (84 FR 33722; hereinafter ''2019 proposed rule'') to rescind the regulatory access requirements at §§ 447.203(b) and 447.204, and

[36] State Medicaid Director Letter #17–0004 Re: Medicaid Access to Care Implementation Guidance. Accessed at *https://www.medicaid.gov/federal-policy-guidance/downloads/smd17004.pdf* (November 2017).

concurrently issued a CMCS Informational Bulletin (CIB) [37] stating the agency's intention to establish a new access strategy. Based on the responses we received during the public comment period, we decided not to finalize the 2019 proposed rule, and instead continue our efforts and commitment to develop a data-driven strategy to understand access to care in the Medicaid program.

States have continued to question whether the AMRP process is the most effective or accurate reflection of access to care in a State's Medicaid program, and requested we provide additional clarity on the data necessary to support compliance with section 1902(a)(30)(A) of the Act. In reviewing the information that States presented through the AMRPs, we also have questioned whether the data and analysis consistently address the primary access-related question posed by section 1902(a)(30)(A) of the Act—namely, whether rates are sufficient to ensure access to care at least as great as that enjoyed by the general population in geographic areas. The unstandardized nature of the AMRPs, which largely defer to States to determine appropriate data measures to review and monitor when documenting access to care, have made it difficult to assess whether any single State's analysis demonstrates compliance with section 1902(a)(30)(A) of the Act.

While the AMRPs were intended to be a useful guide to States in the overall process to monitor beneficiary access, they are generally limited to access in FFS delivery systems and focus on targeted payment rate changes rather than the availability of care more generally or population health outcomes (which may be indicative of the population's ability to access care). Moreover, the AMRP processes are largely procedural in nature and not targeted to specific services for which access may be of particular concern, requiring States to engage in triennial reviews of access to care for certain broad categories of Medicaid services—primary care services, physician specialist services, behavioral health services, pre- and post-natal obstetric services, and home health services. Although the 2016 final rule discussed that the selected service categories were intended to be indicators for available access in the overall Medicaid FFS system, these categories do not directly translate to the services authorized under section 1905(a) of the Act, granting States deference as to how broadly or narrowly to apply the AMRP analysis to services within their programs. For example, the category ''primary care services'' could encompass several of the Medicaid service categories described within section 1905(a) of the Act and, without clear guidance on which section 1905(a) services categories, qualified providers, or procedures we intended States to include within the AMRP analyses, States were left to make their own interpretations in analyzing access to care under the 2016 final rule.

Similarly, a number of the AMRP data elements, both required and suggested within the 2016 final rule, may be overly broad, subject to interpretation, or difficult to obtain. Specifically, under the 2016 final rule provisions, States are required to review: the extent to which beneficiary needs are fully met; the availability of care through enrolled providers to beneficiaries in each geographic area, by provider type and site of service; changes in beneficiary utilization of covered services in each geographic area; the characteristics of the beneficiary population (including considerations for care, service and payment variations for pediatric and adult populations and for individuals with disabilities); and actual or estimated levels of provider payment available from other payers, including other public and private payers, by provider type and site of service. Although service utilization and provider participation are relatively easy measures to source and track using existing Medicaid program data, an analysis of whether beneficiary needs are fully met is at least somewhat subjective and could require States to engage in a survey process to complete. Additionally, while most Medicaid services have some level of equivalent payment data that can be compared to other available public payer data, such as Medicare, private payer information may be proprietary and difficult to obtain. Therefore, many States struggled to meet the regulatory requirement to compare Medicaid program rates to private payer rates because of their inability to obtain private payer data.

Due to these issues, States produced varied AMRPs through the triennial process that were, as a whole, difficult to interpret or to use in assessing compliance with section 1902(a)(30)(A) of the Act. In isolation, a State's specific AMRP most often presented data that could be meaningful as a benchmark against changes within a State's Medicaid program, but did not present a case for Medicaid access consistent with the general population in geographic areas. Frequently, the data and information within the AMRPs were presented without a formal determination or attestation from the State that the information presented established compliance with section 1902(a)(30)(A) of the Act. Because the States' AMRPs generally varied to such a great degree, there was also little to glean in making State-to-State comparisons of performance on access measures, even for States with geographic and demographic similarities.

Based on results of the triennial AMRPs, we were uncertain of how to make use of the information presented within them other than to make them publicly available. We published the AMRPs on Medicaid.gov but had little engagement with States on the content or results of the AMRPs since much of the information within the plans could not meaningfully answer whether access in Medicaid programs satisfied the requirements of section 1902(a)(30)(A) of the Act. Additionally, we received little feedback from providers, beneficiaries, or advocates on whether or how interested parties made use of the triennial AMRPs. However, portions of the 2016 final rule related to public awareness and feedback on changes to Medicaid payment rates and the analysis that we received from individual States proposing to make rate changes was of great benefit in determining approvals of State payment change proposals. Specifically, the portion of the AMRP process where States update their plans to describe data and measures to serve as a baseline against which they monitor after reducing or restructuring Medicaid payments allows States to document consistency with section 1902(a)(30)(A) of the Act at the time of SPA submission, usually as an assessment of how closely rates align with Medicare rates, and to understand the impact of reductions through data monitoring after SPA approval.

Under this final rule, we balance elimination of unnecessary Federal and State administrative burden with robust implementation of the Federal and State shared obligation to ensure that Medicaid payment rates are set at levels sufficient to ensure access to care for beneficiaries consistent with section 1902(a)(30)(A) of the Act. The provisions of this final rule, as discussed in more detail later, will better achieve this balance through improved transparency of Medicaid FFS payment rates, through publication of a comparative payment rate analysis to Medicare and payment rate disclosures,

[37] CMCS Informational Bulletin: Comprehensive Strategy for Monitoring Access in Medicaid, Accessed at *https://www.medicaid.gov/federal-policy-guidance/downloads/CIB071119.pdf* (July 2019).

and through a more targeted and defined approach to evaluating data and information when States propose to reduce or restructure their Medicaid payment rates. Payment rate transparency is a critical component of assessing compliance with section 1902(a)(30)(A) of the Act. In addition, payment rate transparency helps to ensure that interested parties have basic information available to them to understand Medicaid payment levels and the associated effects of payment rates on access to care so that they may raise concerns to State Medicaid agencies via the various forms of public processes discussed within this final rule. Along with improved payment rate transparency and disclosures as well as comparative payment rate analyses, we are finalizing a more efficient process for States to undertake when submitting rate reduction or restructuring SPAs to CMS for review. As we move toward aligning our Medicaid access to care strategy across FFS and managed care delivery systems, we will consider additional rulemaking to help ensure that Medicaid payment rate information is appropriately transparent and rates are fully consistent with broad access to care across delivery systems, so that interested parties have a more complete understanding of Medicaid payment rate levels and resulting access to care for beneficiaries.

II. Summary of the Proposed Provisions and Analysis of and Responses to the Public Comments

We received 2,123 public comments from individuals and organizations, including, but not limited to, individuals, State government agencies, non-profit health care organizations, advocacy groups, associations, law firms, managed care plans, academic groups, and tribal organizations. We thank and appreciate the commenters for their consideration of the proposed requirements for ensuring access to care, quality and health outcomes, and better addressing health equity issues in the Medicaid program across FFS and managed care delivery systems, and in HCBS programs. In general, commenters supported the proposed rule. In this section, arranged by subject area, we summarize the proposed provisions, the public comments received, and our responses. For a complete and full description of the proposed requirements, see the 2023 proposed rule, ''Medicaid Program; Ensuring Access to Medicaid Services'' (88 FR 27960, May 5, 2023) hereafter referred to as the ''proposed rule.''

We also received a number of out-of-scope comments that are not addressed in this final rule. In addition, we received some comments which were s solely applicable to the Managed Care proposed rule. Please see the Managed Care final rule for a for a summary of the comments CMS received pertaining to that proposed rule.

We are clarifying and emphasizing our intent that if any provision of this final rule is held to be invalid or unenforceable by its terms, or as applied to any person or circumstance, or stayed pending further action, it shall be severable from this final rule, and from rules and regulations currently in effect, and not affect the remainder thereof or the application of the provision to other persons not similarly situated or to other, dissimilar circumstances. If any provision is held to be invalid or unenforceable, the remaining provisions which could function independently, should take effect and be given the maximum effect permitted by law. Through this rule, we adopt provisions that are intended to and will operate independently of each other, even if each serves the same general purpose or policy goal. Where a provision is necessarily dependent on another, the context generally makes that clear.

Finally, we note that we are finalizing with modification several of the dates for when we expect States to begin complying with the requirements being finalized in this rule, instead of what we proposed. Generally, we are finalizing that this rule, including the proposals being finalized herein, will be effective 60 days after publication of this final rule. However, we are finalizing that States are not required to begin compliance with most requirements being finalized in this rule until a specified applicability date, which we have specified for each such individual proposal being finalized. We discuss in detail the applicability date we are finalizing for each proposal being finalized in this rule in the respective section of this preamble. We encourage States, providers, and interested parties to confirm the applicability dates indicated in this final rule for any changes from the proposed. To assist, we are including Table 1 with the provisions and relevant timing information and dates.

BILLING CODE 4120–01–P

TABLE 1: Provisions and Relevant Timing Information and Dates*

Regulation Section(s) in Title 42 of the CFR	Applicability Dates**
Medicaid Advisory Committee (MAC) & Beneficiary Advisory Council (BAC) § 431.12	*Establishment of MAC and BAC*: 1 year after the effective date of the final rule.
	BAC crossover on MAC: For the period from the effective date of the final rule through 1 year after the effective date, 10 percent; for the period from year 1 plus one day through year 2 after the effective date of the final rule, 20 percent; and thereafter, 25 percent of committee members must be from the BAC
	Annual report: States have 2 years from the effective date of the final rule to finalize the first annual report. After the report has been finalized, States will have 30 days to post the annual report.
Person-Centered Service Plans §§ 441.301(c)(1) and (3), 441.450(c), 441.540(c), and 441.725(c)	Beginning 3 years after the effective date of the final rule***
Grievance Systems §§ 441.301(c)(7), 441.464(d)(5), 441.555(e), and 441.745(a)(1)(iii)	Beginning 2 years after the effective date of the final rule
Incident Management System §§ 441.302(a)(6), 441.464(e), 441.570(e), 441.745(a)(1)(v), and (b)(1)(i)	Beginning 3 years after the effective date of the final rule***; except for the requirement at § 441.302(a)(6)(i)(B) (electronic incident management system), which begins 5 years after the effective date of the final rule***
HCBS Payment Adequacy §§ 441.302(k), 441.464(f), 441.570(f), and 441.745(a)(1)(vi)	Beginning 6 years after the effective date of the final rule***
Reporting Requirements §§ 441.311, 441.474(c), 441.580(i), and 441.745(a)(1)(vii)	Beginning 3 years after the effective date of the final rule*** for § 441.311(b) (compliance reporting) and § 441.311(d) (access reporting) Beginning 4 years after the effective date of the final rule*** for § 441.311(c) (reporting on the HCBS Quality Measure Set) and (e) (HCBS payment adequacy reporting)
HCBS Quality Measure Set §§ 441.312, 441.474(c), 441.585(d), and 441.745(b)(1)(v)	HHS Secretary begins identifying quality measures no later than December 31, 2026, and no more frequently than every other year. HHS Secretary shall make technical updates and corrections to the HCBS Quality Measure Set annually as appropriate.
Website Transparency §§ 441.313, 441.486, 441.595, and 441.750	Beginning 3 years after the effective date of the final rule***
Payment Rate Transparency Publication § 447.203(b)(1)	July 1, 2026, then updated within 30 days of a payment rate change.
Comparative Payment Rate Analysis Publication § 447.203(b)(2) to (4)	July 1, 2026, then every 2 years
Payment Rate Disclosure § 447.203(b)(2) to (4)	July 1, 2026, then every 2 years
Interested Parties Advisory Group § 447.203(b)(6)	The first meeting must be held within 2 years after effective date of the final rule (then at least every 2 years).
Rate Reduction and Restructuring SPA procedures § 447.203(c)(1) and (2)	Effective date of the final rule

* Regulatory provisions in this table are applicable at the time this rule becomes effective.

** In this final rule, including the regulations being finalized herein, we use the term "applicability date" to indicate when a new regulatory requirement will be applicable and when States must begin compliance with the requirements as specified in that regulation.

*** In the case of the State that implements a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act and includes HCBS in the managed care organization's (MCO), prepaid inpatient health plan's (PIHP), or prepaid ambulatory health plan's (PAHP) contract, the applicability date is the first rating period for contracts with the MCO, PIHP or PAHP beginning on or after the applicability date specified in the chart.

BILLING CODE 4120–01–C

A. Medicaid Advisory Committee and Beneficiary Advisory Council (§ 431.12)

The current regulations at § 431.12 require States to have a Medical Care Advisory Committee (MCAC) to advise the State Medicaid agency about health and medical care services. The regulations are intended to ensure that State Medicaid agencies had a way to receive feedback regarding health and medical care services from interested parties. However, these regulations lacked specificity related to how these committees can be used to ensure the proper and efficient administration of the Medicaid program more expressly by more fully promoting beneficiary perspectives.

Under the authority of section 1902(a)(4) of the Act, section 1902(a)(19) of the Act, and our general rulemaking authority in section 1102 of the Act, we are finalizing proposals to § 431.12 to replace the current MCAC requirements with a committee framework designed to ensure the proper and efficient administration of the Medicaid program and to better ensure that services under the Medicaid program will be provided in a manner consistent with the best interests of the beneficiaries. States will be required to establish and operate the newly named Medicaid Advisory Committee (MAC) and a Beneficiary Advisory Council (BAC). Please note that in the proposed rule, the BAC was referred to as the Beneficiary Advisory Group, or BAG. The MAC and its corresponding BAC will serve as vehicles for bi-directional feedback between interested parties and the State on matters related to the effective administration of the Medicaid program as determined by the State and MAC. With the changes in this final rule FFP, or Federal match, for Medicaid administrative activities will remain available to States for expenditures related to MAC and BAC activities in the same manner as the former MCAC.

The proposed and finalized requirements of the MAC amend previous and add new Federal requirements to: (1) expand the scope and use of States' MACs; (2) rename the Medicaid Advisory Committee, which will advise the State on a range of issues including medical and non-medical services; (3) require States to establish a BAC; (4) establish minimum requirements for Medicaid beneficiary representation on the MAC, membership, meetings materials, and attendance; and (5) promote transparency and accountability between the State and interested parties by making information on the MAC and BAC activities publicly available. The finalized requirements aimed at promoting transparency and accountability also include a requirement for States to create and publicly post an annual report summarizing the MAC and BAC activities.

We note that some commenters expressed general support for all of the provisions in section II.A. of this rule, as well as for this rule in its entirety. In response to commenters who supported some, but not all, of the policies and regulations we proposed in the proposed rule, we are clarifying and emphasizing our intent that each final policy and regulation is distinct and severable to the extent it does not rely on another final policy or regulation that we proposed.

While the provisions in section II.A. of this final rule are intended to present a comprehensive approach to implementing Medicaid Advisory Committees and Beneficiary Advisory Councils, and these provisions complement the goals expressed and policies and regulations being finalized in sections II.B. (Home and Community-Based Services) and II.C.(Documentation of Access to Care and Service Payment Rates) of this final rule, we intend that each of them is a distinct, severable provision, as finalized. Unless otherwise noted in this rule, each policy and regulation being finalized under this section II.A is distinct and severable from other final policies and regulations being finalized in this section or in sections II.B. or II.C of this final rule, as well as from rules and regulations currently in effect.

Consistent with our previous discussion earlier in section II. of this final rule regarding severability, we are clarifying and emphasizing our intent that if any provision of this final rule is held to be invalid or unenforceable by its terms, or as applied to any person or circumstance, or stayed pending further State action, it shall be severable from this final rule, and from rules and regulations currently in effect, and not affect the remainder thereof or the application of the provision to other persons not similarly situated or to other, dissimilar circumstances. For example, we intend that the policies and regulations we are finalizing related to the State Plan requirement (section II.A.2 of this final rule) are distinct and severable from the policies and regulations we are finalizing related to the MAC Membership and Composition requirement and the Annual Report requirement (sections II.A.4 and II.A.9 of this final rule, which we further intend are severable from each other).

1. Basis and Purpose (§ 431.12(a))

Under § 431.12 of the current regulation, paragraph (a) Basis and Purpose, sets forth a State plan requirement for the establishment of a committee (Medical Care Advisory Committee) to advise the Medicaid agency about health and medical care services. In the proposed rule, we proposed to amend the title of § 431.12 and paragraph (a) to update the name of the existing MCAC to the Medicaid Advisory Committee (MAC), and to add the requirement for States to establish and operate a dedicated advisory council comprised of Medicaid beneficiaries, the Beneficiary Advisory Group. In this final rule, we are changing the name from the Beneficiary Advisory Group to the Beneficiary Advisory Committee (BAC).

In the proposed rule, we stated that our goal was for the committee and its corresponding advisory council to serve in an advisory role to the State on issues related to health and medical services, as the MCAC did, as well as on other matters related to policy development and to the effective administration of the Medicaid program consistent with the language of section 1902(a)(4)(B) of the Act, which requires a State plan to meaningfully engage Medicaid beneficiaries and other low-income people in the administration of the plan.[38] The Medicaid program covers medical services and is increasingly also covering services designed to address beneficiaries' social determinants of health and their health-related social needs more generally. Therefore, we believe that the MAC should discuss topics directly related to covered services as well as the potential need for the coverage of additional services that may be necessary to ensure that beneficiaries are able to meaningfully access these services. Expanding the scope of the current committee is necessary in order to align with the expanding scope of the Medicaid program. These changes are consistent with section 1902(a)(4)(B) of the Act because the MAC creates a formalized way for interested parties and beneficiary representatives to provide feedback to the State about issues related to the Medicaid program and the services it covers. The feedback from the MAC and BAC will be used by the State to ensure that the program operates efficiently and as it was designed to operate.

We received public comments on these proposals. The following is a

[38] Medicaid Program; Ensuring Access to Medicaid Services,'' (88 FR 27967).

summary of the comments we received and our responses.

Comment: We received a large number of comments in support of the proposed changes to the MCAC regulation and structure as proposed in § 431.12(a). The commenters expressed broad support for creation of the dual structure of the MAC and BAC. They noted that the creation of the BAC was a positive and welcome step to better capturing the lived experiences of people enrolled in Medicaid. Commenters also noted that having the BAC advise the MAC on policy development was a way to prioritize beneficiaries' perspectives. Commenters noted that the improvements proposed to the existing MCAC structure had the potential to be transformative and make the State more attuned to the needs and priorities of Medicaid beneficiaries.

Response: We thank commenters for their support of our overhaul of the MCAC. We are finalizing as proposed, with minor technical changes, the creation of the MAC and BAC.

Comment: We also received comments in opposition to the creation of a BAC. Generally, opposing commenters wanted CMS to be less prescriptive and allow States to engage Medicaid beneficiaries in other ways (for example, using existing State committees to serve as the BAC, conducting focus groups, and fielding surveys). Other commenters noted that States would need resources to implement the BAC, citing the additional administrative burden and layering of meetings for certain members.

Response: We encourage States to engage with their Medicaid beneficiaries in a variety of ways, and we understand that many States may already operate groups or committees comprised of Medicaid beneficiaries. However, having a formalized structure to work directly with Medicaid beneficiaries will help to ensure a level and manner of engagement across all State programs. For the commenters concerned with the BAC adding administrative burden, we acknowledge that implementing these changes will create administrative burden. We discuss administrative burden to States in the Regulatory Impact Analysis section of this rule. However, in an effort to minimize administrative burden for States, we note that existing committees can be used to fulfill the BAC requirement as long as the committees meet the membership requirements specified in § 431.12(e). Later in this section, we also note that States do not have to use the same BAC members to join all MAC meetings. While it may not be an ideal way to create long-term consistency of the MAC membership, States could, in an effort to lessen the time commitment of BAC members, choose to rotate which members attend the quarterly MAC meetings.

Comment: We received several comments asking for the BAG name to be changed. The commenters cited potentially negative connotations that could be associated with the acronym BAG. Additionally, a few commenters requested that States with existing beneficiary groups be able to maintain their names.

Response: We have changed the name of the BAG to the BAC, as noted earlier in this final rule. For commenters concerned with duplicative efforts, we noted in the proposed rule that States with existing BAC-like committees can use those committees to fulfil the BAC requirement as long as they meet the membership requirements specified § 431.12(e). States are not required to change their existing group names to match the BAC name as long as interested parties understand what existing group or committee is being used to fulfill regulatory requirement of the BAC. To clarify this for interested parties, States must note in their publicly posted by-laws (§ 431.12 (f)(1)) that the group is being used to fulfill the regulatory requirements of § 431.12.

Comment: Several commenters asked CMS to clarify the role of the MAC and BAC, citing that in the proposals, the language varies from ''advisory'' to ''providing feedback.'' Other commenters expressed that they do not want the MAC and BACs to be approval bodies that lack the ability to make decisions.

Response: The primary role of the MAC and BAC is to advise the State Medicaid agency on policy development and on matters related to the effective administration of the Medicaid program. It is our intention that the MAC and BAC serve in an advisory capacity to the State. However, serving in an advisory capacity does not preclude the MAC and BAC members from sharing experiential feedback. We did not propose to give the MAC or BAC a decision-making role because we want to allow States the freedom to administer their Medicaid programs in the manner they see fit, but be guided by these two entities' recommendations and experiences with the Medicaid program.

Comment: We received a comment asking CMS to require that the MAC and BAC not be used to take the place of a State's tribal consultation requirements.

Response: We do not anticipate that the MAC or BAC could be used to fulfill tribal consultation requirements under section 1902(a)(73) of the Act. For States with one or more Indian Health Programs or Urban Indian Organizations that furnish health care services, the State must consult with such Programs and Organizations on a regular, ongoing basis. While the statute specifically permits representatives of such Programs and Organizations to be included on the MCAC [now known as the MAC], this alone would not meet the requirement to consult on any State plan amendments (SPAs), waiver requests, and proposals for demonstration projects likely to have a direct effect on Indians, Indian Health Programs, or Urban Indian Organizations prior to submission.

Comment: We received a few comments requesting that CMS conduct a study to assess which States already have MCACs or BACs to ensure they are no duplicative efforts. Another commenter asked CMS to solicit feedback from existing MCAC members to see how it can be improved before making beneficiary groups a requirement.

Response: We clarify that MCACs are currently required of all States so conducting an assessment to see which States already have MCACs would not necessarily result in a lot of new information. However, we agree that understanding which States already have BAC-like committees in place would be helpful. In fact, when developing the proposed rule, we engaged with interested parties, both from State Medicaid agencies and the wider Medicaid community, to determine what improvements were needed to the MCACs to allow States and beneficiaries to obtain the most benefit from their work. For commenters concerned with duplicative BAC activities, we note again that States with an existing beneficiary group or beneficiary committee that meets the requirement of the BAC, as finalized in this rule at § 431.12(e), do not need to set up a second beneficiary committee.

Comment: We received a few comments asking CMS to require the MAC and BAC to coordinate with other State advisory committees.

Response: States will vary in how they run their advisory committees. Some States may choose to coordinate across their different advisory committees, while other States may have reasons for keeping their advisory committees and their processes separate. We do not want to add more administrative burden by adding a requirement to § 431.12 for States to coordinate across State advisory committees. However, if coordinating

across these committees in some manner would be advantageous for the Medicaid program, then we encourage the State to do so.

After consideration of public comments, we are finalizing § 431.12(a) as proposed with the following change:

Language modifications to reflect the new name of the ''Beneficiary Advisory Council (BAC).''

2. State Plan Requirement (§ 431.12(b))

Under § 431.12 of the current regulation, paragraph (b) State Plan Requirement, calls for a State plan to provide for a MCAC to advise the Medicaid agency director about health and medical care services.

We proposed conforming updates to paragraph (b) regarding the State plan requirements, to reflect the addition of the BAC and the expanded scope.

The Interested Parties Advisory Group, described in a later section of this final rule (Interested Parties Advisory Group § 447.203(b)(6)), is designed to advise States on rate setting and other matters for certain HCBS and is not related to the MAC or BAC specified here. In section II.C.2.c. of this final rule, under § 447.203(b)(6), we explain that States will have the option to use its MAC and BAC to provide recommendations for payment rates, thereby satisfying the requirements of § 447.203(b)(6). However, the MAC and BAC requirements finalized here are wholly separate from the Interested Parties Advisory Group.

We did not receive public comments on § 431.12(b). However, we are making one conforming edit to this paragraph based on a language change identified in § 431.12(c) to replace the term State Medicaid Director. We are finalizing as proposed with the following changes:

- Language modifications to reflect the new name of the ''Beneficiary Advisory Council (BAC).''
- Replacing the term Medicaid Agency Director with the term, ''director of the single State Agency for the Medicaid program.''

3. Selection of Members (§ 431.12(c))

Under § 431.12 of the current regulation, paragraph (c) Appointment of members, the agency director, or a higher State authority, must appoint members to the advisory committee on a rotating and continuous basis.

We proposed to revise paragraph (c) to specify that the members of the MAC and BAC must be appointed by the agency director or a higher State authority on a rotating and continuous basis. We also proposed to require the State to create a process for the recruitment and appointment of members of the MAC and BAC. Additionally, we proposed to require the State to post this information on the State's website. As discussed in the proposed rule,[39] the website page where this information is located would be required to be easily accessible by the public. These proposed updates align with how some States' existing MCACs are already run, which will facilitate the transition of these MCACs into MAC/BACs. Additionally, the proposed changes are designed to provide additional details to support States' operation of the MAC and BAC. Further, we believe these proposed updates will facilitate transparency, improving the current regulations, which did not mention nor promote transparency of information related to the MCAC with the public. We also believe that transparency of information can lead to enhanced accountability on the part of the State in making its MAC and BAC as effective as possible.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: We received several comments regarding the terms used to describe who should be given the authority to appoint members to the MAC and BAC. Many commenters supported the proposal of having the State Medicaid Director appoint the members. A few commenters suggested that we make clarifications to the proposed regulation language so that only the State Medicaid Director and not ''a higher State authority'' is referenced, since the work of the MAC and BAC is to advise the State Medicaid Director. Others noted that the correct term to use in the regulation when referring to the State Medicaid Director is the director of the single State agency for the Medicaid program. There was another category of commenters that did not believe the authority to select MAC and BAC members should sit with either the State Medicaid Director or a higher State Authority. These commenters instead stated it would be more equitable if prospective MAC and BAC members were selected by an outside company, a computer, at random, or by a lottery system. They noted that in their experiences sometimes parents or family members are excluded from selection processes. Finally, other commenters noted that the term ''appointed'' implied that the State did not use any kind of a ''selection process'' to choose its MAC and BAC members. These commenters may have felt that the term ''appoint'' means that the State can simply pick whomever it wants to serve as a member rather than ''selecting'' members from a pool of people who submitted applications to serve as MAC or BAC members.

Response: We appreciate the comments provided on this section and acknowledge the complicated work that comes with selecting MAC and BAC members. Since the MAC and BAC serve in an advisory role to the Medicaid program, we believe strongly that the authority to select should lie with the director of the State Medicaid agency. We know that Medicaid agencies' names may vary from State to State, and thus, agree that language in the regulation can be changed to more clearly reflect a more commonly used term for the Medicaid agency (that is, the single State Agency for the Medicaid Program). For commenters that expressed concern that parents or family members are excluded from the selection processes, we note that the BAC regulations require both Medicaid beneficiaries and individuals with direct experience supporting Medicaid beneficiaries, such as family members to be selected. Finally, we agree that the word ''appoint'' in the proposed rule does not accurately reflect the intention of the regulation and could be misinterpreted to mean that the State did not use a selection process where interested parties submit an application and then the State reviews those applications before selecting its MAC and BAC members. Based on the comments we received, we now understand that the term ''appoint'' can be taken to mean that a selection process did not occur. We want to avoid any confusion that the requirements are asking the State to appoint members without using a selection process, which was not our intention. For clarity, we are also amending the regulatory language in § 431.12(c) to now state that the ''director of the single State Agency for the Medicaid program,'' must ''select'' members for the MAC and BAC.

Comment: We received comments on the proposed changes to § 431.12(c) related to term limits of the MAC and BAC members. The commenters were generally divided across wanting CMS to require States to have set term limits for members, not wanting any term limits, and not wanting short term limits. Commenters who expressed support for set term limits noted that setting term limits ensured that new perspectives would be added on a regular basis while others noted that setting term limits allowed members to

[39] Medicaid Program; Ensuring Access to Medicaid Services,'' (88 FR 27960, 27968).

share recommendations or constructive criticism without fear of retaliation. The commenters who opposed term limits noted that finding people with Medicaid expertise may be difficult in some geographic areas and, as a result, the State would benefit from having the same members serve without term limits. Other commenters noted that it takes time for members to build their expertise and understanding of the Medicaid program and setting short term limits may not take into account the time needed to accumulate enough knowledge to contribute fully to the MAC and BAC. These commenters suggested term limits with lengths ranging from 2 to 6 years.

Response: States have the ability to determine the tenure of members, as States are best situated to assess their members' ability to participate in and meaningfully contribute to the MAC and BAC and for what length of time. In the proposed rule, we described the requirement for States to determine the length of terms for committee and council members. For clarity, we are amending the regulatory language in § 431.12(c) to reflect this information as well, to now state ''. . . members to the MAC and BAC for a term of a length determined by the State, which may not be followed immediately by a consecutive term for the same member, on a rotating and continuous basis.'' We proposed this type of term because we believe there is value in ensuring new voices and perspectives are introduced to the committee and council. We further clarify that once a MAC or BAC member's term has been completed, the State will select a new member, thus ensuring that MAC and BAC memberships rotate continuously. Setting memberships as continuously rotating means that the State must seek to recruit members to fill open seats on the MAC and BAC on an ongoing basis. States can also select members to serve multiple non-consecutive terms.

After consideration of public comments, we are finalizing § 431.12(c) with the following changes:

- Language modifications to reflect the new name of the BAC.
- Replacing the term agency director or higher authority with the term, ''director of the single State Agency for the Medicaid program.''
- Replacing the word ''appoint'' with ''select'' in various places.
- Adding language to the regulation to reflect that ''the term of length for MAC and BAC members will be term of a length determined by the State, which may not be followed immediately by a consecutive term for the same member, on a rotating and continuous basis.''

4. MAC Membership and Composition (§ 431.12(d))

Under § 431.12 of the current regulation, paragraph (d), Committee Membership, States are required to select three types of committee members: (1) Board-certified physicians and other representatives of the health professions who are familiar with the medical needs of low-income population groups and with the resources available and required for their care; (2) Members of consumers' groups, including Medicaid beneficiaries, and consumer organizations such as labor unions, cooperatives, consumer-sponsored prepaid group practice plans, and others; and (3) the director of the public welfare department or the public health department, whichever does not head the Medicaid agency.

In the proposed rule, paragraph (d) of § 431.12, MAC membership and composition, we proposed in (d)(1) to require that a minimum of 25 percent of the MAC must be individuals with lived Medicaid beneficiary experience from the BAC. The BAC, which is defined later in § 431.12(e), is comprised of people who: (1) are currently or have been Medicaid beneficiaries, and (2) individuals with direct experience supporting Medicaid beneficiaries (family members or caregivers of those enrolled in Medicaid).

We proposed 25 percent as the minimum threshold requirement for (d)(1) to reflect the importance of including the beneficiary perspective in the administration of the Medicaid program and to ensure that the beneficiary perspective has meaningful representation in the feedback provided by the MAC. We did not propose a higher percentage because we acknowledge that States will benefit from a MAC that includes representation from a diverse set of interested parties who work in areas related to Medicaid but are not beneficiaries, their family members, or their caregivers.

In terms of the required representation from the remaining MAC members, as specified in the proposed rule, paragraph (d)(2), we proposed that a State must include at least one from each category: (A) State or local consumer advocacy groups or other community-based organizations that represent the interests of, or provide direct service, to Medicaid beneficiaries; (B) clinical providers or administrators who are familiar with the health and social needs of Medicaid beneficiaries and with the resources available and required for their care; (C) participating Medicaid managed care organizations or the State health plan association representing such organizations, as applicable; and (D) other State agencies serving Medicaid beneficiaries, as ex-officio members.

We believe that advisory committees and councils can be most effective when they represent a wide range of perspectives and experiences. Since we know that each State environment is different, we aimed to provide the State with discretion on how large the MAC and BAC should be. In the proposed changes we did, however, specify the types of categories of Committee members that can best reflect the needs of a Medicaid program. We believe that diversely populated MACs and BACs can provide States with access to a broad range of perspectives, and importantly, beneficiaries' perspective, which can positively impact the administration of the Medicaid program. This approach is consistent with the language of section 1902(a)(4)(B) of the Act, which requires a State plan to meaningfully engage Medicaid beneficiaries and other low-income people in the administration of the plan. The changes in membership we proposed and are finalizing will support States to set up MACs that align with section 1902(a)(4)(B) since States will now have to select the membership composition to reflect the community members who represent the interests of Medicaid beneficiaries. The State also benefits from having a way to hear how the Medicaid program can be responsive to its beneficiaries' and the wider Medicaid community's needs.

We also noted in the proposed rule that we encourage States to take into consideration, as part of their member selection process, the demographics of the Medicaid population in their State. Keeping diverse representation in mind as a goal for the MAC membership can be a way for States to help ensure that specific populations and those receiving critically important services are appropriately represented on the MAC. For example, in making MAC membership selections, the State may want to balance the representation of the MAC according to geographic areas of the State with the demographics and health care needs of the Medicaid program of the State. The State will want to consider geographical diversity (for example, urban and rural areas) when making its membership selections. We noted in the proposed rule, that a State could also consider demographic representation of its membership by including members representing or serving Medicaid beneficiaries who receive services in the

following categories: (1) pediatric health care; (2) behavioral health services; (3) preventive care and reproductive health services; (4) health or service issues pertaining specifically to people over age 65; and (5) health or service issues pertaining specifically to people with disabilities. By offering these considerations, we seek to support States in their efforts to eliminate differences in health care access and outcomes experienced by diverse populations enrolled in Medicaid. We intend that the MAC and the BAC can support several of the priorities for operationalizing health equity across CMS programs as outlined in the CMS Framework for Health Equity (2022–2032) and the HHS Equity Action Plan which is consistent with E.O. 13985, which calls for advancing equity for underserved communities.

Rather than prescribing specific percentages for the other (non-BAC) categories in the proposed rule, we only required representation from each category as part of the MAC. The specific percentage of each of category (other than the BAC members) relative to the whole committee can be determined by each State. This approach will provide States with the flexibility to determine how to best represent the unique landscape of each State's Medicaid program. We solicited comment on what should be the minimum percentage requirement that MAC members be current/past Medicaid beneficiaries or individuals with direct experience supporting Medicaid beneficiaries (such as family members or caregivers of those enrolled in Medicaid). In addition to hearing directly from beneficiaries, the State can gain insights into how to effectively administer its program from other members of the Medicaid community.

States will determine which types of providers to include under the clinical providers or administrators category, and we recommend they consider a wide range of providers or administrators that are experienced with the Medicaid program including, but not limited to: (1) primary care providers (internal or family medicine physicians or nurse practitioners or physician assistants that practice primary care); (2) behavioral health providers (that is, mental health and substance use disorder providers); (3) reproductive health service providers, including maternal health providers; (4) pediatric providers; (5) dental and oral health providers; (6) community health, rural health clinic or Federally Qualified Health Center (FQHC) administrators; (7) individuals providing long-term care services and supports; and (8) direct care workers [40] who can be individuals with direct experience supporting Medicaid beneficiaries (such as family members or caregivers).

We have also identified managed care plans, including Primary Care Case Management (PCCM) entities and Primary Care Case Managers (PCCMs),[41] as an important contributor to the MAC, but we acknowledge that not all States have managed care delivery systems. We know many Medicaid managed care plans administer similar committees and thus allow for States to tailor managed care plan representation based on its delivery system and the experience and expertise of managed care plans in the State. For example, States, if applicable, can fulfill this category with only one or with multiple managed care plans operating in the State. In addition, we also give States the flexibility to meet the managed care plan representation requirements with either participating Medicaid managed care plans or a health plan association representing more than one such organization.

The language in paragraph (d)(2)(D) broadens the previous MCAC requirement to allow for additional types of representatives from other State agencies to be on the committee. Specifically, the previous MCAC regulation requires membership by ''the director of the public welfare department or the public health department, whichever does not head the Medicaid agency.'' In the proposed rule, we expanded the requirement for external agency representation to be broader than the welfare or public health department, which would give States more flexibility in representing the Medicaid program's interests based on States' unique circumstances and organizational structure. States can work with sister State agencies to determine who should participate in the MAC (for example, foster care agency, mental health agency, department of public health). We also proposed that these representatives be part of the committee as ex-officio members, meaning that they hold the position because they work for the relevant State agency. In finalizing the proposals, we reviewed this requirement closer. While we believe it will be essential to have these State-interested parties present for program coordination and information-sharing, we intended to reflect in the proposed rule that the formal representation of the MAC should be comprised of beneficiaries, advocates, community organizations, and providers that serve Medicaid beneficiaries. Therefore, we clarify in this final rule that while these ex-officio members will sit on the MAC, they will not be voting members of the MAC. Therefore, on matters that the MAC decides by vote, including but not necessarily limited to finalizing the MAC's recommendations to the State, the ex-officio members will not participate in voting.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: We received many comments about the proposed requirement of having some BAC members serving on the MAC. Commenters either agreed with the importance of having a subset of Medicaid beneficiaries serve on both the BAC and the MAC, or they noted that having a subset of BAC members on both committees could lead to undue burden for these members based on the number of meetings they would have to attend. One commenter suggested a phased-in approach where the BAC members meet only as the BAC for a time (for example, a year) and then transition to serving on the MAC only.

Response: We understand the concerns raised by the commenters about putting undue burden on a subset of BAC members. We believe it is vital for the success of both the BAC and MAC that there is a point of integration via the crossover membership requirement since this is the way to ensure that the Medicaid beneficiary perspective is included in both groups.

[40] As finalized in § 441.302(k) of this final rule, CMS defines as Direct care worker as any of the following individuals who may be employed by a Medicaid provider, State agency, or third party; contracted with a Medicaid provider, State agency, or third party; or delivering services under a self-directed service model: (A) A registered nurse, licensed practical nurse, nurse practitioner, or clinical nurse specialist who provides nursing services to Medicaid beneficiaries receiving home and community-based services available under this subpart; (B) A licensed or certified nursing assistant who provides such services under the supervision of a registered nurse, licensed practical nurse, nurse practitioner, or clinical nurse specialist; (C) A direct support professional; (D) A personal care attendant; (E) A home health aide; or (F) Other individuals who are paid to provide services to address activities of daily living or instrumental activities of daily living, behavioral supports, employment supports, or other services to promote community integration directly to Medicaid beneficiaries receiving home and community-based services available under this subpart, including nurses and other staff providing clinical supervision.

[41] Throughout this document, the use of the term ''managed care plan'' includes managed care organizations (MCOs), prepaid inpatient health plans (PIHPs), and prepaid ambulatory health plans (PAHPs) [as defined in 42 CFR 438.2] and is used only when the provision under discussion applies to all three arrangements. An explicit reference is used in the preamble if the provision applies to primary care case managers (PCCMs) or primary care case management entities (PCCM entities).

We created this crossover requirement to reflect the importance of including the beneficiary perspective in the administration of the Medicaid program and to ensure that the beneficiary perspective has meaningful representation in the feedback provided by the MAC. For commenters that are concerned with undue burden of having a subset of BAC members also attend MAC meetings, in § 431.12(f)(3), we note that MACs and BACs are only required to meet once per quarter. While the regulation does not state that the subset of BAC members that join each MAC meeting has to be the same, we recognize that it would be more effective to have consistency in the BAC members that attend the MAC meetings in many cases. However, if States or the BAC are concerned with overburdening its BAC members, a potentially less efficient but workable alternative could be to rotate which BAC members attend the MAC in an effort to further reduce the number of meetings attended for a given BAC member. Nevertheless, the suggestion of having a member transition from solely being on the BAC to solely being on the MAC might not always promote the crossover concept we are seeking with the requirement that the MAC membership consist of 10 to 25 percent members from the BAC, since we are striving for inclusion of the Medicaid beneficiary perspective in both groups via the BAC members.

Comment: In response to our solicitation about having 25 percent as the minimum threshold of BAC membership crossover on the MAC, the majority of the commenters stated that a minimum 25 percent was the appropriate amount of crossover members. They noted that 25 percent crossover membership would help to center and amplify beneficiary voices on the MAC. A few commenters stated that the percentage should be lower (for example 10 or 15 percent). These commenters cited several reasons why having a lower threshold number would be better. Some commenters noted that having a smaller number of BAC members would allow States to better support or train their members so they could fully participate in the MAC. Other commenters stated that having a smaller number of BAC members could lessen the burden on States of finding and recruiting members to participate. Another group of commenters wanted the percentage of BAC crossover to be higher than 25 percent (for example 33, 50, 51, or 75 percent). These commenters sought a higher BAC crossover in order to: safeguard against marginalization of beneficiary members on the MAC; amplify diverse voices through a higher crossover number; and rectify any power imbalances that may exist. There were also a few commenters who noted that States should have the ability to determine their own percentages for the BAC crossover. Finally, we received comments asking CMS to consider allowing States to use a graduated approach to reach the 25 percent minimum requirement of BAC crossover on the MAC.

Response: We thank the commenters who agreed with our proposed threshold of the requirement for a minimum of 25 percent BAC crossover on the MAC. For commenters who thought the percentage should be lower, we understand States may face challenges with finding, recruiting, and training beneficiary members to serve on the BAC. To account for these challenges, we are extending the timeframe for implementation of this requirement in this final rule so that States have 2 years to achieve the 25 percent minimum threshold requirement of MAC members that come from the BAC. Instead of the 25 percent minimum threshold coming into effect right away, we are revising this final rule to provide in § 431.12(d)(1) that, for the period from July 9, 2024 through July 9, 2025, 10 percent of the MAC members must come from the BAC; for the period from July 10, 2025 through July 9, 2026 20 percent of MAC members must come from the BAC; and thereafter, 25 percent of MAC members must come from the BAC.

For commenters who expressed the need for a percentage higher than 25 for the BAC member crossover, we note that the policy we proposed and are finalizing establishes a minimum percentage threshold for States to meet. If a State so chooses, it can select a percentage higher than the minimum of 25 percent, provided the MAC membership also satisfies the requirements of § 431.12(d)(2) of this final rule. For commenters who raised the issue of providing training for BAC members, we have a comment/response on this topic under § 431.12(h)(3).

Comment: The majority of comments received on § 431.12(d) were about § 431.12(d)(2), MAC composition categories. We received comments that fell into four groups. The first group of commenters shared their broad support for the MAC committee member categories that we proposed and also urged CMS to ensure that States select members that represented the Medicaid community and who were geographically as well as racially/ethnically diverse. The second group of commenters asked for the MAC to include representation from members who would qualify for the BAC (for example, Medicaid beneficiaries, their families, and caregivers). It is unclear from the comments if these commenters were asking for an additional group of Medicaid beneficiaries be added to the MAC (in addition to the 25 percent of MAC we proposed to require be from the BAC) or if they did not understand that the MAC composition already includes a category which accounts for this category of members. The third group of commenters asked that specific types of interested parties be required to be represented on the MAC categories (for example, specific provider types, unions, HCBS provider agencies, hospitals, protection and advocacy programs, legal professionals, and medical billing professionals). The fourth group of commenters suggested ideas for types of MAC members that States could use to meet categories specified in the proposed rule (for example add a State Ombudsman to the ex-officio category). We also received a few suggestions to add specific member categories (for example, a member category for FFS members, a member category for people with behavioral health conditions, and a youth member category).

Response: We appreciate the wide range of comments that were submitted about the MAC membership composition. We developed the MAC composition framework in the proposed rule by creating broad membership categories that captured a range of interested parties who are members of the Medicaid community while giving States as much flexibility as possible to build their MACs in ways that account for the unique features of the State's environment. All of the membership categories, as currently written, are broad enough to accommodate the types of members described by the commenters. For example, a State Ombudsman can be used to fulfil the State agency category; a State with both managed care and FFS could chose to select two members (one for each type of delivery system) for the MAC; a person with behavioral health condition(s) could be suitable for multiple categories depending on whether they are a Medicaid beneficiary (current or former) or represent a consumer advocacy or community-based organization. Finally, for the commenter asking for a specific youth member category, we will note that there are no Federal requirements or limitations concerning youth participation on the MAC or BAC, and this is in the State's discretion. The

State could select a youth member to fulfill a MAC or BAC member category as long as that person meets the requirements of that membership category.

We also want to clarify for commenters that Medicaid beneficiaries, their families, and caregivers have their own MAC category in the regulation, because the BAC is listed in the final regulation as one of the categories of MAC members at § 431.12(d)(1).

After consideration of public comments, for § 431.12(d), we are finalizing as proposed with:

- Language modifications to reflect the new name of the BAC;
- Replacing the language at § 431.12 (d)(1) to clarify the timeframe for States to reach 25 percent of MAC members coming from the BAC. The new sentence will now read, ''For the period from July 9, 2024 through July 9, 2025, 10 percent of the MAC members must come from the BAC; for the period from July 10, 2025 through July 10, 2026 20 percent of MAC members must come from the BAC; and thereafter, 25 percent of MAC members must come from the BAC.''
- Language modifications to § 431.12 (d)(2)(C) to replace ''managed care plan'' with ''MCOs, PIHPs, PAHPs, PCCM entities or PCCMs as defined in § 438.2''; and
- Adding the word ''non-voting'' to ex-officio members at the end of § 431.12 (d)(2)(D).

5. Beneficiary Advisory Council (§ 431.12(e))

The current requirements governing MCACs require the presence of beneficiaries in committee membership but do little else to ensure their contributions are considered or their voices heard. For example, in the current regulations of § 431.12, paragraph (e) Committee participation, only briefly mentions the participation of beneficiary members. The current requirement provides little guidance about how to approach the participation of beneficiary members on the committee.

We proposed to add new paragraph § 431.12(e). The proposed rule noted that in the new paragraph, (e) Beneficiary Advisory Council, States would be required to create a BAC, a dedicated Beneficiary Advisory Council, that will meet separately from the MAC on a regular basis and in advance of each MAC meeting.

Specifically, at new paragraph (e)(1), we proposed to require that the MAC members described in paragraph (d)(1) must also be members of the BAC. This requirement will facilitate the bi-directional communication essential to effective beneficiary engagement and allow for meaningful representation of diverse voices across the MAC and BAC. In paragraph (e)(2), we proposed to require that the BAC meetings occur in advance of each MAC meeting to ensure BAC member preparation for each MAC discussion. BAC meetings will also be subject to requirements in paragraph (f)(5), described later in this section, that the BAC meetings must occur virtually, in-person, or through a hybrid option to maximize member attendance. We plan to expound on best practices for engaging beneficiary participation in committees like the MAC in a future toolkit.

We proposed the addition of the BAC because we believe that it will result in providing States with increased access to beneficiary perspectives. The creation of a separate beneficiary-only advisory council also aligns with what we have learned from multiple interviews with State Medicaid agencies and other Medicaid interested parties (for example, Medicaid researchers, former Medicaid officials) conducted over the course of 2022 on the operation of the existing MCACs. These interested parties described the importance of having a comfortable, supportive, and trusting environment that facilitates beneficiaries' ability to speak freely on matters most important to them. Further, we believe that the crossover structure for the MAC and BAC proposed in § 431.12(d) allows for the beneficiary-only group to meet separately while still having a formal connection to the broader, over-arching MAC. It is important the MAC members can directly engage with the beneficiaries and hear from their experience. We noted earlier that some States may already have highly effective BAC-type councils operating as part of their Medicaid program. These existing councils may represent specific constituencies such as children with complex medical needs or older adults or may be participants receiving services under a specific waiver. In these instances, States may use these councils to satisfy the requirements of this rule, as long as the pre-existing BAC-type council membership includes the type of members required in the proposed paragraph of § 431.12(e).

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: We received many comments in support of the BAC as specified in the newly proposed § 431.12(e). Commenters noted that the BAC would provide a necessary and less-intimidating venue where Medicaid beneficiaries along with their families and caregivers can share first-person experiences and feedback to the State. While many commenters stated the BAC was needed and a welcomed improvement, a few commenters cautioned that States would need more than just to set up a BAC; they will also need to invest in creating opportunities for meaningful engagement.

Response: We agree that the BAC must be supported and used by the State in ways that create opportunities for BAC members to be actively involved and have their contributions considered.

Comment: A few commenters asked CMS to clarify how existing community groups or advisory councils could be used to satisfy the requirements of the BAC. One commenter asked if the BAC would meet a State's inclusive Community First Choice (CFC) requirements.

Response: The proposed new paragraph (e) requires that States form a BAC, but notes that the State can use an existing beneficiary group. Prior to rulemaking, CMS spoke to several States and researchers to understand how States were implementing the MCAC requirements. From the information gathered, we know that many States already have active Medicaid beneficiary groups that could fill these requirements and can function as their BACs. In these instances, it is not our intention to ask a State to create a second Medicaid beneficiary group to meet the BAC requirements. If a State wants to use an existing group to satisfy the BAC requirements, they will need to ensure that the existing committee's membership meets the membership requirements of the BAC and that the existing committee's bylaws are developed or updated, and published, to explain that the committee functions to meet the BAC requirements.

Regarding the ability to use the BAC to meet CFC requirements of the State, CMS notes in the ''Medicaid Program; State Plan Home and Community-Based Services, 5-Year Period for Waivers, Provider Payment Reassignment, and Home and Community-Based Setting Requirements for Community FirstChoice and Home and Community Based Services (HCBS) Waivers'' final rule,[42] that States may utilize existing

[42] ''Medicaid Program; State Plan Home and Community-Based Services, 5-Year Period for Waivers, Provider Payment Reassignment, and Home and Community-Based Setting Requirements for Community FirstChoice and Home and Community Based Services (HCBS) Waivers *https://www.medicaid.gov/sites/default/files/2019-12/cfc-final-settings.pdf*,'' (79 FR 2948, 2982).

advisory bodies in the implementation of CFC, as long as the statutory requirements as specified in § 441.715 for the Development and Implementation Council are met. We acknowledge the benefits of the Implementation Council coordinating with related interested parties councils and commissions and encourage States to do so. States may also choose to leverage these councils and/or include members from these councils to meet the requirements for CFC.

Comment: The majority of the comments received related to the newly proposed § 431.12(e) were commenters providing recommendations on which groups of people should also be required to be included as BAC members. We received a range of suggestions such as: HCBS beneficiaries, individuals with specific chronic diseases and disabilities, individuals using long term care services and supports (LTSS), individuals who are receiving perinatal health services, individuals who have lived experience with behavioral health conditions, and Medicaid beneficiaries who are deaf, hard of hearing, or deaf blind. Commenters also requested that the BAC members represent a cross-section of Medicaid beneficiaries that can also be regarded as demographically and geographically diverse.

Response: We agree with commenters that the States should select the types of BAC members that can provide them with representative views of the experience of Medicaid beneficiaries in their State. The regulatory language provides States with the flexibility to make those determinations based on the characteristics of their individual State Medicaid program. It can be challenging to find beneficiaries available to serve on a council, particularly if the requirements of membership are very specific. By keeping our regulations broad for what types of beneficiaries should be selected for the BAC, we seek to ensure States are able to recruit members with fewer challenges.

Comment: A few commenters asked for CMS to clarify or further define a few terms used in newly proposed § 431.12(e). Specifically, a couple of commenters asked CMS to clarify the phrase ''individuals with direct care experience supporting Medicaid beneficiaries.'' Another commenter asked if CMS could define whether the term ''caregivers'' included paid caregivers.

Response: In the proposed and in this final rule, we have described individuals with direct experience supporting Medicaid beneficiaries as ''family members or caregivers of those enrolled in Medicaid.'' In the proposed rule's preamble,[43] we state that caregivers can be paid or unpaid caregivers. To better clarify these definitions, we are adding the words ''paid or unpaid'' before the word caregiver to the proposed regulatory language at new paragraph § 431.12(e) so that the phrase reads, ''. . . individuals who are currently or have been Medicaid beneficiaries and individuals with direct experience supporting Medicaid beneficiaries (family members and paid or unpaid caregivers of those enrolled in Medicaid), to advise the State. . . .''

Comment: As noted in an earlier section, several commenters asked CMS to clarify the role of the BAC, citing that in the proposals, the language varies from ''advisory'' to ''providing feedback.''

Response: The primary role of the BAC is to advise the State Medicaid agency on policy development and on matters related to the effective administration of the Medicaid program. To better clarify the BAC's advisory role, we are removing from the proposed regulatory language at new paragraph § 431.12(e) the words and to ''provide input to.'' The phrase now reads ''. . . to advise the State regarding their experience with the Medicaid program, on matters of concern related to policy development and matters related to the effective administration of the Medicaid program.''

Comment: A few commenters shared suggestions related to the BAC meetings described in new paragraph § 431.12(e)(2). One commenter asked CMS to encourage States to hold BAC and MAC meetings on the same day, with the BAC meeting occurring first in an effort to minimize travel. Other commenters asked CMS for additional meetings for the BAC to be required to attend (for example, meetings with the State Medicaid Director and meetings with CMS regional administrators).

Response: The meeting structure specified in the BAC proposal is focused on the interplay between the BAC and MAC meetings. In new paragraph § 431.12(e)(2), we are requiring that the BAC meetings be held separate from the MAC and in advance of the MAC, so that the BAC members have the opportunity to prepare and hold an internal discussion among themselves. Holding MAC and BAC meetings in the same day could be in line with the meeting requirements. States may wish to hold additional BAC meetings with other parties, as needed.

Comment: Some commenters asked CMS to create a Federal-level BAC to ensure consistency across States.

Response: A Federal-level BAC would not further the goal of providing States with beneficiary input into their programs because it would not focus on the particular features of each individual State's Medicaid program or beneficiary and provider communities. Such a group is beyond the scope of this rulemaking.

After consideration of public comments, we are finalizing new § 431.12(e) as proposed, with changes to:

- Language modifications to reflect the new name of the BAC;
- Adding language that caregivers on the BAC can be ''paid or unpaid.'' Section 431.12 (e) will now state, ''. . . individuals who are currently or have been Medicaid beneficiaries and individuals with direct experience supporting Medicaid beneficiaries (family members and paid or unpaid caregivers of those enrolled in Medicaid) . . . .''
- Deleting the phrase ''. . . and provide input to . . . .'' Section 431.12(e) will now state ''. . . to advise the State regarding their experience with the Medicaid program, on matters of concern related to policy development and matters related to the effective administration of the Medicaid program.''

6. MAC and BAC Administration (§ 431.12(f))

We proposed to add new paragraph § 431.12(f), MAC and BAC administration, to provide an administrative framework for the MAC and BAC that ensures transparency and a meaningful feedback loop to the public and among the members of the committee and council.[44]

Specifically, in new paragraph (f)(1), we proposed that State agencies would be required to develop and post publicly on their website bylaws for governance of the MAC and BAC, current lists of MAC and BAC memberships, and past meeting minutes for both the committee and council. In paragraph (f)(2), we proposed that State agencies would be required to develop and post publicly a process for MAC and BAC member recruitment and selection along with a process for the selection of MAC and BAC leadership. In paragraph (f)(3), we proposed that State agencies would be required to develop, publicly post, and implement a regular meeting schedule for the MAC and BAC. The proposed

[43] ''Medicaid Program; Ensuring Access to Medicaid Services,'' (88 FR 27960, 27968).

[44] ''Medicaid Program; Ensuring Access to Medicaid Services,'' (88 FR 27960, 27920).

requirement specified that the MAC and BAC must each meet at least once per quarter and hold off-cycle meetings as needed. In paragraph (f)(4), we proposed requiring that that at least two MAC meetings per year must be opened to the public. For the MAC meetings that are open to the public, the meeting agenda would be required to include a dedicated time for public comment to be heard by the MAC. None of the BAC meetings were required to be open to the public unless the State's BAC members decided otherwise. We also proposed that the State ensure that the public is provided adequate notice of the date, location, and time of each public MAC meeting and any public BAC meeting at least 30 calendar days in advance. We solicited comment on this approach. In paragraph (f)(5), we proposed that States would be required to offer in-person, virtual, and hybrid attendance options including, at a minimum telephone dial-in options at the MAC and BAC meetings for its members to maximize member participation at MAC and BAC meetings. If the MAC or BAC meeting was deemed open to the public, then the State must offer at a minimum a telephone dial-in option for members of the public.

With respect to in-person meetings, we proposed in paragraph (f)(6) that States would be required to ensure that meeting times and locations for MAC and BAC meetings were selected to maximize participant attendance, which may vary by meeting. For example, States may determine, by consulting with their MAC and BAC members, that holding meetings in various locations throughout the State may result in better attendance. In addition, States may ask the committee and council members about which times and days may be more favorable than others and hold meetings at those times accordingly. We also proposed that States use the publicly posted meeting minutes, which lists attendance by members, as a way to gauge which meeting times and locations garner maximum participate attendance.

Finally, in paragraph (f)(7), we proposed that State agencies were required to facilitate participation of beneficiaries by ensuring that meetings are accessible to people with disabilities, that reasonable modifications are provided when necessary to ensure access and enable meaningful participation, that communication with individuals with disabilities is as effective as with others, that reasonable steps are taken to provide meaningful access to individuals with Limited English Proficiency, and that meetings comply with the requirements at § 435.905(b) and applicable regulations implementing the ADA, section 504 of the Rehabilitation Act, and section 1557 of the Affordable Care Act at 28 CFR part 35 and 45 CFR parts 84 and 92.

Interested parties' feedback and recent reports [45] [46] published on meaningful beneficiary engagement illuminate the need for more transparent and standardized processes across States to drive participation from key interested parties and to facilitate the opportunity for participation from a diverse set of members and the community. Further, we believe that in order for the State to comply with the language of section 1902(a)(4)(B) of the Act, which requires a State plan to meaningfully engage Medicaid beneficiaries and other low-income people in the administration of the plan, it needs to be responsive to the needs of its beneficiaries. To be responsive to the needs of its beneficiaries, the State needs to be able to gather feedback from a variety of people that touch the Medicaid program, and the MAC and BAC will serve as a vehicle through which States can obtain this feedback.

We acknowledge that interested parties may face a range of technological and internet accessibility limitations, and proposed requiring that, at a minimum, States provide a telephone dial-in option for MAC and BAC meetings. While we understand that in-person interaction can sometimes assist in building trusted relationships, we also recognize that accommodations for members and the public to participate virtually is important, particularly since the beginning of the COVID–19 pandemic. We solicited comment on ways to best strike this balance.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: We received many comments expressing broad support of § 431.12(f)(1) proposals requiring States to post publicly information on the MAC and BAC (bylaws, meeting minutes). The commenters noted that transparency plays an important role in promoting multi-directional accountability and could also help ensure the success of the MAC and BAC. While commenters were supportive, they also recommended that States consider their Medicaid communities' communication access needs, including cultural competency and linguistic needs, when posting these materials to their websites.

Response: We agree with commenters that States should take steps to ensure that any publicly posted materials are accessible to the various interested parties that comprise their Medicaid community.

Comment: We received a few comments asking us to reconsider the requirement of having States to post their BAC membership list on their websites. Several commenters suggested that States should give BAC members the choice of being publicly identified.

Response: We thank commenters for raising this issue, as we want to avoid any situation where a Medicaid beneficiary, family member or caregiver, does not want to be publicly identified. In response to these comments, we are updating and finalizing the proposed regulations to permit BAC members to choose whether to be publicly identified in materials such as membership lists and meeting minutes. If BAC members choose not to be identified in public materials, they can be referred to as BAC member 1, BAC member 2 and so on. Specifically, we are updating and finalizing the proposed language under new paragraph § 431.12(f)(1) to state, ''Develop and publish by posting publicly on its website, bylaws for governance of the MAC and BAC along with a current list of members . . . States will give BAC members the option to include their names on the membership list and meeting minutes that will be posted publicly.''

Comment: We received comments supporting the § 431.12(f)(2) requirement of having States publicly post their process for recruitment and selection. Commenters emphasized that these processes must be inclusive and reflect the diversity of their State's Medicaid community and beneficiaries. Other commenters asked for CMS to provide guidance or best practices on how to recruit members, as well as marketing best practices and the preferred format for print and audio materials.

Response: We agree that States should develop recruitment strategies that will result in identifying members that are

representative of a State's Medicaid community and beneficiaries. However, we have kept the requirements flexible to be cognizant of the fact that States can experience challenges in recruiting Medicaid beneficiaries to serve on the BAC. We also encourage States to examine best practices from entities that specialize in marketing, recruitment, and the accessibility of published materials as outlined on *Digital.gov*.[47]

Comment: We received some comments asking that States have a process for identifying conflicts of interest when making member selections.

Response: We agree that avoiding conflicts of interest is important, and we encourage States to establish conflict of interest policies, to be documented in the MAC/BAC bylaws or other organizing documents that govern the membership and operations of the MAC/BAC, and to ensure these policies are respected when selecting MAC/BAC members. Since MAC and BAC membership represent a variety of backgrounds and interest relevant to Medicaid, we also believe that building in a time for conflict-of-interest disclosure into each meeting's agenda is important. Specifically, under new § 431.12(f)(3) we are now adding that each MAC and BAC meeting agenda should have time set aside for members to disclose any matters that are not incompatible with their participation on the MAC and/or BAC under the State's conflict of interest policy, but which nevertheless could give rise to a perceived or actual conflict of interest and therefore should be disclosed. We also believe our requirements for MAC and BAC meetings, including the posting of meeting minutes and membership lists, will provide the public and States with the transparency needed to know if a conflict of interest (perceived, apparent, or actual) occurred during a meeting.

Comment: We received comments regarding the requirement in § 431.12(f)(3) for both the MAC and BAC to each meet at a minimum of once quarterly. Commenters noted the number of meetings could pose a burden to the States and members. Several commenters suggested that CMS allow Medicaid agencies to hold meetings in a way that matches their administrative resources and goals.

Response: We selected a quarterly meeting versus a monthly meeting schedule for the MAC and BAC because we believe it will provide States with more flexibility in determining when to meet. For example, rather than having the MAC and BAC members meeting every month (12 times annually), we reduce the time commitment for members by having the State select which month per quarter works best for the MAC and BAC members (4 times annually). Further, the goal of the MAC and BAC is to advise the State on matters related to policy development and to the effective administration of the Medicaid program. We believe that holding a quarterly meeting, as a minimum, allows States to integrate their Medicaid community's voice into the effective administration of the Medicaid program in a way that is timely and meaningful. Further, we believe that holding quarterly meetings would result in the least amount of burden for States. Holding more meetings per year would likely result in additional strain of time and resources for the State and its members. Holding meetings less frequently than quarterly would not assist the timely integration of the community voice into the administration of the Medicaid program. We also strive to further reduce the burden to MAC and BAC members by structuring the meeting requirements in a way that allows States to select non-traditional meeting times and to use different telecommunications options (for example, online meetings) for its meetings which would eliminate members' commuting times to meetings.

Comment: We received several comments about new § 431.12(f)(4) in support of the requirement that each MAC meeting must have a public comment period, citing the importance of all interested parties to be able to share feedback. Additionally, a few commenters asked that States also have a process to accept input from interested parties while developing MAC agendas.

Response: States will have the flexibility to develop the MAC agendas in accordance with their own processes and procedures. We encourage commenters to work with their State regarding those processes.

Comment: A couple of commenters suggested that all MAC and BAC meetings be open to the public.

Response: We place great importance on meeting transparency, but we also believe that States may need the flexibility to keep closed some of their meetings each year. The proposed requirement in § 431.12(f)(4) related to BAC meetings notes that BAC meetings are not required to be open to the public unless the State and the BAC members decide otherwise. It is important for States to create a dedicated space for this group of Medicaid beneficiaries and people with lived Medicaid experience to share their interactions with and perceptions of the Medicaid program. Having a comfortable, supportive, and trusting environment will encourage members to speak freely on matters most important to them. We note that in order to support overall transparency, we proposed that the meeting minutes of the BAC meetings be required to be posted online and MAC members who are also on the BAC will share input from the BAC with the broader MAC.

Comment: We received comments in response to our request for comments about in-person and virtual attendance options for the MAC and BAC meetings. The comments emphasized the need for States to offer both in-person and virtual attendance options. One commenter questioned if the proposed requirement meant that offering an in-person attendance option was a requirement for each meeting.

Response: We thank commenters for responding to our request for comments. In response to those comments, we are updating new § 431.12(f)(5) to list the different types of meeting options. Specifically, § 431.12(f)(5) states, ''Offer a rotating, variety of meeting attendance options. These meeting options are: all in-person attendance, all virtual attendance, and hybrid (in-person and virtual) attendance options. Regardless of which attendance type of meeting it is, States are required to always have, a minimum, telephone dial-in option at the MAC and BAC meetings for its members.'' For the commenter who questioned if States had to always provide in-person attendance options, we are clarifying that if the meeting is designated as a virtual-only meeting, States do not need to have in-person attendance.

Comment: One commenter suggested we add a requirement for meetings to be held both during and after work hours.

Response: In new § 431.12(f)(6), we require that States ensure that the meeting times selected for MAC and BAC meetings maximize member attendance. We encourage States to consider working hours and the impact on their MAC and BAC membership, as appropriate.

Comment: Several commenters expressed broad support for the proposal to ensure that MAC and BAC meetings are accessible by people with disabilities and Limited English Proficiency (LEP). Commenters also provided suggestions to better ensure meaningful participation, such as making sure States have available: interpreter services, American Sign Language translation services, closed captioning for virtual meeting, and

[47] *https://digital.gov/resources/an-introduction-to-accessibility/?dg.*

making materials available in plain language.

Response: As reflected in § 431.12(f)(7), we agree that MAC and BAC members with disabilities and LEP should have access to the types of supports needed to meaningfully engage in meetings. We have updated the relevant Federal requirements for States to meet in this final rule.

Comment: One commenter requested that CMS clarify what is meant by the phrase, ''that reasonable steps are taken to provide meaningful access to individuals with Limited English Proficiency . . . .''

Response: Title VI of the Civil Rights Act requires recipients of Federal financial assistance, including State Medicaid programs, to take reasonable steps to provide meaningful access to their programs or activities for individuals with Limited English Proficiency.[48] Section 1557 of the Affordable Care Act similarly requires recipients of Federal financial assistance to take reasonable steps to provide meaningful access to their health programs or activities for individuals with Limited English Proficiency, and the implementing regulation requires the provision of interpreting services and translations when it is a reasonable step to provide meaningful access.[49]

After consideration of public comments, we are finalizing § 431.12(f) as proposed with:

- Language modifications to reflect the new name of the BAC.
- Updates to § 431.12(f)(1) to now state, ''States will also post publicly the past meeting minutes of the MAC and BAC meetings, including a list of meeting attendees. States will give BAC members the option to include their names in the membership list and meeting minutes that will be posted publicly.''
- Updates to § 431.12(f)(3) to state, ''Each MAC and BAC meeting agenda must include a time for members and the public (if applicable) to disclose conflicts of interest.''
- Updates to § 431.12(f)(4) to move one sentence up to be the new second sentence and the deletion of a repetitive sentence so that third sentence now reads as, ''The public must be adequately notified of the date, location, and time of each public MAC meeting and any public BAC meeting at least 30 calendar days in advance of the date of the meeting.''
- Updates to § 431.12(f)(5) to state, ''Offer a rotating, variety of meeting attendance options. These meeting options are: all in-person attendance, all virtual attendance, and hybrid (in-person and virtual) attendance options. Regardless of which attendance type of meeting it is, States are required to always have at a minimum, telephone dial-in option at the MAC and BAC meetings for its members.''
- Updates to paragraph (f)(7) to reflect additional Federal requirements (adding reference to the Title VI of the Civil Rights Act of 1964). The sentence will now state, ''. . . that reasonable steps are taken to provide meaningful access to individuals with Limited English Proficiency, and that meetings comply with the requirements at § 435.905(b) of this chapter and applicable regulations implementing the ADA, Title VI of the Civil Rights Act of 1964, section 504 of the Rehabilitation Act, and section 1557 of the Affordable Care Act at 28 CFR part 35 and 45 CFR parts 80, 84 and 92, respectively.''

7. MAC and BAC Participation and Scope (§ 431.12(g))

We proposed to replace former paragraph (e) Committee participation, with new paragraph (g) MAC and BAC Participation and Scope. The original paragraph (e), Committee participation, required that the MCAC must have opportunity for participation in policy development and program administration, including furthering the participation of beneficiary members in the agency program.

In new paragraph § 431.12(g), we proposed and are finalizing the expansion of the types of topics which provide the MAC and BAC should advise to the State. The list of topics we proposed included at a minimum topics related to: (1) addition and changes to services; (2) coordination of care; (3) quality of services; (4) eligibility, enrollment, and renewal processes; (5) beneficiary and provider communications by State Medicaid agency and Medicaid managed care plans; (6) cultural competency, language access, health equity and disparities and biases in the Medicaid program; or (7) other issues that impact the provision or outcomes of health and medical services in the Medicaid program as identified by the MAC, BAC or State.

In researching States' MCACs, we know that some already use the MCACs advice on a variety of topics relating to the effective and efficient administration of the Medicaid program. With these changes, we aim to strike a balance that reflects some States' current practices without putting strict limitations on specific topics for discussion in a manner that would constrict flexibility for all States. Broadening the scope of the topics that the MAC and BAC discuss will benefit the State by giving greater insight into how it is currently delivering coverage and care for its beneficiaries and thereby assist in identifying ways to improve the way the Medicaid program is administered.

The State will use this engagement with the MAC and BAC to ensure that beneficiaries' and other interested parties' voices are considered and to allow the opportunity to adjust course based on the advice provided by the committee and council members. The State will base topics of discussion on State need and will determine the topics in collaboration with the MAC and BAC to address matters related to policy development and matters related to the effective administration of the Medicaid program. In finalizing the proposals, we reviewed the wording for this requirement closer. When listing the types of topics on which the MAC and BAC should advise to the State, we used the term ''or''. However, using the term ''or'' does not represent the intention behind the regulation. The MAC or BAC should not be limited to advising the State on one topic at a time. Our intent is that the MAC and BAC, in collaboration with the State, should be able to provide recommendations on all or any of the subset of the topics listed. We clarify this intention in this final rule by making a technical change to replace the word ''and'' with the word ''or'' in the list of the types of topics on which the MAC and BAC should advise the State.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: As noted in other sections, we received a few comments asking CMS to clarify the advisory authority of the MAC and BAC, noting that language fluctuated between advisory and experiential feedback.

Response: As discussed earlier with respect to § 431.12(a), the role of the MAC and BAC is to advise the State Medicaid agency. In reviewing the language proposed in § 431.12(g), we see similar opportunities where CMS can refine its wording to make clear the advisory roles that the MAC and BAC hold. The primary role of the MAC and BAC is to advise the State Medicaid agency on policy development and on

[48] *Lau* v. *Nichols,* 414 U.S. 563, 566 (1974) (interpreting Title VI and its implementing regulations to require a school district with students of Chinese origin with limited English proficiency to take affirmative steps to provide the students with a meaningful opportunity to participate in federally funded educational programs).

[49] 45 CFR 92.101; *see alsohttps://www.hhs.gov/civil-rights/for-providers/laws-regulations-guidance/guidance-federal-financial-assistance-title-vi/index.html.*

matters related to the effective administration of the Medicaid program. By replacing the wording in § 431.12(g) from ''provide recommendations'' to ''advise'' we are being consistent with the wording used in similar updates made in this final rule and also making clear that our intention is for the MAC and BAC to serve in an advisory capacity to the State.

Comment: All commenters who addressed § 431.12(g) supported the change in the MAC and BAC scope. The majority of those commenters also suggested additional topics for which the MAC and BAC should advise the State. These topics include getting feedback on Secret Shopper studies, external quality organization reports, consumer facing materials, enrollment materials, implementation of integrated programs for dually eligible individuals, rate reviews, and annual medical loss ratio report. We also received a comment noting the importance of access to services with a request that it be added it to the list of topics.

Response: We appreciate the support to the proposed changes. We clarify that the categories of topics we named in this section were selected as examples because they represented far-reaching parameters related to the effective administration of the Medicaid program. We believe that the proposal we are finalizing in this final rule allows for a broad interpretation of the topics that are within scope while leaving the ultimate decision on which topics the MAC and BAC will advise on to the MAC, BAC, and State. We encourage commenters to work with their States to define the topics that will be discussed at the MAC and BAC. Finally, we agree that specifically mentioning access to services is important, as it represents a key topic area of this regulation. Therefore, we are redesignating the proposed § 431.12(g)(7) as (g)(8) and adding a new § 431.12(g)(7), access to services.

After consideration of public comments, we are finalizing § 431.12(g) as proposed with:

- Language modifications to reflect the new name of the BAC.
- Replacing the wording at § 431.12(g) ''to participate in and provide recommendations'' with ''advise'' so as to clarify the advisory role of the MAC and BAC.
- Conforming edits to replacing the term State Medicaid Director at § 431.12(g) with the term, ''director of the single State Agency for the Medicaid program.''

Language modifications to § 431.12(g)(5) to replace ''managed care plan'' with ''MCOs, PIHPs, PAHPs, PCCM entities or PCCMs as defined in § 438.2.''

- Redesignating and finalizing proposed § 431.12(g)(7) as (g)(8) and adding a new § 431.12(g)(7), ''access to services.''
- Replacing the word ''or'' with the word ''and'' after 431.12(g)(7), access to services.

8. State Agency Staff Assistance, Participation, and Financial Help (§ 431.12(h))

Under § 431.12 of the current regulation, paragraph (f) Committee staff assistance and financial help, the State was required to provide the committee with—(1) Staff assistance from the agency and independent technical assistance as needed to enable it to make effective recommendations; and (2) Financial arrangements, if necessary, to make possible the participation of beneficiary members.

In the proposed rule, we proposed to redesignate previous paragraph § 431.12(f) to new paragraph (h) and expand upon existing State responsibilities for managing the MAC and BAC regarding staff assistance, participation, and financial support. The changes we proposed and are finalizing to new paragraph (h) are for the State to provide staff to support planning and execution of the MAC and the BAC to include: (1) Recruitment of MAC and BAC members; (2) Planning and execution of all MAC and BAC meetings; and (3) The provision of appropriate support and preparation (providing research or other information needed) to the MAC and BAC members who are Medicaid beneficiaries to ensure meaningful participation. These tasks include: (i) Providing staff whose responsibilities are to facilitate MAC and BAC member engagement; (ii) Providing financial support, if necessary, to facilitate Medicaid beneficiary engagement in the MAC and the BAC; and (iii) Attendance by at least one staff member from the State agency's executive staff at all MAC and BAC meetings.

The overlap of the current regulation with our proposed changes will mean much of the work to implement is already occurring. We are not changing the existing financial support requirements. We understand from States and other interested parties that many States already provide staffing and financial support to their MCACs in ways that meet or go beyond what we require through our updated requirements. We believe that expanding upon the current standards regarding State responsibility for planning and executing the functions of the MAC and BAC will ensure consistent and ongoing standards to further beneficiaries' and other interested parties' engagement. For example, we know that when any kind of interested parties council meets, all members of that council need to fully understand the topics being discussed in order to meaningfully engage in that discussion. This is particularly relevant when the topics of discussion are complex or based in specific terminology as Medicaid related issues often can be.

We believe that when States provide their MACs and BACs with additional staffing support that can explain, provide background materials, and meet with the members in preparation for the larger discussions, the members have a greater chance to provide more meaningful feedback and be adequately prepared to engage in these discussions. The proposed changes to the existing requirements seek to create environments that support meaningful engagement by the members of the MAC and the BAC, whose feedback can then be used by States to support the efficient administration of their Medicaid program. We anticipate providing additional guidance on model practices, recruitment strategies, and ways to facilitate beneficiary participation, and we solicited comments on effective strategies to ensure meaningful interested parties' engagement that in turn can facilitate full beneficiary participation.

Further, the proposed changes to the requirement for beneficiary support, including financial support, are similar to the original MCAC requirements. For example, using dedicated staff to support beneficiary attendance at both the MAC and BAC meetings and providing financial assistance to facilitate meeting attendance by beneficiary members are similar to the current regulations. Staff may support beneficiary attendance through outreach to the Medicaid beneficiary MAC and BAC members throughout the membership period to provide information and answer questions; identify barriers and supports needed to facilitate attendance at MAC and BAC meetings; and facilitate access to those supports.

In the proposed rule, we proposed to add a new requirement that at least one member of the State agency's executive staff attend all MAC and BAC meetings to provide an opportunity for beneficiaries and representatives of the State's leadership to interact directly.

We received public comments on these proposals. The following is a

summary of the comments we received and our responses.

Comment: Many commenters supported the modifications proposed at § 431.12(h), but they emphasized the importance of requiring States to appropriately compensate members that are beneficiaries for their participation. The comments noted that there should be financial compensation to beneficiary members for the time spent on BAC activities, as well as financial reimbursement for any travel, lodging, meals, and childcare associated with their participation in the BAC and/or MAC. Commenters also asked CMS to exclude the value of any financial compensation paid to members for their participation in the MAC and/or BAC from consideration in determining eligibility for Medicaid. A few commenters expressed that the term ''if necessary'' should be dropped from the regulatory language, noting that States should offer reimbursement to all participating Medicaid beneficiaries.

Response: Under the policies we are finalizing at § 431.12(h)(3)(ii), States will have the ability to reimburse all beneficiaries to facilitate Medicaid beneficiary engagement in the MAC and the BAC. This can include, at the State's discretion, reimbursement for travel, lodging, meals, and childcare. We did not remove the words ''if necessary'' to account for Medicaid beneficiaries who may not need financial support to engage in the MAC and BAC activities.

We are also clarifying the circumstances in which compensation provided to beneficiary members would be considered income for Medicaid eligibility purposes. For both MAGI and non-MAGI methodologies, reimbursements (such as for meals eaten away from home, mileage, and lodging) do not count as income, but other compensation (such as a daily stipend) for participating in an advisory council is countable income under applicable financial methodologies. For non-MAGI methodologies, the State could submit a SPA to CMS to disregard such stipends or other countable income under section 1902(r)(2) of the Act. Other means tested programs may have other rules for counting income, and we encourage States to assess those rules and advise Medicaid beneficiary members of the MAC and BAC accordingly.

Comment: Many commenters in support of the proposed requirements in § 431.12(h)(3) noted how critical it will be for States to provide appropriate technical support and preparation to MAC and BAC members who are also Medicaid beneficiaries in order to ensure their full and active participation in discussions. Commenters shared a variety of suggestions for the type of support that can help prepare these members to feel comfortable fully and meaningfully engaging in the process. The suggestions made by the commenters included specific areas to be addressed in the trainings and materials that the State agency staff provides, such as providing background materials in plain language, implementing techniques to empower members to participate successfully and equally in MAC and BAC discussions, supporting health literacy needs, and training members on digital access to meetings/technology. Additionally, some commenters suggested that States be required to provide MAC and BAC members with a mentor and training on the Medicaid program throughout the length of their membership term. Several commenters suggested that States be required to select an independent (outside of the Medicaid agency) policy advisor or technical expert to provide BAC members with support in understanding Medicaid topics and policy.

Response: We appreciate the support for our proposals and understand the interest in ensuring support for beneficiary members of the MAC and BAC. The underpinning of meaningful member engagement is that members have a substantial understanding of the topics to be discussed. We agree with commenters' suggestions in general, but given the differences in States' structures and resources, we believe there is a benefit in leaving the decision of how best to provide training and support to the MAC and BAC members to the States. As we noted earlier in the preamble, CMS will post publicly a MAC best practices toolkit.

Comment: We received a couple of comments asking CMS to clarify the role of the State Medicaid agency staff attending the MAC and BAC meetings.

Response: The purpose of requiring a member from the State Medicaid agency's executive staff to attend MAC and BAC meetings is to provide an opportunity for beneficiaries and representatives of the State's Medicaid agency leadership to interact directly. The role of the executive staff person is not to be a MAC/BAC co-chair, nor to facilitate these meetings. The executive staff person's role is to hear directly from and interact with Medicaid beneficiaries and with the wider Medicaid community in that State. The person attending generally will be expected to share take-aways from these meetings with State's Medicaid agency leadership.

After consideration of public comments, we are finalizing § 431.12(h) as proposed with:

- Language modifications to reflect the new name of the BAC.
- Conforming edits to replace the word ''State Agency'' with the ''single State agency for the Medicaid program'' in several places across § 431.12(h).

Language modifications to § 431.12(h)(3) to state, ''. . . MAC and BAC members who are Medicaid beneficiaries . . .''

9. Annual Report (§ 431.12(i)).

In the spirit of transparency and to ensure compliance with the updated regulations, we added in the proposed rule [50] and are finalizing new paragraph § 431.12(i) to require that the MAC, with support from the State and in accordance with the requirements updated at this section, must submit an annual report to the State. The State must review the report and include responses to the recommended actions. The State must also: (1) provide MAC members with final review of the report; (2) ensure that the annual report of the MAC includes a section describing the activities, topics discussed, and recommendations of the BAC, as well as the State's responses to the recommendations; and (3) post the report to the State's website. In the proposed rule, we noted that States had one year to implement the annual report requirement and we sought comment on that timeline. In finalizing the proposals, we reviewed these requirements closer. It is our intention that the MAC is required to submit an annual report to the State. We clarify this intention in this final rule by making a technical change to add the word ''must'' which was unintentionally omitted in the proposed rule.

The proposed requirements of this paragraph seek to ensure transparency while also facilitating a feedback loop and view into the impact of the MAC and BAC's recommendations. We solicited comment on additional ways to ensure that the State can create a feedback loop with the MAC and BAC.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposed requirements in new § 431.12(i), of having States submit an annual report that describes activities of the MAC and BAC, including the topics discussed and their

[50] ''Medicaid Program; Ensuring Access to Medicaid Services,'' (88 FR 27960, 27971).

recommendations. Commenters noted that requiring these reports is critical to building trust as well as ensuring transparency and accountability among the State, MAC, and BAC members. In addition, several commenters agreed with the annual report requirement, but they also wanted CMS to stipulate the contents of the annual report. One commenter suggested that States' annual reports include results from anonymous surveys of MAC and BAC members indicating whether these members felt they have been listened to and if they felt the State used members' feedback.

Response: We appreciate the support for the proposed regulations. We carefully considered the benefits of national uniformity of the contents of an annual report. However, due to the differences in how States may approach setting priorities, creating their MAC and BACs, and the varying level of resources, we believe that States should have the flexibility to adopt an approach to the content of the annual report that works best within their State.

Comment: A few commenters asked CMS to either further require that the BAC issue its own set of reports and recommendations independently or as part of the MAC report.

Response: While we fully understand and agree with the importance of the BAC and ensuring that their voices are heard, we believe that requiring States to create a second BAC-only annual report would add administrative burden. The proposed regulatory language requires that States create an annual report that reflects the activities of both the MAC and BAC. Since the annual report is required to contain the priorities and activities of both the MAC and BAC, there is no need for a separate BAC-only report.

Comment: There were a handful of commenters that wanted CMS to reconsider the report requirement because they thought the resource burden was too great to develop an annual report, the reporting requirement lacked meaning, or they wanted CMS to allow Medicaid agencies to set their own cadence to the reports.

Response: We understand the concerns of the commenters, but we have written the annual report requirement broadly to ensure maximal flexibility for States to meet this requirement. It is critical that States document the work and key outcomes of the MAC and BAC. Further, we believe the annual report requirement supports the implementation of the principles of bi-directional feedback, transparency, and accountability on the part of the State, MAC, and BAC. In response to comments about burden to States, we have adjusted the proposed applicability date for this requirement of 1 year and are now finalizing it as, States have 2 years from July 9, 2024 to finalize the first annual MAC report. After the report has been finalized, States will have 30 days to post the annual report.

Comment: A few commenters asked CMS to require States to conduct additional activities related to monitoring the MAC and BAC, in addition to the annual report. The commenters' suggestions included: implementing a corrective action plan for States that failed to meet the MAC requirements; requiring process evaluations on the experiences of the MAC and BAC members be conducted and the findings be made public; and requiring States to engage in program improvement activities in response to the recommendations made by the MAC that appear in the annual report.

Response: We carefully considered the benefits of requiring additional studies and activities to be captured by States and included in the annual report. However, we want to keep the parameters of our expectations on the content of a State's annual report to be as broad as possible to give each State the ability to create a report that will help them best document the interested parties' engagement with the MAC and the BAC and serve as a tool for helping advance programmatic goals over time.

Comment: A couple of commenters requested CMS publish the annual reports on its website.

Response: We thank the commenters for this suggestion. Currently, we believe each respective State Medicaid agency's website to be the most appropriate place for the annual reports to be published. However, we will consider whether the needs of interested parties would be better served with CMS collecting and publishing annual reports as well.

Comment: A few commenters inquired about how CMS would provide oversight on compliance with activities such as the annual report and number of meetings requirements.

Response: We thank commenters for these questions. We are currently assessing the most effective strategies with which to provide oversight. As these requirements implement State plan requirements in section 1902(a)(4) and (a)(19) of the Act, noncompliance with the provisions of this final rule could result in a State plan compliance action in accordance with § 430.35.

After consideration of public comments, we are finalizing § 431.12(i) as proposed with:

- Language modifications to reflect the new name of the BAC.
- Additional sentences at the end of § 431.12(i)(3), ''States have 2 years from July 9, 2024 to finalize the first annual MAC report. After the report has been finalized, States will have 30 days to post the annual report.''

10. Federal Financial Participation (§ 431.12(j))

In the current regulation, paragraph (g) Federal financial participation, noted that FFP is available at 50 percent in expenditures for the committee's activities. As noted in the proposed rule, we are not making changes to, and thus are maintaining, the current regulatory language on FFP from previous paragraph (g) to support committee activities, to appear in new paragraph (j) with conforming edits for the new MAC and BAC names.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: We received a few comments about the newly proposed § 431.12(j), encouraging CMS to offer a higher FFP than 50 percent. One commenter suggested that 90 percent FFP would be ideal.

Response: For Medicaid, all States receive a statutory 50 percent Federal matching rate for general administrative activities. States may also receive higher Federal matching rates for certain administrative activities, such as design, development, installation, and operation of certain qualifying systems. Federal matching rates are established by Congress, and CMS does not have the authority to change or increase them.

After consideration of public comments, we are finalizing new paragraph § 431.12(j) as proposed with:

- Language modifications to reflect the new name of the BAC.

11. Applicability Dates § 431.12(k)

For this final rule, we are adding new paragraph § 431.12 (k) *Applicability dates.* In the proposed rule, we noted that the requirements of § 431.12 would be effective 60 days after the publication date of the final rule, although we established different applicability dates by which States must implement certain provisions. We then solicited comment on whether 1 year was too much or not enough time for States to implement the updates in this regulation in an effective manner. We understand that States may need to modify their existing MCACs to reflect the finalized requirements for MACs and may also need to create the BAC and recruit members to participate

if they do not already have a similar entity already in place.

We received public comments on proposed implementation timeline. The following is a summary of the comments we received and our responses.

Comment: We received several comments related to the implementation timeframes specified in the MAC and BAC provisions of the proposed rule. The majority of comments fell into two categories: commenters who noted that 1 year should be sufficient to implement the required changes; and commenters who suggested that CMS provide at least 2 years for implementation. Other commenters suggested that CMS consider a graduated approach that would allow States to demonstrate compliance with the minimum 25 percent BAC crossover requirement over a period of time. The commenters who requested additional time shared concerns about States' many other ongoing priorities, workforce shortages, the amount of time and resources it would take to set up the MAC and BAC, and having enough time to submit budget requests to their legislature so they can get the resources to support the required activities.

Response: We have carefully considered the comments received and acknowledge that additional time for implementation of the requirements could be beneficial for States given competing priorities, budgeting and other challenges States may encounter. Additionally, we weighed the request for a graduated approach to demonstrate compliance with a 25 percent BAC crossover requirement, and we agree that a graduated approach will allow States a longer ramp-up time to modify their current MCACs, as well as to set up the BAC and recruit members to participate.

In the proposed rule, we proposed that States have 1 year from the effective date of the final rule to recruit members, set up their MAC and BAC, hold meetings, and submit their first annual report. Based on public comment, we understand that 1 year is not enough time to complete all of these activities. As a result, we are adding and finalizing in this final rule a second implementation year. Based on these changes, States would now recruit members and set up their MACs and BACs during the first year implementation year. In the second implementation year, States would hold the required MAC and BAC meetings. At the end of that second implementation year, States would summarize the information from the MAC and BAC activities and use that information to complete an annual report. States would then fulfill the annual report requirement by finalizing the report and posting the annual report to their websites. This annual report would need to be posted by States within 30 days of the report being completed.

Additionally, as noted in section II.A.4., and in response to public comment asking for States to have a more graduated approach to reach the requirement of having 25 percent of MAC members be from the BAC, we are finalizing in this rule an extended implementation timeline for this requirement. The finalized provision at § 431.12(d)(1) will require that, for the period from July 9, 2024 through July 9, 2025, 10 percent of the MAC members must come from the BAC; for the period from July 10, 2025 through July 9, 2026, 20 percent of MAC members must come from the BAC; and thereafter, 25 percent of MAC members must come from the BAC. We developed this approach based on the comments we received about competing State priorities and the time and resources that a State would need to meet the new requirements. Additionally, we understand States may face challenges with finding, recruiting, and training beneficiary members to serve on the BAC.

Based on the comments received, we are changing two applicability dates. We note in this new paragraph *Applicability dates* § 431.12(k), that except as noted in paragraphs (d)(1) and (i)(3) of this section, the requirements in paragraphs (a) through (j) are applicable July 9, 2025.

B. Home and Community-Based Services (HCBS)

To address several challenges that we described in the proposed rule (88 FR 27964 and 27965), we proposed both to amend and add new Federal HCBS requirements to improve access to care, quality of care, and beneficiary health and quality of life outcomes, while consistently meeting the needs of all beneficiaries receiving Medicaid-covered HCBS. The preamble of the proposed rule (88 FR 27971 through 27996) outlined our proposed changes in the context of current law.

As we noted in the proposed rule (88 FR 27971), we have previously received questions from States about the applicability of HCBS regulatory requirements to demonstration projects approved under section 1115 of the Act that include HCBS. As a result, we proposed that, consistent with the applicability of other HCBS regulatory requirements to such demonstration projects, the requirements for section 1915(c) waiver programs and section 1915(i), (j), and (k) State plan services included in the proposed rule would apply to such services included in approved section 1115 demonstration projects, unless we explicitly waive one or more of the requirements as part of the approval of the demonstration project.

We proposed not to apply the requirements for section 1915(c) waiver programs and section 1915(i), (j), and (k) State plan services that we proposed in the proposed rule to the Program of All-Inclusive Care of the Elderly (PACE) authorized under sections 1894 and 1934 of the Act, as the existing requirements for PACE either already address or exceed the requirements outlined in the proposed rule, or are substantially different from those for section 1915(c) waiver programs and section 1915(i), (j), and (k) State plan services.

We received public comments on these proposals for HCBS under the Medicaid program. The following is a summary of the comments we received and our responses. We discuss the comments we received related to specific proposals, and our responses, in further detail throughout the sections in this portion of the final rule (section II.B.).

Comment: Many commenters expressed general support for our efforts to increase transparency and accountability in HCBS programs, and ultimately improve access to Medicaid services. Commenters in particular noted general support for our proposed provisions in this section that are designed to support HCBS delivery systems through improvements in data collection around waiting lists and service delivery, enhancements to person-centered planning, standardization of critical incident investigation and grievance process requirements, and establishment of defined quality measures. While overall reaction to the payment adequacy minimum performance level (discussed in section II.B.5. of the proposed rule and this final rule) was mixed, many commenters agreed that HCBS programs are facing shortages of direct care workers that pose obstacles to beneficiaries' access to high-quality HCBS.

Commenters also shared several ideas for ways we could improve beneficiaries' access to, or the overall quality of, HCBS beyond the provisions presented in the proposed rule.

Some commenters expressed concerns that the HCBS provisions we proposed, when taken together, could present significant administrative costs to States and, in some cases, to providers.

Response: We thank commenters for their support. Comments on specific provisions that we proposed are summarized below, along with our responses. We also appreciate the many thoughtful suggestions made by commenters for other ways they believe HCBS could be improved beyond what we proposed in the proposed rule. While comments that are outside the scope of what we proposed in the proposed rule and not relevant are not summarized in this final rule, we will take these recommendations under consideration for potential future rulemaking.

We recognize that we must balance our desire to stimulate ongoing improvements in HCBS programs with the need to give States, managed care plans, and providers sufficient time to make adjustments and allocate resources in support of these changes. After consideration of comments we received, we are finalizing many of our proposals, some with modifications. These modifications are discussed in this section (section II.B.) of the final rule.

We also note that some commenters expressed general support for all of the provisions in section II.B. of this rule, as well as for this rule in its entirety. In response to commenters who supported some, but not all, of the policies and regulations we proposed in the proposed rule (particularly in section II.B related to HCBS), we are clarifying and emphasizing our intent that each final policy and regulation is distinct and severable to the extent it does not rely on another final policy or regulation that we proposed.

While the provisions in section II.B. of this final rule are intended to present a comprehensive approach to improving HCBS and complement the goals expressed and policies and regulations being finalized in sections II.A. (Medicaid Advisory Committee and Beneficiary Advisory Group) and II.C. (Documentation of Access to Care and Service Payment Rates) of this final rule, we intend that each of them is a distinct, severable provision, as finalized. Unless otherwise noted in this rule, each policy and regulation being finalized under this section II.B is distinct and severable from other final policies and regulations being finalized in this section or in sections II.A. or II.C of this final rule, as well as from rules and regulations currently in effect.

Consistent with our previous discussion earlier in section II. of this final rule regarding severability, we are clarifying and emphasizing our intent that if any provision of this final rule is held to be invalid or unenforceable by its terms, or as applied to any person or circumstance, or stayed pending further action, it shall be severable from this final rule, and from rules and regulations currently in effect, and not affect the remainder thereof or the application of the provision to other persons not similarly situated or to other, dissimilar circumstances. For example, we intend that the policies and regulations we are finalizing related to person-centered planning and related reporting requirements (sections II.B.1 and II.B.7. of this final rule) are distinct and severable from the policies and regulations we are finalizing related to grievance system (section II.B.2. of this final rule), and incident management system and related reporting requirements (sections II.B.3 and II.B.7. of this final rule). The standalone nature of the finalized provisions is further discussed in their respective sections in this rule.

Comment: Several commenters addressed the relationship between the proposed HCBS requirements and HCBS authorized under a section 1115 demonstration project. A few commenters requested clarification about the application of the proposed HCBS requirements in this section to services delivered under section 1115 authority. A few commenters expressed concern about what they perceived was the exclusion of services provided through a managed care delivery system under section 1115 demonstration authority. One commenter recommended only applying the finalized rules to new section 1115 demonstration programs; in the alternative, if applying the finalized requirements to current section 1115 demonstration programs, the commenter recommended that States develop transition plans and be given a reasonable timeframe for bringing their programs into compliance. A few commenters recommended that we add a specific reference to section 1115 demonstration authority of the Act in our proposed HCBS requirements (if finalized), including at § 438.72(b) (applying various finalized requirements to managed care programs) and § 441.302(k) (applying new payment adequacy requirements to section 1915(c) waiver programs).

Response: We are confirming that, consistent with the applicability of other HCBS regulatory requirements to such demonstration projects, the requirements for section 1915(c) waiver programs and section 1915(i), (j), and (k) State plan services included in this final rule, apply to such services included in approved section 1115 demonstration projects, unless we explicitly waive one or more of the requirements as part of the approval of the demonstration project. Further, we have not identified a compelling reason to treat States operating section 1115 demonstration projects differently from States operating other HCBS programs in terms of implementation, such as by requiring States with section 1115 demonstration programs to develop transition plans (as was recommended by one commenter). We also believe that the timeframes that are finalized in this rule are reasonable and sufficient to allow all States operating programs under all relevant authorities to come into compliance. If States have specific questions or concerns regarding compliance with the finalized requirements, we will provide assistance as needed.

We note that we have already included references to managed care delivery systems implemented under section 1115(a) of the Act in the implementation requirements at §§ 441.301(c)(3)(iii) (implementing the person-centered planning process minimum performance requirements), 441.302(a)(6)(iii) (implementing the critical incident management system minimum performance requirements), 441.302(k)(8) (implementing the payment adequacy minimum performance requirement), 441.311(f) (implementing reporting requirements), and 441.313(c) (implementing the website transparency provision). We decline commenters' recommendations that we include additional references to section 1115 of the Act, as we believe doing so would be duplicative. We will ensure that the approved standard terms and conditions of States' section 1115 demonstration projects are clear that the States must comply with all applicable HCBS requirements that we are finalizing in this rule.

We did not receive any comments on our proposal not to extend HCBS requirements that we are finalizing in this rule to PACE. We are finalizing our proposal to not apply the requirements we are finalizing in this rule for section 1915(c) waiver programs and section 1915(i), (j), and (k) State plan services to PACE authorized under sections 1894 and 1934 of the Act.

1. Person-Centered Service Plans (§§ 441.301(c), 441.450(c), 441.540(c), and 441.725(c))

Section 1915(c)(1) of the Act requires that services provided through section 1915(c) waiver programs be provided under a written plan of care (hereinafter referred to as person-centered service plans or service plans). Existing Federal regulations at § 441.301(c) address the person-centered planning process and

include a requirement at § 441.301(c)(3) that the person-centered service plan be reviewed and revised, upon reassessment of functional need, at least every 12 months, when the individual's circumstances or needs change significantly, or at the request of the individual.

In 2014, we released guidance for section 1915(c) waiver programs [51] (hereinafter the 2014 guidance) that included expectations for State reporting of State-developed performance measures to demonstrate compliance with section 1915(c) of the Act and the implementing regulations in 42 CFR part 441, subpart G through six assurances, including assurances related to person-centered service plans. The 2014 guidance indicated that States should conduct systemic remediation and implement a Quality Improvement Project when they score below an 86 percent threshold on any of their performance measures. We refer readers to section II.B.1. of the proposed rule (88 FR 27972) for a detailed discussion of the six assurances identified in the 2014 guidance.

In the proposed rule (88 FR 27972 through 27975), we proposed a different approach for States to demonstrate that they meet the statutory requirements in section 1915(c) of the Act and the regulatory requirements in 42 CFR part 441, subpart G, including the requirements regarding assurances around service plans. We proposed this approach based on feedback CMS obtained during various public engagement activities conducted with States and other interested parties over the past several years about the reporting discussed in the 2014 guidance, as well as feedback received through a request for information (RFI) [52] we released in the spring of 2022. Through this feedback, many States and interested parties expressed, and we identified, that there is a need to standardize reporting and set minimum standards for HCBS. We proposed HCBS requirements to establish a new strategy for oversight, monitoring, quality assurance, and quality improvement for section 1915(c) waiver programs, including minimum performance requirements and reporting requirements for section 1915(c) waiver programs. Further, as is discussed later in this section (section II.B.1. of the rule), to ensure consistency and alignment across HCBS authorities, we proposed to apply the proposed requirements for section 1915(c) waiver programs to section 1915(i), (j), and (k) State plan services, as appropriate.

As support for our proposals, we noted that under section 1902(a)(19) of the Act, States must provide safeguards to assure that eligibility for Medicaid-covered care and services are determined and provided in a manner that is consistent with simplicity of administration and that is in the best interest of Medicaid beneficiaries. While the needs of some individuals who receive HCBS may be relatively stable over some time periods, individuals who receive HCBS experience changes in their functional needs and individual circumstances, such as the availability of natural supports or a desire to choose a different provider, that necessitate revisions to the person-centered service plan to remain as independent as possible or to prevent adverse outcomes. Thus, the requirements to reassess functional need and to update the person-centered service plan based on the results of the reassessment, when circumstances or needs change significantly or at the request of the individual, are important safeguards that are in the best interest of beneficiaries because they ensure that an individual's section 1915(c) waiver program services change to meet the beneficiary's needs most appropriately as those needs change.

We also noted that effective State implementation of the person-centered planning process is integral to ensuring compliance with section 2402 of the of the Patient Protection and Affordable Care Act (Affordable Care Act) (Pub. L. 111–148, March 23, 2010). Section 2402 of the Affordable Care Act requires the Secretary of HHS to ensure that all States receiving Federal funds for HCBS, including Medicaid, develop HCBS systems that are responsive to the needs and choices of beneficiaries receiving HCBS, maximize independence and self-direction, provide support and coordination to facilitate the participant's full engagement in community life, and achieve a more consistent and coordinated approach to the administration of policies and procedures across public programs providing HCBS.[53]

Finally, we noted that since the release of the 2014 guidance, we have received feedback from States, the HHS Office of Inspector General (OIG), Administration for Community Living (ACL), and Office for Civil Rights (OCR), and other interested parties on how crucial person-centered planning is in the delivery of care and the significance of the person-centered service plan for the assurance of health and welfare for section 1915(c) waiver program participants that underscored the need for the proposals.[54]

To ensure a more consistent application of person-centered service plan requirements across States and to protect the health and welfare of section 1915(c) waiver participants, under our authority at sections 1915(c)(1) and 1902(a)(19) of the Act and section 2402(a)(1) and (2) of the Affordable Care Act, we proposed several changes to our person-centered service plan requirements in section II.B.1 of the proposed rule (88 FR 27972 through 27975), as discussed in more detail in this section of the final rule. First, we proposed revisions to § 401.301(c)(3)(i) to clarify that: (1) States are required to ensure person-centered service plans are reviewed and revised in compliance with requirements set forth therein; and (2) changes to the person-centered service plans are not required if the reassessment does not indicate a need for changes. Second, we proposed to establish a minimum performance level for States to demonstrate they meet the requirements at § 441.301(c)(3). Specifically, at § 441.301(c)(3)(ii)(A), we proposed to require that States demonstrate that a reassessment of functional need was conducted at least annually for at least 90 percent of individuals continuously enrolled in the waiver for at least 365 days. At § 441.301(c)(3)(ii)(B) we proposed to require that States demonstrate that they reviewed the person-centered service plan, and revised the plan as appropriate, based on the results of the required reassessment of functional need at least every 12 months for at least 90 percent of individuals continuously enrolled in the waiver for at least 365 days. Finally, we proposed to apply the requirements at § 441.301(c)(3) to section 1915(j), (k), and (i) State plan

services at §§ 441.450(c), 441.540(c), and 441.725(c), respectively.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: One commenter questioned whether States would continue to be required to demonstrate compliance with the six assurances and the related subassurances, including those related to person-centered service plans described in the 2014 guidance, or whether the minimum performance requirements and reporting requirements that we proposed in the proposed rule for the section 1915(c) waiver program, if finalized in the final rule, supersede these six assurances and related subassurances.

Response: We noted in the proposed rule (88 FR 27972), and reiterate here, that States must demonstrate that they meet the statutory requirements in section 1915(c) of the Act and the regulatory requirements in part 441, subpart G, including the requirements regarding assurances around person-centered service plans.

We proposed new minimum performance requirements and new reporting requirements for section 1915(c) waiver programs that are intended to supersede and fully replace the reporting requirements and the 86 percent performance level threshold for performance measures described in the 2014 guidance. Further, to ensure consistency and alignment across HCBS authorities, we proposed to apply the proposed requirements for section 1915(c) waiver programs to section 1915(i), (j), and (k) State plan services as appropriate.

We confirm that the section 1915(c) six assurances and the related subassurances,[55] including those related to person-centered service plans, continue to apply. The requirements proposed at § 441.301(c)(3)(ii)(A) and (B) (discussed in the next section, II.B.1.b. of this rule) assess State performance with the requirements at § 441.301(c)(3) and we did not intend to suggest that they would fully supersede the section 1915(c) six assurances and the related subassurances in the 2014 guidance. Further, as finalized later in this rule, States will be required to report on the minimum performance levels at § 441.301(c)(3)(ii)(A) and (B). To reduce unnecessary burden and to avoid duplicative or conflicting reporting requirements, we plan to work with States to phase-out the reporting requirements and the 86 percent performance level threshold for performance measures described in the 2014 guidance as they implement these requirements in the final rule.

Comment: A commenter requested we clarify what the impacts would be to the existing section 1915(c) waiver reporting tools as defined in the Version 3.6 HCBS Waiver Application if we finalize our proposals.

Response: We expect to implement new reporting forms for the new reporting requirements that we are finalizing in this final rule. However, some components of the existing reporting forms may remain in effect to the extent that they cover other requirements that remain unchanged by the requirements that we are finalizing in this final rule. States and interested parties will have an opportunity to comment on the new reporting forms and the revised forms through the Paperwork Reduction Act notice and comment process.

a. Finalization of Amended Requirement for Review of the Person-Centered Service Plan (§ 441.301(c)(3)(i))

At § 441.301(c)(3), we proposed to revise the regulatory text so that it is clearer that the State is the required actor under § 441.301(c)(3), and that changes to the person-centered service plan are not required if the reassessment does not indicate a need for changes. In the proposed rule (88 FR 27973), we noted that, with this revision to the regulatory text, the State could, for instance, meet the requirement that the person-centered service plan was reviewed, and revised as appropriate, based on the results of the required reassessment of functional need by documenting that there were no changes in functional needs or the individual's circumstances upon reassessment that necessitated changes to the service plan. However, the State would still be expected to review the service plan to confirm that no revisions are needed, even if the reassessment identified no changes in functional needs or the individual's circumstances.

Specifically, we proposed to move the sentence at § 441.301(c)(3) beginning with ''The person-centered service plan must be reviewed. . .'' to a new paragraph at § 441.301(c)(3)(i) and reposition the regulatory text under the proposed title, *Requirement.* In addition, we proposed to revise the regulatory text at the renumbered paragraph to clarify that the person-centered service plan must be reviewed, and revised as appropriate, based on the reassessment of functional need as required by § 441.365(e), at least every 12 months, when the individual's circumstances or needs change significantly, or at the request of the individual.

We received public comment on this proposal. Below is the summary of the comment and our response.

Comment: Commenters did not raise specific concerns about the proposal at § 441.301(c)(3)(i). However, one commenter raised concerns about the impact the minimum performance requirement proposed at § 441.301(c)(3)(ii) (discussed in greater detail in the next section) would have on the requirement at § 441.301(c)(3)(i). The commenter expressed concern that States may interpret the 90 percent minimum performance levels proposed at § 441.301(c)(3)(ii)(A) and (B) as meaning they are only required to conduct the reassessments and updates to person-centered service plans as required by § 441.301(c)(3)(i) for 90 percent of beneficiaries, not for 100 percent of beneficiaries receiving HCBS. This commenter also suggested that CMS clarify that States should conduct functional assessments and person-centered plan updates for every individual to make sure that the requirement at § 441.301(c)(3)(i) is not open to interpretation.

Response: We intend that the 90 percent minimum performance requirements proposed at § 441.301(c)(3)(ii) would assess States' minimum performance of the requirements at § 441.301(c)(3)(i); we do not suggest that reassessments of functional need and reviews, and revisions as appropriate, of the person-centered service plan, based on the results of the required reassessment of functional need, are required for only 90 percent of individuals enrolled in the waiver program. The minimum performance requirements at § 441.301(c)(3)(ii) (and the associated reporting requirements at § 441.311(b)(3), discussed in section II.B.7. of this final rule), while important for aiding in our oversight and States' accountability for complying with § 441.301(c)(3)(i), are distinct and severable requirements from § 441.301(c)(3)(i). In other words, States would be expected to comply fully with § 441.301(c)(3)(i) even had we not also proposed the specific minimum performance requirement at § 441.301(c)(3)(ii). Thus, the minimum performance of 90 percent proposed in § 441.301(c)(3)(ii) notwithstanding, it is our intent to require at § 441.301(c)(3)(i) that States ensure that the person-

[55] Modifications to Quality Measures and Reporting in § 1915(c) Home and Community-Based Waivers. March 2014. Accessed at *https://www.hhs.gov/guidance/sites/default/files/hhs-guidance-documents/3-cmcs-quality-memo-narrative_0_2.pdf.*

centered service plan for every individual is reviewed, and revised as appropriate, at least every 12 months, when the individual's circumstances or needs change significantly, or at the request of the individual. To ensure that this expectation is clear in the requirement, we are finalizing § 441.301(c)(3)(i) with a modification to specify that the requirement at § 441.301(c)(3)(i) applies to every individual.

Upon further review, we also determined that retaining the reference to § 441.301(c)(3) in § 441.365(e), governing the frequency of functional assessments for section 1915(d) waiver programs, at the redesignated § 441.301(c)(3)(i), is both obsolete and unnecessary. Section 441.365(e) was a standard used by section 1915(d) waiver programs, which were time-limited programs that are no longer in effect, to establish the frequency of functional assessments. The requirements at § 441.301(c)(3) establish the frequency of functional assessments for section 1915(c) programs, thus referencing § 441.365(e), which is obsolete, is unnecessary.

Accordingly, we are finalizing § 441.301(c)(3)(i) with the previously noted modifications to specify that the requirement applies to every individual and removing reference to § 441.365(e), as well as a minor technical modification to remove an extraneous comma after the word ''revised.'' As finalized, § 441.301(c)(3)(i) specifies that the State must ensure that the person-centered service plan for every individual is reviewed, and revised as appropriate, based upon the reassessment of functional need at least every 12 months, when the individual's circumstances or needs change significantly, or at the request of the individual.

b. Minimum Performance Level (§ 441.301(c)(3)(ii))

To ensure a more consistent application of person-centered service plan requirements across States and to protect the health and welfare of section 1915(c) waiver participants, under our authority at sections 1915(c)(1) and 1902(a)(19) of the Act and section 2402(a)(1) and (2) of the Affordable Care Act, we proposed to codify a minimum performance level to demonstrate that States meet the requirements at § 441.301(c)(3) (88 FR 27973).

Specifically, at new § 441.301(c)(3)(ii)(A), we proposed to require that States demonstrate that a reassessment of functional need was conducted at least annually for at least 90 percent of individuals continuously enrolled in the waiver for at least 365 days. We also proposed, at new § 441.301(c)(3)(ii)(B), to require that States demonstrate that they reviewed the person-centered service plan and revised the plan as appropriate based on the results of the required reassessment of functional need at least every 12 months for at least 90 percent of individuals continuously enrolled in the waiver for at least 365 days.

We intended that these proposed minimum performance levels would strengthen person-centered planning reporting requirements while taking into account that there may be legitimate reasons why assessment and care planning processes occasionally are not completed timely in all instances. We also considered whether to propose allowing good cause exceptions to the minimum performance level in the event of a natural disaster, public health emergency, or other event that would negatively impact a State's ability to achieve a minimum 90 percent performance level. In the end, we decided not to propose good cause exceptions because the minimum 90 percent performance level is intended to account for various scenarios that might impact a State's ability to achieve these minimum performance levels. Further, we noted that there are existing disaster authorities that States could utilize to request a waiver of these requirements in the event of a public health emergency or a disaster (88 FR 27973).

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported our proposals to codify at § 441.301(c)(3)(ii)(A) and (B) minimum performance levels for States to demonstrate that they meet the requirements at § 441.301(c)(3)(i). These commenters noted that, by CMS establishing minimum performance levels for the person-centered planning requirements, beneficiaries who receive HCBS may be more empowered to actively participate in decision-making processes related to their care and services.

Response: We appreciate the support for our proposals.

Comment: One commenter suggested we specify that a beneficiary's services should not be reduced, suspended, or terminated because the reassessment of functional need or person-centered service plan update did not occur within the specified timeframe.

Response: The proposed requirements to reassess functional need and to update the person-centered service plan based on the results of the reassessment, when circumstances or needs change significantly, or at the request of the individual, are important safeguards that are in the best interest of beneficiaries because they ensure that an individual's section 1915(c) waiver program services are reassessed to ensure they continue meeting the beneficiary's needs most appropriately as those needs change. Any changes in the services and supports included in the person-centered service plan for beneficiaries should be based on changes in circumstances or needs or preferences of the individual; they should not result from a failure by the State or managed care plan to conduct required assessment and service planning processes timely. Further, States should not reduce, suspend, or terminate a beneficiary's services solely to reach the minimum performance level required at § 441.301(c)(3)(ii)(A) and (B).

Comment: A couple of commenters suggested we clarify whether States would be required to implement corrective action for noncompliance with the 90 percent performance level if the same beneficiaries do not receive timely reassessments or updated person-centered plans repeatedly. One commenter questioned whether a 90 percent performance level provides an acceptable margin of error (10 percent) and requested clarification on whether States will be expected to remediate through corrective action if this threshold is not met.

Response: Corrective actions or other enforcement actions will be determined on a case-by-case basis, using our standard enforcement authority, for States that are determined to not be compliant with the requirements at § 441.301(c)(3)(ii)(A) and (B). We will take this feedback into account as we plan technical assistance and develop guidance for States.

Comment: One commenter stated that the person-centered planning requirements are essential to ensure choice and access to appropriate service and suggested that, although the proposed approach meets compliance oversight and monitoring objectives, a quality improvement strategy to address improving outcomes with the person-centered planning requirements is needed.

Response: We note that the proposed requirements at § 441.301(c)(3)(ii)(A) and (B) were intended to strengthen person-centered planning reporting requirements by codifying a minimum performance level to demonstrate that States meet the requirements at § 441.301(c)(3). We encourage States to consider implementing quality

improvement processes to strengthen and improve person-centered planning in their HCBS programs. Further, as discussed in section II.B.8. of this final rule, we are finalizing the HCBS Quality Measure Set reporting requirements to include requirements for States to implement quality improvement strategies in their HCBS programs; while the HCBS Quality Measure Set is distinct from the person-centered planning requirements being finalized at § 441.301(c)(3), we believe the HCBS Quality Measure Set requirements support the quality improvement objectives described by this commenter.

Comment: A few commenters suggested CMS include a good cause exception for States that do not meet the minimum performance level to take into account certain instances that fall outside of the specified performance standards for appropriate reasons, such as for resource challenges in rural areas, or for beneficiary-related events that could delay the ability to complete the assessment, such as medical emergencies/hospitalizations. Alternatively, a few commenters supported our proposal to not allow good cause exceptions to the performance level, observing that the 90 percent minimum performance level already gives States leeway for unexpected occurrences.

Response: We believe that the 90 percent minimum performance level proposed at § 441.301(c)(3)(ii)(A) and (B) sets a realistic and achievable threshold.

As we noted in the proposed rule (88 FR 27973), we decided to not propose any good cause exceptions because the minimum 90 percent performance level accounts for various scenarios that might impact the State's ability to achieve these performance levels, and there are existing disaster authorities, such as the waiver authority under section 1135 of the Act, that States could utilize to request a waiver of these requirements in the event of a public health emergency or a disaster. We decline to include good cause exceptions in the minimum performance level in this final rule.

After consideration of public comments, we are finalizing our proposals at § 441.301(c)(3)(ii) with minor modifications to clarify that the State must ensure that the minimum performance levels specified at § 441.301(c)(3)(ii)(A) and (B) are met (since States typically have person-centered planning requirements carried out by entities such as case managers or providers, rather than directly by the State). We are also finalizing § 441.301(c)(3)(ii)(B) with minor technical modifications to make the same punctuation correction as the modification finalized in § 441.301(c)(3)(i).

c. Application to Managed Care and Fee-for-Service (§ 441.301(c)(3))

To ensure consistency in person-centered service plan requirements between FFS and managed care delivery systems, we proposed to add the requirements for services delivered under FFS at § 441.301(c)(3) to services delivered under managed care delivery systems. Section 2402(a)(3)(A) of the Affordable Care Act requires States to improve coordination among, and the regulation of, all providers of Federally and State-funded HCBS programs to achieve a more consistent administration of policies and procedures across HCBS programs. In the context of Medicaid coverage of HCBS, it should not matter whether the services are covered directly on a FFS basis or by a managed care plan to its enrollees. Therefore, we proposed that a State must ensure compliance with the requirements in § 441.301(c)(3) with respect to HCBS delivered both under FFS and managed care delivery systems.

We note that in the proposed rule at 88 FR 27974, we made the statement that to ensure consistency in person-centered service plan requirements between FFS and managed care delivery systems, we propose to add the requirements at § 441.301(c)(3) to 42 CFR 438.208(c). This statement was published in error, and we did not intend to propose this specific regulation text include reference to § 438.208(c). We note that § 438.208(c)(3)(v) already requires that managed care plans comply with § 441.301(c)(3), generally, so we believe that referencing § 438.208(c) is not necessary. We also note that § 438.208(c)(3)(ii) requires compliance with the other person-centered planning requirements at § 441.301(c)(1) and (2). Thus, also referring to § 438.208(c) would be unnecessary.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Commenters expressed support for the proposed requirements at § 441.301(c)(3) to be applied to managed care delivery systems as well, noting that States must ensure compliance with respect to HCBS delivered both in FFS and managed care delivery systems. Commenters also noted that the process of conducting reassessments and making updates to a person-centered service plan is agnostic to whether a provider is paid by a managed care plan or through a FFS delivery system.

Response: We appreciate the support for our proposal.

After consideration of public comments received, we are finalizing our proposed policy to require that the person-centered planning requirements at § 441.301(c)(3) finalized in this section are applied to HCBS delivered under both managed care and FFS delivery systems. As noted above, we are not finalizing a new reference to § 441.301(c)(3) at § 438.208(c), as § 438.208(c) already requires that managed care plans comply with § 441.301(c)(1) through (c)(3), which includes the requirements being finalized in this rule at § 441.301(c)(3)(i) and (ii). Additionally, as is discussed in section II.B.11. of this rule, we are finalizing our proposal at § 438.72(b) to direct States to comply with the requirements finalized in this final rule, including the revised person-centered centered planning requirements at § 441.301(c)(1) through (c)(3), for services authorized under HCBS authorities and provided under managed care delivery systems.

d. Person-Centered Planning—Definition of Individual (§ 441.301(c)(1))

We also proposed updates to existing language describing the person-centered planning process specific to section 1915(c) waivers. Current language describes the role of an individual's authorized representative as if every waiver participant will require an authorized representative, which is not the case. This language has been a source of confusion for States and providers. We proposed to amend the regulation text at § 441.301(c)(1) to better reflect that the individual, or if applicable, the individual and the individual's authorized representative, will lead the person-centered planning process. When the term individual is used throughout this section, it includes the individual's authorized representative will lead the person-centered planning process if applicable. We note that, in the proposed rule, we described our proposal as removing extraneous language and not as an amendment of § 441.301(c)(1) (88 FR 27974). Upon further consideration, we believe characterizing this proposal as an amendment is more accurate. We intend that this proposed language as finalized will bring the section 1915(c) waiver regulatory text in line with person-centered planning process language in both the section 1915(j) and (k) State plan options.

We did not receive public comments on this proposal. However, after further

consideration of the proposed requirement, we are finalizing § 441.301(c)(1) with a technical modification to clarify that the language contained in § 441.301(c)(1), as finalized, applies to the person-centered planning requirements **throughout § 441.301(c)(1) through (3)**. (New language identified in bold.) This modification expresses our intent that § 441.301(c)(1) applies to the person-centered planning requirements in § 441.301(c)(1) through (3), rather than § 441.301(c) in its entirety.

e. Applicability Date (§ 441.301(c)(3)(iii))

We proposed at § 441.301(c)(3)(iii) to make the performance levels under § 441.301(c)(3)(ii) effective 3 years after the effective date of § 441.301(c)(3) (in other words, 3 years after the effective date of the final rule) in FFS delivery systems. For States that implement a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act and include HCBS in the managed care organization's (MCO's), prepaid inpatient health plan's (PIHP's), or prepaid ambulatory health plan's (PAHP's) contract, we proposed to provide States until the first rating period with the MCO, PIHP, or PAHP, beginning on or after 3 years after the effective date of the final rule to implement these requirements. We solicited comment on whether the timeframe to implement the proposed regulations is sufficient, whether we should require a shorter timeframe or longer timeframe to implement these provisions, and, if an alternate timeframe is recommended, the rationale for that alternate timeframe.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Most commenters supported the 3-year timeframe for the effective date as defined at § 441.301(c)(3)(iii). A few commenters expressed concerns about the overall burden they believe will be associated with the final rule, due to competing priorities, and the effect it may have on States' ability to implement the proposed person-centered planning provisions at § 441.301(c)(3)(ii) within 3 years following the effective date of the final rule. A few commenters expressed that the performance levels under § 441.301(c)(3)(ii) may require States to have a longer runway to implement and operationalize State regulation changes and processes, revise policies, and hire critical staff. A few commenters also requested we consider alternative effective dates for the person-centered planning minimum performance requirements, ranging from 18 months to 4 years.

Response: We noted, in the proposed rule (88 FR 27974), that we recognize many States may need time to implement the proposed HCBS requirements we are finalizing in the final rule. We acknowledge that States will have to expend resources in addressing the person-centered planning minimum performance requirements, including needing time to amend provider agreements, make State regulatory or policy changes, implement process or procedural changes, update information systems for data collection and reporting, or conduct other activities to implement these person-centered planning requirements.

We believe that 3 years for States to ensure compliance with the person-centered planning minimum performance requirements being finalized at § 441.301(c)(3)(ii) is realistic and achievable for States. We also note that the minimum performance requirements measure performance of the requirements at § 441.301(c)(3)(i), which substantively reflect activities States are currently expected to perform under existing § 441.301(c)(3). For States implementing a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act and include HCBS in the in the MCO's, PIHP's, or PAHP's contract, we similarly believe it is realistic and achievable to provide States with a date to comply that is until the first rating period with the MCO, PIHP, or PAHP, beginning on or after 3 years after the effective date of this final rule to implement these requirements. We will provide technical assistance to States as needed with meeting the timeframe for compliance.

After consideration of the comments received, we are finalizing the substance of §§ 441.301(c)(3)(iii) as proposed, but with minor modifications to correct erroneous uses of the word ''effective'' and to make technical modifications to the language pertaining to managed care delivery systems to improve accuracy and alignment with common phrasing in managed care contracting policy. We are retitling the requirement at § 441.301(c)(3)(iii) as Applicability date (rather than Effective date). We are also modifying the language at § 441.301(c)(3)(iii) to specify that **States must comply with** the requirements at § 441.301(c)(3)(ii) **beginning** 3 years from the effective date of this final rule (rather than stating that the performance levels described in § 441.301(c)(3)(ii) are effective 3 years after the date of enactment of the final rule); and in the case of the State that implements a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act and includes HCBS in the MCO's, PIHP's, or PAHP's contract, the first **rating period *for contracts with the MCO, PIHP, or PAHP beginning*** on or after **the date that is** 3 years after the effective date of this **final rule**. (New language identified in bold.).

f. Application to Other Authorities

Section 2402(a)(3)(A) of the Affordable Care Act requires States to improve coordination among, and the regulation of, all providers of Federally and State-funded HCBS programs to achieve a more consistent administration of policies and procedures across HCBS programs. In accordance with the requirement of section 2402(a)(3)(A) of the Affordable Care Act and because HCBS State plan options have similar person-centered planning and service plan requirements, we proposed to include the proposed requirements at § 441.301(c)(3) in section 1915(j), (k), and (i) State plan services, at §§ 441.450(c), 441.540(c), and 441.725(c), respectively. Consistent with our proposal for section 1915(c) waivers, we proposed these requirements under section 1902(a)(19) of the Act, which authorizes safeguards necessary to assure that eligibility for care and services under the Medicaid program will be determined, and such care and services will be provided, in a manner consistent with the best interest of beneficiaries. We believe these same reasons for proposing these requirements for section 1915(c) waivers are equally applicable for these other HCBS authorities.

We considered whether to apply the proposed person-centered plan requirements at § 441.301(c)(3) to section 1905(a) ''medical assistance'' State plan personal care services, home health services, and case management services. However, we did not propose that these requirements apply to any section 1905(a) State plan services at this time. First, States do not have the same data collection and reporting capabilities for these services as they do for other HCBS at section 1915(c), (i), (j), and (k). Second, person-centered planning and service plan requirements are not required by Medicaid for section 1905(a) services, although we recommend that States implement person-centered planning processes for all HCBS. We note that the vast majority of HCBS is delivered under section 1915(c), (i), (j), and (k) authorities, while only a small percentage of HCBS

nationally is delivered under section 1905(a) State plan authorities. However, the small overall percentage includes large numbers of people with mental health needs who receive case management.

We solicited comment on whether we should establish similar person-centered planning and service plan requirements for section 1905(a) State plan personal care services, home health services and case management services.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters expressed support for applying the proposed person-centered planning and person-centered plan requirements at § 441.301(c)(3) to section 1915(j), (k), and (i) State plan services.

Response: We appreciate the support for our proposal. As noted earlier, we are finalizing modifications to § 441.301(c)(3)(i) to specify that the requirement applies to every individual and to make a technical correction to remove an extraneous comma. We are finalizing corresponding edits for section 1915(k) in § 441.540(c) and section 1915(i) in § 441.725(c). The revised language for both § 441.540(c) and § 441.725(c) will specify that the State must ensure that the person-centered service plan for every individual is reviewed, and revised as appropriate, based upon the reassessment of functional need, at least every 12 months, when the individual's circumstances or needs change significantly, and at the request of the individual. States must adhere to the requirements of § 441.301(c)(3).

Comment: A few commenters responded to our request for comment on whether we should establish similar health and welfare requirements for section 1905(a) State plan personal care services, home health services, and case management services. Several commenters supported that we decided not to propose to extend the person-centered plan requirements at § 441.301(c)(3) to section 1905(a) services. These commenters expressed concern that applying these requirements to these State plan benefits could pose critical challenges for State Medicaid and other operating agencies, due to varying levels of HCBS provided and different data reporting infrastructure States have for section 1905(a) services. A few commenters recommended that CMS apply the person-centered planning requirements to mental health rehabilitative services delivered under section 1905(a) State plan authority. A couple of other commenters suggested that mental health rehabilitative services are considered HCBS under the broader definition enacted by Congress in the American Rescue Plan Act of 2021 (Pub. L. 117–2, March 11, 2021), suggesting that CMS should consider including these services in the person-centered plan requirements at § 441.301(c)(3).

Response: At this time and as noted in the proposed rule (88 FR 27974 and 27975), we are not applying the person-centered service plan requirements at § 441.301(c)(3) to section 1905(a) services, due to the statutory and regulatory differences between services authorized under sections 1905(a) and 1915 of the Act. For example, there are no statutory provisions in section 1905(a) of the Act that attach State-level reporting requirements to any section 1905(a) service. Relatedly, States do not have the same data collection and reporting capabilities for these services as they do for HCBS at section 1915(c), (i), (j), and (k).

Additionally, we note that section 1905(a) services do not have the same person-centered planning requirements at § 441.301(c)(1) through (6). Formal person-centered service planning requirements are established for section 1915(j) services in § 441.468, for section 1915(k) services in § 441.540, and for section 1915(i) services at § 441.725. While service planning might be part of some specific 1905(a) services, it is not a required component of all section 1905(a) services.

We acknowledge that many beneficiaries, particularly those receiving mental health services, are served by section 1905(a) services, and encourage States to implement effective person-centered planning processes that are based on individual preferences and personal goals and support full engagement in community for Medicaid beneficiaries receiving section 1905(a) State plan personal care services, home health services, case management services, and rehabilitative services. We thank commenters for their feedback on this request for comment, which we may consider in future rulemaking.

After consideration of public comments, we are finalizing the application of § 441.301(c)(3), as finalized in this rule, to section 1915(j), (k), and (i) State plan services by finalizing relevant requirements at §§ 441.450(c), 441.540(c), and 441.725(c), respectively. We are finalizing §§ 441.450(c), 441.540(c), and 441.725(c), with a technical modification to clarify that service plans must meet the requirements of § 441.301(c)(3), but that references therein to section 1915(c) of the Act are instead references to section 1915(j), 1915(k), and 1915(i) of the Act, respectively. We are finalizing the requirements at §§ 441.540(c) and 441.725(c) with minor modifications. To maintain consistency with modifications finalized in § 441.301(c)(3)(i), we are finalizing §§ 441.540(c) and 441.725(c) with modifications to specify that the requirements apply to every individual and to remove an extraneous comma.

g. Summary of Finalized Requirements

After consideration of the public comments, we are finalizing the proposals at §§ 441.301(c)(1), 441.301(c)(3), 441.450(c), 441.540(c), and 441.725(c) as follows:

- We are finalizing the requirement at § 441.301(c)(1) with a technical modification to clarify that § 441.301(c)(1) applies to paragraphs (c)(1) through (3) of this section.
- We are finalizing § 441.301(c)(3)(i) with modifications to specify that the requirement applies to every individual and to remove the reference to § 441.365(e), as well as finalizing a minor technical change to remove an extraneous comma.
- We are finalizing our proposals at § 441.301(c)(3)(ii) with minor modifications to clarify that the State must ensure that the minimum performance levels specified at § 441.301(c)(3)(ii)(A) and (B) are met. We are also finalizing § 441.301(c)(3)(ii)(B) with minor technical modifications to correct the punctuation (consistent with the change finalized in § 441.301(c)(3)(i)).
- We are finalizing the applicability date requirement at § 441.301(c)(3)(iii), with a technical modification to the language to improve accuracy and alignment with common phrasing in managed care contracting policy. We also are finalizing § 441.301(c)(3)(iii) to specify that States must comply with the performance levels described in paragraph (c)(3)(ii) of this section beginning 3 years after July 9, 2024; and in the case of the State that implements a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act and includes HCBS in the MCO's, PIHP's, or PAHP's contract, the first rating period for contracts with the MCO, PIHP, or PAHP beginning on or after the date that is 3 years after July 9, 2024.
- We are finalizing §§ 441.450(c), 441.540(c), and 441.725(c), with a technical modification to clarify that service plans must meet the requirements of § 441.301(c)(3), but that references therein to section 1915(c) of

the Act are instead references to section 1915(j), 1915(k), and 1915(i) of the Act, respectively.

- We are finalizing §§ 441.540(c) and 441.725(c), consistent with modifications finalized in § 441.301(c)(3)(i), with a modification to specify that the requirements apply to every individual, and with technical modification to correct the punctuation.

2. Grievance System (§ 441.301(c)(7); Proposed at § 441.464(d)(2)(v), Being Finalized at § 441.464(d)(5); Proposed at § 441.555(b)(2)(iv), Being Finalized at § 441.555(e); and § 441.745(a)(1)(iii))

a. Scope of Grievance System and Definitions (§ 441.301(c)(7)(i) and § 441.301(c)(7)(ii))

Section 2402(a) of the Affordable Care Act requires the Secretary of HHS to ensure that all States receiving Federal funds for HCBS, including Medicaid HCBS, develop HCBS systems that are responsive to the needs and choices of beneficiaries receiving HCBS, maximize independence and self-direction, provide support and coordination to assist with a community-supported life, and achieve a more consistent and coordinated approach to the administration of policies and procedures across public programs providing HCBS.[56] Among other things, section 2402(a)(3)(B)(ii) of the Affordable Care Act requires development and monitoring of an HCBS complaint system. Further, section 1902(a)(19) of the Act requires States to provide safeguards to assure that eligibility for Medicaid-covered care and services will be determined and provided in a manner that is consistent with simplicity of administration and the best interest of Medicaid beneficiaries.

Federal regulations at 42 CFR part 431, subpart E, require States to provide Medicaid applicants and beneficiaries with an opportunity for a fair hearing before the State Medicaid agency in certain circumstances, including for a denial, termination, suspension, or reduction of Medicaid eligibility, or for a denial, termination, suspension, or reduction in benefits or services. These fair hearing rights apply to all Medicaid applicants and beneficiaries, including those receiving HCBS regardless of the delivery system. Under 42 CFR part 438, subpart F, Medicaid managed care plans must have in place an appeal system that allows a Medicaid managed care enrollee to request an appeal, which is a review by the Medicaid managed care plan of an adverse benefit determination issued by the plan; and a grievance system, which allows a Medicaid managed care enrollee to file an expression of dissatisfaction with the plan about any matter other than an adverse benefit determination. Currently, our regulations do not provide for a venue to raise concerns about issues that HCBS beneficiaries in an FFS delivery system may experience which are not subject to the fair hearing process, such as the failure of a provider to comply with the HCBS settings requirements at § 441.301(c)(4) (which are issues that a managed care enrollee could file a grievance with their plan).

Under our authority at section 1902(a)(19) of the Act and section 2402(a)(3)(B)(ii) of the Affordable Care Act, we proposed to require that States establish grievance procedures for Medicaid beneficiaries receiving services under section 1915(c), (i), (j) and (k) authorities through a FFS delivery system. Specifically, for section 1915(c) HCBS waivers, we proposed at § 441.301(c)(7) that States must establish a procedure under which a beneficiary can file a grievance related to the State's or a provider's compliance with the person-centered planning and service plan requirements at §§ 441.301(c)(1) through (3) and the HCBS settings requirements at §§ 441.301(c)(4) through (6). This proposal was based on feedback obtained during various public engagement activities conducted with interested parties over the past several years about the need for beneficiary grievance processes in section 1915(c) waiver programs related to these requirements. We also proposed to apply this requirement to section 1915(i), (j) and (k) authorities, which are discussed below in section II.B.2.h. of this final rule.

To avoid duplication with the grievance requirements at part 438, subpart F, we proposed not to apply this requirement to establish a grievance procedure to managed care delivery systems. We note, though, that the requirements in this section are similar to requirements for managed care grievance requirements found at part 438, subpart F, with any differences reflecting changes appropriate for FFS delivery systems. The proposed requirements included at § 441.301(c)(7) in the proposed rule (88 FR 27975) were focused specifically on grievance systems and did not establish new fair hearing system requirements, as appeals of adverse eligibility, benefit, or service determinations are addressed by existing fair hearing requirements at 42 CFR part 431, subpart E. We solicited comments on any additional changes we should consider in this section with respect to a grievance system.

As discussed earlier in this section II.B.2. of this final rule, section 2402(a)(3)(B)(ii) of the Affordable Care Act requires development and monitoring of an HCBS complaint system. In addition, section 2402(a)(3)(A) of the Affordable Care Act requires the Secretary of HHS to ensure that all States receiving Federal funds for HCBS, including Medicaid HCBS, develop HCBS systems that achieve a more consistent and coordinated approach to the administration of policies and procedures across public programs providing HCBS. As such, we believe the proposed requirement for States to establish grievance procedures for Medicaid beneficiaries receiving HCBS through a FFS delivery system is necessary to comply with the HCBS complaint system requirements at section 2402(a)(3)(B)(ii) of the Affordable Care Act and to ensure consistency in the administration of HCBS between managed care and FFS delivery systems. Further, in the absence of a grievance system requirement for FFS HCBS programs, States may not have established processes and systems for people receiving HCBS through FFS delivery systems to express dissatisfaction with or voice concerns related to States' compliance with the person-centered planning and service plan requirements at § 441.301(c)(1) through (3) and the HCBS settings requirements at § 441.301(c)(4) through (6), as such concerns are not subject to the existing fair hearing process at 42 CFR part 431 subpart E. As a result, we believe the proposal for a grievance system for FFS HCBS programs is necessary to assure that care and services will be provided in a manner that is in the best interests of the beneficiaries, as required by section 1902(a)(19) of the Act.

We specifically focused our proposed grievance system requirement on States' and providers' compliance with the person-centered service plan requirements at § 441.301(c)(1) through (3) and the HCBS settings requirements at § 441.301(c)(4) through (6) because of the critical role that person-centered planning and service plans play in appropriate care delivery for people receiving HCBS. Additionally, we focused the grievance system requirements on the HCBS settings requirements because of the importance of the HCBS settings requirements to ensuring that HCBS beneficiaries have full access to the benefits of community

[56] Section 2402(a) of the Affordable Care Act—Guidance for Implementing Standards for Person-Centered Planning and Self-Direction in Home and Community-Based Services Programs. Accessed at *https://acl.gov/sites/default/files/news%202016-10/2402-a-Guidance.pdf*.

living and are able to receive services in the most integrated setting appropriate to their needs. Beneficiary advocates and other interested parties indicated to us that these are especially important areas for which to ensure that grievance processes are in place for all Medicaid beneficiaries receiving HCBS. Further, focusing the grievance systems requirements on the person-centered service plan requirements at § 441.301(c)(1) through (3) and the HCBS settings requirements at § 441.301(c)(4) through (6) helps to ensure that the proposed grievance requirements do not duplicate or conflict with existing fair hearing requirements at part 431, subpart E, as HCBS settings requirements and person-centered planning requirements are outside the scope of the fair hearing requirements.

At § 441.301(c)(7)(ii), we proposed to define a grievance as an expression of dissatisfaction or complaint related to the State's or a provider's compliance with the person-centered service plan requirements at § 441.301(c)(1) through (3) and the HCBS settings requirements at § 441.301(c)(4) through (6), regardless of whether the beneficiary requests that remedial action be taken to address the area of dissatisfaction or complaint. Also, at § 441.301(a)(7)(ii), we proposed to define the grievance system as the processes the State implements to handle grievances, as well as the processes to collect and track information about them.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters expressed support for our proposal to require that States establish a procedure under which a beneficiary can file a grievance related to the State's or a provider's compliance with the person-centered service plan requirements at §§ 441.301(c)(1) through (3) and the HCBS settings requirements at §§ 441.301(c)(4) through (6). In general, commenters believed that clear, transparent, and accessible grievance processes are critical to ensuring that beneficiaries can address violations of their rights, provide feedback on their experiences in HCBS, and more fully participate in HCBS programs. One commenter noted that a Federal requirement will help establish national best practices.

Some commenters connected a strong grievance process with improved safety and service quality in HCBS programs. For instance, one commenter noted that a grievance process can complement other quality mechanisms (such as performance measures) because a grievance system can address problems as they happen, thus preventing harm before it can occur. Another commenter suggested that preventing or remediating poor service delivery has the potential of improving the HCBS workforce by promoting professionalism and improving the public perception of HCBS providers, which could aid providers' worker recruitment and retention efforts; this commenter noted that a strong workforce would promote quality in HCBS.

Other commenters noted that a grievance system would allow beneficiaries to state their rights and provide a fair and unbiased review of beneficiaries' concerns. Several commenters were specifically supportive of the proposal's potential to collect and track standardized information about service system issues, including obstacles to informed choice and person-centered planning.

A few commenters also described frustrations with current State or provider grievance processes that they have found difficult to access, unresponsive, ineffective, or opaque. One commenter described our proposal as ''overdue,'' but also expressed concerns about whether providers will comply with requirements moving forward. In this vein, a few commenters suggested that CMS involvement and oversight may be critical to ensuring that existing or newly created grievance processes are effective. One commenter expressed the hope that beneficiaries would be able to contact CMS if they believe the State is not complying with grievance process obligations.

Response: We thank commenters for their support. We believe the personal experiences with grievance systems that commenters shared underscore the need for national standards. Additionally, while States will have a great deal of responsibility for developing and monitoring their own systems, having Federal requirements for grievance systems will facilitate our ability to engage in oversight. We note that members of the public are able to share concerns with us about their State's Medicaid activities, which would include the grievance system, once implemented.[57] We also note that in addition to the grievance process finalized under this rule, individuals who believe they have been discriminated against in HCBS programs, including the right to be served in the most integrated setting, may file a civil rights complaint with the HHS Office for Civil Rights at *https://www.hhs.gov/civil-rights/filing-a-complaint/index.html.*

Comment: Several commenters expressed opposition to the proposal, suggesting that it was too prescriptive and would result in unnecessary information technology (IT) systems changes in States that already have grievance systems in place. Several commenters also noted concerns that the proposal would place administrative burdens on providers. Additionally, several commenters noted that this requirement could be administratively burdensome for States with a small percentage of their population enrolled in FFS. One commenter suggested that we provide an exceptions process in these circumstances.

Response: We address specific concerns from commenters—including concerns about potential duplication, burden, and provider involvement—in more detail in subsequent responses. As described below, we are seeking to balance State flexibility with the need for accountability and consistency among State systems. We also do not believe that this proposal should place excessive burdens on providers, as we are requiring that States, and not providers, bear the primary responsibility of managing the grievance system. Finally, as part of our goal of establishing national standards, we do not intend to exempt States from these requirements based on the size of their FFS populations.

Comment: One commenter requested clarification on whether the State or CMS is ''in charge'' of the grievance process.

Response: We have proposed and, as discussed further below, we are finalizing Federal requirements that States operate and maintain a grievance system. The State is responsible for this system. However, we will monitor the States' compliance with these requirements.

Comment: A few commenters raised concerns or expressed confusion about how the proposed grievance system requirement will affect dually eligible beneficiaries who are enrolled in managed care plans that already have grievance processes. One commenter raised concerns about the possibility of multiple investigations being conducted parallel to one another. Other commenters inquired if Medicare Advantage care navigators could be required to help beneficiaries file grievances, or if the proposed grievance system requirements can be made part of dual eligible special needs plan (D–

[57] Specific questions or concerns regarding the application or implementation of the regulations finalized in section II.B. of this rule may be directed to *HCBS_Access_Rule@cms.hhs.gov*.

SNP) contracts. One commenter noted that it is critical for dually eligible beneficiaries to have one place to file grievances about both Medicare and Medicaid services. Another commenter requested clarification on how the grievance systems should work for dually eligible beneficiaries who have, as described by the commenter, ''multiple, perhaps conflicting plans of care.''

Response: We plan to provide States with technical assistance to help address issues specific to dually eligible beneficiaries. We note that we proposed that the grievance system requirements at § 441.301(c)(7), and as finalized in this rule, apply only to beneficiaries receiving services under section 1915(c), (i), (j), and (k) authorities through FFS delivery systems, and to issues arising with these services. The new grievance system requirement would not affect, for instance, dually eligible beneficiaries who receive services under section 1915(c), (i), (j), or (k) authorities through fully integrated dual eligible special needs plans (FIDE SNP), highly integrated dual eligible special needs plans (HIDE SNP), or D–SNPs otherwise affiliated with MLTSS plans, as those beneficiaries receive their HCBS through managed care and not through FFS. We also note that some dually eligible beneficiaries may be enrolled in managed care plans known as applicable integrated plans (AIP), which are subject to the integrated grievance requirements at § 422.630. AIPs must resolve and notify enrollees within required timeframes for integrated grievances filed for Medicare and Medicaid services. We will provide technical assistance as needed regarding the application of the requirements finalized at § 441.301(c)(7) to beneficiaries in different categories of dual eligibility.

Comment: One commenter recommended continuity across grievance systems in FFS and managed care delivery systems to ensure consistent and equitable processes for addressing enrollee concerns.

Response: We agree that such continuity is important. In drafting the proposed requirements at § 441.301(c)(7) for FFS grievance systems, which we are finalizing as described in this section II.B.2 of the final rule, we attempted to mirror the requirements for managed care grievance processes in part 438, subpart F, as much as possible in order to promote consistency between the two systems.

Comment: A few commenters requested that we allow States to arrange for the operations of the grievance procedures to be performed by a vendor, local agencies, or other contracted entity. Conversely, a few other commenters raised concerns about the possibility of the grievance process being administered by providers. Some of these commenters expressed concerns that the requirement might be burdensome for local and regional entities to administer, and one commenter raised concerns that administration of the grievance process by local agencies might cause problems in terms of oversight and conflict of interest.

A few commenters also noted that, unlike in managed care where care is managed under one plan, some FFS delivery systems involve multiple State agencies or agency divisions operating different programs. The commenters requested more clarification about which agency or department is responsible for oversight of the system and coordination in these circumstances.

Response: The requirements proposed, and being finalized, in § 441.301(c)(7) are applied to the State, by which we refer (as we do in many of our regulations) to the single State agency as described in § 431.10(b). However, we believe that some States may find it more efficient or effective to have the operations of the grievance system performed by other government agencies or contractors, depending on how a State's systems are organized. Allowing such contracting may also help preserve existing State grievance processes; we address additional comments about preservation of existing grievance systems later in this section II.B.2. of the final rule. However, the single State agency must retain ultimate responsibility for ensuring compliance with the requirements set forth in § 441.301(c)(7). We expect that States are familiar with their local resources (including the capacity of local agencies) and would only have the operations of the grievance system performed by an entity that had the necessary infrastructure and resources to operate a system that would comply with the requirements in § 441.301(c)(7). To ensure that the responsibility of the single State agency is clear, we are finalizing § 441.301(c)(7)(i) with a modification to specify that the State may contract with contractors or other government entities to perform activities described in § 441.301(c)(7) provided however that the State retains responsibility for ensuring performance of and compliance with these provisions.

We also note that we intend that the proposed requirements at § 441.301(c)(7)(iii)(C)(3), which we are finalizing as discussed in detail later in this section II.B.2. of the final rule, promote an unbiased review of grievances because they prohibit someone who has previously made decisions related to the grievance from reviewing the grievance. While we do not intend to specify any additional restrictions on the entities operating the grievance system in this final rule, we believe that it would be difficult to envision scenarios in which it would be appropriate for the State to contract with a provider (or local agencies that act as providers) to operate the grievance system. For example, an employee of a provider who signed off on the provider's actions that gave rise to the grievance would be someone who was involved with making a decision about the grievance and thus neither that employee (nor their subordinates) would be appropriate decisionmakers in the grievance process. If a State believed it necessary to arrange for the operations of the grievance system to be performed by a local agency that also provided services, firewalls would have to be put in place to ensure that grievances were reviewed by a neutral decisionmaker within that agency.

Comment: Several commenters supported the definition of grievance we proposed at § 441.301(c)(7)(ii). Overall, these commenters supported the focus on compliance with the person-centered planning process and the HCBS settings rule. One of these commenters observed that issues with these requirements are often at the core of challenges experienced by beneficiaries. One commenter, however, questioned the inclusion of concerns about the HCBS settings requirements, noting that if a setting violates the HCBS settings requirements, the individual has the choice of moving to a different setting.

Response: We appreciate commenters' support for the definition of grievances. We specifically included noncompliance with the HCBS settings requirements as one of the bases for grievances so that beneficiaries do not have the burden of addressing violations of their rights by having to change providers, which could result in some circumstances in having to move out of their home. We do not believe that beneficiaries should have to choose between their rights or their homes. As a practical matter, switching residences can be disruptive, emotionally and physically demanding, costly, and time-intensive, not to mention particularly difficult in areas that lack plentiful affordable and accessible housing options. We also believe that requiring States to address these issues related to

compliance with HCBS settings requirements in the context of a grievance system may encourage States and providers to prevent similar issues from occurring with other beneficiaries.

Comment: One commenter stated that the definition of grievance was too broad and requested that CMS narrow the scope of allowable grievances. The commenter stated that although the proposed requirements limit the grievance system to person-centered planning, service plan requirements, and HCBS settings requirements, they would still allow a beneficiary to file a grievance on nearly every aspect of their HCBS experience, which would in turn create the potential for an unreasonably high volume of grievances to which States would be required to respond.

A few commenters stated that the definition of grievance was subjective, and asked for general clarification on what is meant by an ''expression of dissatisfaction.'' Conversely, a few commenters stated the definition of grievance was not broad enough. One commenter stated that the reference to §§ 441.301(c)(1) through (3) would only allow for the filing of grievances in relation to the person-centered planning process but would not allow for grievances in relation to beneficiaries' dissatisfaction with the delivery of the services in the plan. The commenter provided examples, such as a care provider handling an HCBS beneficiary roughly, failing to assist the beneficiary with certain activities of daily living or perform other services in the care plan, being slow to respond to the beneficiary's requests for assistance in residential settings, improper administration of chemical restraints, or general poor care that leads to injuries such as bed sores. The commenter recommended that the regulatory language be revised to include the right to file a grievance to protect beneficiary health and welfare.

One commenter suggested that we specify that grievances may include issues regarding timeliness, quality, and effectiveness of services, in addition to the HCBS setting, person-centered planning, and service plan requirements. The commenter noted that, in the commenter's State, beneficiaries have had to wait for long periods of time for the initiation of services after being approved for the services.

Finally, another commenter noted that they believed that the managed care regulations' grievance definition includes an expression of dissatisfaction about any matter other than an adverse benefit determination and recommended adding clarifying language to the definition of a grievance to ensure that beneficiaries do not mistakenly file grievances about issues that are adverse benefit decisions and that entitle them to a fair hearing.

Response: We disagree with commenters that the proposed definition is overly broad. The definition of grievance proposed at § 441.301(c)(7)(ii) was crafted to strike a balance between providing beneficiaries with broad, but not unlimited, bases for filing a grievance. We believe that the requirements in §§ 441.301(c)(1) through (6) provide a clear list of activities that the States and providers must perform to ensure that HCBS beneficiaries receive appropriate person-centered planning, receive the services described in the person-centered service plan to support the individual in the community, and have full access to the benefits of community living and are able to receive services in the most integrated setting appropriate to their needs.[58] We note that some specific examples of when a beneficiary may express dissatisfaction by filing a grievance are discussed further in this section.

We also disagree that the scope of the definition is too narrow. We proposed that the definition of grievance include an expression of dissatisfaction or complaint related to the State's or provider's compliance with the person-centered service planning process, required in §§ 441.301(c)(1) through (3). We note that some issues regarding the timeliness, quality, or effectiveness of services may need to be addressed as part of the person-centered service planning process itself. For instance, if a beneficiary believes the service is not effective, the beneficiary may request revision to the person-centered service plan, as required at § 441.301(c)(3), to identify either a more effective service or a more effective provider; non-responsiveness on the part of the entity responsible for updating the service plan could be a reason to file a grievance.

Additionally, § 441.301(c)(4) requires that home and community-based settings must meet certain requirements enumerated therein, including (but not limited to): being integrated in and supporting full access of individuals to community life; ensuring that an individual has rights to privacy, dignity and respect, and freedom from coercion and restraint; optimizing an individual's initiative, autonomy, and independence in daily activities and the physical environment; and facilitating an individual's choice in services and supports, as well as who provides them. If, for instance, a beneficiary believes that a worker has not treated the beneficiary with respect, or the worker is chronically late, and the provider has failed to address the worker's behavior or provide a different worker at the beneficiary's request, it would be reasonable for a beneficiary to file a grievance, as the provider is not ensuring that all of the qualities of a home and community-based setting (as described by § 441.301(c)(4)) are being met. Accordingly, we believe that the activities set forth in §§ 441.301(c)(1) through (6) (both currently and as are being amended in this final rule) generally describe the actions of both providers and States that are necessary to uphold and promote high-quality service delivery that promotes respect for beneficiaries' rights.

While we believe the scope of grievances that may be considered under the grievance system that we proposed, and are finalizing, appropriately captures activities that promote delivery of quality HCBS and respect for beneficiaries' rights, we do believe further clarity is warranted. We believe it is more appropriate and precise to say grievances may be filed regarding the State's or a provider's performance of (rather than compliance with) the requirements described in §§ 441.301(c)(1) through (6). We note that the activities described in § 441.301(c)(1) through (6) must, as required at § 441.301(c), be included in a State's waiver application; we want to make it clear that grievances may be filed when a State or provider fails to perform these activities (not solely if the State fails to include these items in a waiver application). To clarify this point, we are finalizing the scope of grievances that may be filed under the grievance system we proposed to set forth at § 441.301(c)(7) with modification, by revising the language in § 441.301(c)(7)(i) to specify that beneficiaries may file grievances regarding a State's or provider's performance of (rather than compliance with) the activities described in §§ 441.301(c)(1) through (6). We are finalizing a conforming modification to the definition of grievance at § 441.301(c)(7)(ii).

We observe that most of the examples provided by commenters, as described above, included instances in which a beneficiary experienced abuse or harm during the performance (or lack thereof) of services in the person-centered service plan. These types of complaints

[58] We note that compliance with CMS regulations and reporting requirements does not imply that a State has complied with the integration mandate of Title II of the ADA, as interpreted by the Supreme Court in the Olmstead Decision.

may be more appropriately addressed under the critical incident system being finalized at § 441.302(a)(6). As discussed in II.B.3. of this rule, we believe the critical incident system proposed at § 441.302(a)(6) is the appropriate mechanism for investigating harms to beneficiaries' health and safety. As we discuss in II.B.3 of this rule, we proposed additional performance measures and reporting requirements for the critical incident system (beyond what is proposed for the grievance system) to ensure more formal oversight of the investigations and resolutions of threats to beneficiary health and safety. We do not believe a grievance system is an appropriate mechanism for investigating threats to the beneficiary's health and welfare. Therefore, we decline to broaden the definition of grievances that may be addressed under the grievance system we are finalizing at § 441.301(c)(7) in such a way that would suggest that the grievance system is intended for complaints regarding health and safety. We believe doing so would create duplicative system requirements for the grievance process and critical incident system and potentially cause States to resolve threats to health and safety in the grievance system that should have been investigated and addressed within the critical incident system.

We also disagree with the commenter that suggested we align the definition of grievance we proposed at § 441.301(c)(7)(ii) with the definition of grievance for managed care grievance processes at § 438.400(b). We believe that, for the purposes of a FFS grievance system intended to address specific concerns with HCBS, using the same or similar definition of grievance for managed care grievance processes would be overly broad and will not diminish confusion about whether an issue is appropriate to be filed as a grievance, a critical incident, or a fair hearing. We plan to provide technical assistance to States as needed on this topic.

We refer readers to section II.B.2.b. of this final rule where we also address more specific concerns related to ensuring matters are filed with the correct system in our discussion of § 441.301(c)(7)(iii).

Comment: One commenter suggested that we broaden the definition of grievance to specify that beneficiaries can file grievances when their rights are violated, and suggested that the following be included in the definition of rights:

- Right to work and fair pay;
- Right to control one's own money;
- Right of possessions and ownership;
- Right to privacy, dignity, and respect;
- Freedom of choice and decision-making;
- Right to leisure activities;
- Freedom to marry and have children;
- Right to food, shelter, and clothing;
- Freedom of movement;
- Freedom of religion;
- Freedom of speech and expression;
- Free association and assembly;
- Freedom from harm;
- Access to health care;
- Right to citizenship and right to vote;
- Right to equal education;
- Right to equal access; and
- Due process.

Response: We believe that some of the consumer rights listed by the commenter are addressed in or mirrored by components of the existing HCBS settings rule requirements at § 441.301(c)(4), such as: ensuring that the individuals have access to the greater community, including engagement in community life, opportunities for employment in competitive integrated settings, and control over personal resources (§ 441.301(c)(4)(i)); the right to privacy, dignity and respect, and freedom from coercion and restraint (§ 441.301(c)(4)(ii)); allowing for individuals to choose their activities and set their own schedules (§ 441.301(c)(4)(iv) and (vi)(C)); the ability to determine with whom the individual will interact, as well as to have visitors of the individual's choosing at any time (§ 441.301(c)(4)(iv) and (vi)(D)); and control over the individual's own physical environment, living and sleeping space, and access to food (§ 441.301(c)(4)(iv), (v)(B), and (vi)(C)).

We note that many of the other rights suggested by the commenter are either addressed by other systems (such as access to health care which, if related to an adverse benefit determination made by the State Medicaid agency, may be subject to the fair hearings process or are out of scope of the State Medicaid agency's authority) or by other authorities (such as fair wages, equal access to education, or violations of constitutional rights).

Comment: Several commenters requested that the grievance process include issues such as authorization disputes and the provision of services.

Response: We are not certain if the commenters are referring to using the grievance system to allow beneficiaries or providers to challenge denials of services. We are also uncertain if disputes over ''provision of services'' refers to the quantity or quality of services. We note that the fair hearings process at 42 CFR part 431, subpart E, sets out the parameters that allow beneficiaries to challenge an adverse action by the State Medicaid agency. For the purposes of a fair hearing, an ''action'' is defined at § 431.201 in part, as the termination, suspension of, or reduction in covered benefits or services, or a termination, suspension of, or reduction in Medicaid eligibility. A State must provide an individual the opportunity for a fair hearing in the circumstances described in § 431.220(a), which include when the Medicaid agency has denied eligibility, services, or benefits, and when the claim for medical assistance has not been acted on with reasonable promptness. In most circumstances, a refusal of a State Medicaid agency to authorize a particular service for a beneficiary, or to authorize the quantity of services the beneficiary believes is necessary, would be addressed in the fair hearings process. In contrast, the grievance process we have proposed is intended to allow beneficiaries to raise concerns about specific aspects of their services that have been authorized.

Comment: Several commenters who supported this proposal did so because they agreed that, currently, concerns regarding person-centered planning and HCBS settings requirements are not subject to the existing fair hearings process at 42 CFR part 431 subpart E. One commenter, however, suggested that, rather than create a grievance process to hear complaints about person-centered service plans and the HCBS settings requirements, we should require that concerns about person-centered service plans or the HCBS settings requirements be added to fair hearings processes. The commenter stated the belief that fair hearings permit an unbiased third-party Administrative Law Judge (ALJ) to consider the facts and render an objective decision. By contrast, the commenter believed that, in their State, the current State grievance process did not permit unbiased or effective review.

Response: We agree that it is important to provide beneficiaries with the opportunity to raise concerns about the person-centered service plans and planning process and the HCBS settings requirements. We do not, however, believe that these are necessarily appropriate matters for the fair hearings process. The authority for the fair hearings process comes from section 1902(a)(3) of the Act, which requires that States provide beneficiaries and

applicants an opportunity for a fair hearing before the State agency to any individual whose claim for medical assistance is denied or is not acted upon with reasonable promptness.

While beneficiaries can request a fair hearing to address concerns about service denials (including partial denials) and other concerns described under § 431.220(a), we believe that an individual's concerns about person-centered service plans, the planning process, and HCBS settings are outside the scope of issues for which the statute requires that a fair hearing be provided, and therefore we cannot require States to provide an opportunity for a fair hearing to address such issues. We note, however, that States have discretion to decide whether integrating their grievance processes with other State systems, including their fair hearings systems, is feasible and appropriate, and that the requirements for both systems may still be met.

Separate from the fair hearing requirement at section 1902(a)(3) of the Act, section 2402(a)(3)(B)(ii) of the Affordable Care Act requires the development and monitoring of an HCBS complaint system. To address this statutory requirement, we proposed that the grievance system address matters that do not arise from a denial of Medicaid eligibility or denial of services, or failure to act upon the individual's claim for medical assistance with reasonable promptness, which are addressed separately under the required fair hearing process. We expect the grievance system will help beneficiaries resolve concerns about the quality of the services they are receiving. We also note that the purpose of our proposals in this section II.B.2. is to require that States create, implement, and maintain grievance systems that, while not necessarily as formal as a fair hearings process in all cases, will nevertheless result in unbiased and effective reviews of grievances.

We note that, while States may choose to use ALJs as hearing officers to conduct a Medicaid fair hearing, hearing officers are not required to be ALJs. Medicaid regulations at § 431.240(a)(3) require that all fair hearings be conducted by one or more impartial officials or other individuals who were not directly involved in the initial determination in question. We also note that the proposed requirements at § 441.301(c)(7)(iii)(C)(3), which we are finalizing as discussed in detail later in this section II.B.2. of the final rule, are intended to promote an unbiased review of grievances because they prohibit someone who has previously made decisions related to the grievance from reviewing the grievance.

Comment: A few commenters expressed concerns that, in States that already have grievance systems, the proposed requirements could result in duplication of processes and confusion for beneficiaries about where and how to report grievances. Several of these commenters requested we allow States to use existing grievance systems to meet the Federal requirement. One commenter also suggested that if the State's existing system meets our proposed criteria, the State should be considered in compliance with the requirements. Another commenter suggested that providers or States with existing grievance systems should not have to modify their systems.

Commenters were especially concerned about the impact on States that already had multiple grievance systems for different programs, administered by different operating agencies. These commenters requested that we allow States flexibility to design grievance systems and processes to fit their unique program and systems structures and implement multiple grievance systems or processes tailored to their programs. One commenter raised specific concerns about having to consolidate current grievance systems into a single electronic system.

One commenter, however, requested that we require States to have a single grievance system; the commenter stated that having multiple grievance processes can be confusing and burdensome for beneficiaries.

Response: We acknowledge that many States already have grievance processes in place for HCBS, and it is not our intent for States to abandon these systems or create additional systems. We agree with the suggestion that, if a State already has a grievance process in place that meets the requirements that we are finalizing in this rule, that State will be considered in compliance with these requirements. However, we disagree that States with existing grievance systems should be allowed to maintain the system without modification where their systems do not meet Federal requirements. While we encourage States to economize by maintaining current systems as much as possible, we do expect that States will make any needed adjustments to bring their systems into compliance with the requirements we are finalizing in this rule. We believe that having Federal requirements for grievance systems will promote consistency and accountability across the country.

Additionally, we note that the definition of grievance system that we proposed referred to ''processes,'' suggesting that a grievance system may be made up of one or more processes (88 FR 28080). If a State wishes to maintain multiple grievance processes, and each of these processes comply with the Federal requirements we are finalizing in this rule, the State will be considered in compliance.

We did not propose a requirement for a State to maintain a single electronic system for their grievance system and, as discussed above, believe it would be acceptable to maintain multiple grievance processes. However, we also emphasize that part of the definition of grievance system we proposed, and are finalizing, in § 441.307(c)(7)(ii) is that the system allows States to collect and track information about grievances. If States choose to maintain separate systems, including separate electronic systems, they must develop ways to ensure that they are able to track trends across systems in meaningful ways. We refer readers to section II.B.2.f of this final rule, where we discuss our proposals related to recordkeeping requirements for the required grievance system.

Although not required, we encourage States to implement a single integrated system across their HCBS programs, as we echo one commenter's concerns that a single integrated system would likely reduce confusion for beneficiaries and facilitate their ability to access the system. We also believe that a single system would best permit States to track trends across their HCBS programs and use the data and information generated by the grievance system to address systemic issues in their HCBS programs. Additionally, a single integrated system may be more cost-effective for States to operate once implemented.

Comment: One commenter requested clarification on whether there is a difference between a complaint and a grievance, as well as what would elevate a complaint to the level of a grievance.

One commenter asked for clarification on the role of conflict-free case managers in the grievance system.

Response: While section 2402(a)(3)(B)(ii) requires that we promulgate regulations to ensure that all States develop service systems that include development and monitoring of a complaint system, the Affordable Care Act does not define the terms complaint or complaint system. In developing our proposal to implement this requirement from the Affordable Care Act, we have chosen to use the term grievance, instead of complaint, and proposed to define grievance and grievance system at § 441.301(c)(7)(ii). If a State has implemented a system it calls a

complaint system that meets the requirements we proposed, and are finalizing, at § 441.301(c)(7), it is possible that this system could satisfy the requirement for a State to have a grievance system.

We do not understand the specific nature of the comment regarding conflict-free case managers. We note, in general, that we will provide technical assistance to States to assist in adapting their HCBS programs and any associated existing grievance processes to comply with the requirements finalized at § 441.301(c)(7).

Comment: Several commenters observed that some States currently require providers to have policies and procedures in place related to service-delivery complaints. One commenter requested that we provide clarification, either in the final rule or subregulatory guidance, regarding the inclusion of the proposed grievance system requirements in existing provider-level complaint and grievance processes. Commenters stated that additional guidance is needed to help all interested parties understand when beneficiaries should file a grievance with their provider and when they should file with the State. One commenter recommended that beneficiaries be required to exhaust these processes at the provider level before a complaint is submitted to the State agency for investigation or intervention.

Response: Our goal for proposing uniform requirements for grievance systems applicable to all States providing HCBS under section 1915(c) waiver program authority, and other HCBS authorities as discussed in section II.B.2.h of this final rule, is to ensure consistent processes are available for Medicaid beneficiaries receiving such services. We decline to require in this final rule that beneficiaries exhaust their provider-level complaint process prior to accessing the State grievance system. We believe that such a Federal requirement would be inapplicable or confusing in States that do not have provider-level complaint process requirements, do not require all providers to have them, or do not require that providers have uniform complaint processes. We have attempted to provide States with as much flexibility as possible in the design of their grievance system. Additionally, we have concerns that such an exhaustion requirement would be a barrier, or would cause unnecessary delay, for beneficiaries where the relationship between the beneficiary and the provider is contentious, or where the provider does not have an effective or efficient complaint process.

Comment: Commenters requested that grievance processes be developed with input from providers, beneficiaries, families, and advocacy groups to create a grievance system that is accessible, practical, and sets realistic expectations for its users.

Response: We have attempted to provide States with as much flexibility as possible in the design of their grievance system and decline to add a specific requirement on this point in this final rule. We encourage States to include input from interested parties when developing their grievance system policies and procedures to comply with the requirements we are finalizing in this rule.

Comment: Several commenters suggested that the grievance system be integrated with the critical incident system. One commenter stated that States should be required to enter the grievance information and data into a State database with standardized fields that is either part of, or integrated with an incident management system, so that grievance data can be compared to data on relevant individuals, providers, and incidents (both reported and unreported). Similarly, a few commenters suggested that the grievance system should be integrated with the fair hearings system in States.

Response: While we agree that States may find it useful to have a single, integrated system for grievances, critical incidents, and fair hearings, we are not requiring in this final rule that States do so. We believe it is important for States to have flexibility in how they design their grievance systems so that they may expand on infrastructures and processes they already have in place and tailor the grievance systems to meet their programmatic and operational needs, even as they are held to standardized Federal grievance system requirements.

After consideration of the comments received, we are finalizing the language at § 441.301(c)(7)(i) and (ii) with modifications. For the reasons discussed above, we are modifying § 441.301(c)(7)(i) to include language specifying the State may have activities described in paragraph (c)(7) of this section performed by contractors or other government entities, provided, however, that the State retains responsibility for ensuring performance of and compliance with these provisions. Additionally, we are finalizing § 441.301(c)(7)(i) and the definition of grievance in § 441.301(c)(7)(ii) with the modification that States must establish a procedure under which a beneficiary can file a grievance related to the State's or a provider's *performance of* (rather than compliance with) the person-centered planning and service plan requirements at §§ 441.301(c)(1) through (3) and the HCBS settings requirements at §§ 441.301(c)(4) through (6). We are otherwise finalizing the definition of grievance system at § 441.301(c)(7)(ii) as proposed.

b. Grievance Process Requirements (§ 441.301(c)(7)(iii))

At § 441.301(c)(7)(iii)(A) through (C), we proposed new general requirements for States' grievance procedures for section 1915(c) HCBS waiver programs and other HCBS authorities as discussed in section II.B.2.h of this final rule. Specifically, at § 441.301(c)(7)(iii)(A), we proposed to require that a beneficiary or authorized representative be permitted to file a grievance under the section 1915(c) HCBS waiver program. As discussed below in section II.B.2.h. of this final rule, we also proposed to apply these same requirements to section 1915(i), (j) and (k) HCBS programs. Under the proposal, another individual or entity may file a grievance on a beneficiary's behalf, so long as the beneficiary or authorized representative provides written consent. We noted that our proposal would not permit a provider to file a grievance that would violate conflict of interest guidelines, which States are required to have in place under § 441.540(a)(5). At § 441.301(c)(7)(iii)(A), we also proposed to specify that all references to beneficiary in the regulatory text of this section includes the beneficiary's representative, if applicable.

At § 441.301(c)(7)(iii)(B)(1) through (7), we proposed to require States to:

- Have written policies and procedures for their grievance processes that at a minimum meet the requirements of this proposed section and serve as the basis for the State's grievance process;
- Provide beneficiaries with reasonable assistance in completing the forms and procedural steps related to grievances and to ensure that the grievance system is consistent with the availability and accessibility requirements at § 435.905(b);
- Ensure that punitive action is not threatened or taken against an individual filing a grievance;
- Accept grievances, requests for expedited resolution of grievances, and requests for extensions of timeframes from beneficiaries;
- Provide beneficiaries with notices and other information related to the grievance system, including information on their rights under the grievance

system and on how to file grievance, and ensure that such information is accessible for individuals with disabilities and individuals who are limited English proficient in accordance with § 435.905(b);

- Review grievance resolutions with which beneficiaries are dissatisfied; and
- Provide information on the grievance system to providers and subcontractors approved to deliver services under section 1915(c) of the Act.

At § 441.301(c)(7)(iii)(C)(1) through (6),[59] we proposed to require that the processes for handling grievances must:

- Allow beneficiaries to file a grievance either orally or in writing;
- Acknowledge receipt of each grievance;
- Ensure that decisions on grievances are not made by anyone previously involved in review or decision-making related to the problem or issue for which the beneficiary has filed a grievance or a subordinate of such an individual, are made by individuals with appropriate expertise, and are made by individuals who consider all of the information submitted by the beneficiary related to the grievance;
- Provide beneficiaries with a reasonable opportunity, face-to-face (including through the use of audio or video technology) and in writing, to present evidence and testimony and make legal and factual arguments related to their grievance;
- Provide beneficiaries, free of charge and in advance of resolution timeframes, with their own case files and any new or additional evidence used or generated by the State related to the grievance; and
- Provide beneficiaries, free of charge, with language services, including written translation and interpreter services in accordance with § 435.905(b), to support their participation in grievance processes and their use of the grievance system.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposal at § 441.301(c)(7)(iii)(A) to require that a beneficiary or the beneficiary's authorized representative be permitted to file a grievance, including allowing another individual or entity to file a grievance on a beneficiary's behalf, with written consent from the beneficiary or the beneficiary's authorized representative.

However, several commenters raised concerns about the proposed requirement that beneficiaries or their authorized representatives must provide written consent to another individual or entity to file a grievance on the beneficiary's behalf. A few commenters noted that some beneficiaries may not be able to give written consent, or that waiting for written consent to be obtained could create unnecessary delays in grievance filings and investigations. One commenter suggested that we either remove the word ''written'' or specify that consent may be verbal or written. Another commenter, using their State as an example, suggested that a grievance could be filed with verbal consent from the beneficiary or authorized representative, with written consent obtained later. One commenter suggested an agency could obtain a beneficiary or authorized representative's consent over the phone to allow another individual or entity to file a grievance on the beneficiary's behalf.

Response: As discussed further herein, we are finalizing the requirement that consent must be written as proposed. We modelled the proposed requirement and language at § 441.301(c)(7)(iii)(A) on requirements for the managed care grievance process at § 438.402(c)(1)(ii), which provides that, if State law permits and with the written consent of the enrollee, a provider or an authorized representative may request an appeal or file a grievance, or request a State fair hearing, on behalf of a managed care enrollee. Our general intent is to align the FFS grievance system and managed care grievance process to the greatest extent possible. We also believe it is important to ensure that there is some documentation demonstrating that beneficiaries or their authorized representatives have provided consent for a grievance to be filed on the beneficiary's behalf, especially as the investigation of a grievance may involve reviewing records pertaining to the beneficiary's care.

We note that written consent may be broadly interpreted to include electronic signatures, voice signatures, or other methods that provide reasonable accommodations to individuals who might face challenges providing traditional written signatures. States will have flexibility in determining how written consent is obtained and verified, so long as the system States develop ensures that the process presents as few administrative barriers as possible for a beneficiary or authorized representative to provide the necessary consent.

Comment: Several commenters recommended that we clarify that beneficiaries be able to choose who represents them throughout the grievance process. One commenter recommended that the grievance process should provide the beneficiary with the opportunity to indicate who they want to assist them in the process, and this should serve as a type of release.

Response: It was our intent that beneficiaries and their authorized representatives be able to involve other individuals or entities of their choosing to assist them throughout the grievance process, in addition to filing a grievance. We believe that it is logical to assume that if a beneficiary or their authorized representative needs assistance filing a grievance, they may also need assistance with other parts of the process (such as requesting and reviewing their case file, or presenting information to support their concerns at a hearing). We also note that while States are required at § 441.301(c)(7)(iii)(B)(*2*) to provide beneficiaries with reasonable assistance in completing forms and taking other procedural steps related to a grievance, beneficiaries may prefer to get this assistance from an individual or entity of their own choosing, particularly in situations where the beneficiary has filed a grievance against the State. To clarify this intent, we are finalizing § 441.301(c)(7)(iii)(A)(*1*) with a modification to specify that another individual or entity may file a grievance on behalf of the beneficiary, or provide the beneficiary with assistance or representation throughout the grievance process, with the written consent of the beneficiary or authorized representative. We note that we expect that, as part of ensuring the process is person-centered, beneficiaries or their authorized representatives will be able to withdraw consent for this third-party representation at any time, and that beneficiaries can generally terminate the grievance process at any time.

We are finalizing § 441.301(c)(7)(iii)(B)*(1)* with a modification to correct an erroneous reference to subchapter in the regulatory language and replace subchapter with paragraph (c)(7).

Comment: Several commenters requested clarifications or made suggestions regarding our proposal at § 441.301(c)(7)(iii)(B)(2) to require that States provide beneficiaries reasonable assistance in completing forms and taking other procedural steps related to a grievance. One commenter

[59] At 88 FR 27976, we incorrectly stated that we were proposing these requirements at § 441.301(c)(7)(iii)(C)(*1*) through (*5*), rather than (*1*) through (*6*). This typo has been corrected.

recommended that we set minimum criteria for reasonable assistance in filing a grievance, including but not limited to the State making someone available to meet with the beneficiary in person. Another commenter observed that many individuals who receive section 1915(c) waiver services, for example, have significant intellectual and developmental disabilities and as a result may need substantially more assistance than other beneficiaries to complete forms and procedural steps. The commenter requested clarification as to whether, in these circumstances, the reasonable threshold is determined by the needs of the beneficiary or the burden is on the State to determine how to provide reasonable assistance.

Response: We disagree that the term reasonable assistance that we proposed at § 441.301(c)(7)(iii)(B)(*2*) is unclear. We intentionally proposed language that would require States to determine, on a case-by-case basis, what constitutes reasonable assistance for beneficiaries utilizing the grievance system. Reasonable assistance may vary among beneficiaries and thus we intended to provide States with flexibility in determining what assistance is reasonable to provide. We decline to include additional formal definitions or criteria for the term reasonable assistance in this final rule lest we inadvertently set rigid standards that would, counterproductively, inhibit States from modifying processes for beneficiaries. For instance, if we were to require that States make someone available to meet with the beneficiary in person, we would not want this misinterpreted as a requirement that grievances may only be filed in person, which could pose significant barriers to individuals who lack transportation or live far from the physical locations in which grievances could be filed, even though we recognize that some beneficiaries may prefer to file a grievance in person.

We agree with the commenter that some beneficiaries may need more assistance, or different types of assistance, than other beneficiaries. We decline, however, to weigh in on what would be the threshold for determining reasonableness, as this appears to be a request for an opinion on hypothetical situations. We note that the concept of reasonableness is central to many areas of law and bodies of guidance regarding reasonableness are well-developed. We also note that the grievance system in general, by virtue of being administered by State Medicaid programs, will be subject to Title II of the Americans with Disabilities Act (ADA) of 1990, and section 504 of the Rehabilitation Act of 1973 (section 504), which may provide some specific guidance for what may be considered a reasonable modification in a government service.

Comment: A number of commenters advocated for the creation of a requirement for an HCBS Ombudsman program, similar to those required by the Older Americans Act. Many commenters noted an independent ombuds program could provide more effective assistance to individuals in filing grievances, helping them navigate the process, and representing them during the proceedings, rather than relying on assistance provided by the State.

Response: We thank commenters for their interest in this issue. As commenters noted, Title VII of the Older American Act authorizes and provides Federal funding for the national Long-Term Care Ombudsman Program, which is administered at the State level. These programs provide advocacy on behalf of residents of long-term care facilities. While there is no similar Federal statutory requirement for States to create an HCBS ombuds program, States may create such a program or similar programs at their own discretion to assist during grievance processes or to provide other advocacy supports.

Comment: Several commenters expressed concerns that it will be challenging for beneficiaries to understand when and how to file grievances. Several commenters noted the possibility that beneficiaries will be confused by the grievance and fair hearings processes and will file grievances or appeals with the wrong entities. One commenter suggested that beneficiaries enrolled in managed care for some medical services but receive FFS HCBS may be confused when presented with multiple grievance processes.

A number of commenters recommended that the grievance system should be set up with a ''no wrong door'' process so that, for example, a managed care plan receiving a grievance related to a FFS service would be responsible for forwarding the grievance to the appropriate entity. Similarly, another commenter suggested that if an enrollee mistakenly files a grievance about an adverse benefit determination, we require that this submission be treated as a fair hearing request unless the beneficiary objects. One commenter cautioned that, based on the commenter's experience, creating a ''no wrong door'' approach to grievances can be complicated and resource intensive. Another commenter requested that, if setting up a ''no wrong door'' approach, we ensure that the burden does not fall entirely on local entities, such as local Area Agencies on Aging.

One commenter requested clarification on whether appropriate referral of a grievance to the critical incident management process will count as a successful resolution of the grievance.

Response: We take very seriously the concerns raised by commenters regarding potential confusion among beneficiaries about which matters should be filed with which system. Our understanding of the commenters' suggestions is that such system should be coordinated for accepting grievances, fair hearing requests, and reports of critical incidents, among other engagements with beneficiaries, and ensure that each grievance, fair hearing request, or report of a critical incident is appropriately and seamlessly processed once it has been received by that system. However, we are not adding a formal ''no wrong door'' requirement in this final rule. Rather, we are finalizing the grievance system requirements we proposed with modifications as described below. We understand that, despite efforts to provide beneficiaries and interested parties with information and to make systems as user-friendly as possible, there will be instances in which beneficiaries attempt to access the ''wrong'' system. Additionally, there may be some matters where it is not immediately clear to the beneficiary if the problem, for instance, is a matter for the grievance system, critical incident investigation, or the fair hearings process. We also note that the beneficiary (or someone on their behalf) may report a critical incident (as defined at § 441.302(a)(6) of this final rule), or file an appeal under the fair hearings process that may not, as a whole, meet the definition of a grievance, but may contain elements that are more appropriate for consideration under the grievance system, while the remaining elements should still proceed as a critical incident investigation or in the fair hearing process. (We note that additional concerns about perceived overlap between grievances and critical incidents are addressed more fully later in this section.) Further, we agree that something akin to a ''no wrong door'' approach may be a good solution, to ensure that matters that are brought to the grievance system are not rejected because they are really a matter for a fair hearing or critical incident investigation. We encourage States to create a ''no wrong door'' policy and system or integrate grievance filings with existing ''no wrong door'' systems,

if feasible. We believe that such a system would help ensure that matters are filed correctly, which could reduce administrative burden on the grievance system.

However, we did not propose, nor are we requiring, that States create a ''no wrong door'' system. We note that some States may already have ''no wrong door'' systems that could be used to support beneficiary filings in the grievance system. While we encourage States that do not have such ''no wrong door'' systems to consider developing them, we recognize that there is variety among State systems and we do not wish to create a potentially rigid requirement that misaligns with States' existing infrastructures. We also want to ensure that the grievance process requirements finalized in this section focus on standardizing the grievance process itself, and are concerned that an attempt to further standardize ancillary processes would distract from this intention. We will take commenters' suggestions regarding ''no wrong door'' systems under consideration for potential future policy development or rulemaking.

While we are not requiring States develop a ''no wrong door'' system, we do take seriously commenters' concerns that beneficiaries may attempt to file grievances with other systems operated by the State. We proposed a requirement at § 441.301(c)(7)(iii)(B)(*2*) that States must provide reasonable assistance to beneficiaries both with filing grievances and completing other procedural steps; we believe it is logical to expect that if a beneficiary needs reasonable assistance from the State for the procedural steps, then they may need assistance with determining where to file their grievance in the first place. To better address the concern about potential beneficiary confusion about the grievance, incident management, fair hearings, and managed care grievance and appeal systems, we are modifying the language in § 441.301(c)(7)(iii)(B)(*2*) to indicate more clearly that States must provide reasonable assistance to ensure that grievances are appropriately filed with the grievance system (in other words, that States help beneficiaries identify whether their concern should be filed in the grievance system and, to the greatest extent possible, redirect grievances filed with other State systems to the grievance system).

Additionally, we note that the disposition of matters that are not grievances is outside the scope of the grievance process requirements at § 441.301(c)(7) finalized in this section regarding the grievance system; however, we strongly encourage States to ensure that grievances filed with the grievance system that contain matters that are appropriate for other systems, including the critical incident system (as finalized in section II.B.3. of this rule), the fair hearings system (as described in part 431, subpart E), or the managed care grievance or appeal system (as described in part 438, subpart F) are also considered filings with the appropriate system or systems in accordance with the requirements and timeframes for those systems.

We also remind States that States have the option under current regulations to assist beneficiaries with filing fair hearing requests (as described in part 431, subpart E). Section 431.221(c) provides that State Medicaid agencies may assist applicants or beneficiaries in submitting fair hearings requests and section 2901.3 of the State Medicaid Manual instructs States to make every effort to assist applicants and beneficiaries to exercise their appeal rights. Additionally, section 2902.1 of the State Medicaid Manual states that oral inquiries about the opportunity to appeal should be treated as an appeal for purposes of establishing the earliest possible date for an appeal. Thus, if a beneficiary submits a matter to the grievance system which the State recognizes as a matter more appropriate for a fair hearing, the State should treat this matter in accordance with the requirements of § 431.221(c) and the State Medicaid Manual by assisting the beneficiary with filing a fair hearing request and using the grievance submission date to establish the earliest possible submission date for the fair hearing requests. States also have the option to establish procedures that treat the request made to the grievance system as a submission of a fair hearing request described at § 431.221(a) when the matter raised in the grievance filing is more appropriate for a fair hearing.

Finally, we clarify that matters that are mistakenly filed with the grievance system but are appropriately referred to another system may be considered ''resolved grievances'' unless the State determines that the matter also contains separate grounds for a grievance review. We note that should a matter be resolved through referral to another system, this matter would still be subject to the requirements at § 441.301(c)(7)(v) and (vi) (notifying the beneficiary of the resolution of a grievance) and § 441.301(c)(7)(iii)(B)(*6*) (review of grievance resolutions with which the beneficiary is dissatisfied), which are being finalized in this section II.B.2. of the final rule.

Comment: A few commenters provided support for our proposal at § 441.301(c)(7)(iii)(B)(2) that the reasonable assistance provided by the State includes, but is not limited to, ensuring the grievance system is accessible to individuals with disabilities and individuals with Limited English Proficiency. These commenters noted the importance of providing accessible information to beneficiaries, to ensure beneficiaries have full participation in the process.

Some commenters suggested modifications or additions to the accessibility requirements, including:

- Replacing the term, interpreter services, with the term, linguistic accommodations, noting this would better capture the need for trans creative supports that addresses differences in cultural norms and understandings;
- Requiring plain language explanations of the grievance procedures; and
- Adding mention of the regulations implementing section 1557 of the Affordable Care Act, particularly to reflect §§ 92.201–92.205 of the 2022 Nondiscrimination in Health Programs and Activities proposed rule (87 FR 47824).

Response: As discussed further herein, we are not making modifications to § 441.301(c)(7)(iii)(B)(2) in response to these comments. While it may be a term of art used in some fields, there is no Federal guidance or definition of the term, linguistic accommodations. We retain the term, interpreter services, as defined at § 441.301(c)(7)(iii)(B)(*2*), in this final rule to remain consistent with other Federal requirements. We thank the commenter for bringing the term linguistic accommodations to our attention, and we will take it into consideration for future technical assistance related to this provision.

We note that the proposed requirement at § 441.301(c)(7)(iii)(B)(2) already included a mention of existing accessibility requirements at § 435.905(b). Section 435.905(b) includes a requirement that communications be provided in plain language. We believe it would be duplicative to add a specific requirement that information be provided in plain language.

We also decline to add specific reference to section 1557 of the Affordable Care Act or its implementing regulations, as we find such an addition to be unnecessary. State Medicaid agencies must comply with all relevant requirements in section 1557 in all aspects of their programs, including the grievance process.

Upon review, we are finalizing § 441.307(c)(7)(iii)(B)(*2*) with some modifications to better align the provision with other regulations. We are finalizing a modification to revise the term ''individuals who are limited English proficient'' to ''individuals with Limited English Proficiency.'' This modification conforms with the language being finalized in § 431.12(f)(7) (discussed in section II.A. of this final rule). We are finalizing a modification to clarify that auxiliary aids and services are to be available where necessary to ensure effective communication (instead of upon request as originally proposed), which we believe better conforms to access standards such as those set forth in the ADA and section 504.

Comment: One commenter noted that the repeated references to the regulation at § 435.905(b) (in the proposed requirements at § 441.301(c)(7)(iii)(B)(*2*), (c)(7)(iii)(C)(*6*), and (c)(7)(vi)(A)) may suggest that these accessibility services are not necessary outside of the specific provisions for which they are listed. The commenter suggested we create a separate provision related to language and disability access under the general requirements for the grievance system and specify that it applies to all components of the grievance system.

Response: We disagree that a separate, standalone accessibility requirement would add clarity to States' accessibility requirements. We also do not believe that we have overlooked a part of the process that must be accessible and note that the entire grievance system is subject to other accessibility requirements, including the ADA and section 504, by virtue of being administered by government agencies. As discussed further herein, we are finalizing the references to § 435.905(b) included in the provisions in § 441.301(c)(7) as proposed, as we believe that it is helpful to reiterate the importance of compliance with § 435.905(b) in the various steps of the grievance process.

Comment: One commenter recommended that we mandate that States accept electronic grievances with fill-in forms that could be completed by someone using a smart phone. Another commenter also requested that we require that the grievance system be web-based. One commenter, however, expressed concerns about a grievance system that is only accessible electronically, noting that some people may not have access to or be able to use computers.

Another commenter suggested that we specify that States must maintain a toll-free number, a regularly monitored email address for receiving grievances from Medicaid HCBS beneficiaries, and multiple modes of submitting a grievance, including a request for assistance with articulating and submitting a grievance as a reasonable accommodation.

Response: We appreciate commenters' many thoughtful suggestions on how to ensure that the grievance process system is accessible and user-friendly. At this time, we are not making changes in this final rule at § 441.301(c)(7) to include specific regulatory requirements for exactly how States should implement an electronic system for filing grievances. We believe that the diversity of comments on this issue demonstrates that beneficiaries will likely need the ability to access the grievance filing process through multiple modalities. We encourage States to consider user access (in addition to legally required accessibility considerations) and engage the interested parties within the HCBS community regarding the construction of a user-friendly grievance filing process that accommodates beneficiaries' different communication and technology needs.

Comment: A few commenters expressed support for our proposal to prohibit punitive actions against individuals who file grievances. One commenter noted that, in their State, beneficiaries are reluctant to complain about care due to fear of retaliation. Another commenter requested that CMS clarify that the requirement applies to punitive actions taken by either the State or a provider. The commenter also requested that CMS clarify that States must investigate punitive actions from providers. One commenter requested that CMS clarify that punitive action includes implying that an individual or family might lose services if they access the grievance process. Another commenter stated that the State should provide operational definitions of punitive actions and provide easily understood guidance to providers and State entities as to what types of actions would be considered punitive.

Several commenters offered specific suggestions for revising the proposed requirement at § 441.301(c)(7)(iii)(B)(*3*). One commenter suggested we revise the language to read ''retaliatory action'' or ''retaliatory or punitive action.'' Another commenter suggested that we amend the proposed regulatory text to define such action as ''any negative action following a grievance, complaint, and appeal or reporting of any issue to any regulatory body.''

Response: We clarify that this requirement is intended to prohibit punitive actions from either the State or providers. We do expect that, as part of ensuring that beneficiaries (as well as authorized representatives or other individuals who have filed a grievance on the beneficiary's behalf) are protected from punitive action, States will have a system for both identifying and investigating allegations of punitive action. We agree with the commenter that verbal threats from a provider directed at the beneficiary, or the beneficiary's family, would be the type of punitive action contemplated by this provision that would merit investigation. We also agree that providing additional definitions and examples of punitive actions will be an important part of States' grievance system policies.

To better clarify who is protected from punitive actions (both beneficiaries and those filing grievances on their behalf), we are finalizing a modification to § 441.301(c)(7)(iii)(B)(*3*) to clarify that prohibited actions are neither threatened nor taken against an individual filing a grievance *or who has had a grievance filed on their behalf.* As discussed in this section (section II.B.2.b.), we are finalizing our proposal at § 441.301(c)(7)(iii)(A)(*1*) to allow beneficiaries to have another individual or entity file a grievance on their behalf with written consent. We intend to make it clear that punitive action may not be taken against a beneficiary, whether the beneficiary personally filed the grievance or received assistance filing the grievance. We also want to ensure that authorized representatives or other individuals (including family members or other beneficiaries) are protected from punitive action when helping beneficiaries file grievances.

We agree that amending the regulatory language to ''punitive or retaliatory actions'' would further clarify the intent of the requirement, as ''retaliation'' is a common term associated with prohibited behavior in other types of complaints systems. While there is overlap in the connotations of ''punitive'' and ''retaliatory'' actions, we also believe that some actions that could be taken against individuals in response to the filing of a grievance could be perceived as ''retaliatory'' rather than ''punitive.'' We believe that the word ''retaliatory'' may particularly capture threats or actions that could negatively affect a beneficiary's access to services, whether or not the threat or negative outcome actually materializes. For instance, if a provider noted negative things to other providers about a beneficiary or the beneficiary's authorized representative and discouraged other providers from accepting that beneficiary as client after a grievance was filed against the

provider, this action could be perceived as ''retaliatory'' rather than ''punitive,'' particularly if this did not ultimately result in a reduction or alteration of the beneficiary's services. Therefore, we are finalizing § 441.301(c)(7)(iii)(B)(*3*) with modification in this final rule to specify that States must ensure that punitive or retaliatory action is neither threatened nor taken against an individual filing a grievance or who has had a grievance filed on their behalf.

We decline to make the other modifications that commenters suggested. We believe the requirement we proposed at § 441.301(c)(7)(iii)(B)(*3*), as modified herein, is sufficiently broad and clear to address the essential concerns raised by commenters. We believe including language prohibiting ''any negative action'' may be ambiguous and overly broad. Additionally, we do not believe the grievance system regulations should be used to prohibit punitive or retaliatory actions in response to actions performed outside of the grievance process. However, we note that, if a beneficiary believes they are experiencing poor treatment from a provider because the beneficiary has filed a complaint about the provider in a system other than the grievance system, the beneficiary may have grounds to file a grievance on the basis of the poor treatment.

Comment: Several commenters recommended the addition of more specific provisions to protect against punitive or retaliatory action, including a post-grievance follow-up with the beneficiary and assessing fines or other penalties against a provider who has taken retaliatory action. One commenter also requested that CMS require States to make the results of investigations into allegations of punitive behavior available to the public.

Response: We decline to make modifications to § 441.301(c)(7)(iii)(B)(*3*) based on these commenters' suggestions because we believe that the proposed regulation text at § 441.301(c)(7)(iii)(B)(*3*), which we are finalizing with modification as discussed herein, is sufficient. To comply with the requirement that States ensure that punitive or retaliatory actions are neither threatened nor taken against individuals who have filed a grievance or have had a grievance filed on their behalf, we expect that States will develop a system for identifying, investigating, and deterring punitive or retaliatory actions. We believe creating more regulatory requirements as commenters suggested would not provide States with flexibility in how they comply with this requirement. Instead, States may develop processes in accordance with their grievance system's structure and other relevant considerations, such as provider agreements and State laws.

Comment: We received a few comments on the requirement we proposed at § 441.301(c)(7)(iii)(B)(*4*) that States must accept grievances, requests for expedited resolution of grievances, and requests for extensions of timeframes from beneficiaries. One commenter recommended that § 441.301(c)(7)(iii)(B)(*4*) be revised to specify that no ''magic language'' is needed to initiate the grievance process. The commenter noted that a ''demonstrated intent'' to obtain assistance with an HCBS-related problem should be accepted as a grievance.

Response: We are concerned that the language proposed by the commenter is overly broad. We agree that States should make filing a grievance as simple and accessible as possible for beneficiaries, their authorized representatives, and other individuals or entities filing on a beneficiary's behalf. For example, we believe that it would be inappropriate for a State to create a complex grievance filing form and then refuse to review a grievance because the form was not filled out completely or properly. We note that this scenario would also be a plausible illustration of a State's failure to provide reasonable assistance and accessibility as required at § 441.301(c)(7)(iii)(B)(*2*). We also believe it is critical that States make every effort to ensure that beneficiaries and their advocates know that a grievance system exists and how to access it. We do not, however, expect that every expression of dissatisfaction, in any context, must be treated as a presumptive grievance filing. We believe it is acceptable for States to develop a grievance filing process that requires a clear intent to file a grievance. Further, we do not want to encourage situations in which grievances are pursued on the beneficiary's behalf without the beneficiaries' knowledge or consent.

Comment: We received a number of comments regarding the requirement we proposed at § 441.301(c)(7)(iii)(B)(5) that States provide beneficiaries with notices and other information related to the grievance system, including information on their rights under the grievance system and on how to file grievances. One commenter expressed particular support for this requirement. Other commenters provided several suggestions for additional requirements to ensure that beneficiaries receive information regarding the grievance process, including:

- Requiring that States add an explanation of grievance rights in any HCBS-related communication from the State to the beneficiary;
- Requiring that providers include an explanation of grievance rights in the person-centered service planning process;
- Requiring that information on grievance procedures be posted in each group home or other provider owned or controlled residential setting, along with a toll-free number and email address for filing grievances; and
- Including common examples of grievances in the information given to beneficiaries, so that beneficiaries are better able to understand the potential utility of the process.

A few commenters noted that, regardless of where or how the information was shared, the information should be in accessible plain language and large print formats.

Response: We do not intend to add additional requirements in this final rule regarding how States must inform beneficiaries about the grievance system, as we believe it is important for States to retain flexibility in how they communicate with beneficiaries. We believe the ideas shared by commenters are great examples of what could be done. We note that there is a lot of diversity among beneficiaries receiving HCBS, States' existing communication pathways, and HCBS program design—all factors that will affect the methods of informing beneficiaries about the grievance process. Therefore, we believe it may be necessary for the information about the grievance system to be presented in multiple ways and through multiple modalities. We encourage States to engage with interested parties to determine the most effective ways to inform beneficiaries. We will also work with States to identify effective ways to inform beneficiaries about the State's grievance system.

We also highlight that our proposed text at § 441.301(c)(7)(iii)(B)(*5*) requires that information provided to beneficiaries must comply with § 435.905(b), which does require that materials use plain language. In addition, States generally must comply with the ADA and section 504, and their implementing regulations. We are finalizing § 441.301(c)(7)(iii)(B)(*5*) largely as proposed, although with a modification to change mention of individuals who are limited English proficient to individuals with Limited English Proficiency, consistent with the change to § 441.301(c)(7)(iii)(B)(*2*) discussed previously in this section.

Comment: One commenter requested clarification whether States have an

ongoing obligation to provide this notice and information to beneficiaries, including to people who begin HCBS after the effective date of the grievance system requirements that we proposed at § 441.301(c)(7).

Response: We agree and clarify that States will have an ongoing responsibility to ensure that both new and current beneficiaries receive information about the grievance system to comply with § 441.301(c)(7)(iii)(B)(*5*), which we are finalizing as described in this section (section II.B.2. of the final rule).

Comment: One commenter noted that our proposal at § 441.301(c)(7)(iii)(B)(*6*), requiring the State to review any grievance resolution with which the beneficiary is dissatisfied, is too vague. This commenter suggested that the regulations should specify that the reviewer be someone not involved in the original determination, and the beneficiary should have a process to submit information as to why the original resolution was insufficient. The commenter also suggested that we specify that the beneficiary must request review, believing that otherwise the expectation appears to be that the State must decide whether the beneficiary is dissatisfied. Finally, the commenter suggested that the notice of the original resolution should inform the beneficiary of this review process and how to initiate it.

One commenter also requested clarification on how beneficiaries should express dissatisfaction with a resolution for the purpose of seeking review of a resolution under § 441.301(c)(7)(iii)(B)(6).

Response: We believe that the requirements at § 441.301(c)(7)(iii)(C)(3), which we are finalizing as described in this section II.B.2, address several of the commenter's concerns. We clarify that the requirements at § 441.301(c)(7)(ii)(C)(*3*) apply to initially filed grievances and review of grievances under § 441.301(c)(7)(iii)(B)(*6*). We note that § 441.301(c)(7)(iii)(C)(*3*)(*i*) requires that the individual making a decision on a grievance is an individual who was neither involved in any previous level of review or decision-making related to the grievance nor a subordinate of any such individual. Section 441.301(c)(7)(iii)(C)(*3*)(*iii*) specifies that the individual must consider all comments, documents, records, and other information submitted by the beneficiary without regard to whether such information was submitted to or considered previously by the State.

We expect that beneficiaries would express dissatisfaction by affirmatively requesting review of a grievance resolution. We agree that beneficiaries have the responsibility of requesting the review, and expect that States will include, as part of their written policies, the method for how beneficiaries may request review and how beneficiaries will be notified of this right.

Comment: We did not receive comments on the requirement we proposed at § 441.301(c)(7)(iii)(B)(*7*) that States must provide information on the grievance system to providers and subcontractors. However, one commenter requested that we require States to give providers 14 days' notice if the provider is a party to the grievance.

Response: We believe that whether, and how, a State chooses to involve providers in individual grievances filed pursuant to § 441.301(c)(7) will vary on a case-by-case basis and, thus, a standardized notification requirement may not be appropriate. For instance, some grievances may be resolvable without the provider's involvement, and in some cases, the beneficiary may not want the provider to know the beneficiary's identity. If the beneficiary and the State believe it is necessary to have the provider involved in the investigation, including appearing at the resolution meeting, we expect that States will give the provider reasonable notice and ensure that the provider is able to participate in the process. Therefore, we intend to provide States with flexibility in determining their grievance system policies in this respect.

Comment: One commenter supported the requirement we proposed at § 441.301(c)(7)(iii)(C)(*1*) to allow beneficiaries to file grievances orally but recommended that we revise the requirement to specify that States must follow up with a written summary of the oral grievance so the beneficiary can ensure accuracy. Another commenter suggested that we revise the requirement at § 441.301(c)(7)(iii)(C)(*2*) to specify that acknowledgement of the receipt of a grievance must be in writing.

Response: We appreciate the comments and believe it is a best practice for States to provide a summary of the grievance to the beneficiary for accuracy. However, we decline to mandate that States provide a written summary, as we intend to allow flexibility for States to decide their own policies to operationalize this requirement. We believe that part of acknowledging the grievance, as required at § 441.301(c)(7)(iii)(C)(*2*), involves developing an appropriate system for providing beneficiaries with confirmation of their grievance.

Comment: One commenter requested that we specify whether all grievances filed must receive a full resolution or whether there are instances in which the acknowledgement of the grievance is sufficient. The commenter anticipated that because of the current direct care workforce crisis, many grievances may be filed related to provider shortages. While acknowledging that understaffing is a serious problem, the commenter believed that the grievance process is unlikely to be able to address the problem to the beneficiary's satisfaction.

Response: We note that the definition of grievance that we are finalizing at § 441.301(c)(7)(ii) indicates that a beneficiary may file a grievance regardless of whether remedial action is requested. We agree that, in instances in which the beneficiary does not wish to pursue remedial action and indicates they are not interested in presenting and debating their grievance as we proposed at § 441.301(c)(7)(iii)(C)(*4*), acknowledging the grievance may be considered resolving the complaint (rather than conducting additional inquiry). We note that should a matter be resolved with an acknowledgment, this matter would still be subject to the requirements at § 441.301(c)(7)(v) and (vi) (notifying the beneficiary of the resolution of a grievance) and § 441.301(c)(7)(iii)(B)(*6*) (review of grievance resolutions with which the beneficiary is dissatisfied).

Comment: A few commenters commented on our proposal at § 441.301(c)(7)(iii)(C)(*3*), establishing requirements for decisionmakers reviewing grievances considered under the grievance system. Several of these commenters supported our efforts to require a system that would provide a fair and unbiased review of beneficiaries' concerns. However, one commenter noted that the requirement at § 441.301(c)(7)(iii)(C)(*3*) would require a separate set of personnel to respond to and investigate grievances than the staff that is currently allocated for program management, administration, and support, and expressed concern that this would require additional resources.

Response: We note that the requirement we proposed at § 441.301(c)(7)(iii)(C)(*3*) requires that individuals reviewing and making decisions about grievances are not the same individuals, nor subordinates of individuals, who made the original decision or action that has given rise to the grievance. This would require that the provider that made the decision or performed the action giving rise to the

grievance would not be able to be the decisionmaker for the grievance. However, this would not preclude State Medicaid agency personnel from reviewing a grievance filed against a provider. Additionally, even for grievances filed about the State's performance, the requirement does not necessarily require review from separate departments or entities. With firewalls as needed, reviewers may be from the same department (or a different department) so long as the necessary expertise and independence standards are met, and the reviewer takes into account the information described in § 441.301(c)(7)(iii)(C)(*3*)(*ii*). We are not making modifications to § 441.301(c)(7)(iii)(C)(*3*) based on these comments.

Comment: One commenter questioned if the intent of the requirement we proposed at § 441.301(c)(7)(iii)(C)(*3*)(*iii*) is to require a ''de novo'' review of the grievances.

Response: De novo review typically refers to a standard of review of a matter on appeal after a trial court or administrative body has reached a determination. If a matter is being reviewed *de novo,* the reviewer is reviewing the whole matter as if it is freshly presented to them, without regard for what the prior decisionmaker determined, or their rationale supporting that determination. We did not specify in the regulation text (either proposed or finalized) whether this process is intended as a *de novo* review of grievances, as reference to *de novo* review would have been inapplicable. The general intent of the grievance system we proposed at § 441.301(c)(7) is not to address specific determinations that are being appealed, as would be the case in the fair hearing process. The grievance system is intended to address a beneficiary's dissatisfaction or complaint related to the State's or provider's performance of person-centered planning or HCBS settings requirements. We expect that the grievance system will typically represent the first opportunity a beneficiary has had to present their concerns directly to the State. Because there likely has not been an initial determination to consider and possibly affirm or reverse, we do not believe *de novo* review is applicable.

For example, consider two scenarios in which a provider fails to send a personal care assistant to two beneficiary's homes. For Beneficiary A, the failure was because the provider forgot to ensure a worker was scheduled to deliver the services. For Beneficiary B, the provider decided, unilaterally, that Beneficiary B had been authorized more personal care services than the provider believed was necessary and thus refused to send a personal care assistant to Beneficiary B's home. In both scenarios, Beneficiary A and Beneficiary B could file grievances about the provider's failure to provide services as outlined in the person-centered care plan or attempt to change the service plan without going through the process required in § 441.301(c)(1) through (3). The proper focus in both cases would be on whether the provider provided services in accordance with the current person-centered care plan. We would not expect in Beneficiary B's situation that the State would treat the provider's actions as a formal determination requiring *de novo* review (such as reviewing whether the provider's objections to the number of service hours in the service plan were valid, or making the beneficiary prove that the service hours were needed). Further, even if there has been an initial decision by a provider or State that the beneficiary disputes, we did not intend the grievance system to operate like a formal legal proceeding (that is, an administrative hearing or trial) and, again therefore, we do not believe the concept of *de novo* review is applicable.

Comment: One commenter suggested that we amend the definition of ''skilled professional medical personnel'' to allow the designation to apply to staff administering the grievance process, which would make the activity eligible for a 75 percent Federal matching rate.

Response: We are not amending the definition of skilled professional medical personnel in this final rule. The term ''skilled professional medical personnel'' is defined at § 432.2 as physicians, dentists, nurses, and other specialized personnel who have professional education and training in the field of medical care or appropriate medical practice and who are in an employer-employee relationship with the Medicaid agency. The term explicitly does not include other, nonmedical health professionals such as public administrators, medical analysts, lobbyists, senior managers, or administrators of public assistance programs of the Medicaid program. Per § 432.50, the FFP rate for skilled professional medical personnel and directly supporting staff of the Medicaid agency is 75 percent. We do not intend to require that the administrative activities required for grievance process must be administered by personnel with specialized medical education and training. Even for those who meet the criteria to be considered skilled professional medical personnel, only the portion of their activities that require their advanced skills and expertise would be eligible for the enhanced matching rate. If similar functions are performed by non-skilled professional medical personnel, then the activities themselves would not qualify for the higher matching rate.

Comment: One commenter requested clarification as to whether a telephonic communication would satisfy the proposed requirement at § 441.301(c)(7)(iii)(C)(*4*) that the State provide a beneficiary with a reasonable opportunity face-to-face, including through the use of audio or video technology.

Response: We believe that audio-only telephone calls, when requested by the beneficiary and with the inclusion of any necessary accommodations, satisfy this requirement.

Comment: One commenter recommended that we revise proposed § 441.301(c)(7)(iii)(C)(*4*) by removing the word ''limited'' from before ''time available,'' as the commenter believed the inclusion of the word ''limited'' was unnecessary.

Response: We disagree with the commenter's statement that the word ''limited'' is unnecessary. The language in this requirement was intended to mirror similar language in the managed care grievance process requirements at § 438.406(b)(4). Further, we believe it is important that beneficiaries understand the timeframes associated with the grievance resolutions and understand that it is intended, for their benefit, to be a time-limited process.

Comment: One commenter recommended that we mandate a minimum number of days afforded to a beneficiary to review their record and submit additional germane evidence and testimony to the State agency before resolution. The commenter noted that the proposed regulation merely requires that the State agency provide the beneficiary with ''a reasonable opportunity.'' The commenter regarded this as a vague standard and was concerned that States would not grant beneficiaries sufficient time. The commenter noted that beneficiaries with disabilities or complex medical issues may need additional time and supports to prepare evidence and testimony. The commenter suggested that granting beneficiaries a minimum of 21 days to prepare their evidence and testimony after receipt of the agency record would ensure that the State provided the record well in advance of the resolution deadline and would protect beneficiaries from the imposition of unreasonable timeframes to prepare.

Response: We note that § 441.301(c)(7)(iii)(C)(*4*) requires that

the State provide the beneficiary a reasonable opportunity to present evidence and testimony and make legal and factual arguments related to their grievance, while § 441.301(c)(7)(iii)(C)(*5*) requires the State to provide the beneficiary with their case file and other records sufficiently in advance of the resolution timeframe for grievances. We are unclear on which provision the commenter is recommending we modify. We decline to modify either provision by prescribing specific deadlines within the overall resolution timeframe, to allow States to develop flexible processes to accommodate beneficiaries. We expect that States will develop appropriate processes to allow beneficiaries to request postponements or rescheduling of any face-to-face hearings that they have requested if they find they need more time to prepare, or other situations arise that would prevent a beneficiary from being able to participate in the hearing.

We also note that we are finalizing a requirement at § 441.301(c)(7)(v)(C) to allow beneficiaries to have the option of requesting 14-day extensions if (for any reason) a beneficiary requires additional time beyond the 90-day resolution timeframe we are finalizing at § 441.301(c)(7)(v)(B).

Comment: Several commenters expressed concern about legal representation during the process. One commenter stated that beneficiaries should get access to State-provided legal assistance. Another commenter requested that, if a beneficiary is unable to afford an attorney, the opposing party not be allowed an attorney.

Response: As discussed in a prior response, beneficiaries have flexibility in determining who will assist them throughout the grievance process—which could, if the beneficiary chose, include assistance from a legal professional. We believe that the grievance system should be easy to navigate and largely non-adversarial, such that beneficiaries would not be required, nor feel pressured, to have legal representation. We also believe that at least some portion of grievances filed will be for minor issues that do not require a formal inquiry. We agree with commenters that it is preferable that hearings neither be, nor have the appearance of being, imbalanced in terms of support for the beneficiary. We encourage States, as they develop their policies, to consider what level of assistance beneficiaries will need during face-to-face meetings and ensure that reasonable assistance is provided.

Comment: One commenter stated that § 441.301(c)(7)(iii)(C)(*5*) should be revised to expand the documents beyond the beneficiary's ''case file.'' The commenter recommended that the regulations require that the State obtain relevant files and other information held by the provider and then provide that information to the beneficiary. The commenter stated that, particularly in cases involving residential providers, provider-maintained information will be relevant and often pivotal.

Response: We disagree and believe adding this language is unnecessary. We believe that the term, case file, could have several meanings, depending on the circumstances, and could include the records related to the beneficiary's services maintained by the provider that would be obtained by the State as part of review of the grievance. We also note that proposed § 441.301(c)(7)(iii)(C)(*5*) already requires beneficiaries to receive other documents and records, as well as new and current evidence considered or relied upon by the State related to the grievance. We believe relevant records from providers could fall into these categories, depending on the record and the circumstances by which the State obtained it. We do not intend our requirement at § 441.301(c)(7)(iii)(C)(*5*), as proposed and being finalized in this rule, to amend any existing obligations for confidentiality of certain records and we expect States to comply with applicable Federal and State laws and regulations governing confidentiality of those records in determining what records to provide to the beneficiary related to their grievance in compliance with § 441.301(c)(7)(iii)(C)(*5*). We decline to make modifications to § 441.301(c)(7)(iii)(C)(*5*) as requested by the commenter.

Comment: One commenter suggested that we require that the grievance system be compliant with the Health Insurance Portability and Accountability Act of 1996 (HIPAA).

Response: We had proposed at § 441.301(c)(7)(iii)(C)(*5*) that medical records being used as part of a grievance be handled in compliance with 45 CFR 164.510(b) (a provision of the HIPAA Privacy Rule), to ensure that protected health information (PHI) used during the grievance review are obtained and used with beneficiaries' authorization. In general, whenever a beneficiary's PHI may be obtained, maintained, or disclosed by a State agency that is a covered entity as defined in 45 CFR 160.103 (such as a State Medicaid agency), States are responsible for ensuring compliance with the requirements of HIPAA and its implementing regulations, as well as any other applicable Federal or State privacy laws governing confidentiality of a beneficiary's records. We also note that 45 CFR 164.510(b) is just one provision of the HIPAA Privacy Rule that permits the disclosure of PHI, and other provisions may also permit the disclosure of PHI (such as disclosure of PHI to personal representatives under 45 CFR 164.502(g)); other permissions may also apply in addition to what is cited here and included in the regulatory text of this final rule. Upon further review, we have determined that, given that a number of requirements of the HIPAA Privacy Rule may apply to the obtaining and sharing of beneficiaries' information, we are finalizing § 441.301(c)(7)(iii)(C)(5) with a modification to change the citation of 45 CFR 164.510(b) to a broader reference to the HIPAA Privacy Rule (45 CFR part 160 and part 164 subparts A and E).

Finally, we also note that individuals who believe their health information privacy has been violated may file a complaint with the HHS Office for Civil Rights at *https://www.hhs.gov/hipaa/filing-a-complaint/index.html.*

After consideration of public comments, we are finalizing § 441.301(c)(7)(iii)(A) as proposed, with the following modification. We are finalizing § 441.301(c)(7)(iii)(A)(1) with modification to specify that another individual or entity may file a grievance on behalf of the beneficiary or provide the beneficiary with assistance or representation throughout the grievance process with the written consent of the beneficiary or authorized representative. We are finalizing § 441.301(c)(7)(iii)(A)(2) as proposed.

We are finalizing requirements at § 441.301(c)(7)(iii)(B) as proposed, with the following modifications. We are finalizing § 441.301(c)(7)(iii)(B)(*1*) with a modification to correct an erroneous reference to subchapter by replacing subchapter with paragraph (c)(7). We are finalizing § 441.301(c)(7)(iii)(B)(*2*) with modifications by: (1) adding to States' obligation the requirement that States must provide beneficiaries reasonable assistance in ensuring grievances are appropriately filed with the grievance system; (2) modifying language to refer to individuals with Limited English Proficiency; and (3) clarifying that auxiliary aids and services must be made available where necessary to ensure effective communication. We are finalizing § 441.301(c)(7)(iii)(B)(*3*) with modifications to require that States ensure that punitive or retaliatory actions (rather than just punitive actions) are neither threatened nor taken. We are also adding language to specify that the punitive or retaliatory actions cannot be threatened or taken

against an individual filing a grievance **or who has had a grievance filed on their behalf**. (New language identified in bold.)

For reasons we discuss in greater detail in the next section (section II.B.2.c. of this rule) we are finalizing § 441.301(c)(7)(iii)(B)(*4*) with a modification to remove the reference to expedited grievances. We are finalizing § 441.301(c)(7)(iii)(B)(*5*) with a modification to change the language to refer to individuals with Limited English Proficiency. We are finalizing § 441.301(c)(7)(iii)(B)(6) and (7) as proposed.

We are finalizing § 441.301(c)(7)(iii)(C)(*1*) through (*5*) with minor technical modifications. We are replacing the periods at the end of each paragraph with semi-colons and adding the word and at the end of § 441.301(c)(7)(iii)(C)(*5*) to accurately reflect that § 441.301(c)(7)(iii)(C)(*1*) through (*6*) are elements of a list, not separate declarative statements. Additionally, for reasons we discuss in greater detail in a later section (section II.B.2.d.) because we are not finalizing the expedited resolution timeframe at § 441.301(c)(7)(v)(B)(2), we are finalizing § 441.301(c)(7)(iii)(C)(*5*) with modifications to remove references to § 441.301(c)(7)(v)(B)(1) and (2) and add a reference to § 441.301(c)(7)(v). We are also finalizing § 441.301(c)(7)(iii)(C)(5) with a modification to change the citation of 45 CFR 164.510(b) to a broader reference to the HIPAA Privacy Rule (45 CFR part 160 and part 164 subparts A and E).

c. Filing Timeframe (§ 441.301(c)(7)(iv))

At § 441.301(c)(7)(iv)(A), we proposed to require that the beneficiary be able to file a grievance at any time. At § 441.301(c)(7)(iv)(B), we proposed to require that beneficiaries be permitted to request expedited resolution of a grievance, whenever there is a substantial risk that resolution within standard timeframes will adversely affect the beneficiary's health, safety, or welfare, such as if, for example, a beneficiary cannot access personal care services authorized in the person-centered service plan.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A few commenters made suggestions or submitted clarifying questions about our proposal at § 441.301(c)(7)(iv)(A) that beneficiaries be able to file a grievance at any time. One commenter requested clarification on whether our intent was to prohibit limits on the timeframe between the occurrence of the subject of the grievance and the date when the individual files a grievance. Another commenter noted that there should be a 90-day time limit on when beneficiaries can file grievances.

Response: We do not intend for beneficiaries' ability to file grievances to be time-limited. We appreciate commenters' concerns regarding this issue; however, we defer to the rationale we used when declining to add a timeframe cap in the managed care grievance filing process (81 FR 27511). In the managed care grievance process, § 438.402(c)(2)(i) specifies that enrollees may file a grievance with their managed care plan at any time. As we previously noted, grievances do not progress to the level of a State fair hearing, which is a time-sensitive process; therefore, we found it unnecessary to include filing limits because grievances are resolved without having to consider the time limits of other processes (81 FR 27511).

We understand that States may be concerned about revisiting grievance issues that occurred in the past, but we believe this is a normal part of providing services and that beneficiaries should be permitted to file a grievance at any time. We also note, that, as discussed in more detail below, States believe that educating beneficiaries about the grievance process will take time; therefore, we do not want to prevent beneficiaries from filing grievances in cases where the delay in filing was because the beneficiary was not initially aware of their ability to file a grievance.

Comment: A few commenters supported the proposal at § 441.301(c)(7)(iv)(B) to create a pathway for expedited resolutions when there is a substantial risk that resolution within standard timeframes will adversely affect the beneficiary's health, safety, or welfare.

Several commenters, however, believed that the proposal at § 441.301(c)(7)(iv)(B) to create a pathway for an expedited resolution was unclear or overly broad and requested additional clarification as to what would constitute a grievance warranting expedited resolution. Some of these commenters stated that technical assistance would be needed to help States identify the criteria for determining whether a resolution should be expedited, and how to proceed if a beneficiary disagrees with the State's determination that a grievance request should be expedited or resolved in the standard timeframe. One commenter raised the concern that if a beneficiary's request for an expedited resolution was denied, they may follow up with submitting another grievance or file a fair hearing request. Another commenter suggested that expedited resolutions should be defined as being contingent on the timely receipt of information from the beneficiary.

Some commenters noted that the expedited resolution process's focus on health, safety, and welfare could lead to duplication with other systems, including the critical incident system. They expressed the belief that there are separate channels to address health and safety concerns. For this reason, a few commenters suggested that there should only be one standard grievance resolution and notice timeline of 90 calendar days. A few commenters also suggested that we should not have an expedited resolution process in the FFS grievance system because there is not such a process in the managed care grievance system (as described in 42 CFR part 438, subpart F).

One commenter stated that, in their experience, few grievances were about issues affecting beneficiaries' health and safety, and thus it would not be appropriate to create a requirement for an expedited process as it was defined in proposed § 441.301(c)(7)(iv)(B). The commenter offered examples of typical grievances, based on the commenter's experience with operating a State grievance system. The commenter noted that many grievances involve education about the HCBS program (for example, additional services and limitations), information about available providers in their area as an alternative to their current provider, dissatisfaction with their paid caregiver, and frustrations with provider workforce shortages.

Response: We are persuaded by commenters' feedback summarized here, as well as comments summarized later in this section regarding the expedited resolution timeframe. After consideration of public comments, as discussed here in section II.B.2, we are not finalizing § 441.301(c)(7)(iv)(B) and are removing other references to the expedited resolution process where it appears in § 441.301(c)(7) in this final rule.

In particular, we are persuaded by the concern that the expedited resolution process as proposed could create overlap with the critical incident system, which is described in section II.B.3 of this final rule. We believe that the critical incident system is the most appropriate mechanism for investigating situations when a beneficiary has experienced actual harm or substantial risks to their health and safety. We do not want there to be a delay in the investigation of a critical incident

because it was incorrectly filed as a grievance, nor do we want matters that should be investigated as critical incidents resolved only in the grievance process.

In addition, as some commenters correctly noted, the managed care requirements at 42 CFR part 438, subpart F, do not include an expedited grievance resolution process. We have not identified a compelling reason why beneficiaries receiving HCBS through FFS systems should need an expedited resolution process for grievances when no similar process has, as yet, been deemed necessary in the managed care system. After reexamining these requirements in light of comments received, we do not wish to create misalignment between managed care and FFS systems' grievance resolution processes.

In general, we agree with the commenter that it is likely that many grievances filed would not meet the standard we proposed for expedited resolution (and, as noted above, if they did meet the standard, they are likely candidates for the critical incident or fair hearings systems). However, we envision that there remains the potential for some grievances to require immediate attention and intervention, even if they do not rise to the level of a critical incident (as defined in § 441.302(a)(6)(i)(A)) or do not qualify for a fair hearing (as set out in part 431, subpart E). Therefore, we encourage States to include in their grievance system a system for identifying, triaging, and expediting resolution of grievances that require, according to the State's criteria, prioritization and prompt resolution.

After consideration of the comments received about § 441.301(c)(7)(iv), we are finalizing our proposal at § 441.301(c)(7)(iv) with modification by removing the expedited resolution requirement at § 441.301(c)(7)(iv)(B) and redesignating § 441.301(c)(7)(iv)(A) as § 441.301(c)(7)(iv). Additionally, we are removing references to the expedited resolution process in § 441.301(c)(7)(iii)(B)(*4*). We are also removing requirements related to the expedited resolution process in § 441.301(c)(7)(v). These changes are discussed in their respective sections below.

d. Resolution and Notification (§ 441.301(c)(7)(v))

At § 441.301(c)(7)(v), we proposed resolution and notification requirements for grievances. Specifically, at § 441.301(c)(7)(v)(A), we proposed to require that States resolve and provide notice of resolution related to each grievance as quickly as the beneficiary's health, safety, and welfare requires and within State-established timeframes that do not exceed the standard and expedited timeframes proposed in § 441.301(c)(7)(v)(B). At § 441.301(c)(7)(v)(B)(1), we proposed to require that standard resolution of a grievance and notice to affected parties must occur within 90 calendar days of receipt of the grievance. At § 441.301(c)(7)(v)(B)(2), we proposed to require that expedited resolution of a grievance and notice must occur within 14 calendar days of receipt of the grievance.

At § 441.301(c)(7)(v)(C), we proposed that States be permitted to extend the timeframes for the standard resolution and expedited resolution of grievances by up to 14 calendar days if the beneficiary requests the extension, or the State documents that there is need for additional information and how the delay is in the beneficiary's interest. At § 441.301(c)(7)(v)(D), we proposed to require that States make reasonable efforts to give the beneficiary prompt oral notice of the delay, give the beneficiary written notice, within 2 calendar days of determining a need for a delay but no later than the timeframes in paragraph (c)(7)(v)(B), of the reason for the decision to extend the timeframe, and resolve the grievance as expeditiously as the beneficiary's health condition requires and no later than the date the extension expires, if the State extends the timeframe for a standard resolution or an expedited resolution.

We also proposed at § 441.301(c)(7)(iv)(B) and (c)(7)(v)(B)(*2*) that beneficiaries be permitted to request, and the State provide for, expedited resolution of a grievance. However, we noted that these proposed requirements differ from the current grievance system requirements for Medicaid managed care plans at part 438, subpart F, which do not include specific requirements for an expedited resolution of a grievance. We solicited comment on whether part 438, subpart F should be amended to include the proposed requirements for expedited resolution of a grievance at § 441.301(c)(7)(iv)(B) and (v)(B)(2).

We received public comments on these proposals. The following is a summary of the comments we received and our responses. We note that, as discussed in the previous section, we are not finalizing the expedited resolution process at § 441.301(c)(7)(iv)(B). We will discuss the impact of this change to the requirements in § 441.301(c)(7)(v) in our response to the comments below.

Comment: A few commenters requested that we provide additional information to clarify what is expected for a grievance to be considered resolved.

Response: We believe that the resolutions of grievances can take many forms and may vary on a case-by-case basis, and thus we decline to revise the requirements at § 441.301(c)(7)(v) to provide a more specific definition. We proposed and are finalizing as discussed in this section II.B.2 that a beneficiary may file a grievance even if the beneficiary does not request remedial action. We expect that grievances will vary not only in severity and urgency but will also vary according to the formality of the response. Some grievances, as noted in a response above, may require only a simple acknowledgment of the concern. Others may require immediate action(s), including intervention(s) with or action(s) taken against the provider. Still others may involve the State setting up a long-term corrective action plan or monitoring, consistent with applicable State laws governing such. We believe that a critical part of the grievance process involves collecting input from the beneficiary filing the grievance on the resolution or outcome they hope to achieve through the grievance process. This may include instances in which the beneficiary wishes to bring a concern to the State's attention but is not necessarily pursuing a specific resolution.

Comment: A few commenters raised concerns or questions about how States should ensure compliance with resolutions. One commenter noted the importance of ensuring corrective actions are taken in response to grievances so that policy and systems transformation can take place in a timely manner. One commenter requested that we provide States with more tools to ensure provider compliance, including appropriate monetary and nonmonetary penalties. Another commenter stated that the grievance resolution process should include an order for the creation of a corrective action plan and subsequent monitoring.

Response: We appreciate the commenters' suggestions, but we decline to add specific actions to the requirements at § 441.301(c)(7)(v). As noted above, we believe that there will be variety in both grievances and resolutions. It would be difficult, and perhaps detrimental, to establish a set of Federal penalties that may be over- or under-responsive to the range of matters heard in the grievance process. Thus, we want to retain flexibility in the

regulatory requirements to allow State grievance systems to respond appropriately to each situation. We expect that States will apply a reasonable interpretation to the requirement that the States ''resolve'' the grievance. For instance, if resolution reasonably requires a corrective action plan for a provider (for grievances resolved against providers) or a corrective action plan for the State (for grievances resolved against the State), we expect that a corrective action plan would be executed and monitored as part of the resolution in accordance with applicable State laws. Through State law and regulations, States can create penalties, whether monetary or non-monetary, for providers that have violated their obligations as set forth by the State Medicaid program.

Comment: Several commenters suggested that the grievance resolution process should include formal follow-up requirements. To ensure proper follow-up, one commenter recommended that the regulations specify that grievances and their resolutions be reviewed at the subsequent person-centered planning process. One commenter recommended that the State should perform a follow up at 30 and 90 days after the resolution.

Response: We decline to add specific follow-up requirements to § 441.301(c)(7)(v). As discussed in prior responses, we believe that grievances are likely to take many forms. We agree that, in some instances, follow-up or ongoing monitoring may be a critical element of a particular resolution and, thus, should be included. In other cases, the grievance may not require follow-up and, thus, a formal follow-up requirement would impose an unnecessary administrative burden. There may also be instances in which a beneficiary may not wish to be repeatedly contacted after they believe the matter has been resolved. We believe that determining the appropriateness of when, and how, to monitor outcomes of grievances should be part of policies States develop for their grievance system.

Comment: One commenter recommended that we revise the requirement at § 441.301(c)(7)(v)(A) to require that the State solicit more information from beneficiaries on how a delayed resolution could hurt the beneficiary. One commenter suggested that we include the language from this provision in the timeframe requirement for expedited grievances at § 441.301(c)(7)(v)(B)(2) so that the requirement reads, ''as expeditiously as the beneficiary's health condition requires and no longer than 14 calendar days after the State receives the grievance.''

Response: We decline to make the suggested modifications to the requirement at § 441.301(c)(7)(v)(A). We clarify that this requirement at § 441.301(c)(7)(v)(A) sets a general expectation for expeditious resolutions for all grievances. We encourage States to ensure that beneficiaries provide, in their grievances, detailed information about their concerns (including negative impacts they are experiencing or believe they will experience). However, we have specifically not set requirements for the amount or type of information beneficiaries must submit when filing a grievance, as we do not wish to inadvertently mandate a process that is administratively burdensome for beneficiaries. We believe that commenters may have interpreted this requirement as a means of identifying grievances being filed for expedited resolution, which was not the intent. Additionally, as discussed above, we are not finalizing the requirement for an expedited resolution at § 441.301(c)(iv)(B)(*2*).

We also note that, consistent with our discussion above related to concerns about confusion between the purpose of the grievance system and the critical incident system described in § 441.302(a)(6), we are revising the language in this provision. Specifically, we are finalizing our proposal at § 441.301(c)(7)(v)(A) with modification to require that the State resolve each grievance and provide notice as expeditiously as the beneficiary's health condition requires, instead of our proposal, which would have required that such notice be provided as expeditiously as the beneficiary's health, safety, and welfare requires. We believe this avoids confusion with the critical incident system and aligns the language with a parallel requirement in the managed care grievance requirements at § 438.408(a), as well as our language in §§ 441.301(c)(7)(v)(D)(*3*) (pertaining to expeditious resolution during extensions). We believe that ''health condition'' may be broadly interpreted to refer both to physical and mental health and well-being of the beneficiary.

Comment: A few commenters supported our proposal at § 441.301(c)(7)(v)(B)(*1*) that standard resolution of a grievance and notice to affected parties must occur within 90 calendar days of receipt of the grievance. However, some commenters, while not specifically opposing the 90-day timeframe, expressed concerns that the timeframe proposed for resolving grievances may not always allow for a thorough investigation. One commenter noted that, while this timeframe might allow for investigation and resolution of some grievances, other grievances might require more extensive investigation (such as interviews, on-site visits, legal review and consultation, and request for additional documentation) and could take longer. The commenter also worried about the time involved in allowing the beneficiary a reasonable opportunity to present evidence face-to-face and in writing, as well as access to their case file to review in advance.

Conversely, a number of commenters recommended that the standard resolution timeframe be shortened to 45 days. Many of these commenters stated that 90 days is too long for an individual to wait for resolution if they are experiencing a serious violation of their rights or access to services.

Response: We agree with commenters that some grievances may take longer than 90 days to resolve properly and note that these extenuating circumstances can be addressed through the use of the 14-day extension we are finalizing at § 441.301(c)(7)(v)(C) if the conditions set forth in that requirement are met. We also agree with commenters that grievances should be resolved as expeditiously as possible, but we do not agree that cutting the proposed timeframe in half (to 45 days) would be a sufficient timeframe. We based our proposal of 90 calendar days on the current timeframe for resolution in the managed care grievance system at § 438.408(b), and we do not find reason to believe that FFS grievances would require less time to resolve than grievances in the managed care system. We do not wish to set a timeframe that encourages hasty investigations, nor the overuse of the 14-day extensions. We also note that 90 calendar days is the maximum allowed timeframe and that States may choose to set a shorter timeframe, or several timeframes for different types of grievances, so long as none of the timeframes exceed 90 calendar days. We are finalizing the 90-calendar day timeframe for resolutions as proposed.

Comment: One commenter noted that the proposed timeframe of 14 days for expedited resolution was too long and suggested that it be reduced to 7 days. On the other hand, many commenters expressed concerns about staff capacity necessary to respond to expedited grievances within 14 calendar days, as well as the feasibility of completing investigations within the proposed 14-day timeframe. Commenters believed that, given the potential seriousness of grievance inquiries, it may be difficult

for all necessary information to be gathered in 14 days and to grant the beneficiary a reasonable opportunity to present evidence in a face-to-face meeting. Several commenters recommended that, if finalizing an expedited resolution timeframe, we extend the timeframe to 30 calendar days, and one commenter recommended 30 business days.

Response: As discussed above, we are not finalizing the requirement for an expedited resolution process. In addition to the comments summarized above about the process itself, we agree with commenters that if a beneficiary has filed a grievance and wishes to present evidence and participate in a face-to-face meeting with the decisionmaker, 7 calendar days, or even 14 calendar days, may not be sufficient time for all relevant materials to be gathered and reviewed by the beneficiary and decisionmaker, nor to arrange for a resolution meeting. As discussed above, we are encouraging States to create their own processes for expediting resolution of certain grievances. We believe that there will be some grievances filed that may (and should) be resolved almost immediately, including by a referral to the critical incident system or fair hearings process. We note that several commenters suggested that 30 days is a reasonable timeframe for expediting resolutions, and States may want to take that recommendation under consideration when developing their own processes.

Consistent with our decision not to finalize the expedited resolution process at § 441.301(c)(7)(iv)(B), we are not finalizing § 441.301(c)(7)(v)(B)(*2*).

Comment: One commenter noted that imposing any timelines for resolving grievances could detract from staff resources needed to investigate critical incidents, particularly if the grievance and critical incident systems use the same staff.

Response: We recognize that States will have to supply staff and resources for both the grievance and critical incident systems that we are finalizing in this rule. We will provide technical assistance to States as needed to help identify ways to manage both systems, including setting priorities and managing the critical incident investigation and grievance resolution timeframes.

Comment: A number of commenters responded to our invitation to comment on whether part 438, subpart F should be amended to include the proposed expedited resolution requirements at § 441.301(c)(7)(iv)(B) and (v)(B)(*2*). Several commenters recommended that expedited procedures be extended to the managed care grievance procedures at part 438 subpart F. However, several commenters opposed adding expedited resolution timeframes to part 438 subpart F. Similar to the opposition presented to including expedited resolutions in the FFS grievance system, these commenters believed that very few expressions of dissatisfaction require expedited resolution and that other mechanisms exist to address health and safety concerns in a timely manner. A few commenters also provided suggestions on possible changes to the managed care grievance requirements, such as adding a prohibition of punitive action against beneficiaries who file grievances.

Response: We will take these comments under consideration. We note that we are not, at this time, finalizing an expedited resolution process in the FFS grievance system and are not finalizing the requirements we proposed at § 441.301(c)(7)(iv)(B) and at § 441.301(c)(7)(v)(B)(*2*) for such a process. We also note that, while outside the scope of this proposal, we will take other recommendations regarding potential changes to the managed care grievance process under consideration as well.

Comment: A few commenters noted support for the proposal at § 441.301(c)(7)(v)(C) that States be permitted to extend the timeframes for the resolution of grievances by up to 14 calendar days.

Response: We thank the commenters for their support.

We did not receive comments on the requirements we proposed at § 441.301(c)(7)(v)(D).

After consideration of public comments, we are finalizing our proposal at § 441.301(c)(7)(v)(A) with modification to require that the State resolve each grievance, and provide notice, as expeditiously as the beneficiary's health condition (instead of health, safety, and welfare) requires. Additionally, consistent with our decision not to finalize the expedited resolution process at § 441.301(c)(7)(iv)(B), we are not finalizing the expedited resolution timeframe at § 441.301(c)(7)(v)(B)(2), redesignating § 441.301(c)(7)(v)(B)(1) as § 441.301(c)(7)(v)(B), and retitling § 441.301(c)(7)(v)(B) as ''Resolution timeframes.'' We are also removing the word ''standard'' in § 441.301(c)(7)(v)(B)(1) (which we are finalizing at § 441.301(c)(7)(v)(B)) since the finalized requirements do not distinguish between ''standard resolution'' and other types of resolutions.

We are finalizing § 441.301(c)(7)(v)(C), with a technical correction to redesignate paragraphs (C)(*1)*(i) and (C)(*1*)(ii) as (C)(*1*) and (C)(*2*), respectively. We are finalizing § 441.301(c)(7)(v)(D) as proposed, with minor technical corrections. Specifically, we are changing the periods at the end of § 441.301(c)(7)(v)(D)(*1*) and (*2*) to semi-colons and adding ''and'' at the end of § 441.301(c)(7)(v)(D)(*2*).

e. Notice of Resolution (§ 441.301(c)(7)(vi))

We proposed at § 441.301(c)(7)(vi) requirements related to the notice of resolution for beneficiaries. Specifically, at § 441.301(c)(7)(vi)(A), we proposed to require that States establish a method for written notice to beneficiaries and that the method meet the availability and accessibility requirements at § 435.905(b). At § 441.301(c)(7)(vi)(B), we proposed to require that States make reasonable efforts to provide oral notice of resolution for expedited resolutions.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters recommended that we expand the requirements proposed at § 441.301(c)(7)(vi) pertaining to the information beneficiaries receive at the resolution of their grievance. The commenters requested we include a requirement that the notice explain what the grievance is, the information considered, the necessary remedial actions (if any) for resolution, and the ability to request further review.

Response: We encourage States to include this information in resolution notices as appropriate, but we decline to make changes to this requirement in our final rule. We note that this requirement, as written, is consistent with the parallel requirement in § 438.408(d), which provides States with flexibility in developing a method by which managed care plans will notify enrollees of resolutions. We intend to provide States with this same flexibility in the FFS system, as we see no compelling reason to impose more rigid requirements on one system than the other.

We also note that, consistent with the discussion above not to finalize the expedited resolution process, we are not finalizing § 441.301(c)(7)(vi)(B), which requires oral notice for expedited resolutions. We expect that States, should they decide to include an expedited resolution process in their grievance system, would develop an

appropriate system for notifying beneficiaries of these resolutions.

After consideration of the comments received, we are finalizing § 441.301(c)(7)(vi)(A) without substantive changes. However, consistent with our decision (discussed above) not to finalize the expedited resolution process at § 441.301(c)(7)(iv)(B), we are not finalizing the requirement we proposed relating to the expedited resolution process at § 441.301(c)(7)(vi)(B) and redesignating § 441.301(c)(7)(vi)(A) as § 441.301(c)(7)(vi).

f. Recordkeeping (§ 441.301(c)(7)(vii))

We proposed at § 441.301(c)(7)(vii) recordkeeping requirements related to grievances. Specifically, at § 441.301(c)(7)(vii)(A), we proposed to require that States maintain records of grievances and review the information as part of their ongoing monitoring procedures. At § 441.301(c)(7)(vii)(B), we proposed to require that the record of each grievance must contain at a minimum the following information: a general description of the reason for the grievance, the date received, the date of each review or review meeting (if applicable), resolution and date of the resolution of the grievance (if applicable), and the name of the beneficiary for whom the grievance was filed. Further, at § 441.301(c)(7)(vii)(C), we proposed to require that grievance records be accurately maintained and in a manner that would be available upon our request.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposal at § 441.301(c)(7)(vii)(A) to require that States maintain records of grievances and review the information as part of their ongoing monitoring procedures, and for the proposal at § 441.301(c)(7)(vii)(C) that grievance records would be available upon CMS's request. A few commenters were also specifically supportive of what they regarded as the proposal's potential to collect and track standardized information about service system issues, including obstacles to informed choice and person-centered planning.

One commenter observed that there will be important lessons and conclusions that may be drawn from the data that should help the State to take steps to deter future service provider actions that lead to grievances. The commenter also hoped that such data could lead to educational opportunities to refine State and service provider knowledge of HCBS settings and person-centered service plan rules, and data should be collected on the efficacy of such educational interventions. One commenter suggested that we require qualitative, as well as quantitative, reporting.

Response: We decline to make any additional changes to our proposal at § 441.301(c)(7)(vii) in this final rule, but we agree with the commenters that the data and records that States collect as part of the grievance process may be critical in helping States improve their HCBS programs. While we are not finalizing specific requirements for how States must use this data, promising practices related to data collection and analysis, including methods of capturing qualitative data from the records, will likely be included in the technical assistance that will be available to States during the implementation period.

Comment: A few commenters recommended requiring States to make information on grievances publicly available, such as by releasing an annual report on the anonymized grievances received in the previous 12 months, categorized by issue, severity, and resolution or lack of resolution. One commenter suggested that such a report would enhance transparency and could assist with quality improvement by providing States, providers, and consumer advocates with insight into grievance patterns and trends. Another commenter recommended that we require public online disclosure of grievance details and resolutions. The commenter noted this would help individuals make informed choices about providers and would encourage compliance with person-centered planning and settings requirements. One commenter, presuming that the State's recordkeeping system would be made publicly available, suggested that we include the name of the decision maker in the records so that CMS, researchers, and advocacy groups can ensure that decision makers are making unbiased decisions.

Response: We did not propose that States publicly report information about grievance resolutions in this final rule; we note, for instance, that we did not include reporting on the grievance system as part of the reporting requirement being finalized at § 441.311, nor are we requiring that States report information about grievances as part of the website posting requirement being finalized at § 441.313. We decline to make any changes in this final rule to require such public reporting.

We believe that some public disclosures may not be suitable or appropriate in every instance, and it would be difficult to tailor a meaningful requirement to anticipate all of these circumstances. We are concerned that, for example, in States with smaller HCBS populations, it may be difficult to truly anonymize information about grievances. Relatedly, some beneficiaries may not want grievances published about specific providers, as some commenters suggest, as this would further complicate anonymity when some providers only serve a few clients. We are concerned also that public disclosure could have a chilling effect if beneficiaries believed their grievance could be made part of a public report. While we agree that, over time, data about trends in grievances could be useful to both the States and external interested parties in promoting systemic improvements of HCBS, we defer to States to determine when and how to make this information public and for what purpose. We also note that the specific recommendation to add the name of the decision maker to the record is addressed in another response later in this section.

Comment: One commenter recommended that we establish a process for an annual or regular review of the States' summary of issues and the States' resolution of the issues. Another commenter recommended requiring an independent evaluator periodically review States' grievance processes to identify common barriers, trends, participation rates, and effectiveness of resolutions.

Response: When developing the proposed requirements at § 441.301(c)(7), we did not intend to create a formal system in which we would routinely review individual resolutions made by States' grievance systems and are not persuaded otherwise after review of public comments received. As discussed further in this section II.B., we proposed, and are finalizing, the requirement at § 441.301(c)(7)(vii)(C) that States must make records available to us upon request. This provides CMS with authority to review records should we need to review the functioning of a State's grievance system on a case-by-case basis.

We believe that the grievance system's designated decision makers are generally in the best position to determine appropriate resolutions to beneficiaries' concerns and that the need to review individual records should be decided on a case-by-case basis. We do agree regular review of the States' grievance systems is a good

suggestion, and we will take it under consideration for future guidance and rulemaking. Similarly, we are not requiring that States have their grievance system reviewed by an independent evaluator in this final rule—in part because we believe many States will likely do this anyway, as part of their standard audit processes. However, we agree that having the system regularly reviewed by an independent entity is a good practice that States may consider.

Comment: A few commenters suggested specific categories of information to be added to the record of each grievance proposed at § 441.301(c)(7)(vii)(B). One commenter suggested that all information considered should be included as a category in the record of each grievance. A few commenters recommended we add that the name of the decisionmaker be included in the record to ensure that conflict of interest requirements at § 441.301(c)(7)(iii)(C)(*3*) are preserved.

Response: We thank commenters for their suggestions, but we decline to add new record requirements for States at § 441.301(c)(7)(vii)(B). We believe capturing the names of staff and individuals who decided the outcome of each grievance is an operational and internal matter for States. States can record whatever information about a grievance resolution that they deem appropriate in addition to what is required. We believe § 441.301(c)(7)(vii)(B) as finalized reflects an appropriate minimum level of detail. We note that § 441.301(c)(7)(vii)(B) aligns with the managed care grievance system recordkeeping requirement at § 438.416.

After consideration of public comments received, we are finalizing § 441.301(c)(7)(vii) without substantive modifications. However, we are finalizing § 441.301(c)(7)(viii)(B)(*1*) through (*5*) with minor technical modifications. We are replacing the periods at the end of each paragraph with semi-colons, to accurately reflect that § 441.301(c)(7)(vii)(B)(*1*) through (*6*) are elements of a nonexhaustive list, not separate declarative statements. We are also adding the word ''and'' to the end of § 441.301(c)(7)(vii)(B)(*5*).

g. Applicability Date (§ 441.301(c)(7)(viii))

In the proposed rule (88 FR 27977), we recognized that many States may need time to implement the proposed grievance system requirements, including needing time to amend provider agreements, make State regulatory or policy changes, implement process or procedural changes, update information systems for data collection and reporting, or conduct other activities to implement these requirements. However, we noted that the absence of a grievance system in FFS HCBS systems poses a substantial risk of harm to beneficiaries. We proposed at § 441.301(c)(7)(viii) that the requirements at § 441.301(c)(7) be effective 2 years after the effective date of the final rule. A 2-year time period after the effective date of the final rule for States to implement these requirements reflected our attempt to balance two competing challenges: (1) the fact that there is a gap in existing regulations for FFS HCBS grievance processes related to important HCBS beneficiary protection issues involving person-centered planning and HCBS settings requirements; and (2) feedback from States and other interested parties that it could take 1 to 2 years to amend State regulations and work with their State legislatures, if needed, as well as to revise policies, operational processes, information systems, and contracts to support implementation of the proposals outlined in this section. We also considered all of the HCBS proposals outlined in the proposed rule (88 FR 27971 through 27995) as whole. We solicited comments on overall burden for States to meet the requirements of this section, whether this timeframe is sufficient, whether we should require a shorter timeframe (1 year to 18 months) or longer timeframe (3 to 4 years) to implement these provisions, and if an alternate timeframe is recommended, the rationale for that alternate timeframe.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: One commenter supported our proposal at § 441.301(c)(7)(viii) that the requirement at § 441.301(c)(7) be effective 2 years after the effective date of the final rule. However, one commenter, stating that these grievance protections will be vital to HCBS beneficiaries, recommended that States be required to come into compliance within 18 months after the effective date of the regulations.

A few commenters expressed concerns about the burden they believe will be associated with developing a grievance system, particularly in States that do not already have grievance processes in place. Commenters believed that it would take significant resources to help beneficiaries understand what rights they can claim under the grievance system. Commenters also described costs or activities such as: funding and statutory change requests to State legislatures; administrative rulemaking; IT and administrative system design and development, which may include vendor procurement; collaboration with other State agencies or agency divisions; partnering with providers for implementation; hiring and training new staff; and approval of implementation advance planning documents by CMS. These commenters suggested alternative effective dates ranging from 3 to 5 years. One commenter also suggested an effective date of 4 years after CMS releases relevant subregulatory guidance.

Response: We appreciate the fact that States will have to expend resources in developing the grievance system, particularly States that do not currently have grievance systems for Medicaid beneficiaries receiving services under section 1915(c), (i), (j) and (k) authorities through a FFS delivery system. Because of the activities that some States will have to perform to develop the grievance system shared by commenters, we agree that requiring an earlier timeframe of 18 months is not realistic. We also appreciate, and agree with, the sense of urgency expressed by commenters. We believe it is important to prioritize giving beneficiaries the opportunity to have their concerns heard. In this final rule, we have provided States with as much flexibility as possible to build on or retain existing grievance systems and have kept specific information systems requirements to a minimum. We have also reduced some potential initial administrative challenges by not finalizing a formal expedited resolution requirement and by allowing States to decide whether, and how, to implement such a policy. After consideration of public comments received as discussed herein, we are finalizing the substance of § 441.301(c)(7)(viii) as proposed, but with minor modifications to correct erroneous uses of the word ''effective'' and retitle the requirement as Applicability date (rather than Effective date). We are also modifying the language at § 441.301(c)(7)(viii) to specify that **States must comply with** the requirements at § 441.301(c)(7) **beginning** 2 years from the effective date of this final rule, rather than stating that this requirement is effective 2 years after the date of enactment of the final rule. (New text in bolded font). We are finalizing § 441.301(c)(7)(viii) with a technical modification to specify that the applicability date applies to the requirements at § 441.301(c)(7).

Comment: A few commenters requested enhanced FMAP to support implementation and operationalization

of the grievance process. Two commenters recommended that, in addition to providing 90 percent FFP for information systems improvements, we should offer 75 percent FFP for all quality-related activities, including operational costs associated with a grievance system. The commenters suggested this would create parity between the States whose service delivery systems are largely FFS and the States with managed care services that can receive 75 percent FFP for External Quality Review (EQR) activities.

Response: We note that enhanced FMAP is available for certain activities related to administering the Medicaid program and designing, developing, implementing, and operating certain IT systems.[60] However, Federal matching rates are established by Congress and CMS does not have the authority to change or increase them, nor do we have the authority to add additional activities not specified in statute into the scope of an existing enhanced FMAP. We also do not agree that providing broader enhanced match for the FFS grievance system would create parity with managed care, as we believe this is an inaccurate characterization of payments related to the managed care grievance systems. While commenters are correct that States can receive 75 percent enhanced match for EQR activities, which are listed at § 438.358, these activities are primarily validation and review of data on performance measures; the operation of a grievance system is not listed as an EQR activity. We also note that the associated administrative costs for MCOs, PIHPs, and PAHPs are variable and negotiated with the State as part of their contracts.

After consideration of public comments received, we are finalizing the substance of § 441.301(c)(7)(viii) as proposed, but with minor modifications to correct erroneous uses of the word ''effective'' and retitle the requirement as Applicability date (rather than Effective date). We are also modifying the language at § 441.301(c)(7)(viii) to specify that States must comply with the requirements at § 441.301(c)(7) beginning 2 years from the effective date of this final rule, rather than stating that this requirement is effective 2 years after the date of enactment of the final rule. (New text in bolded font.) We are finalizing § 441.301(c)(7)(viii) with a technical modification to specify that the applicability date applies to the requirements at § 441.301(c)(7).

h. Application to Other Authorities

As discussed earlier in section II.B.1. of this preamble, section 2402(a)(3)(A) of the Affordable Care Act requires States to improve coordination among, and the regulation of, all providers of Federally and State-funded HCBS programs to achieve a more consistent administration of policies and procedures across HCBS programs. In accordance with the requirement of section 2402(a)(3)(A) of the Affordable Care Act for States to achieve a more consistent administration of policies and procedures across HCBS programs and because HCBS State plan options also must comply with the HCBS Settings Rule and with similar person-centered planning and service plan requirements, we proposed to include these grievance requirements within the applicable regulatory sections. Specifically, we proposed to apply these proposed requirements in § 441.301(c)(7) to sections 1915(j), (k), and (i) State plan services at §§ 441.464(d)(2)(v), 441.555(b)(2)(iv), and 441.745(a)(1)(iii), respectively.

Also, consistent with our proposal for section 1915(c) waivers, we proposed to apply the proposed grievance requirements in § 441.301(c)(7) to sections 1915(j), (k), and (i) State plan services based on our authority under section 1902(a)(19) of the Act to assure that there are safeguards for beneficiaries and our authority at section 2402(a)(3)(B)(ii) of the Affordable Care Act to require a complaint system for beneficiaries. We stated that the same arguments for applying these requirements for section 1915(c) waivers are equally applicable to these other HCBS authorities. We requested comment on the application of the grievance system provisions to section 1915(i), (j), and (k) authorities. We also noted that, in the language added to § 441.464(d)(2)(v), the proposed grievance requirements apply when self-directed personal assistance services authorized under section 1915(j) include services under a section 1915(c) waiver program.

As described in the proposed rule (88 FR 27978), we did not propose to apply these requirements to section 1905(a) services. Specifically, we considered whether to also apply the proposed requirements to section 1905(a) ''medical assistance'' in the form of State plan personal care services, home health services, and case management services, but did not propose these requirements apply to any section 1905(a) State plan services because section 1905(a) services are not required to comply with HCBS settings requirements and because the person-centered planning and service plan requirements for most section 1905(a) services are substantially different from those for section 1915(c), (i), (j), and (k) services. Further, the vast majority of HCBS is delivered under section 1915(c), (i), (j), and (k) authorities, while only a small percentage of HCBS nationally is delivered under section 1905(a) State plan authorities. We solicited comment, seeing the value in discussing and seeking public input, on whether we should establish grievance requirements for section 1905(a) State plan personal care services, home health services and case management services.

We received public comments on these proposals. The following is a summary of the comments and our responses.

Comment: A few commenters supported the proposal to apply the grievance system provisions proposed for section 1915(c) at § 441.301(c)(7) to sections 1915(i), (j) and (k) authorities. They agreed with the goal of aligning the different HCBS program authorities and promoted consistency with managed care.

Response: We thank commenters for their support.

Comment: One commenter supported the application of the grievance requirements to self-directed personal assistance services under section 1915(j) of the Act as well. This commenter noted that, during the pandemic, there was no clear way to file a grievance with Medicaid concerning a lack of access to direct care workers, for example.

One commenter, on the other hand, questioned the operationalization of the grievance process for self-directed personal care service models under sections 1915(j) and (k), where the beneficiary acts as the employer for purposes of hiring, training, supervising, and firing, their provider, if necessary. This commenter was concerned that allowing beneficiaries to file grievances against their provider would erode a beneficiary's responsibilities as the employer. Another commenter, while supporting application of the grievance process to section 1915(j) self-directed services, did suggest that implementing this requirement in self-directed models may require additional time and guidance.

Response: We believe it would be inappropriate to exclude beneficiaries enrolled in self-directed services delivery models from the grievance system and decline to do so in this final rule. As noted by other commenters, beneficiaries enrolled in self-directed

[60] For a current list of activities eligible for this enhanced FMAP, refer to: MACPAC, ''Federal Match Rates for Medicaid Administrative Activities,'' last access: October 22, 2023. *https://www.macpac.gov/federal-match-rates-for-medicaid-administrative-activities/.*

services may experience systemic challenges with their services; they may also interact with other providers in addition to their self-directed service provider (such as the entity providing financial management services). We also note that the grievance system is a venue for expressing concerns about violations of the HCBS settings requirements, which may be relevant to some beneficiaries in self-directed programs. We do not believe that additional time needs to be granted specifically for inclusion of beneficiaries using self-directed services.

Comment: Several commenters responded to our request for comment on whether we should establish grievance requirements for section 1905(a) State plan personal care services, home health services and case management services. A few commenters supported the proposal not to extend the requirements to section 1905(a) services on the basis that these services are not subject to the same person-centered planning and HCBS settings rules. Additionally, several commenters also believed the expansion of these requirements to section 1905(a) State plan services would pose additional challenges to State Medicaid and operating agencies. One commenter noted that, in States that deliver section 1905(a) State plan services and section 1915(c) services through different agencies or agency divisions, implementation could prove challenging and costly. A few commenters stated that States should be encouraged (but not required) to implement the proposed provisions to their section 1905(a) State plan services.

However, a few commenters supported extending the grievance system requirements to section 1905(a) services. Among these commenters, a few commenters recommended that CMS apply the grievance system requirements specifically to mental health rehabilitative services delivered under section 1905(a) services. These services, some commenters stated, are delivered to large numbers of Medicaid beneficiaries, particularly those with mental health needs. These commenters elaborated on concerns that, otherwise, there would be disparities between individuals receiving similar services from the same State Medicaid agency under different authorities, and that many Medicaid recipients with mental health disabilities receiving services under the section 1905(a) authority would not have recourse if their rights were violated. One commenter also suggested that mental health rehabilitative services are considered ''home- and community-based services'' under the broader definition enacted by Congress in the American Rescue Plan Act of 2021.

Response: At this time, we are not requiring inclusion of section 1905(a) services in the State grievance system. That said, we are not convinced by the argument that including section 1905(a) services would simply be too much work, as we do believe it is critical that beneficiaries have access to mechanisms to claim their rights and have their concerns heard. Rather, we note that there are statutory and regulatory differences between services authorized under sections 1905(a) and 1915 of the Act. We would need to consider how to define the nature of the grievances that would be filed for section 1905(a) services, given that they do not have the same person-centered planning and HCBS settings rule requirements at § 441.301(c)(1) through (6). As we discussed extensively in this section, the bases for a grievance are providers' and States' performance of the requirements at § 441.301(c)(1) through (6). We believe this definition of grievance provides clear parameters for matters that would be the subject of grievances. We note that person-centered service planning requirements are established for section 1915(j) services in § 441.468, for section 1915(k) services in § 441.540, and for section 1915(i) services at § 441.725. While person-centered service planning might be part of some specific 1905(a) services, it is not a required component of all section 1905(a) services.

Similarly, the HCBS settings requirements a § 441.301(c)(3) through (6) that apply to section 1915(c) services have counterparts for section 1915(k) services at § 441.530 and for 1915(i) services at § 441.710. (For more discussion of the application of the HCBS settings rule's application to section 1915(c), (i), and (k) services, we refer readers to the final rule published in 2014 at 79 FR 2948.) Section 1915(j) services offered through a section 1915(c) waiver (as specified, for instance, at § 441.452(a)) would also be subject to the HCBS settings requirements at § 441.301(c)(3) through (6). There is not a similar application of the HCBS settings rule to section 1905(a) services.

If we are to apply a grievance process to 1905(a) services, it is likely we would weigh proposing a grievance process for all section 1905(a) services versus for only specific section 1905(a) services. These services are diverse, are offered in diverse settings, and lack the clear regulatory framework that we were able to use in constructing the bases for grievances in section 1915 services. We believe this requires additional consideration and discussion with the public beyond what could be finalized in this current rule.

Though we are not finalizing inclusion of section 1905(a) services in the State grievance system in this rule, we acknowledge that many beneficiaries, including those receiving mental health services, are served by section 1905(a) services and encourage States to consider development of grievance processes to address these beneficiaries' concerns. We appreciate the commenters' suggestions. Given that our work to better ensure access in the Medicaid program is ongoing, we intend to gain implementation experience with this final rule, and we will consider the recommendations provided on the proposed rule to help inform any future rulemaking in this area, as appropriate.

After consideration of public comments, we are finalizing the application of the grievance system requirements for section 1915(c) waivers, as finalized in this rule at § 441.301(c)(7), to the other HCBS authorities under sections 1915(j), 1915(k), and 1915(i). However, after further review, we determined it is necessary to make modifications to our regulations for these other HCBS authorities to clarify this intention. Our proposed regulation text for these HCBS authorities did not accurately reflect or effectuate our proposal to require States to implement and maintain a grievance system, in accordance with § 441.301(c)(7), for these HCBS authorities as well. We are finalizing the regulation text we proposed at §§ 441.464 (for section 1915(j)), 441.555 (for section 1915(k)), and 441.745 (for section 1915(i)) with modification to more clearly specify that a State must implement and maintain a grievance system in accordance with the requirements we are finalizing at § 441.301(c)(7) for HCBS programs they administer under these authorities.

For application to section 1915(j) services, we are not finalizing the amendment we proposed at § 441.464(d)(2)(v), but rather finalizing this new requirement for a grievance system at § 441.464(d)(5). We will retain the current language at § 441.464(d)(2)(v), which indicates that States must include grievance processes, generally, among the support activities about which States provide information, counseling, training, and assistance. At § 441.464(d)(5), we are finalizing with modification for clarity and precision that the State must implement and maintain a grievance process in accordance with § 441.301(c)(7), rather

than the language we proposed at § 441.464(d)(2)(v) (Grievance process, as defined in § 441.301(c)(7) when self-directed PAS include services under a section 1915(c) waiver program). We are also finalizing § 441.464(d)(5) with a technical modification to clarify that the grievance system must meet the requirements of § 441.301(c)(7), but that references therein to section 1915(c) of the Act are instead references to section 1915(j) of the Act.

For application to section 1915(k) services, we are not finalizing the amendment we proposed at § 441.555(b)(2)(iv), but rather finalizing this new requirement for a grievance system at § 441.555(e). We will retain the current language at § 441.555(b)(2)(iv), which indicates that States must include grievances processes, generally, among the support activities about which States provide information, counseling, training, and assistance. At § 441.555(e), we are finalizing with modification for clarity and precision that the State must implement and maintain a grievance process in accordance with § 441.301(c)(7), rather than the language we proposed at § 441.555(b)(2)(iv) (Grievance process, as defined in § 441.301(c)(7)). We are also finalizing § 441.555(e) with a technical modification to clarify that the grievance system must meet the requirements of § 441.301(c)(7), but that references therein to section 1915(c) of the Act are instead references to section 1915(k) of the Act.

For application to section 1915(i) services, we are finalizing the amendment we proposed at § 441.745(a)(1)(iii) with modifications. As proposed, § 441.745(a)(1)(iii) had indicated that a State must provide beneficiaries receiving section 1915(i) services with the opportunity to file a grievance. To clarify that the State must maintain a grievance process in accordance with § 441.301(c)(7) for beneficiaries receiving HCBS under section 1915(i), we are finalizing § 441.745(a)(1)(iii) to specify that the State must implement and maintain a grievance process in accordance with § 441.301(c)(7). We note that several requirements being finalized at § 441.301(c)(7) (such as § 441.301(c)(7)(iii)(A), (B)(*2*), and (C)(*1*), discussed in section II.B.2.b. of this final rule) require States to provide the beneficiary with the opportunity to file grievances in the grievance system. We are also finalizing § 441.745(a)(1)(iii) with a technical modification to clarify that the grievance system must meet the requirements of § 441.301(c)(7), but that references therein to section 1915(c) of the Act are instead references to section 1915(i) of the Act. Additionally, as we are finalizing a new § 441.745(a)(1)(iii) in this rule, we are redesignating the current § 441.745(a)(1)(iii) as § 441.745(a)(1)(iv).

We also note that while we are finalizing these amendments to regulations under section 1915(j), (k) and (i) authorities, we are not suggesting that States that provide HCBS through multiple authorities must operate a separate grievance process for each program. As discussed earlier in II.B.2. of this preamble, while States are allowed to maintain multiple grievance processes (so long as each process complies with § 441.301(c)(7)), we strongly encourage States to maintain a single, integrated grievance system for all HCBS beneficiaries.

i. Summary of Finalized Requirements

After consideration of the public comments, we are finalizing the proposals at §§ 441.301(c)(7) as follows:

- We are finalizing the requirement describing the grievance system purpose at § 441.301(c)(7)(i) with technical modifications to specify that States must establish a procedure under which a beneficiary can file a grievance related to the State's or a provider's **performance of** (rather than **compliance with**) the activities described in paragraphs (c)(1) through (6) of § 441.301(c)(7). (New language identified in bold.) We are also adding language to § 441.301(c)(7)(i) stating that the State may contract with other entities to perform activities described in § 441.301(c)(7) but retains responsibility for ensuring performance of and compliance with these provisions. The finalized requirement at § 441.301(c)(7)(i) will read: *Purpose.* The State must establish a procedure under which a beneficiary may file a grievance related to the State's or a provider's performance of the activities described in paragraphs (c)(1) through (6) of this section. This requirement does not apply to a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act. The State may have activities described in paragraph (c)(7) of this section performed by contractors or other government entities, provided, however, that the State retains responsibility for ensuring performance of and compliance with these provisions.
- We are finalizing the definition of grievance at § 441.301(c)(7)(ii) with a technical modification, conforming with the modification at § 441.301(c)(7)(i), to specify that a grievance will mean an expression of dissatisfaction or complaint related to the State's or a provider's performance of (rather than **compliance with**) the activities described in paragraphs (c)(1) through (6), regardless of whether remedial action is requested. (New language identified in bold.) We are finalizing the definition of grievance system at § 441.301(c)(7)(ii) as proposed.
- We are finalizing the process requirement at § 441.301(c)(7)(iii)(A) as proposed, with the following exceptions. We are finalizing § 441.301(c)(7)(iii)(A)(*1*) with modification to specify that another individual or entity may file a grievance on behalf of the beneficiary, or provide the beneficiary with assistance or representation throughout the grievance process, with the written consent of the beneficiary or authorized representative. The finalized requirement at § 441.301(c)(7)(ii)(A)(*1*) will read: Another individual or entity may file a grievance on behalf of the beneficiary, or provide the beneficiary with assistance or representation throughout the grievance process, with the written consent of the beneficiary or authorized representative. We are finalizing § 441.301(c)(7)(iii)(A)(*2*) as proposed.
- We are finalizing the process requirement at § 441.301(c)(7)(iii)(B) as proposed.
- We are finalizing § 441.301(c)(7)(iii)(B)(*1*) with a modification to correct an erroneous reference to subchapter by replacing subchapter with paragraph (c)(7).
- We are finalizing the process requirements at § 441.301(c)(7)(iii)(B)(*2*) with a modification to specify that States must provide beneficiaries with reasonable assistance in ensuring grievances are appropriately filed with the grievance system. We are also finalizing § 441.307(c)(7)(iii)(B)(2) with modifications to change the term ''individuals who are limited English proficient'' to ''individuals with Limited English Proficiency.'' We are also finalizing with modification to clarify that auxiliary aids and services are to be available where necessary to ensure effective communication. As finalized, § 441.301(c)(7)(iii)(B)(2) specifies that States must provide beneficiaries reasonable assistance in ensuring grievances are appropriately filed with the grievance system, completing forms, and taking other procedural steps related to a grievance. This includes, but is not limited to, ensuring the grievance system is accessible to individuals with disabilities and to provide meaningful access to individuals with Limited English Proficiency, consistent with § 435.905(b) of this chapter, and includes auxiliary aids and services

where necessary to ensure effective communication, such as providing interpreter services and toll-free numbers that have adequate TTY/TTD and interpreter capability.

- We are finalizing the process requirement at § 441.301(c)(7)(iii)(B)(3) with modifications to require that States ensure that punitive or retaliatory action (rather than just punitive actions) is neither threatened nor taken against an individual filing a grievance or who has had a grievance filed on their behalf. The finalized requirement at § 441.301(c)(7)(iii)(B)(3) will read: Ensure that punitive or retaliatory action is neither threatened nor taken against an individual filing a grievance **or who has had a grievance filed on their behalf**. (New language identified in bold.)
- We are finalizing the process requirement § 441.301(c)(7)(iii)(B)(4) with a modification to remove the reference to expedited grievances. The finalized requirements at § 441.301(c)(7)(iii)(B)(4) will read: Accept grievances and requests for extension of timeframes from the beneficiary.
- We are finalizing the process requirements at § 441.301(c)(7)(iii)(B)(5) with a modification to change mention of individuals who are limited English proficient to individuals with Limited English Proficiency.
- We are finalizing the process requirements at § 441.301(c)(7)(iii)(B)(6) and (7) as proposed.
- We are finalizing the requirements at § 441.301(c)(7)(iii)(C)(*4*) and (*5*) with a modification to replace the reference to § 441.301(c)(7)(v)(B)(1) and (2) and adding a reference to § 441.301(c)(7)(v). We are also finalizing § 441.301(c)(7)(iii)(C)(5) with a modification to change the reference to 45 CFR 164.510(b) to a broader reference to the HIPAA Privacy Rule (45 CFR part 160 and part 164 subparts A and E).
- Aside from the modifications noted previously to § 441.301(c)(7)(iii)(C)(*4*) and (5), we are finalizing § 441.301(c)(7)(iii)(C) as proposed, with minor formatting changes.
- We are finalizing the filing timeframe requirement at § 441.301(c)(7)(iv) with modifications by removing the expedited resolution requirement at § 441.301(c)(7)(iv)(B) and redesignating § 441.301(c)(7)(iv)(A) as § 441.301(c)(7)(iv). The finalized requirement at 441.301(c)(7)(iv) will read: *Filing timeframes.* A beneficiary may file a grievance at any time.
- We are finalizing the resolution and notification requirement at § 441.301(c)(7)(v)(A) with a modification to require that the State resolve each grievance, and provide notice, as expeditiously as the beneficiary's health condition (instead of health, safety, and welfare) requires. The finalized requirement at § 441.301(c)(7)(v)(A) will read: *Basic rule.* The State must resolve each grievance, and provide notice, as expeditiously as the beneficiary's health condition requires, within State-established timeframes that may not exceed the timeframes specified in this section.
- We are not finalizing the expedited resolution timeframe at § 441.301(c)(7)(v)(B)(*2*). Instead, we are redesignating § 441.301(c)(7)(v)(B)(*1*) as § 441.301(c)(7)(v)(B) and retitling § 441.301(c)(7)(v)(B) as ''Resolution timeframes.'' We are also removing the word ''standard'' from § 441.301(c)(7)(v)(B). The finalized requirement at § 441.301(c)(7)(v)(B) will read: *Resolution timeframes.* For resolution of a grievance and notice to the affected parties, the timeframe may not exceed 90 calendar days from the day the State receives the grievance. This timeframe may be extended under paragraph (c)(7)(v)(C) of this section.
- We are finalizing the timeframe extension requirement at § 441.301(c)(7)(v)(C) and (D) without substantive changes. We are finalizing § 441.301(c)(7)(v)(C) with a technical modification to redesignate paragraphs (C)(*1*)(i) and (C)(*1*)(ii) as (C)(*1*) and (C)(*2*), respectively. We are finalizing § 441.301(c)(7)(v)(D) as proposed, but with a technical modification to change the periods at the end of § 441.301(c)(7)(v)(D)(*1*) and (*2*) to semi-colons, and adding ''and'' at the end of § 441.301(c)(7)(v)(D)(*2*).
- We are finalizing the notice format requirement at § 441.301(c)(7)(vi)(A) without substantive modification. However, we are not finalizing the proposal relating to the expedited resolution process at § 441.301(c)(7)(vi)(B). Therefore, we are redesignating § 441.301(c)(7)(vi)(A) as § 441.301(c)(7)(vi).
- We are finalizing the recordkeeping requirements at § 441.301(c)(7)(vii) without substantive modifications. However, we are finalizing § 441.301(c)(7)(viii)(B)(*1*) through (*5*) with semi-colons rather than periods at the end of each paragraph, and with the word ''and'' at the end of § 441.301(c)(7)(vii)(B)(*5*).
- We are finalizing the applicability date requirements at § 441.301(c)(7)(viii) to specify that States must comply with the requirement at paragraph (c)(7) beginning 2 years from the effective date of this final rule.

Additionally, we are finalizing the application of the grievance process requirements at § 441.301(c)(7) to section 1915(j), (k) and (i) authorities as follows:

- For application to section 1915(j) services, we are not finalizing a reference at § 441.464(d)(2)(v), as we had proposed, but rather finalizing a new requirement at § 441.464(d)(5) that specifies that States must implement and maintain a grievance process in accordance with § 441.301(c)(7), except that the references to section 1915(c) of the Act are instead references to section 1915(j) of the Act.
- For application to section 1915(k) services, we are not finalizing a reference at § 441.555(b)(2)(iv), as we had proposed, but rather finalizing a new requirement at § 441.555(e) that specifies that States must implement and maintain a grievance process in accordance with § 441.301(c)(7), except that the references to section 1915(c) of the Act are instead references to section 1915(k) of the Act.
- For application to section 1915(i) services, we are finalizing a new § 441.745(a)(1)(iii) with modification to clarify that the State must maintain a grievance process in accordance with § 441.301(c)(7), except that the references to section 1915(c) of the Act are instead references to section 1915(i) of the Act. We are redesignating the existing § 441.745(a)(1)(iii) as § 441.745(a)(1)(iv).

3. Incident Management System (§§ 441.302(a)(6), 441.464(e), 441.570(e), 441.745(a)(1)(v) and 441.745(b)(1)(i))

Section 1902(a)(19) of the Act requires States to provide safeguards as may be necessary to assure that eligibility for care and services will be determined, and that such care and services will be provided, in a manner consistent with simplicity of administration and the best interests of the recipients. Section 1915(c)(2)(A) of the Act and current Federal regulations at § 441.302(a) require that States have in place necessary safeguards to protect the health and welfare of individuals receiving section 1915(c) waiver program services. Further, as discussed previously in section II.B.1. of this rule, section 2402(a) of the Affordable Care Act requires the Secretary of HHS to ensure that all States receiving Federal funds for HCBS, including Medicaid, develop HCBS systems that are responsive to the needs and choices of beneficiaries receiving HCBS, maximize independence and self-direction, provide support and coordination to assist with a community-supported life, and achieve a more a more consistent

and coordinated approach to the administration of policies and procedures across public programs providing HCBS.[61] Among other things, section 2402(a)(3)(B)(ii) of the Affordable Care Act requires development and oversight of a system to qualify and monitor providers.

As noted earlier in section II.B.1. of this rule, we released guidance for section 1915(c) waiver programs included in the 2014 guidance,[62] which noted that States should report on State-developed performance measures to demonstrate that they meet six assurances, including a Health and Welfare assurance for States to demonstrate that they have designed and implemented an effective system for assuring waiver participant health and welfare. Specifically, the 2014 guidance highlighted, related to the Health and Welfare assurance, the following:

- The State demonstrates on an ongoing basis that it identifies, addresses, and seeks to prevent instances of abuse, neglect, exploitation, and unexplained death;
- The State demonstrates that an incident management system is in place that effectively resolves incidents and prevents further similar incidents to the extent possible;
- The State's policies and procedures for the use or prohibition of restrictive interventions (including restraints and seclusion) are followed; and
- The State establishes overall health care standards and monitors those standards based on the responsibility of the service provider as stated in the approved waiver.

Consistent with the expectations for other performance measures, the 2014 guidance noted that States should conduct systemic remediation and implement a Quality Improvement Project when they score below 86 percent on any of their Health and Welfare performance measures.

Despite States implementing these statutory and regulatory requirements to protect the health and welfare of individuals receiving section 1915(c) waiver program services, and States' adherence to related subregulatory guidance, there have been notable and high-profile instances of abuse and neglect in recent years that highlight the risks associated with poor quality care and with inadequate oversight of HCBS in Medicaid. For example, a 2018 report, ''Ensuring Beneficiary Health and Safety in Group Homes Through State Implementation of Comprehensive Compliance Oversight,'' [63] (referred to as the Joint Report, developed by ACL, OCR, and the OIG), found systemic problems with health and safety policies and procedures being followed in group homes and that failure to comply with these policies and procedures left beneficiaries in group homes at risk of serious harm.

In addition, in 2016 and 2017, OIG released several reports on their review of States' compliance with Federal and State requirements regarding critical incident reporting and monitoring.[64] [65] [66] OIG found that several States did not comply with Federal waiver and State requirements for reporting and monitoring critical incidents involving individuals receiving HCBS through waivers. In particular, the reports indicated that:

- Critical incidents were not reported correctly;
- Adequate training to identify appropriate action steps for reported critical incidents or reports of abuse or neglect was not provided to State staff;
- Appropriate data sets to trend and track critical incidents were not accessible to State staff; and
- Critical incidents were not clearly defined, making it difficult to identify potential abuse or neglect.

In 2016, we conducted three State audits based at least in part on concerns regarding health and welfare and media coverage on abuse, neglect, or exploitation issues.[67] We found that these three States had not been meeting their section 1915(c) waiver assurances, similar to findings reported by the OIG. In two cases, for the incidents of concern, tracking and trending of critical incidents were not present. Further, in at least two of the States, staffing at appropriate levels was identified as an issue.

In January 2018, the United States Government Accountability Office (GAO) released a report on a study of 48 States that covered assisted living services.[68] The GAO found large inconsistencies between States in their definition of a critical incident and their system's ability to report, track, and collect information on critical incidents that have occurred. States also varied in their oversight methods, as well as the type of information they were reviewing as part of this oversight. The GAO recommended that requiring States to report information on incidents (such as the type and severity of incidents and the number of incidents) would strengthen the effectiveness of State and Federal oversight.

In July 2019, we issued a survey to States that operate section 1915(c) waivers, requesting information on their approach to administering incident management systems. The goal of the survey was to obtain a comprehensive understanding of how States organize their incident management system to best respond to, resolve, monitor, and prevent critical incidents in their waiver programs. The survey found that:

- Definitions of critical incidents vary across States and, in some cases, within States for different HCBS programs or populations;
- Some States do not use standardized forms for reporting incidents, thereby impeding the consistent collection of information on critical incidents;
- Some States do not have electronic incident management systems, and, among those that do, many use systems with outdated electronic platforms that are not linked with other State systems, leading to the systems operating in silos and the need to consolidate information across disparate systems; and
- Many States cited the lack of communication within and across State agencies, including with investigative agencies, as a barrier to incident resolution.

Additionally, during various public engagement activities conducted with interested parties over the past several years, we have heard that ensuring access to HCBS requires that we must first ensure health and safety systems are in place across all States, a theme underscored by the Joint Report.

a. Incident Management System Requirements (§ 441.302(a)(6))

Based on these findings and reports, under the authorities at sections 1902(a)(19) and 1915(c)(2)(A) of the Act and section 2402(a)(3)(B)(ii) of the Affordable Care Act, we proposed a new requirement at § 441.302(a)(6) to require that States provide an assurance that they operate and maintain an incident management system that identifies, reports, triages, investigates, resolves, tracks, and trends critical incidents. This proposal is intended to ensure standardized requirements for States regarding incidents that harm or place a beneficiary at risk of harm and is based on our experience working with States as part of the section 1915(c) waiver program and informed by the incident management survey described previously in this section of the final rule. In the absence of an incident management system, people receiving section 1915(c) waiver program services are at risk of preventable or intentional harm. As such, we believe that such a system to identify and address incidents of abuse, neglect, exploitation, or other harm during the course of service delivery is in the best interest of and necessary for protecting the health and welfare of individuals receiving section 1915(c) waiver program services. We proposed similar requirements for section 1915(i), (j) and (k) HCBS programs at §§ 441.464(e), 441.570(e), 441.745(a)(1)(v), and 441.745(b)(1)(i); these are discussed further in section II.B.3.i of this final rule.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the proposal at § 441.302(a)(6) to require States to provide an assurance that they operate and maintain an incident management system that identifies, reports, triages, investigates, resolves, tracks, and trends critical incidents. Additionally, these commenters noted that the proposed requirements for this incident management system can ensure States standardize data and processes for critical incident monitoring, identify trends, and influence timely oversight of responses to incidents to minimize health and safety risks for beneficiaries receiving HCBS.

Several commenters stated that establishing an incident management system, including requirements for data-driven analytics and trend reporting, would help to better inform States and providers by creating new collaborative models to measure improvements to better ensure quality of life for HCBS beneficiaries. In the same vein, one commenter noted that States should use the data and information collected on critical incidents to develop strategies to reduce or eliminate the risk of abuse, neglect, or exploitation; to enable discovery of root cause for occurrence of critical incidents; and to identify actions to influence critical incidents proactively, instead of reactively.

Response: We appreciate the support for our proposal and agree that requiring States to provide an assurance that they operate and maintain an incident management system that identifies, reports, triages, investigates, resolves, tracks, and trends critical incidents will ensure that States are better informed and more able to identify root causes for the occurrence of critical incidents, enabling them to act more proactively to influence and prevent the occurrence of such incidents.

Comment: A few commenters requested we clarify how States can fully address critical incidents for dually eligible beneficiaries who are enrolled in managed care plans, when the managed care plan does not have access to Medicare claims data. In the same vein, they were also concerned that States would require extensive resources to utilize the Medicare claims data.

These commenters also requested clarification on the feasibility of reporting across Medicare and Medicaid in dual eligible special needs plan (D–SNP) contracts.

Response: Since 2011, we have provided States access to Medicare data for dually-eligible beneficiaries, including for beneficiaries in different categories of dual eligibility, free-of-charge via the Medicare-Medicaid Data Sharing Program.[69] Information on the Medicare-Medicaid Data Sharing Program, including how to request data and the standard data sharing agreements, is available through the State Data Resource Center.[70]

We proposed that the incident management system requirements, as specified at § 441.302(a)(6) and as finalized in this rule, will apply to section 1915(c)(i), (j), and (k) services delivered through managed care plans. We also note that dually eligible beneficiaries enrolled in managed care plans known as fully integrated dual eligible special needs plans (FIDE SNP) and highly integrated dual eligible special needs plans (HIDE SNP), are subject to the incident management requirements at § 441.302(a)(6) as finalized. We will provide technical assistance regarding the application of these requirements to beneficiaries in different categories of dual eligibility.

Comment: A few commenters expressed concern that the requirements we proposed for this incident management system generally seemed to be more focused on documentation of critical incidents, rather than impacting quality and outcomes for HCBS participants to ensure optimal health and welfare. One commenter recommended that States should assure that resolution of critical incidents focuses on preventing harm to the HCBS participant(s) involved in the critical incident. This commenter also suggested that States should take actions to not only prevent further harm to HCBS participant(s) involved in a critical incident, but actions based on the critical incident should be taken to prevent further harm to all HCBS participants.

Response: We believe the requirements we proposed at § 441.302(a)(6), and as finalized in this rule, give States the flexibility to decide how to design and implement their incident management system. We encourage States to consider implementing quality improvement processes as part of their incident management systems, as quality improvement processes can help States to promote the health and welfare of beneficiaries by addressing systemic issues in their HCBS programs. We also note that the purpose of tracking and trending critical incidents is to assist States in understanding patterns that require interventions to promote improvement and prevent the recurrence of harm to beneficiaries.

We also refer readers to the requirements currently set forth at § 438.330(b)(5)(ii) that MCOs, PHIPs, and PAHPs participate in efforts by the State to prevent, detect, and remediate critical incidents, consistent with assuring beneficiary health and welfare as required in § 441.302 and § 441.703(a). Further, as noted herein, the six assurances and related

[69] See Medicare-Medicaid Data Sharing Program at *https://www.cms.gov/Medicare-Medicaid-Coordination/Medicare-and-Medicaid-Coordination/Medicare-Medicaid-Coordination-Office/StateAccesstoMedicareData.*

[70] See State Data Resource Center at *https://www.statedataresourcecenter.com/home/contact-us.*

subassurances for section 1915(c) waiver programs, including the Health and Welfare assurance, as set forth in the 2014 guidance, continue to apply. In addition, as discussed in section II.B.8. of this final rule, the HCBS Quality Measure Set reporting requirements include requirements for States to implement quality improvement strategies in their HCBS programs; while the HCBS Quality Measure Set requirements being finalized in this rule are distinct and severable from the incident management requirements being finalized at § 441.302(a)(6), we believe the HCBS Quality Measure Set requirements support the quality improvement objectives described by this commenter.

After consideration of these public comments, we are finalizing our proposal to require at § 441.302(a)(6) that States must provide an assurance that the State operates and maintains an incident management system that identifies, reports, triages, investigates, resolves, tracks, and trends critical incidents as proposed.

b. Critical Incident Definition (§ 441.302(a)(6)(i)(A))

At § 441.302(a)(6)(i)(A) through (G), we proposed new requirements for States' incident management systems. Specifically, at § 441.302(a)(6)(i)(A), we proposed to establish a standard definition of a critical incident to include, at a minimum, verbal, physical, sexual, psychological, or emotional abuse; neglect; exploitation including financial exploitation; misuse or unauthorized use of restrictive interventions or seclusion; a medication error resulting in a telephone call to or a consultation with a poison control center, an emergency department visit, an urgent care visit, a hospitalization, or death; or an unexplained or unanticipated death, including but not limited to a death caused by abuse or neglect.

We proposed the Federal minimum standard definition of a critical incident at § 441.302(a)(6)(i)(A) to address the lack of a standardized Federal definition for the type of events or instances that States should consider a critical incident that must be reported by a provider to the State and considered for an investigation by the State to assess whether the incident was the result of abuse, neglect, or exploitation, and whether it could have been prevented. The definition we proposed at § 441.302(a)(6)(i)(A) is based on internal analyses of data and information obtained through a CMS survey of States' incident management systems, commonalities across definitions, and common gaps in States' definitions of critical incidents (for instance, that many States do not consider sexual assault to be a critical incident).

We also requested comment on whether there are specific types of events or instances of serious harm to section 1915(c) waiver participants, such as identity theft or fraud, that would not be captured by the proposed definition and that should be included, and whether the inclusion of any specific types of events or instances of harm in the proposed definition would lead to the overidentification of critical incidents.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposed minimum standard definition of a critical incident. Commenters expressed that the proposed requirements at § 441.302(a)(6)(i)(A) establish a minimum Federal definition of a critical incident which would help to standardize practices across States and HCBS programs to better serve and prevent harm or risk of harm for beneficiaries. A few commenters noted the standardized Federal minimum definition of a critical incident will increase consistency across States, section 1915(c) waivers, and HCBS programs. A few commenters suggested CMS further explain the critical incident definition to minimize misinterpretation, stating that explanations of definitions for each type of critical incident could ensure reporting is uniform and consistent across all State programs and services. These commenters stated that without a uniform understanding of each type of critical incident, critical incidents could be over or under reported. Similarly, several other commenters suggested that the definition of critical incident we proposed is overly broad, expressing it could impede the State's coordination with other agencies and interested parties. These commenters indicated that more explanation of the definitions of critical incident at § 441.302(a)(6)(i)(A) could help to address varying interpretations in implementation of the proposed requirements, noting that each State Medicaid agency or interested parties could independently establish meaning.

Response: We disagree with commenters that the proposed definition of critical incident is overly broad. We believe that the proposed requirements at § 441.302(a)(6)(i)(A) provide States with a comprehensive minimum standard definition of a critical incident. We recommend that States view the definition as a minimum Federal standard. States may consider expanding the definition to include other health and safety concerns based on the unique needs of their HCBS populations and the specific characteristics of their HCBS programs. We plan to provide technical assistance, as needed, to States if they have questions about the types of incidents that should be included in the standardized definition, and how this definition relates to existing critical incident definitions already in use.

Comment: Commenters responded to our request for comment on whether there were specific types of events or instances of serious harm that would not be captured by the proposed critical incident definition and should be included. A few commenters suggested that we broaden the definition of critical incident and suggested that the following types of incidents be included in the proposed definition of critical incident at § 441.302(a)(6)(i)(A): abuse between HCBS waiver housemates; expression of racism, sexism, homophobia, or transphobia by a provider toward a beneficiary; lack of direct care workers; physical or emotional harm suffered by participant; falls with severe or moderate injury/illness; missed or delayed provision of services identified in the person-centered plan; refusal of service; self-neglect; and a range of harmful things beneficiaries may experience.

Alternatively, a few commenters recommended that CMS not expand the minimum definition of critical incident further, indicating the critical incident definition offers flexibility to States to expand their critical incident definition to fit the HCBS program and population served by the State. Commenters expressed that CMS should provide technical assistance, for all States, including for States that already have an incident management system with critical incident definitions and policies and programs in place.

Response: We appreciate commenters sharing these suggestions. We note that many of these types of events would be captured by the minimum standard definition. For instance, we would consider abuse between HCBS waiver housemates to fall under verbal, physical, sexual, psychological, or emotional abuse. Similarly, expressions of racism, sexism, homophobia, or transphobia by a provider toward a beneficiary may be considered a critical incident. If a lack of direct care workers, a refusal of service, or missed or delayed provision of services identified in the person-centered service plan results in

harm or risk of risk from the failure of a provider to deliver needed services, we would expect a State to consider those events as instances of neglect. Physical or emotional harm suffered by a participant as a result of one or more types of events included in our definition of critical incidents or that results in death would also be captured as a critical incident. Falls with severe or moderate injury/illness may be considered critical incidents depending on whether they occur as a result of an event included in our definition of critical incidents. They would also be considered critical incidents if they result in death. Some of these events, such as missed or delayed provision of services identified in the person-centered service plan, could also meet the definition of a grievance and be appropriate for consideration under the grievance system, which we are finalizing as part of a separate provision in § 441.301(c)(7) (discussed in section II.B.2 of this rule.)

We decline to include refusing a service or self-neglect in the minimum standard definition because we intend this definition to focus on incidents that occur during the course of service delivery. However, States may include these events in their own definitions.

We are unsure what the commenter intended by ''range of harmful things beneficiaries may experience'' and are unable to respond directly to that recommendation.

We appreciate these comments and will take this feedback into consideration when developing resources for States on the incident management system's requirements.

Comment: One commenter stated that we should consider whether what constitutes a critical incident might differ between adult and child beneficiaries and recommended that pediatricians could assist States in development and implementation of incident management requirements, including critical incident requirements. This commenter also stated that data and information for children receiving HCBS and housed in pediatric health systems should be linked with the State electronic critical incident system proposed at § 441.302(a)(6)(i)(B).

Response: As previously discussed, our proposal is to establish a minimum Federal definition, and States may consider expanding the definition to include other health and safety concerns based on the unique needs of their HCBS populations. We also encourage States to include input from interested parties, including experts in children receiving HCBS, when developing and implementing their incident management systems and policies and procedures to meet the proposed requirements. We discuss requirements for data and information sharing and electronic systems in more detail below in this section II.B.3. of the rule.

Comment: Several commenters provided feedback about the inclusion of medication errors resulting in a telephone call to or a consultation with a poison control center in the proposed critical incident definition at § 441.302(a)(6)(i)(A)(*5*). One commenter expressed support for the reporting of a medication error resulting in a telephone call to or a consultation with a poison control center, and agreed they should be reported by the provider to the State. Another commenter expressed that beneficiaries receiving HCBS are encouraged to be independent and have the right to self-determination, and completing investigations on medication errors could be infringing upon HCBS beneficiaries' self-determination. One commenter requested we consider that managed care plans do not typically receive member data from poison control centers unless they are contracted with the managed care plan to provide this notification, making it difficult to track incidents that result in a consultation with the poison control center unless this data is captured elsewhere in member claims data. One commenter expressed concern that including a medication error in the definition of critical incidents could be problematic since not all providers who serve HCBS beneficiaries are clinical staff who can render a professional clinical determination of medication error, which could result in medication errors being over or under reported and skew data reports.

Response: We plan to provide States with technical assistance to help address issues raised by providers in reporting any critical incidents that occur during the delivery of services as specified in a beneficiary's person-centered service plan, or any critical incidents that are a result of the failure to deliver authorized services, including medication errors resulting in a telephone call to or a consultation with a poison control center. Because we also are finalizing § 441.302(a)(6)(i)(C) as described in II.B.3.d. of this rule, we confirm that States must require providers to report to them any critical incidents that occur during the delivery of services as specified in a beneficiary's person-centered service plan, or any critical incidents that are a result of the failure to deliver authorized services. As such, a provider would be expected to report a medication error resulting in a contact with a poison control center if the medication error occurred during the delivery of services or a result of the failure to deliver services. We believe that such a system to identify and address incidents of abuse, neglect, exploitation, or other harm during the course of service delivery is in the best interest of and necessary for protecting the health and welfare of individuals receiving HCBS.

Comment: One commenter requested that CMS clarify that in addition to audio-only telephone, that the use of audio or video technology be made acceptable to satisfy the requirement proposed at § 441.302(a)(6)(i)(A)(*5*) that the State adopt the minimum standard definition for critical incident for a medication error resulting in contact with a poison control center.

Response: We do not have the authority to define additional communication types or consultation methods for poison control centers. We decline to add ''use of audio or video technology'' to the requirement proposed at § 441.302(a)(6)(i)(A)(*5*). We encourage States to collaborate with their State and local poison control centers to understand the types of consultation that are acceptable and make requests for additional communication types or consultation methods for poison control centers.

Comment: Several commenters responded to our solicitation to comment on whether the proposed critical incident definition at § 441.302(a)(6)(i)(A) should include other specific types of events or instances of serious harm to beneficiaries receiving HCBS, such as identity theft or fraud. Most commenters responding to the request for comment recommended that CMS not expand the critical incident definition to include identity theft or fraud, noting it could create duplication of existing investigative and reporting processes. Alternatively, a few commenters supported the inclusion of identity theft and fraud in the critical incident definition. One commenter recommended that CMS provide additional guidance on identity theft or fraud in the context of exploitation, including financial exploitation if added to the minimum critical incident definition. One commenter expressed concern with including identity theft or fraud in the proposed critical incident definition, except when the individual has been formally and legally judged incompetent to make relevant decisions.

Response: We agree with commenters that expanding the critical incident definition at § 441.302(a)(6)(i)(A) to include identity theft or fraud could

create duplication of existing Federal investigative agencies and reporting processes. Therefore, we have not identified a compelling reason to add other types of incidents, such as identity theft or fraud, to the standardized minimum definition of critical incidents we proposed and are finalizing in this rule.

Comment: One commenter specifically responded to the request for comment soliciting whether the proposed critical incident definition at § 441.302(a)(6)(i)(A) includes any specific types of events or instances of harm that would lead to the overidentification of critical incidents. The commenter supported the proposed definition, noting it would not result in overidentification of critical incidents. This commenter noted that, although the events included in the critical incident definition they use are not the same as those in the proposed critical incident definition at § 441.302(a)(6)(i)(A), they believed that the proposed definition would not cause overidentification of critical incidents because their policies require any incident, not solely those that are defined, to be reported.

Response: We appreciate the support for our proposal.

After consideration of these public comments, we are finalizing § 441.302(a)(6)(i)(A) as proposed with the following minor modifications: a minor formatting modification at § 441.302(a)(6)(i)(A)(3) to correct an improper italicization; a minor technical modification at § 441.302(a)(6)(i)(A)(5) to correct missing punctuation; and a minor formatting modification to conclude § 441.302(a)(6)(i)(A)(6) with a semi-colon.

c. Electronic Critical Incident Systems (§ 441.302(a)(6)(i)(B))

At § 441.302(a)(6)(i)(B), we proposed that States must have electronic critical incident systems that, at a minimum, enable electronic collection, tracking (including of the status and resolution of investigations), and trending of data on critical incidents. We also solicited comment on the burden associated with requiring States to have electronic critical incident systems and whether there is specific functionality, such as unique identifiers, that should be required or encouraged for such systems. As part of our proposal, we also encouraged, but did not propose to require, States to advance the interoperable exchange of HCBS data and support quality improvement activities by adopting standards in 45 CFR part 170 and other relevant standards identified in the Interoperability Standards Advisory (ISA).[71]

We received public comments on these proposals. Below is a summary of the public comments we received and our responses.

Comment: Several commenters supported the proposed requirements at § 441.302(a)(6)(i)(B), that a State have an electronic critical incident system that, at a minimum, enables electronic collection, tracking (including of the status and resolution of investigations), and trending of data on critical incidents. A few commenters expressed concern about the impact of the proposed requirements on States that already have multiple incident management systems, including electronic systems, for different programs, administered by different operating agencies. Commenters requested that we allow States flexibility to design the electronic critical incident systems, which we proposed to require at § 441.302(a)(6)(i)(B), by taking into account existing State incident management systems and processes which fit their unique program and systems structures. A few commenters were especially concerned about the impact on States that already enable electronic collection of critical incidents and questioned whether a single incident management system is required to be implemented across all waivers and authorities, or whether a separate system can be implemented for each waiver or program. Commenters expressed concern about having to consolidate current incident management systems, designed based on State infrastructure, into a single electronic system.

Response: We acknowledge that some States currently have electronic incident management systems in place for HCBS, and it is not our intent for States to abandon these systems. We encourage States to build upon existing incident management system infrastructure and protocols to meet the electronic critical incident systems requirements we proposed at § 441.302(a)(6)(i)(B) and are finalizing in this rule.

We believe that a single electronic critical incident system may best enable the State to prevent the occurrence of critical incidents and protect the health and safety of beneficiaries across their lifespan. For example, in the absence of a single electronic critical incident system, States may have more difficulty developing and implementing a comprehensive plan to address and resolve critical incidents across HCBS programs and authorities. A single electronic incident management system could also better enable the State to track critical incidents for providers that deliver services in multiple HCBS programs or under different HCBS authorities, identify systemic causes of critical incidents, or detect patterns of preventable critical incidents and, in turn, implement strategies to more effectively prevent critical incidents.

We assume that some States may need to make at least some changes to their existing systems to fully comply with the requirements at § 441.302(a)(6)(i)(B). We have attempted to provide the State with as much flexibility as possible in the design of their incident management system. As such, the State may opt to maintain multiple systems that comply with the requirements at § 441.302(a)(6).

We encourage each State to consider developing a single electronic critical incident system for all of their HCBS programs under section 1915(c), (i), (j), and (k) authorities.

However, if a State chooses to implement multiple systems, we strongly encourage the State to share data among those systems to enable the development and implementation of a comprehensive plan to address and resolve critical incidents for HCBS beneficiaries and track and trend incidents for specific providers. We note that the State is responsible for ensuring compliance with the requirements of applicable Federal or State laws and regulations governing confidentiality, privacy, and security of certain information and records.

Comment: Several commenters recommended that CMS consider providing additional funding opportunities to assist States in the development and implementation of electronic critical incident systems we proposed to require at § 441.302(a)(6)(i)(B).

Response: As noted in the proposed rule (88 FR 27979), in Medicaid, enhanced Federal financial participation (FFP) is available at a 90 percent Federal Medical Assistance Percentage (FMAP) for the design, development, or installation of improvements of mechanized claims processing and information retrieval systems, in accordance with applicable

[71] Relevant standards adopted by HHS and identified in the ISA include the USCDI (*https://www.healthit.gov/isa/united-states-core-data-interoperability-uscdi*), eLTSS (*https://www.healthit.gov/isa/documenting-care-plans-person-centered-services*), *and Functional Assessment Standardized Items* (*https://www.healthit.gov/isa/representing-patient-functional-status-andor-disability*).

Federal requirements.[72] Enhanced FFP at a 75 percent FMAP is also available for operations of such systems, in accordance with applicable Federal requirements.[73] However, we reiterate that receipt of these enhanced funds is conditioned upon States meeting a series of standards and conditions to ensure investments are efficient and effective.[74]

Comment: A few commenters supported CMS encouraging States to advance the interoperable exchange of HCBS data by adopting standards in the Interoperability Standards Advisory (ISA), and requested we further promote, support, and incentivize the development of better interoperability infrastructure to facilitate more seamless data sharing between States, providers, and managed care plans.

Response: While we did not propose any specific requirements related to interoperability for the electronic incident management system, States should ensure the advancement of the interoperable exchange of HCBS data, to further improve the identification and reporting on the prevalence of critical incidents for HCBS beneficiaries to support quality improvement activities that can help promote the health and safety of HCBS beneficiaries. We clarify that, to receive enhanced FMAP funds, the State Medicaid agency is required at § 433.112(b)(12) to ensure the alignment with, and incorporation of, standards and implementation specifications for health information technology adopted by the Office of the National Coordinator for Health IT in 45 CFR part 170, subpart B, among other requirements set forth in § 433.112(b)(12). States should also consider adopting relevant standards identified in the Interoperability Standards Advisory (ISA) [75] to bolster improvements in the identification and reporting on the prevalence of critical incidents for HCBS beneficiaries and present opportunities for the State to develop improved information systems that can support quality improvement activities that can help promote the health and safety of HCBS beneficiaries.

Comment: A few commenters recommended CMS not require States to include additional specific functionalities, including unique identifiers.

Response: We agree with commenters to not require or encourage a specific functionality, such as unique identifiers.

After consideration of public comments received, we are finalizing our proposal to require at § 441.302(a)(6)(i)(B) that States use an information system, meeting certain requirements, for electronic data collection, tracking, and trending of critical incident data, as proposed, with minor modifications. We are finalizing § 441.302(a)(6)(i)(B) with the addition of the word ''enables'' and striking ''enables'' from § 441.302(a)(6)(i)(B)(*1*) so that it applies to all paragraphs in § 441.302(a)(6)(i)(B). We are finalizing minor formatting changes to conclude paragraphs (a)(6)(i)(B)(*2*) and (3) with semi-colons.

d. Provider Critical Incident Reporting—During Delivery of or Failure To Deliver Services (§ 441.302(a)(6)(i)(C))

At § 441.302(a)(6)(i)(C), we proposed that States must require providers to report to the State any critical incidents that occur during the delivery of section 1915(c) waiver program services as specified in a waiver participant's person-centered service plan, or any critical incidents that are a result of the failure to deliver authorized services. We believe that this proposed requirement will help to specify provider expectations for reporting critical incidents and to ensure that harm that occurs because of the failure to deliver services will be appropriately identified as a critical incident.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the requirement we proposed at § 441.302(a)(6)(i)(C) that a State must require providers to report to the State any critical incidents that occur during the delivery of services as specified in a beneficiary's person-centered service plan, or any critical incidents that are a result of the failure to deliver authorized services. One commenter expressed that requiring providers to report on any critical incidents that occur during service delivery, or as a result of the failure to deliver authorized services, encourages better, more transparent reporting and provides a more accurate reflection of the prevalence and types of critical incidents occurring in HCBS delivery. Another commenter noted missed or delayed services, especially a pattern of missed or delayed service appointments, can lead to poor health outcomes for beneficiaries.

Response: We appreciate the expressions of support for our proposal.

Comment: A few commenters raised concerns with the requirement we proposed at § 441.302(a)(6)(i)(C) that States require providers to report to them any critical incidents that occur during the delivery of section 1915(c) waiver program services as specified in a waiver participant's person-centered service plan, or as a result of the failure to deliver services authorized under a section 1915(c) waiver program and as specified in the waiver participant's person-centered service plan. One commenter expressed that this requirement would require reviewers of critical incidents to draw conclusions about the service provider's role, without taking into account a beneficiary's right to privacy, decision making, personal preferences, and autonomy, especially for beneficiaries who live in their own home and/or receive care from different providers. Another commenter expressed concern that, even after a thorough investigation, it is often impossible to definitively substantiate certain allegations of abuse or neglect or determine whether a negative outcome, such as a hospitalization, was the direct result of a critical incident that occurred during the delivery of services or as a result of the failure to deliver services as authorized. A commenter expressed concern that the requirement for providers to report to States any critical incidents that are a result of the failure to deliver authorized services is too broad and could cause critical incident reporting to be ineffective and inconsistent.

Response: We proposed requirements for States regarding the reporting of critical incidents by providers that we believe are important for identifying and addressing incidents of abuse, neglect, exploitation, or other harms that occur during the course of service delivery or as a result of the failure to deliver services. We note that the reporting of a critical incident does not necessarily mean that an action should be taken by the State in response to the critical incident. Further, even if no action is warranted or it is not possible to substantiate an allegation of abuse or neglect, it is still important to have the critical incident reported, and investigation conducted if appropriate, in case, for instance, a pattern later

[74] See § 433.112 (b, 80 FR 75841; *https://www.ecfr.gov/current/title-42/chapter-IV/subchapter-C/part-433/subpart-C.*

[75] Relevant standards adopted by HHS and identified in the ISA include the USCDI (*https://www.healthit.gov/isa/united-states-core-data-interoperability-uscdi*), eLTSS (*https://www.healthit.gov/isa/documenting-care-plans-person-centered-services*), and Functional Assessment Standardized Items (*https://www.healthit.gov/isa/representing-patient-functional-status-andor-disability*).

emerges that indicates systemic causes of critical incidents or that warrants action by the State.

Comment: A few commenters suggested we modify § 441.302(a)(6) to specify that critical incident records be collected in accordance with applicable privacy laws, such as HIPAA and its implementing regulations.

Response: In consideration of public comments received, we have not identified a compelling reason, and therefore decline, to add a reference to specific privacy laws to the requirements at § 441.302(a)(6). We note that States have existing obligations to comply with applicable Federal and State laws and regulations governing confidentiality, privacy, and security of information, records, and data obtained and maintained in a critical incident system. We note that this regulatory requirement does not modify these obligations to comply with applicable laws.

Comment: One commenter suggested we require States to accept critical incident reports, and acknowledge receipt of the report, directly from beneficiaries or other interested parties, establish a process to accept such reports, and allow reports to be made orally or in writing. The commenter recommended that we should require that punitive action is neither threatened nor taken against any individual who makes a report in good faith.

Response: We decline to modify our proposal to broaden the requirements related to critical incidents we proposed at § 441.302(a)(6)(i)(C) in this final rule. Although we proposed to only require providers to report critical incidents at § 441.301(a)(6)(i)(C), the State is not precluded from accepting the reporting of critical incidents from others, who are not providers, including beneficiaries or other interested parties. We believe that our proposal that the State assure a system to identify and address incidents of abuse, neglect, exploitation, or other harm during the course of service delivery, or as a result of the failure to deliver services, is in the best interest of, and necessary for, protecting the health and welfare of beneficiaries receiving HCBS in section 1915(c) waiver programs and under section 1915(i), (j) and (k) State plan services.

We encourage States to include in their policies and procedures that beneficiaries would not be prohibited from reporting critical incidents and, in doing so, would be free from any punitive action when reporting a critical incident to the State. We have provided States with flexibility to establish their own policies and procedures related to addressing punitive actions against beneficiaries involved in the critical incident process.

After consideration of these public comments, we are finalizing our proposal at § 441.302(a)(6)(i)(C) with a modification to require providers to report to the State, within State-established timeframes and procedures, any critical incident that occurs during the delivery of services authorized under section 1915(c) of the Act and as specified in the **beneficiary's** (instead of waiver participant's) person-centered service plan, or occurs as a result of the failure to deliver services authorized under section 1915(c) of the Act and as specified in the **beneficiary's** (instead of waiver participant's) person-centered service plan. (New language identified in bold.) We are also finalizing § 441.302(a)(6)(i)(C) with minor formatting changes to conclude § 441.302(a)(6)(i)(C) with a semi-colon.

e. Data Sources To Identify Unreported Critical Incidents (§ 441.302(a)(6)(i)(D))

At § 441.302(a)(6)(i)(D), we proposed to require that States use claims data, Medicaid Fraud Control Unit data, and data from other State agencies such as Adult Protective Services or Child Protective Services to the extent permissible under applicable State law to identify critical incidents that are unreported by providers and occur during the delivery of section 1915(c) waiver program services, or as a result of the failure to deliver authorized services. We believe that such data can play an important role in identifying serious instances of harm to waiver program participants, which may be unreported by a provider, such as a death that occurs as a result of choking of an individual with a developmental disability residing in a group home, or a burn that occurs because a provider failed to appropriately supervise someone with dementia and that results in an emergency department visit.

We solicited comment on whether States should be required to use these data sources to identify unreported critical incidents, and whether there are other specific data sources that States should be required to use to identify unreported critical incidents.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters expressed support for our proposal at § 441.302(a)(6)(i)(D). One commenter noted that these data sources could help establish pathways at the beneficiary and systems levels for reporting, tracking, and addressing issues with person-centered planning and provider noncompliance, and they will also advance efforts to ensure States' ongoing compliance with the HCBS Settings Rule. Another commenter approved of the requirement that States use data sources to identify unreported critical incidents, including claims data, Medicaid Fraud Control Unit data, and data from other State agencies such as Adult Protective Services or Child Protective Services to the extent permissible under applicable State law, expressing that implementation of this requirement could result in a more accurate reflection of the prevalence and types of critical incidents occurring in HCBS delivery, in working with managed care plans and providers.

Response: We appreciate the support for our proposal.

Comment: Two commenters requested that collaboration with police and law enforcement be included in the data sources under § 441.302(a)(6)(i)(D). One commenter noted CMS should require providers to report to law enforcement in a timely manner any reasonable suspicion of a crime committed against a beneficiary receiving HCBS. Another commenter recommended CMS require providers to report suspicion of a crime to law enforcement. A commenter also questioned whether an investigative agency includes law enforcement. Additionally, a few commenters also recommended that collaboration with the designated Protection & Advocacy (P&A) system for the State be included in the data sources under § 441.302(a)(6)(i)(D), citing that P&A systems have the authority to investigate incidents of abuse and neglect of individuals with developmental disabilities if the incidents are reported to the system or if there is probable cause to believe that the incidents occurred.

Response: While we intend that § 441.302(a)(6)(i)(D) establishes the minimum requirements for States to use certain data sources to detect unreported critical incidents, States retain flexibility to use additional data sources, such as police and law enforcement data and P&A systems, to identify critical incidents that are unreported by providers. However, we decline to include additional data sources in the regulation at this time. We are concerned that it would be difficult for States to use non-Medicaid data sources, such as data from P&A systems and law enforcement records, to effectively identify unreported critical incidents for Medicaid beneficiaries and that such requirements would be administratively and operationally

burdensome for States to implement. At § 441.302(a)(6)(i)(D), we proposed to require that States use claims data, Medicaid Fraud Control Unit data, and data from other State agencies to the extent permissible under applicable State law to identify critical incidents that are unreported by providers and occur during the delivery of section 1915(c) waiver program services, or as a result of the failure to deliver authorized services, identifying Adult Protective Services or Child Protective Services as examples of State agencies. We encourage the State to include additional State agency data sources to detect unreported critical incidents as defined at § 441.302(a)(6)(i)(D) as appropriate.

Comment: A couple commenters stated that CMS should direct States to take definitive enforcement actions to address provider compliance with the incident management requirements. One commenter proposed to penalize HCBS providers that do not timely report critical incidents by imposing monetary penalties or suspension from the Medicaid program. Another commenter recommended that we allow States to implement an escalation of remedies to address provider reporting, up to and including a separate investigation with sanctions, if necessary.

Response: We reiterate that States already have broad authority to create penalties, whether monetary or non-monetary, for providers that have violated their obligations as set forth by the State Medicaid program.

After consideration of public comments we received, we are finalizing our proposal at § 441.302(a)(6)(i)(D), with a modification to require providers to report to the State, within State-established timeframes and procedures, any critical incident that occurs during the delivery of services authorized under section 1915(c) of the Act and as specified in the **beneficiary's** (instead of waiver participant's) person-centered service plan, or occurs as a result of the failure to deliver services authorized under section 1915(c) of the Act and as specified in the **beneficiary's** (instead of waiver participant's) person-centered service plan. (New language identified in bold.) We are also finalizing § 441.302(a)(6)(i)(D) with minor formatting changes to conclude § 441.302(a)(6)(i)(D) with a semi-colon.

f. Critical Incident Data Sharing (§ 441.302(a)(6)(i)(E))

At § 441.302(a)(6)(i)(E), we proposed States share information, consistent with the regulations in 42 CFR part 431, subpart F on the status and resolution of investigations. We set the expectation that data sharing could be accomplished through the use of information sharing agreements with other entities in the State responsible for investigating critical incidents if the State refers critical incidents to other entities for investigation.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters recommended CMS provide technical assistance related to the data sharing requirements. Commenters noted data sharing barriers in and between the State, agencies, and divisions within in the same agency, influencing successful implementation of the proposed requirements at § 441.302(a)(6)(i)(G).

Response: We appreciate these comments identifying the need for technical assistance related to data and information sharing agreements. We will take this feedback into consideration when developing resources for States on the incident management system requirements.

Further, we generally note that the State is responsible for ensuring its critical incident system(s) comply with all applicable Federal and State laws and regulations governing confidentiality, privacy, and security of records obtained, maintained, and disclosed via this incident management system.

After consideration of public comments, we are finalizing the proposed § 441.302(a)(6)(i)(E) as proposed, with a minor technical modification to clarify that mention of critical incident in § 441.302(a)(6)(i)(E) refers to critical incidents as defined in paragraph (a)(6)(i)(A) of this section (meaning § 441.302).

g. Separate Investigation of Critical Incidents (§ 441.302(a)(6)(i)(F))

At § 441.302(a)(6)(i)(F), we proposed to require the State be required to separately investigate critical incidents if the investigative agency fails to report the resolution of an investigation within State-specified timeframes. These proposed requirements are intended to ensure that the failure to effectively share information between State agencies or other entities in the State responsible for investigating incidents does not impede a State's ability to effectively identify, report, triage, investigate, resolve, track, and trend critical incidents, particularly where there could be evidence of serious harm or a pattern of harm to a section 1915(c) waiver program participant for which a provider is responsible.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters expressed serious concerns about the requirements we proposed at § 441.302(a)(6)(i)(F), that the State is required to separately investigate critical incidents if the investigative agency fails to report the resolution of an investigation within State-specified timeframes. Commenters recognized the importance of cross-agency collaboration but identified that the timeframes for investigations by investigative agencies, such as Adult Protective Services and Child Protective Services, can be prolonged. Further, opening a separate concurrent investigation at the State level, if the investigative agency fails to report the resolution of an investigation within State-specified timelines, could compromise the integrity of both investigations. Some commenters questioned the feasibility of the requirements at § 441.302(a)(6)(i)(F) due to State statutory provisions around investigative agency responsibilities and allowable data sharing.

Response: These proposed requirements are intended to ensure that the failure to effectively share information between State agencies or other entities in the State responsible for investigating incidents does not impede a State Medicaid agency's ability to effectively identify, report, triage, investigate, resolve, track, and trend critical incidents to protect the health and welfare of HCBS beneficiaries. We believe that requiring the State to separately investigate critical incidents if the investigative agency fails to report the resolution of an investigation within State-specified timeframes will strengthen the ability of the State Medicaid agency to act quickly and/or separately if investigations by Adult Protective Services, Child Protective Services, or other State agencies are taking longer to address and resolve. Further, it will ensure that the State has the information it needs to take action to protect beneficiary health and safety if a provider is responsible (intentionally or unintentionally) for causing harm to beneficiaries or putting beneficiaries at risk of harm. Additionally, we note that the State Medicaid agency may have the authority to take certain actions against the provider (such as suspend their Medicaid enrollment) that other State agencies, such as Adult Protective

Services or Child Protective Services, are unable to take.

We have provided States with flexibility to establish State-specified timelines to separately investigate critical incidents if the investigative agency fails to report the resolution of an investigation and encourage States to take into account specific nuances that may impact the timelines.

After consideration of public comments, we are finalizing the proposed § 441.302(a)(6)(i)(F) as proposed.

h. Reporting (§§ 441.302(a)(6)(i)(G) and 441.302(a)(6)(ii))

Section 1902(a)(6) of the Act requires State Medicaid agencies to make such reports, in such form and containing such information, as the Secretary may from time to time require, and to comply with such provisions as the Secretary may from time to time find necessary to assure the correctness and verification of such reports. Under our authority at section 1902(a)(6) of the Act, we proposed to modernize the health and welfare reporting by requiring all States to report on the same Federally prescribed quality measures as opposed to the State-developed measures, which naturally vary State by State. Specifically, at § 441.302(a)(6)(i)(G), we proposed to require that States meet the reporting requirements at § 441.311(b)(1) related to the performance of their incident management systems. We discuss these reporting requirements in our discussion of proposed § 441.311(b)(1). Further, under our authority at sections 1915(c)(2)(A) and 1902(a)(19) of the Act, we proposed to codify a minimum performance level to demonstrate that States meet the requirements at § 441.302(a)(6). Specifically, at § 441.302(a)(6)(ii), we proposed to require that States demonstrate that: an investigation was initiated, within State-specified timeframes, for no less than 90 percent of critical incidents; an investigation was completed and the resolution of the investigation was determined, within State-specified timeframes, for no less than 90 percent of critical incidents; and corrective action was completed, within State-specified timeframes, for no less than 90 percent of critical incidents that require corrective action. This minimum performance level strengthens health and welfare reporting requirements while taking into account that there may be legitimate reasons for delays in investigating and addressing critical incidents.

In the proposed rule (88 FR 27980), we considered whether to allow good cause exceptions to the minimum performance level in the event of a natural disaster, public health emergency, or other event that would negatively impact a State's ability to achieve a minimum 90 percent. We opted not to propose good cause exceptions because the minimum 90 percent performance level accounts for various scenarios that might impact a State's ability to achieve these performance levels, and there are existing disaster authorities that States could utilize to request a waiver of these requirements in the event of a public health emergency or a disaster.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A couple of commenters expressed concern about implementing the performance levels at the 90 percent threshold at § 441.302(a)(6)(ii). Alternatively, one commenter recommended the performance level should instead be 100 percent to protect the health and welfare of HCBS beneficiaries, since the minimum performance level to demonstrate that States meet the requirements at § 441.302(a)(6) should gauge State performance by how efficiently they conduct critical incident investigations.

Response: We believe the performance levels at the 90 percent threshold sets a high, but achievable standard, for complying with the requirements at § 441.302(a)(6)(ii). Our intention in proposing minimum performance requirements at § 441.302(a)(6)(ii) was to provide a standard by which we could oversee, and hold States accountable, for complying with the requirements for an incident management system that we are finalizing at § 441.302(a)(6). Further it, was intended to strengthen the critical incident requirements while also recognizing that there may be legitimate reasons why critical incident processes occasionally are not completed timely in all instances. However, it is our expectation that States make reasonable efforts to ensure every critical incident is investigated, resolved, and (if necessary) subject to corrective action within State-specified timeframes.

Comment: A few commenters suggested CMS include a good-cause exception to the incident management performance level for certain instances that fall outside of the specified performance standards for appropriate reasons, such as for resource challenges or when the investigating agency requests that the State refrain from contact due to an ongoing and active investigation. Alternatively, a few commenters supported the approach in the proposed rule to not allow good-cause exceptions to the incident management performance level, observing that the 90 percent minimum performance level already gives States leeway for unexpected occurrences.

Response: We reiterate our belief that the 90 percent minimum performance level sets a high, but achievable standard for States' incident management systems. We underscore that the minimum 90 percent performance level accounts for various scenarios that might impact the State's ability to achieve these performance levels, and there are existing disaster authorities that States could utilize to request a waiver of these requirements in the event of a public health emergency or a disaster. The 90 percent minimum performance level is intended to strengthen incident management system requirements. We also recognize that there may be legitimate reasons why incident management processes occasionally are not completed timely in all instances. We reiterate that our expectation is that States make reasonable efforts to ensure every critical incident is investigated, resolved, and (if necessary) subject to corrective action within State-specified timeframes.

After consideration of public comments, we are finalizing our proposals at §§ 441.302(a)(6)(i)(G) and 441.302(a)(6)(ii) as proposed.

i. Applicability Date

We proposed at § 441.302(a)(6)(iii) to provide States with 3 years to implement these requirements in FFS delivery systems following the effective date of the final rule. For States with managed care delivery systems under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act and that include HCBS in the MCO's, PIHP's, or PAHP's contract, we proposed to provide States until the first rating period that begins on or after 3 years after the effective date of the final rule to implement these requirements.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters expressed concerns about the burden they believe will be associated with the proposed provision to implement the incident management requirements at § 441.302(a)(6) within 3 years following the effective date of the final rule. Commenters stated that implementation of the incident management requirements as proposed at § 441.302(a)(6)(i)(B) could require

potential State statute and regulatory amendments, lead time for securing additional technology resources, and operational and workflow changes. Commenters requested CMS consider alternative effective dates for the incident management system ranging from 4 to 7 years, with the most frequent suggestions at 4 to 5 years to address these concerns.

Response: We believe that 3 years for States to comply with the requirements at § 441.302(a)(6) is realistic and achievable for most of the incident management provisions. However, we agree that the proposed 3-year implementation timeframe for States to comply with the electronic incident management requirements at § 441.302(a)(6)(i)(B) could create hardships for States. We agree that States and managed care plans may require a timeframe longer than 3 years to address funding needs, policy changes, IT procurements, and other systems changes, necessary to implement an electronic incident management system as required at § 441.302(a)(6)(i)(B), which may necessitate 5 years.

After consideration of public comments, we are finalizing § 441.302(a)(6)(iii) with minor modifications to correct erroneous uses of the word ''effective.'' We are retitling the requirement at § 441.302(a)(6)(iii) as Applicability date (rather than Effective date). We are also modifying the applicability date to require that States must comply with the requirements in paragraph (a)(6) beginning 3 years from the effective date of this final rule, except for the requirement at paragraph (a)(6)(B) of this section, with which the State must comply beginning 5 years from the effective date of the final rule. In addition, we are making a technical correction to clarify that the applicability dates in § 441.302(a)(6)(iii) apply only to the requirements in § 441.302(a)(6). Additionally, we are also finalizing with modification the language pertaining to managed care delivery systems to improve accuracy and alignment with common phrasing in managed care contracting policy at § 441.302(a)(6)(iii).

j. Application to Other Authorities

At § 441.302(a)(6)(iii), we proposed to apply these requirements to services delivered under FFS or managed care delivery systems. Section 2402(a)(3)(A) of the Affordable Care Act requires States to improve coordination among, and the regulation of, all providers of Federally and State-funded HCBS programs to achieve a more consistent administration of policies and procedures across HCBS programs. In the context of Medicaid coverage of HCBS, it should not matter whether the services are covered directly on an FFS basis or by a managed care plan to its enrollees. The requirement for consistent administration should require consistency between these two modes of service delivery. We proposed that a State must ensure compliance with the requirements in § 441.302(a)(6) with respect to HCBS delivered both under FFS and managed care delivery systems.

Section 2402(a)(3)(A) of the Affordable Care Act requires States to improve coordination among, and the regulation of, all providers of Federally and State-funded HCBS programs to achieve a more consistent administration of policies and procedures across HCBS programs. In accordance with the requirement of section 2402(a)(3)(A) of the Affordable Care Act for States to achieve a more consistent administration of policies and procedures across HCBS programs and because of the importance of assuring health and welfare for other HCBS State plan options, we proposed to include the incident management requirements at § 441.302(a)(6) within the applicable regulatory sections, including section 1915(j), (k), and (i) State plan services at §§ 441.464(e), 441.570(e), and 441.745(a)(1)(v), respectively. We note that a conforming reference to § 441.745(b)(1)(i), although not discussed in preamble of the proposed rule, was included in the proposed rule (88 FR 28086); the reference supports the application of incident management requirements to section 1915(i) services. Consistent with our proposal for section 1915(c) waivers, we based on our authority under section 1902(a)(19) of the Act to assure that there are safeguards for beneficiaries. We believe the same arguments for these requirements for section 1915(c) waivers are equally applicable for these other HCBS authorities.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the requirements at § 441.302(a)(6)(iii), expressing that States must ensure compliance with the requirements in § 441.302(a)(6) with respect to HCBS delivered both in FFS and managed care delivery systems, noting there is no meaningful difference between abuse, neglect, or exploitation perpetrated by a provider paid through a managed care plan or by a provider paid through a FFS delivery system. One commenter recommended we assist States in developing instructions for State incident management systems for work with Medicaid managed care plans and contracted providers in implementing the requirements in § 441.302(a)(6).

Response: We appreciate the support for our proposal. We will take this feedback into consideration when developing technical assistance and other resources for States on the incident management system requirements.

After consideration of public comments received, we are finalizing the proposal at § 441.302(a)(6)(iii) for HCBS delivered under both FFS and managed care delivery systems.

Comment: Several commenters supported the proposal to apply the incident management system requirements at § 441.302(a)(6) to sections 1915(i), (j) and (k) authorities. Commenters expressed that equally applicable requirements for States across waiver authorities can ensure better access, equity, quality, and reporting for HCBS beneficiaries.

Response: We appreciate the support for our proposal.

Comment: A few commenters responded to our request for comment on whether we should establish similar health and welfare requirements for section 1905(a) State plan personal care, home health, and case management services. Several commenters supported the proposal not to extend the incident management requirements at § 441.302(a)(6) to section 1905(a) services and expressed that applying these requirements to State plan benefits would pose critical challenges for State Medicaid and other operating agencies, due to varying levels of HCBS provided and different data reporting infrastructure States have for 1905(a) services. A few commenters recommended that CMS apply the incident management system requirements to mental health rehabilitative services delivered under section 1905(a) State plan authority. A couple of commenters suggested that mental health rehabilitative services are considered home- and community-based services under the broader definition enacted by Congress in the American Rescue Plan Act of 2021. They also indicated that many Medicaid beneficiaries with mental health disorders and disabilities receiving services under the section 1905(a) authority would benefit from the beneficiary protections afforded through the incident management system requirements at § 441.302(a)(6).

Response: At this time, we are not mandating inclusion of section 1905(a) services in the State requirements for incident management systems, due to the statutory and regulatory differences between services authorized under sections 1905(a) and 1915 of the Act. That said, we are not persuaded by the argument that including section 1905(a) services would simply be too much work, as we do believe it is critical that Medicaid beneficiaries have protections for freedom from harm. We acknowledge that many beneficiaries, particularly those receiving mental health services, are served by section 1905(a) services, and encourage States to consider development of critical incident processes to address protections for beneficiaries from harm or events that place a beneficiary at risk of harm.

After consideration of public comments, we are finalizing application of the requirements at § 441.302(a)(6) to other HCBS program authorities within the applicable regulatory sections, including section 1915(j), (k), and (i) State plan services. We are finalizing the requirements at §§ 441.464(e), 441.570(e), and 441.745(a)(1)(v) and (b)(1)(i) as proposed, with minor modifications to clarify that the references to section 1915(c) of the Act are instead references to section 1915(j), 1915(k), and 1915(i) of the Act, respectively.

k. Summary of Finalized Requirements

After consideration of the public comments, we are finalizing the requirements at §§ 441.302(a)(6), as follows:

- We are finalizing § 441.302(a)(6)(i)(A) as proposed with the following minor modifications: a minor formatting modification at § 441.302(a)(6)(i)(A)(3) to correct an improper italicization; a minor technical modification at § 441.302(a)(6)(i)(A)(5) to correct missing punctuation; and a minor formatting modification to conclude § 441.302(a)(6)(i)(A)(6) with a semi-colon.
- We are finalizing § 441.302(a)(6)(i)(B) as proposed with the following minor modifications: adding the word ''Enables'' to § 441.302(a)(6)(i)(B) and striking it from § 441.302(a)(6)(i)(B)(1); and minor formatting modifications to conclude § 441.302(a)(6)(i)(B)(2) and (3) with a semi-colon.
- We are finalizing the requirements at § 441.302(a)(6)(i)(C) with a modification to require providers to report to the State, within State-established timeframes and procedures, any critical incident that occurs during the delivery of services authorized under section 1915(c) of the Act and as specified in the beneficiary's person-centered service plan, or occurs as a result of the failure to deliver services authorized under section 1915(c) of the Act and as specified in the beneficiary's person-centered service plan. We are also finalizing § 441.302(a)(6)(i)(C) with a minor formatting change so that it concludes with a semi-colon.
- We are finalizing the requirements at § 441.302(a)(6)(i)(D, with a modification to require providers to report to the State, within State-established timeframes and procedures, any critical incident that occurs during the delivery of services authorized under section 1915(c) of the Act and as specified in the beneficiary's person-centered service plan, or occurs as a result of the failure to deliver services authorized under section 1915(c) of the Act and as specified in the beneficiary's person-centered service plan. We are also finalizing § 441.302(a)(6)(i)(D) with a minor formatting change so that it concludes with a semi-colon.
- We are finalizing the requirement at § 441.302(a)(6)(i)(E) with a minor formatting modification to change a reference to § 441.302(a)(6)(i)(A) to paragraph (a)(6)(i)(A).
- We are finalizing the requirements at § 441.302(a)(6)(i)(F) and (G) and (a)(6)(ii) as proposed.
- We are finalizing the requirement at § 441.302(a)(6)(iii) with modifications to specify that States must comply with the requirements in paragraph (a)(6) beginning 3 years from the effective date of this final rule; except for the requirement at paragraph (a)(6)(B) of this section, with which the State must comply beginning 5 years after the date that is the effective date of this final rule; and in the case of the State that implements a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act and includes HCBS in the MCO's, PIHP's, or PAHP's contract, the first rating period for contracts with the MCO, PIHP, or PAHP beginning on or after 3 years from the effective date of this final rule, except for the requirement at paragraph (a)(6)(B) of this section, with which the first rating period for contracts with the MCO, PIHP, or PAHP beginning on or after 5 years from the effective date of this final rule.
- We are finalizing the requirements at §§ 441.464(e), 441.570(e), and 441.745(a)(1)(v) and (b)(1)(i) with minor modifications to clarify that the references to section 1915(c) of the Act are instead references to section 1915(j), 1915(k), and 1915(i) of the Act, respectively.

4. Reporting (§ 441.302(h))

As discussed earlier in section II.B.1. of this rule, section 2402(a)(3)(A) of the Affordable Care Act requires HHS to promulgate regulations to ensure that States develop HCBS systems that are designed to improve coordination among, and the regulation of, all providers of Federally and State-funded HCBS programs to achieve a more consistent administration of policies and procedures across HCBS programs. We also believe that standardizing reporting across HCBS authorities will streamline and simplify reporting for providers, improve States' and CMS's ability to assess HCBS quality and performance, and better enable States to improve the quality of HCBS programs through the availability of comparative data. Further, section 1902(a)(6) of the Act requires State Medicaid agencies to make such reports, in such form and containing such information, as the Secretary may from time to time require, and to comply with such provisions as the Secretary may from time to time find necessary to assure the correctness and verification of such reports.

To avoid duplicative or conflicting reporting requirements at § 441.302(h), we proposed to amend § 441.302(h) by removing the following language: ''annually''; ''The information must be consistent with a data collection plan designed by CMS and must address the waiver's impact on -''; and by removing paragraphs (1) and (2) under § 441.302(h). Further, we proposed to add '', including the data and information as required in § 441.311'' at the end of the new amended text, ''Assurance that the agency will provide CMS with information on the waiver's impact.'' By making these changes, we proposed to consolidate reporting expectations in one new section at proposed § 441.311, described in section II.B.7. of the proposed rule, under our authority at section 1902(a)(6) of the Act and section 2402(a)(3)(A) of the Affordable Care Act. As noted earlier in section II.B.1. of the proposed rule, this reporting will supersede existing reporting for section 1915(c) waivers and standardize reporting across section 1915 HCBS authorities.

We did not receive specific comments on this proposal.

We are finalizing our proposed amendment of § 441.302(h) as proposed.

We did receive comments on proposed § 441.311, described in section II.B.7. of this rule, which establishes a new Reporting Requirements section. Comments on this proposal and our

responses are summarized in section II.B.7. of this final rule.

5. HCBS Payment Adequacy (§§ 441.302(k), 441.464(f), 441.570(f), 441.745(a)(1)(vi))

Section 1902(a)(30)(A) of the Act requires State Medicaid programs to ensure that payments to providers are consistent with efficiency, economy, and quality of care and are sufficient to enlist enough providers so that care and services are available to beneficiaries at least to the extent as to the general population in the same geographic area. Access to most HCBS generally requires hands-on and in-person services to be delivered by direct care workers. Direct care workers are referred to by various names, such as direct support professionals, personal care attendants, and home health aides, within and across States. They perform a variety of roles, including nursing services, assistance with activities of daily living (such as mobility, personal hygiene, and eating) and instrumental activities of daily living (such as cooking, grocery shopping, and managing finances), behavioral supports, employment supports, and other services to promote community integration for older adults and people with disabilities. We discuss the definition of direct care workers in more detail below in the context of our proposed definition of direct care workers.

Direct care workers typically earn low wages and receive limited benefits [76] [77] [78] contributing to a shortage of direct care workers and high rates of turnover in this workforce, which can limit access to and impact the quality of HCBS. Workforce shortages can also reduce the cost-effectiveness of services for State Medicaid agencies that take into account the actual cost of delivering services when determining Medicaid payment rates, such as by increasing the reliance on overtime and temporary staff, which have higher hourly costs than non-overtime wages paid to permanent staff. Further, an insufficient supply of HCBS providers can prevent individuals from transitioning from institutions to home and community-based settings and from receiving HCBS that can prevent institutionalization. HCBS is, on average, less costly than institutional services,[79] [80] and most older adults and people with disabilities prefer to live in the community. Accordingly, limits on the availability of HCBS lessen the ability for State Medicaid programs to deliver LTSS in a cost-effective, beneficiary friendly manner.

Shortages of direct care workers and high rates of turnover also reduce the quality of HCBS. For instance, workforce shortages can prevent individuals from receiving needed services and, in turn, lead to poorer outcomes for people who need HCBS. Insufficient staffing can also make it difficult for providers to achieve quality standards.[81] High rates of turnover can reduce quality of care,[82] including through the loss of experienced and qualified workers and by reducing continuity of care for people receiving HCBS,[83] which is associated with the reduced likelihood of improvement in function among people receiving home health aide services.[84]

While workforce shortages have existed for years, the COVID–19 pandemic exacerbated the problem, leading to higher rates of direct care worker turnover (for instance, due to higher rates of worker-reported stress), an inability of some direct care workers to return to their positions prior to the pandemic (for instance, due to difficulty accessing child care or concerns about contracting COVID–19 for people with higher risk of severe illness), workforce shortages across the health care sector, and wage increases in retail and other jobs that tend to draw from the same pool of workers.[85] [86] [87] Further, demand for direct care workers is expected to continue rising due to the growing needs of the aging population, the changing ability of aging caregivers to provide supports, the increased provision of services in the most integrated community setting rather than institutional services, and a decline in the number of younger workers available to provide services.[88] [89] [90]

Section 2402(a) of the Affordable Care Act requires the Secretary of HHS to ensure that all States receiving Federal funds for HCBS, including Medicaid, develop HCBS systems that are responsive to the needs and choices of beneficiaries receiving HCBS, maximize independence and self-direction, provide coordination for and support each person's full engagement in community life, and achieve a more consistent and coordinated approach to the administration of policies and procedures across public programs providing HCBS.[91] In particular, section 2402(a)(1) of the Affordable Care Act requires States to allocate resources for

[78] We recognize that there are workforce shortages that may impact access to other Medicaid-covered services aside from HCBS. We are focusing in this rule on addressing workforce shortages in HCBS and continue to assess the feasibility and potential impact of other actions to address workforce shortages in other parts of the health care sector.

services in a manner that is responsive to the changing needs and choices of beneficiaries receiving HCBS, while section 2402(a)(3)(B)(iii) of the Affordable Care Act requires States to oversee and monitor HCBS system functions to assure a sufficient number of qualified direct care workers to provide self-directed personal assistance services. To comply with sections 2402(a)(1) and 2402(a)(3)(B)(iii) of the Affordable Care Act, States must have a sufficient direct care workforce to be able to deliver services that are responsive to the changing needs and choices of beneficiaries, and, specifically, a sufficient number of qualified direct care workers to provide self-directed personal assistance services. We proposed requirements across section 1915(c), (i), (j) and (k) HCBS programs to further this outcome.

a. Assurance of Sufficient Rates (§ 441.302(k))

Consistent with section 1902(a)(30)(A) of the Act and sections 2402(a)(1) and 2402(a)(3)(B)(iii) of the Affordable Care Act, we proposed to require at § 441.302(k) that State Medicaid agencies provide assurance that payment rates for certain HCBS authorized under section 1915(c) of the Act are sufficient to ensure a sufficient direct care workforce (defined and explained later in this section of the rule) to meet the needs of beneficiaries and provide access to services in accordance with the amount, duration, and scope specified in the person-centered service plan, as required under § 441.301(c)(2). We believe that this proposed requirement supports the economy, efficiency, and quality of HCBS authorized under section 1915(c) of the Act, by ensuring that a sufficient portion of State FFS and managed care payments for HCBS go directly to compensation of the direct care workforce.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A significant number of commenters raised the issue of State Medicaid rates for homemaker, home health aide, and personal care services. Many commenters suggested that requiring that a sufficient portion, or even requiring a specific percent, of Medicaid payments be spent on compensation for direct care workers will not address rate sufficiency, which they regard as the underlying cause of low wages for direct care workers. Even commenters who were supportive of § 441.302(k) generally or the proposed minimum performance level at § 441.302(k)(3) (discussed further below) acknowledged that the policies may be more successful if they coincided with rate increases to ensure that providers' service operations remain fully supported. Many commenters recommended that as an alternative to (or in addition to) this proposal, we create requirements that States regularly review and update or increase their rates.

Several commenters were concerned that wages for direct care workers will not increase if the underlying Medicaid payment rates for the services remain low and are not increased. However, one commenter suggested that if a State's Medicaid rates are low, this places even greater importance on ensuring that as much of the rate as possible is going to compensation for direct care workers.

A few commenters expressed the belief that the accountability and transparency created by the proposal, in addition to the associated reporting requirement we proposed at § 441.311(e) (discussed further in section II.B.7. of this rule), would encourage providers to pass more of their Medicaid payments along to direct care worker wages. A few commenters offered anecdotal observations that, when their State allocated additional funds to HCBS providers, the commenters believed the increased funding was not passed along to direct care worker wages. One commenter noted that a permanent payment adequacy requirement is preferable to the temporary pass-through policies that have been enacted for one-time rate increases, because a permanent requirement would not be dependent on rate increases.

Response: While section 1902(a)(30)(A) of the Act does not provide us with authority to require specific payment rates or rate-setting methodologies, section 1902(a)(30)(A) of the Act does provide us with authority to oversee that States assure that payments are consistent with efficiency, economy, and quality of care and are sufficient to enlist enough providers so that care and services are available under the plan, at least to the extent that such care and services are available to the general population in the geographic area. We did not propose to establish, and are not finalizing, specific payment rates for HCBS under the Medicaid program. Instead, we reiterate that under section 1902(a)(30)(A) of the Act payments must be sufficient to recruit and retain enough providers to ensure care and services are available to beneficiaries; we proposed to implement this requirement by specifying a percentage of Medicaid payments be spent on compensation to direct care workers. We believe this policy will also promote, and be consistent with, economy, efficiency, and quality of care.

Broadly speaking, we also do not believe that simply increasing rates alone, without setting guardrails for how the payments are allocated, would ensure that direct care workers' wages will increase. Rather, we agree with commenters who believed that, regardless of the underlying Medicaid rate, requiring a certain amount of Medicaid payments be spent on compensation will help ensure that Medicaid payments are distributed in a way that supports direct care workers, including their recruitment and retention, to the greatest extent possible. While we did not propose, and are not finalizing, a requirement that State Medicaid agencies increase their rates, we anticipate that States will examine their rates to assure they are sufficient to support the direct care workforce to comply with the policy we proposed and are finalizing with modifications, as discussed further herein. We also direct commenters to the proposals discussed in section II.C. of this final rule, which includes a number of provisions related to rate transparency that are intended to support FFS rate sufficiency.

Comment: One commenter recommended that we revise § 441.302(k) to specify that rates must be sufficient to ensure a sufficient number of providers, including members of the direct care workforce. The commenter stated that this revision would match the broader term ''provider'' in section 1902(a)(30)(A) of the Act while highlighting the importance of the direct care workforce.

Response: We appreciate the commenter's feedback, but we decline to make the recommended revision. At this time, we want to make the focus of the requirement explicitly on the individuals who are part of the direct care workforce, whether they act as individual providers (such as by working as an independent contractor), are employed by a provider entity, or otherwise. We agree with the commenter that section 1902(a)(30)(A) of the Act requires that Medicaid payments must be sufficient to enlist enough providers so that care and services are available to beneficiaries at least to the extent that such care and services are available to the general population in the geographic area. We note that section 1902(a)(30)(A) of the Act also requires that States assure that payments are consistent with efficiency, economy, and quality of care. We agree that enrolling sufficient numbers of

providers is critical to Medicaid service delivery, and that providers in turn may not be able to deliver services if they do not have a sufficient number of direct care workers. As noted in a previous response, we proposed to implement these requirements by specifying a percentage of Medicaid payments be spent on compensation to direct care workers. We believe this policy will promote, and be consistent with, economy, efficiency, and quality of care, as required by statute at section 1902(a)(3)(A) of the Act.

Comment: One commenter requested clarification on whether the payment adequacy requirement applies only to the voluntary, nonprofit sector or whether it also applies to State-operated services.

Response: Given the varied nature of HCBS programs, we specifically proposed for the payment adequacy requirement to apply broadly to compensation paid to direct care workers by providers receiving payments for furnishing homemaker, home health aide, or personal care services from the State; we did not propose to apply these requirements to only certain types of providers or their ownership arrangements. We specifically proposed at § 441.302(k)(1)(ii)(G) (which we are finalizing at § 441.302(k)(1)(ii) as discussed later in this section) that a direct care worker, to whom this requirement would apply, may be employed by or contracted with a Medicaid provider, State agency, or third party or delivering services under a self-directed service model. The requirements we proposed, and are finalizing in this section II.B.5, under § 441.302(k) require States to assure that payment rates are adequate to ensure a sufficient direct care workforce by, in turn, ensuring that providers spend a certain percentage of their total payments for certain HCBS on compensation for direct care workers furnishing those HCBS.

After consideration of the comments received, we are finalizing the assurance requirement at § 441.302(k) with modifications as discussed in this section II.B.5 of this final rule. We are finalizing the language we proposed in the introductory paragraph at § 441.302(k) with technical modifications so that it is clear that the reference to person-centered service plans is to beneficiaries' person-centered service plans. The finalized language at § 441.302(k) will read: *HCBS payment adequacy.* Assurance that payment rates are adequate to ensure a sufficient direct care workforce to meet the needs of beneficiaries and provide access to services in the amount, duration, and scope specified in beneficiaries' person-centered service plans.

b. Minimum Performance Requirement and Flexibilities (§ 441.302(k)(2), (3), (4), (5), and (6))

Our proposal at § 441.302(k)(2) and (3) was designed to affect the inextricable link between sufficient payments being received by the direct care workforce and access to and, ultimately, the quality of HCBS received by Medicaid beneficiaries. We believe that this proposed requirement would not only benefit direct care workers but also individuals receiving Medicaid HCBS because supporting and stabilizing the direct care workforce will result in better qualified employees, lower turnover, and a higher quality of care. The direct care workforce must be able to attract and retain qualified workers in order for beneficiaries to access providers of the services they have been assessed to need and for the direct care workforce to be comprised of workers with the training, expertise, and experience to meet the diverse and often complex HCBS needs of individuals with disabilities and older adults. Without access to a sufficient pool of direct care workers, individuals are forced to forgo having their needs met, or have them addressed by workers without sufficient training, expertise, or experience to meet their unique needs, both of which could lead to worsening health and quality of life outcomes, loss of independence, and institutionalization.[92] [93] [94] [95] Further, we believe that ensuring adherence to a Federal standard of the percentage of Medicaid payments going to direct care workers is a concrete step in recruitment and retention efforts to stabilize this workforce by enhancing salary competitiveness in the labor market. In the absence of such requirements, we may be unable to support and stabilize the direct care workforce because we would not be able to ensure that the payments are used primarily and substantially to pay for care and services provided by direct care workers. Therefore, at § 441.302(k)(3)(i), we proposed to require that at least 80 percent of all Medicaid payments, including but not limited to base payments and supplemental payments, with respect to the following services be spent on compensation to direct care workers: homemaker services, home health aide services, and personal care services.[96]

While many States have already voluntarily established such minimums for payments authorized under section 1915(c) of the Act,[97] we believe a Federal standard would support ongoing access to, and quality and efficiency of, HCBS. Our proposal was based on feedback from States that have implemented similar requirements for payments for certain HCBS under section 9817 of the ARP [98] or other State-led initiatives. We refer readers to our proposed rule for more specific discussion of the feedback we received from States regarding their implementation of similar requirements (88 FR 27984).

We focused our proposed requirement on homemaker services, home health aide services, and personal care services because they are services for which we

[92] MACPAC Issue Brief. State Efforts to Address Medicaid Home- and Community-Based Services Workforce Shortages. March 2022. Accessed at *https://www.macpac.gov/wp-content/uploads/2022/03/MACPAC-brief-on-HCBS-workforce.pdf.*

[96] We note that section 2402(a) of the Affordable Care Act applies broadly to all HCBS programs and services funded by HHS. Further, section 2402(a) does not include limits on the scope of services, HCBS authorities, or other factors related to its use of the term HCBS. Therefore, we believe that there is no indication that personal care, homemaker, and home health aide services would fall outside the scope of section 2402(a).

[97] For instance, as part of their required activities to enhance, expand, or strengthen HCBS under ARP section 9817, some States have required that a minimum percentage of rate increases and supplemental payments go to the direct care workforce. See *https://www.medicaid.gov/medicaid/home-community-based-services/guidance/strengthening-and-investing-home-and-community-based-services-for-medicaid-beneficiaries-american-rescue-plan-act-of-2021-section-9817/index.html* for more information on ARP section 9817.See *https://www.medicaid.gov/medicaid/home-community-based-services/guidance/strengthening-and-investing-home-and-community-based-services-for-medicaid-beneficiaries-american-rescue-plan-act-of-2021-section-9817/index.html* for more information on ARP section 9817.

[98] Information on State activities to expand, enhance, or strengthen HCBS under ARP section 9817 can be found on *Medicaid.gov* at *https://www.medicaid.gov/medicaid/home-community-based-services/guidance/strengthening-and-investing-home-and-community-based-services-for-medicaid-beneficiaries-american-rescue-plan-act-of-2021-section-9817/index.html.*

expect that the vast majority of payment should be comprised of compensation for direct care workers. These services are comprised of individualized supports for Medicaid beneficiaries delivered by direct care workers and generally have low equipment or supply costs relative to other services. Further, these are services that would most commonly be conducted in individuals' homes and general community settings. As such, there should be low facility or other indirect costs associated with the services. We requested comment on the following options for the minimum percentage of payments that must be spent on compensation to direct care workers for homemaker services, home health aide services, and personal care services: (1) 75 percent; (2) 85 percent; and (3) 90 percent. If an alternate minimum percentage was recommended, we requested that commenters provide the rationale for that minimum percentage.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters (regardless of whether they supported the overall proposal itself) applauded our acknowledgement of, and efforts to address, HCBS workforce shortages, which many commenters characterized as a ''crisis.'' Many commenters appeared to agree that wages to direct care workers are generally low, and that these low wages contribute to overall workforce challenges. Both providers and beneficiaries submitted comments detailing struggles they have had in hiring and retaining qualified direct care workers. Some of these commenters described the frustration of having to constantly recruit and train new direct care workers. Some commenters described having to turn away new clients due to staff shortages, and beneficiaries reported experiencing delays or reductions in their services due to difficulty in finding direct care workers to provide the services. Many direct care workers also submitted personal examples of the hardships caused by financial strain due to inadequate pay, including having to work long hours at multiple jobs to earn extra income, missing time with their own families, struggling to pay bills, risking exposure to (or contracting) COVID–19, and experiencing burnout and psychological stress. A few of these commenters indicated they had left the direct care workforce due to low wages.

Several commenters stated that the proposed minimum performance requirement, if finalized, would likely lead to increases in wages for direct care workers and strengthen the workforce, which in turn could improve the quality of HCBS. In particular, a number of commenters noted the potential for the proposal to have a positive impact on workers who are Black, other people of color, and women, who are disproportionately represented in the direct care workforce—groups that have historically experienced low wages due to discrimination.

Commenters were able to draw anecdotal connections between wages and worker retention. A few providers, for instance, noted that they had made efforts to increase their workers' wages, and observed that the increase in wages had a positive impact on their staff retention and the number of beneficiaries the providers were able to serve.

A few other commenters noted that there are other factors that may contribute to worker shortages, and recommended that we continue to partner with the Administration for Community Living and other Federal agencies to promote a comprehensive, integrated campaign that addresses multiple facets of the workforce shortage, including promotion of and improvement of social valuation of this work, support of workforce pipelines, changes to immigration policy, and creative strategies for atypical workforce development.

Response: We thank commenters for sharing their personal experiences and perspectives on how they have been affected by the direct care workforce shortage and the low wages paid to many direct care workers. We share the belief that this requirement will create a foundation of support for the direct care workforce, which we believe is fundamental to HCBS delivery. We focused in this proposal on compensation for direct care workers because, as we noted above and many commenters confirmed anecdotally, many direct care workers have been paid low wages for a long time.[99] [100] We recognize that other factors also play important roles in worker retention and shortages. While we will continue to partner with other Federal agencies to address these issues, some of the factors affecting the workforce lie outside of our regulatory purview and are outside of the scope of this proposal.

Comment: A significant number of commenters provided feedback on the idea of having a national minimum performance level (separate from providing comment on what the percentage should be). One commenter, representing several State agencies, supported the intent of the proposal and indicated that the proposed requirements could ''improve recruitment, retention and economic security of the HCBS direct care workforce.'' While offering cautions, the commenter indicated that many States generally support a single national minimum performance requirement, but they also recommended that we consider providing States with flexibility related to the requirement based on provider size, rural/urban status, and risk of closure.

Many commenters expressed concerns that a single national minimum performance level could fail to take into account various factors that might affect the percent of Medicaid payments that is spent on compensation for direct care workers including substantial differences among HCBS waiver programs, such as size, services, populations, service area, and staffing needs; State requirements for providers, such as differences in business operations requirements, licensure costs, staff training requirements, or whether States require providers to maintain physical office space; and local economic environments, including cost of living, taxes, and wage laws. Many commenters requested that we not finalize a minimum performance level, so that providers may be allowed flexibility to allocate their Medicaid payments as they determine to be appropriate. One commenter, while acknowledging a workforce crisis, noted that Area Agencies on Aging and provider organizations are taking steps to improve recruitment and retention and that a Federal mandate such as the 80 percent minimum performance level proposed in the rule is unnecessary, may have unintended consequences, and may complicate State and local efforts currently underway.

Response: After consideration of public comments as described in this section II.B.5 of this rule, we are finalizing a national minimum performance level in this final rule. We believe that not doing so would fail to help address the chronic shortages in the HCBS direct care workforce. In this context, the status quo amounts to minimal oversight over how much of the Medicaid payment is going to support the direct care workers who are

[99] MACPAC Issue Brief. State Efforts to Address Medicaid Home- and Community-Based Services Workforce Shortages. March 2022. Accessed at *https://www.macpac.gov/wp-content/uploads/2022/03/MACPAC-brief-on-HCBS-workforce.pdf.*

[100] Campbell, S., A. Del Rio Drake, R. Espinoza, K. Scales. 2021. Caring for the future: The power and potential of America's direct care workforce. Bronx, NY: PHI *http://phinational.org/wp-content/uploads/2021/01/Caring-for-the-Future-2021-PHI.pdf.*

performing the core activities of homemaker, home health aide, and personal care services. While some States have already implemented initiatives to ensure that a certain percentage of Medicaid payments or rate increases are going to direct care worker compensation, as noted above, we believe a Federal requirement is necessary and would be more effective to promote consistency and transparency nationwide.

We agree that there may be State or local circumstances that impact the percent of Medicaid payments that is spent on compensation for direct care workers. Where possible, we have built flexibilities into this requirement as discussed further in this section II.B.5 to ensure that it addresses certain differences among HCBS programs and providers. Specifically, as we discuss in detail later in this section, we are modifying the policy we proposed at § 441.302(k) by: (1) adding a definition of excluded costs at § 441.302(k)(1)(iii) to ensure certain costs are not included in the minimum performance level calculation of the percentage of Medicaid payments to providers that is spent on compensation for direct care workers; (2) revising the definition of direct care worker proposed at § 441.301(k)(1)(ii) to clarify that clinical supervisors are included in the definition of direct care workers; (3) revising § 441.302(k)(3)(ii) to allow States to set a separate minimum performance level for small providers; (4) adding a new provision at § 441.302(k)(4) to provide an option for States to develop reasonable, objective criteria to identify small providers to meet a small provider minimum performance level set by the State; (5) adding a new provision at § 441.302(k)(5) to allow States to develop reasonable, objective criteria to exempt certain providers from meeting the minimum performance level requirement; and (6) adding a new provision at § 441.302(k)(7) to exempt the Indian Health Service (IHS) and Tribal health programs subject to 25 U.S.C. 1641 from the HCBS payment adequacy requirements at § 441.302(k). The specific modifications and the rationale for these modifications are discussed in greater detail in this section II.B.5. of the final rule.

Further, we are modifying the policy we proposed at § 441.302(k) to require States to comply with this HCBS payment adequacy policy beginning 6 years after the effective date of this final rule, rather than the 4 years we proposed. (We discuss this modification to § 441.302(k)(4), being redesignated as § 441.302(k)(8), in section II.B.5.h., of this rule.) We will continue to use our standard enforcement tools and discretion, as appropriate, when States must comply with § 441.302(k).

Ultimately, while we agree that providers generally have flexibility to determine how to spend their Medicaid payments, we believe it is important to reiterate the parameters for payment rates required under section 1902(a)(30)(A) of the Act. Section 1902(a)(30)(A) of the Act requires that payment rates must be economic and efficient; they must not be so high as to be uneconomic or inefficient. This provision also requires payment rates to be consistent with quality of care and sufficient to enlist enough providers to ensure a specified level of access to services for beneficiaries; rates must not be so low as to impermissibly limit beneficiaries' access to care or the quality of care they receive. The Supreme Court in *Armstrong* v. *Exceptional Child Center, Inc.,* in considering this provision, recognized that Congress was ''explicitly conferring enforcement of this judgment-laden standard upon the Secretary[,] . . . thereby achieving 'the expertise, uniformity, widespread consultation, and resulting administrative guidance that can accompany agency decision-making.' '' [101] We believe that implementing this statutory requirement includes some degree of oversight into how providers are allocating the Medicaid payments that they receive for delivering HCBS to beneficiaries. For example, if providers are spending a high proportion of their Medicaid payments on compensation to direct care workers but beneficiaries have difficulty accessing services and quality is compromised due to an insufficient number of direct care workers, then the payment rate may be too low to satisfy section 1902(a)(30)(A). Conversely, if concerns about access to and quality of services were not present and providers were spending a low proportion of their Medicaid payments on compensation to direct care workers, then the Medicaid payment rate may exceed a level that is economic and efficient, contributing to overhead spending and/or operating margin at levels higher than needed to ensure access and quality.

Comment: While several commenters agreed that a national minimum performance level is authorized by section 1902(a)(30) of the Act, a few other commenters disagreed that this policy is authorized by section 1902(a)(30) of the Act. These latter commenters noted that section 1902(a)(30)(A) of the Act requires each State plan for medical assistance to provide such methods and procedures relating to the utilization of, and the payment for, care and services available under the plan as may be necessary to assure that payments are consistent with efficiency, economy, and quality of care and are sufficient to enlist enough providers so that care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area. As such, these commenters contended that this statutory provision applies to State plans, not to CMS, and speaks to the adequacy of payments to Medicaid-enrolled healthcare providers, not the providers' workforce. They stated that section 1902(a)(30)(A) of the Act cannot be read to delegate authority to us to prescribe specific wage pass-through requirements that States must impose upon providers.

Response: We believe that the statutes we cited support the components of our proposal. Regarding the applicability of section 1902(a)(30)(A) of the Act, we refer readers to our prior discussion of section 1902(a)(30)(A) of the Act in section II.B.5.a. of this rule. As we noted in that discussion, section 1902(a)(30)(A) of the Act provides us with authority to oversee that States assure that payments are consistent with efficiency, economy, and quality of care and are sufficient to enlist enough providers so that care and services are available under the plan, at least to the extent that such care and services are available to the general population in the geographic area. We did not propose to establish, and are not finalizing, specific payment rates. Instead, we proposed that States demonstrate that payments are sufficient to ensure care and services are available to beneficiaries by specifying a percentage of Medicaid payments that States must ensure is spent on compensation to direct care workers. We believe this policy will also promote, and be consistent with, economy, efficiency, and quality of care. We also disagree that section 1902(a)(30)(A) of the Act speaks only to provider enrollment. We believe that setting a performance level at which States support their State plan assurance that payments are consistent with efficiency, economy, and quality of care is an appropriate use of our oversight authority under section 1902(a)(30)(A) of the Act.

Comment: A few commenters agreed that sections 2402(a)(1) and 2402(a)(3) of the Affordable Care Act authorize the creation of a national minimum

[101] *Armstrong* v. *Exceptional Child Center, Inc.,* 575 U.S. 320, 328–29 (2015) (internal citations omitted).

performance requirement to support the direct care workforce. However, a few commenters disagreed with this application of section 2402(a)(1) of the Affordable Care Act. These commenters noted that section 2402(a)(1) of the Affordable Care Act requires the Secretary of the Department of Health and Human Services (HHS) to promulgate regulations to ensure that all States develop service systems that are designed to allocate resources for services in a manner that is responsive to the changing needs and choices of beneficiaries receiving non-institutionally-based long-term services and supports and that provides strategies for beneficiaries receiving such services to maximize their independence, including through the use of client-employed providers. Commenters stated that, although this provision speaks to HHS's authority to promulgate regulations, those regulations must pertain to ensuring that States develop systems to appropriately allocate resources to the types of services their beneficiaries need. These commenters contended that section 2402 of the Affordable Care Act allows HHS to, for example, require States to assess whether they should provide services such as delivering healthy meals to certain populations or allow beneficiaries to hire a family member to assist them (and fund the wages), but it does not provide HHS the authority to require States to impose upon providers wage pass-through requirements that are set at a specific minimum performance level.

Response: We disagree with commenters' interpretation of section 2402(a)(1) of the Affordable Care Act. Section 2402(a)(1) of the Affordable Care Act requires States to allocate resources for services in a manner that is responsive to the changing needs and choices of beneficiaries receiving HCBS. As discussed throughout this section, one of the most fundamental ways that HCBS programs meet the needs of beneficiaries is by having a sufficient direct care workforce to provide the services beneficiaries have been assessed to need. Without an adequate supply of workers, beneficiaries may not be able to access all the services that they need and that fully reflect their choices or preferences. We believe that setting a benchmark that helps measure whether Medicaid payments are being allocated in a way that is responsive to the HCBS workforce shortage and supports essential aspects of HCBS delivery is an appropriate application of our authority under section 2402(a)(1) of the Affordable Care Act.

Comment: One commenter did not agree that section 2402(a)(3)(B)(iii) of the Affordable Care Act authorized the application of a minimum performance requirement. The commenter noted that section 2402(a)(3)(B)(iii) of the Affordable Care Act requires the Secretary of HHS to promulgate regulations to ensure that all States develop service systems that are designed to improve coordination among, and the regulation of, all providers of such services under Federally and State-funded programs in order to oversee and monitor all service system functions to assure an adequate number of qualified direct care workers to provide self-directed personal assistance services. The commenter stated that this statutory provision both bestows authority upon HHS to promulgate regulations and specifically references the need to ensure an adequate number of direct care workers. However, the commenter noted that, like section 2402(a)(1) of the ACA, section 2402(a)(3)(B)(iii) specifies that HHS's role—and its authority to promulgate such regulations—is limited to ensuring that States develop service systems that assure an adequate number of qualified direct care workers to provide self-directed personal assistance services. The commenter also stated that this statutory provision applies only to the self-directed service delivery model and does not authorize HHS to promulgate wage pass-through requirements with respect to services delivered by provider agencies. The commenter stated, generally, that the Medicaid program's fundamental premise is to allow each State or Territory the ability to tailor its program to reflect its unique needs, and that this is at odds with a requirement for States to direct providers' behavior.

Response: We generally disagree with the commenter's analysis of section 2402(a)(3)(B)(iii) of the Affordable Care Act that it does not authorize the application of a minimum performance requirement. Section 2402(a)(3)(B)(iii) of the Affordable Care Act requires States to oversee and monitor HCBS system functions to assure there is a sufficient number of qualified direct care workers to provide self-directed personal assistance services. We believe that, to comply with this statutory requirement, States must have a sufficient direct care workforce to be able to deliver services that are responsive to the changing needs and choices of beneficiaries (regardless of delivery model), and, specifically, States must have a sufficient number of qualified direct care workers to provide self-directed personal assistance services. In other words, an insufficient direct care workforce generally will impact whether a State has a sufficient number of qualified direct care workers to provide self-directed personal assistance services in compliance with this requirement. However, we do agree that section 2402(a)(3)(B)(iii) of the Affordable Care Act speaks specifically to self-directed services. We cited this authority for the purposes of supporting our inclusion of self-directed services in this proposal.

As noted in prior responses, we believe that section 1902(a)(30)(A) of the Act and 2402(a)(1) of the Affordable Care Act authorize us to set parameters or benchmarks for HCBS expenditures (both including and in addition to expenditures for self-directed personal care services). Section 1902(a)(30)(A) of the Act provides us with authority to oversee that States assure that Medicaid payments for services are consistent with efficiency, economy, and quality of care and are sufficient to enlist enough providers so that care and services are available under the plan, at least to the extent that such care and services are available to the general population in the geographic area. Section 2402(a)(1) of the Affordable Care Act requires HHS to ensure States to allocate resources for services in a manner that is responsive to the changing needs and choices of beneficiaries receiving HCBS. States retain flexibility in how they construct their HCBS systems. Rather, we believe the minimum performance requirement we proposed, and are finalizing with modifications in this section II.B.5, sets a benchmark to help us determine whether States are ensuring that their HCBS systems are allocating sufficient resources to support the direct care workforce to ensure there are sufficient providers so that care and services are available to beneficiaries and that these services are consistent with efficiency, economy, and quality of care. We believe that setting such a benchmark that helps measure whether Medicaid payments are being allocated in a way that is responsive to the HCBS workforce shortage and supports essential aspects of HCBS delivery is an appropriate application of our authority under section 2402(a)(1) of the Affordable Care Act and applies to other HCBS in addition to the self-directed personal care services specifically addressed in section 2402(a)(iii)(B).

Comment: A number of commenters stated that we did not provide enough data to support the proposal for an 80 percent minimum performance level. One commenter suggested that by not providing sufficient data to support the

proposal, we have not fulfilled our obligations under the Administrative Procedure Act.

A number of commenters recommended we collect more data before finalizing a certain percent for the national minimum performance level. Some commenters suggested that a State-by-State analysis of rates and the potential impact of a minimum performance level would need to be performed before setting a minimum performance level. A few of these commenters suggested that helpful data could be collected from States' rate studies, HCBS waiver rates, provider cost reports, or the data we proposed in the proposed rule to be reported to us (including our proposals at § 441.311(e) and § 447.203, which we discuss in sections II.B.7. and II.C. of this rule, respectively). One commenter suggested using the electronic visit verification (EVV) system [102] as a tool for gathering relevant data. Several commenters also suggested that any additional data collection performed to support a national minimum performance level be used to assess unintended consequences of such a level.

A few commenters questioned the specific data relied on for the proposal of an 80 percent minimum performance level. They noted concerns including:

- A lack of support for the claim in the proposed rule that some States have set wage pass-through requirements as high as 90 percent;
- Use of data on the American Rescue Plan Act of 2021 section 9817 funds by a few States to increase worker wages, which have only been relatively recently distributed, and thus reflect limited data;
- State wage pass-through requirements as part of their activities to enhance, expand, or strengthen HCBS under section 9817 the American Rescue Plan Act of 2021were generally only applied to temporary rate increases, not entire rates; and
- Minnesota and Illinois, two States that have wage pass-through requirements, have their requirements set at 72 percent and 77 percent, respectively, and both use different definitions of compensation or direct care worker than what was proposed.

Response: As discussed in the proposed rule (88 FR 27982), we based our proposal on feedback from States that have implemented similar requirements for payments for certain HCBS under section 9817 of the ARP [103] or other State-led initiatives. For example, as noted by commenters, Minnesota has established a minimum threshold of 72.5 percent,[104] while Illinois has implemented a minimum threshold of 77 percent, for similar requirements for HCBS payments as we proposed.[105] To further clarify the data that we used to inform our proposal, which was referenced in footnote 81 in the proposed rule (88 FR 27983 to 27984), we note the following examples of different types of States' wage pass-through requirements that States added to spending plans for ARP section 9817:

- Indiana announced a Direct Service Workforce Investment Grant in which 95 percent of the grant funds must be spent on direct service professionals.[106]
- Massachusetts required that HCBS providers use 90 percent of a rate increase to support their direct care workers.[107]
- North Carolina required that 80 percent of its rate increases for certain HCBS be spent on direct care worker wages.[108]
- West Virginia set different wage pass-through requirements (ranging from 50 percent to 100 percent) for the amount of the rate increase that would be allocated to direct care workers providing services to beneficiaries in several of the State's waiver programs.[109]

We acknowledge that we are unable to present a State-by-State study of the impact of a specific minimum performance level on all State Medicaid programs and providers. The variability among HCBS programs (including staffing requirements, service definitions, and rate methodologies) poses challenges to performing and presenting a multi-State analysis of the allocation of Medicaid payments to direct care workers using existing available data, such as rate studies or cost reports. We also note that information from EVV system reporting would only pertain to use of personal care services or home health aide services (not homemaker services) and would not speak to rates. We agree that the reporting requirement we proposed, and are finalizing in this rule, at § 441.311(e) may generate standardized data that is more amenable to national comparisons.

We also believe that the reporting requirement at § 441.311(e) may yield important data that will support transparency around the portion of Medicaid payments being shared with direct care workers; such transparency in and of itself may well encourage States and providers to look critically at their rates and how they are allocated. Further, we believe that gathering and sharing data about the amount of Medicaid dollars that are going to the compensation of workers is a critical step in understanding the ways we can enact policies that support the direct care workforce and thereby help advance access to high quality care for Medicaid beneficiaries. However, we believe that a reporting requirement alone will not be as effective at stabilizing the direct care workforce.

We believe that compensation levels are a significant factor in the creation of a stable workforce, and that a stable workforce will result in better qualified employees, lower turnover, and safer and higher quality care. If individuals are attracted to the HCBS workforce and incentivized to remain employed in it with sufficient compensation, the workforce is more likely to be comprised of workers with the training, knowledge, and experience to meet the diverse and often complex needs of individuals with disabilities and older adults receiving HCBS. A stable and qualified workforce will also enable beneficiaries to access providers of the services they have been assessed to need. As noted in an earlier comment

[102] Section 12006 of the 21st Century Cures Act (Pub. L. 114–255) requires States to have EVV systems for Medicaid personal care services and home health care services.

summary, commenters almost unanimously agreed that the direct care workforce shortage is posing extensive challenges to HCBS access and quality of care. We believe that setting a minimum performance requirement that we have determined to be reasonable based on available information (and is supported by many commenters) is an appropriate exercise of our responsibility to oversee the sufficiency of Medicaid payments under section 1902(a)(30)(A) of the Act and States' allocation of resources under section 2402(a) of the Affordable Care Act.

We agree that the data from States that implemented wage pass-throughs through activities in their ARP section 9817 spending plans is relatively recent. However, we do not believe that data should be disqualified simply because it was generated recently; such data is likelier to provide a more current snapshot of States' Medicaid rates and the needs of their direct care workforce.

We also agree that States applied wage pass-through requirements to rate increases that they were implementing as part of their ARP section 9817 spending plans and that at least some of these wage pass-through requirements were temporary. As such, these percentages might not be as relevant to the selection of a minimum performance level as a permanent wage pass-through requirement applied to the entire Medicaid rate. That said, we do believe that these data are useful for illustrating that the need to support direct care workers' wages is relevant across the country, and that States and interested parties have not only identified increases in wages for direct care workers as a priority, but they have also identified allocating specific portions of Medicaid rates as an appropriate mechanism for addressing low wages. We echo a comment summarized earlier that the advantage of establishing a permanent minimum performance requirement is that it creates a stable support for the direct care workforce, rather than intermittent increases in compensation that are dependent on specific actions taken by State or Federal legislatures.

As observed by some commenters, the percent we proposed, at 80 percent, is slightly higher than the wage pass-through requirements set by Minnesota and Illinois. We believe that the 80 percent minimum performance level we are finalizing is informed by the current range of the wage pass-through requirements set by those States, but is set slightly higher to encourage further steps towards improving compensation for workers. We also note that we are not required to replicate precisely what certain States have done.

We continue to believe 80 percent is the feasible performance level to ensure that payments made for Medicaid HCBS are appropriately allocated to direct care workers' compensation to ensure sufficient providers for beneficiaries to access HCBS as approved in their person-centered plans. However, given that the 80 percent minimum performance is higher than what States have currently set in terms of permanent wage pass-through requirements, we will provide States with additional time to come into compliance with the 80 percent performance level. We are finalizing at § 441.302(k)(8) a modification to the applicability date for § 441.302(k) to indicate that States must comply with this requirement at § 441.302(k) beginning 6 years after the effective date of this rule, rather than 4 years as proposed. We will continue to use our standard enforcement tools and discretion, as appropriate, when States must comply with § 441.302(k). As discussed in greater detail below, we are also finalizing additional flexibilities that States, at their option, may utilize to apply a different percentage for small providers and exempt certain providers that experience hardships from the State's calculation for meeting these performance levels. We also describe below an exemption of the Indian Health Service (IHS) and Tribal health programs subject to 25 U.S.C. 1641 from the HCBS payment adequacy requirements.

Comment: A significant number of commenters stated that an 80 percent minimum performance level, if finalized, would not leave providers enough money for costs associated with administrative tasks, programmatic activities, supervision, technology, office or facility expenses, training, or travel reimbursement. Many commenters noted the 80 percent minimum performance level would result in unintended consequences—namely that affected HCBS providers would cut back on services, limit or stop serving Medicaid beneficiaries, or close altogether. A few commenters expressed concern that our proposal would result in fewer new providers enrolling as Medicaid HCBS providers. Many commenters worried that such reductions in available services or the provider pool would reduce, rather than increase, beneficiaries' access to high-quality HCBS. A few commenters worried that HCBS provider closures, as a result of the proposed policy, could result in more beneficiaries moving into institutional settings.

Several commenters also expressed the belief that the 80 percent minimum performance level would discourage innovation among providers. One commenter suggested that providers would be penalized if they relied on assistive technology, remote supports, or other technology solutions to support beneficiaries in lieu of human assistance.

Response: We thank commenters for their feedback. As discussed in greater detail later in this section, we are modifying the policy we proposed at § 441.302(k)(3) to establish certain exceptions from the minimum performance level, and to establish a 6-year effective date, rather than the 4 years we had proposed. We will continue to use our standard enforcement tools and discretion, as appropriate, when States must comply with § 441.302(k). As discussed in greater detail below, we are also: (1) adding a definition of excluded costs at § 441.302(k)(1)(iii) to exclude certain costs from the minimum performance level calculation of the percentage of Medicaid payments to providers that is spent on compensation for direct care workers; (2) revising the definition of direct care worker proposed at § 441.301(k)(1)(ii) to clarify that clinical supervisors are included in the definition of direct care workers; (3) revising § 441.302(k)(3)(ii) to allow States to set a separate minimum performance level for small providers; (4) adding a new provision at § 441.302(k)(4) to provide an option for States to develop reasonable, objective criteria to identify small providers to meet a small provider minimum performance level set by the State; (5) adding a new provision at § 441.302(k)(5) to allow States to develop reasonable, objective criteria to exempt certain providers from meeting the minimum performance level requirement; and (6) adding a new provision at § 441.302(k)(7) to exempt the Indian Health Service (IHS) and Tribal health programs subject to 25 U.S.C. 1641 from the HCBS payment adequacy requirements at § 441.302(k).

We believe that these amended requirements will address some commenters' concerns about leaving providers sufficient administrative funds for certain personnel and administrative activities and will meet the needs of providers that are small or experiencing other challenges in meeting the minimum performance level.

We always encourage providers to find innovative ways to deliver services but believe that these services (even if delivered with the assistance of

technology or telehealth) at their core require direct care workers to provide them. It is difficult to imagine how strategies that do not aim to stabilize direct care worker wages would improve the efficacy or quality of these services. We do believe, however, that placing a limit on the amount of the Medicaid payment going to expenses other than direct care worker compensation could encourage innovative efforts to improve and streamline administrative activities.

In response to commenters' concerns that this proposal would have the unintended consequence of causing program cuts or provider closures, we do not believe this outcome would be the result from implementing the proposed minimum performance level. We believe that the current environment—in which providers and beneficiaries routinely struggle to find qualified direct care workers, and direct care workers leave the HCBS workforce for better-paying jobs—poses a significant threat to access and community integration because there are an insufficient number of direct care workers to meet beneficiaries' needs. In addition, the direct care worker shortage threatens beneficiary access to services and community integration as such shortage may lead to provider closures if providers are unable to find enough workers to deliver services. This shortage also threatens service quality through the loss of well-trained and experienced direct care workers, if left unaddressed. Further, we believe that the modifications we are finalizing to this requirement will help to mitigate these concerns.

Comment: Some commenters (including beneficiaries, providers, labor organizations, disability or legal advocacy organizations, and research and policy organizations) agreed that 80 percent was an appropriate or reasonable payment adequacy requirement. A couple of these commenters based their support on personal experience, including a few who indicated that they were providers, and stated that 80 percent was an achievable minimum performance level. A few commenters pointed out that the medical loss ratio (MLR) for managed care is 85 percent. One commenter suggested that the minimum performance level be increased to 85 percent to align with the MLR. One commenter recommended that the 80 percent standard should account for necessary administration of HCBS programs, including training. This commenter stated that, if it does not account for necessary administration, the payment rates that States and managed care programs have established are likely too low. The commenter also recommended that, once the requirement is implemented, we review whether the percentage should be higher than 80 percent.

A number of commenters suggested alternative, lower minimum performance levels. Several commenters (including providers, State Medicaid agencies, a labor organization, and an advocacy organization) suggested minimum performance levels ranging from 70 percent to 75 percent. A few of the commenters who recommended 75 percent self-identified as providers and believed that 75 percent was achievable based on their own experiences and expenditure calculations. One commenter recommended we mandate a 72.35 percent minimum performance level and change the definition of compensation to exclude the 7.65 percent employer share of FICA taxes for direct care workers; the commenter believed this would reduce confusion regarding employers' shares of taxes and align the definition of compensation with that used by some States. A few commenters recommended 70 percent based on experience with rate studies or provider expenditures in their States.

Several commenters, including providers and commenters representing State agencies, recommended setting a minimum performance level at either 60 percent or 65 percent, based on the commenters' personal experience running a provider agency or overseeing provider agencies. One commenter suggested a minimum performance level of 60 percent based on a hypothetical analysis of one State's HCBS rates and projected expenditures.

While not making specific recommendations, several commenters (mostly providers and State Medicaid agencies) submitted comments that included anecdotal data of what providers spend on compensation; these percentages ranged from 55 to 81 percent.

Response: We thank commenters for engaging in this issue, including sharing their own experiences allocating Medicaid payments. While we found the feedback provided by commenters instructive, both the range of recommendations and the anecdotal nature of information supporting most of the recommendations prevented us from relying on the recommendations to finalize additional modifications to the proposed minimum performance at the provider level requirement at § 441.302(k)(3).

We do not agree that we should increase the minimum performance level upward to match the 85 percent MLR required in managed care as the MLR is a calculation and associated reporting requirement for Medicaid managed care contracts in accordance with § 438.8 and is not specific to HCBS.

Additionally, as discussed previously and in more detailed responses below, we are finalizing some modifications related to the exclusion of certain costs, the inclusion of clinical supervisors in the definition of direct care workers, and options for a small provider minimum performance level and hardship exemptions for some providers that will change somewhat the impact of the minimum performance level. Further, we are modifying the policy we proposed at § 441.302(k) to establish certain exceptions from the minimum performance level proposed at § 441.302(k)(3), and requiring States to comply beginning 6 years after the effective date of this final rule, rather than the 4 years we had proposed. We will continue to use our standard enforcement tools and discretion, as appropriate, when the minimum performance level requirement go into effect. We believe these modifications are necessary to balance the goal of stabilizing the direct care workforce with the operational realities faced by providers of varying sizes and locations.

Comment: A few commenters suggested that the minimum performance level, if finalized, should be applied at the State level, rather than the provider level. Commenters suggested that applying the minimum performance level at the State level would create some flexibility, as this would require only that all providers in the State meet the minimum performance level in aggregate. However, a few other commenters recommended that we clarify that the minimum performance level applies at the provider level.

Response: We clarify that we intended to propose that the minimum performance level policy would apply at the provider level, meaning that the State must ensure that each provider spends Medicaid payments they receive for certain HCBS on direct care worker compensation in accordance with the minimum performance level requirement. As noted previously, we believe it is important for States to hold providers individually accountable for how they allocate their Medicaid payments and are finalizing other policies, discussed below and elsewhere in this section II.B.5. of the final rule, for States to accommodate providers that need additional flexibility. We note that there was an error in the heading of § 441.302(k)(3), which was proposed

as ''Minimum performance at the State level.'' We apologize for any confusion this may have caused; we believe that most commenters, based on their comments, understood the minimum performance requirement to apply at the provider level. Accordingly, we are finalizing § 441.302(k)(3) with modification by revising the heading for § 441.302(k)(3) to read ''Minimum performance at the provider level,'' as it was originally intended to read.

Additionally, to ensure that it is understood that the minimum performance level that must be met by the State is calculated as the percentage of total payment (not including excluded costs, which are discussed in greater detail in section II.B.5.d. of this final rule) to a **provider** for furnishing homemaker, home health aide, or personal care services, as set forth at § 440.180(b)(2) through (4), represented by **the provider's** total compensation to direct care workers. (New text in bold font).

Comment: A significant number of commenters worried that a national minimum performance level, regardless of the percentage, would have a disparate impact on providers that are small, new, in rural or underserved areas, or run by/for people from specific underserved communities (such as indigenous people) or individuals for whom English is a second language. Some commenters worried that the proposal favors large providers and would lead to consolidation of providers. A few other commenters worried that this would mean that beneficiaries would have fewer choices of providers and have to work with larger corporate providers. One commenter worried that a national minimum performance level would have a disparate impact on agency providers (which may have more overhead costs), as opposed to providers of self-directed services.

A number of commenters requested that if we finalize a national payment adequacy requirement, we include additional flexibilities to minimize unintended consequences on certain providers, particularly small and rural providers. One commenter suggested that we allow for ''hardship exemptions'' on a case-by-case basis. One commenter suggested that we allow States to exempt providers that pay workers 200 percent of the Federal Poverty Level. Another commenter suggested that we exempt States from the payment adequacy requirement if the State has a minimum hourly base wage of $15 per hour applicable to direct care workers delivering the affected services.

Other commenters recommended adjustments to the national minimum performance level, rather than exemptions. A few commenters suggested that we allow for a variable payment adequacy requirement or for ''scaling'' of the minimum performance level, adjusted for different provider sizes or different types of services. A few other commenters recommended requiring a range to identify rates, which could vary by provider size, number of Medicaid beneficiaries served, rural or urban status, hardship status (risk of closure), or other characteristics. One commenter suggested the rate could vary by delivery system or service type. A number of commenters recommended that we allow States to set their own payment adequacy requirement.

A small number of commenters raised concerns that requiring a minimum performance level would conflict with 25 U.S.C. 1641, governing how IHS and Tribal health programs (as defined in 25 U.S.C. 1603(25)) may use Medicare and Medicaid funds, and other applicable laws providing for Tribal self-governance and self-determination. One commenter recommended that we exempt IHS and Tribal health programs from the requirement.

Response: We believe that at least some of commenters' concerns about provider impact may be alleviated by some of the modifications we are finalizing to our proposed policy in this section II.B.5. of the final rule. In particular, we are excluding travel costs from the calculation of the minimum performance level, as increased travel expenses were cited as a primary concern for rural providers. (We refer readers to the discussion of the definition of compensation and excluded costs in section II.B.5.d. of this rule, below.)

We note that the purpose of this proposal is not to set a particular wage for direct care workers, but to ensure that Medicaid payments are being allocated in ways that promote efficiency, economy, and quality of care. We believe that all States are accountable to this requirement and should hold their providers accountable. However, we also agree that some small providers may experience additional challenges in meeting a payment adequacy requirement, as any fixed costs must be covered by a smaller pool of revenues than for larger providers, and small providers have fewer opportunities for administrative efficiencies than larger providers do. We share commenters' desires that the minimum performance level not have a disparate impact on small providers, new providers that may still be developing their processes, providers that may, for various reasons, have additional administrative tasks (such as an increased need for interpreter or translation services), or providers that face disparately high costs, such as providers that may have to pay for temporary lodging for direct care workers delivering services to clients in extremely rural areas.

While we are finalizing a minimum performance level at § 441.302(k)(3)(i) as previously discussed that States must apply to most of their providers, we also agreed with commenters' suggestions. We are finalizing our policy with modifications at § 441.302(k)(3)(ii) to provide that States may apply a different minimum percentage to small providers that the States develop in accordance with requirements at § 441.302(k)(4). These modifications at § 441.302(k)(3)(ii) and (k)(4) will allow States the option to require a reasonable number of small providers, as defined using reasonable, objective criteria set by the State through a transparent process that must include public notice and opportunities for comment from interested parties, to meet a different minimum performance level. This separate minimum performance level would also be set by the State based on reasonable, objective criteria through a transparent process that must include public notice and opportunities for comment from interested parties. In order to apply a small provider minimum performance level, States must ensure it is supported by data or other reasonable factors in the State. We also note that States would still need to collect and report data as required in § 441.302(k)(2) and § 441.311(e) (discussed in section II.B.7. of this rule) for providers subject to the small provider minimum performance level.

Further, under our authority at section 1902(a)(6) of the Act, we are finalizing an additional provision at § 441.302(k)(6)(i), to require that States that establish a small provider minimum performance level in accordance with § 441.302(k)(4) must report to CMS annually, in the form and manner, and at a time, specified by CMS, on the following: the State's small provider criteria; the State's small provider minimum performance level; the percent of providers of services set forth at § 440.180(b)(2) through (4) that qualify for the small provider performance level; and a plan, subject to CMS review and approval, for small providers to meet the minimum performance requirement at § 441.302(k)(3)(i) within a reasonable period of time.

We also agree with commenters that some providers may experience hardships with meeting a payment adequacy requirement because, for instance, they are new to serving Medicaid beneficiaries and thus have not had time to develop administrative efficiencies. Additionally, we agree that special attention needs to be paid where a provider may be at risk of closure and could cause beneficiaries to lose access to HCBS in a particular area. We also agree that States are best positioned to identify the nature of the hardships and which providers are experiencing these hardships. As a result, we are finalizing a modification at § 441.302(k)(5) to allow States to develop reasonable, objective criteria through a transparent process to exempt from the minimum performance requirement at § 441.302(k)(3) a reasonable number of providers determined by the State to be facing extraordinary circumstances that prevent their compliance with § 441.302(k)(3). The State must develop these criteria through a transparent process that includes public notice and opportunities for comment from interested parties. If a provider meets the State's hardship exemption criteria, the provider should be excluded from the State's calculation of the minimum performance level at § 441.302(k)(3). We note that we expect that most providers would be subject to a hardship exemption on a temporary basis, and that States would still need to collect and report data as required in § 441.302(k)(2) and § 441.311(e) for providers with hardship exemptions.

Further, under our authority at section 1902(a)(6) of the Act, we are finalizing an additional provision at § 441.302(k)(6)(ii) to require that States that provide a hardship exemption to providers facing extraordinary circumstances must report to CMS annually, in the form and manner, and at a time, specified by CMS, on the State's hardship criteria, the percentage of providers of services set forth at § 440.180(b)(2) through (4) that qualify for a hardship exemption, and a plan, subject to CMS review and approval, for reducing the number of providers that qualify for a hardship exemption within a reasonable period of time.

We plan to issue guidance on both the small provider performance level and the hardship exemption and encourage States to consult with CMS as they develop their criteria. However, we note that, for States in which a small proportion of providers (less than 10 percent of the total number of providers of services at § 440.180(b)(2) through (4)) qualify for either the small provider performance level or a hardship exemption, CMS may waive the requirements, at § 441.302(k)(6)(i)(D), for States to report on a plan for small providers to meet the minimum performance level at § 441.302(k)(3)(i) within a reasonable period of time, and at § 441.302(k)(6)(ii)(C), for States to report on a plan for reducing the number of providers that qualify for a hardship exemption within a reasonable period of time. We are finalizing this waiver at § 441.302(k)(6)(iii).

In addition, we are modifying the date for when States must comply with the requirements at § 441.302(k) to be beginning 6 years after the effective date of the final rule, rather than the 4 years we had proposed. (We refer readers to our discussion in II.B.5.h. of this rule.) We will continue to use our standard enforcement tools and discretion, as appropriate, when the minimum performance level requirement goes into effect.

Finally, we are persuaded by commenters who raised concerns about interactions between statutory requirements for IHS and certain Tribal health programs health programs subject to 25 U.S.C. 1641 and the proposed requirement at § 441.302(k). Congress has already passed laws, such as 25 U.S.C. 1641, specifying how IHS and Tribal health programs (as defined in 25 U.S.C. 1603(25)) are to use their Medicaid collections. Because Congress has already specified how such funds must be used, we are finalizing an exemption at § 441.302(k)(7) to the HCBS payment adequacy requirements at § 441.302(k) for IHS and Tribal health programs subject to 25 U.S.C. 1641.

After consideration of the comments received, we are finalizing § 441.302(k)(3) with modifications, as well as finalizing new requirements at § 441.302(k)(4), (5), and (6). The requirements we are finalizing with modifications are as follows:

We are finalizing § 441.302(k)(3) with several modifications to retitle the requirement as *Minimum performance at the provider level* and clarify the components of the required calculation and the services that fall within this requirement. We also made modifications at § 441.302(k)(3) to clarify that excluded costs are not included in the calculation of the percentage of total payments to a provider that is spent on compensation to direct care workers and to specify the specific services (homemaker, home health aide, and personal care services) to which the payment adequacy requirement applies. We are also modifying § 441.302(k)(3) to note the exceptions to the minimum performance level that we are adding at (k)(5) (hardship exemption) and (k)(7) (IHS and Tribal health programs subject to 25 U.S.C. 1641). As finalized, § 441.302(k)(3) specifies that, **except as provided in paragraphs (k)(5) and (7)**, the State must meet the following minimum performance level as applicable, calculated as the percentage of total payment (not including excluded costs) *to a provider* for furnishing homemaker, home health aide, or personal care services, as set forth at § 440.180(b)(2) through (4), represented by the *provider's* total compensation to direct care workers. (New text in bold font).

We are modifying the language at § 441.302(k)(3)(i) to read that the minimum performance level of 80 percent applies to all payments to a provider, except as provided in paragraph (k)(3)(ii). We are finalizing a new requirement at § 441.302(k)(3)(ii) to read that at the State's option, for providers determined by the State to meet its State-defined small provider criteria in paragraph (k)(4)(i) of this section, the State must ensure that each provider spends the percentage set by the State in accordance with paragraph (k)(4)(ii) of this section of total payments the provider receives for services it furnishes as described in paragraph (k)(3) of this section on total compensation for direct care workers who furnish those services.

We are redesignating the applicability date we proposed at § 441.302(k)(4) as § 441.302(k)(8), as discussed further in section II.B.5.f. of this rule. We are finalizing a new § 441.302(k)(4) and adding new paragraphs (i) and (ii) to provide an option for States to develop reasonable, objective criteria through a transparent process to identify small providers to meet the State-defined small provider minimum performance level; require that the transparent process for developing criteria to identify providers that meet the small provider minimum performance level must include public notice and opportunities for comment from interested parties; and require that the small provider minimum performance level be set based on reasonable, objective criteria the State develops through a transparent process that includes public notice and opportunities for comment from interested parties.

We are finalizing a new § 441.302(k)(5) to allow States to develop reasonable, objective criteria through a transparent process to exempt from the minimum performance requirement at § 441.302(k)(3) a reasonable number of providers determined by the State to be facing

extraordinary circumstances that prevent their compliance with § 441.302(k)(3). The State must develop these criteria through a transparent process that includes public notice and opportunities for comment from interested parties. If a provider meets the State's hardship exemption criteria, the provider should be excluded by the State from its calculation of the State's compliance with the minimum performance level at § 441.302(k)(3).

We are finalizing a new provision at § 441.302(k)(6) to require States to report on their development and use of the small provider minimum performance level and hardship exemption. Specifically, at § 441.302(k)(6)(i), States that establish a small provider minimum performance level in accordance with § 441.302(k)(4) must report to CMS annually, in the form and manner, and at a time, specified by CMS, on the following: the State's small provider criteria; the State's small provider minimum performance level; the percent of providers of services at § 440.180(b)(2) through (4) that qualify for the small provider performance level; and a plan, subject to CMS review and approval, for small providers to meet the minimum performance requirement at § 441.302(k)(3)(i) within a reasonable period of time. We are also requiring at § 441.302(k)(6)(ii) that States that provide a hardship exemption to providers facing extraordinary circumstances must report to CMS annually, in the form and manner, and at a time, specified by CMS, on the State's hardship criteria, the percentage of providers of services at § 440.180(b)(2) through (4) that qualify for a hardship exemption, and a plan, subject to CMS review and approval, for reducing the number of providers that qualify for a hardship exemption within a reasonable period of time. Additionally, we are finalizing a waiver at § 441.302(k)(6)(iii) that specifies that CMS may waive the reporting requirements in paragraphs (6)(i)(D) or (6)(ii)(C), as applicable, if the State demonstrates it has applied the small provider minimum performance level at § 441.302(k)(4)(ii) or the hardship exemption at § 441.302(k)(5) to a small proportion of the State's providers.

Finally, we are finalizing a new § 441.302(k)(7) specifying that the Indian Health Service and Tribal health programs subject to the requirements at 25 U.S.C. 1641 are exempt from the requirements at § 441.302(k).

c. Other Services (§ 441.302(k)(3))

We considered whether the requirements we proposed at § 441.302(k)(3)(i) related to the percent of Medicaid payments going to the direct care workforce should apply to other services in addition to homemaker, home health aide, or personal care services (as set forth at § 440.180(b)(2) through (4)), such as adult day health, habilitation, day treatment or other partial hospitalization services, psychosocial rehabilitation services, and clinic services for individuals with chronic mental illness. However, these services may have facility or other indirect costs for which we do not have adequate information to determine a minimum percent of the payment that should be spent on compensation for the direct care workforce. We requested comment on whether the proposed requirements at § 441.302(k)(3)(i) related to the percent of payments going to the direct care workforce should apply to other services listed at § 440.180(b). In particular, in recognition of the importance of services provided to individuals with intellectual or developmental disabilities, we requested comment on whether the proposed requirements at § 441.302(k)(3)(i) related to the percent of payments going to the direct care workforce should apply to residential habilitation services, day habilitation services, and home-based habilitation services.

We also requested comment on the following options for the minimum percentage of payments that must be spent on compensation to direct care workers for each specific service that this provision should apply if this provision should apply to other services at § 440.180(b): (1) 65 percent; (2) 70 percent; (3) 75 percent; and (4) 80 percent. Specifically, we requested that commenters respond separately on the minimum percentage of payments for services delivered in a non-residential community-based facility, day center, senior center, or other dedicated physical space, which would be expected to have higher other indirect costs and facility costs built into the Medicaid payment rate than other HCBS. If an alternate minimum percentage is recommended, we requested that commenters provide the rationale for that minimum percentage.

We further clarified that we were requesting comment on a different range of options for the other services at § 440.180(b) than for the services at § 440.180(b)(2) through (4) because we expect that some of the other services at § 440.180(b), such as adult day health and day habilitation services, may have higher other indirect costs and facility costs than the services at § 440.180(b)(2) through (4). We also requested that commenters respond separately on the minimum percentage of payments for facility-based residential services and other facility-based round-the-clock services that have other indirect costs and facility costs that would be paid for at least in part by room and board payments that Medicaid does not cover. If a minimum percentage is recommended for any services, we requested that commenters provide the rationale for that minimum percentage.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: One commenter requested additional clarification on how the services we proposed to be included in the requirements at § 441.302(k)(3) were selected. One commenter suggested that we only apply the minimum performance requirement to personal care services. The commenter suggested we could align the requirement with the EVV system reporting requirement,[110] which applies to personal care services, including personal care services delivered as part of habilitation services.

Response: The priority of this proposal is to support the direct care workforce, and to this end we have focused on accountability for services that rely on direct care workers to perform the core activities. As noted in the background discussion of this provision and in previous responses, the services subject to the minimum performance requirement were selected because they are unlikely to have facility costs as part of the rate or as a component of the core service. We also note that the data we reviewed when determining an appropriate minimum performance requirement focused on home-based services, not facility-based services. Additionally, as identified in an analysis performed by CMS, the three services we proposed to be subject to this requirement at § 441.302(k) fall within the taxonomy of home-based services, which are both high-volume and high-cost.[111] Thus, we believe that targeting these services will maximize the impact of this requirement by addressing the needs of many beneficiaries and promoting better oversight of the allocation of Medicaid rates for frequently used services. Given these similarities among homemaker, home health aide, and personal care

[110] Section 12006 of the 21st Century Cures Act (Pub. L. 114–255).

[111] Centers for Medicare & Medicaid Services. ''Trends in Rate Methodologies for High-Cost, High Volume Taxonomies.'' *https://www.medicaid.gov/sites/default/files/2019-12/trends-in-rate-august-2017.pdf.* Last access October 2, 2023.

services, we cannot find a justification for removing homemaker and home health aide services from this requirement.

Comment: A few commenters requested that we provide a more specific definition of personal care services. Commenters noted that States do not always use HCBS taxonomies consistently, and personal care services can be applied to a different constellation of activities in different waivers. Similarly, one commenter noted that the lack of definitions in the proposed rule for homemaker, home health aide, and personal care services is problematic because States do not use these terms consistently and use a variety of different terms to describe these services.

Response: We understand that States have service definitions for homemaker, home health aide, and personal care services that differ from the definition of homemaker, home health aide, and personal care services in the section 1915(c) waiver Technical Guide [112] and that States do not always use these terms consistently. However, codifying definitions of homemaker, home health aide, and personal care services would have broad implications for State's HCBS programs that would extend beyond the HCBS payment adequacy requirements in this final rule. We will provide additional subregulatory guidance and technical assistance to aid in implementation of the HCBS payment adequacy requirements and may consider addressing in future rulemaking.

Comment: Many commenters responded to our solicitation for comment on whether we should include habilitation services in the services subject to the minimum performance requirement. Most commenters who responded did not believe that habilitation services should be included in the requirement. They echoed our concerns that these services are likelier to include at least some activities in a provider-operated facility or residential setting, which changes the expected costs of providing and allocation of the payment for these services.

Much of the public feedback around habilitation services focused on the facility or residential portion of those services. Commenters noted that rent, utilities, property maintenance, and other costs associated with residential or facility-based services can vary significantly. One commenter suggested that if residential habilitation was included in the minimum performance requirement, the minimum performance level for residential habilitation should be set at 75 percent to account for additional administrative costs. A few other commenters suggested that a different minimum performance level should be set for habilitation services, if included, but did not specify a particular percentage.

Some commenters also suggested that residential services might require more, or different staffing levels, as well as different types of staff than home-based services, which might change the necessary minimum performance level. Commenters disagreed, however, on whether these staffing differences would necessitate a higher or lower minimum performance level than for in-home services, and commenters did not recommend a percentage to specifically address the perceived differences in staffing. One commenter objected to any discussion of residential settings, out of concern that this would appear to promote congregate settings in violation of the home and community-based settings requirements; the commenter stated that all services should be provided in the community.

Several commenters recommended that we not apply the minimum performance level at § 441.302(k)(3)(i) to habilitation services and encouraged us to collect data on the percent of payments for habilitation services.

Response: We believe that the comments we received affirm our decision not to apply the HCBS payment adequacy policy we are finalizing at § 441.302(k) to habilitation or other facility-based services (in which services are delivered in a provider-operated physical location and for which facility-related costs are included in the Medicaid payment rate) due to the number of additional or variable expenses associated with facility-based services. While outside the scope of this final rule, we refer readers to and our requirements for, and the criteria of, a home and community-based setting at § 441.301(c)(4) and (5).

We agree with commenters that additional data collection on habilitation services would be useful. Please refer to the discussion of § 441.311(e) in section II.B.7. of this rule, below.

Comment: Although not necessarily supporting the inclusion of habilitation services in the minimum performance requirement, commenters worried about the impact on beneficiaries receiving habilitation services, who are largely individuals with intellectual or developmental disabilities or behavioral health needs. Some commenters stated that direct care workers who had been providing habilitation services might switch to working for providers that offer homemaker, home health aide, or personal care services because they believed that the requirements at § 441.302(k), if finalized, would lead to increased wages paid to these workers or to Medicaid agencies allocating more resources for these services. One commenter speculated that, if a lower minimum performance level was set for residential habilitation, this would encourage more services to be provided in congregate settings because providers would try to take advantage of the lower minimum performance level. Several commenters that provided services to people with intellectual disabilities and people with mental illness suggested we amend § 441.302(k)(3)(i) to specify an exclusion for direct care workers (or direct service professionals) providing services for individuals with intellectual and developmental disabilities or severe mental illness, as they believed that many of these services are delivered as facility-based habilitation services; the commenters were concerned that these providers have additional non-compensation expenses that are not considered by the proposal, and that it was unclear whether facility-based services were already excluded from the proposal.

Response: We agree that, by excluding habilitation services from this requirement, we are excluding services that are used more frequently by certain populations. This was not our intent, and we do not intend to explicitly exclude certain services from this requirement on the basis of the population receiving the service. However, as noted above, because of differences in these services, we do not believe we can set an appropriate minimum performance level for these services at this time. Although we are not requiring that habilitation or other facility-based services (in which services are delivered in a provider-operated physical location and for which facility-related costs are included in the Medicaid payment rate) be included in the minimum performance requirement, States are able to set wage pass-through requirements of their own for such services to promote the stability of the workforce; we also believe that States may naturally adjust rates or wages in other services in response to the implementation of the minimum performance requirement for homemaker, home health aide, and personal care services.

[112] See Centers for Medicare & Medicaid Services, ''Application for a § 1915(c) Home and Community Based Waiver: Instructions, Technical Guide and Review Criteria.'' January 2019. Available *at https://wms-mmdl.cms.gov/WMS/help/35/Instructions_TechnicalGuide_V3.6.pdf.*

Comment: One commenter expressed a concern that the minimum performance requirement would apply to skilled nursing facilities. Several commenters requested that we clarify in § 441.302(k)(3)(i) that direct care workers would be excluded from the minimum performance requirement if they are providing services in residential settings. One commenter requested that we clarify that assisted living facilities or assisted living services are not included in the minimum performance requirement, while another commenter raised concern about a lack of clarity about whether the requirement applies to assisted living facilities.

Response: The requirements we are finalizing in this section II.B. of this rule only apply to HCBS, and the minimum performance requirement at § 441.302(k)(3) applies specifically to homemaker, home health aide, and personal care services as set forth at § 440.180(b)(2) through (4). However, while the minimum performance requirement would not apply to institutional services (because those are not HCBS), we decline to explicitly restrict the application of this requirement on the basis of different community-based settings. As we noted in prior responses, we selected homemaker, home health aide, and personal care services because these are typically services delivered in the home. However, we acknowledge that beneficiaries may live in different residential settings that are considered homes, and that these services may be bundled with other services delivered to beneficiaries in residential settings.

Comment: A number of commenters requested that we add private duty nursing to the services subject to the minimum performance requirement.

Response: We believe that at least some commenters may be referring to private duty nursing as defined at section 1905(a)(8) of the Act and § 440.80 of our regulations. As discussed in greater detail below in section II.B.5.g. of this rule, we are not planning to require that the minimum performance level be applied to services authorized under section 1905(a) at this time. We note that home health aide services, included in § 440.180(b)(3) but authorized as part of a section 1915(c) waiver, are included in the minimum performance requirement. It is possible that some services that commenters are characterizing as ''private duty nursing'' may fall within the category of a section 1915(c) home health aide service, even as we acknowledge that Federal requirements for private duty nursing specify that these are skilled care services provided by a registered nurse or licensed practical nurse.

Comment: A few commenters recommended that we apply the minimum performance requirement to a number of other services that are experiencing staffing shortages, including: job supports; respite provided in the community; community habilitation services; in-home cognitive rehabilitation therapy; and in-home physical, occupational and speech therapy services. A few commenters suggested, without specifying which services, that the minimum performance requirement ought to be expanded to other services, or that it would be easier to administer if applied to a broader array of services than just homemaker, home health aide, and personal care services.

Response: We thank the commenters for their suggestions and will take them under consideration for potential future rulemaking. As we noted earlier in this section of the final rule, we selected homemaker, home health aide, and personal care services because they are services for which we expect that the vast majority of payment to be comprised of compensation for direct care workers. Further, they are high-volume and high-cost services,[113] and as a result, we believe that targeting these services will maximize the impact of this requirement by addressing the needs of many beneficiaries and promoting better oversight of the allocation of Medicaid rates for frequently used services. We note that States are able to apply wage pass-through requirements to additional services if they choose.

After consideration of the comments received, we are finalizing our proposed language at § 441.302(k)(3) to apply the minimum performance requirement to homemaker, home health aide, and personal care services as set forth at § 440.180(b)(2) through (4).

d. Definition of Compensation (§ 441.302(k)(1)(i))

At § 441.302(k)(1)(i), we proposed to define compensation to include salary, wages, and other remuneration as defined by the Fair Labor Standards Act and implementing regulations (29 U.S.C. 201 *et seq.,* 29 CFR parts 531 and 778), and benefits (such as health and dental benefits, sick leave, and tuition reimbursement). In addition, we proposed to define compensation to include the employer share of payroll taxes for direct care workers delivering services under section 1915(c) waivers. We considered whether to include training or other costs in our proposed definition of compensation. However, we determined that a definition that more directly assesses the financial benefits to workers would better ensure that a sufficient portion of the payment for services went to direct care workers, as it is unclear that the cost of training and other workforce activities is an appropriate way to quantify the benefit of those activities for workers. We requested comment on whether the definition of compensation should include other specific financial and non-financial forms of compensation for direct care workers.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A couple of commenters noted support for our definition of compensation and encouraged us to finalize the definition as proposed.

Response: We thank the commenters for their support.

Comment: Several commenters expressed concern that workers' overtime pay would not be considered part of the definition of compensation.

Response: Our definition of compensation as proposed at § 441.302(k)(1)(i)(A) included salary, wages, ''and other remuneration as defined by the Fair Labor Standards Act'' and its regulations. As the Fair Labor Standards Act includes overtime pay in its definition of wages, overtime pay therefore is included in our definition of compensation as well.

Comment: Many commenters supported the inclusion of health and dental insurance and sick leave in the definition of benefits at § 441.302(k)(1)(i)(B). A few commenters requested that life insurance, disability insurance, and retirement contributions also be added to this definition. Several commenters also requested clarification as to whether paid time off was included in the definition of compensation, and a few suggested that it should be included.

One commenter noted that our definition of compensation was too broad, particularly the use of the term ''such as'' when describing the inclusion of benefits. The commenter expressed concern that employers could over-include items in compensation by calling them ''benefits.'' One commenter worried that if too many benefits were included in compensation, this would reduce workers' take-home pay.

One commenter expressed concerns that it will be difficult for State

[113] Centers for Medicare & Medicaid Services. ''Trends in Rate Methodologies for High-Cost, High Volume Taxonomies.'' *https://www.medicaid.gov/sites/default/files/2019-12/trends-in-rate-august-2017.pdf.* Last access October 2, 2023.

Medicaid agencies to quantify benefits included in direct care worker compensation.

Response: We believe that all the items identified by these commenters—life insurance, disability insurance, retirement, and paid time off—would be reasonably considered part of compensation. In its glossary, the Bureau of Labor Statistics (BLS) defines compensation as ''employer costs for wages, salaries, and employee benefits,'' and notes that the National Compensation Survey includes the following categories in employee benefits: insurance (life insurance, health benefits, short-term disability, and long-term disability insurance); paid leave (vacations, holidays, and sick leave); and retirement (defined benefit and defined contribution plans).[114] We believe the items suggested by the commenters align with our intent and are reflected by a common understanding of ''benefits'' as exemplified in the BLS glossary.

To help clarify what is meant by ''benefits,'' we are modifying the language we proposed at § 441.302(k)(1)(i)(B) in this final rule. We are retaining ''health and dental benefits'' but also are adding to the list ''life and disability insurance.'' We note that the definition used by BLS simply refers to health benefits, life insurance, and different types of disability insurance collectively as ''insurance,'' but we believe that spelling out examples of types of insurance is useful here. In the context of our definition, ''insurance'' listed by itself might be unclear (since it could be confused with other types of insurance that would not be considered compensation, like employers' liability insurance), and we wish to make it clear that the benefits must benefit the employee directly. We are also modifying ''sick leave'' to the broader term ''paid leave,'' as this should be understood to cover any time for which the employee is paid, whether it be for sick leave, holidays, vacations, and so forth. We also are adding retirement, which we believe is also a useful blanket term for different types of retirement plans or contributions on the employee's behalf. After consideration of public comments, we are finalizing § 441.302(k)(1)(i)(B) with modification to specify that compensation includes benefits, such as health and dental benefits, life and disability insurance, paid leave, retirement, and tuition reimbursement.

When proposing that benefits be included in the definition of compensation, we intentionally included the phrase ''such as'' to indicate that the examples of benefits provided in the definition is not exhaustive. We did not attempt to list all possible benefits in the regulatory definition, as we believe that would run the risk of creating a definition that is too narrow. We plan to provide technical assistance to States on how to help ensure that providers are applying a reasonable definition of ''benefits'' and are only counting expenses thereunder that would reasonably be considered an employee benefit.

Comment: Some commenters supported including employers' share of payroll taxes in the definition of compensation at § 441.302(k)(1)(i)(C). However, several commenters recommended that this expense be removed from the definition, as these are not expenses included in employees' take-home pay and are the responsibility of the employer. Several commenters requested that employers' contributions to worker's compensation and unemployment insurance be included in the definition of compensation.

Response: It is our intent to include employers' payroll tax contributions for unemployment insurance and workman's compensation (as well as payments required by the Federal Insurance Compensation Act) under § 441.302(k)(1)(i)(C) and thus as part of our definition of compensation for the purposes of the requirements at § 441.302(k). While not necessarily paid directly to the workers, these expenses are paid on their behalf. We also note, for instance, that per the BLS, the National Compensation Survey calls these payroll taxes ''legally mandated employee benefits'' and includes them as part of the definition of ''employee benefits'' for the purposes of determining compensation.[115] We plan to provide technical assistance to States on how to help ensure that providers are including payroll tax contributions for unemployment insurance and workman's compensation when reporting on compensation to workers.

Comment: Several commenters noted support for including tuition reimbursement in the definition of compensation. Several commenters suggested that costs associated with continuing education should also be included as compensation.

Response: We appreciate the commenters' support. We believe the term ''tuition reimbursement'' is broad enough to cover a variety of scenarios in which a provider may choose to reimburse a worker for tuition costs incurred either prior to or during their period of employment.

Comment: A number of commenters supported either including training in the definition of compensation or excluding training from the administrative and other expenses that are not considered compensation under this rule. Some of these commenters noted that certain types of services or programs might involve additional training for staff, such as services delivered to beneficiaries with complex needs. One commenter suggested that raising workers' wages will not necessarily increase service quality if it is not accompanied by better training for staff. Another commenter worried that providers could decide to cut back on training in order to meet the minimum performance level, which could endanger workers. Commenters cited examples of trainings, including in-service trainings and cardiopulmonary resuscitation trainings, as being critical for caring for beneficiaries. Several commenters suggested that direct care workers who serve beneficiaries with higher-acuity needs may require additional training than other direct care workers.

Commenters suggested that, if training was included in the definition of ''compensation'' (or was excluded from administrative and other expenses that are not considered compensation under this rule), training should be defined to include time spent in training, training materials, trainers, and training facilities.

Conversely, one commenter stated that if training was included in the definition of compensation, the minimum performance level should be adjusted further upward (above 80 percent). One commenter stated that if training was included as compensation to direct care workers, this cost should be restricted to the time workers spend in training and not include training materials and payments made to the trainer. One commenter stated that the cost of onboarding new staff should not be considered ''training.'' One commenter expressed skepticism that training was truly a major cost for providers.

Response: We clarify that the time direct care workers spend in training would already be accounted for in the definition of compensation. We agree with commenters on several points: that training is critical to the quality of services; that training needs might vary across (or even within) States' Medicaid HCBS programs, depending on the nature of the services or the acuity of

[114] See BLS ''Glossary'' at *https://www.bls.gov/bls/glossary.htm.*

[115] See BLS ''Glossary'' at *https://www.bls.gov/bls/glossary.htm.*

the beneficiaries served; that training costs may be difficult to standardize; and that worker training is essential to quality, as well as the health and safety of both the direct care worker and the beneficiary. We do not want to encourage providers to reduce training to cut administrative costs.

However, we are also reluctant upon considering comments to treat all training costs as ''compensation'' to the direct care worker. Trainings, as commenters noted, are often required as part of the job and may vary depending on the services or the needs of the beneficiaries they serve. We are concerned that including training costs in the definition of compensation could mean that direct care workers with higher training requirements would see more of their ''compensation'' going to training expenses, which could cause them to receive lower take-home pay than colleagues with fewer training requirements.

Rather than include training costs in the definition of compensation at § 441.302(k)(1)(i)), we are creating a new definition at § 441.302(k)(1)(iii) to define excluded costs for the purposes of the payment adequacy requirement at § 441.302(k)(3). Excluded costs are those that are not included in the State's calculation of the percentage of Medicaid payments that is spent on compensation for direct care workers required at § 441.302(k)(3). In other words, States would ensure providers deduct these costs from their total Medicaid payments before performing the calculation. We are specifying at § 441.302(k)(3)(iii) that excluded costs are limited to: training costs (such as costs for training materials or payment to qualified trainers); travel costs for direct care workers (such as mileage reimbursement or public transportation subsidies); and costs of personal protective equipment for direct care workers. This would mean that providers could deduct the total eligible training expenses, travel costs, and personal protective equipment for direct care workers from the total payments they receive for homemaker, home health aide, and personal care services before the compensation percentage is determined for the minimum performance level as required under § 441.302(k)(3).

The training costs that are excluded costs under § 441.302(k)(1)(iii) are limited to those costs associated with the training itself (such as qualified trainers and materials) and are distinct from the compensation paid to a direct care worker participating in the training as part of their employment duties under § 441.302(k)(1)(i).

Comment: One commenter requested clarification as to whether travel expenses were part of the definition of ''compensation.'' Many commenters stated that travel or transportation expenses should be included in the definition of compensation, or not treated as an administrative expense. Many commenters also expressed the concern that it would be difficult to cover the cost of travel as part of administrative expenses and other expenses that are not considered compensation under this rule, especially in rural areas where direct care workers may have to travel large distances to visit clients or transport them to appointments. A few commenters worried that if travel were considered an administrative expense, providers would be reluctant to serve beneficiaries outside of a narrow service area to save on travel expenses. A number of direct care workers shared experiences of having to pay for gas out-of-pocket when they transported beneficiaries and having to shoulder the financial burden of wear-and-tear on their cars. One commenter noted that travel costs are frequently included in rate calculations. Several commenters suggested that ''travel,'' if included in the definition of compensation, should include time workers spent travelling, mileage reimbursement, and public transportation reimbursement.

However, a few commenters specifically noted that travel should not be considered part of the definition of compensation. One commenter noted that due to the variability of travel costs, it would be difficult to include travel in a standardized definition of compensation.

Response: We agree with commenters that certain travel-related expenses should not be considered compensation to direct care workers. Travelling to beneficiaries' homes or assisting them in the community is an essential function of the job, and thus, travel reimbursement is not for the direct care worker's personal benefit.[116] We also agree that travel costs will vary significantly by region and even by beneficiary. We too are concerned that including travel in the definition of compensation could mean that direct care workers with higher travel demands would see more of their compensation going to travel, which could cause them to receive lower take-home pay than colleagues with lower travel demands.

At the same time, we are aware of the critical importance of travel to the delivery of these services and do not want to create unintended consequences. We are persuaded by commenters' concerns that counting travel as an administrative expense could induce some providers to stop serving beneficiaries that live outside certain regions. We would also be concerned if direct care workers were expected to shoulder the financial burden of travel out-of-pocket, as appears to be happening in some cases now.

To preserve beneficiary access to services and avoid burden or disparate impact on beneficiaries, direct care workers, and providers in rural or underserved areas, we are excluding travel costs in this final rule from the calculation of the percent of Medicaid payments for certain services going to compensation for direct care workers. This means that providers can deduct the total travel expenses for direct care workers that providers incur from the total Medicaid payments they receive before the compensation percentage is determined.

In order to reflect the exclusion of travel costs from the payment calculation, we are adding a new § 441.302(k)(1)(iii)(B) that specifies that travel costs (such as reimbursement for mileage or public transportation) may be considered an excluded cost for the purposes of the minimum performance requirement at § 441.302(k)(3). The travel costs that are excluded costs under § 441.302(k)(1)(iii) are limited to those costs associated with the travel itself (such as reimbursement for mileage or public transportation) and are distinct from the compensation paid to a direct care worker for any time spent traveling as part of their employment duties under § 441.302(k)(1)(i). Please refer to our discussion in an earlier response regarding the new definition of excluded costs at § 441.302(k)(1)(iii) and its effect for the calculation required at § 441.302(k)(3).

Comment: Several commenters expressed concerns about covering the cost of vehicle purchases or maintenance as an administrative expense. One commenter suggested that if travel were included in the definition of compensation, it should include the cost of vehicles or vehicle maintenance.

Response: We note that the payment adequacy requirement applies to Medicaid payments for homemaker services, home health aide services, and personal care services. In our

[116] *See* 29 U.S.C. 207(e)(2) (permitting employers to exclude ''reasonable payments for traveling expenses'' when determining an employee's regular rate of pay under the FLSA); *see also* 29 CFR 778.217 (same).

experience, it is rare that providers would be purchasing vehicles for these services or that vehicle purchases would be part of the rate. We do not expect that the cost of vehicles would be part of excludable travel costs, but we plan to provide technical assistance to States on a case-by-case basis.

Comment: Several commenters noted that personal protective equipment (PPE) for staff should be counted as compensation or that these expenses should not count as an administrative expense. Several direct care workers also shared experiences of having to provide their own PPE during the COVID–19 public health emergency (PHE), and the harms caused to them both physically and financially by contracting COVID–19.

Response: We agree, particularly given the recent experience with the COVID–19 PHE, that PPE should not be treated as an administrative expense. Providing direct care workers with adequate PPE is critical for the health and safety of both the direct care workers and the beneficiaries they serve. We also do not believe that direct care workers should have to pay for PPE out-of-pocket or that it is considered part of their compensation.

Similar to our approach with training and travel above, we are excluding the cost of PPE for direct care workers in this final rule from the calculation of the percentage of payments spent on compensation for direct care workers. In order to reflect the exclusion of PPE costs from the payment calculation, we are adding new §§ 441.302(k)(1)(iii) that specifies that PPE costs for direct care workers may be considered an excluded cost for the purposes of the minimum performance requirement at § 441.302(k). Please refer to our discussion in an earlier response regarding the new definition of excluded costs at § 441.302(k)(1)(iii) and its effect for the calculation required at § 441.302(k)(3).

Comment: Several commenters requested clarification as to what activities and costs would not be counted as compensation under this rule. A significant number of commenters described other activities or costs they believed should count as compensation, should not be counted as part of non-compensation costs, or simply would not be affordable if providers were left with only 20 percent of the Medicaid rate for personal care, homemaker, or home health aide services. These included costs associated with:

- Administration, including wages paid to administrative and human resources staff, who perform activities such as billing, payroll processing, contracts management, or scheduling client appointments;
- Other business expenses, such as organization accreditation, liability insurance, and licensure.
- Human resources activities, including recruitment activities or advertising for new staff.
- Background checks, drug screening, and medical screening for employees (such as testing staff for tuberculosis prior to starting service delivery).
- Office space and utilities (especially for providers that are required by State law to have a physical office).
- Office supplies, medical supplies, food, or other out-of-pocket expenses for clients, IT, mobile devices (including those used for electronic visit verification), and staff uniforms.
- Non-cash awards to direct care workers, such as parties, staff retreats, gifts for staff, Employee Assistance Programs, or other wellness programs.
- Recordkeeping and complying with quality measures and other reporting requirements.

Commenters noted that these costs are essential to operating a service organization. Commenters also noted that at least some of these costs, such as office space, are fixed costs, or costs that are beyond providers' control.

Response: We believe that most of the items listed above would qualify as administrative expenses, but some activities may be considered compensation or excluded costs under the definitions we are finalizing at § 441.302(k)(1), depending on the context. We clarify that, by designating activities as administrative and other expenses that are not considered compensation under this rule, we do not suggest that they are inessential. However, we also believe, as has been discussed in prior responses, that a vast majority of the payment for homemaker, home health aide, and personal care services must be spent supporting core activities that are performed by direct care workers. As noted by commenters in earlier comment summaries, we also do not want States to allow providers to add so many non-cash benefits to a worker's compensation that their take-home pay is excessively reduced. We plan to provide technical assistance to States to help ensure that States understand what are considered administrative and other expenses that are included in the percentage calculation and what are considered excluded costs.

Comment: Several commenters raised concerns that wages spent for staff conducting certain beneficiary support activities would not be considered compensation. These activities include completing person-centered service plans or scheduling client appointments.

Response: We believe that some of the activities described by commenters are activities that would be performed by staff who would classify as direct care workers, as we proposed to define at § 441.302(k)(1)(ii). We refer readers to our discussion of our proposed definition of direct care workers in the next section below. We plan to provide technical assistance to help States appropriately identify direct care workers and, separately, administrative staff, administrative activities, and other costs that are not considered compensation under this rule.

Comment: A few commenters expressed the concern that employers will shift more administrative activities to direct care workers, to avoid having these activities fall under administrative and other costs that are not considered compensation under this rule. The commenter stated that this could increase burnout for direct care workers.

Response: As discussed earlier, the definition of compensation we proposed, and are finalizing with modification, includes all compensation paid to direct care workers for activities related to their roles as direct care workers. States should ensure providers do not count in the percentage calculation at § 441.302(k)(3) compensation for the time that workers spend on administrative or other tasks unrelated to their roles as direct care workers as compensation to direct care workers. We would not view as permissible under this regulation the shifting of administrative tasks to direct care workers as a way to inflate compensation for direct care workers. However, providers can count as compensation to direct care workers the time that direct care workers spend on tasks, including administrative tasks, such as completing timecards, that are directly related to their roles as direct care workers in providing services to beneficiaries. We plan to provide States with technical assistance on how to accurately capture compensation for workers who provide direct care and perform administrative or other roles. However, we decline to make changes in this final rule based on these comments.

Comment: Several commenters requested clarification on what was included in the denominator of the calculation (in other words, what is meant by ''payments'' when calculating the percent of payments being spent on compensation for direct care workers). One commenter suggested that rather

than requiring 80 percent of Medicaid payments be spent on compensation, we require that 80 percent of all revenue be spent on compensation. One commenter requested clarification about whether, for managed care delivery systems, payment is the State's capitation payment to the MCO or the MCO's payment to the home care provider agency. The commenter also recommended that we require States to set a minimum payment rate that MCOs or other entities pay home care agencies and that the minimum rates be set at a level to pay workers the locally required minimum wage and other compensation as defined in the regulation, and for the home care agency to reserve 20 percent overhead.

A few commenters made specific suggestions for parameters of what should be included or excluded in the denominator, such as:

- Only collected revenue (and not billed charges) would be considered as base or supplemental payments;
- Excluding refunded or recouped payments from current or prior years based on program financial audits;
- Excluding chargebacks; and
- Excluding bad debt.

Response: For Medicaid FFS payments in the denominator of the calculation should include base and supplemental payments (as described in SMDL 21–006 [117]). Those base and supplemental payments should only include payments actually collected, or revenue, rather than billed charges. In addition, refunded or recouped payments from current or prior years based on program financial audits, chargebacks, and bad debt should be excluded from those base and supplemental payment amounts. We are available to provide States with technical assistance related to calculating payments for the purpose of determining the percent of all payments that is spent on compensation.

For Medicaid managed care, payments refer to payments from the managed care plan to the provider and not the capitation payment from the State to the managed care plan. Further, for Medicaid managed care, payments in the denominator of the calculation should include only those payments actually collected and exclude refunded or recouped payments from current or prior years based on program financial audits, chargebacks, and bad debt. We note that section 1902(a)(30)(A) of the Act does not provide us with authority to require specific payment rates or rate-setting methodologies.

As discussed throughout this section (II.B.5), we proposed the requirements at § 441.302(k) using our authority under section 1902(a)(30)(A) of the Act, which requires State Medicaid programs to ensure that payments to providers are consistent with efficiency, economy, and quality of care and are sufficient to enlist enough providers so that care and services are available to beneficiaries at least to the extent as to the general population in the same geographic area. We believe section 1902(a)(30)(A) of the Act speaks specifically to Medicaid payments, not to all revenue received by providers (which may be from various sources); thus, we decline to modify the requirement to affect non-Medicaid revenues.

Comment: One commenter requested that revenue from value-based care (VBC) arrangements in managed care be exempt from the calculation so as not to disrupt State or managed care efforts moving toward VBC or to disincentivize providers from pursuing innovative strategies to improve health and financial outcomes such as lowering emergency room visits, inpatient utilization, and admissions from HCBS to inpatient settings such as nursing facilities. The commenter also noted that providers must make numerous additional investments above and beyond typical compensation rates for a VBC or pay-for-performance (PFP) arrangement to work. Additionally, the commenter noted, VBC and PFP programs rely on lengthy cycles of data, tracking, analysis, and reconciliation before additional payments are made. The commenter stated that, if these types of payments are included in the denominator of the calculation, this will prove disruptive to these programs.

Response: We appreciate the commenter raising these concerns and agree that VBC, PFP, and other unique payment arrangements that reward and support quality over quantity are important, and it was not our intention to appear to discourage them or minimize their value. However, given the wide-ranging designs of such payments and that most HCBS are often not included in these arrangements, we are not requiring a specific way to address them in this final rule. We also decline to adopt the commenter's suggestion to exempt revenue from VBC arrangements in managed care from the calculation of the percent of Medicaid payments for certain HCBS that is spent on compensation of direct care workers, as such an exemption would undermine the intent of the proposal and the usefulness of the data for assessing the percentage of all Medicaid payments for certain HCBS that is spent on compensation for direct care workers. We plan to provide States with technical assistance as needed on how to include revenues from VBC, PFP, and other unique payment arrangements in the calculation.

After consideration of the comments received, we are finalizing § 441.302(k)(1)(i) with a modification to clarify at § 441.302(k)(1)(i)(B) that compensation includes benefits, such as health and dental benefits, life and disability insurance, paid leave, retirement, and tuition reimbursement.

We are also finalizing a new definition at § 441.302(k)(1)(iii) to define excluded costs, which are costs that are not included in the calculation of the percentage of Medicaid payments that is spent on compensation for direct care workers. In other words, States must ensure providers deduct these costs from their total Medicaid payments before performing the calculation required at § 441.302(k)(3)). Such costs are limited to: (A) Costs of required trainings for direct care workers (such as costs for qualified trainers and training materials); (B) Travel costs for direct care workers (such as mileage reimbursement or public transportation subsidies) provided to direct care workers; and (C) Costs of personal protective equipment for direct care workers.

e. Definition of Direct Care Worker (§ 441.302(k)(1)(ii))

At § 441.302(k)(1)(ii), we proposed to define direct care workers to include workers who provide nursing services, assist with activities of daily living (such as mobility, personal hygiene, eating) or instrumental activities of daily living (such as cooking, grocery shopping, managing finances), and provide behavioral supports, employment supports, or other services to promote community integration. Specifically, we proposed to define direct care workers to include nurses (registered nurses, licensed practical nurses, nurse practitioners, or clinical nurse specialists) who provide nursing services to Medicaid-eligible individuals receiving HCBS, licensed or certified nursing assistants, direct support professionals, personal care attendants, home health aides, and other individuals who are paid to directly provide services to Medicaid beneficiaries receiving HCBS to address activities of daily living or instrumental activities of daily living, behavioral supports, employment supports, or

[117] CMS State Medicaid Director Letter: SMDL 21–006. December 2021. New Supplemental Payment Reporting and Medicaid Disproportionate Share Hospital Requirements under the Consolidated Appropriations Act, 2021. Available at *https://www.medicaid.gov/sites/default/files/2021-12/smd21006.pdf.*

other services to promote community integration. We further identified in the preamble of the proposed rule that our definition of direct care worker is intended to exclude nurses in supervisory or administrative roles who are not directly providing nursing services to people receiving HCBS.

Our proposed definition of direct care worker was intended to broadly define such workers to ensure that the definition appropriately captures the diversity of roles and titles across States that direct care workers may have. We included workers with professional degrees, such as nurses, in our proposed definition because of the important roles that direct care workers with professional degrees play in the care and services of people receiving HCBS, and because excluding workers with professional degrees may increase the complexity of reporting, and may unfairly punish States, managed care plans, and providers that disproportionately rely on workers with professional degrees in the delivery of HCBS. We also proposed to define direct care workers to include individuals employed by a Medicaid provider, State agency, or third party; contracted with a Medicaid provider, State agency, or third party; or delivering services under a self-directed service model. This proposed definition is in recognition of the varied service delivery models and employment relationships that can exist in HCBS waivers. We requested comment on whether there are other specific types of direct care workers that should be included in the definition, and whether any of the types of workers listed should be excluded from the definition of direct care worker.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported finalizing the definition of direct care worker as proposed. However, one commenter opposed the entire definition. The commenter noted that the definition, which resembles a definition of direct care worker used by the Department of Labor, is distinguishable from the definition used by the Bureau of Labor Statistics. The commenter recommended that no definition should be finalized until there has been an interagency workgroup to review and coordinate the different definitions.

Response: As discussed earlier in this section II.B.5.e. of this rule, our proposed definition of direct care worker was intended to capture the diversity of roles and titles across States that direct care workers may have. It was also intended to include individuals in the varied service delivery models and employment relationships that can exist in HCBS waivers. As discussed later in this section II.B.5.e. of this rule, we are finalizing the definition of direct care worker largely as proposed with a modification to clarify that direct care workers include nurses and other staff providing clinical supervision, as we do not want to discourage clinical oversight that contributes to the quality of services by creating a disincentive for providers to hire clinicians when necessary. We believe that the definition of direct care worker, as finalized, appropriately defines direct care worker for the specific purposes of the requirements in § 441.302(k), and we note that it was subject to interagency review.

Comment: Several commenters supported including clinicians (such as those we proposed at § 441.302(k)(1)(ii)(A)) in the definition of direct care worker. Commenters noted that providers are often required to have clinicians on staff and that such clinicians are critical to ensuring quality of care. A few commenters, however, expressed ambivalence or reservations about including clinicians in the definition of direct care worker. One commenter noted that some States do not include nurses in their State definitions of direct care worker. A few commenters observed that because clinicians (including nurses) generally earn higher wages, providers that employ clinicians will have an easier time reaching the minimum performance level for direct care worker compensation or that the higher wages of clinicians will mask the lower wages of direct care workers who do not have professional degrees and generally earn lower wages.

Response: We continue to believe it is appropriate to include clinicians (such as registered nurses, licensed practical nurses, nurse practitioners, or clinical nurse specialists) in the definition of direct care worker and are finalizing the definition in this final rule with these clinicians included. There is a shortage of nurses and other clinicians delivering HCBS, and we believe it is important to support these members of the HCBS workforce (especially as they also work directly with beneficiaries). We echo observations from commenters that some services are required to be delivered or monitored by clinicians. We also would not want to discourage clinical oversight that contributes to the quality of services by creating a disincentive for providers to hire clinicians when necessary. Therefore, we are clarifying that our definition of direct care worker is intended to include nurses and other staff who directly provide services to beneficiaries or who provide clinical supervision. However, consistent with the proposed rule, our definition is intended to exclude staff who provide administrative supervision. We are finalizing a modification at the end of § 441.302(k)(1)(ii)(F) to specifically include nurses and other staff providing clinical supervision.

Comment: One commenter suggested that if a State requires that a program employ a nurse to perform occasional beneficiary visits, the State should pay the nurses directly, rather than requiring the providers to pay them.

Response: We thank the commenter for this suggestion. While we do not intend to establish specific requirements for how States pay for services provided by nurses, we agree that this could be a solution for States that would prefer for providers to reach the payment adequacy requirement without relying on salaries for clinical staff. We decline to make changes in this final rule based on this comment.

Comment: A number of commenters requested that we include private duty nurses, including registered nurses, licensed practical nurses, and certified nursing assistants, in the definition of direct care worker.

Response: We note that private duty nurses are not necessarily a separate category of worker, but rather registered nurses, licensed practical nurses, or certified nursing assistants who provide services classified and billed as private duty nursing. As a technical matter, we clarify that only registered nurses and licensed practical nurses may provide private duty nursing services authorized under § 440.80. As discussed above, these types of clinicians are included in the definition of direct care worker in § 441.302(k)(1)(i)(A) so long as they are providing one of the three HCBS services specified in the minimum performance requirement (homemaker, home health aide, or personal care services). However, private duty nursing is not one of the services we have proposed, and are finalizing, for application of this the minimum performance requirement.

Comment: Many commenters recommended that nurse supervisors be included in the definition of direct care workers. Several of these commenters noted that these are required positions for their programs. Some commenters observed that nurse supervisors perform important activities like supervising and training other direct care workers,

coordinating beneficiaries' care, or completing documentation and other paperwork specific to beneficiaries' care (as opposed to paperwork related to business administration). Several commenters stated that clinical supervision is critical to the quality of HCBS. A few commenters noted that nurse supervisors sometimes visit beneficiaries or provide direct services when filling in for absent direct care workers.

One commenter noted support for excluding general administrative or supervisory staff from the definition of direct care workers. A few commenters expressed concerns about the exclusion of administrative or supervisory staff who may sometimes also provide services to beneficiaries. Some of these commenters noted that especially during workforce shortages, administrative staff or supervisors may fill in for direct care workers. A couple of commenters requested clarification on how wages for staff who perform both direct care work and administrative or supervisory work should be counted for the purposes of complying with the minimum performance level. One commenter requested clarification on whether first line supervisors of direct support professionals are included in the definition of direct care workers.

Several commenters stated that they opposed the exclusion of supervisory or managerial staff because these are required positions for their programs. Several commenters noted that staff who provide supervision or perform administrative tasks, such as understanding and reviewing compliance and other regulatory requirements, are critical to quality. One commenter expressed the concern that excluding supervisory or managerial staff from the 80 percent minimum performance level would mean that providers would have to lower the salaries of these positions, and then in turn may have trouble filling these positions. One commenter raised concerns about ''wage compression,'' with providers reducing wages for higher-skilled jobs or paying these jobs more like entry-level jobs.

Response: We are persuaded that nurses or other staff who provide clinical oversight and training for direct care workers participate in activities directly related to beneficiary care (such as completing or reviewing documentation of care), are qualified to provide services directly to beneficiaries, and periodically interact with beneficiaries should be included in the definition of direct care workers at § 441.302(k)(1)(ii). As noted earlier, we are modifying our definition of direct care worker at § 441.302(k)(1)(ii)(F) to clarify that it includes nurses and other staff providing clinical supervision. However, consistent with the proposed rule, our definition is intended to exclude staff who provide administrative supervision (such as overseeing business operations).

While we acknowledge that administrative staff and administrative supervisors are often required staff and perform essential functions (including quality and compliance reporting and recordkeeping), we believe it is critical for the economic and efficient use of Medicaid funds that the vast majority of Medicaid payment for homemaker, home health aide, and personal care services must go to supporting the core activities of that service; the core activities of homemaker, home health aide, and personal care services are performed by direct care workers. As discussed above, evidence specifically shows that direct care workers are paid low wages and, thus, our priority is ensuring a greater share of Medicaid payments go to direct care workers' compensation. If there is an insufficient number of direct care workers employed by a provider, then those HCBS cannot be delivered, and beneficiaries may not be able to access the HCBS they need. We will continue to partner with States to help providers find efficient ways to support their administrative and reporting requirements.

Comment: Many commenters expressed concern that direct support professionals were excluded from the definition of direct care worker, as direct care workers are often associated with provision of services to older adults and people with physical disabilities, while direct service professionals typically provide services to people with intellectual and developmental disabilities.

Response: We note that direct support professionals are explicitly included in the definition of direct care worker at § 441.302(k)(1)(ii)(C), so there is no need to further modify the definition of direct care worker in response to these comments. If someone designated by their State as a direct support professional provides a service that is subject to the minimum performance requirement, their compensation will be included in the calculation for the minimum performance level.

Comment: One commenter suggested that payments to contract employees should not count toward the minimum performance level.

Response: Given the varied nature of HCBS programs, we specifically proposed for the definition of direct care worker at § 441.302(k)(1)(ii)(G) to encompass a broad array of employment relationships. We cannot find sufficient justification for excluding certain types of employment relationships from this requirement and are finalizing our definition of direct care worker to include individuals employed by a Medicaid provider, State agency, or third party; contracted with a Medicaid provider, State agency, or third party; or delivering services under a self-directed service model, as proposed. However, we are making a technical modification for clarity to not finalize § 441.302(k)(1)(ii)(G) and to add language proposed at § 441.302(k)(1)(ii)(G) to the end of § 441.302(k)(1)(ii).

Comment: One commenter opposed including workers who deliver services via a self-directed services delivery model in the definition of direct care workers. They noted that including these workers would ''chip away at the uniqueness at the heart of the self-direction paradigm,'' unintentionally burden self-directed employers and employees, reduce autonomy by introducing a single title for a wide variety of caregiving types, and would not recognize the flexible and interdependent nature of self-direction or the fact that Medicaid beneficiaries who self-direct their services do not retain the funds that remain in budgets at the end of the year.

Response: We thank the commenter for raising their concerns. We decline to make modifications to the definition of direct care worker to exclude direct care workers providing services in self-directed services delivery models generally. We believe it is important for States to have a sufficient direct care workforce to be able to deliver services that are responsive to the changing needs and choices of beneficiaries, as required by section 2402(a)(1) of the Affordable Care Act, regardless of whether they are receiving services through a self-directed services delivery model or a model that is not self-directed. Further, we believe it is important for States to have a sufficient number of qualified direct care workers to provide self-directed personal assistance services, as required by section 2402(a)(3)(B)(iii) of the Affordable Care Act.

However, we do agree that there are certain self-directed services delivery models for which the minimum performance level at (k)(3) would not be appropriate. We intend to apply the requirements at § 441.302(k)(3) to models in which the beneficiary directing the services is not setting the payment rate for the worker (such as

agency-provider models). We do not intend to apply the requirements to self-directed services delivered through models in which the beneficiary sets the payment rate for the worker (such as in individual budget authority models). In the latter scenario, we expect that all or nearly all of that payment rate routinely is spent on the direct care worker's compensation. We are finalizing a new requirement at § 441.302(k)(2)(ii) that clarifies this policy; this requirement is discussed in greater detail in section II.B.5.g. of this final rule.

After consideration of the comments received, we are finalizing the definition of direct care worker at § 441.302(k)(1)(ii) with technical modifications for clarity to change the term, Medicaid-eligible individuals, to the term, Medicaid beneficiaries, in both § 441.302(k)(1)(ii)(A) and (F). We are finalizing § 441.302(k)(1)(ii) with a modification at the end of § 441.302(k)(1)(ii)(F) to provide that direct care workers include nurses and other staff providing clinical supervision. The finalized revised text at § 441.302(k)(1)(ii)(F) will read: Other individuals who are paid to provide services to address activities of daily living or instrumental activities of daily living, behavioral supports, employment supports, or other services to promote community integration directly to Medicaid beneficiaries receiving HCBS available under this subpart, including nurses and other staff providing clinical supervision. We are making a technical modification to not finalize § 441.302(k)(1)(ii)(G) and add language proposed at § 441.302(k)(1)(ii)(G) to the end of § 441.302(k)(1)(ii) to clarify that a direct care worker may be employed by a Medicaid provider, State agency, or third party; contracted with a Medicaid provider, State agency, or third party; or delivering services under a self-directed service model.

f. Reporting (§ 441.302(k)(2))

Section 1902(a)(6) of the Act requires State Medicaid agencies to make such reports, in such form and containing such information, as the Secretary may from time to time require, and to comply with such provisions as the Secretary may from time to time find necessary to assure the correctness and verification of such reports. At § 441.302(k)(2), under our authority at section 1902(a)(6) of the Act, we proposed to require that States demonstrate that they meet the minimum performance level at § 441.302(k)(3)(i) through new Federal reporting requirements at § 441.311(e). We discuss these reporting requirements in our discussion of proposed § 441.311(e) in section II.B.7 of this final rule.

We received public comments on these proposals. The following is a summary of the comments we received and our responses. We also direct the reader to the discussion of § 441.311(e) in section II.B.7. of this final rule for additional comments and responses.

Comment: A number of commenters, while not supporting the minimum performance requirement, did express support for the requirement that States must collect and report data on the percent of Medicaid payments for certain HCBS going to compensation of direct care workers. Commenters noted this reporting could yield important data about the compensation to workers and allow for national comparisons.

Response: We agree with commenters that the reporting requirement proposed at § 441.311(e) will yield important data about compensation to workers that will help support the HCBS direct care workforce and promote better oversight of how Medicaid payments for certain services are used.

We note that, while several commenters encouraged us to finalize the reporting requirement at § 441.311(e) without finalizing the minimum performance requirement at § 441.302(k)(3), no commenter suggested that we finalize the minimum performance requirement without a reporting requirement. We believe that the reference included in § 441.302(k)(2) to the reporting requirement at § 441.311(e) is necessary for CMS to oversee States' compliance with the minimum performance requirement at § 441.302(k)(3); however, the reporting requirement at § 441.311(e) is distinct and severable from the minimum performance requirement at § 441.302(k). As discussed in more detail in section II.B.7, the reporting requirement at § 441.311(e), which we are finalizing with modifications, addresses a broader universe of services than is included in the minimum performance level at § 441.302(k)(3) and has an earlier applicability date than the date we are finalizing at § 441.302(k)(8) (discussed later in this section). While we are finalizing both the minimum performance requirement at § 441.302(k)(3) and the payment adequacy reporting requirement, as amended, at § 441.311(e), these represent distinct policies, and we believe that the reporting requirement can (and will) function independently from the minimum performance requirement.

Comment: Several commenters suggested that we add a requirement to § 441.302(k)(2) that would require States, as part of their assurances of compliance with the minimum percentage requirement, to acknowledge and explain any differences between the actual payment rates for home care services and the rate most recently recommended by the interested parties' advisory group under § 447.203(b)(6) of this final rule and discussed in section II.C. of this rule. The commenters suggested that if the actual rate is lower than the recommended rate, the State would also need to explain why it is sufficient to ensure access to services.

Response: Although the interested parties' advisory group will provide an invaluable perspective on the adequacy of rates, as discussed in greater detail later in this preamble, the role of the group finalized at § 447.203(b)(6) is advisory. States will not be required to follow the recommendations of the group. We believe the policies as we are finalizing strike the right balance of accountability and flexibility for wholly new rate processes. We further note the recommendations of the interested parties' advisory group will be posted publicly for review. Finally, we note that we are also finalizing steps a State must take to demonstrate adequate access to services when proposing a rate reduction or restructuring in circumstances that could result in diminished access to care.

After consideration of the comments received, we are finalizing § 441.302(k)(2) with modifications. For reasons discussed in section II.B.5.g. of this final rule, at § 441.302, we are redesignating paragraph (k)(2) as paragraph (k)(2)(i) to allow for the addition of a new requirement at paragraph (k)(2)(ii) regarding treatment of certain payment data under self-directed services delivery models.

As discussed in section II.B.5.b. of this rule, we are finalizing reporting requirements at § 441.302(k)(6) to ensure accountability in the States' use of the small provider minimum performance level and hardship exemptions. To clarify that States must comply with this requirement, as well as the reporting requirement at § 441.311(e), we are finalizing references to § 441.302(k)(6) in § 441.302(k)(2)(i). We also are finalizing a technical modification for clarity that the State must demonstrate **annually**, consistent with the reporting requirements at §§ 441.302(k)(6) and 441.311(e), that they meet the minimum performance level at § 441.302(k)(3). (New text in bold font).

g. Application to Other Authorities (Proposed at § 441.302(k)(4), Finalized at § 441.302(k)(8); and §§ 441.464(f), 441.570(f), and 441.745(a)(1)(vi))

At § 441.302(k)(4), we proposed to apply the HCBS requirements described in the proposed rule to services delivered under FFS or managed care delivery systems. As discussed earlier in section II.B.1. of this preamble, section 2402(a)(3)(A) of the Affordable Care Act requires States to improve coordination among, and the regulation of, all providers of Federally and State-funded HCBS programs to achieve a more consistent administration of policies and procedures across HCBS programs. In the context of Medicaid coverage of HCBS, it should not matter whether the services are covered directly on an FFS basis or by a managed care plan to its enrollees. The requirement for consistent administration should require consistency between these two modes of service delivery. We accordingly proposed to specify that a State must ensure compliance with the requirements in § 441.302(k) with respect to HCBS delivered both under FFS and managed care delivery systems.

Similarly, because workforce shortages exist under other HCBS authorities, which include many of the same types of services to address activities of daily living or instrumental activities of daily living as under section 1915(c) waiver authority, we proposed to include these requirements within the applicable regulatory sections. Specifically, we proposed to apply the proposed requirements at § 441.302(k) to section 1915 (j), (k), and (i) State plan at §§ 441.464(f), 441.570(f), and 441.745(a)(1)(vi), respectively. Consistent with our proposal for section 1915(c) waivers, we proposed these requirements based on our authority under section 1902(a)(30)(A) of the Act to ensure payments to HCBS providers are consistent with efficiency, economy, and quality of care and are sufficient to enlist enough providers so that care and services are available to beneficiaries at least to the extent as to the general population in the same geographic area. We believed the same arguments for proposing these requirements for section 1915(c) waivers are equally applicable for these other HCBS authorities. We requested comment on the application of payment adequacy provisions across section 1915(i), (j), and (k) authorities. As noted earlier in section II.B.4. of the proposed rule, to accommodate the addition of new language at § 441.464(e) and (f), we proposed to renumber existing § 441.464(e) as paragraph (g) and existing § 441.464(f) as paragraph (h). We requested comment on whether we should exempt, from these requirements, services delivered using any self-directed service delivery model under any Medicaid authority.

We considered whether to also apply these proposed payment adequacy requirements to section 1905(a) ''medical assistance'' State plan personal care and home health services. However, we did not propose that these requirements apply to any section 1905(a) State plan services based on State feedback that they do not have the same data collection and reporting capabilities in place for section 1905(a) services as they do for section 1915(c), (i), (j), and (k) services. Further, the vast majority of HCBS is delivered under section 1915(c), (i), (j), and (k) authorities, while only a small percentage of HCBS nationally is delivered under section 1905(a) State plan authorities. We requested comment on whether we should apply these requirements to section 1905(a) State plan personal care and home health services.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported holding providers delivering care in managed care delivery systems accountable for paying a sufficient amount to direct care workers. A few commenters requested that we clarify how this requirement would apply to MCOs, PIHPs, and PAHPs. One commenter noted that managed care plans do not control the payment rates that contracted providers pay their direct care workers.

A few commenters requested that we clarify managed care plans' responsibility for tracking and reporting expenditures. A few commenters expressed concern that this proposal would pose particular reporting or accounting burdens for providers that participate in multiple Medicaid managed care plans, serve non-Medicaid clients, or receive bundled payments.

Response: We acknowledge commenters' broad concerns about how these requirements will apply to managed care plans and will provide technical assistance regarding specific questions as they are raised during implementation. However, we are finalizing our proposal to apply the requirements at § 441.302(k) to both managed care and FFS delivery systems. We clarify here that the requirements in § 441.302(k) are the ultimate responsibility of States, regardless of whether their HCBS are delivered through an FFS delivery system, managed care delivery system, or both. The minimum performance requirement applies at the provider level, not the managed care plan level. We expect that States will develop an appropriate process with their managed care plans should the State determine that managed care plans have some role in activities such as the data collection or reporting required in § 441.302(k)(2) (being finalized as § 441.302(k)(2)(i)). We agree that managed care plans do not control payment rates that contracted providers pay their direct care workers and reiterate that the focus of § 441.302(k) is on the percentage of the payment to providers that is passed along as compensation to direct care workers.

We plan to provide technical assistance to States with managed care delivery systems to minimize provider reporting and accounting burden and to address questions related to bundled payments that include the affected services (homemaker, home health aide, and personal care services).

Comment: A few commenters specifically noted support for applying the payment adequacy requirement to programs authorized under all section 1915 authorities. One commenter did not support applying this requirement to ''all 1915 waiver authorities'' but did not provide a specific rationale for their recommendation.

Response: We are finalizing §§ 441.464(f), 441.570(f), and 441.745(a)(1)(vi) (applying § 441.302(k) to section 1915(j), (k) and (i) services, respectively) with minor technical modifications as noted later in this section II.B.5.g. of this final rule.

Comment: A number of commenters expressed concerns about the application of the minimum performance level to self-directed services authorized under sections 1915(j) and 1915(k) of the Act. A few commenters, while not necessarily suggesting that self-directed services should be excluded from the payment adequacy requirement, believed that it would take more time and additional guidance to implement the requirement for self-directed services.

Some commenters raised concerns about the application of the requirement to specific models of self-direction, particularly the self-directed model with service budget (as defined in § 441.545(b)) (often referred to as the individual budget authority model), in which the beneficiary sets the direct care worker's wages. Some commenters worried that the application of the minimum performance level to such

models would put the individual beneficiary in the position of acting as a provider for this purpose. Other commenters were concerned that if the minimum performance level was applied to these self-directed services delivery models, beneficiaries would have to apply a set percent of their budget to compensation of workers and thus would lose the flexibility of determining how their budget was spent or what to pay their direct care workers. One commenter pointed out that beneficiaries in self-directed services delivery models do not personally keep unspent funds and, thus, do not stand to profit by lowering direct care workers' wages. A few commenters also requested clarification of how the payment adequacy requirement would impact the co-employment relationship in self-directed services. One commenter noted that the vast majority of HCBS furnished under self-directed services delivery models are paid so that the entire payment rate goes toward direct care worker's wages and other associated costs such as employer taxes, workers' compensation, and other employer requirements such as State-mandated paid sick leave, while payment for financial management services is paid separately. In these models, nearly 100 percent of the payment rate goes toward the direct care worker's wages and associated costs, which would create an unfair comparison to agency-directed services.

A few commenters noted that it would be undesirable to apply the minimum performance level to HCBS furnished via self-directed services delivery models because these services involve additional activities and costs not associated with other types of services. These commenters noted that services furnished via self-directed services delivery models involve more training and human resources support for the beneficiaries to help them hire and direct their workers. One commenter stated that the proposed minimum performance level of 80 percent would be too high to accommodate other non-compensation activities included in self-directed services delivery models, such as employment or day activities, case management, and back up supports.

On the other hand, some commenters noted that self-directed services delivery models should be included in the payment adequacy requirements and that it is important to support compensation for direct care workers who provide HCBS via self-directed services delivery models. One commenter noted that most personal care services in the commenter's State are furnished via self-directed services delivery models.

Response: We agree with commenters that the minimum performance requirement may be difficult to apply (and, in fact, may simply be inapplicable) to self-directed services delivery models with service budget authority in which the beneficiary directing the services sets the worker's wages as the payment rate for the service (such as models meeting the definition of § 441.545(b) for section 1915(k) services, or self-directed services typically authorized under the section 1915(j) authority).

We also agree with one commenter who noted that, because of the separate payment of financial management services, nearly all of the payments for personal care, homemaker, and home health aide services furnished via self-directed services delivery models with service budget authority are spent on compensation for direct care workers. We believe that applying the minimum performance requirement to such models would be ineffectual and an unnecessary burden on States.

We believe the minimum performance requirement is appropriate when applied to a Medicaid rate for self-directed services that includes both compensation to direct care workers and administrative activities and in which the beneficiary did not set the payment rate for the worker.

We note that at least some of the ''non-compensation activities'' identified by one commenter, such as employment or day activities and case management, do not appear to fall under the specific services to which we proposed, and are finalizing, for the minimum performance requirement to apply, and therefore, they would not likely be subject to the minimum performance requirement as finalized.

To clarify the application of § 441.302(k) to HCBS furnished via self-directed services delivery models, we are finalizing a new requirement at § 441.302(k)(2)(ii), specifying that, if the State provides that homemaker, home health aide, or personal care services, as set forth at § 440.180(b)(2) through (4), may be furnished under a self-directed services delivery model in which the beneficiary directing the services sets the direct care worker's payment rate, then the State does not include such payment data in its calculation of the State's compliance with the minimum performance levels at paragraph (k)(3).

We are finalizing the general application of § 441.302(k) to HCBS authorized under section 1915(j), (k), and (i) authorities, with the understanding that some services delivered under these authorities will fall under the exception for self-directed services delivery models being finalized at § 441.302(k)(2)(ii).

We note that the exception at § 441.302(k)(2)(ii) directs States to exclude certain data from the specified excluded self-directed services models when establishing compliance with the minimum performance level or small provider performance level at § 441.302(k)(3). We believe, however, that the regulation text at § 441.302(k) requiring States to assure that payment rates are adequate to ensure a sufficient direct care workforce to meet the needs of beneficiaries and provide access to services in the amount, duration, and scope specified in beneficiaries' person-centered service plans applies to all self-directed services models offered under all section 1915 authorities.

Comment: Commenters were mixed in their support for excluding section 1905(a) services from the payment adequacy requirement. A few commenters expressed strong support for extending the payment adequacy requirement to services authorized under section 1905(a), particularly commenters writing from States in which larger numbers of beneficiaries receive section 1905(a) State plan services. One commenter expressed concern that not including section 1905(a) services would disproportionately exclude direct care workers providing services to children or adults with intellectual and developmental disabilities. One commenter noted that section 1902(a)(6) of the Act gives CMS the authority to apply the requirement section 1905(a) services.

However, several commenters did not support applying the requirement to section 1905(a) State plan services. Many of these commenters simply did not support applying the minimum performance requirement to services under any authority. A few commenters agreed with our concerns that applying the payment adequacy requirement to section 1905(a) State plan services would pose a particular burden on States due to differences in how these services are delivered and monitored.

Several commenters expressed concerns about potential unintended consequences of not applying the minimum performance requirement to section 1905(a) State plan services. In particular, some commenters raised concerns that direct care workers would stop working for providers that deliver section 1905(a) services, in favor of working for providers that were subject to the minimum performance requirement. On the other hand, a few

commenters worried that providers would stop providing services under section 1915 authorities and switch to providing section 1905(a) services to avoid having to comply with the payment adequacy requirement.

Response: At this time, we are not requiring the application of the HCBS payment adequacy requirements at § 441.302(k) to section 1905(a) services. Given our work to better ensure access in the Medicaid program is ongoing, we intend to gain implementation experience with this final rule, and we will take these comments under consideration for any potential future rulemaking regarding section 1905(a) services.

Comment: One commenter requested clarification as to whether the payment adequacy requirements would apply to services delivered under section 1115 authority.

Response: At § 441.302(k)(4) (which we are finalizing at § 441.302(k)(8)), we proposed to apply these requirements to services delivered under FFS or managed care delivery systems, including those authorized under section 1115(a) of the Act. We are finalizing this requirement in this final rule, with modifications as noted herein, including retaining the application to managed care delivery systems authorized section 1115(a).

After consideration of public comments, and for reasons discussed in sections II.B.5.b. and II.B.5.h. of this rule, we are finalizing § 441.302(k)(4) with modifications to redesignate § 441.302(k)(4) as § 441.302(k)(8) and change the date for States to comply with the requirements at § 441.302(k) from 4 years to 6 years. We are finalizing § 441.302(k)(8) with minor modifications to correct erroneous uses of the word ''effective.'' We are retitling the requirement at § 441.302(k)(8) as Applicability date (rather than Effective date). We are also modifying the language at § 441.302(k)(8) to specify that States must comply with the requirements in § 441.302(k) beginning 6 years after the effective date of this final rule, rather than stating that § 441.302(k)(8) is effective 6 years after the effective date of the final rule. In addition, we are finalizing technical modifications to the language pertaining to the applicability date for States providing services through managed care delivery systems to improve accuracy and alignment with common phrasing in managed care contracting policy.

As finalized, the redesignated § 441.302(k)(8) reads: *Applicability date.* **States must comply with the** requirements **set forth in paragraph (k) of this section** beginning *6* years after the effective date of this paragraph; and in the case of the State that implements a managed care delivery system under the authority of section 1915(a), 1915(b), 1932(a), or 1115(a) of the Act and includes **homemaker, home health aide, or personal care services, as set forth at § 440.180(b)(2) through (4)** in the MCO's, PIHP's, or PAHP's contract, ***the first rating period for contracts with the MCO, PIHP, or PAHP beginning*** on or after **the date that is** *6* years after the **effective** date of this paragraph. (New language identified in bold.)

After consideration of the comments, as noted above in this section, we are finalizing a requirement at § 441.302(k)(2)(ii) specifying that if the State provides that homemaker, home health aide, or personal care services, as set forth at § 440.180(b)(2) through (4), may be furnished under a self-directed services delivery model in which the beneficiary directing the services sets the direct care worker's payment rate, then the State does not include such payment data in its calculation of the State's compliance with the minimum performance levels at paragraph (k)(3).

We are finalizing the application of § 441.302(k) to section 1915(j), (k), and (i) services with minor modifications. We are finalizing a technical modification to clarify that the reference to person-centered service plans in §§ 441.464(f), 441.570(f), and 441.745(a)(1)(vi) is to beneficiaries' person-centered service plans. We are also clarifying in §§ 441.464(f), 441.570(f), and 441.745(a)(1)(vi) that while § 441.302(k) applies to services delivered under these authorities, references to section 1915(c) of the Act are instead references to sections 1915(j), (k), or (i), as appropriate.

Additionally, to ensure application of all relevant requirements of § 441.302(k) to section 1915(i) and (k) authorities, we are also finalizing a modification to §§ 441.474(c), 441.580(i) and 441.745(a)(1)(vii) to clarify that the reporting requirement at § 441.302(k)(6) applies to section 1915(j), (k) and (i) authorities, respectively. (We note that discussion of the finalization of §§ 441.474(c), 441.580(i) and 441.745(a)(1)(vii) is in II.B.7. of this final rule.) We note that while we are applying the requirement at § 441.302(k)(6) to section 1915(j), (k), and (k) authorities, States would only be required to comply with this reporting requirement if the State provided services under these authorities described in § 441.302(k)(2)(i) and if the State meets the other criteria set forth in § 441.302(k)(6).

h. Applicability Date (Proposed at § 441.302(k)(4), Being Finalized at § 441.302(k)(8))

As noted throughout the HCBS provisions in this preamble, we recognize that many States may need time to implement these requirements, including to amend provider agreements or managed care contracts, make State regulatory or policy changes, implement process or procedural changes, update information systems for data collection and reporting, or conduct other activities to implement these proposed payment adequacy requirements. We expect that these activities will take longer than similar activities for other HCBS provisions in the rule. Further, we expect that it will take a substantial amount of time for managed care plans and providers to establish the necessary systems, data collection tools, and processes necessary to collect the required information to report to States. As a result, we proposed at § 441.302(k)(4), to provide States with 4 years to implement these requirements in FFS delivery systems following the effective date of the final rule. For States that implement a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act and include HCBS in the MCO's, PIHP's, or PAHP's contract, we proposed to provide States until the first rating period for contracts with the MCO, PIHP, or PAHP, beginning on or after 4 years after the effective date of the final rule to implement these requirements. Similar to our rationale in other sections, this proposed timeline reflects feedback from States and other interested parties that it could take 3 to 4 years for States to complete any necessary work to amend State regulations and work with their State legislatures, if needed, as well as to revise policies, operational processes, information systems, and contracts to support implementation of the proposals outlined in this section. We also considered the overall burden of the proposed rule as a whole in proposing the effective date for the payment adequacy provision. We invited comments on the overall burden associated with implementing this section, whether this timeframe is sufficient, whether we should require a shorter timeframe (such as 3 years) or longer timeframe (such as 5 years) to implement the payment adequacy provisions and if an alternate timeframe is recommended, the rationale for that alternate timeframe.

We received public comments on these proposals. The following is a

summary of the comments we received and our responses.

Comment: A few commenters supported our proposal that the minimum performance requirement go into effect four years after the publication of this final rule. One commenter noted that 4 years should be sufficient time for States and providers to make necessary adjustments. A few commenters noted that 4 years was too long, given the urgency of the workforce shortage. One commenter suggested that we require the minimum performance requirement go into effect January 1, 2025, while another commenter suggested a 2-year effective date. One commenter suggested the requirement should go into effect in 3 years, to align with some of the other proposed effective dates in this rule.

Other commenters recommended that we allow for a longer effective date, such as 6 years. Commenters noted that large-scale changes, such as what would be required to comply with the minimum performance requirement, would take time.

Several commenters suggested that compliance with the minimum performance requirement be phased in over time to give providers and States an opportunity to adjust their systems and policies.

Response: While we are sympathetic to commenters' sense of urgency regarding the workforce shortage, we do not believe it is realistic for States to comply with the requirements earlier than the proposed four years. We agree with commenters that, for some States, ensuring that a minimum percent of Medicaid payments go to direct care worker compensation (and tracking compliance with this requirement) will require a period of adjustment. We do expect that providers should already be aware of their Medicaid revenues and what they pay their workers; however, we acknowledge that they may not already be reporting this information to the States and that the States will need to work with their providers to develop an appropriate reporting mechanism. We also understand that some providers will have to adjust how they operate their business in order to meet the required minimum performance level. We also acknowledge that we will need to provide additional subregulatory guidance and technical assistance to aid in implementation.

We agree with commenters that a slightly longer date for States to comply with the requirements is necessary. We believe that the complementary reporting requirement at § 441.311I (discussed in section II.B.7. of this rule) can be leveraged to create a transition period to aid States in their compliance with § 441.302(k)(3). As such, we are finalizing § 441.302(k)(8) with a modification to change the date for States to comply with the requirements from 4 years to 6 years. The data collected as part of § 441.311(e) will give States feedback on how close they are to reaching the minimum performance level and will help CMS develop targeted technical assistance for States that are farther away from attaining compliance. For States electing to create a State-defined minimum performance level for small providers, this period between reporting and performance will also allow States to make any necessary adjustments to their State-defined minimum performance levels. It will also allow States to make any necessary adjustments to their criteria for hardship exemptions and to identify providers who need hardship exemptions. We will continue to use our standard enforcement tools and discretion, as appropriate, when the requirements at §§ 441.302(k) go into effect.

As noted in section II.B.5.b. and II.B.5.h. of this section, we are creating new requirements at § 441.302(k)(4) through (7) and thus are redesignating proposed § 441.302(k)(4) as § 441.302(k)(8) and finalizing § 441.302(k)(8) with the modifications as noted in section II.B.5.b. of this final rule. We are finalizing § 441.302(k)(8) with minor modifications to correct erroneous uses of the word ''effective.'' We are retitling the requirement at § 441.302(k)(8) as Applicability date (rather than Effective date). We are also modifying the language at § 441.302(k)(8) to specify that States must comply with the requirements in § 441.302(k) beginning 6 years after the effective date of this final rule, rather than stating that § 441.302(k)(8) is effective 6 years after the effective date of the final rule. In addition, we are finalizing technical modifications to the language pertaining to the applicability date for States providing services through managed care delivery systems to improve accuracy and alignment with common phrasing in managed care contracting policy.

i. Summary of Finalized Requirements

After consideration of the public comments, we are finalizing the requirements at § 441.302(k) as follows:

- We are finalizing the assurance requirement at § 441.302(k) with technical modifications.
- We are finalizing § 441.302(k)(1) with a technical modification.
- The definition of compensation at § 441.302(k)(1)(i) (now also at § 441.311(e)(1)(i)) and finalized as proposed, with the exception of § 441.302(k)(1)(i)(B) (now also at § 441.311(e)(1)(i)(B)), which is revised to read: Benefits (such as health and dental benefits, life and disability insurance, paid leave, retirement, and tuition reimbursement).
- The definition of direct care worker at § 441.302(k)(1)(ii) (now also at § 441.311(e)(ii)) is finalized with technical modifications to § 441.302(k)(1)(ii)(A) and (F) (now also at § 441.311(e)(1)(ii)(A) and (F)). We are also finalizing the following addition at the end of § 441.302(k)(1)(ii)(F) (now also at § 441.311(e)(1)(ii)(F)), including nurses and other staff providing clinical supervision. The revised text at § 441.302(k)(1)(ii)(F) (now also at § 441.311(e)(1)(ii)(F)) will read as follows: Other individuals who are paid to provide services to address activities of daily living or instrumental activities of daily living, behavioral supports, employment supports, or other services to promote community integration directly to Medicaid beneficiaries receiving home and community-based services available under this subpart, including nurses and other staff providing clinical supervision. In addition, we are making a technical modification to not finalize § 441.302(k)(1)(ii)(G) and add language proposed at § 441.302(k)(1)(ii)(G) to the end of § 441.302(k)(1)(ii) to clarify that a direct care worker may be employed by a Medicaid provider, State agency, or third party; contracted with a Medicaid provider, State agency, or third party; or delivering services under a self-directed services delivery model.
- A definition of excluded costs is finalized at § 441.302(k)(1)(iii) (now also at § 441.311(e)(1)(iii)) as follows:

Excluded costs means costs that are not included in the calculation of the percentage of Medicaid payments to providers that is spent on compensation for direct care workers. Such costs are limited to:

(A) Costs of required trainings for direct care workers (such as costs for qualified trainers and training materials);

(B) Travel costs for direct care workers (such as mileage reimbursement or public transportation subsidies); and

(C) Costs of personal protective equipment for direct care workers.

- Section 441.302(k)(2) is finalized with modifications. We are redesignating the language at § 441.302(k)(2) as § 441.302(k)(2)(i). We are finalizing § 441.302(k)(2)(i) to include references to the reporting requirements that are finalized at

§§ 441.302(k)(6) and 441.311(e) and the exception finalized at § 441.302(k)(2)(ii). We also made a technical modification for clarity that the State must demonstrate **annually,** consistent with the reporting requirements at §§ 441.302(k)(6) and 441.311(e), that they meet the minimum performance level at § 441.302(k)(3). In addition, we made technical modifications for clarity and precision to specify the specific services (homemaker, home health aide, and personal care services) to which the payment adequacy requirement applies and to specify that these requirements apply to services authorized under section 1915(c) of the Act, unless excepted under § 441.302(k)(2)(ii).

- We are finalizing at new requirement at § 441.302(k)(2)(ii) that clarifies that if the State provides that homemaker, home health aide, or personal care services, as set forth at § 440.180(b)(2) through (4), may be furnished under a self-directed services delivery model in which the beneficiary directing the services sets the direct care worker's payment rate, then the State would not include such payment data in its calculation of the State's compliance with the minimum performance levels at paragraph (k)(3).
- Section 441.302(k)(3) is finalized with several modifications to retitle the requirement as ''*Minimum performance at the provider level*'' and clarify the components of the required calculation and the services that fall within this requirement. Section 441.302(k)(3) is also finalized with modifications to clarify that excluded costs are not included in the calculation of the percentage of total payments to a provider that is spent on compensation to direct care workers and to specify the specific services (homemaker, home health aide, and personal care services) to which the payment adequacy requirement applies. We are also modifying § 441.302(k)(3) to note the exceptions to the minimum performance level that we are adding at (k)(5) (hardship exemption) and (k)(7) (IHS and Tribal health programs subject to 25 U.S.C. 1641).
- Section 441.302(k)(3)(i) is finalized with a clarification that the minimum performance level of 80 percent applies to all payments to a provider, except as provided in paragraph (k)(3)(ii).
- Section 441.302(k)(3)(ii) is amended to add an option for States to set a State-defined small provider minimum performance level. As finalized, § 441.302(k)(3)(ii) reads: (ii) At the State's option, providers determined by the State to meet its State-defined small provider criteria in paragraph (k)(4)(i) of this section, the State must ensure that each provider spends the percentage set by the State in accordance with paragraph (k)(4)(ii) of this section of total payments the provider receives for services it furnishes as described in paragraph (k)(3) on total compensation for direct care workers who furnish those services.
- An option for States to develop criteria to identify small providers to meet the State-defined small provider minimum performance level is added at new § 441.302(k)(4).
- An option for States to provide some providers with a hardship exemption is added at new § 441.302(k)(5).
- Reporting requirements are finalized at § 441.302(k)(6), establishing reporting requirements for States that utilize the small provider minimum performance level and hardship exemption options finalized at § 441.302(k)(4)(ii) and (k)(5), as well as a waiver of these requirements that may be granted under certain circumstances.
- An exemption from the requirements at § 441.302(k) is finalized for IHS and Tribal health programs subject to 25 U.S.C. 1641 at § 441.302(k)(7).
- Section 441.302(k)(4) is renumbered as § 441.302(k)(8) and is finalized, with other technical modifications, to specify that States must comply with the requirements set forth at § 441.302(k)(8) beginning 6 years from the effective date of this final Rule.
- We are finalizing §§ 441.464(f), 441.570(f), and 441.745(a)(1)(vi) with technical modification to clarify that the references to person-centered service plans in §§ 441.464(f), 441.570(f), and 441.745(a)(1)(vi) are to beneficiaries' person-centered service plans. We are also finalizing modifications to clarify that § 441.302(k) applies to services delivered under these authorities, except that references to section 1915(c) of the Act are instead references to sections 1915(j), (k), or (i) of the Act, as appropriate.
- We are finalizing a modification to §§ 441.474(c), 441.580(i), and 441.745(a)(1)(vii) to clarify that the reporting requirement at § 441.302(k)(6) applies to section 1915(j), (k) and (i) authorities, respectively.

6. Supporting Documentation Required (§ 441.303(f)(6))

As discussed in the proposed rule (88 FR 27986), States vary in whether they maintain waiting lists for section 1915(c) waivers, and if a waiting list is maintained, how individuals may join the waiting list. Section 1915(c) of the Act authorizes States to set enrollment limits or caps on the number of individuals served in a waiver, and many States maintain waiting lists of individuals interested in receiving waiver services once a spot becomes available. While some States require individuals to first be determined eligible for waiver services to join the waiting list, other States permit individuals to join a waiting list after an expression of interest in receiving waiver services. This can overestimate the number of people who need Medicaid-covered HCBS because the waiting lists may include individuals who are not eligible for services. According to the Kaiser Family Foundation, over half of people on HCBS waiting lists live in States that do not screen people on waiting lists for eligibility.[118]

We have not previously required States to submit any information on the existence or composition of waiting lists, which has led to gaps in information on the accessibility of HCBS within and across States. Further, feedback obtained during various public engagement activities conducted with States and other interested parties over the past several years about reporting requirements for HCBS, as well as feedback received through the RFI[119] discussed earlier, indicate that there is a need to improve public transparency and processes related to States' HCBS waiting lists. In addition, we have found, over the past several years in particular, that some States are operating waiting lists for their section 1915(c) waiver programs despite serving fewer people than their CMS-approved enrollment limit or cap, even though States are expected to enroll individuals up to their CMS-approved enrollment limit or cap before imposing a waiting list. However, because we do not routinely collect information on States' use of waiting lists and the number of people on waiting lists, we are unable to determine the extent to which States are operating such unauthorized waiting lists or to work with States to address these unauthorized waiting lists.

Section 1902(a)(6) of the Act requires State Medicaid agencies to make such reports, in such form and containing such information as the Secretary may from time to time require, and to comply with such provisions as the

[118] Burns, A., M. O'Malley Watts, M. Ammula. A Look at Waiting lists for Home and Community-Based Services from 2016 to 2021. Kaiser Family Foundation. *https://www.kff.org/47f8e6f/.*

[119] CMS Request for Information: Access to Coverage and Care in Medicaid & CHIP. February 2022. For a full list of question from the RFI, see *https://www.medicaid.gov/medicaid/access-care/downloads/access-rfi-2022-questions.pdf.*

Secretary may from time to time find necessary to assure the correctness and verification of such reports. Based on the authority found at section 1902(a)(6) of the Act, we proposed to require information from States on waiting lists to improve public transparency and processes related to States' HCBS waiting lists and ensure that we are able to adequately oversee and monitor States' use of waiting lists in their section 1915(c) waiver programs. To address new proposed requirements at § 441.311(d)(1), described in section II.B.7. of this rule, on State reporting on waiting lists, we proposed to amend § 441.303(f)(6) by adding a sentence to the end of the existing regulatory text to require that if the State has a limit on the size of the waiver program and maintains a list of individuals who are waiting to enroll in the waiver program, the State must meet the reporting requirements at § 441.311(d)(1).

We received public comments on these proposals. The following is a summary of the comments we received and our responses. We also received a number of comments on the related reporting requirement at § 441.311(d). Those comments are addressed in section II.B.7.

Comment: A few commenters shared local data and anecdotal experiences about States' waiting lists, which some described as containing thousands of people and requiring beneficiaries to wait for long periods of time, even years, before accessing services. One commenter observed that as demand for HCBS grows, the waiting lists will also grow. A few commenters expressed concerns that the long waiting times may result in beneficiaries having to enter institutional care. Commenters also noted that beneficiaries and their families experience confusion regarding waiting lists, including how long they will have to remain on the waiting list before receiving services; commenters noted that this confusion or lack of transparency can make it difficult for beneficiaries to make informed decisions or plan for future care needs.

A few commenters specifically supported our proposed amendment to § 441.303(f) that would require States to report information on waiting lists for section 1915(c) waiver programs, which commenters believed would contribute to transparency and provide additional data to help make future changes within HCBS programs. Commenters believed that a requirement to report this information would improve CMS's ability to provide oversight and to hold States accountable for waiting list practices. A few commenters believed that creating reporting requirements for waiting lists is a necessary step toward the larger goal of reducing HCBS waiting lists through expansion of HCBS programs. A few commenters noted this information is critical when requesting additional appropriations from State legislatures to expand HCBS programs.

Response: We thank the commenters for their support and for sharing their experiences and perspectives. We agree that collecting and reporting data on waiting lists is a critical step in identifying unmet needs among beneficiaries and can support the efficient administration and expansion of HCBS programs.

Comment: A few commenters expressed opposition to adding a reporting requirement for section 1915(c) waiver programs. Commenters noted concerns that this requirement would necessitate changes in States' data collection processes and IT systems.

Response: We address commenters' concerns in more detail in the discussion of § 441.311(d) in section II.B.7. of this rule. As we note in that section, we have designed the reporting requirement to minimize administrative burden on States while still generating valuable data about waiting lists needed to support transparency and accountability. We plan to offer States technical assistance as needed to help align their current data collection practices with what will be needed to comply with this reporting requirement.

After consideration of the public comments, we are finalizing the requirements at § 441.303(f) as proposed. We note that specific recommendations regarding the reporting requirement are addressed in section II.B.7. as part of the discussion of § 441.311(d).

7. Reporting Requirements (§§ 441.311, 441.474(c), 441.580(i), and 441.745(a)(1)(vii))

Section 1902(a)(6) of the Act requires State Medicaid agencies to make such reports, in such form and containing such information, as the Secretary may from time to time require, and to comply with such provisions as the Secretary may from time to time find necessary to assure the correctness and verification of such reports. As discussed in section II.B.1. of the proposed rule, in 2014, we released guidance for section 1915(c) waiver programs in which we requested States to report on State-developed performance measures across several domains, as part of an overarching HCBS waiver quality strategy. The 2014 guidance established an expectation that States conduct systemic remediation and implement a Quality Improvement Project when they score below 86 percent on any of their performance measures. Under our authority at section 1902(a)(6) of the Act, we proposed requirements at § 441.311, in combination with other proposed requirements identified throughout the proposed rule, to supersede and fully replace the reporting metrics and the minimum 86 percent performance level expectations for States' performance measures described in the 2014 guidance.

The reporting requirements we proposed in the proposed rule represented consolidated feedback from States, consumer advocates, managed care plans, providers, and other HCBS interested parties on improving and enhancing section 1915(c) waiver performance to integrate nationally standardized quality measures into the reporting requirements, address gaps in existing reporting requirements related to access and the direct service workforce, strengthen health and welfare and person-centered planning reporting requirements, and eliminate annual performance measure reporting requirements that provide limited useful data for assessing State compliance with statutory and regulatory requirements. The intent of the proposed reporting requirements was to allow us to better assess State compliance with the statutory and regulatory requirements for section 1915(c) waiver programs. As indicated at the end of this preamble section, we proposed that the reporting requirements at § 441.311 also apply to State plan options authorized under section 1915(i), (j) and (k) of the Act, as well as to both FFS and managed care delivery systems, unless otherwise indicated.

We proposed, at § 441.311(a), a regulation setting forth the statutory basis and scope of the reporting requirements in § 441.311.

We did not receive comments on § 441.311(a). Based on further consideration, we are finalizing § 441.311(a) with a modification for clarity to remove ''simplification'' and make a minor formatting change to ensure § 441.311(a) aligns directly with the statutory requirement at section 1902(a)(19) of the Act.

We also note that, consistent with statements we made in the introduction of sections II. and II.B. of this final rule regarding severability, we intend that each provision in § 441.311 of this final rule is, as finalized, distinct and severable to the extent it does not rely on another final policy or regulation that we proposed. While we intend that each of the provisions being finalized

within § 441.311, and policies and regulations being finalized elsewhere in this rule, present a comprehensive approach for our oversight of States' Medicaid programs and improving HCBS, we also intend that each reporting requirement within § 441.311 is distinct and severable from one another and from other policies and regulations, being finalized in this rule as well as those rules and regulations currently in effect, to the extent applicable.

Specifically, we proposed, and are finalizing, various reporting requirements in § 441.311 to provide mechanisms for us to oversee States' compliance with other policies being finalized in this rule, such as reporting requirements at § 441.311(b)(1) through (2) for incident management system and critical incident requirements under § 441.302(a)(6), as well as to collect data to support future policy considerations to address the direct care worker shortage at § 441.311(e). While we intend them to be distinct and severable, we are finalizing these reporting requirements in § 441.311 to consolidate them in one place in regulation so they are easier to find. They are not interdependent to the extent each does not rely on another final policy or regulation that we proposed and are finalizing in this rule. We believe that the reporting requirements being finalized herein at § 441.311(b)(1) through (4), (c), (d)(1) and (2), and (e) are each valuable on their own and would provide critical data and oversight even in a circumstance where individual provisions within § 441.311 were not finalized or implemented; however, we note that in this final rule, we are finalizing all reporting requirements in § 441.311, albeit some with modifications, as discussed in this section.

a. Compliance Reporting

(1) Incident Management System Assessment (§ 441.311(b)(1) and (2))

As noted earlier in section II.B.3. of this rule, there have been notable and high-profile instances of abuse and neglect in recent years that highlight the risks associated with poor quality care and with inadequate oversight of HCBS in Medicaid. This is despite State efforts to implement statutory and regulatory requirements to protect the health and welfare of individuals receiving section 1915(c) waiver program services, and State adoption of related subregulatory guidance. In addition, a July 2019 survey of States that operate section 1915(c) waivers found that:

- Definitions of critical incidents vary across States and, in some cases, within States for different HCBS programs or populations;
- Some States do not use standardized forms for reporting incidents, thereby impeding the consistent collection of information on critical incidents;
- Some States do not have electronic incident management systems, and, among those that do, many use systems with outdated electronic platforms that are not linked with other State systems, leading to the systems operating in silos and the need to consolidate information across disparate systems; and
- Many States cited the lack of communication within and across State agencies, including with investigative agencies, as a barrier to incident resolution.

Based on these findings and reports, as well as feedback obtained during various public engagement activities conducted with interested parties over the past several years to standardize and strengthen health and welfare reporting requirements, we proposed new requirements for States' incident management systems at § 441.302(a)(6), as discussed in section II.B.3. of this preamble. We also proposed new reporting requirements that will allow us to better assess State compliance with the requirements at § 441.302(a)(6).

Relying on our authority at section 1902(a)(6) of the Act, at § 441.311(b), we proposed to establish new compliance reporting requirements. Specifically, at § 441.311(b)(1)(i), we proposed to require that States report every 24 months on the results of an incident management system assessment to demonstrate that they meet the requirements at § 441.302(a)(6) that the State operate and maintain an incident management system that identifies, reports, triages, investigates, resolves, tracks, and trends critical incidents, including that:

- The State define critical incidents to meet the proposed minimum standard definition at § 441.302(a)(6)(i)(A);
- The State have an electronic critical incident system that, at a minimum, enables electronic collection, tracking (including of the status and resolution of investigations), and trending of data on critical incidents as proposed at § 441.302(a)(6)(i)(B);
- The State require that providers report any critical incidents that occur during the delivery of section 1915(c) waiver program services as specified in a waiver participant's person-centered service plan, or are a result of the failure to deliver authorized services, as proposed at § 441.302(a)(6)(i)(C);
- The State use claims data, Medicaid Fraud Control Unit data, and data from other State agencies such as Adult Protective Services or Child Protective Services to the extent permissible under applicable State law to identify critical incidents that are unreported by providers and occur during the delivery of section 1915(c) waiver program services, or as a result of the failure to deliver authorized services, as proposed at § 441.302(a)(6)(i)(D);
- The State ensure records being used as part of the incident management system are handled in compliance with 45 CFR 164.510(b), and records with protected health information are obtained and used with beneficiary consent at § 441.302(a)(6)(i)(E);
- The State share information on reported incidents, the status and resolution of investigations, such as through the use of information sharing agreements, with other entities in the State responsible for investigating critical incidents, if the State refers critical incidents to other entities for investigation, as proposed at § 441.302(a)(6)(i)(E); and
- The State separately investigate critical incidents if the investigative agency fails to report the resolution of an investigation within State-specified timeframes as proposed at § 441.302(a)(6)(i)(F).

Given the risk of preventable and intentional harm to beneficiaries when effective incident management systems are not in place, documented instances of abuse and neglect among people receiving HCBS, and identified shortcomings and weaknesses of States' incident management systems discussed earlier, we believed the proposed requirement for States to report every other year on the results of an incident management system assessment is in the best interest of and necessary for protecting the health and welfare of individuals receiving section 1915(c) waiver program services. In the absence of such a reporting requirement, we believed that we are unable to determine whether States have effective systems in place to identify and address incidents of abuse, neglect, exploitation, or other harm during the course of service delivery; ensure that States are protecting the health and welfare of individuals receiving section 1915(c) waiver program services; and safeguard people receiving section 1915(c) waiver program services from preventable or intentional harm.

In proposing an every 24-month timeframe for reporting, we were attempting to take into account the

likely frequency of State changes to policies, procedures, and information systems, while also balancing State reporting burden and the potential risk to beneficiaries if States have incident management systems that are not compliant with the proposed requirements at § 441.302(a)(6). We believed an every 24-month timeframe for reporting is sufficient to detect substantial changes to policies, procedures, and information systems and ensure that we have accurate information on States' incident management systems. We also proposed, at § 441.311(b)(1)(ii), to allow States to reduce the frequency of reporting to up to once every 60 months for States with incident management systems that are determined to meet the requirements at proposed § 441.302(a)(6). We invited comments on whether the timeframe for States to report on the results of the incident management system assessment is sufficient or if we should require reporting more frequently (every year) or less frequently (every 3 years). We also invited comment on whether we should require reporting more frequently (every 3 years or every 4 years) for States that are determined to have an incident management system that meets the requirements at § 441.302(a)(6). If an alternate timeframe is recommended, we requested that commenters provide the rationale for that alternate timeframe.

We received public comments on this proposal. The following is a summary of the comments we received and our responses. We also received comments on the incident management system requirements. Those comments and our responses are in section II.B.3. of this final rule.

Comment: A few commenters generally supported the proposed incident management requirements being finalized at § 441.302(a)(6), which are the subject of the reporting requirement at § 441.311(b)(1). One commenter questioned how these reporting requirements would interact with current State reporting requirements related to critical incidents or other waiver reporting requirements.

Response: We thank commenters for their support. We expect to implement new reporting forms for the new reporting requirements that we are finalizing in this final rule, including the critical incident reporting requirements. We also expect to modify existing reporting forms, particularly to remove the reporting requirements in the 2014 guidance [120] that are being superseded and fully replaced by the requirements in this final rule. We note that some components of the existing reporting forms may remain in effect to the extent that they cover other requirements that remain unchanged by the requirements that we are finalizing in this final rule. States and interested parties will have an opportunity to comment on the new reporting forms and the revised forms through the Paperwork Reduction Act notice and comment process. Further, we expect that States will be able to build on existing systems to comply with the requirements being finalized in this rule at §§ 441.302(a)(6) and 441.311(b)(1) (discussed in sections II.B.3. and II.B.7. of this rule, respectively.) We plan to provide technical assistance to specific State questions, as needed, about how these requirements can align and interact with current practices.

Comment: A few commenters requested clarification on the assessment that is mentioned in § 441.311(b)(1)(i). Commenters requested more information on the contents of the assessment States must perform of their incident management systems and how States should report the results of the assessment. A few commenters requested more detail on the reporting template and when the report would need to be submitted. A few commenters expressed the hope that the reporting timing could be aligned with waiver years or other administrative deadlines. One commenter inquired if States were expected to pay for the assessment. One commenter requested clarification on the deadline for when this assessment must be completed. A few commenters noted that the assessment was required to be performed annually.

Response: The assessment that States perform of their systems will include review of the elements being finalized at § 441.302(a)(6). The requirements we are finalizing in § 441.302(a)(6) is discussed in detail in section II.B.3. of this final rule. The assessment results will be collected as part of the overall data collection activities associated with the reporting requirements in § 441.311. Per § 441.311(f), as finalized herein (and discussed below in this section II.B.7.), States will be required to comply with the reporting requirement for § 441.311(b)(1) beginning 3 years after the effective date of this final rule. This means that States will be required to submit the assessment results to CMS in three years; thus, assessments should be performed in time for States to meet this timeframe. We will be making the required assessment and reporting template available for public comment through the Paperwork Reduction Act notice and comment process. Specific reporting due dates will be determined through subregulatory guidance.

We anticipate that the costs that States incur to conduct and report on the results of the assessment will be eligible for Federal match as an administrative activity. Current Medicaid Federal matching funds are available for State expenditures on the design, development, and installation (including enhancements), and for operation, of mechanized claims processing and information retrieval systems. Under section 1903(a)(7) of the Act, Federal matching funds are available for administrative activities necessary for the proper and efficient administration of the Medicaid State plan. This may include the costs that States incur to conduct and report on the results of the incident management assessment.

We also clarify that there is not a requirement that the incident management assessment be performed annually. As discussed in greater detail below, §§ 441.311(b)(1)(i) and (ii) require that States must submit an incident management assessment every 24 months unless CMS determines the system meets the requirements at § 441.302(a)(6), at which point the assessment must be made every 60 months. Assessments of the incident management system need to be performed as part of this assurance schedule. However, States are welcome to perform assessments more frequently than this schedule requires.

Comment: A few commenters requested that we require States to assess whether the State system tracks the reporting of critical incidents to the designated State Protection and Advocacy system at the same time the incident was reported to the State.

Response: We are declining to make modifications to requirements for States system assessments. We note that commenters made a similar request to add this requirement to the system requirements proposed at § 441.302(a)(6). We also declined to add the requirement to § 441.302(a)(6). We refer readers to section II.B.3. of this rule for the related discussion. However, States are welcome to add other factors to their system assessment beyond the requirements we are finalizing in this rule.

[120] We note that, although States will no longer be expected to meet the reporting requirements and 86 percent minimum performance level in the 2014 guidance, the six assurances and related subassurances in the 2014 guidance continue to apply.

Comment: One commenter requested clarification on the consequences of a State's incident management system being found to be non-compliant with § 441.302(a)(6).

Response: Corrective actions or other enforcement actions will be determined on a case-by-case basis, using our standard enforcement authority, for States with incident management systems that are determined by the assessment to not be compliant with the requirements at § 441.302(a)(6). Additionally, States that do not have compliant systems will be required to perform assessments every 24 months, as required by § 441.311(b)(1)(i) until CMS determines that the system meets the requirements of § 441.302(a)(6) and the State can reduce reporting frequency to every 60 months, as provided by § 441.311(b)(1)(ii). We are not making any changes in this final rule based on this comment.

Comment: A few commenters supported the proposals at § 441.311(b)(1)(i) and (ii) that States must provide the required assessment every 24 months and, if the system is determined to be compliant, every 60 months. One commenter encouraged us to reduce the frequency in § 441.311(b)(1)(i) to one year. One commenter suggested that States should provide assessments on their systems every 1 to 2 years, and if the State's system has been deemed to be in compliance, the assessment should be provided every 3 to 4 years.

A few commenters, however, believed that the reporting frequency should be increased. One commenter recommended this reporting should occur every three years. A few commenters worried that 24 months would not be sufficient time for States to submit the assessment to CMS, and implement any system changes, which might require IT systems updates and acquiring additional funding from State legislatures. One commenter suggested that the assessment should be submitted every 5 years to align with the waiver renewal cycle.

One commenter noted that requiring an assessment every 24 months will create an unnecessary duplication of work. The commenter agreed with the need for an initial assessment but contended that the ongoing assessments were unnecessary, as States could independently monitor ongoing operations and make quality improvements and system updates as needed.

Response: We continue to believe that 24 months (and, for compliant systems, 60 months) is an appropriate frequency that ensures accountability without being overly burdensome. We refer readers to our prior response regarding situations in which we determine, based on the State's assessment, that its system does not meet the requirements finalized at § 441.302(a)(6).

We do not agree that requiring a regular schedule of system review is duplicative. If a State is already conducting regular system reviews as part of a quality improvement process, that review can form the basis for the every 24-month or, as appropriate, every 60-month assessment. We believe that for States that may not already have such processes in place, some regular schedule of review is necessary to ensure that over time, systems do not fall out of compliance. We also would encourage States to use these assessments as opportunities to conduct more comprehensive audits or reviews to identify opportunities for system improvements.

After consideration of the comments received, we are finalizing the reporting frequency in § 441.311(b)(1)(i) with a technical modification for clarity that the State must report on the results of an incident management system assessment, every 24 months, in the form and manner, and at a time, specified by CMS, rather than according to the format and specifications provided by CMS. We are finalizing § 441.311(b)(1)(ii) as proposed.

(2) Critical Incidents (§ 441.311(b)(2))

As discussed earlier in section II.B.4. of the proposed rule, at § 441.302(a)(6)(i)(A), we proposed to require States to define critical incidents at a minimum as verbal, physical, sexual, psychological, or emotional abuse; neglect; exploitation including financial exploitation; misuse or unauthorized use of restrictive interventions or seclusion; a medication error resulting in a telephone call to or a consultation with a poison control center, an emergency department visit, an urgent care visit, a hospitalization, or death; or an unexplained or unanticipated death, including but not limited to a death caused by abuse or neglect.

Based on the same rationale as discussed previously in section II.B.7.a.(1) of this preamble related to the proposed incident management system assessment reporting requirement, at § 441.311(b)(2), relying on our authority under section 1902(a)(6) of the Act, we proposed to require that States report annually on the number and percent of critical incidents for which an investigation was initiated within State-specified timeframes; number and percent of critical incidents that are investigated and for which the State determines the resolution within State-specified timeframes; and number and percent of critical incidents requiring corrective action, as determined by the State, for which the required corrective action has been completed within State-specified timeframes. We intended to use the information generated from the proposed reporting requirements at § 441.311(b)(2)(i) through (iii) to determine if States meet the requirements at § 441.302(a)(6)(ii).[121] Given the risk of harm to beneficiaries when effective incident management systems are not in place, documented instances of abuse and neglect among people receiving HCBS, and identified shortcomings and weaknesses of States' incident management systems discussed earlier, we believed the proposed requirement at § 441.311(b)(2) for States to report annually on critical incidents is in the best interest of and necessary for protecting the health and welfare of individuals receiving section 1915(c) waiver program services. We invited comments on the timeframe for States to report on the critical incidents, whether we should require reporting less frequently (every 2 years), and if an alternate timeframe is recommended, the rationale for the alternate timeframe.

We received public comments on this proposal. The following is a summary of the comments we received and our responses. We also received comments on the minimum performance requirements for critical incident investigations proposed in § 441.302(a)(6), which form the basis of the reporting requirement at § 441.311(b)(2). These comments and our responses are in section II.B.3. of this final rule.

Comment: A few commenters generally supported our proposal at § 441.311(b)(2). One commenter observed that the current lack of standardized incident management systems across all States puts beneficiaries at risk and believed that the critical incident reporting requirements will help to prevent adverse experiences, increase accountability for States, and provide beneficiaries with an avenue of redress when they experience harm.

Response: We thank commenters for their support.

Comment: A few commenters opposed the reporting requirement at § 441.311(b)(2). One commenter

[121] We note that there was a typographical error in the NPRM at 88 FR 27987, incorrectly identifying the proposed reporting requirements at § 441.311(b)(2)(ii) through (iv), rather § 441.311(b)(2)(i) through (iii).

believed that building the necessary IT systems to complete the reporting will impose an extraordinary cost to States and take years to develop, test, and implement. Another commenter expressed concerns that the reporting requirements would necessitate a restructuring of some States' critical incident management, including revising policies, procedures, trainings, and processes.

Response: As discussed in the proposed rule (88 FR 27978), since 2014, States operating section 1915(c) waiver programs have been expected to demonstrate on an ongoing basis that they identify, address, and seek to prevent instances of abuse, neglect, exploitation, and unexplained death, and demonstrate that an incident management system is in place that effectively resolves incidents and prevents further similar incidents to the extent possible. While we acknowledge that some States may have to make some adjustments to their systems, we expect that most will be able to build on existing systems to achieve this reporting. We plan to offer States technical assistance as needed to support questions they may have about adjustments they need to make to existing policies, tracking, and reporting systems. We decline to make any changes in this final rule based on these comments.

Comment: A few commenters requested that we share more details about the reporting template and when the report would need to be submitted. A few commenters expressed the hope that the reporting timing could be aligned with waiver years or other administrative deadlines.

Response: The reporting requirement at § 441.311(b)(2) will be collected as part of the overall data collection activities associated with the reporting requirements in § 441.311. Per § 441.311(f), as finalized herein and discussed in this section II.B.7. of the rule, States must comply with the reporting requirement at § 441.311(b)(2) beginning 3 years from the effective date of this final rule]. Prior to that applicability date, we will be making the reporting template available for public comment through the Paperwork Reduction Act notice and comment process. Specific reporting due dates will be determined through subregulatory guidance.

Comment: One commenter requested clarification on whether the reporting was statewide or could be submitted for each program. The commenter noted that for States operating multiple critical incident systems, or tracking critical incidents at the program level, reporting of data at an aggregate statewide level will not only prove operationally challenging, but it could also limit the ability to identify and address program-specific issues.

Response: States are expected to report aggregated statewide data for this requirement. We believe that a State could track critical incidents by program at the State level and then aggregate this data for the purposes of the reporting requirement at § 441.311(b)(2). We plan to offer technical assistance to States, as needed, that have decentralized critical incident systems to facilitate the aggregated statewide reporting. We also note that States will be able to provide input into the reporting instrument when it is shared for public comment during the Paperwork Reduction Act notice and public comment process.

Comment: One commenter was critical of the proposed reporting metrics at § 441.311(b)(2), believing that the focus of the metrics was too much on timeliness: timely initiation of investigations, timely resolutions, and timely corrective action. The commenter did not believe that there was sufficient focus on the substance of the incidents. A few commenters recommended that we add the following metrics to § 441.311(b)(2): the number of critical incidents in each year, categorized by type of incident and extent of injury or by severity; whether corrective action was needed; whether corrective action was performed; whether any corrective action addressed the needs of current participants or future participants (or both); and whether corrective action adequately addressed participants' needs.

One commenter stated that the information should be reported to the public, although in a format that protects the anonymity of the beneficiary and filer. The commenter also suggested that a separate section of the public report should provide information on substantiated critical incidents by provider, including the service provider's owner and the name under which they are doing business.

Response: We disagree that the metrics in § 441.311(b)(2) focus only on timeliness. Inherent in these metrics is the expectation that States will promptly investigate and resolve critical incidents, which we believe is the essential purpose of the critical incident system. We developed the reporting requirement at § 441.311(b)(2) to strike a balance between collecting enough information to enable Federal oversight of the States' system designed to investigate and resolve critical incidents and imposing as minimal an administrative burden on States and providers as possible. We believe it is important for States to have flexibility in how they design their system to identify, report, triage, investigate, resolve, track, and trend critical incidents as set forth in the proposed requirements at § 441.302(a)(6), which we are finalizing as discussed in section II.B.3. We also believe that requiring a broad, national reporting requirement for States to report critical incident timeliness data will provide a mechanism to assess whether States are complying with their own timeframes for investigating, resolving, and implementing corrective actions, and to ensure States are complying with their own established processes for reviewing and addressing critical incidents.

We did not propose, and are not finalizing, specific requirements for how States must use this data. We will likely include promising practices related to data collection and analysis, including methods of capturing qualitative data from the records, in technical assistance for States to aid in implementation.

We note that the data required in § 441.311(b)(2) is included in the public posting requirement we are finalizing at § 441.313 (discussed in greater detail in II.B.9. of this final rule). We are not requiring that States publicly report specific information about critical incidents, including the names of providers involved in critical incidents. We believe that some public disclosures may not be suitable or appropriate in every instance, and it would be difficult to tailor a meaningful requirement to anticipate all of these circumstances. We are concerned that, for example, in States with smaller HCBS populations, it may be difficult to truly anonymize information about critical incidents. While we agree that, over time, qualitative data about trends in critical incidents could be useful to both States and other interested parties in promoting systemic improvements in their HCBS programs, we defer to States to determine when and how to make this information public, in accordance with applicable laws governing confidentiality of such information, and for what purpose.

Comment: A few commenters supported the proposal that this data should be reported on an annual basis. A few commenters recommended less frequent reporting, such as every two years, to reduce burden.

One commenter, while not necessarily recommending a different reporting frequency, noted that reporting requirements must take into account the unique factors that impact the length of time it could take to complete an

investigation or conduct corrective action. The commenter noted that depending on the nature of the corrective action and when the corrective action process begins in a reporting year, annual reporting may result in misleading data about the number of resolved critical incidents or completed corrective actions.

Response: Given the importance and time-sensitive nature of critical incident investigations, resolutions, and corrective actions, we believe it is necessary to collect this data on an annual basis so we may monitor these systems. We also clarify that the reporting is not intended to track how many critical incidents were investigated, resolved, or resulted in completed corrective actions in a reporting year; the requirement is to report how many critical incidents were investigated, resolved, or resulted in completed corrective actions within State-specified timeframes during the reporting period. Thus, even if the reporting period falls in the middle of a critical incident resolution or corrective action, these incidents would not be reported as ''non-compliant'' if they were still within the State-specified timeframes for completion.

After consideration of these comments, we are finalizing the introductory text at § 441.311(b)(2), with a technical modification for clarity that the State must report to CMS annually in the form and manner, and at a time, specified by CMS, rather than according to the format and specifications provided by CMS. We are also simplifying the title and moving the reference to § 441.302(a)(6)(i)(A) from the title of § 441.311(b)(2) to the introductory text. As finalized, the introductory text at § 441.311(b)(2) will specify that the State must report to CMS annually on the following information regarding critical incidents as defined in § 441.302(a)(6)(i)(A), in the form and manner, and at a time, specified by CMS. We are finalizing § 441.311(b)(2)(i) through (iii) as proposed.

(3) Person-Centered Planning (§ 441.311(b)(3))

Under the authority of section 1902(a)(6) of the Act, we proposed at § 441.311(b)(3) to require that States report annually to demonstrate that they meet the requirements at § 441.301(c)(3)(ii). Specifically, at § 441.311(b)(3)(i), we proposed to require that States report on the percent of beneficiaries continuously enrolled for at least 365 days for whom a reassessment of functional need was completed within the past 12 months. At § 441.311(b)(3)(ii), we proposed to require that States report on the percent of beneficiaries continuously enrolled for at least 365 days who had a service plan updated as a result of a reassessment of functional need within the past 12 months. These proposed requirements were based on feedback obtained during various interested parties' engagement activities conducted with States and other interested parties over the past several years about the reporting discussed in the 2014 guidance. As discussed in section II.B.7. of the preamble for the proposed rule, this feedback indicated that we should strengthen person-centered planning reporting requirements and eliminate annual performance measure reporting requirements that provide limited useful data for assessing State compliance with statutory and regulatory requirements. These proposed requirements were also based on feedback received through the RFI [122] discussed earlier about the need to standardize reporting and set minimum standards for HCBS.

As discussed in section II.B.1. of the preamble for the proposed rule, we proposed a revision to the regulatory text so that it is clear that changes to the person-centered service plan are not required if the re-assessment does not indicate a need for changes. As such, for the purpose of the reporting requirement at § 441.311(b)(3)(ii), beneficiaries would be considered to have had a person-centered service plan updated as a result of the re-assessment if it is documented that the required re-assessment did not indicate a need for changes.

For both of the metrics at § 441.301(c)(3)(ii), we proposed to allow States to report a statistically valid random sample of beneficiaries, rather than for all individuals continuously enrolled in the waiver program for at least 365 days.

We invited comments on whether there are other specific compliance metrics related to person-centered planning that we should require States to report, either in place of or in addition to the metrics we proposed. We also invited comments on the timeframe for States to report on person-centered planning, whether we should require reporting less frequently (every 2 years), and if an alternate timeframe is recommended, the rationale for the alternate timeframe.

We received public comments on this proposal. The following is a summary of the comments we received and our responses. We also received comments on the person-centered service plans minimum performance requirements proposed in § 441.301(c)(3)(ii), which form the basis of the reporting requirement at § 441.311(b)(3). These comments and our responses are in section II.B.1. of this final rule.

Comment: A few commenters expressed support for the requirement that States report annually on the specified performance metrics for person-centered planning. Commenters echoed sentiments that are reflected in section II.B.1. of this final rule, that many States are already regularly performing the assessment and reassessment activities in compliance with the minimum performance standards being finalized in § 441.301(c)(3)(ii) and, thus, reporting on these activities is reasonable.

We did not receive feedback in response to our request for comment on additional or alternative metrics that should be included in the reporting requirement at § 441.311(b)(3).

Response: We thank commenters for their support. We note that the metrics in § 441.311(b)(3) are based on the minimum performance requirements being finalized at § 441.301(c)(3)(ii); comments on these minimum performance standards are discussed in section II.B.1. of this final rule.

Comment: A few commenters expressed reservations about the proposal to allow States to report data on a statistically valid sample of beneficiaries, suggesting instead that we require complete reporting on all relevant beneficiary data.

Response: We intended that the proposed requirement allow States to report data and information for the person-centered service planning reporting metrics at § 441.311(b)(3) using a statistically valid random sampling of beneficiaries would reduce State burden, while still providing valuable data for strengthening States' person-centered service planning processes. We will consider expanding the reporting to capture the full population of beneficiaries receiving HCBS in future rulemaking if it is determined that such an approach gives a more complete picture of person-centered service planning. We note that States may choose to report on the total population for this measure as opposed to a sample, for instance, if doing so better aligns with their data collection process or needs.

We note that, as proposed, we stated in § 441.311(b)(3)(i) and (ii) that the State may report these metrics for a statistically valid random sample of

[122] CMS Request for Information: Access to Coverage and Care in Medicaid & CHIP. February 2022. For a full list of question from the RFI, see *https://www.medicaid.gov/medicaid/access-care/downloads/access-rfi-2022-questions.pdf.*

beneficiaries. We are finalizing the requirements at § 441.311(b)(3)(i) and (ii) with a technical modification to specify that the State may report this metric **using statistically valid random sampling** of beneficiaries. (Revised language identified in bold.) We make this technical correction to better align the language with standard terminology for the sampling methodology we intended in these requirements.

Comment: One commenter specifically noted that the frequency of annual reporting was feasible. One commenter noted that while the reporting frequency is reasonable, it is important to align with other reporting requirements already placed on States and managed care plans to minimize State and managed care plan reporting burdens.

A few commenters requested clarification on when the report required in § 441.311(b)(3) would be due to CMS and whether we would provide a template for the reporting. One commenter requested clarification on how this aggregated data should be reported, noting that current mechanisms for reporting similar data are waiver specific.

Response: We will be releasing subregulatory guidance, including technical specifications for the new reporting requirements in this final rule, and making the required reporting templates available for public comment through the Paperwork Reduction Act notice and comment process. Per § 441.311(f) below, States must comply with the reporting requirement for § 441.311(b)(3) beginning 3 years from the effective date of this final rule]. Specific reporting due dates will be determined through subregulatory guidance; we will work with States to align these due dates with other obligations to minimize administrative burden to the greatest extent possible.

After consideration of the public comments received, we are finalizing the reporting requirement at § 441.311(b)(3)(i) and (ii), with the technical modification noted above to specify that the State may report this metric using statistically valid random sampling of beneficiaries. We are also finalizing a technical correction to the regulation text at § 441.311(b)(3). In the proposed rule (88 FR 27988), we indicated that we were proposing at § 441.311(b)(3) to require that States report annually to demonstrate that they meet the requirements at § 441.301(c)(3)(ii). In the publication of the proposed rule, this language was omitted from the regulatory text in error. We are finalizing § 441.311(b)(3) with technical modifications to specify that, to demonstrate that the State meets the requirements at § 441.301(c)(3)(ii) regarding person-centered planning (as described in § 441.301(c)(1) through (3)), the State must report to CMS annually. We are also making a technical modification to indicate that the reporting must be in the form and manner, and at a time, specified by CMS. We believe, based on the language included in the proposed rule (88 FR 27988) and the comments received, that commenters understood the intent of this regulation even with language omitted.

(4) Type, Amount, and Cost of Services (§ 441.311(b)(4))

As discussed previously in section II.B.4. of this preamble, we proposed to amend § 441.302(h) to avoid duplicative or conflicting reporting requirements with the new Reporting Requirements section at proposed § 441.311. In particular, at § 441.302(h), we proposed to remove paragraphs (1) and (2). At § 441.311(b)(4), we proposed to add the language previously at § 441.302(h)(1). In doing so, we proposed to retain the current requirement that States report on the type, amount, and cost of services and to include the reporting requirement in the new consolidated reporting section at § 441.311.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: One commenter supported this proposal.

Response: We thank the commenter for their support.

Comment: One commenter requested clarification on whether the reporting requirement at § 441.311(b)(4) will apply to managed care plans.

Response: The requirement at § 441.311(b)(4) replicates the current requirement at § 441.302(h), which applies to section 1915(c) programs, regardless of whether they are part of a FFS or managed care delivery system.

As stated in the proposed rule (88 FR 27988), it was our intent to consolidate the current reporting requirement at § 441.302(h)(1) with the new requirements being finalized at § 441.311. We note that as this requirement was presented in the proposed rule, we inadvertently struck part of the language from § 441.302(h) that we intended to retain in § 441.311(b)(4) that clarified the reporting frequency (annually) and the object (the 1915(c) waiver's impact on the State plan) of the requirement currently at § 441.302(h)(1). We are concerned that without this omitted language, § 441.311(b)(4) does not include information needed to implement this requirement. We believe that, as we expressed our intent in the proposed rule (88 FR 27988) to retain the reporting requirement at § 441.302(h)(1), readers would have understood that we intended to preserve the essential elements of the reporting.

To ensure that this requirement can be implemented as intended, we are finalizing § 441.311(b)(4) with language from § 441.302(h) to specify that, **annually,** the **State will provide CMS with information on the waiver's impact on** the type, amount, and cost of services provided under the State plan. (Restored language is noted in bold.)

We also specify here that, as the requirement at § 441.302(h) specifies certain reporting for programs authorized under section 1915(c), this new requirement at § 441.311(b)(4) will similarly apply only to section 1915(c) waiver programs. We discuss the impact of this clarification on references to section 1915(j), (k), and (i) services (at §§ 441.474(c), 441.580(i), and 441.745(a)(1)(vii)) later in this section.

After consideration of the comments received, and in light of the clarification outlined above, we are finalizing the provision at § 441.311(b)(4) to specify that annually, the State will provide CMS with information on the waiver's impact on the type, amount, and cost of services provided under the State plan. Further, we are finalizing § 441.311(b)(4) with a technical modification to specify that the information is to be reported in the form and manner, and at a time, specified by CMS.

b. Reporting on the Home and Community-Based Services (HCBS) Quality Measure Set (§ 441.311(c))

At § 441.311(c), relying on our authority under section 1902(a)(6) of the Act, we proposed to require that States report every other year on the HCBS Quality Measure Set, which is described later in section II.B.8. of the preamble. Specifically, we proposed, at § 441.311(c)(1)(i), to require that States report every other year, according to the format and schedule prescribed by the Secretary through the process for developing and updating the HCBS Quality Measure Set described in section II.B.8. of the final rule, on measures identified in the HCBS Quality Measure Set as mandatory measures for States to report or are identified as measures for which the Secretary will report on behalf of States, and, at § 441.311(c)(1)(ii), to allow States to report on measures in the HCBS Quality Measure Set that are not

identified as mandatory, as described later in this section of the rule.

We proposed every other year for State reporting in recognition of the fact that the current, voluntary HCBS Quality Measure Set is heavily comprised of survey-based measures, which are more burdensome, including for beneficiaries who would be the respondents for the surveys, and costlier to implement than other types of quality measures. Further, we believed that requiring reporting every other year, rather than annually, would better allow States to use the data that they report for quality improvement purposes, as it would provide States with sufficient time to implement interventions that would result in meaningful improvement in performance scores from one reporting period to another. We also proposed this frequency in recognition of the overall burden of the proposed requirement.

Because the delivery of high quality services is in the best interest of Medicaid beneficiaries, we proposed at § 441.311(c)(1)(iii), under our authority at section 1902(a)(19) of the Act, to require States to establish performance targets, subject to our review and approval, for each of the measures in the HCBS Quality Measure Set that are identified as mandatory for States to report or are identified as measures for which we will report on behalf of States, as well as to describe the quality improvement strategies that they will pursue to achieve the performance targets for those measures.[123]

At § 441.311(c)(1)(iv), we proposed to allow States to establish State performance targets for other measures in the HCBS Quality Measure Set that are not identified as mandatory for States to report or as measures for which the Secretary will report on behalf of States as well as to describe the quality improvement strategies that they will pursue to achieve the performance targets for those targets.

At § 441.311(c)(2), we proposed to report on behalf of the States, on a subset of measures in the HCBS Quality Measure Set that are identified as measures for which we will report on behalf of States. Further, at § 441.311(c)(3), we proposed to allow, but not require, States to report on measures that are not yet required but will be, and on populations for whom reporting is not yet required but will be phased-in in the future.

We solicited comments on whether there should be a threshold of compliance that would exempt the State from developing improvement strategies, and if so, what that threshold should be. We also invited comments on whether the timeframe for States to report on the measures in HCBS Quality Measure Set is sufficient, whether we should require reporting more frequently (every year) or less frequently (every 3 years), and, if an alternate timeframe is recommended, the rationale for that alternate timeframe. We welcomed comments on any additional changes we should consider in this section.

We received public comments on this proposal. The following is a summary of the comments we received and our responses. We also received comments on the HCBS Quality Measure Set requirements proposed at § 441.312. These comments and our responses are in section II.B.8. of this final rule.

Comment: Regarding whether there should be a threshold of compliance that would exempt the State from developing improvement strategies, one commenter recommended exemptions for States to develop improvement strategies if they are performing within the top 5th to 10th percentile of performance targets for the quality measures in the HCBS Quality Measure Set, to alleviate administrative burden. Another commenter discouraged CMS from permitting a compliance threshold exemption for States from developing improvement strategies, emphasizing that all States should be held accountable for providing high-quality care and services to beneficiaries receiving HCBS regardless of performance.

Response: We continue to believe that, for each of the measures in the HCBS Quality Measure Set that are identified as mandatory for States to report, or are identified as measures for which we will report on behalf of States, States should establish and describe the quality improvement strategies to achieve the performance targets for those measures.[124] We reiterate our belief that the HCBS Quality Measure Set will promote more common and consistent use within and across States of nationally standardized quality measures in HCBS programs, and will allow CMS and States to have comparative quality data on HCBS programs. As such, exempting States from developing improvement strategies for quality measures in the HCBS Quality Measure Set does not align with this intent.

Comment: Several commenters recommended either faster or slower implementation for reporting of the measures in the HCBS Quality Measure Set. A few commenters recommended we change the timeframe requirement for States to report on the quality measures in the HCBS Quality Measure Set to every year. In this same vein, one commenter suggested we align the reporting timelines required for reporting measures in the HCBS Quality Measure Set to other Medicaid, CHIP, Medicare, and Marketplace measure sets, expressing that reporting biennially (every other year) could lock in data lags that could hinder State progress in improving HCBS for beneficiaries. A few commenters recommended alternatives to the HCBS Quality Measure Set biennial reporting time frame. These alternatives included the following: initiating reporting based on State choice; reporting on odd- or even-numbered years; and beginning State reporting upon renewal of their section 1915(c) waiver or based on the State reporting years for their waiver program.

A few commenters expressed concern that the timeframe for reporting measures in the HCBS Quality Measure Set should be longer than every other year, emphasizing the significant amount of systems work, contracting, and survey data needed to capture the necessary data and implement reporting on HCBS measures. Commenters recommended we consider that the implementation of the HCBS Quality Measure Set reporting requirements as proposed at § 441.311(c)(1)(iii) could require State statutory and regulatory amendments, lead time for securing additional technology resources, and operational and workflow changes. Commenters requested CMS consider alternative dates for States beginning reporting on the measures in the HCBS Quality Measure Set, ranging from an additional 3 to 5 years to address these concerns.

Response: We continue to believe that a biennial timeframe requirement for States to report on the measures in HCBS Quality Measure Set is an appropriate frequency that ensures accountability without being overly burdensome and are finalizing the frequency of reporting as proposed. We determined that a shorter annual reporting timeframe would not likely be operationally feasible because of the potential systems and contracting changes (to existing contracts or the establishment of new contracts) that States may be required to make. For

[123] We note that compliance with CMS regulations and reporting requirements does not imply that a State has complied with the integration mandate of Title II of the ADA, as interpreted by the Supreme Court in the Olmstead Decision.

[124] We note that compliance with CMS regulations and reporting requirements does not imply that a State has complied with the integration mandate of Title II of the ADA, as interpreted by the Supreme Court in the Olmstead Decision.

example, additional reporting requirements may need to be added to State contracts, changes may be needed to data sharing agreements with managed care plans, and modifications of databases or systems might be required to record new variables.

However, to provide States sufficient time to comply with the requirements finalized at § 441.311(c), we are finalizing at § 441.311(f)(2) an applicability date beginning 4 years, rather than 3 years, from the effective date of this final rule for the HCBS Quality Measure Set reporting at § 441.311(c). Our primary purpose in extending the effective date is to ensure States have sufficient time for interested parties to provide input into the measures, as required by § 441.312(g), which we are finalizing in section II.B.8. of this rule.

In general, we anticipate that States will not need more than 4 years after the effective date of the final rule, to implement systems and contracting changes, or acquire any additional support needed to report on the quality measures in the HCBS Quality Measure Set.

We plan to work collaboratively with States to provide the technical assistance and reporting guidance through the Paperwork Reduction Act process necessary to support reporting.

Comment: A few commenters requested confirmation of whether States with section 1115 demonstrations are expected to comply with the HCBS Quality Measures Set requirements in this final rule.

Response: Yes, consistent with the applicability of other HCBS regulatory requirements to such demonstration projects, the reporting requirements for section 1915(c) waiver programs and section 1915(i), (j), and (k) State plan services included in this rule, including the requirements at § 441.311 (and the related quality measure requirements at § 441.312), would apply to such services included in approved section 1115 demonstration projects, unless we explicitly waive or exclude one or more of the requirements as part of the approval of the demonstration project.

Comment: A couple of commenters recommended that we offer States financial assistance to develop and deploy the ability to report the quality measures in the HCBS Quality Measure Set.

Response: We note that Medicaid Federal matching funds are available for State expenditures on the design, development, and installation (including of enhancements), and for operation, of mechanized claims processing and information retrieval systems. We also note that under section 1903(a)(7) of the Act, Federal matching funds are available for administrative activities necessary for the proper and efficient administration of the Medicaid State plan. This may include developing and deploying the ability to report the quality measures in the HCBS Quality Measure Set.

Comment: A few commenters expressed that instructions related to the reporting requirements for the quality measures in the HCBS Quality Measures Set, and how they are related to the section 1915(c) waiver reporting requirements, would be helpful for implementing the reporting of the measure set.

Response: We thank commenters for the feedback. We plan to work collaboratively with States to provide the technical assistance and reporting guidance through the Paperwork Reduction Act process necessary to support reporting and help facilitate compliance with this requirement.

After consideration of public comments received, we are finalizing the HCBS Quality Measure Set reporting requirements at § 441.311(c) with modifications. At § 441.311(f)(2), we are finalizing that States must comply with the reporting requirements at § 441.311(c) beginning 4 years, rather than 3 years, from the effective date of this final rule for the HCBS Quality Measure Set. Our primary purpose in extending the applicability date is to ensure States have sufficient time for interested parties to provide input into the measures, as required by § 441.312(g), which we are finalizing in section II.B.8. of this rule.

c. Access Reporting (§ 441.311(d))

As noted earlier in section II.B.6. of this preamble, feedback obtained during various public engagement activities conducted with States and other interested parties over the past several years about reporting requirements for HCBS, as well as feedback received through the RFI [125] discussed earlier, indicated that there is a need to improve public transparency and processes related to States' HCBS waiting lists and for standardized reporting on HCBS access, including timeliness of HCBS and the comparability to services received to eligibility for services. At § 441.311(d) we proposed that the State must report to CMS annually on the following, according to the format and specifications provided by CMS. We are finalizing in this rule § 441.311(d) with a technical modification for clarity that requires that the State must report to CMS annually on the following, **in the form and manner, and at a time,** specified by CMS. (New language identified in bold.)

(i) Waiver Waiting Lists (§ 441.311(d)(1)(i))

At § 441.311(d)(1)(i), relying on our authority under section 1902(a)(6) of the Act, we proposed to require that States provide a description annually, according to the format and specifications provided by CMS, on how they maintain the list of individuals who are waiting to enroll in a section 1915(c) waiver program, if they have a limit on the size of the waiver program and maintain a list of individuals who are waiting to enroll in the waiver program, as described in § 441.303(f)(6). We further proposed to require that this description must include, but be not limited to, information on whether the State screens individuals on the waiting list for eligibility for the waiver program, whether the State periodically re-screens individuals on the waiver list for eligibility, and the frequency of re-screening if applicable. We also proposed to require States to report, at § 441.311(d)(1)(ii), the number of people on the waiting list, if applicable, and, at § 441.311(d)(1)(iii), the average amount of time that individuals newly enrolled in the waiver program in the past 12 months were on the waiting list, if applicable. We invited comments on whether there are other specific metrics or reporting requirements related to waiting lists that we should require States to report, either in place of or in addition to the requirements we proposed. We also invited comments on the timeframe for States to report on their waiting lists, whether we should require reporting less frequently (every 2 or 3 years), and if an alternate timeframe was recommended, the rationale for that alternate timeframe.

We received public comments on this proposal. The following is a summary of the comments we received and our responses. We also received comments on the related requirement at § 441.303(f). Those comments are addressed in section II.B.6. of this rule.

Comment: Many commenters supported the proposal at § 441.311(d)(1) to require States to report on waiting lists, including whether the State screens individuals on the list for eligibility, frequency of re-screening, number of individuals waiting to enroll, and average amount of time newly enrolled individuals were on the waiting list. Commenters

[125] CMS Request for Information: Access to Coverage and Care in Medicaid & CHIP. February 2022. For a full list of question from the RFI, see *https://www.medicaid.gov/medicaid/access-care/downloads/access-rfi-2022-questions.pdf.*

believed that this reporting would promote consistency, transparency, oversight, and accountability of waiting list practices and help States identify unmet needs among their Medicaid beneficiaries. Commenters noted that this additional information will better allow interested parties to advocate for policy changes to address underlying causes of waiting lists and expand HCBS programs; one commenter described this requirement as a good ''first step'' to understanding access issues for HCBS waivers.

A few commenters stated this requirement, with its potential to support policies that reduce waiting lists, would help beneficiaries avoid having to turn to institutional care for their LTSS needs. Commenters also noted transparent, understandable data about waiting lists may help individuals and families to make more informed decisions about accessing coverage as they plan for their future.

A few commenters noted that nationally comparable data and information-sharing among States will encourage standardization of waiting list processes and help States identify best practices for reducing waiting lists. Commenters noted that inconsistencies in the way States report data about their waiting lists and the current lack of standardized reporting requirements makes it difficult to form a clear picture of how many people are waiting to receive services, as well as how many of these individuals on the waiting list are actually eligible for services. One commenter suggested that making the waiting list public may lead to needed administrative updates to waiting lists, such as removing duplicate applications or applications from beneficiaries who have moved out of State or passed away.

Response: We agree that this critical data is not currently available in a way that allows for monitoring or comparison on a national level. We believe that this reporting requirement is an important first step in making data publicly available that can be used to identify unmet needs among Medicaid beneficiaries, support policymaking, and improve administrative efficiency.

Comment: A few commenters expressed opposition to, or concerns about, the waiting list reporting requirement at § 441.311(d)(1). A few commenters expressed concerns that the reporting requirement did not align with current State waiting list practices and would require significant change in data collection and IT systems. One commenter was concerned that due to differences in States' HCBS programs, infrastructure, and waiting list practices, attempting to collect and compare data on a national level could be misleading. A few commenters requested clarification on how CMS would use this data to drive meaningful policy changes and improvement in HCBS access. A few commenters stated that the proposed requirements would not address the underlying causes of waiting lists, which they attributed to limited funding for HCBS waiver slots, low Medicaid reimbursement rates, delays or barriers within States' Medicaid eligibility determination processes, or shortages of HCBS direct care workers. A few commenters, while not necessarily opposing the requirement at § 441.311(d)(1), suggested that we focus on gathering information about why States have caps on the number of beneficiaries who may be served by HCBS waivers and why States have waiting lists when they have not met their waiver caps.

One commenter raised a concern that the reporting requirement would cause States to redirect or prioritize resources for waivers with waiting lists at the expense of waivers that currently do not have waiting lists.

Response: We are not currently collecting States' data on their waiting lists and understand that States may have to update data collection systems to comply with this new requirement. We proposed the reporting requirement at § 441.311(d) to strike a balance between collecting enough information to enable Federal oversight of States' waiting list practices and imposing as minimal an administrative burden on States and providers as possible. We plan to offer States technical assistance as needed to help align their current data collection practices with what will be needed to comply with this reporting requirement. The reporting requirement at § 441.311(d)(1) is a first step in what will be an evolving process to promote transparency, oversight, and data-driven improvements in States' waiting list practices. We acknowledge that differences in States' HCBS programs may initially make comparing States' data challenging, but we believe that collecting this data will help highlight such differences and draw connections between different States' policies and the impact on their beneficiaries' access to HCBS. As noted by other commenters, States may be able to use this data to learn from the experiences of other States.

We acknowledge that there are many underlying causes for States to have long waiting lists, but we believe that the first step toward addressing these challenges, where possible, is to quantify the scope of these waiting lists through data collection. This data will not only help identify situations in which a State appears to be maintaining a waiting list when not all of the waiver's slots are taken but can also facilitate conversations with States about reasons for limitations on waiver enrollment.

We clarify that the purpose of this requirement is to document unmet needs for individuals who are seeking enrollment in HCBS waivers and to identify resources or practices that could be used to improve waiting list processes. As such, our goal is not to require that States shift needed resources away from other areas of their Medicaid programs.

Comment: One commenter requested that we provide reporting tools to help States track the required data. One commenter requested that the data needed for this reporting requirement be derived from the State's own eligibility and service authorization processes, not from providers and beneficiaries, particularly for self-directed services.

Response: We plan to release subregulatory guidance and other tools to assist States with implementation of this reporting requirement. We will also be making the reporting template available for public comment through the Paperwork Reduction Act notice and comment process.

While States have flexibility as to how they will gather the data needed to complete this reporting, we encourage States to find ways to rely on administrative data rather than gathering data directly from beneficiaries to meet the reporting requirements.

Comment: A few commenters requested that the information about waiting lists be made available to the public in a consumer-friendly and accessible format in order to facilitate program accountability and potentially improve beneficiary understanding of waiting list information. One commenter suggested that publishing data about the waiting list may help publicize the need for more direct care workers.

Response: As discussed in more detail later in section II.B.9 of this rule, we are finalizing a requirement at § 441.313(a) to require States to operate a website that meets the availability and accessibility requirements at § 435.905(b) of this chapter and that provides the results of the reporting requirements at § 441.311 (including this access reporting requirement at § 441.311(d), as well as the incident management, critical incident, person-centered planning, and service provision compliance data; data on the HCBS Quality Measure Set; and

payment adequacy data, discussed in this section) and the reporting requirements at § 441.302(k)(6). Please refer to the discussion of the website posting requirements in section II.B.9. of this rule.

Comment: One commenter suggested that we consider offering incentives for States to reduce or end waiting lists through a higher FMAP rate for a limited time period. One commenter requested that States be given a grace period and allowed to update their section 1915(c) waivers prior to any punitive action.

Response: We note that the requirement at § 441.311(d)(1) is a reporting requirement intended to encourage transparency and does not include any specific performance measures with which States must comply. To the extent that States are in compliance with existing requirements for section 1915(c) waiver programs, it is also not intended to require that States make changes to their waiver programs or processes. We intend to use our standard enforcement discretion to require State compliance with the reporting requirement, which (as discussed under § 441.311(f) below) will go into effect three years after the effective date of this final rule. In addition, we note that CMS does not have authority to provide States with a higher FMAP rate for any expenditures than has been authorized by statute.

Comment: A number of commenters noted that waiting list terminology, definitions, and processes vary widely among States and even among individual State programs. Commenters observed that some States operate what they refer to as interest lists, preauthorization lists, or similarly named lists, rather than waiting lists. In some cases, individuals can sign up to express interest in a waiver program but may not have yet been assessed for eligibility at the time they joined the interest list. Commenters questioned whether these individuals would be considered ''waiting to enroll'' as described in the proposed rule, as they are waiting to be determined eligible to enroll. Commenters requested clarification as to what data would be collected from States that maintain interest lists or similarly named lists of individuals who have not yet been determined to be eligible for the waiver.

A few commenters expressed concerns that if interest lists are not included in this requirement, States may be encouraged to stop maintaining waiting lists. One commenter noted that if the requirement does apply to interest lists, States that use an interest list approach would have to make significant changes to their processes to meet the waiting list reporting requirement. One commenter observed that in their State, the State maintains a single waiting list for all waivers, which could complicate reporting.

Several commenters requested that we create a definition of a waiting list. One commenter supported what they believed to be our proposed standardized definition of a waiting list (but did not specify what they thought that definition to be). A few commenters requested that we require States to have waiting lists for their waiver programs and that States screen individuals for eligibility prior to placing the individuals on the waiting list.

Response: We intended for the reporting requirement to apply to all States that maintain a list of individuals interested in enrolling in a section 1915(c) waiver program, whether or not the individual has been assessed for eligibility. As we stated in the proposed rule (88 FR 27986), many States maintain waiting lists of individuals interested in receiving waiver services once a spot becomes available. While some States require individuals to first be determined eligible for waiver services to join the waiting list, other States permit individuals to join a waiting list after an expression of interest in receiving waiver services.

We note that the requirement at § 441.311(d)(1) requires States to submit a description of their waiting list that includes information on whether the State screens individuals on the waiting list for eligibility for the waiver program, whether the State periodically re-screens individuals on the waiver list for eligibility, and the frequency of re-screening if applicable. This requirement indicates that § 441.311(d)(1) applies to States even if they do not screen the individuals on their list for eligibility. We believe that for the purposes of this requirement individuals who are waiting to be screened for eligibility for the waiver are considered ''waiting to enroll.''

We believe that States that maintain an interest list (or a similarly named list of individuals who have expressed interest in the waiver and are waiting to be assessed for eligibility) can report the same information required in § 441.311(d)(1) as States that maintain lists of individuals who have been screened for eligibility. We expect, for instance, that States typically would have information about the number of individuals who are on an interest list and how long those individuals have been on those lists. If a State maintains two separate lists for a waiver—a list of individuals who have been screened for eligibility for the waiver and a list of individuals who have expressed interest in enrolling in the waiver but have not yet been screened—the State should report on both to meet the reporting requirements at § 441.311(d)(1).

As we did not propose a formal definition of waiting list, nor a requirement for States to maintain a waiting list of individuals who have been screened for eligibility, we will not add these components to the finalized § 441.311(d). States retain flexibility in determining whether or not to maintain a list of individuals who are interested in enrolling in the waiver (whether or not the individual has been screened for eligibility). We will take commenters' recommendations into consideration for future policymaking if, after monitoring reporting generated by § 441.311(d), we identify the need for further standardization of these processes.

Comment: We received responses to our comment solicitation on additional metrics that could be collected regarding the waiting list. One commenter recommended that we not add more metrics to § 441.311(d)(1). Several commenters did suggest additional metrics. Many of these commenters believed that more detailed data would allow for a better assessment of overall unmet needs and disparities within the waiting lists. Additional metrics suggested by commenters included:

- Disaggregated data about beneficiaries, by demographic categories, including race, ethnicity, Tribal status, language status, sex or gender identification, sexual orientation, age, and geographic location;
- Disaggregated data on beneficiaries' dual eligible status, disability, diagnosis, functional status, level of care, and risk of institutionalization;
- Whether States maintain separate waiting lists or registries for beneficiaries who are eligible for HCBS but have been determined by the State to not have a need prioritized by the State for enrollment in the waiver;
- The criteria used to determine beneficiaries' placement and movement within a waiting list;
- How much time individuals spend waiting for an eligibility assessment and how much time elapses between an assessment and service authorization;
- The number of eligibility screens performed on each beneficiary on the waiting list in the past year, and why a rescreen was performed;
- The number of beneficiaries removed from the waiting list due to death, admission to an institutional

setting, or having been rescreened and deemed ineligible;

- The number of beneficiaries on the waiting list who are receiving care through another State Medicaid program, reasons why beneficiaries prefer to remain on the waiting list rather than enroll in other services, and what beneficiary needs remain unmet by other Medicaid programs while a beneficiary is on a waiting list; and
- Whether a participant who has been approved for HCBS waiver services is able to find a provider, how long it took for them to find that provider, and what services they wanted, but could not access because no provider was available.

Response: We thank commenters for their feedback. We will take these recommendations under consideration for future policymaking, but at this time decline to make modifications to the requirements based on these comments.

We believe it is important to strike a balance between collecting enough information to promote transparency around waiting lists and imposing as minimal an administrative burden on States and providers as possible. We also believe that information on whether States screen individuals on their waiting lists, the number of beneficiaries on the waiting list, and the average amount of time beneficiaries enrolled in HCBS waivers spent on the waiting list provides important preliminary data on the States' waiting list practices. As we gather and review this data, we will consider what additional information may be needed to further improve our oversight of HCBS programs and improve beneficiaries' access to services.

However, we agree that some of the granular data elements suggested by commenters could provide States with valuable insight into their own programs and beneficiary needs. We encourage States to consider what information they have the capacity to collect and would find useful for developing local policies to support beneficiaries' access to section 1915(c) HCBS waiver programs in their State.

Comment: One commenter recommended requiring that States report duplicated and unduplicated counts of individuals across waiver program waiting lists.

Response: We have not identified a compelling reason to require that States report unduplicated counts of beneficiaries for all waiver programs. We clarify that the reporting required for § 441.331(d)(1) is for each waiting list; if an individual is on multiple waiting lists, we believe that person should be counted among individuals on each of those waiting lists.

Comment: A few commenters recommended additional metrics that fall outside the scope of reporting on waiting list practices or waiver enrollment, including:

- Whether individuals on waiting lists are also being screened for eligibility for other programs that they may be able to benefit from (for example, Supplemental Nutrition Assistance Program);
- How long it takes a State to approve enrollment in any program that provides Medicaid LTSS, from the date that it receives an application until the date of the approval letter; and
- Additional measures to assess the needs of populations that face barriers to navigating the HCBS programs, applying, and getting on a waiting list.

Response: While these metrics lie outside the scope of the proposed reporting requirements, we will add these to other comments regarding broader HCBS access and equity issues that we will consider for future policymaking.

Comment: A few commenters suggested that we collect data on reasons for long waiting times, such as challenges with workforce availability or provider capacity. Some commenters, particularly those representing States or providers, were concerned that without this information, States and providers would be held responsible for long waiting lists or long waiting times for services that are due to reasons beyond States' or providers' control. One commenter recommended adding a requirement that States describe any conditions, such as State funding priorities, that serve to limit access to the HCBS described in the waiver application. A few commenters recommended adding a requirement to the interested parties' advisory group being finalized at § 447.203 that would require States, through their interested parties' advisory groups, to examine reasons for gaps in services that are revealed by the reporting on waiting lists.

Response: We do not believe it would be feasible at this stage to standardize the collection of qualitative data regarding the causes of waiting lists; this data would also be difficult to validate. As noted in prior responses, the purpose of the requirement at § 441.311(d)(1) is to encourage transparency; the requirement does not include any specific performance measures with which States or providers must comply. We believe that collecting the number of individuals on the waiting list and the length of time individuals spend on waiting list will present quantifiable and comparable baseline data that can facilitate more nuanced conversations with States about potential unmet beneficiary needs and the underlying causes of these unmet needs.

We note that, regarding the interested parties' advisory group being finalized at § 447.203, the requirements at § 447.203 already include an expectation that access reporting that is required by 441.311(d) would be appropriate data for the Interested Parties Advisory Group (IPAG) to consider when making recommendations regarding the sufficiency of rates. We decline to add a specific requirement as suggested by the commenter, as we wish to allow both States and the IPAGs some discretion in determining their approach to examining the impact on payments rates in their State.

Comment: A few commenters supported annual reporting for § 441.311(d)(1). One commenter observed that one of their State agencies had already identified annual reporting on the waiting list as a best practice and was publishing an annual report. One commenter recommended quarterly reporting to encourage States to take more aggressive steps to reduce the size of their waiting lists. A few commenters believed that biennial (every other year) reporting would reduce burden on States and better account for fluctuations in waiting list size that are beyond the State Medicaid agency's control.

One commenter highlighted that waiting list volumes may vary at certain times of year or from year to year, depending on how States structure the release of new waiver slots and the timing of the State legislative sessions where new funding for waiver slots may be approved. The commenter stated that it is important to take these factors into account when considering reporting frequency and when evaluating reported data from year to year.

Response: We are finalizing the annual reporting frequency as proposed at § 441.311(d)(1). We continue to believe that annual reporting on waiting lists strikes the right balance between collecting current data on waiting lists and minimizing burden on States to the greatest extent possible. We believe reporting more frequently than annually may represent an undue burden on States, although States are encouraged to share information with interested parties within their State on a more frequent basis if they are able to do so. We are concerned that if we extend the reporting to a biennial frequency, the information will become outdated prior

to the next public report. We also note that States will likely have to develop or maintain the same data tracking systems regardless of whether the reporting itself is done annually or biennially; we believe the potential reduction in administrative burden by biennial reporting is outweighed by the need for more timely information on waiting lists.

Comment: One commenter requested clarification that the reporting requirement at § 441.311(d)(1) is limited to the section 1915(c) authority and to the section 1915(j) authority, where it is used as the State's authority for self-direction in a section 1915(c) waiver. This commenter recommended limiting this requirement to these authorities.

Response: We agree that, because section 1915(i) and section 1915(k) State plan services cannot have capped enrollment, the reporting requirements at § 441.311(d)(1) would not apply to these authorities. We also agree that the reporting requirements at § 441.311(d)(1) would also apply to section 1915(j) authority only where section 1915(j) is used as the State's authority for self-direction in a section 1915(c) waiver. We note that the reporting requirements at § 441.311(d)(1) would apply to section 1115(a) demonstration projects that include HCBS if the State caps enrollment for the HCBS under the section 1115(a) demonstration project. As discussed later in this section, section II.B.7. of this final rule, we are finalizing the application of the reporting requirements at § 441.311 to section 1915(j), (k), and (i) authorities with modifications to specify that States must only comply with the reporting requirements applicable to the services under these authorities.

After consideration of the commenters received, we are finalizing § 441.311(d)(1) as proposed.

(ii) Reporting on Wait Times for Services and Authorized Service Hours Provided (§ 441.311(d)(2))

At § 441.311(d)(2)(i), based on our authority under section 1902(a)(6) of the Act, we proposed to require States report annually on the average amount of time from when homemaker services, home health aide services, or personal care services, as listed in § 440.180(b)(2) through (4), are initially approved to when services began, for individuals newly approved to begin receiving services within the past 12 months. We proposed to focus on these specific services for this reporting requirement because of feedback from States, consumer advocates, managed care plans, providers, and other HCBS interested parties that timely access to these services is especially challenging and because the failure of States to ensure timely access to these services poses substantial risk to the health, safety, and quality of care of individuals residing independently and in other community-based residences. We believed that having States report this information will assist us in our oversight of State HCBS programs by helping us target our technical assistance and monitoring efforts. We requested comment on whether this requirement should apply to additional services authorized under section 1915(c) of the Act.

For this metric, we proposed to allow States to report on a statistically valid random sample of individuals newly approved to begin receiving these services within the past 12 months, rather than for all individuals newly approved to begin receiving these services within the past 12 months. We invited comments on the timeframe for States to report on this metric, whether we should require reporting less frequently (every 2 or 3 years), and if an alternate timeframe is recommended, the rationale for that alternate timeframe. We also invited comments on whether there are other specific metrics related to the amount of time that it takes for eligible individuals to begin receiving homemaker services, home health aide services, or personal care services that we should require States to report, either in place of or in addition to the metric we proposed.

At § 441.311(d)(2)(ii), also based on our authority under section 1902(a)(6) of the Act, we proposed to require States to report annually on the percent of authorized hours for homemaker services, home health aide services, or personal care services, as listed in § 440.180(b)(2) through (4), that are provided within the past 12 months. For this metric, we further proposed to allow States to report on a statistically valid random sample of individuals authorized to receive these services within the past 12 months, rather than all individuals authorized to receive these services within the past 12 months. We invited comments on the timeframe for States to report on this metric, whether we should require reporting less frequently (every 2 or 3 years), and if an alternate timeframe is recommended, the rationale for that alternate timeframe. We also invited comments on whether there are other specific metrics related to individuals' use of authorized homemaker services, home health aide services, or personal care services that we should require States to report, either in place of or in addition to the metric we proposed. We further requested comment on whether this requirement should apply to additional services authorized under section 1915(c) of the Act.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported our proposals at § 441.311(d)(2) that States report on the time it takes between service authorization and service delivery and the number of authorized hours compared to the number of hours provided. A few commenters, while characterizing these as imperfect measures, nevertheless noted that the data measurements can help assess systematic issues with provider enrollment and access to care. One commenter observed that similar data is not currently available from their State, and believed this type of data would be useful.

Commenters noted that in their experience, beneficiaries might wait months after being authorized to receive services for the services to actually begin, or do not receive all of the services indicated in their person-centered care plan; these delays and underutilization of services cause a wide array of issues for the beneficiary and their families.

Commenters also noted these proposals complemented the waiver waiting list requirement at § 441.311(d)(1), noting that even when individuals are enrolled in a waiver, this does not always mean that their services start immediately. A few commenters also stated that in their experience, even in States that do not have waiting lists for their waiver programs, beneficiaries may wait long periods of time for the waiver services to begin.

Response: As we discuss further in responses below, we recognize that the reasons for service delays and underutilization are nuanced. The reporting requirements at § 441.311(d)(2) are a first step in what will be an evolving process to promote transparency, oversight, and data-driven improvements in States' waiting list practices.

Comment: A few commenters cited factors that may contribute to delays or underutilization of services, some of which are beyond the control of State Medicaid agencies, managed care plans, or providers. Commenters cited challenges including administrative inefficiency, shortages of direct care workers or available providers, and geographic constraints. Other

commenters cited specific obstacles, such as: difficulty in obtaining complete medical information from the beneficiary, delays in the care planning process, additional training requirements for self-directed service workers, lags in providers submitting claims or other delays in claims processing, or unavailability of the beneficiary due to travel, hospitalization, changes in provider, withdrawal from the program, or loss of Medicaid eligibility. A few commenters suggested that in some cases, beneficiaries decline services or are already receiving a different service that meets their needs prior to the new services being authorized.

One commenter noted that there are service delivery delays in care provided under private payers and wondered how these delays compare to those in Medicaid HCBS and whether they may be attributable to the adequacy of the provider network or to reimbursement rates.

A few commenters believed that the requirements at § 441.311(d)(2) would not address these underlying causes of service delays or underutilization and, thus, would not improve access to services. One commenter requested clarification on how this data would be used to promote meaningful change.

On the other hand, some commenters believed that the requirements at § 441.311(d)(2) can help identify unmet needs and uncover some of the causes of these challenges, which in turn can focus efforts on efficient solutions.

Response: We acknowledge that there are many underlying causes for service delays or service underutilization. We believe that the first step toward addressing these challenges, where possible, is to quantify the scope of these delays or underutilization through data collection. Additionally, some of the challenges commenters cited are within the purview of States, managed care plans, or providers to address. If the data demonstrates what appears to be significant delays or underutilization, we believe this information can help facilitate conversations with States, managed care plans, and providers about the reasons for these reporting results.

We also note that the purpose of the data is to track trends in service delivery times and utilization, not to track the outcomes for each beneficiary. The reporting will be the average amount of time a random sample of beneficiaries waited between service authorization and the start of services, and the total percent of authorized services that were provided. Thus, some of the factors that commenters cited, particularly those involving the behavior of specific beneficiaries, such as failure to provide timely medical data, declining services, or traveling, we believe should not significantly impact the reported numbers unless these obstacles are particularly prevalent (in which case, this may also be an area to identify for policy or program improvement).

Comment: A few commenters opposed the requirements at § 441.311(d)(2). A few commenters suggested that some States or managed care plans are not currently tracking the time between service authorization and the start of services and that it would take significant resources to develop, test, and deploy changes to the State's documentation management system. One commenter noted that it may be difficult to track this data because services are authorized, and claims are paid using different systems or are overseen by different parts of State government. One commenter noted that, while their State does track service utilization data, it would take additional staff resources to comply with the reporting requirements.

Response: We are not currently collecting States' data on the times between service authorization and when services begin, or the number of authorized hours that are being utilized and understand that States may not be tracking all of this data; the absence of this data is what has prompted us to propose the requirement at § 441.311(d)(2). We recognize that, because this data has not previously been tracked by all States, some States may have to update their data collection systems to comply with this new requirement. As discussed elsewhere in this rule, in Medicaid, enhanced FFP is available at a 90 percent FMAP for the design, development, or installation of improvements of mechanized claims processing and information retrieval systems, in accordance with applicable Federal requirements. Enhanced FFP at a 75 percent FMAP is also available for operations of such systems, in accordance with applicable Federal requirements. We reiterate that receipt of these enhanced funds is conditioned upon States meeting a series of standards and conditions to ensure investments are efficient and effective. We also note that, under section 1903(a)(7) of the Act, Federal matching funds are available for administrative activities necessary for the proper and efficient administration of the Medicaid State plan.

We developed the reporting requirement at § 441.311(d)(2) to strike a balance between collecting enough information to enable Federal oversight of service delivery and utilization and imposing as minimal an administrative burden on States and providers as possible. We believe the long-term benefits of collecting this data outweigh the initial burden of implementation. Accordingly, we decline to make any changes in this final rule based on these comments.

We are finalizing § 441.311(d)(2)(i) with a modification that we believe will further reduce administrative burden on States. As noted in an earlier comment summary, some commenters noted that in some instances beneficiaries may wait long periods of time to receive services. Upon further consideration, we have determined that the requirement at § 441.311(d)(2) as written may present some data collection challenges in situations in which the beneficiary's date of approval of service and the date when services actually begin are separated by enough time that they fall in two different reporting periods. For instance, if the reporting period aligned with the calendar year, if an individual was approved for services on November 1, 2028, but did not start receiving services until February 1, 2029, it is not clear how that beneficiary's wait time for services would be captured in the reporting period for January 1, 2028, through December 31, 2028. (We note that we are using the calendar year as the reporting period only for the purposes of this example. As discussed later in this section, we will work with States and other interested parties through the Paperwork Reduction Act process to determine the actual reporting period.) It appears that in this circumstance, the State would have to first indicate that the beneficiary had waited 2 months (November 1, 2028, through the end of the reporting period on December 31, 2028); then the State would need to submit updated information for this beneficiary to report the beneficiary's total wait time. This process would need to be repeated on a rolling basis for other beneficiaries whose approval date and service start date fell in different reporting periods. Repeated updates to States' data would be burdensome, make it difficult for States to share meaningful data with CMS and the public, and lead to delays in State reporting of complete data for each reporting period.

To avoid this type of confusion in reporting, we are amending the requirement at § 441.311(d)(2)(i) to specify that the reporting is for individuals **newly** receiving **services,** rather than for individuals newly approved to begin receiving services. (Revised language is noted in bold.) As applied to the example above, this

modification to § 441.311(d)(2)(i) means that the beneficiary whose services began on February 1, 2029 would be included in the January 1, 2029, through December 31, 2029, reporting period; the State would be able to ''look back'' to identify when the services were approved (in the example, services were approved November 1, 2028) and the State would report the beneficiary's total wait time between November 1, 2028 and February 1, 2029. We believe this modification preserves the intention of what we proposed in § 441.311(d)(2)(i)—to measure the time between when a beneficiary was approved to receive services and when the services actually begin—but clarifies and streamlines the reporting process.

Comment: A few commenters expressed concerns that States would use information about unfilled service hours to infer whether or not authorized services are necessary for the beneficiary. These commenters noted that many reasons exist as to why an individual would be unable to receive authorized care on a particular day but still need the care, such as the service provider was unavailable or there was confusion around when and what services were to be delivered on that day. One commenter requested reassurance that the reporting requirement at § 441.311(d)(2)(ii) to report on the average number of hours authorized that are provided would not be used to reduce or limit beneficiaries' access to services. One commenter suggested that we monitor services to ensure that States are not reducing services in response to this data.

Response: The purpose of this reporting requirement at § 441.311(d)(2)(ii) is not to audit individual beneficiaries' service utilization or to use the information as a reason to reduce their authorized service hours. The purpose and intent of the requirement is to identify barriers to beneficiaries' access to services. Accordingly, we decline to make any changes in this final rule based on these comments. However, we note that the State is required at § 441.301(c)(2) to ensure that the person-centered service plan reflects the services and supports that are important for the individual to meet the needs identified through an assessment of functional need, as well as what is important to the individual with regard to preferences for the delivery of such services and supports, and this requirement remains unchanged. States and managed care plans should not use the data collected to meet the reporting requirement at § 441.311(d)(2)(ii) to reduce authorized hours.

Comment: One commenter requested clarification on when the approval of services occurs, such as at the time of enrollment or when a physician signs the plan of treatment. The commenter also observed that it will be critical to standardize the data elements that must be captured in this reporting.

Response: Given the variable nature of States' processes, we defer to States to determine when services are considered to have been approved and how this approval date can be tracked consistently for the reported services. We intend to provide States with technical assistance, including technical specifications and sampling guidance, for the new reporting requirements in this final rule, which will aid in consistent data reporting. We will also be making the reporting template available for public comment through the Paperwork Reduction Act notice and comment process.

Comment: A couple of commenters recommended requiring States to set a target for timeliness (such as 7 days) and measure the percentage of all cases in which the wait time exceeded that target.

Response: At this time, we are focusing on creating baseline data-reporting standards. We will take these recommendations for setting or requiring benchmarks under consideration should we pursue future rulemaking in this area.

Comment: We received responses to our comment solicitation on whether § 441.311(d)(2) should apply to other section 1915(c) services aside from homemaker, home health aide, and personal care services as set forth at § 440.180(b)(2) through (4).

One commenter recommended narrowing the scope of this requirement to personal care services only and removing homemaker and home health aide services from the requirement. The commenter contended that homemaker services do not cover activities of daily living which are typically associated with direct care to HCBS beneficiaries. The commenter also noted that home health aide services are typically offered under the Medicaid State plan rather than a section 1915(c) waiver. The commenter concluded that limiting the requirement to personal care services would allow CMS and States to concentrate on highly utilized personal care services and would make the requirement more operationally feasible for States.

On the other hand, a few commenters advocated for extending the reporting requirements to all HCBS. One of these commenters suggested that applying the requirement to only a few services would create an unintended consequence of focusing more attention on certain services and the populations receiving those services, at the expense of other beneficiaries. A few of these commenters also pointed out that other services are experiencing direct care worker shortages that could be contributing to service delays or underutilization that need to be identified.

One commenter suggested that we add services offered by specialty providers, such as occupational therapists, physical therapists, or speech-language pathologists, to the requirement.

A couple of commenters recommended extending the requirement to include services typically delivered to people with intellectual or developmental disabilities, such as habilitation services. Similar to the reasons cited by commenters for extending the requirement to all HCBS, commenters in favor of extending the requirements to include habilitation noted that these services are critical and beneficiaries who receive them are experiencing delays in services or other access issues. However, one commenter requested that we not extend these requirements to habilitation services, citing concerns that some States' information systems are not equipped to track this information for habilitation services. The commenter also noted that differences between habilitation services and other types of HCBS require additional study and consideration prior to applying these reporting requirements for habilitation services.

Response: We believe that the services proposed for inclusion in this requirement include activities of daily living that are critical to beneficiaries' health, safety, and ability to live successfully in the community. Additionally, as identified in an analysis performed by CMS, the three services fall within the taxonomy of home-based services, which are both high-volume and high cost.[126] Thus, we believe that targeting these services will maximize the impact of this requirement by addressing the needs of many beneficiaries and promoting better oversight of frequently used services. Given the similarities among homemaker, home health aide, and personal care services, we cannot find a justification for removing homemaker

[126] Centers for Medicare & Medicaid Services. ''Trends in Rate Methodologies for High-Cost, High Volume Taxonomies.'' *https://www.medicaid.gov/sites/default/files/2019-12/trends-in-rate-august-2017.pdf.* Last access October 2, 2023.

and home health aide services from this requirement.

Because we want to start by focusing on a selection of high-volume, high-cost services, we do not at this time intend to expand the reporting requirement to all HCBS. We do agree with commenters that services in addition to homemaker, home health aide, and personal care services may be particularly vulnerable to delays due to shortages in the direct care workforce. For that reason, we are extending the requirement to habilitation services in this final rule which, like homemaker, home health aide, and personal care services, tend to be hands-on services that are delivered by direct care workers who often earn lower wages. We believe that expanding the reporting to include habilitation services will ensure that beneficiary populations, namely individuals with intellectual or developmental disabilities who commonly receive personal care services as part of their habilitation services, are not excluded from our efforts to support the direct care workforce.

We acknowledge the comment that habilitation services are unique from other services, but also cannot identify reasons why these differences should exclude them from this reporting requirement.

After consideration of these comments and the benefits of aligning reporting requirements across services, we are finalizing the reporting requirements at § 441.311(d)(2)(i) and (ii) with a modification to include homemaker, home health aide, personal care, and habilitation services, as set forth at § 440.180(b)(2) through (4) and (6).

Comment: One commenter requested clarification on whether § 441.311(d)(2) would apply to services in both managed care and FFS delivery systems. One commenter requested that we require reporting on managed care plans' prior authorization practices, including differing lengths of authorizations and untimely authorizations that were not in place or renewed prior to the date of expected services. The commenter noted that missing authorizations may cause disruptions in payments to providers and threaten the continuity of beneficiaries' access to the services.

Response: The reporting requirements apply to services delivered under both FFS and managed care delivery systems. For additional information, we refer readers to the discussion of §§ 441.311(f) and 438.72(b) below. We note that a State may consider requiring reporting on specific managed care processes through its contracts with managed care plans.

Comment: A few commenters requested clarification as to whether the requirements at § 441.311(d)(2) would apply to self-directed services. A few commenters raised specific questions or concerns about the application of the reporting requirements at § 441.311(d)(2) to self-directed services, particularly self-directed service models with individual budget authority. Commenters noted that the inherent flexibility of these services might make reporting on the utilization of service hours particularly misleading. One commenter noted that, when an individual selects an independent worker to provide services, that worker might have to go through background checks and training that would make it appear that the service delivery is delayed. One commenter worried that States would become concerned with the appearance of delays in the delivery of self-directed services and discourage beneficiaries from seeking self-directed services. Another commenter pointed out that since beneficiaries might use their budget authority to purchase equipment or devices that replace some hands-on services, or may choose to adjust their service schedules, service utilization data on these services might inaccurately suggest that the beneficiary is being underserved. On the other hand, one commenter recommended that self-directed services be included in this reporting. Another commenter stated that from their personal experience as a provider, beneficiaries receiving self-directed services tend to have higher service utilization rates than beneficiaries in agency-directed services. One commenter suggested that data on all models of self-directed services be tailored to the unique needs of the model, such as by requiring reporting on the percent of the budget used rather than the number of service hours. Another commenter suggested that additional guidance would be needed to apply the reporting requirements to self-directed models.

Response: As discussed in section II.B.7.e. of this final rule, these reporting requirements will apply to self-directed services. We thank commenters for raising these concerns. As noted earlier, we intend to provide States with technical assistance, including technical specifications and sampling guidance, for the new reporting requirements in this final rule, which should aid in reporting on self-directed services. As noted in a prior response, the purpose of the data is to track trends in service delivery times and utilization, not to track the outcomes for each beneficiary. The reporting will be the average amount of time a random sample of beneficiaries waited between service authorization and the start of services, and the total percent of authorized services that are provided. Thus, some of the factors that commenters cited, such as additional training for self-directed service workers or individual beneficiaries' changes in schedules, should not significantly impact the reported numbers. However, we will work with States to monitor this issue.

Comment: A few commenters raised concerns about the proposal to allow States to report data on a statistically valid sample of beneficiaries, suggesting instead that we require complete reporting on all relevant beneficiary data. Commenters were concerned that using a sample could mask disparities or fail to identify individuals with particularly acute unmet needs. One commenter suggested that if we permit reporting on a random sample, we add a requirement that the data must include information on race, ethnicity, and population (such as older adults, people with intellectual and developmental disabilities, and people with physical disabilities) in order to identify disparities in service delivery.

Response: To minimize State reporting burden, we are finalizing the requirement to allow States to report data for § 441.311(d)(2) using statistically valid random sampling. We believe that due to variety in States' current tracking systems, some States might find reporting using statistically valid random sampling to be more manageable and auditable than attempting to report on all beneficiaries. We will consider expanding reporting to the full population in future rulemaking if it is determined that such an approach gives a more complete picture of service delivery. We note that States may choose to report on the full population, as opposed to sampling their beneficiaries, if for instance, doing so better aligns with their data collection process or needs.

We are finalizing the requirements at § 441.311(d)(2)(i) and (ii) with a technical modification to specify that the State may report this metric using **statistically valid random sampling of beneficiaries.** (Revised language identified in bold.) We make this technical correction to better align the language with standard terminology for the sampling methodology we intended in these requirements.

Comment: We received responses to our comment solicitation on additional metrics that could be collected regarding service delivery and utilization. One commenter

recommended that we not add more metrics to § 441.311(d)(2). Several commenters did suggest additional metrics. Many of these commenters noted that more detailed data would allow for a better assessment of overall unmet needs and disparities within service delivery. Additional metrics suggested by commenters included:

- Disaggregated data about beneficiaries, by demographic categories, including race, ethnicity, language status, sex or gender identification, sexual orientation, age, and geographic location;
- Tracking the total number of beneficiaries who received service authorizations versus the number of beneficiaries who received services;
- Tracking why services are not provided or why a beneficiary declines a service;
- Disaggregated data by HCBS authority and population (including dual eligibility), delivery system, provider type, and managed care plan; and
- Tracking beneficiaries' long-term access to services or other metrics to measure continuity of care and how the care contributes to beneficiaries' goals and outcomes.

One commenter, while not recommending that we require the measure for all States, shared a State's experience of including a measure to assess missed visits in its managed LTSS program. The commenter observed that this required a significant amount of time to identify legitimate reasons for services to not have been provided and to build the system mechanisms to capture that data, which was primarily identified through case management record review.

Response: We thank commenters for their thoughtful feedback. We will take these recommendations under consideration for future policymaking, but at this time, we decline to modify the metrics required at § 441.311(d)(2) based on these comments.

As noted in previous responses, we do not believe it would be feasible at this stage to standardize the collection of certain types of qualitative data, such as reasons for delayed or undelivered services, or how the services contribute to beneficiaries' outcomes; this data would also be difficult to validate and, as noted by one commenter, time-consuming to implement.

We believe it is important to strike a balance between collecting information to promote transparency around service times and utilization and imposing as minimal an administrative burden on States and providers as possible. We also believe that the reporting requirements at § 441.311(d)(2) are straightforward metrics on which to begin reporting. As we gather and review this data, we will consider what additional information may be needed to further improve our oversight of HCBS programs and improve beneficiaries' access to services and may consider additional reporting requirements in the future.

However, we agree that some of the granular data elements suggested by commenters could provide States with valuable insight into their own programs and beneficiary needs. We encourage States to consider what information they have the capacity to collect and would find useful for developing local policies to support beneficiaries' access to HCBS waivers in their State.

Comment: A few commenters recommended additional metrics that fall outside the scope of the reporting in § 441.311(d)(2). One commenter recommended collecting data on case manager or service coordinator caseloads. A few commenters recommended measuring time between an individual's date of application and their eligibility determination, and the time between an individual's eligibility determination and the plan of care development or authorization for services.

Another commenter noted that a cause of delay in receiving HCBS may be due to delays in the development of care plans that are required for HCBS delivery to begin. The commenter noted that a potential solution to this specific barrier is the use of provisional plans of care, which are discussed in Olmstead Letter #3.[127] The commenter recommend that we affirm that HCBS provisional plans of care are an available option and require States to report on usage of such plans.

Response: We thank commenters and note these comments are not directly related to the proposed requirements in § 441.311(d), and thus we decline to make modifications to § 441.311(d) based on these suggestions. We plan to consider the comments as we regard broader HCBS access and equity issues for future policymaking. We also note that while requiring use of provisional care plans would be outside the of scope of this requirement, we agree with the commenter that the use of provisional care plans as described in Olmstead Letter #3 may help avoid the delay of services pending the development of the care plan.[128] In this letter, we explain that we will accept, as meeting requirements, a provisional written plan of care which identifies the essential Medicaid services that will be provided in the person's first 60 days of waiver eligibility, while a fuller plan of care is being developed and implemented. During this time, the relevant agencies work with the beneficiary to develop and finalize a ''comprehensive plan of care,'' which goes into effect as soon as practically possible, and at least within 60 days.

Comment: One commenter recommended that we allow States the option to choose one of the proposed criteria in § 441.311(d)(2) on which to report or to propose a different metric on which to report. The commenter believed this would permit flexibility in reporting on and context for data related to timeliness of initiation of service planning and service delivery. The commenter believed that this could serve as the first stage in a phased approach for access reporting.

Response: We thank the commenter for their suggestion. However, we believe it is important to take steps to establish nationally comparable data, which would require States to report on the same metrics. As discussed in previous responses, we are not finalizing any additional metrics for § 441.311(d)(2) and believe that the two metrics included in this requirement are a reasonable first step in data collection.

Comment: A few commenters supported annual reporting for § 441.311(d)(2). One commenter noted that annual reporting will better monitor service interruptions due to shortages of direct care workers. One commenter noted that a beneficiary's service utilization can fluctuate significantly even from month to month. One commenter believed that biennial (every other year) reporting would reduce burden on States.

Response: We are finalizing the annual reporting frequency as proposed

[127] Refer to Centers for Medicare and Medicaid Services, ''Olmstead Letter #3, Attachment 3–a.'' July 25, 2000. Available at *https://www.medicaid.gov/sites/default/files/Federal-Policy-Guidance/downloads/smd072500b.pdf;*. The commenter notes that in Olmstead Letter #3, Attachment 3–a (*https://www.medicaid.gov/Federal-Policy-Guidance/downloads/smd072500b.pdf*), CMS explains that it ''will accept as meeting the requirements of the law a provisional written plan of care which identifies the essential Medicaid services that will be provided in the person's first 60 days of waiver eligibility, while a fuller plan of care is being developed and implemented.'' During this time, the relevant agencies work with the beneficiary to develop and finalize a ''comprehensive plan of care,'' which goes into effect as soon as practically possible, and at least within 60 days.

[128] Centers for Medicare and Medicaid Services, ''Olmstead Letter #3, Attachment 3–a.'' July 25, 2000, which is available at *https://www.medicaid.gov/sites/default/files/Federal-Policy-Guidance/downloads/smd072500b.pdf.*

in § 441.311(d)(2). We continue to believe that annual reporting strikes the right balance between collecting current data and minimizing burden on States to the greatest extent possible. We are concerned that if we extend the reporting to a biennial frequency, the information will become outdated prior to the next public report.

After consideration of the comments received, we are finalizing the requirements at § 441.311(d)(2), with modifications. We are finalizing § 441.311(d)(2)(i) with a modification to specify that the reporting is for individuals newly receiving services within the past 12 months, rather than for individuals newly approved to begin receiving services. We are also finalizing a modification so that both reporting requirements at § 441.311(d)(2)(i) and (ii) require reporting on homemaker services, home health aide services, personal care, or habilitation services, as set forth in § 440.180(b)(2) through (4) and (6), and allow States to report using statistically valid random sampling of beneficiaries.

We note that we are finalizing § 441.311(d)(2) with technical corrections. As a result of modifying § 441.311(d)(2) to include habilitation services, we are modifying the title of this provision to specify *Access to homemaker, home health aide, personal care, and habilitation services.* We are also finalizing a technical modification in both § 441.311(d)(2)(i) and (ii) to indicate that the services are as ''set forth'' in § 440.180(b)(2) through (4) and (6), rather than as ''listed'' in.

d. Payment Adequacy (§ 441.311(e))

At § 441.311(e), we proposed new reporting requirements for section 1915(c) waivers, under our authority at section 1902(a)(6) of the Act, requiring that States report annually on the percent of payments for homemaker, home health aide, and personal care services, as listed at § 440.180(b)(2) through (4), spent on compensation for direct care workers. For the same reasoning discussed in section II.B.5. of this preamble, we have focused this requirement on homemaker services, home health aide services, and personal care services because they are services for which we expect that the vast majority of payment should be comprised of compensation for direct care workers and for which there would be low facility or other indirect costs. These are services that would most commonly be conducted in individuals' homes and general community settings. As such, there should be low facility or other indirect costs associated with the services. We also believed that this reporting requirement could serve as the mechanism by which States demonstrated that they meet the proposed HCBS Payment Adequacy requirements at § 441.302(k).

We considered whether the proposed reporting requirements at § 441.311(e) related to the percent of payments going to the direct care workforce should apply to other services, such as adult day health, habilitation, day treatment or other partial hospitalization services, psychosocial rehabilitation services and clinic services for individuals with chronic mental illness. We had selected homemaker, home health aide, and personal care services (as defined at § 440.180(b)(2) through (4)) for this reporting requirement to align with the payment adequacy minimum performance requirement at § 441.302(k)(3), which is discussed in section II.B.5. of this preamble. However, we requested comment on whether States should be required to report annually on the percent of payments for other services listed at § 440.180(b) spent on compensation for direct care workers and, in particular, on the percent of payments for residential habilitation services, day habilitation services, and home-based habilitation services spent on compensation for direct care workers.

We further proposed that States separately report for each service subject to the reporting requirement and, within each service, separately report on payments for services that are self-directed. We considered whether other reporting requirements such as a State assurance or attestation or an alternative frequency of reporting could be used to determine State compliance with the requirement at § 441.302(k) and decided that the proposed requirement would be most effective to demonstrate State compliance. We requested comment on whether we should allow States to provide an assurance or attestation, subject to audit, that they meet the requirement in place of reporting on the percent of payments, and whether we should reduce the frequency of reporting to every other year.

To minimize burden on States and providers, we proposed that States report in the aggregate for each service across all of their services across all programs as opposed to separately report for each waiver or HCBS program. However, we requested comment on whether we should require States to report on the percent of payments for certain HCBS spent on compensation for direct care workers at the delivery system, HCBS waiver program, or population level. We also requested comment on whether we should require States to report on median hourly wage and on compensation by category.

In consideration of additional burden reduction for certain providers, we requested comment on whether we should allow States the option to exclude, from their reporting to us, payments to providers of agency directed services that have low Medicaid revenues or serve a small number of Medicaid beneficiaries, based on Medicaid revenues for the service, number of direct care workers serving Medicaid beneficiaries, or the number of Medicaid beneficiaries receiving the service. We also requested comment on whether we should establish a specific limit on this exclusion and, if so, the specific limit we should establish, such as to limit the exclusion to providers in the lowest 5th, 10th, 15th, or 20th percentile of providers in terms of Medicaid revenues for the service, number of Medicaid beneficiaries served, or number of direct care workers serving Medicaid beneficiaries.

We proposed that payments for self-directed services by States should be included in these reporting requirements, although we noted feedback from interested parties indicating that compensation for direct care workers in self-directed models tends to be higher and may comprise a higher percentage of the payments for services than other HCBS. This decision not to exclude them was based on the importance of ensuring a sufficient direct care workforce for self-directed services. We requested comment on whether we should allow States to exclude payments for self-directed services from these reporting requirements.

We note that, for clarity, we are aligning the definitions of compensation, direct care worker, and excluded costs at § 441.311(e)(1) with those we are finalizing in § 441.302(k)(1). As a result, the reporting requirement we proposed at § 441.311(e) is finalized at § 441.311(e)(2)(i), as discussed below. While we consider the reporting requirement at § 441.311(e) to be distinct and severable from the payment adequacy requirements in § 441.302(k), we believe that the reverse is not the case—that § 441.302(k) does rely on the reporting mechanism at § 441.311(e) to establish compliance with the minimum performance requirement at § 441.302(k)(3). As such, we believe it is advantageous to have aligned definitions.

We received public comments on this proposal. The following is a summary of

the comments we received and our responses.

Comment: Several commenters expressed general support for our proposed requirement at § 441.311(e) that States report annually on the percent of payments for homemaker, home health aide, and personal care services, as listed at § 440.180(b)(2) through (4), spent on compensation for direct care workers. Commenters believed that this requirement would provide data about how Medicaid payments are being spent, which would improve oversight and enable meaningful comparisons across programs. One commenter requested clarification on the intent of the reporting requirement.

Commenters also believed that this requirement would ensure compliance with the payment adequacy minimum performance requirement at § 441.302(k)(3). Several commenters, however, expressed support for finalizing this reporting requirement, but not for finalizing the minimum performance requirement at § 441.302(k)(3). These commenters noted that the reporting requirement by itself would yield useful data that would support payment transparency in HCBS programs.

Response: This requirement is intended to help track the percent of Medicaid payments for certain HCBS that is spent on compensation for direct care workers. As we discussed extensively in section II.B.5. of this rule, we believe that ensuring that a significant portion of payments for these hands-on services is spent on compensation for direct care workers aligns with our responsibility under section 1902(a)(30)(A) of the Act to require assurance that payments are consistent with efficiency, economy, and quality of care. We do note that this reporting requirement also is a mechanism by which States demonstrate compliance with the payment adequacy requirements at § 441.302(k), which is discussed in detail in section II.B.5. of this rule.

While we are finalizing the payment adequacy requirements at § 441.302(k), we agree that the value provided by this reporting requirement is distinct and severable from the minimum performance requirement and serves as a standalone requirement. To clarify the distinction between this reporting requirement and the payment adequacy requirement at § 411.302(k), we are revising the language at § 411.311(e)(2) to remove the reference to the minimum performance requirement at § 411.302(k)(3). We believe this will better demonstrate that the reporting requirement has a function aside from demonstrating compliance with § 411.302(k). We also believe this to be necessary because, as discussed further below, we are finalizing the reporting requirement at § 411.311(e)(2) to include reporting of data related to habilitation services, which are not subject to the minimum performance requirement at § 411.302(k)(3). Thus, we believe retaining the reference to § 411.302(k)(3) would cause some confusion.

Comment: A few commenters opposed the reporting requirement proposed at § 441.311(e) (which we are finalizing at § 411.311(e)(2)). These commenters noted that the reporting requirement would increase administrative burden and administrative costs for providers; a few commenters believed the increase in administrative tasks would undermine the goal of the minimum performance requirement at § 441.302(k)(3) to reduce providers' spending on administrative activities.
