Other commenters expressed concern that this requirement would create a burden for States. One commenter, although recognizing the need for more data about compensation to direct care workers, believed that most States do not currently collect this type of data and would require significant time, administrative effort, and expense to collect, compile, report, and analyze the data in a meaningful way. A few commenters stated that States would need to make significant changes to current billing and reporting practices and IT in order to isolate the use of reimbursements for the three specified services from the larger menu of services a provider typically offers. A couple of commenters expressed concerns about the time and resources it would take to educate providers about the requirements and their reporting responsibilities.

Additionally, a few commenters expressed concerns about whether States have the capacity to validate the accuracy of providers' reports and conduct audits, especially in States with a large number of providers. One commenter expressed concern about the cost associated with hiring and training independent auditors to audit providers' reported compensation of direct care workers. One commenter shared first-hand experience with implementing a wage pass-through requirement as part of the State's spending plan under ARP section 9817; the commenter regarded the process of monitoring and validating the percentage of payments going to direct care workers as administratively burdensome.

Response: We acknowledge that complying with this reporting requirement will necessitate certain expenditures of resources and time on the part of providers and States. As noted by commenters, we believe that the value of the data collected through their efforts makes these expenditures of resources worthwhile. As discussed further below, we are finalizing the redesignated § 441.311(e)(2)(i) to require only aggregated data by service, as proposed, which we believe will reduce burden on both providers and States.

We believe that, generally speaking, States and providers should already have information about the amount of Medicaid payments providers receive for specific services, and that providers likely already track expenditures on wages and benefits for their workers. We also believe that the simpler, aggregated reporting will be easier for States to validate and include in their existing auditing processes.

However, to ensure that States are prepared to comply with this reporting, we are adding a requirement at § 441.311(e)(3) to require that States must report, one year prior to the applicability date for (e)(2)(i) of this section, on their readiness to comply with the reporting requirement in (e)(2)(i) of this section. This will allow us to identify States in need of additional support to come into compliance with § 441.311(e)(2)(i) and provide targeted technical assistance to States as needed.

Comment: A couple of commenters requested that CMS issue subregulatory guidance or share best practices to assist with strategies for collecting data and ensuring compliance with the requirement. One commenter recommended that we work with States to determine the most efficient way to gather comparable, useful data to inform future rate policies, including exploring whether existing State tools could meet the requirement or could do so with modification.

A few commenters raised particular concerns about cost reports, which they believed would be necessary for implementing the reporting requirement. Commenters stated that without standardized cost reports, it will be difficult to ensure consistent and comparable data reporting across programs. Some of these commenters noted that, in States that do not currently require cost reports, this will present a new burden for both providers and States. A couple of commenters worried that providers may lack both the familiarity and the resources to complete cost reports. A few commenters requested that CMS

develop a standard cost reporting template to ensure accurate data collection and assessment of compliance across all States.

A couple of commenters, noting the language proposed in § 441.311(e) (which we are finalizing at § 441.311(e)(2)(i)) that the reporting will be at the time and in the form and matter specified by CMS, requested additional information regarding the method of submission and the methodology that will be required for the calculations used in the report.

Response: We intend to release subregulatory guidance to assist States with implementation of this requirement, and we plan to also provide technical assistance and best practices to help States identify ways to use existing infrastructure or tools to gather and report. Further, as noted earlier, we intend to provide States with technical specifications for the new reporting requirements in this final rule, which will aid in consistent data reporting. In addition, we will be making the reporting template available for public comment through the Paperwork Reduction Act notice and comment process. Through that process, the public will have the opportunity to review and provide feedback on the elements of the required State reports, including the methodology of the calculations, as well as the timing and format of the report to us.

As discussed further below, we are finalizing the requirement at § 441.311(e)(2)(i) (originally proposed at § 441.311(e)) that States need only report aggregated data by service. We believe this will reduce the overall burden on States and providers and reduce the need for complex cost reporting.

Comment: One commenter requested enhanced FMAP for costs associated with the reporting requirement.

Response: Enhanced FFP is available at a 90 percent FMAP for the design, development, or installation of improvements of mechanized claims processing and information retrieval systems, in accordance with applicable Federal requirements.[129] Enhanced FFP at a 75 percent FMAP is also available for operations of such systems, in accordance with applicable Federal requirements.[130] We reiterate that receipt of these enhanced funds is conditioned upon States meeting a series of standards and conditions to ensure investments are efficient and effective.[131] We decline to make any changes in this final rule based on this comment.

Comment: One commenter suggested that, instead of requiring reporting on the percentage of Medicaid payments going to compensation for direct care workers, we should require States to report annually on how their rates are determined and if the State's rate review included factors such as current wage rates, inflation, required costs of business, and increasing health insurance rates. Another commenter recommended that CMS consider implementing a regular review and assessment to determine if State Medicaid rates provide competitive wages for the direct care workforce and review how these wages are funded in the various payment models.

Response: We focused this particular proposal on the allocation of Medicaid payments, not on rate setting or rate methodology. Such considerations are outside the scope of this proposal. However, we direct readers to the discussion in Documentation of Access to Care and Service Payment Rates (section II.C. of this final rule) which may speak to readers' interests in rate transparency and analysis. We decline to make any changes in this final rule based on this comment.

Comment: A few commenters requested clarification of the enforcement mechanisms for the reporting requirement.

Response: In terms of enforcing compliance of the States' obligation to submit reports as required at § 441.311(e), we intend to use our standard enforcement discretion. In terms of providers' cooperation with States in submitting the data States need to make their reports, we note that States already have broad authority to take enforcement action and create penalties, whether monetary or non-monetary, for providers that have violated their obligations as set forth by the State Medicaid program. We decline to make any changes in this final rule based on this comment.

Comment: A few commenters requested that we clarify managed care plans' responsibility for tracking and reporting expenditures. A few commenters expressed concern that this proposal would pose particular reporting or accounting burdens for providers that participate in multiple Medicaid managed care plans, serve non-Medicaid clients, or receive bundled payments.

Response: We plan to provide technical assistance to States to address the role of managed care plans in adhering to this reporting requirement, as well as to assist with strategies for addressing bundled payments that include the services affected by this requirement. Also, as discussed in greater detail below, we are not proposing granular reporting (such as requiring data be disaggregated by managed care plan or by HCBS waiver program). Additionally, we would like to emphasize that our intention is that the State requires providers share information about the percent of all of their Medicaid FFS payments and the payment they receive from managed care plans that is being spent on compensation for the direct care workforce; we do not intend that the State should expect providers to provide a separate percent of Medicaid payments from each managed care plan in which they are enrolled, or provide separate calculations based on payment from services provided to non-Medicaid beneficiaries that is separate and distinct from their participation in the Medicaid managed care program. We therefore decline to make any changes in this final rule based on this comment.

Comment: A couple of commenters suggested that we expand reporting to include more HCBS than the three services specified, or even to apply this requirement to all HCBS. One of the commenters noted that, while more work, it would be administratively simpler to report on a broader array of services, rather than trying to isolate data for a few HCBS. One of the commenters recommended that we could phase in these expanded reporting requirements, beginning with homemaker, home health aide, and personal care services.

Response: As discussed below, we are expanding this reporting requirement in this final rule to include habilitation services. We tailored this requirement to address the services that are most likely to be delivered by direct care workers who predominantly earn lower wages. At this time, we do not intend to expand the requirement beyond homemaker, home health aide, personal care, and habilitation services. However, we note that States are free to collect additional information for State use if the States believe this would simplify administration or they would like to track allocations of Medicaid payments to direct care workers providing other types of HCBS.

Comment: In response to our request for comments, a few commenters recommended expanding the reporting requirement to include the percent of payments for residential habilitation services, day habilitation services, and home-based habilitation services that is spent on compensation for direct care workers. One commenter believed that it was important to include habilitation because, in the absence of such data, individuals with developmental disabilities will be disadvantaged since habilitation is a primary vehicle for the delivery of support services to people with intellectual and developmental disabilities in most States. Another commenter believed this information would be critical for determining any future minimum performance level for compensation to direct care workers that was applied to habilitation services.

A few commenters, on the other hand, did not support including habilitation services, but did not specify reasons why these services should be excluded.

Response: We agree with commenters that collecting information about habilitation services would yield useful data about the allocation of Medicaid payments in support of the direct care workforce. Like homemaker, home health aide, and personal care services, habilitation services also tend to be hands-on services that are delivered by direct care workers who often earn lower wages. However, a key difference between habilitation services and the services that were initially selected for this reporting requirement is that they may include facility costs if the service includes residential habilitation or day habilitation. Reporting on habilitation could be useful in better understanding these costs as well, as it will allow for a comparison between the facility-based habilitation services and in-home services. We also agree with commenters that, as habilitation services are more often delivered to people with intellectual and developmental disabilities, excluding habilitation services will disproportionately impact beneficiaries with intellectual and developmental disabilities.

While we agree with commenters that it is important to collect data on habilitation services, we also acknowledge that, as noted above, some services include facility costs that may impact the percent of Medicaid payments being spent on compensation for direct care workers. Similar to our proposed requirement at § 441.311(e), that self-directed services be reported separately, we also are requiring that services that include facility costs in the Medicaid rate be reported separately; this way, we can observe the differences between the allocation of payments in facility-based services versus services that are provided solely in the beneficiary's home or in community settings that are not facilities.

After consideration of the comments, we are adding habilitation services to this reporting requirement being finalized at § 441.311(e)(2)(i). We are modifying the requirement at § 441.311(e)(2)(i) to specify that the services included in this requirement are those set forth at § 440.180(b)(2) through (4) and (6). We note that § 440.180(b)(6) refers to habilitation services, without distinguishing between residential habilitation services, day habilitation services, and home-based habilitation services. Thus, we are also specifying that services with facility costs included in the Medicaid rate must be reported separately. These categories will be further described in subregulatory guidance. We approximate this distinction in this reporting requirement through the separate depiction of services with facility costs.

Comment: One commenter recommended that we exclude nurses and direct care workers who provide nursing assistance from this reporting requirement. Another commenter suggested that we should require data to be stratified by workforce. This commenter worried that without this disaggregation, workers who typically earn lower wages (such as personal care assistants) will be ''overshadowed'' in the data by workers who typically earn higher wages (such as nurses). The commenter believed this lack of transparency within the data would limit targeted interventions and advocacy for the lowest-paid positions within HCBS.

Response: Nurses and staff who provide nursing assistance are included in the definition of direct care worker we are finalizing at § 441.311(e)(1)(ii), as discussed previously. While some of the underlying rationale of this reporting requirement is related to concerns about low wages earned by some direct care workers, our broader concern is the health of the HCBS workforce as a whole. The HCBS workforce is experiencing a shortage of workers in all categories, including clinicians and nursing assistants. These workers provide direct, hands-on services to beneficiaries and may in some cases be required to provide or supervise the services. We do not believe excluding them from the reporting serves our larger interests in supporting the direct care workforce overall. For that reason, we also do not believe that it is necessary to include a Federal reporting requirement that compensation to nurses should be reported separately, as our primary interest is in tracking the allocation of Medicaid payments to the direct care workers who are delivering the services. As noted above, States may choose to disaggregate data (for State use) for different categories of direct care workers in order to examine workforce issues at the State level.

Comment: Several commenters responded to our request for comment on whether we should allow States to provide an assurance or attestation, subject to audit, that they meet the requirement in place of reporting on the percent of payments. A few commenters opposed an attestation rather than a reporting requirement. These commenters agreed that the reporting requirement is the most effective means of verifying States' compliance with the payment adequacy minimum performance requirement at § 441.302(k)(3). Commenters also noted that the reporting requirement, rather than an attestation only, will yield granular data that will allow for comparison across States and, within States, across providers and service categories; such data, commenters believe, will enable States to better understand the impact of payment levels on access and adjust their rates accordingly, as well as prove useful for CMS's Federal oversight of beneficiaries' access.

A few commenters, on the other hand, supported requiring an attestation in lieu of a reporting requirement. Commenters, who mostly represented State agencies, preferred the option as being less burdensome and allowing for more flexibility. One commenter suggested that such an attestation could still be a means of limited data collection and proposed that, as part of an attestation, we provide States with a standardized reporting tool to assess whether their rates are sufficient to ensure a livable wage for direct care workers.

A couple of commenters noted that, while an attestation would be helpful to Medicaid programs, some Medicaid agencies noted that they would still need to collect at least some provider-level data to ensure compliance.

Response: We agree with commenters that a reporting requirement will be more effective and useful at monitoring and understanding the allocation of Medicaid payments to compensation for direct care workers, especially as this reporting requirement is intended to do more than simply demonstrate compliance with the payment adequacy requirements at § 441.302(k). We also

are persuaded by commenters' observations that, even with an attestation, States would still need to collect data from providers to ascertain the accuracy of their attestation. In light of the fact that an attestation would only slightly reduce burden and would not result in data collection that would allow for national comparisons, we are moving forward with the reporting requirement rather than replacing it with an attestation.

Comment: Several commenters responded to our proposal at § 441.311(e) (which we are finalizing at § 441.311(e)(2)(i)) that reporting would be required annually as well as our request for comment on whether we should reduce the frequency of reporting to every other year. A few commenters supported our proposal that this reporting would be collected annually. One commenter believed that reporting less frequently than every year would result in the reporting of out-of-date data and would delay identification of problems in the HCBS system that could cause access issues for beneficiaries. Another commenter noted that the value of the data for rate-setting and the work of the interested party advisory group (discussed in section II.C.2. of this final rule, specifically in the discussion of § 447.203(b)(6)) outweighs any potential burden of annual reporting.

A few commenters supported reporting every two years, rather than an annual reporting period. One commenter made the specific suggestion that the reporting should be every two years with a 12-month lag to better ensure accurate reporting. Commenters who supported reporting every 2 years stated that this would allow States sufficient time to collect data, conduct necessary follow-up activities, and publish data while also helping them better balance this requirement with other compliance and reporting activities. One commenter opposed an annual reporting period because it misaligned with their State's cycle of rate methodology review, which occurs every three to five years.

One commenter proposed an alternative reporting frequency of 3 years, but with the expectation that States would be collecting the data quarterly and analyzing the data annually. The commenter noted this frequency would also give the MAC and BAG (discussed in section II.A. of this rule) time to react to the data prior to its being reported to CMS.

Response: We agree that if too much time lapses between each reporting period, the reports, when released, will become quickly out of date. We also appreciate commenters' observations that interested parties, including advisory groups, might rely on this data when making recommendations for Medicaid rates or examining HCBS workforce issues; this places even greater importance on timely data. We also note that, as discussed further below, we are finalizing the requirement that only aggregated data must be reported, which should reduce burden on States and providers and make annual reporting manageable. We note that while annual reporting may be more frequent than States' rate review process, collecting this data annually will allow States to track trends in workforce compensation that they could include in their rate reviews.

We decline to add a requirement specifying how frequently States should review the data they collect. The purpose of this requirement is, in part, to establish the frequency with which States must submit a report to CMS, which we proposed as being on an annual basis. We do not intend to require that States collect and internally review their data quarterly; however, States may choose to do so if feasible and useful. We expect that, at minimum, States will review and analyze the data they receive on an annual basis as part of their submission of the report required by § 441.311(e)(2)(i).

Comment: One commenter specifically noted support for the requirement at § 441.311(e) that States report separately for each service subject to the reporting requirement. A few commenters requested that we finalize the requirement to allow States to report aggregated data to minimize burden. A few commenters suggested that aggregate reporting would be preferable to a more granular approach (such as reporting on the percent of payments for certain HCBS spent on compensation for direct care workers at the delivery system, HCBS waiver program, or population level; reporting on median hourly wage and on compensation by category).

Response: As noted in our background discussion of this provision, we believe that reporting on aggregated data by service strikes the best balance between monitoring the proportion of Medicaid payments that are being spent on compensation for direct care workers and avoiding unnecessary data collection and burden on States and providers.

Comment: We received responses to our request for comment on whether we should require States to report on the percent of payments for certain HCBS that is spent on compensation for direct care workers at the delivery system, HCBS waiver program, or population level. A number of commenters supported more granular reporting, which they believed would yield more valuable data and support transparency. Several commenters supported reporting at the delivery system level, which commenters believed would help capture differences between managed care and FFS. A few of these commenters also suggested that for managed care delivery systems, reporting should also be disaggregated by plan. One commenter also suggested that within managed care reporting, States should report separately for services delivered to dually eligible beneficiaries.

A few commenters supported breaking down the reporting by HCBS program.

One commenter noted that both provider payments and direct care worker compensation can have considerable variations across all of a State's programs and having this information would be useful for State policymakers as they develop payment rates. This commenter believed that States and providers must already be tracking which services are provided under each program.

A few commenters supported reporting at the population level. Suggestions for what would be included in the population level reporting included race, ethnicity, and geographic location. One commenter believed that demographic information about beneficiaries and their geographic regions would help address barriers to access that are unique to certain populations and areas (such as access issues in rural regions). One commenter, however, believed that collecting data at the population level was not feasible.

Commenters made suggestions for additional details to add to the reporting requirement, including reporting on:

- Direct care worker turnover;
- Compensation to workers by setting (services delivered at home, residential, or facility-based day settings); and
- The number of direct care workers who are considered W–2 employees versus independent contractors.

Response: We thank commenters for their thoughtful feedback. We will take these recommendations under consideration for future policymaking, but at this time are moving forward with finalizing the language in the requirement at § 441.311(e)(2)(i) specifying that States must report the percent of total Medicaid payments spent on compensation to direct care workers by service. We note that a few of the suggestions are outside of the

scope of this proposal, which is intended for States to report data about the percent of payments for certain HCBS that is spent on compensation for direct care workers, not for providers to report on the demographics or employment status of each of their workers, nor on granular beneficiary-level data. We direct readers who are interested to data collection about beneficiaries, including demographic data, to the discussion of the HCBS Quality Measure Set in section II.B.8. of this rule.

As noted in previous responses, we believe it is important to strike a balance between collecting enough information to enable Federal oversight of how Medicaid payments are being allocated and imposing as minimum an administrative burden on States and providers as possible. We believe that the data on the percent of Medicaid payments going to compensation for direct care workers is sufficient to help us ensure that a significant portion of Medicaid payments for these hands-on services goes to the direct care workforce, which in turn supports our responsibility under section 1902(a)(30)(A) of the Act to require assurance that payments are consistent with efficiency, economy, and quality of care.

However, we agree that some of the granular data elements suggested by commenters could provide States with valuable insight into their own programs and workforce needs. We encourage States to consider what information they have the capacity to collect and would find useful for developing local policies to support direct care workers in their State.

Comment: One commenter also recommended collecting data specifically designed to measure the impact of the payment adequacy minimum performance requirement (which we are finalizing at § 441.302(k)) on the HCBS provider network. The commenter suggested we collect data on:

- The number of providers employing direct care workers that opened or closed before and after the effective date of the minimum performance requirement;
- The number of beneficiaries (particularly those with higher needs) for whom providers started or discontinued service provision before and after the effective date of the minimum performance requirement;
- The number of health and safety waiver requests that were received before and after the effective date of the minimum performance requirement; and
- The causal factors service providers cite when closing their business before and after the rule becomes effective.

Response: As the reporting requirement proposed at § 441.311(e) was intended only to measure the percent of Medicaid rates going to direct care worker compensation, recommendations for data collection regarding provider behavior are outside of the scope of our proposal.

However, we note that there are already data collection requirements for some HCBS regarding the number of beneficiaries served through a section 1915(k) program (as required at § 441.580) or annual reporting on the projected number of beneficiaries who will be served under section 1915(i) (as required at § 441.745(a)(1)).

Additionally, we are finalizing other reporting requirements in this final rule that may speak to some of the commenter's concerns. Specifically, we note that we are finalizing a rate disclosure process (discussed in section II.C., particularly under § 447.203(c)), which will include identification of the number of Medicaid-paid claims and the number of Medicaid enrolled beneficiaries who received a service within a calendar year for certain services, including homemaker, home health aide, personal care, and habilitation services defined at § 440.180(b)(2) through (4) and (6). We also note that the reporting requirement finalized in the previous section of this rule (under § 441.311(d)) will require reporting on the following metrics related to beneficiary access to homemaker, home health aide, personal care, and habilitation services: the average amount of time from when services are initially approved to when services began, for individuals newly approved to begin receiving services within the past 12 months; and the percent of authorized hours for the services that are provided within the past 12 months. We note that these other reporting requirements, as finalized, will go into effect prior to the finalized effective date for the payment adequacy minimum performance requirement. This means that there will be data collected for these metrics both before and after the implementation of the payment adequacy requirement at § 441.302(k). Finally, we note that we do not know what the commenter is referring to by using the term, health and safety waiver requests.

Comment: Commenters responded to our request for comment on whether we should require States to report on median hourly wage and on compensation by category. A number of commenters supported adding this level of detail to the reporting requirement. Commenters noted that this level of reporting would help monitor workforce compensation generally, including identifying whether there were compensation disparities across service types. A few commenters also suggested this data would help track the impact of the payment adequacy minimum performance requirement (required at § 441.302(k)(3)) on workforce compensation. One commenter also suggested that this data could be helpful to the interested parties advisory group (discussed further in section II.C.2. of this rule, under § 447.203(b)(6)). A few commenters also recommended that we require collection of specific details on other provider expenditures, such as for travel, training, administrative expenses, or other non-compensation program expenses.

One commenter, however, noted that median hourly wage and compensation by category reporting could be duplicative of other measures and required reporting.

Response: We thank commenters for their thoughtful feedback. In the proposed rule, in addition to requesting comment on whether we should require reporting on median hourly wages, in a separate proposal (under § 447.203(b)(3)) we had proposed a payment rate disclosure process for HCBS that included providing information about the hourly Medicaid rates paid for homemaker, home health aide, and personal care services. The proposals under § 447.203(b)(3) were standalone reporting requirements unrelated to the reporting requirement at § 441.311(e). As discussed in section II.C. of this final rule, the payment rate disclosure process at § 447.203(b)(3) is being finalized with modifications to include habilitation services in the reporting requirement. We do not see a need to finalize an additional reporting process that may be duplicative of both data and burden.

Additionally, upon consideration of the comments, we have identified no compelling reason to require a Federal requirement for disaggregating the data by compensation category. We believe that employee benefits, in addition to wages, are also integral to direct care workers. (We refer readers to the discussion in section II.B.5. of this rule, which includes concerns raised by public commenters about the lack of benefits for direct care workers.) Additionally, the third component of compensation—employers' share of payroll taxes—is a fixed cost. While States may want to collect this disaggregated data from providers to observe local compensation trends or to

share with the interested parties advisory group, we are not adding a requirement for this disaggregation as part of the required State reporting at § 441.311(e).

Comment: In response to our request for comment, a few commenters recommended that we allow States to exclude from their reporting to CMS payments to providers of agency-directed services that have low Medicaid revenues or serve a small number of beneficiaries. We did not receive feedback on metrics for determining which providers would be eligible for such an exclusion, nor on possible caps or limits for an exclusion.

One commenter noted that excluding certain providers due to size, revenue, or geography would create further inequities in the HCBS field and be administratively infeasible to implement. A couple of commenters worried that excluding small providers would create perverse incentives for providers to remain small by failing to hire additional workers or declining to serve additional beneficiaries.

Response: We are concerned that excluding certain providers from the reporting requirement at § 441.311(e) would not support the goals of this requirement to promote transparency about how Medicaid payments are being allocated.

For clarity, we also note that the reporting requirement we proposed at § 441.311(e), and are finalizing at § 441.311(e)(2)(i), requires each State to report to CMS annually on the percentage of Medicaid payments for certain services that is spent on compensation for direct care workers. We intend that each State collect and report this data regardless of whether the State establishes, and their providers meet, the hardship exemption we are finalizing at § 441.302(k)(5) or the small provider requirements at § 441.302(k)(3)(ii) and (4). We do note that, under the requirements we are finalizing at § 441.302(k)(6), the State must report additional information regarding any small provider requirements or hardship exemptions the State develops and implements.

However, we are finalizing the reporting requirement at § 441.311(e) with modification, adding § 441.311(e)(4) to exclude data from Indian Health Service and Tribal health programs subject to the requirements at 25 U.S.C. 1641 from the required reporting. As discussed in section II.B.5.b. of this final rule, the requirements being finalized at § 441.302(k) conflict with statutory requirements at 25 U.S.C. 1641, and we are finalizing, at § 441.302(k)(7), an exemption to the payment adequacy requirement at § 441.302(k) for IHS and Tribal health programs subject to 25 U.S.C. 1641. Given the conflict between § 441.302(k) and the statutory requirements at 25 U.S.C. 1641, we would likely be unable to use HCBS payment adequacy data from IHS and the Tribal health programs subject to 25 U.S.C. 1641 to inform future policymaking related to how IHS or Tribal health programs spend Medicaid payments they receive, including on direct care worker compensation. Further, we do not want data from the exempted IHS and Tribal health programs to skew the other data States would collect and report to CMS under § 441.311(e), which CMS intends to use to evaluate direct care worker compensation nationally and inform policymaking to address the workforce shortage.

Comment: A few commenters suggested other metrics that could be used as the basis for an exception to the reporting requirement. One commenter suggested that an exception could be made for providers in areas (defined as a city, county, or grouping of zip codes) with a documented deficit of service providers accepting new clients. One commenter recommended that any provider who pays a full-time direct care worker at an hourly rate that exceeds 200 percent of the Federal poverty level be exempted from reporting. Another commenter suggested that if a provider can demonstrate they spend more than 85 percent of Medicaid payments on compensation should be exempted from any detailed cost reporting.

Response: As noted above, we are finalizing the reporting requirement without exceptions for providers. However, we appreciate the recommendations for possible exceptions criteria and will take these into consideration for future policymaking.

Comment: One commenter requested that we exclude self-directed services from reporting. However, we received a number of comments encouraging us to include self-directed services in the reporting as proposed and agreeing that these services should be reported separately. A few of these commenters stated that self-directed services should be reported separately from agency-provided services, due to the differences in these service models.

A few commenters, however, believed that the reporting for self-directed services should be further broken down by whether the service is provided by an independent worker or by a worker who is employed by an agency. One commenter noted that our rationale for separating out self-directed services was that compensation for workers in self-directed models tends to be higher and to comprise a greater percentage of Medicaid payment for services, which the commenter believed to be true of services delivered by independent providers, but not necessarily of self-directed services delivered through agency models.

One commenter noted that some States might have challenges in distinguishing payments for self-directed services delivered via agency models, as these payments may appear in claims processing as traditional HCBS agency payments, rather than as self-directed services.

Response: We agree with commenters that, in terms of the percent of the payment going to compensation for direct care workers, there will be significant differences between the percent for services delivered by independent workers hired by the beneficiary for whom the beneficiary sets the payment rate under a self-directed services delivery model versus those delivered by a worker employed by a provider. In particular, we are concerned that this reporting requirement might not yield meaningful data if applied to the self-directed services delivery models in which the individual beneficiary determines the wage paid directly to the direct care worker out of the beneficiary's service budget (such as models meeting the definition at § 441.545(b) for section 1915(k) services, self-directed services typically authorized under section 1915(j)). We believe the reporting requirement on the percentage of payments going to compensation for direct care workers is only appropriate when applied to a Medicaid rate that includes both compensation to direct care workers and administrative activities. In the former scenario, we expect that all or nearly all of that payment rate routinely is spent on the direct care worker's compensation; in the latter scenario, we expect the payment rate to a provider includes both the direct care worker's compensation and administrative costs for the provider.

Based on the comments received, and to ensure we are collecting only meaningful data that demonstrates the percent of Medicaid payments that are going to direct care worker compensation, we are finalizing a new requirement at § 441.311(e)(2)(ii) that specifies, if the State provides that homemaker, home health aide, personal care services, or habilitation services, as set forth at § 440.180(b)(2) through (4)

and (6), may be furnished under a self-directed services delivery model in which the beneficiary directing the services sets the direct care worker's payment rate, then the State must exclude such payment data from the reporting required in paragraph (e) of this section. We note that self-directed homemaker, home health aide, personal care, or habilitation services delivered through self-directed services models not described in § 441.311(e)(2)(ii) would still be part of the reporting requirements finalized at § 441.311(e)(2)(i).

After consideration of the comments received, we are finalizing § 441.311(e) with modifications. As discussed in section II.B.5. of this final rule, we are replicating at § 441.311(e)(1)(i), (1)(ii), and (1)(iii) the finalized definitions at § 441.302(k)(1)(i), (k)(1)(ii), and (k)(1)(iii), respectively.

At § 441.311, we are redesignating paragraph (e) as paragraph (e)(2)(i). At finalized § 441.311(e)(2)(i), we are making a technical modification to remove the reference to the definition of direct care workers at § 441.302(k)(1). As we are also adding the definition of direct care workers at § 441.311(e)(1)(ii), the reference to § 441.302(k)(1) is unnecessary. We are finalizing § 441.311(e)(2)(i) with substantive modifications to specify that the State must report to CMS annually on the percentage of total payments **(not including excluded costs)**, to include habilitation services (as set forth in § 440.180(b)(6)) in the reporting, and to specify that States must report separately **for** services **delivered in a provider-operated physical location for which** facility-**related costs are included in the payment rate**. (Revised text in bold font). We are also finalizing § 441.311(e)(2)(i) with technical modifications to: include references to § 441.311(e)(2)(ii) and (4); clarify that the provision applies to services as **set forth** in § 440.180(b)(2) through (4) and (6) (as opposed to services at § 440.180(b)(2) through (4) that are authorized under section 1915(c) of the Act); and clarify that reporting is at the time and in the form and manner specified by CMS.

We are finalizing a new requirement at § 441.311(e)(2)(ii) that specifies if the State provides that homemaker, home health aide, personal care services, or habilitation services, as set forth at § 440.180(b)(2) through (4) and (6), may be furnished under a self-directed services delivery model in which the beneficiary directing the services sets the direct care worker's payment rate, then the State must exclude such payment data from the reporting required in paragraph (e) of this section.

We are finalizing a new § 441.311(e)(3), requiring that the State must report, one year prior to the applicability date for paragraph (e)(2)(i) of this section, on its readiness to comply with the reporting requirement in paragraph (e)(2)(i) of this section.

We are finalizing a new § 441.311(e)(4) to require States to exclude data from the Indian Health Service and Tribal health programs subject to the requirements at 25 U.S.C. 1641 from the required reporting at § 441.311(e), as well as to require that States not require submission of data by, or include any data from, the Indian Health Service or Tribal health programs subject to the requirements at 25 U.S.C. 1641 for the State's reporting required under § 441.311(e)(2).

e. Applicability Date (§ 441.311(f))

We proposed at § 441.311(f)(1) to provide States with 3 years to implement the compliance reporting requirements at § 441.311(b), the HCBS Quality Measure Set reporting requirements at § 441.311(c), and the access reporting requirements at § 441.311(d) in FFS delivery systems following the effective date of the final rule. For States that implement a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act and include HCBS in the MCO's, PIHP's, or PAHP's contract, we proposed to provide States until the first rating period for contracts with the MCO, PIHP, or PAHP, beginning on or after 3 years after the effective date of the final rule to implement these requirements. This time period was based on feedback from States and other interested parties that it could take 2 to 3 years to amend State regulations and work with their State legislatures, if needed, as well as to revise policies, operational processes, information systems, and contracts to support implementation of these proposed reporting requirements. We also considered all of the HCBS proposals outlined in the proposed rule as whole. We invited comments on whether this timeframe was sufficient, whether we should require a shorter timeframe (2 years) or longer timeframe (4 years) to implement these provisions, and if an alternate timeframe was recommended, the rationale for that alternate timeframe.

In addition, we proposed at § 441.311(f)(2) to provide States with 4 years to implement the payment adequacy reporting requirements at § 441.311(e) in FFS delivery systems following the effective date of the final rule. For States that implement a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act and include HCBS in the MCO's, PIHP's, or PAHP's contract, we proposed to provide States until the first rating period for contracts with the MCO, PIHP, or PAHP beginning on or after 4 years after the effective date of the final rule to implement these requirements. This time period was intended to align with the effective date for the HCBS payment adequacy requirements at § 441.302(k), which are discussed in section II.B.5. of this preamble. It was also based on feedback from States and other interested parties that it could take 3 to 4 years to amend State regulations and work with their State legislatures, if needed, as well as to revise policies, operational processes, information systems, and contracts to support implementation of these reporting requirements. We also considered all of the HCBS proposals outlined in the proposed rule as a whole. We solicited comments on whether this timeframe was sufficient, whether we should require a shorter timeframe (3 years) or longer timeframe (5 years) to implement these provisions, and if an alternate timeframe is recommended, the rationale for that alternate timeframe.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the effective dates in § 441.311(f). One commenter noted that the effective dates appear to be appropriate and necessary to ensure that data is reported accurately and uniformly. One commenter suggested that States should begin to report on person-centered planning within 2 years. One commenter noted particular support for the longer four-year timeframe for the payment adequacy reporting requirements at § 441.311(e), which the commenter noted recognized the additional complexity of this provision. A few commenters stated that they support the 4-year effective date for § 441.311(e) but would advocate for a 6-year effective date if the payment adequacy minimum performance level in § 441.302(k) is also being finalized.

A number of commenters noted that while they are supportive of each of these proposals individually, they were nevertheless concerned that the number of new requirements will be difficult to implement cost-effectively and accurately in the proposed timeframes. Several commenters noted that proposed data elements required in § 441.311 are beyond what the States

currently collect and—even if the States are able to expand on existing systems—will require policy and process changes and system updates and will place strain on existing staff resources; some commenters stated these changes may require seeking appropriations from State legislatures for additional staff or system upgrades, as well as acquiring vendor support, which could take additional time. A few commenters noted their States would face challenges in coordinating data collection across multiple systems, which may be administered by different agencies or contracted entities. A few commenters noted the feasibility of compliance with § 441.311 will depend on how quickly CMS can provide subregulatory guidance on the reporting requirements; these commenters requested that we set an effective date of 3 or 4 years after the release of subregulatory guidance.

While commenters requested that we extend the timeframes in § 441.311(f), we received few suggestions for how much additional time would be needed. A few commenters suggested alternative timeframes of 4 to 6 years for the provisions in § 441.311. One commenter suggested that timeframes should be specifically waived for self-directed services and that States should be required to submit transition plans for implementing the requirements for self-directed services.

Response: We are finalizing the substance of § 441.311(f) as proposed, but with minor modifications to correct erroneous uses of the word ''effective.'' We are retitling the requirement at § 441.311(f) as Applicability dates (rather than Effective dates). We are also modifying the language at § 441.311(f) to specify the dates when States must comply with the requirements in § 441.311(f), rather than stating the dates when the requirements in § 441.311(f) are effective, beginning a specified number of years after the effective date of the final rule.

As noted above in section II.B.7.b. of the rule, we have determined it is necessary to provide States with an additional year for compliance with the quality measure set reporting requirement at § 441.311(c). Our primary purpose in extending the date for States to comply is to ensure States have sufficient time for interested parties to provide input into the measures, as required by § 441.312(g), which we are finalizing in section II.B.8. of this rule.

Regarding the dates for States to comply with the other requirements in § 441.311, as discussed throughout this section, we continue to believe that many of these requirements build on activities that States have already been doing as part of the administration of their HCBS programs and will work with States to identify ways to leverage existing data collection tools and update their current systems as efficiently as possible.

We also acknowledge that complying with these reporting requirements will necessitate expenditures of resources and time on the part of States, managed care plans, and (in some cases) providers. We believe that the value of the data collected through their efforts makes this expenditure of resources worthwhile. This data captures information related to beneficiaries' health and safety (addressed by the incident management system and critical incident reporting in § 441.311(b)(1) and (2)) and beneficiaries' long-standing concerns about access to HCBS waivers and services (addressed by the person-centered planning and access reporting requirements in § 441.311(b)(3) and (d)). These data are urgently needed, and we do not want to postpone implementation of this reporting further than proposed.

Additionally, the data collected as part of the payment adequacy reporting requirement in § 441.311(e) not only addresses the current workforce shortages that are impacting service delivery, but the data are also going to be relied on by the interested parties advisory group (discussed further in section II.C.2. of this rule, under § 447.203(b)(6)) to develop recommendations to the State on Medicaid rates for certain HCBS. We do not believe the interests of beneficiaries, providers, workers, or States are served by delaying the collection and publication of this information. As a result, we are declining to make changes in this final rule based on these comments. We plan to provide technical assistance to States experiencing challenges implementing specific reporting requirements.

Comment: A few commenters, while not opposing the proposed dates that the reporting requirements become effective, noted that it is important to align these reporting requirements with other reporting requirements in States and for managed care plans to minimize State and managed care plan reporting burdens. Commenters also believed that streamlining reporting requirements across programs could help to ensure that States and CMS do not analyze similar data that report on the same populations and same or similar programs across different timeframes, which would complicate findings.

Response: We will be releasing subregulatory guidance, including technical specifications for the new reporting requirements in this final rule, and making the required reporting templates available for public comment through the Paperwork Reduction Act notice and comment process. Specific reporting due dates will be determined through subregulatory guidance; we plan to work with States to align these due dates with other obligations to minimize administrative burden to the greatest extent possible.

After consideration of public comments, we are finalizing § 441.311(f) with minor modifications to correct erroneous uses of the word ''effective.'' We are removing from § 441.311(f)(1) the date for States to comply with the quality measure set reporting requirements date and adding it to § 441.311(f)(2) so that States will have 4 years from the effective date of this final rule to comply with those requirements.

We are also finalizing in § 441.311(f)(1) and (2) a modification to the language pertaining to managed care delivery systems to improve accuracy and alignment with common phrasing in managed care contracting policy. We are specifying at § 441.311(f)(1) that States must comply with the reporting requirements at paragraphs (b) and (d) of this section beginning 3 years after the effective date of this final rule; and in the case of a State that implements a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act and includes HCBS in the MCO's, PIHP's, or PAHP's contract, the first rating period for contracts with the MCO, PIHP, or PAHP beginning on or after the date that is 3 years after the effective date of this final rule.

We are specifying at § 441.311(f)(2) that States must comply with the reporting requirements at paragraphs (c) and (e) of this section beginning 4 years after the effective date of this final rule; and in the case of a State that implements a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act and includes HCBS in the MCO's, PIHP's, or PAHP's contract, the first rating period for contracts with the MCO, PIHP or PAHP beginning on or after the date that is 4 years after the effective date of this final rule.

f. Application to Other Authorities (§§ 441.311(f), 441.474(c), 441.580(i), and 441.745(a)(1)(iii))

At § 441.311(f), we proposed to apply all of the reporting requirements described in § 441.311 to services delivered under FFS and managed care

delivery systems. As discussed earlier in section II.B.1. of this preamble, section 2402(a)(3)(A) of the Affordable Care Act requires States to improve coordination among, and the regulation of, all providers of Federally and State-funded HCBS programs to achieve a more consistent administration of policies and procedures across HCBS programs, and as noted in the Medicaid context this would include consistent administration between FFS and managed care programs. We accordingly proposed to specify that a State must ensure compliance with the requirements in § 441.302(a)(6) with respect to HCBS delivered both under FFS and managed care delivery systems.

As discussed earlier in section II.B.1. of this preamble, the proposed requirements at § 441.311, in combination with other proposed requirements identified throughout the proposed rule, are intended to supersede and fully replace the reporting expectations and the minimum 86 percent performance level for State's performance measures described in the 2014 guidance, also discussed earlier in section II.B.1. of this preamble. We expect that States may implement some of the requirements proposed in the proposed rule in advance of any effective date. We will work with States to phase out the 2014 guidance as they implement the requirements in this final rule to reduce unnecessary burden and to avoid duplicative or conflicting reporting requirements.

In accordance with the requirement of section 2402(a)(3)(A) of the Affordable Care Act for States to achieve a more consistent administration of policies and procedures across HCBS programs, and because these reporting requirements are relevant to other HCBS authorities, we proposed to include these requirements within the applicable regulatory sections for other HCBS authorities. Specifically, we proposed to apply the requirements at § 441.311 to section 1915(j), (k), and (i) State plan services at §§ 441.474(c), 441.580(i), and 441.745(a)(1)(vii), respectively. Consistent with our proposal for section 1915(c) waivers, we proposed these requirements based on our authority under section 1902(a)(6) of the Act, which requires State Medicaid agencies to make such reports, in such form and containing such information, as the Secretary may from time to time require, and to comply with such provisions as the Secretary may from time to time find necessary to assure the correctness and verification of such reports. We believed the same arguments for these requirements for section 1915(c) waivers are equally applicable for these other HCBS authorities. We requested comment on the application of these provisions across section 1915(i), (j), and (k) authorities. To accommodate the addition of new language at § 441.580(i), we proposed to renumber existing § 441.580(i) as § 441.580(j).

We considered whether to also apply these reporting requirements to section 1905(a) ''medical assistance'' State plan personal care, home health, and case management services. However, we proposed that these requirements not apply to any section 1905(a) State plan services based on State feedback that they do not have the same data collection and reporting capabilities in place for section 1905(a) services as they do for sections 1915(c), (i), (j), and (k) services and because the person-centered planning, service plan, and waiting list requirements that comprise a significant portion of these reporting requirements have little to no relevance for section 1905(a) services, in comparison to section 1915(c), (i), (j), and (k) services. Further, the vast majority of HCBS is delivered under section 1915(c), (i), (j), and (k) authorities, while only a small percentage of HCBS nationally is delivered under section 1905(a) State plan authority. We requested comment on whether we should establish similar reporting requirements for section 1905(a) ''medical assistance'' State plan personal care, home health, and case management services.

We noted that we expected that we would establish new processes and forms for States to meet the reporting requirements, provide additional technical information on how States can meet the reporting requirements including related to sampling requirements (where States are permitted to report on a sample of beneficiaries rather than on all individuals who meet the inclusion criteria for the reporting requirement), and amend existing templates and establish new templates under the Paperwork Reduction Act.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported applying the proposed reporting requirements at § 441.311 to services delivered under managed care, noting that it is important to gather data on services across delivery systems. A few commenters requested clarification on whether, or how, the reporting requirements applied to services delivered under managed care.

Response: The reporting requirements in this section apply to services in both FFS and managed care delivery systems. We note that comments about the application of specific provisions to managed care are addressed in the sections above. As needed, we plan to provide technical assistance to States that have additional questions.

Comment: A few commenters expressed support for applying reporting requirements at § 441.311 to services delivered through other section 1915 authorities. A few commenters, while not necessarily recommending that we exclude self-directed services authorized under section 1915(j), noted that because of differences in self-directed services, we should consider extending timeframes for implementation in self-directed services or release additional guidance specific to self-directed services.

Response: We are finalizing our proposal to extend the reporting requirements in this section to services offered under sections 1915(i), (j), and (k). We note that comments about the application of specific provisions to self-directed care are addressed in the sections above. While we do not believe it is necessary to extend timeframes for the implementation of the reporting requirements in section 1915(j) self-directed services, we plan to provide technical assistance to States that have additional questions.

Comment: One commenter requested clarification that the waiver reporting requirement at § 441.311(d)(1) is limited to the section 1915(c) authority and to the section 1915(j) authority, where it is used as the State's authority for self-direction in a section 1915(c) waiver. This commenter recommended limiting this requirement to these authorities.

Response: We agree that, because section 1915(i) and section 1915(k) State plan services cannot have capped enrollment, the reporting requirements at § 441.311(d)(1) would not apply to these authorities. We also agree that the reporting requirements at § 441.311(d)(1) would also apply to section 1915(j) authority only where section 1915(j) is used as the State's authority for self-direction in a section 1915(c) waiver. We note that the reporting requirements at § 441.311(d)(1) would apply to section 1115(a) demonstration projects that include HCBS if the State caps enrollment for the HCBS under the section 1115(a) demonstration project.

We also note that, similar to the concern raised by commenters about the applicability of § 441.311(d)(1), as discussed in section II.B.7.a.4. of this

rule, § 441.311(b)(4) also applies only to section 1915(c) programs.

Comment: A few commenters requested that we extend the reporting requirements at § 441.311 to section 1905(a) services. Commenters noted that, in some States, many people receive services through section 1905(a). A few commenters also raised concerns that there would be a disparate impact on certain populations or less oversight of certain services if reporting requirements were not extended to services under section 1905(a), such as personal care, home health, or rehabilitative services. A few commenters recommended not extending the reporting requirements to section 1905(a) services at this time, citing concerns about additional burden.

Response: At this time, we are not mandating inclusion of section 1905(a) services in the reporting requirements at § 441.311. Given that our work to better ensure access in the Medicaid program is ongoing, we intend to gain implementation experience with this final rule, and we will consider these comments provided on the proposed rule to help inform any future rulemaking in this area, as appropriate. We are not persuaded by the argument that including section 1905(a) services would simply be too much work, as we do agree that transparency, accountability, and oversight are critical for all HCBS. However, we are continuing to review statutory and regulatory differences between services authorized under sections 1905(a) and 1915 of the Act that could impact how these requirements would apply to section 1905(a) services. We also note that we have not extended the minimum performance requirements for incident management, person-centered planning, or payment adequacy to section 1905(a) services (refer to discussions in sections II.B.1., II.B.3, and II.B.5. of this final rule, respectively, for more detail on those discussions). Furthermore, as section 1905(a) service do not have waiting lists, the requirement at § 441.311(d)(1) would not be applicable to these services.

After consideration of the comments received, we are finalizing application of § 441.311 to section 1915(j), (k), and (i) authorities. We are making modifications at §§ 441.474(c), 441.580(i) and 441.745(a)(1)(vii) with modifications to clarify that the references to section 1915(c) of the Act are instead references to section 1915(j), (k) and (i) of the Act, respectively.

g. Summary of Finalized Requirements

After consideration of the public comments, we are finalizing the requirements at § 441.311 as follows:

- We are finalizing § 441.311(a) with a modification for clarity to remove ''simplification'' and make a minor formatting change to ensure § 441.311(a) aligns directly with the statutory requirement at section 1902(a)(19) of the Act .
- We are finalizing the incident management system compliance requirement at § 441.311(b) with a technical modification for clarity in § 441.311(b)(1)(i) that the State must report on the results of an incident management system assessment, every 24 months, in the form and manner, and at a time, specified by CMS, rather than according to the format and specifications provided by CMS.
- We are finalizing the critical incident compliance requirement at § 441.311(b)(2) with a technical modification for clarity that the State must report to CMS annually in the form and manner, and at a time, specified by CMS, rather than according to the format and specifications provided by CMS. For consistency, we are also simplifying the title and removing the reference to § 441.302(a)(6)(i)(A) from the title of § 441.311(b)(2).
- We are finalizing the person-centered planning reporting requirement at § 441.311(b)(3) with a technical modification to specify at § 441.311(b)(3), to demonstrate that the State meets the requirements at § 441.301(c)(3)(ii) regarding person-centered planning (as described in § 441.301(c)(1) through (3)), the State must report to CMS annually on the following, in the form and manner, and at a time, specified by CMS, rather than according to the format and specifications provided by CMS. We are also finalizing the reporting requirement at § 441.311(b)(3)(i) and (ii), with the technical modification noted previously, to specify that the State may report this metric using statistically valid random sampling of beneficiaries.
- We are finalizing the reporting requirement at § 441.311(b)(4) with a modification to restore language that was erroneously omitted, and with additional technical modifications so that § 441.311(b)(4) specifies that annually, the State will provide CMS with information on the waiver's impact on the type, amount, and cost of services provided under the State plan, in the form and manner, and at a time, specified by CMS.
- We are finalizing the HCBS Quality Measure Set reporting requirements at § 441.311(c) with modifications. At § 441.311(c), we are finalizing a date of 4 years, rather than 3 years, for States to comply with the HCBS Quality Measure Set reporting requirements at § 441.311(c).
- We are finalizing the access reporting requirement at § 441.311(d) with a technical modification to specify that reporting will be in the form and manner, and at a time, specified by CMS. We are finalizing § 441.311(d)(1) as proposed. We are finalizing § 441.311(d)(2)(i) with a modification to specify that the reporting is for individuals newly receiving services within the past 12 months, rather than for individuals newly approved to begin receiving services. We are finalizing the requirements at § 441.311(d)(2), with modifications so that both reporting requirements at § 441.311(d)(2)(i) and (ii) require reporting on homemaker services, home health aide services, personal care, or habilitation services, as set forth in § 440.180(b)(2) through (4) and (6), and allow States to report using statistically valid random sampling of beneficiaries. We are modifying the title of this provision at § 441.311(d)(2) to specify *Access to homemaker, home health aide, personal care, and habilitation services.* We are also finalizing a technical modification in both § 441.311(d)(2)(i) and (ii) to indicate that the services are, as set forth in § 440.180(b)(2) through (4) and (6), rather than, as listed in, as noted in the proposed rule.
- We are replicating at § 441.311(e)(1)(i) through (iii) the finalized definitions at § 441.302(k)(1)(i), through (iii), respectively.
- We are redesignating § 441.311(e) as § 441.311(e)(2)(i) and finalizing § 441.311(e)(2)(i) with modifications to specify that, except as provided at (e)(2)(ii) and (4), the State must report to CMS annually on the total percentage of payments (not including excluded costs) for furnishing homemaker services, home health aide services, personal care, and habilitation services, as set forth in § 440.180(b)(2) through (4) and (6), that is spent on compensation for direct care workers, at the time and in the form and manner specified by CMS. The State must report separately for each service and, within each service, must separately report services that are self-directed and services delivered in a provider-operated physical location for which facility-related costs are included in the payment rate.

• We are finalizing a new requirement at § 441.311(e)(2)(ii) that specifies if the State provides that homemaker, home health aide, personal care services, or habilitation services, as set forth at § 440.180(b)(2) through (4) and (6), may be furnished under a self-directed services delivery model in which the beneficiary directing the services sets the direct care worker's payment rate, then the State must exclude such payment data from the reporting required in paragraph (e) of this section.

• We are finalizing a new § 441.311(e)(3), requiring that the State must report, 1 year prior to the applicability date for paragraph (e)(2)(i) of this section, on its readiness to comply with the reporting requirement in paragraph (e)(2)(i) of this section.

• We are finalizing a new § 441.311(e)(4) to require States to exclude the Indian Health Service and Tribal health programs subject to the requirements at 25 U.S.C. 1641 from the reporting required in paragraph (e) of this section, and not require submission of data by, or include any data from, the Indian Health Service or Tribal health programs subject to the requirements at 25 U.S.C. 1641 for the State's reporting required under paragraph (e)(2).

• We are finalizing § 441.311(f) with modification to move the date that States are required to comply with the quality measure reporting at § 441.311(c) from § 441.311(f)(1) to § 441.311(f)(2), and to clarify the language regarding applicability dates in the case of a State that implements a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act and includes HCBS in the MCO's, PIHP's, or PAHP's contract.

• We are finalizing §§ 441.474(c), 441.580(i), and 441.745(a)(1)(vii) with modifications to clarify that the references to section 1915(c) of the Act are instead references to section 1915(j), (k), and (i) of the Act, respectively.

8. Home and Community-Based Services (HCBS) Quality Measure Set (§§ 441.312, 441.474(c), 441.585(d), and 441.745(b)(1)(v)).

On July 21, 2022, we issued State Medicaid Director Letter #22–003 [132] to release the first official version of the HCBS Quality Measure Set. The HCBS Quality Measure Set is a set of nationally standardized quality measures for Medicaid-covered HCBS. It is intended to promote more common and consistent use within and across States of nationally standardized quality measures in HCBS programs, create opportunities for CMS and States to have comparative quality data on HCBS programs, drive improvement in quality of care and outcomes for people receiving HCBS, and support States' efforts to promote equity in their HCBS programs. It is also intended to reduce some of the burden that States and other interested parties may experience in identifying and using HCBS quality measures. By providing States and other interested parties with a set of nationally standardized measures to assess HCBS quality and outcomes and by facilitating access to information on those measures, we believe that we can reduce the time and resources that States and other interested parties expend on identifying, assessing, and implementing measures for use in HCBS programs.

a. Basis and Scope (§ 441.312(a))

Section 1102(a) of the Act provides the Secretary of HHS with authority to make and publish rules and regulations that are necessary for the efficient administration of the Medicaid program. Section 1902(a)(6) of the Act requires State Medicaid agencies to make such reports, in such form and containing such information, as the Secretary may from time to time require, and to comply with such provisions as the Secretary may from time to time find necessary to assure the correctness and verification of such reports. Under our authority at sections 1102(a) and 1902(a)(6) of the Act, we proposed a new section, at § 441.312, Home and Community-Based Services Quality Measure Set, to require use of the HCBS Quality Measure Set in section 1915(c) waiver programs and promote public transparency related to the administration of Medicaid-covered HCBS. We proposed to describe the basis and scope for this requirement at § 441.312(a).

In proposing this requirement, we believed that quality is a critical component of efficiency, and as such, having a standardized set of measures used to assess the quality of Medicaid HCBS programs supports the efficient operation of the Medicaid program. Further, we believed that it is necessary for the efficient administration of Medicaid-covered HCBS authorized under section 1915(c) of the Act, consistent with section 1902(a)(4) of the Act, as it would establish a process through which we regularly update and maintain the required set of measures at § 441.311(c) in consultation with States and other interested parties (as described later in this section of the rule). The process, as proposed, would ensure that the priorities of interested parties are reflected in the selection of the measures included in the HCBS Quality Measure Set. The process, as proposed, also would ensure that the required set of HCBS quality measures is updated to address gaps in the HCBS Quality Measure Set as new measures are developed and to remove measures that are less relevant or add less value than other available measures, and the HCBS quality measures meets scientific and other standards for quality measures. Due to the constantly evolving field of HCBS quality measurement, we proposed these requirements based on our belief that the failure to establish such a process would result in ongoing reporting by States of measures that do not reflect the priorities of interested parties, measures that offer limited value compared to other measures, and measures that do not meet strong scientific and other standards. It would also result in a lack of reporting on key measurement priority areas, which could be addressed by updating the HCBS Quality Measure Set as new measures are developed. The failure to establish such a process would lead to inefficiency in States' HCBS quality measurement activities through the continued reporting on an outdated set of measures. In other words, we believed that such a process is necessary for the efficient administration of Medicaid-covered HCBS by ensuring that quality measure reporting requirements are focused on the most valuable, useful, and scientifically supported areas of quality measurement, and that quality measures with limited value are removed timely from quality measure reporting requirements.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the proposed basis and scope at § 441.312(a). Several commenters supported the requirements at § 441.312 (a) in its entirety.

Response: We thank the commenters for their support for our proposal.

Comment: A few commenters raised concerns that the HCBS Quality Measure Set is overly prescriptive from a Federal perspective and sets a one-size-fits-all approach, expressing that the responsibility for safeguarding quality in HCBS belong to each State.

Response: We disagree with commenters that the proposed requirement for States to use the HCBS Quality Measure Set is overly

[132] CMS State Medicaid Director Letter. SMD# 22–003 Home and Community-Based Services Quality Measure Set. July 2022. Accessed at *https://www.medicaid.gov/federal-policy-guidance/downloads/smd22003.pdf.*

prescriptive. CMS and States have worked for decades to support the increased availability and provision of high-quality HCBS for Medicaid beneficiaries. While there are quality and reporting requirements for Medicaid HCBS, the requirements vary across authorities and are often inadequate to provide the necessary information for ensuring that HCBS are provided in a high-quality manner that best protects the health and welfare of beneficiaries. Consequently, quality measurement and reporting expectations are not consistent across services, and instead vary depending on the authorities under which States are delivering services. While we support State flexibility, the lack of standardized measures has resulted in thousands of metrics and measures currently in use across States, with different metrics and measures often used for different HCBS programs within the same State. As a result, CMS and States are limited in the ability to compare HCBS quality and outcomes within and across States or to compare the performance of HCBS programs for different Medicaid beneficiary populations. We underscore our belief that use of the HCBS Quality Measure Set will promote more common and consistent use within and across States of nationally standardized quality measures in HCBS programs, create opportunities for CMS and States to have comparative quality data on HCBS programs, drive improvement in quality of care and outcomes for people receiving HCBS, and support States' efforts to promote equity in their HCBS programs. As discussed further in this section II.B.8. of this rule, we are finalizing the requirements at § 441.312(a) as proposed and plan to provide technical assistance to States as needed to address the concerns raised by commenters.

Comment: Several commenters requested that CMS align the HCBS quality measures universally across Medicaid programs, recommending streamlining measures across the HCBS Quality Measure Set, the Medicaid and CHIP (MAC) Quality Rating System (QRS), and the Adult Core Set. Further, commenters recommended we consider a minimum set of mandatory quality measures and limit them to a small set, similar to the MAC QRS, and allow States the flexibility to utilize voluntary measures in addition to the minimum mandatory measures, as appropriate. Commenters further noted that States already have implemented measures that may not be included in the quality measures identified in the HCBS Quality Measure Set, and this approach for a small set of mandatory measures could minimize disruption to the quality-related work that is currently being undertaken by States in their Medicaid programs.

One commenter observed that creating a unified reporting structure on mandatory measures would bring a level of discipline and consistency that would foster more reliable data across the Medicaid program, noting that it is imperative to create alignment for data collection across States.

Response: We thank the commenters for this feedback. We will take these comments into consideration when developing and updating the HCBS Quality Measure Set and developing subregulatory guidance on the required use of the HCBS Quality Measure Set. We agree with the commenters on the importance of parsimony, alignment, and harmonization in quality measurement across the Medicaid program, to the extent possible. While we aim to align measures across programs as much as possible, the HCBS Quality Measure Set is designed to promote more common and consistent use of nationally standardized quality measures in HCBS programs and to support States with improving quality and outcomes specifically for beneficiaries receiving HCBS. As a result, we expect the HCBS Quality Measure Set to be in alignment with the MAC QRS and the Child and Adult Core Sets.

We also acknowledge that States are already using quality measures to assess quality in their HCBS programs, and it is not our intent for States to abandon this quality-related work. The measure set is intended to reduce some of the burden that States and other interested parties may experience in identifying and using HCBS quality measures. However, States may continue to utilize existing measures not found in the HCBS Quality Measure Set if the States believe they generate valuable information, as long as the measures in the HCBS Quality Measures Set are implemented in accordance with § 441.312, which we are finalizing as discussed further in this section II.B.8. of this rule.

After consideration of the comments received, we are finalizing § 441.312(a) with a minor formatting change to correct punctuation.

b. Definitions (§ 441.312(b))

We proposed a definition at § 441.312(b)(1) for ''Attribution rules,'' to mean the process States use to assign beneficiaries to a specific health care program or delivery system for the purpose of calculating the measures in the HCBS Quality Measure Set as described at § 441.312(d)(6). We also proposed a definition at § 441.312(b)(2) for ''Home and Community-Based Services Quality Measure Set'' to mean the Home and Community-Based Services Quality Measures for Medicaid established and updated at least every other year by the Secretary through a process that allows for public input and comments, including through the **Federal Register**.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters generally supported the proposed definitions at § 441.312(b).

Response: We thank these commenters for their support.

After consideration of the comments received, we are finalizing at § 441.312(b)(1) the definition of attribution rules as proposed. As discussed in more detail in our discussion of § 441.312(c) in the next section below (section B.8.c. of this rule), we are making several changes related to the frequency of updates to the HCBS Quality Measure Set. To accommodate those changes, we are striking the words, at least every other year, from the definition of the Home and Community-Based Services Quality Measure Set we proposed at § 441.312(b)(2).

As finalized at § 441.312(b)(2) the definition of Home and Community-Based Services Quality Measure Set means the Home and Community-Based Services Quality Measures for Medicaid established and updated by the Secretary through a process that allows for public input and comment, including through the **Federal Register**, as described in paragraph (d) of this section. We note that the measure updates are specified in § 441.312(c) as finalized, and thus the frequency of updates do not need to be set forth in the definition of the HCBS Quality Measure Set. *Additionally, we are finalizing* § 441.312(b) with a minor technical modification to correct an inadvertent omission in the regulatory text in the proposed rule and are finalizing the addition of the numbers (1) and (2) in front of each definition.

c. Responsibilities of the Secretary (§ 441.312(c))

At § 441.312(c), we described the proposed general process for the HCBS Quality Measure Set that the Secretary will follow to update and maintain the HCBS Quality Measure Set. Specifically, at § 441.312(c)(1), we proposed that the Secretary will identify, and update at

least every other year, through a process that allows for public input and comment, the quality measures to be included in the HCBS Quality Measure Set. At § 441.312(c)(2), we proposed that the Secretary will solicit comment at least every other year with States and other interested parties, which we identified later in this section of the preamble of the proposed rule, to:

- Establish priorities for the development and advancement of the HCBS Quality Measure Set.
- Identify newly developed or other measures that should be added, including to address gaps in the measures included in the HCBS Quality Measure Set.
- Identify measures that should be removed as they no longer strengthen the HCBS Quality Measure Set.
- Ensure that all measures included in the HCBS Quality Measure Set are evidence-based, are meaningful for States, and are feasible for State-level and program-level reporting as appropriate.

The proposed frequency for updating the quality measures included in the HCBS Quality Measure Set was aligned with the proposed frequency at § 441.311(c)(1) for States' reporting of the measures in the HCBS Quality Measure Set. We based other aspects of the proposed process that the Secretary will follow to update and maintain the HCBS Quality Measure Set in part on the processes for the Secretary to update and maintain the Child, Adult, and Health Home Core Sets as described in the Medicaid Program and CHIP; Mandatory Medicaid and Children's Health Insurance Program (CHIP) Core Set Reporting final rule (88 FR 60278); (hereinafter the ''Mandatory Medicaid and CHIP Core Set Reporting final rule''). We believed that such alignment in processes will ensure consistency and promote efficiency for both CMS and States across Medicaid quality measurement and reporting activities.

At § 441.312(c)(3), we proposed that the Secretary will, in consultation with States and other interested parties, develop and update the measures in the HCBS Quality Measure Set, at least every other year, through a process that allows for public input and comment. We solicited comments on whether the timeframes for updating the measures in the HCBS Quality Measure Set and conducting the process for developing and updating the HCBS Quality Measure Set is sufficient, whether we should conduct these activities more frequently (every year) or less frequently (every 3 years), and if an alternate timeframe was recommended, the rationale for that alternate timeframe.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters expressed support for our proposal at § 441.312(c)(1) to identify and update the quality measures included in the HCBS Quality Measure Set at least every other year, through a process that allows for public input and comment. One commenter noted that identifying and updating the measures annually, instead of every other year, could maximize the effectiveness of the HCBS Quality Measure Set, especially with a new and rapidly evolving field of HCBS measures, suggesting that an every other year frequency might impact the use of innovative approaches to inform quality improvement in HCBS. Alternatively, several commenters expressed concern and recommended less frequent updates to the HCBS Quality Measure Set, questioning the usefulness of the measures that change every other year and suggesting that taking a longer time between updates to the HCBS Quality Measure Set will minimize financial burden and allow States to more accurately measure improvement over time. In the same vein, one commenter expressed that every other year updates to the measure set might have an effect and impact the usefulness of longitudinal data. These commenters suggested alternative timeframes ranging from 3 to 5 years, with 3 years being the most frequently suggested frequency for updates to the HCBS Quality Measure Set.

Response: We thank commenters for their feedback. In consideration of comments received, we agree that clarification of the frequency in updates to the HCBS Quality Measure Set is required. We note that the proposed process for updating the quality measures included in the Quality Measure Set differs in frequency from, though is based in part on, the processes for the Secretary to update and maintain the Child, Adult, and Health Home Core Sets as described in the final rule, ''Medicaid Program and CHIP; Mandatory Medicaid and Children's Health Insurance Program (CHIP) Core Set Reporting'' (88 FR 60278) (hereinafter the ''Mandatory Medicaid and CHIP Core Set Reporting final rule''). We proposed a frequency for updating the quality measures included in the HCBS Quality Measure Set, which is different from the mandatory annual State reporting of the Core Set measures in the Mandatory Medicaid and CHIP Core Set Reporting final rule, because the HCBS Quality Measure Set was only first released for voluntary use by States in July 2022, while Child, Adult, and Health Home Core Sets voluntary reporting has been in place for a number of years. Further, a substantial portion of the measures included in the HCBS Quality Measure Set, particularly compared to the Child, Adult, and Health Home Core Sets, is derived from beneficiary experience of care surveys, which are costlier to implement than other types of measures. We recognize that States may need to make enhancements to their data and information systems or incur other costs in implementing the HCBS Quality Measure Set. Upon further consideration, we assure States that CMS will not update the measure set to add new measures or retire existing measures more frequently than every other year, and are modifying the beginning date as no later than December 31, 2026, instead of 2025. We note that, while the finalized requirement will allow CMS to add new measures or retire existing measures every other year, CMS intends to retain each of the measures in the measure set for at least 5 years to ensure the availability of longitudinal data, unless there are serious issues associated with the measures (such as related to measure reliability or validity) or States' use of the measures (such as excessive cost of State data collection and reporting or insurmountable technical issues with State reporting on the measures).

After consideration of the comments received about the frequency of updating the quality measures in § 441.312(c)(1), we are finalizing § 441.312(c)(1) with modifications to require that the Secretary shall identify and update **quality measures no more frequently than** every other year, beginning no later than December 31, 202**6,** the quality measures to be included in the Home and Community-Based Services Quality Measure Set as defined in paragraph (b) of this section). (New language identified in bold.)

We are also finalizing a new requirement at § 441.312(c)(2) to require the Secretary to **make** technical updates and corrections to the Home and Community-Based Services Quality Measure Set annually as appropriate. This addition is intended to ensure that the measures included in the measure set are accurate and up to date, and that we may correct errors, clarify information related to the measures, and align with updated technical specifications of measure stewards, particularly given the revision to § 441.312(c)(2) to indicate that CMS will not update the HCBS Quality Measure Set more frequently than every other

year. To accommodate the new requirement at § 441.312(c)(2), we have renumbered the provisions proposed at §§ 441.312(c)(2) and (3) to §§ 441.312(c)(3) and (4), respectively.

We are finalizing redesignated § 441.312(c)(3)(iv) with a minor technical modification for clarity to specify that the Secretary shall ensure that all measures included in the Home and Community-Based Services Quality Measure Set reflect an evidence-based process including testing, validation, and consensus among interested parties; are meaningful for States; and are feasible for State-level, program-level, or provider-level reporting as appropriate. We are also finalizing the redesignated requirement at § 441.312(c)(4) with a modification to replace the words, at least, with the words, no more frequently than, to require that the Secretary, in consultation with States, develop and update, no more frequently than every other year, the Home and Community-Based Services Quality Measure Set using a process that allows for public input and comment as described in paragraph (d) of this section.

As noted in the proposed rule, in Medicaid, enhanced FFP is available at a 90 percent FMAP for the design, development, or installation of improvements of mechanized claims processing and information retrieval systems, in accordance with applicable Federal requirements.[133] Enhanced FFP at a 75 percent FMAP is also available for operations of such systems, in accordance with applicable Federal requirements.[134] However, we reiterate that receipt of these enhanced funds is conditioned upon States meeting a series of standards and conditions to ensure investments are efficient and effective.[135] We clarify, to receive enhanced FMAP funds, the State Medicaid agency is required at § 433.112(b)(12) to ensure the alignment with, and incorporation of, standards and implementation specifications for health information technology adopted by the Office of the National Coordinator for Health IT in 45 CFR part 170, subpart B, among other requirements set forth in § 433.112(b)(12). States should also consider adopting relevant standards identified in the Interoperability Standards Advisory (ISA) [136] to bolster improvements in the identification and reporting on the prevalence of critical incidents for HCBS beneficiaries and present opportunities for the State to develop improved information systems that can support quality improvement activities that can help promote the health and safety of HCBS beneficiaries.

We plan to provide States with technical assistance and subregulatory guidance to support implementation of the HCBS Quality Measure Set.

After consideration of the comments received, we are finalizing § 441.312(c) with modifications. We are finalizing § 441.312(c)(1) with modifications to require that the Secretary shall identify, and update no more frequently than every other year, beginning no later than **December 31, 2026**, the quality measures to be included in the Home and Community-Based Services Quality Measure Set as defined in paragraph (b) of this section. (New language identified in bold.)

We are finalizing § 441.312(c)(2) without substantive changes, but we are redesignating the requirement as § 441.312(c)(3). We are finalizing a new requirement at § 441.312(c)(2) that the Secretary shall make technical updates and corrections to the Home and Community-Based Services Quality Measure Set annually as appropriate. We are also redesignating what had been proposed as § 441.312(c)(3) as (c)(4) and finalizing the redesignated § 441.312(c)(4) with a modification to replace the word at least with no more frequently than.

d. Process for Developing and Updating the HCBS Quality Measure Set (§ 441.311(d))

At proposed § 441.312(d), we described the proposed process for developing and updating the HCBS Quality Measure Set. Specifically, we proposed that the Secretary will address the following through a process to:

- Identify all measures in the HCBS Quality Measure Set, including newly added measures, measures that have been removed, mandatory measures, measures that the Secretary will report on States' behalf, measures that States can elect to have the Secretary report on their behalf, as well as the measures that the Secretary will provide States with additional time to report and the amount of additional time.
- Inform States how to collect and calculate data on the measures.
- Provide a standardized format and reporting schedule for reporting the measures.
- Provide procedures that States must follow in reporting the measure data.
- Identify specific populations for which States must report the measures, including people enrolled in a specific delivery system type such as those enrolled in a managed care plan or receiving services on a fee-for-service basis, people who are dually eligible for Medicare and Medicaid, older adults, people with physical disabilities, people with intellectual or developmental disabilities, people who have serious mental illness, and people who have other health conditions; and provide attribution rules for determining how States must report on measures for beneficiaries who are included in more than one population.
- Identify the measures that must be stratified by race, ethnicity, Tribal status, sex, age, rural/urban status, disability, language, or such other factors as may be specified by the Secretary.
- Describe how to establish State performance targets for each of the measures.

As discussed in section II.B.8. of the proposed rule (88 FR 27992 through 27993), we anticipated that, for State reporting on the measures in the HCBS Quality Measure Set, as outlined in the reporting requirements we proposed at § 441.311, the technical information on attribution rules described at proposed § 441.312(d)(6), would call for inclusion in quality reporting based on a beneficiary's continuous enrollment in the Medicaid waiver. This ensures the State has enough time to furnish services during the measurement period. In the technical information, we anticipated we would set attribution rules to address transitions in Medicaid eligibility, enrollment in Medicare, or transitions between different delivery systems or managed care plans, within a reporting year, for example, based on the length of time beneficiaries was enrolled in each. We invited comment on other considerations we should address in the attribution rules or other topics we should address in the technical information.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters provided input on the proposed process

[133] See section 1903(a)(3)(A)(i) and § 433.15(b)(3), 80 FR 75817–75843; *https://www.medicaid.gov/state-resourcecenter/faq-medicaid-and-chip-affordable-care-act-implementation/downloads/affordable-care-act-faq-enhancedfunding-for-medicaid.pdf; https://www.medicaid.gov/federal-policy-guidance/downloads/SMD16004.pdf.*

[136] Relevant standards adopted by HHS and identified in the ISA include the USCDI (*https://www.healthit.gov/isa/united-states-core-data-interoperability-uscdi*), eLTSS (*https://www.healthit.gov/isa/documenting-care-plans-person-centered-services*), and Functional Assessment Standardized Items (*https://www.healthit.gov/isa/representing-patient-functional-status-andor-disability*).

that the Secretary will follow to update and maintain the HCBS Quality Measure Set. A few commenters recommended that, to advance meaningful quality improvement and measurement, we should prioritize the importance of a measure and a measure's usability and use for measure selection and suggested an additional evaluative category of advancing equity. A couple of commenters suggested that we should consider implementing a process to determine if quality measures are based on person-centered planning principles, emphasizing that many of the measures in the HCBS Quality Measure Set are more system and process-oriented, rather than focused on assessing and improving person-centered experiences and preferences. One commenter recommended we conduct a broad-based public review of possible quality measures and domains for individuals with intellectual and developmental disabilities to inform the quality measures process. Another commenter suggested that we include an oral health measure for beneficiaries receiving HCBS in the selection of measures for the HCBS Quality Measure Set. A few commenters recommended we prioritize the development and inclusion of culturally and linguistically appropriate measures within the HCBS Quality Measure Set, prioritizing reporting of the most feasible measures, aligning the CMS Core Sets, to capture the experiences and outcomes of diverse populations and ensure that HCBS programs address the unique needs and preferences of beneficiaries from different cultural backgrounds.

Response: At § 441.312(d), we described the general process that the Secretary will follow to update and maintain the HCBS Quality Measure Set.

We underscore the importance of alignment in quality measurement across the Medicaid program, to the extent possible. We proposed at § 441.312(d)(7), that the process for developing and updating the HCBS Quality Measure Set will address the subset of measures that must be stratified by race, ethnicity, Tribal status, sex, age, rural/urban status, disability, language, or such other factors as may be specified by the Secretary and informed by consultation every other year with States and interested parties.

After further consideration, we have identified that including Tribal status as a measure stratification factor is misaligned, as it is not included as a measure stratification factor for the Adult Core Set as defined in the Mandatory Medicaid and CHIP Core Set Reporting final rule. We are also concerned that this additional measure stratification factor will create additional burden for States. After further consideration, to ensure alignment in Medicaid quality measurement and alignment of the HCBS Quality Measure Set with the Adult Core Set, we are removing Tribal status as a measure stratification factor at § 441.312(d)(7). We note that Tribal status could be included as a measure stratification factor under such other factors as may be specified by the Secretary and informed by consultation every other year with States and interested parties in accordance with § 441.312(b)(2) and (g).

At § 441.312(d), we proposed and are finalizing the process for developing and updating the HCBS Quality Measure Set. At § 441.312(d)(5) the process for developing and updating the HCBS Quality Measure Set includes the identification of the beneficiary populations for which States are required to report the HCBS quality measures identified by the Secretary. We are finalizing § 441.312(d)(5)(i) with a technical modification, including the identification of the beneficiaries receiving services through specified delivery systems for which States are required to report the HCBS quality measures identified by the Secretary, replacing managed care plan with **MCO, PIHP, or PAHP as defined in § 438.2.** (New language identified in bold.)

Comment: A few commenters requested we clarify how the HCBS Quality Measure Set would relate to measurement for beneficiaries who are dually eligible for Medicare and Medicaid. One commenter further expressed strong support for disaggregation of data for dually eligible beneficiaries, but also questioned whether partial benefit dually eligible beneficiaries were required to be included in the population for quality measurement, as most do not receive HCBS or any other Medicaid benefits.

Response: We plan to provide States with guidance and technical assistance to help address issues specific to dually eligible beneficiaries. Further, inclusion and exclusion criteria for each measure will be addressed through the technical specifications for the measure. We note that, to the extent that dual-eligible beneficiaries are receiving services authorized under section 1915(c), (i), (j), or (k) Medicaid programs and delivered through managed care plans, and meet the inclusion criteria for the measure, they are required to be included in the reporting on that measure. We will provide technical assistance regarding the application of these requirements to beneficiaries in different categories of dual eligibility.

Comment: One commenter requested that CMS clarify the requirement at § 441.312(d)(7) referencing the subset of measures in the HCBS Quality Measure Set that must be stratified by health equity characteristics, noting that the proposed § 441.312(f) would require States to stratify 100 percent of measures by 7 years after the effective date of the final rule. They emphasized a disconnect between the two provisions, as a subset of measures is not the same as 100 percent of measures and suggest removing the word subset to avoid confusion in implementation.

Response: Reporting of stratified data is a cornerstone of our approach to advancing health equity. We note reporting stratified data helps identify and eliminate health disparities across HCBS populations. As we noted in the proposed rule (88 FR 27993), measuring health disparities, reporting these results, and driving improvements in quality are cornerstones of the CMS approach to advancing health equity through data reporting and stratification aligns with E.O. 13985.[137]

At § 441.312(f), in specifying which measures, and by which factors, States must report stratified measures consistent with § 441.312(d)(7), the Secretary will take into account whether stratification can be accomplished based on valid statistical methods and without risking a violation of beneficiary privacy and, for measures obtained from surveys, whether the original survey instrument collects the variables necessary to stratify the measures, and such other factors as the Secretary determines appropriate. We reiterate that we considered giving States the flexibility to choose which measures they would stratify and by what factors. However, as discussed in the Mandatory Medicaid and CHIP Core Set Reporting rule (87 FR 51313), consistent measurement of differences in health and quality of life outcomes between different groups of beneficiaries is essential to identifying areas for intervention and evaluation of those interventions.[138] This consistency could not be achieved if each State made its own decisions about which data it

would stratify and by what factors.[139] [140] We also recognize that States may be constrained in their ability to stratify measures in the HCBS Quality Measure Set and that data stratification would require additional State resources. We also may face constraints in stratifying measures for which we are able to report on behalf of States, as our ability to stratify will be dependent on whether the original dataset or survey instrument: (1) collects the demographic information or other variables needed and (2) has a large enough sample size. preserved and model accuracy is improved. In consideration of these factors we are finalizing at § 441.312(d)(7) that the subset of measures among the measures in the HCBS Quality Measure Set that must be stratified by health equity characteristics as proposed.

In response to the commenter's observation regarding when 100 percent of the measures must be stratified, we note that, for reasons discussed in greater detail in section II.B.7. and II.B.8.e. of this final rule, we are modifying the requirement at § 441.311(f) to change the timing by which measures must be stratified. As finalized, § 441.311(f) requires that stratification of 25 percent of the measures in the Home and Community-Based Services Quality Measure Set for which the Secretary has specified that reporting should be stratified by 4 years after the effective date of these regulations, 50 percent of such measures by 6 years after the effective date of these regulations, and 100 percent of measures by 8 years after the effective date of these regulations.

After consideration of the comments received, we are finalizing § 441.312(d)(1) through (6) and (8) as proposed. We are finalizing § 441.312(d)(7) with modification to remove Tribal status as a stratification factor. As finalized, § 441.312(d)(7) provides that the process for developing and updating the HCBS Quality Measure Set will address the subset of measures among the measures in the HCBS Quality Measure Set that must be stratified by race, ethnicity, sex, age, rural/urban status, disability, language, or such other factors as may be specified by the Secretary and informed by consultation every other year with States and interested parties.

e. Phasing In of Certain Reporting (§ 441.311(e) and (f))

At § 441.312(e), we proposed, in the process for developing and updating the HCBS Quality Measure Set described at proposed § 441.312(d), that the Secretary consider the complexity of State reporting and allow for the phase-in over a specified period of time of mandatory State reporting for some measures and of reporting for certain populations, such as older adults or people with intellectual and developmental disabilities. At § 441.312(f), we proposed that, in specifying the measures and the factors by which States must report stratified measures, the Secretary will consider whether such stratified sampling can be accomplished based on valid statistical methods, without risking a violation of beneficiary privacy, and, for measures obtained from surveys, whether the original survey instrument collects the variables or factors necessary to stratify the measures.

We considered giving States the flexibility to choose which measures they would stratify and by what factors. However, as we noted was discussed in the Mandatory Medicaid and CHIP Core Set Reporting final rule (88 FR 60278), consistent measurement of differences in health and quality of life outcomes between different groups of beneficiaries is essential to identifying areas for intervention and evaluation of those interventions.[141] This consistency could not be achieved if each State made its own decisions about which data it would stratify and by what factors.[142] [143]

In the proposed rule, we recognized that States may be constrained in their ability to stratify measures in the HCBS Quality Measure Set and that data stratification would require additional State resources. We also noted that there are several challenges to stratification of measure reporting. First, the validity of stratification is threatened when the demographic data are incomplete. Complete demographic information is often unavailable to us and to States due to several factors, including the fact that Medicaid applicants and beneficiaries are not required to provide race and ethnicity data. Second, when States with smaller populations and less diversity stratify data, it may be possible to identify individual data, raising privacy concerns. Therefore, if the sample sizes are too small, the data would be suppressed, in accordance with the CMS Cell Size Suppression Policy and the data suppression policies for associated measure stewards and therefore not publicly reported to avoid a potential violation of privacy.[144]

We also acknowledged that we may face constraints in stratifying measures for which we are able to report on behalf of States, as our ability to stratify would be dependent on whether the original dataset or survey instrument: (1) collects the demographic information or other variables needed and (2) has a large enough sample size. The Transformed Medicaid Statistical Information System (T–MSIS), for example, currently has the capability to stratify some HCBS Quality Measure Set measures by sex and urban/rural status, but not by race, ethnicity, or disability status. This is because applicants provide information on sex and urban/rural address, which is reported to T–MSIS by States, whereas applicants are not required to provide information on their race and ethnicity or disability status, and often do not do so. However, we have developed the capacity to impute race and ethnicity using a version of the Bayesian Improved Surname Geocoding (BISG) method [145] that includes Medicaid-specific enhancements to optimize accuracy, and are able to stratify by race and ethnicity, urban/rural status, and sex.

With these challenges in mind, we proposed that stratification by States in reporting of HCBS Quality Measure Set data would be implemented through a phased-in approach in which the Secretary would specify which measures and by which factors States must stratify reported measures. At § 441.312(f), we proposed that States would be required to provide stratified data for 25 percent of the measures in the HCBS Quality Measure Set for

[145] Elliott, Marc N., et al. ''Using the Census Bureau's surname list to improve estimates of race/ethnicity and associated disparities.'' *Health Services and Outcomes Research Methodology* 9.2 (2009): 69–83.

which the Secretary has specified that reporting should be stratified by 3 years after the effective date of these regulations, 50 percent of such measures by 5 years after the effective date of these regulations, and 100 percent of measures by 7 years after the effective date of these regulations. We noted that the percentages listed here aligned with the proposed phase-in of equity reporting in the Mandatory Medicaid and CHIP Core Set Reporting final rule (88 FR 60278). However, the timeframe associated with each percentage of measures to phase-in equity reporting that we proposed in this rule is different with a slower phase-in, in large part because when compared to the Child, Adult, and Health Home Core Sets, the HCBS Measure Set in its current form includes a substantial number of measures that are derived from beneficiary experience of care surveys, which are costlier to implement than other types of measures. In addition, the slower phase-in was also intended to take into consideration the overall burden of the reporting requirements and that States have less experience with the HCBS Quality Measure Set. Specifically, the Mandatory Medicaid and CHIP Core Set Reporting final rule (88 FR 60278) requires States to provide stratified data for 25 percent of measures within 2 years after the effective date of the final rule, 50 percent of measures within 3 years after the effective date of the final rule, and 100 percent of measures within 5 years after the effective date of the final rule.

In our proposed rule, we determined that our proposed phased-in approach to data stratification would be reasonable and minimally burdensome, and thus consistent with E.O. 13985 on Advancing Racial Equity and Support for Underserved Communities Through the Federal Government (January 20, 2021),[146] because we were balancing the importance of being able to identify differences in outcomes between populations under these measures with the potential operational challenges that States may face in implementing these proposed requirements.

We recognized that States may need to make enhancements to their data and information systems or incur other costs in implementing the HCBS Quality Measure Set. We reminded States that enhanced FFP is available at a 90 percent match rate for the design, development, or installation of improvements of mechanized claims processing and information retrieval systems, in accordance with applicable Federal requirements.[147] Enhanced FFP at a 75 percent match rate is also available for operations of such systems, in accordance with applicable Federal requirements.[148] We also encouraged States to advance the interoperable exchange of HCBS data and support quality improvement activities by adopting standards in 45 CFR part 170 and other relevant standards identified in the ISA.[149]

We invited comments on the proposed schedule for phasing in reporting of HCBS Quality Measure Set data. We also solicited comment on whether we should phase-in reporting on all of the measures in the HCBS Quality Measure Set.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported our proposal at § 441.312(f) in its entirety.

Response: We thank the commenters for their support of our proposed requirements.

Comment: Several commenters submitted recommendations and requests related to the details of stratified reporting, such as definitions of specific categories of populations, data suppression policies, how to handle missing data, and different measures of delivery systems.

Response: We believe that stratified data would enable us and States to identify the health and quality of life outcomes of underserved populations and potential differences in outcomes based on race, ethnicity, sex, age, rural/urban status, disability, language, and other such factors on measures contained in the HCBS Quality Measure Set. We refer readers to section II.B.8. of the proposed rule (88 FR 27993) for a detailed discussion of stratified data and sampling.

We expect to align with Department of Health and Human Services (HHS) data standards for stratification, based on the disaggregation of the 1997 Office of Management and Budget (OMB) Statistical Policy Directive No 15.[150] We expect to update HCBS Quality Measure Set reporting stratification categories if there are any changes to OMB or HHS Data Standards. We will take this feedback into account as we plan technical assistance and develop guidance for States.

Comment: Several commenters supported all the proposed requirements for stratification but recommended either faster or slower implementation. A couple of commenters suggested that States be required to report stratified data by 3 years after the effective date of this final rule rather than phase in this requirement. Multiple commenters provided alternate phase-in schedules for stratification of the HCBS Quality Measure Set, with the most frequent suggestions to add two to five years to the phase-in timeline for data stratification requirements for the measures in the HCBS Quality Measure Set. Some commenters expressed that they supported a staggered implementation timeline of the data stratification requirements and noted that additional time and flexibility for States could make compliance more attainable because of State legislative, budgeting, procurement, and contracting requirements. Another commenter, who represents State agencies, emphasized that many States have long-standing challenges with collecting complete demographic data on Medicaid beneficiaries, and they expressed concerns with small samples, staffing capacity, survey fatigue, and problems identifying baseline demographics. One commenter recommended that the initial implementation of stratification occur with a rolling start date by State, based on waiver renewal date.

Response: We continue to believe that the time frame for States to implement stratification of data on quality measures in the HCBS Quality Measure Set is an appropriate frequency that ensures accountability without being overly burdensome. We determined that a shorter phase timeframe would not likely be operationally feasible because of the potential systems and contracting changes (to existing contracts or the establishment of new contracts) that

[146] Exec. Order No. 13985 (2021), Accessed at *https://www.whitehouse.gov/briefing-room/presidential-actions/2021/01/20/executive-order-advancing-racial-equity-and-support-for-underserved-communities-through-the-federal-government/*.

[148] See section 1903(a)(3)(B) and § 433.15(b)(4).

[149] Relevant standards adopted by HHS and identified in the ISA include the USCDI (*https://www.healthit.gov/isa/united-states-core-data-interoperability-uscdi*), eLTSS (*https://www.healthit.gov/isa/documenting-care-plans-person-centered-services), and Functional Assessment Standardized Items (https://www.healthit.gov/isa/representing-patient-functional-status-andor-disability*).

[150] The categories for HHS data standards for race and ethnicity are based on the disaggregation of the OMB standard: *https://minorityhealth.hhs.gov/omh/browse.aspx?lvl=3&lvlid=53*.

States may be required to make, in order to collect these data for reporting. For example, additional reporting requirements may need to be added to State contracts, changes may be needed to data sharing agreements with managed care plans, and modifications of databases or systems might be required to record new variables.

As discussed in section II.B.7. of this final rule, we are finalizing at § 441.311(f)(2) that States must comply with the HCBS Quality Measure Set reporting requirement at § 441.311(c) beginning 4 years after the effective date of this final rule, rather than 3 years. We are making this modification in order to allow for sufficient time for interested parties to provide input into the measures, as required by § 441.312(g), which we are finalizing as described in this section II.B.8. of this rule. To align with this modification, we are finalizing the phase-in requirement at § 441.312(f). As finalized, § 441.312(f) requires that stratification of 25 percent of the measures in the Home and Community-Based Services Quality Measure Set for which the Secretary has specified that reporting should be stratified by 4 years after the effective date of these regulations, 50 percent of such measures by 6 years after the effective date of these regulations, and 100 percent of measures by 8 years after the effective date of these regulations.

We anticipate that States will not need more than 4 years after the effective date of the final rule, to implement systems and contracting changes, or any additional support needed to report on the quality measures in HCBS Quality Measure Set. However, as described at finalized § 441.312(e), we will consider the complexity of State reporting and allow for the phase in over a specified period of time of mandatory State reporting for some measures and of reporting for certain populations, such as older adults or people with intellectual and disabilities. Further, we plan to work collaboratively with States to provide technical assistance and reporting guidance through the Paperwork Reduction Act process necessary to support reporting.

Comment: A couple of commenters recommended that we offer States financial assistance to develop and deploy health equity efforts, including funding support in addressing the capture of self-reported data.

Response: As discussed above, in Medicaid, enhanced FFP is available at a 90 percent FMAP for the design, development, or installation of improvements of mechanized claims processing and information retrieval systems, in accordance with applicable Federal requirements. Enhanced FFP at a 75 percent FMAP is also available for operations of such systems, in accordance with applicable Federal requirements. We reiterate that receipt of these enhanced funds is conditioned upon States meeting a series of standards and conditions to ensure investments are efficient and effective.[151] This may include improving data reporting, which could promote greater health equity.

We clarify, to receive enhanced FMAP funds, the State Medicaid agency is required at § 433.112(b)(12) to ensure the alignment with, and incorporation of, standards and implementation specifications for health information technology adopted by the Office of the National Coordinator for Health IT in 45 CFR part 170, subpart B, among other requirements set forth in § 433.112(b)(12). States should also consider adopting relevant standards identified in the ISA [152] to bolster improvements in the identification and reporting on the prevalence of critical incidents for HCBS beneficiaries and present opportunities for the State to develop improved information systems that can support quality improvement activities. We further clarify that States are responsible for ensuring compliance with the requirements of HIPAA and its implementing regulations, as well as any other applicable Federal or State privacy laws governing confidentiality of a beneficiary's records.

After consideration of the comments we received, we are finalizing § 441.312(e) as proposed.

We are finalizing § 441.312(f) with a modification to require that stratification of 25 percent of the measures in the Home and Community-Based Services Quality Measure Set for which the Secretary has specified that reporting should be stratified by 4 years after the effective date of these regulations, 50 percent of such measures by 6 years after the effective date of these regulations, and 100 percent of measures by 8 years after the effective date of these regulations.

[151] See § 433.112 (b, 80 FR 75841; *https://www.ecfr.gov/current/title-42/chapter-IV/subchapter-C/part-433/subpart-C.*

[152] Relevant standards adopted by HHS and identified in the ISA include the USCDI (*https://www.healthit.gov/isa/united-states-core-data-interoperability-uscdi*), eLTSS (*https://www.healthit.gov/isa/documenting-care-plans-person-centered-services*), and Functional Assessment Standardized Items (*https://www.healthit.gov/isa/representing-patient-functional-status-andor-disability*).

e. Consultation With Interested Parties (§ 441.312(g))

At § 441.312(g), we proposed the list of interested parties with whom the Secretary must consult to specify and update the quality measures established in the HCBS Quality Measure Set. The proposed list of interested parties included: State Medicaid Agencies and agencies that administer Medicaid-covered HCBS; health care and HCBS professionals who specialize in the care and treatment of older adults, children and adults with disabilities, and individuals with complex medical needs; health care and HCBS professionals, providers, and direct care workers who provide services to older adults, children and adults with disabilities and complex medical and behavioral health care needs who live in urban and rural areas or who are members of groups at increased risk for poor outcomes; HCBS providers; direct care workers and organizations representing direct care workers; consumers and national organizations representing consumers; organizations and individuals with expertise in HCBS quality measurement; voluntary consensus standards setting organizations and other organizations involved in the advancement of evidence-based measures of health care; measure development experts; and other interested parties the Secretary may determine appropriate.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters commended our proposal at § 441.312(g) to consult and receive input from interested parties. These commenters expressed they are encouraged by the continued collaboration with CMS in identifying and updating the HCBS Quality Measure Set. A few commenters shared suggestions for others to include as interested parties, mentioning managed care plans, community representatives from underserved communities, family members, and caregivers.

Response: We appreciate the submission of these comments and will take them into consideration as the Secretary carries out the responsibilities at § 441.312(g).

Comment: One commenter recommended we establish an ongoing process of consultation with States and interested parties to make updates to the quality measures in the HCBS Quality Measure Set in a longer cycle between updates based on consensus, such as 5 years. This commenter emphasized this

approach can assure interested parties that the measure set will continue to be developed over time based on new information and priorities and help avoid making changes too rapidly to be sustained by States.

Response: We appreciate the submission of these comments. As noted previously, we are finalizing § 441.312(c)(1) and (2) with modifications to indicate that we will identify, and update no more frequently than every other year, beginning no later than December 31, 2026, the quality measures to be included in the HCBS Quality Measure Set as defined in paragraph (b) of this section.

We will make technical updates and corrections to the HCBS Quality Measure Set annually as appropriate. Additionally, as discussed in greater detail in section II.B.7. of this final rule, we are giving States more time to engage with interested parties by finalizing an applicability date of 4 years, rather than 3 years, for the requirement that States must comply with the HCBS Quality Measure Set reporting at § 441.311(c). We are making this revision in order to allow for sufficient time for interested parties to provide input into the measures, as required by § 441.312(g).

After consideration of the comments received, we are finalizing § 441.312(g) as proposed.

f. Application to Other Authorities (§§ 441.474(c), 441.585(d), and 441.745(b)(1)(v))

Because these quality measurement requirements are relevant to other HCBS authorities, we proposed to include these requirements within the applicable regulatory sections for other HCBS authorities. Specifically, we proposed to apply the proposed requirements at § 441.312 to section 1915(j), (k), and (i) State plan services at §§ 441.474(c), 441.585(d), and 441.745(b)(1)(v), respectively. Consistent with our proposal for section 1915(c) waivers, we proposed these requirements based on our authority under section 1902(a)(6) of the Act, which requires State Medicaid agencies to make such reports, in such form and containing such information, as the Secretary may from time to time require, and to comply with such provisions as the Secretary may from time to time find necessary to assure the correctness and verification of such reports. We believed the same arguments for proposing these requirements for section 1915(c) waivers are equally applicable for these other HCBS authorities. We requested comment on the application of these provisions across sections 1915(i), (j), and (k) authorities.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposal to apply the HCBS Quality Measure Set requirements at § 441.312 to sections 1915(i), (j) and (k) authorities, stating there should be equally applicable requirements for States across authorities to ensure consistency, coordination, and alignment across quality improvement activities for these HCBS beneficiaries.

Alternatively, a few commenters expressed that applying the HCBS Quality Measure Set requirements across sections 1915(i), (j) and (k) authorities could pose challenges for States since the application of quality measure data collection and reporting for these HCBS authorities is mixed among States. One commenter requested an exemption for the section 1915(i) authority, noting that implementing the HCBS Quality Measure Set requirements for this authority is onerous, since the service array for section 1915(i) programs is more limited than in section 1915(c) programs.

Response: We thank commenters for their support. We note that States can cover the same services under section 1915(i) as they can cover under section 1915(c) of the Act. As such, exempting States from implementing the HCBS Quality Measure Set requirements under section 1915(i) does not align with our intent, which is to ensure consistency and alignment in reporting requirements across HCBS authorities. We are finalizing our proposal to apply the HCBS Quality Measure Set requirements to sections 1915(c), (i), (j) and (k) authorities and plan to provide technical assistance to States as needed to address the concerns raised by commenters.

After consideration of the comments received, we are finalizing the application of § 441.312 to section 1915(j) services by finalizing a reference to § 441.312 at § 441.474(c). (Note that we also discuss finalization of §§ 441.474(c) in section II.B.7. of this final rule.) We are finalizing the application of § 441.312 to sections 1915(k) and 1915(i) services at §§ 441.585(d) and 441.745(b)(1)(v) with modifications to clarify that the references to section 1915(c) of the Act are instead references to section 1915(k) and 1915(i) of the Act, respectively.

g. Summary of Finalized Requirements

After consideration of the public comments, we are finalizing the requirements at § 441.312 as follows:

- We are finalizing § 441.312(a) with a minor technical change.
- We are finalizing the definition of attribution rules and Home and Community-Based Services Quality Measure Set at § 441.312(b)(1) with a minor formatting change.
- We are finalizing the responsibilities of the Secretary at § 441.312(c)(1) with technical modifications to revise the frequency for updating the measure set to no more frequently than every other year and replace December 31, 2025 with December 31, 2026.
- We are finalizing a new requirement at § 441.312(c)(2) that the Secretary shall make technical updates and corrections to the Home and Community-Based Services Quality Measure Set annually as appropriate.
- We are redesignating § 441.312(c)(2) as paragraphs (c)(3) and finalizing with minor technical modification.
- We are redesignating § 441.312(c)(3) as § 441.312(c)(4) and finalizing § 441.312(c)(4) with a minor technical modification to replace ''at least'' with ''no more frequently than.''
- We are finalizing § 441.312(d)(i) as proposed with a modification for clarity to replace managed care plan with MCO, PIHP or PAHP as defined in § 438.2.
- We are finalizing § 441.312(e) as proposed.
- We are finalizing the requirement at § 441.312(f) with a technical modification in the dates by when a certain percent of measures are to be stratified, delaying each deadline by one year.
- We are finalizing § 441.312(g) as proposed.
- We are finalizing the reference to § 441.312 in § 441.474(c) as proposed.
- We are finalizing the requirements at §§ 441.585(d) and 441.745(b)(1)(v) with modification to clarify that the references to section 1915(c) of the Act are instead references to section 1915(k) and 1915(i) of the Act, respectively.

9. Website Transparency (§§ 441.313, 441.486, 441.595, and 441.750)

Section 1102(a) of the Act provides the Secretary of HHS with authority to make and publish rules and regulations that are necessary for the efficient administration of the Medicaid program. Under our authority at section 1102(a) of the Act, we proposed a new section, at § 441.313, titled Website Transparency, to promote public transparency related to the administration of Medicaid-covered HCBS. As noted in the proposed rule, we believe quality is a critical component of efficiency, as payments

for services that are low quality do not produce their desired effects and, as such, are more wasteful than payments for services that are high quality. The proposed approach was based on feedback we obtained during various public engagement activities conducted with States and other interested parties over the past several years that it is difficult to find information on HCBS access, quality, and outcomes in many States. As a result, it is not possible for beneficiaries, consumer advocates, oversight entities, or other interested parties to hold States accountable for ensuring that services are accessible and high quality for people who need Medicaid HCBS. We believe that the website transparency requirements support the efficient administration of Medicaid-covered HCBS authorized under section 1915(c) of the Act by promoting public transparency and the accountability of the quality and performance of Medicaid HCBS systems, as the availability of such information improves the ability of interested parties to hold States accountable for the quality and performance of their HCBS systems.

a. Website Availability and Accessibility (§ 441.313(a))

At § 441.313(a), we proposed to require States to operate a website that meets the availability and accessibility requirements at § 435.905(b) of this chapter and provides the results of the reporting requirements under § 441.311 (specifically, incident management, critical incident, person-centered planning, and service provision compliance data; data on the HCBS Quality Measure Set; access data; and payment adequacy data). We solicited comment on whether the requirements at § 435.905(b) are sufficient to ensure the availability and accessibility of the information for people receiving HCBS and other HCBS interested parties and for specific requirements to ensure the availability and accessibility of the information.

We received public comment on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the website transparency provisions at § 441.313(a), emphasizing that advancing the collection of information and data by States is important to enable the ability of the public, including beneficiaries, to be able to access and compare performance results across States for the reporting requirements proposed at § 441.311.

Response: We appreciate the support for our proposal and thank commenters for their feedback. We note that consistent with statements we made in the introduction of sections II. and II.B. of this final rule regarding severability, while the intent of § 441.313 is for States to post all information collected under §§ 441.302(k)(6) and 441.311 as required, we believe that the website posting requirements being finalized herein at § 441.313 would provide critical data to the public even in a circumstance where individual provisions at §§ 441.302(k)(6) and 441.311 were not finalized or implemented. We do acknowledge that § 441.313 is interrelated with §§ 441.302(k)(6) and 441.311 to the extent that if one of the reporting requirements was not finalized or implemented, posting of the data collected under that particular requirement would not be available to post on the website as required at § 441.313. However, if one or more of the reporting requirements at §§ 441.302(k)(6) and 441.311 is finalized and implemented, then States must post this data on the website as required in § 441.313, as finalized. We note that in this final rule, we are finalizing the reporting requirement at § 441.302(k)(6) (as discussed in section II.B.5. of this final rule) and the reporting requirements proposed in § 441.311 (with modifications, as discussed in section II.B.7. of this final rule.)

Comment: One commenter requested we consider providing additional FMAP for the website creation and support needed to conduct the public posting of information and data required under § 441.311 on the State web page, including to address increased staff time and effort to answer questions regarding the public information required to be reported.

Response: We note we do not have authority to permit States to claim Medicaid expenditures at enhanced FMAP rates that are not specified in statute. As noted in the proposed rule, in Medicaid, enhanced FFP is available at a 90 percent FMAP for the design, development, or installation of improvements of mechanized claims processing and information retrieval systems, in accordance with applicable Federal requirements.[153] Enhanced FFP at a 75 percent FMAP is also available for operations of such systems, in accordance with applicable Federal requirements.[154] However, receipt of these enhanced funds is conditioned upon States meeting a series of standards and conditions to ensure investments are efficient and effective.[155] We plan to provide States with technical assistance related to the availability of enhanced FMAP to support the implementation of the requirements in this final rule.

After consideration of the comments received, we are finalizing the introductory paragraph at § 441.313(a) as proposed with one modification to include the additional reporting requirements to specify that the State must operate a website consistent with § 435.905(b) of this chapter that provides the results of the reporting requirements specified at §§ 441.302(k)(6) and 441.311.

b. Website Data and Information (§ 441.313(a)(1))

We proposed at § 441.313(a)(1) to require that the data and information States are required to report under § 441.311 be provided on one web page, either directly or by linking to the web pages of the MCO, PAHP, PIHP, or primary care case management entity that is authorized to provide services. We solicited comment on whether States should be permitted to link to web pages of these managed care plans and whether we should limit the number of separate web pages that a State could link to, in place of directly reporting the information on its own web page.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported and noted that the States should have one central web page operated and housed solely by the State to ensure data and information is reported consistently across their HCBS programs. One of the commenters suggested a State could, in their centralized State web page, give users the opportunity to filter by provider, managed care plan, or locality and include contact information for managed care plans. A few commenters generally supported permitting States to link to web pages of managed care plans to meet the proposed requirement.

Another commenter identified that beneficiaries may rely on their managed care plan's website for information instead of the State website and

[153] See section 1903(a)(3)(A)(i) and § 433.15(b)(3), 80 FR 75817–75843; *https://www.medicaid.gov/state-resourcecenter/faq-medicaid-and-chip-affordable-care-act-implementation/downloads/affordable-care-act-faq-enhancedfunding-for-medicaid.pdf; https://www.medicaid.gov/federal-policy-guidance/downloads/SMD16004.pdf.*

[154] See section 1903(a)(3)(B) and § 433.15(b)(4).

[155] See § 433.112 (b, 80 FR 75841; *https://www.ecfr.gov/current/title-42/chapter-IV/subchapter-C/part-433/subpart-C.*

recommended limiting web page links to managed care plans' websites, raising concern that requiring States to post the data and information from the managed care plans could be duplicative and lead to user confusion if website updates between the State and managed care plans were not synched. A few commenters emphasized that having multiple managed care plan web page links to access the data and information that States are required to report under § 441.311 could place a burden on beneficiaries, consumers, and the public, to find and navigate the unique displays of managed care plan websites.

Response: We thank commenters for their suggestions. We have attempted to provide States with as much flexibility as possible in reporting of data and information required at § 441.311. State and managed care plan reporting of required data and information must be available and accessible for HCBS beneficiaries and other interested parties, without placing undue burden on them. Upon further consideration, we agree that it adds a undue level of complexity and the potential for duplicate sources of the data and information by requiring the State to link to individual web pages of managed care plans.

After consideration of these public comments, we are finalizing the requirements at § 441.313(a)(1) with a modification to remove the word, web page, and replace with the word, website, and made minor formatting changes. We plan to provide technical assistance to States as needed to address the concerns raised by commenters.

Comment: One commenter agreed that the State should link to managed care plan web pages to report on the results of the reporting requirements at § 441.311, rather than have the managed care plans forward these results to the State to report on their State website. This commenter also recommended requiring the same language and format requirements in § 438.10(d) apply to § 441.33 and noted that many States serve Medicaid HCBS participants who receive services under managed LTSS and FFS, and that misalignment could occur between the regulations for managed care and FFS.

Response: Managed care plan websites required at § 438.10(c)(3) are already subject to the requirements at § 438.10(d), and we have not identified a compelling reason to make a similar reference in § 441.311. We decline to add mention of § 438.10(d) and are finalizing the requirements at § 441.311 as proposed.

After consideration of public comments, we are finalizing the requirements at § 441.313(a)(1) with a modification to require the State to include all content on one website, either directly or by linking to websites of individual MCO's, PIHP's, or PAHP's, as defined in § 438.2. We also are finalizing the requirements at § 441.313(a)(1) with a modification to remove the word, web page, and replace with the word, website, and make minor formatting changes.

c. Accessibility of Information (§ 441.313(a)(2))

At § 441.313(a)(2), we proposed to require that the website include clear and easy to understand labels on documents and links. We requested comments on whether these requirements are sufficient to ensure the accessibility of the information for people receiving HCBS and other HCBS interested parties and for specific requirements to ensure the accessibility of the information.

We received public comment on this proposal. The following is a summary of the comments we received and our responses.

Comment: Two commenters recommended we recognize the communication needs of deaf, hard of hearing, deaf-blind, and blind individuals, including those who have low vision, emphasizing that these beneficiaries should have access to culturally and linguistically competent services, as well as services and auxiliary aids pursuant to Title II of the Americans with Disabilities Act (ADA) of 1990 and section 504 of the Rehabilitation Act of 1973 (section 504). They also recommended that we reference the Twenty-First Century Communications and Video Accessibility Act of 2010 (Pub. L. 111–260), which includes the use of clear language, icons, captioned videos, American Sign Language, and suitable color contrast. The commenters emphasized that any website materials and reports should be written with accommodations, including large print and braille, to ensure beneficiaries have equal, effective, and meaningful website communication. One commenter recommend that we also consider that due to the ''digital divide'' many HCBS beneficiaries do not have easy access to the internet and recommended we require States and managed care plans to share the information posted on their websites in an alternative format at the beneficiary's request.

Response: We confirm that our proposal requires States to operate a website that meets the availability and accessibility requirements at § 435.905(b) of this chapter, which requires the provision of auxiliary aids and services at no cost to individuals with disabilities in accordance with the ADA and section 504. We have attempted to provide the State with as much flexibility as possible in the design of their website. We agree that State and managed care plan websites must be available and accessible for people receiving HCBS and other HCBS interested parties. Further, we note that States' websites are subject to State or local laws regarding accessibility, and States must comply with other applicable laws independent of the requirements at § 441.313(a).

We encourage States to identify inequities for HCBS beneficiaries who have insufficient internet access and develop mechanisms to communicate website information that is available and accessible.

After consideration of comments received, we are finalizing § 441.313(a)(2) as proposed.

d. Website Operation Verification (§ 441.313(a)(3))

At § 441.313(a)(3), we proposed to require that States verify the accurate function of the website and the timeliness of the information and links at least quarterly. We requested comment on whether this timeframe is sufficient or if we should require a shorter timeframe (monthly) or a longer timeframe (semi-annually or annually).

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A few commenters responded to our comment solicitation, expressing alternative timeframes related to the requirements at § 441.313(a)(3). Two commenters suggested websites should be updated on a more frequent monthly basis to ensure accuracy and functionality. A few other commenters suggested that websites should be updated semi-annually. Alternatively, another commenter requested that the verification of web content be completed annually to minimize administrative burden on States with significant web content to review and verify.

Response: We agree that accurate function of the website and the timeliness of the information is important. We note in section II.B.9. of the proposed rule (88 FR 27995 through 27996), and reiterate here, that we believe promoting public transparency and accountability of the quality and performance of Medicaid HCBS systems, and the availability of such information will improve the ability of

beneficiaries, consumer advocates, oversight entities, or other interested parties to hold States accountable for ensuring that services are accessible and high quality for people who need Medicaid. We believe that verification quarterly, is reasonable taking into account the level of complexity required for such State reporting. We decline to make any changes to § 441.313(a)(3) in this final rule.

After consideration of the comments received, we are finalizing § 441.313(a)(3) as proposed.

e. Oral and Written Translation Requirements (§ 441.313(a)(4))

At § 441.313(a)(4), we proposed to require that States include prominent language on the website explaining that assistance in accessing the required information on the website is available at no cost and include information on the availability of oral interpretation in all languages and written translation available in each non-English language, how to request auxiliary aids and services, and a toll free and TTY/TDY telephone number.

We received public comment on this proposal. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposed requirements at § 441.313(a)(4), One commenter further stated that, to ensure best quality, instructions to States on expectations for conducting translation in non-English languages to support the availability of oral interpretation in all languages and to assure uniformity across State policies to implement this component of the provision would be helpful. A few commenters opposed the proposed requirements at § 441.313(a)(4), expressing concern about the State financial and administrative burden that could occur due to the necessity to hire vendors to meet the expectations to conduct translation in non-English languages as required.

Response: We believe that the proposed requirements at § 441.313(a)(4) are important for ensuring that the required information on the website is accessible to people receiving HCBS and other interested parties. We reiterate, as noted in the proposed rule (88 FR 27979 and 27995), in Medicaid, enhanced FFP is available at a 90 percent FMAP for the design, development, or installation of improvements of mechanized claims processing and information retrieval systems, in accordance with applicable Federal requirements.[156] Enhanced FFP at a 75 percent FMAP is also available for operations of such systems, in accordance with applicable Federal requirements.[157] However, receipt of these enhanced funds is conditioned upon States meeting a series of standards and conditions to ensure investments are efficient and effective.[158]

After consideration of comments received, we are finalizing the requirements at § 441.313(a)(4) as proposed.

f. CMS Website Reporting (§ 441.313(b))

We proposed at § 441.313(b) that CMS report on its website the information reported by States to us under § 441.311. For example, we envisioned that we will update CMS's website to provide HCBS comparative information reported by States that can be compared to HCBS information shared by other States. We also envisioned using data from State reporting in future iterations of the CMS Medicaid and CHIP Scorecard.[159]

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposal that CMS would report on its own website the results of the data and information required to be reported under § 441.311, noting this enables easier comparison of results across States and serve as a single information source for users. One commenter suggested we consider a source, such as an HCBS hub, as defined by the commenter, on the CMS website, where users can quickly be directed to State HCBS programs and contracted managed care plan website pages.

One commenter suggested we initiate a best practice using the CMS website as an example for States to follow and share input with States on developing their websites to meet the requirements at § 441.313(a). Another commenter recommended we convene a technical expert panel of relevant interested parties to create a set of guidelines and best practices that States could leverage to meet the proposed website transparency requirements at § 441.313(a) to offset States' time and resource investments in building the website, and to assist with minimizing the State's risk of updating websites that do not meet requirements.

Response: We appreciate the submission of these comments and will take this feedback into consideration as CMS updates its website to report on the results of the data and information required to be reported under § 441.311.

After consideration of the comments received, we decline to make any changes to § 441.313(b) in this final rule and are finalizing as proposed.

g. Applicability Dates (§ 441.313(c))

We proposed at § 441.313(c) to provide States with 3 years to implement these requirements in FFS delivery systems. For States with managed care delivery systems under the authority of sections 1915(a), 1915(b), 1932(a), or section 1115(a) of the Act and that include HCBS in the MCO's, PIHP's, or PAHP's contract, we proposed to provide States until the first managed care plan contract rating period that begins on or after 3 years after the effective date of the final rule to implement these requirements. We based this proposed time period primarily on the effective date for State reporting at § 441.311.

We solicited comments on whether this timeframe is sufficient, whether we should require a longer timeframe (4 years) to implement these provisions, and if a longer timeframe is recommended, the rationale for that longer timeframe.

We received comments on this proposal. Below is a summary of the comments and our responses.

Comment: Most commenters supported the timeframe of 3 years following the effective date of the final rule to implement the website transparency requirements at § 441.313, emphasizing that these requirements facilitate the process of comparing results across States and create a single source where beneficiaries, providers, advocates, and policymakers can find a ''wealth of information about HCBS access.'' One commenter expressed support for the proposed section regarding transparency related to the administration of Medicaid-covered HCBS but did not believe it should take 3 years to implement. A few commenters also expressed concerns about the challenges they believe will be associated with the website transparency requirements at § 441.313, due to administrative burden States may face with significant web content to

[156] See section 1903(a)(3)(A)(i) and § 433.15(b)(3), 80 FR 75817–75843; *https://www.medicaid.gov/state-resourcecenter/faq-medicaid-and-chip-affordable-care-act-implementation/downloads/affordable-care-act-faq-enhancedfunding-for-medicaid.pdf; https://www.medicaid.gov/federal-policy-guidance/downloads/SMD16004.pdf.*

[157] See section 1903(a)(3)(B) and § 433.15(b)(4).

[158] See § 433.112 (b, 80 FR 75841; *https://www.ecfr.gov/current/title-42/chapter-IV/subchapter-C/part-433/subpart-C.*

[159] CMS's Medicaid and CHIP Scorecard. Accessed at *https://www.medicaid.gov/state-overviews/scorecard/index.html.*

review and verify to implement the provision.

Response: We believe that 3 years is a realistic and achievable timeframe for States to comply with the website transparency requirements, and we have not identified a compelling reason make changes to this date. We are finalizing the requirement at § 441.3131(c) as proposed with modifications as described later in this section. We reiterate, as noted in the proposed rule, in Medicaid, enhanced FFP is available at a 90 percent FMAP for the design, development, or installation of improvements of mechanized claims processing and information retrieval systems, in accordance with applicable Federal requirements.[160] Enhanced FFP at a 75 percent FMAP is also available for operations of such systems, in accordance with applicable Federal requirements.[161] However, receipt of these enhanced funds is conditioned upon States meeting a series of standards and conditions to ensure investments are efficient and effective.[162]

After consideration of public comments, we are finalizing the substance of § 441.313(c) as proposed, but with minor modifications to correct erroneous uses of the word ''effective'' and to make technical modifications at § 441.313(c) to the language pertaining to managed care delivery systems to improve accuracy and alignment with common phrasing in managed care contracting policy. We are retitling the requirement at § 441.313(c) as Applicability date (rather than Effective date). We are also modifying the language at § 441.313(c) to specify that States must comply *with the* requirements in § 441.313(c) *beginning* 3 years from the effective date of this final rule.

h. Application to Managed Care and Fee-for Service (§§ 441.486, 441.595, and 441.750)

As discussed in section II.B.1. of the proposed rule, section 2402(a)(3)(A) of the Affordable Care Act requires States to improve coordination among, and the regulation of, all providers of Federally and State-funded HCBS programs to achieve a more consistent administration of policies and procedures across HCBS programs. In the context of Medicaid coverage of HCBS, it should not matter whether the services are covered directly on a FFS basis or by a managed care plan to its enrollees. The requirement for consistent administration should require consistency between these two modes of service delivery. We accordingly proposed to specify that a State must ensure compliance with the requirements in § 441.313, with respect to HCBS delivered both under FFS and managed care delivery systems.

Similarly, because we proposed to apply the reporting requirements at § 441.311 to other HCBS State plan options, we also proposed to include these website transparency requirements within the applicable regulatory sections. Specifically, we proposed to apply the requirements of § 441.313 to section 1915(j), (k), and (i) State plan services at §§ 441.486, 441.595, and 441.750, respectively. Consistent with our proposal for section 1915(c) waivers, we proposed these requirements based on our authority under section 1102(a) of the Act to make and publish rules and regulations that are necessary for the efficient administration of the Medicaid program. We believe the same reasons for these requirements for section 1915(c) waivers are equally applicable for these other HCBS authorities.

We solicited comment on the application of these provisions across section 1915(i), (j), and (k) authorities.

We did not receive public comments on this provision.

After consideration of public comments received on this rule, we are finalizing the application of the website transparency requirements at § 441.313 to section 1915(j), (k), and (i) State plan services. We are finalizing our proposed requirements at §§ 441.486, 441.595, and 441.750 with minor modifications to clarify that the references to section 1915(c) of the Act are instead references to section 1915(j), 1915(k), and 1915(i) of the Act, respectively.

i. Summary of Finalized Requirements

After consideration of the public comments, we are finalizing the requirements at § 441.313 as follows:

- We are finalizing the requirement at § 441.313(c), with a technical modification to the language to improve accuracy and alignment with common phrasing in managed care contracting policy. We also are finalizing § 441.313(c) to specify that States must comply with the requirements as described in § 441.313(c) of this section beginning 3 years after the effective date of this final rule; and in the case of the State that implements a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act and includes HCBS in the MCO's, PIHP's, or PAHP's contract, the first rating period for contracts with the MCO, PIHP, or PAHP beginning on or after the date that is 3 years after the effective date of this final rule.
- We are finalizing at §§ 441.313(a) and (b) with minor technical modifications to include the additional requirements at § 441.302(k)(6).
- We are finalizing the requirements at § 441.313(c) with minor formatting changes.
- We are finalizing §§ 441.486, 441.595, and 441.750 with minor modifications to clarify that the references to section 1915(c) of the Act are instead references to section 1915(j), 1915(k), and 1915(i) of the Act, respectively.

10. Applicability of Proposed Requirements to Managed Care Delivery Systems

As discussed earlier in sections II.B.1., II.B.4., II.B.5., II.B.7., and II.J. of this rule, we proposed to apply the requirements we proposed at §§ 441.301(c)(3), 441.302(a)(6), 441.302(k), 441.311, and 441.313 to both FFS and managed care delivery systems. Although the proposed provisions at §§ 441.301(c)(3), 441.302(a)(6) and (k), 441.311, and 441.313 would apply to LTSS programs that use a managed care delivery system to deliver services authorized under section 1915(c) waivers and section 1915(i), (j), and (k) State plan authorities, we believe incorporating a reference in 42 CFR part 438 would be helpful to States and managed care plans. Therefore, we proposed to add a cross reference to the requirements in proposed § 438.72 to be explicit that States that include HCBS in their MCO's, PIHP's, or PAHP's contracts would have to comply with the requirements at §§ 441.301(c)(1) through (3), 441.302(a)(6) and (k), 441.311, and 441.313. We believed this would make the obligations of States that implement LTSS programs through a managed care delivery system clear, consistent, and easy to locate. While we believed the list proposed in § 438.72 would help States easily identify the provisions related to LTSS, we identified that a provision specified in any other section of 42 CFR part 438 or any other Federal regulation but omitted from § 438.72, is still in full force and effect. We also noted that § 438.208(c)(3)(ii) currently references § 441.301(c)(1) and (2). We did not propose any changes to the regulatory

[160] See section 1903(a)(3)(A)(i) and § 433.15(b)(3), 80 FR 75817–75843; *https://www.medicaid.gov/state-resourcecenter/faq-medicaid-and-chip-affordable-care-act-implementation/downloads/affordable-care-act-faq-enhancedfunding-for-medicaid.pdf; https://www.medicaid.gov/federal-policy-guidance/downloads/SMD16004.pdf.*

[161] See section 1903(a)(3)(B) and § 433.15(b)(4).

[162] See § 433.112 (b, 80 FR 75841; *https://www.ecfr.gov/current/title-42/chapter-IV/subchapter-C/part-433/subpart-C.*

language at § 441.301(c)(1) or (2) or to § 438.208(c)(3)(ii) in the proposed rule. We included § 441.301(c)(1) and (2) in the proposed regulatory language at § 438.72 so that it would be clear that the requirements at § 441.301(c)(1) and (2) continue to apply.

We received various comments and questions about how specific provisions would be implemented in managed care contexts; these comments and our responses are addressed in the sections pertaining to those provisions. We did not receive other comments specifically on this proposal at § 438.72.

Upon further review, we have determined it necessary to make a clarifying correction to § 438.72, which we are finalizing with modifications. We proposed that § 438.72(b) would read that the State must comply with the review of the person-centered service plan requirements at § 441.301(c)(1) through (3), the incident management system requirements at § 441.302(a)(6), the payment adequacy requirements at § 441.302(k), the reporting requirements at § 441.311, and the website transparency requirements at § 441.313 for services authorized under section 1915(c) waivers and section 1915(i), (j), and (k) State plan authorities. We noted that in some cases, our description of the references in the regulations did not align with the titles of those regulations (such as at § 441.302(a)(6), in which only § 441.302(a)(6)(i) is specifically titled requirements, although our intent was for States to comply with § 441.302(a)(6)(i) through (iii). To avoid confusion due to any misaligned language, we are removing the narrative descriptions of the requirements and retaining just the references to the regulatory text.

After consideration of public comments, we are finalizing § 438.72(b) with this modification, which will read that the State must comply with requirements at §§ 441.301(c)(1) through (3), 441.302(a)(6), 441.302(k), 441.311, and 441.313 for services authorized under section 1915(c) waivers and section 1915(i), (j), and (k) State plan authorities.

C. Documentation of Access to Care and Service Payment Rates (§ 447.203)

Section 1902(a)(30)(A) of the Act requires that State plans ''assure that payments are consistent with efficiency, economy, and quality of care and are sufficient to enlist enough providers so that care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area.'' Through the provisions we are finalizing in § 447.203, we are establishing an updated process through which States will be required to document, and we will ensure, compliance with the requirements of section 1902(a)(30)(A) of the Act.

In the 2015 final rule with comment period, we codified a process that requires States to complete and make public AMRPs that analyze and inform determinations of the sufficiency of access to care (which may vary by geographic location in the State) and are used to inform State policies affecting access to Medicaid services, including provider payment rates. The AMRP must specify data elements that support the State's analysis of whether beneficiaries have sufficient access to care, based on data, trends, and factors that measure beneficiary needs, availability of care through enrolled providers, and utilization of services. States are required to update their AMRPs at regular intervals and whenever the State proposes to reduce FFS provider payment rates or restructure them in circumstances when the changes could result in diminished access. Specifically, the AMRP process at § 447.203 before this final rule (which we refer to in this final rule preamble as the previous AMRP process) required States to consider the extent to which beneficiary needs are fully met; the availability of care through enrolled providers to beneficiaries in each geographic area, by provider type and site of service; changes in beneficiary utilization of covered services in each geographic area; the characteristics of the beneficiary population (including considerations for care, service and payment variations for pediatric and adult populations and for individuals with disabilities); and actual or estimated levels of provider payment available from other payers, including other public and private payers, by provider type and site of service. The analysis further required consideration of beneficiary and provider input, and an analysis of the percentage comparison of Medicaid payment rates to other public and private health insurer payment rates within geographic areas of the State, for each of the services reviewed, by the provider types and sites of service. While the previous regulations included broad requirements for what an acceptable methodology used to conduct this analysis must include, States retained discretion in establishing their processes, including but not limited to the specification of data sources and analytical methodologies to be used. For example, States were broadly required to include actual or estimated levels of provider payments available from other payers; however, States retained discretion on which payers they reported on, including where the payment data was sourced from. The result has been a large analytical burden on States without a standardization that allows us and other interested parties to compare data between States to understand whether the Federal access standards are successfully achieving access consistent with section 1902(a)(30)(A) of the Act for beneficiaries nationwide.

Through the previous AMRP process, we aimed to create a transparent and data-driven process through which to ensure State compliance with section 1902(a)(30)(A) of the Act. Following publication of the 2011 proposed rule and as discussed in both the 2015 final rule with comment period and the 2016 final rule, as we worked with States to implement the previous AMRP requirements, many States expressed concerns about the rule.[163] [164] [165] States were concerned about the administrative burden of completing the previous AMRPs and questioned whether the previous AMRP process is the most effective way to establish that access to care in a State's Medicaid program meets statutory requirements. States with high managed care enrollment were also concerned about the previous AMRP process because the few remaining FFS populations in their State often reside in long-term care facilities or require only specialized care that is ''carved out'' of managed care (that is, not covered under the State's contract with managed care plans), but long-term care and specialized care services were not required to be analyzed under the previous AMRP process. We have also heard concerns from other interested parties, including medical associations and non-profit organizations, that the 2015 final rule with comment period afforded States too much discretion in developing access measures which could lead to ineffective monitoring and enforcement, as well as challenges comparing access across States. One commenter on the 2015 final rule was concerned that States had too much discretion in ''. . . setting standards and access measure . . .'' and ''. . . whether they have met their chosen standards'' as this process relies on self-regulation rather than ''an independent, objective third party as the primary arbiter of a State's compliance

[163] 76 FR 26341.

[164] 80 FR 67576 at 67583 and 67584.

[165] 81 FR 21479 at 21479.

. . .'' [166] Another commenter stated that ''CMS should designate a limited and standardized set of data measures that would be collected rather than leaving the decision of which data measures to use to State discretion'' as this would ''enable the development of key, valid, and uniform measures; more effective monitoring and enforcement; and will ensure comparability of objective measures across the States.'' [167] At the time of publication of the 2011 proposed rule and 2015 final rule with comment period, we noted our belief that a uniform approach to meeting the statutory requirement under section 1902(a)(30)(A) of the Act, including setting standardized access to care data measures, could prove difficult given then-current limitations on data, local variations in service delivery, beneficiary needs, and provider practice roles.[168] [169]

Separately, the Supreme Court, in *Armstrong* v. *Exceptional Child Center, Inc.,* 575 U.S. 320 (2015), ruled that Medicaid providers and beneficiaries do not have a direct private right of action against States to challenge Medicaid payment rates in Federal courts. This decision means provider and beneficiary legal challenges against States are unavailable in Federal court to supplement our oversight as a means of ensuring compliance with section 1902(a)(30)(A) of the Act. The Armstrong decision also underscored HHS' and CMS' unique responsibility for resolving issues concerning the interpretation and implementation of section 1902(a)(30)(A) of the Act. The Supreme Court's Armstrong decision placed added importance on CMS' administrative review of SPAs proposing to reduce or restructure FFS payment rates. Accordingly, the 2015 final rule with comment period was an effort to establish a more robust oversight and enforcement strategy with respect to section 1902(a)(30)(A) of the Act.

In consideration of State agencies' and other interested parties' feedback on the previous AMRP process, as well as CMS' obligation to ensure continued compliance with section 1902(a)(30)(A) of the Act, we are updating the requirements in § 447.203. We are rescinding and replacing the AMRP requirements previously in § 447.203(b)(1) through (8) with a streamlined and standardized process, described in § 447.203(b) and (c). This change is informed by a center-wide review of our policy and processes regarding access to care for all facets of the Medicaid program. The 2015 final rule with comment period acknowledged our need to better understand FFS rate actions and their potential impact on State programs, and the requirements we finalized require a considerable amount of data from States. To ensure States were meeting the statutory requirement under section 1902(a)(30)(A) of the Act, the previous AMRP process was originally intended to establish a transparent data-driven process for States to measure the current status of access to services within the State and utilize this process for monitoring access when proposing rate reductions and restructurings.[170] As the rule took effect and as we reviewed States' previous AMRPs, we found that some rate reductions and restructurings had much smaller impacts than others. The 2017 SMDL reflected the experience that certain payment rate changes would not likely result in diminished access to care and do not require the substantial review of access data that generally is required under the 2015 final rule with comment period. Since publication of the 2019 CMCS Informational Bulletin stating the agency's intention to establish a new access strategy, we have developed the new process we are finalizing in this final rule that considers the lessons learned under the previous AMRP process, and emphasizes transparency and data analysis, with specific requirements varying depending on the State's current payment levels relative to Medicare, the magnitude of the proposed rate reduction or restructuring, and any access to care concerns raised to State Medicaid agency by interested parties. With these provisions, we aim to balance Federal and State administrative burden with our shared obligation to ensure compliance with section 1902(a)(30)(A) of the Act (and our obligation to oversee State compliance with the same).

We received public comments on our overall approach to a new access strategy as well as broad comments about multiple provisions in the rule. We received some comments that were outside of the scope of the proposed rule entirely (for example, related to access in managed care and coverage of services), and therefore, are not addressed in this final rule. We also note that some commenters expressed general support for all of the provisions in section II.C. of this rule, as well as for this rule in its entirety. In response to commenters who supported some, but not all, of the policies and regulations we proposed in the proposed rule (particularly in section II.C related to FFS access), we are clarifying and emphasizing our intent that each final policy and regulation is distinct and severable to the extent it does not rely on another final policy or regulation that we proposed.

While the provisions in section II.C. of this final rule are intended to present a comprehensive approach to ensuring that FFS payment rates are adequate to ensure statutorily sufficient access for beneficiaries, and these provisions complement the goals expressed and policies and regulations being finalized in sections II.A. (MAC and BAC) and II.B. (HCBS) of this final rule, we intend that each of them is a distinct, severable provision, as finalized. Unless otherwise noted in this rule, each policy and regulation being finalized under this section II.C is distinct and severable from other final policies and regulations being finalized in this section or in sections II.A. or II.B of this final rule, as well as from rules and regulations currently in effect.

Consistent with our previous discussion earlier in section II. of this final rule regarding severability, we are clarifying and emphasizing our intent that if any provision of this final rule is held to be invalid or unenforceable by its terms, or as applied to any person or circumstance, or stayed pending further State action, it shall be severable from this final rule, and from rules and regulations currently in effect, and not affect the remainder thereof or the application of the provision to other persons not similarly situated or to other, dissimilar circumstances. For example, we intend that the policies and regulations we are finalizing related to the payment rate transparency publication requirement (section II.C.2.a. of this final rule) are distinct and severable from the policies and regulations we are finalizing related to the comparative payment rate analysis requirement and the payment rate disclosure publication requirement (sections II.C.2.b. of this final rule, which we further intend are severable from each other). These provisions are in turn also severable from the interested parties advisory group provision in section II.C.2.c. of this final rule, the State analysis procedures for rate reduction and restructuring SPAs in section II.C.3. of this final rule, and from the Medicaid provider participation and

public process to inform access to care policies in section II.C.4. of this final rule, and each of these in turn is intended to be severable from each other.

The following is a summary of the general comments we received on our proposal to rescind the previous AMRP requirements in § 447.203(b)(1) through (8) and replace them with a streamlined and standardized process in § 447.203(b) and (c), and our responses.

Comment: We received general support from most commenters for our proposal to rescind the AMRP process finalized in the 2015 final rule with comment period in its entirety and replace it with new requirements for payment rate transparency and State analysis procedures for rate reductions and restructuring as described in the proposed rule to ensure compliance with section 1902(a)(30)(A) of the Act. We also received commenter feedback encouraging CMS to ensure the process replacing the AMRPs is robust and public, and that it ensures access to critical services is measured adequately.

Response: We thank the commenters for their support and are finalizing the rescission of the previous AMRP process in its entirety and its replacement with the new requirements as proposed, apart from some minor revisions to the proposed regulatory language, which we address in detail later in this final rule. As of the effective date of this final rule, States are no longer required to submit AMRPs to CMS as previously required in § 447.203(b)(1) through (8). We believe our new policies are robust and that they ensure public transparency and that access to critical services is measured adequately.

Comment: While most commenters generally supported the proposal to rescind § 447.203(b) in its entirety and replace it with new requirements to ensure FFS Medicaid payment rate adequacy, a couple of commenters recommended that CMS maintain some or all of the AMRP process for certain providers (that is, FQHCs, clinics, dental care providers, and community mental health providers), in addition to the newly proposed payment rate transparency, comparative payment rate analysis, and payment rate disclosure requirements. Additionally, these commenters raised concerns that the newly proposed requirements focused exclusively on fee schedule payment rate transparency and comparison to Medicare payment rates; therefore, FQHCs, clinics, dental care providers, and community mental health providers would be excluded from the proposed payment rate transparency and comparative payment rate analysis provisions because these providers generally are not paid fee schedule payment rates (within the meaning of this final rule) and/or lack corresponding Medicare payment rates. One commenter recommended keeping the AMRP requirements in place as a separate process for analyzing access to primary care services provided by FQHCs, clinics, or dental providers if these providers are excluded from the payment rate transparency and comparative payment rate disclosure as a way to assess access to care to these services and providers as they were previously included in the AMRP requirements. Another commenter stated that, in comparison to the AMRPs, the provisions in the proposed rule are an oversimplified approach to evaluating Medicaid FFS payment rates and do not sufficiently focus on payment levels for a comprehensive continuum of behavioral health services.

Response: We acknowledge these commenters' support for the previous AMRP process and suggestion to continue to subject payment rates for FQHCs, clinics (as defined in § 440.90), dental care providers, and community mental health providers to the previous AMRP process. However, we are not incorporating this suggestion, to ensure a consistent approach to evaluating access to care within FFS and across delivery systems that more appropriately balances administrative burden on States and us with the usefulness of the process for ensuring that payment rates comply with section 1902(a)(30)(A) of the Act.

To address commenters' concerns about services being excluded from the payment rate transparency provision in § 447.203(b)(1), we will briefly address which payment rates are and are not subject to the payment rate transparency provisions, but this issue is discussed in greater detail in a later comment response. For purposes of the payment rate transparency provision in § 447.203(b)(1), Medicaid FFS fee schedule payment rates are payment amounts made to a provider and known in advance of a provider delivering a service to a beneficiary by reference to a fee schedule. To the extent a State pays fee schedule payment rates for clinic services (as defined in § 440.90), dental services, and community mental health services that meet the previously stated description, those payment rates are subject to the payment rate transparency provisions in § 447.203(b)(1). As for the comparative payment rate analysis requirements in § 447.203(b)(2)–(3), as discussed in greater detail later in this final rule, only codes included on the CMS-published list of evaluation and management (E/M) Current Procedural Terminology or Healthcare Common Procedure Coding System (HCPCS) CPT/HCPCS codes are subject to the analysis.

Additionally, as further discussed in a later comment response, States use provider-specific cost and visit data for a particular benefit category to set the prospective payment system (PPS) rates that are paid to FQHCs or rural health clinics (RHCs) in a process governed by section 1902(bb) of the Act. Because States utilize these data rather than fee schedule payment rates within the meaning of this final rule, those rates paid to FQHCs and RHCs are not subject to the new payment rate transparency provisions in § 447.203(b)(1) or the comparative payment rate analysis requirements in § 447.203(b)(2) through (3). Lastly, like all State plan services for which the State proposes a rate reduction or restructuring in circumstances where the changes could result in reduced access, FQHC, RHC, clinic (as defined in § 440.90), dental, and community mental health services are subject to access analyses in § 447.203(c) for proposed rate reductions and restructuring.

While we recognize that there may be multiple approaches to evaluating access to care for Medicaid beneficiaries, we respectfully disagree with the commenter that the payment rate transparency and State analysis procedures for rate reductions and restructuring are an oversimplified approach for evaluating Medicaid FFS payment rates. As part of a comprehensive review of our policy and processes regarding access to care for all facets of the Medicaid program, we proposed a more streamlined approach, as compared to previous AMRP process, that we intended better to balance Federal and State administrative burden with our shared obligation to ensure compliance with section 1902(a)(30)(A) of the Act.

Additionally, we disagree with the commenter that, in comparison to the previous AMRP process, the provisions in the proposed rule do not sufficiently focus on payment levels for a comprehensive continuum of behavioral health services. The provisions of this final rule serve as one part of our comprehensive efforts to ensure that payment levels across the continuum of behavioral health services are economic and efficient, as well as consistent with quality and access consistent with the statute. As we discussed in the proposed rule, we limited the scope of behavioral health services subject to

comparative payment rate analysis to include only outpatient services.[171] For this final rule, we have revised the outpatient behavioral health services category of service in § 447.203(b)(2)(iii), which we are finalizing as ''Outpatient mental health and substance use disorder services.'' This revision will ensure this final rule is consistent with the services in the Managed Care final rule (as published elsewhere in this **Federal Register**) and reflects a more granular level of service description. As this category of service remains outpatient, this allows us to focus on ambulatory care provided by practitioners in an office-based setting without duplicating existing Federal requirements for demonstrating compliance with applicable upper payment limits (UPLs) and the supplemental payment reporting requirements under section 1903(bb) of the Act. Therefore, between the comparative payment rate analysis requirements that we are finalizing in this rule (including outpatient mental health and substance use disorder services) and existing UPL and supplemental payment reporting requirements (including requirements specific to inpatient services furnished in psychiatric residential treatment facilities, institutions for mental diseases, and psychiatric hospitals), we believe that States and CMS will have available sufficient information about inpatient and outpatient mental health and substance use disorder services payment rates to appropriately monitor payment levels across the continuum of mental health and substance use disorder services.

Comment: Several commenters raised concerns about administrative burden on States to comply with the payment rate transparency publication, comparative payment rate analysis, and payment rate disclosure requirements. Commenters were generally concerned about the compounding effect on already overburdened State resources that would be required to meet these provisions, the other HCBS and MAC and BAG provisions of the proposed rule, and the provisions of the Managed Care proposed rule. Specifically for the payment rate transparency provisions under § 447.203(b), commenters were generally concerned about the significant amount of State resources (including number of staff, staff time, and financial expense) that would be required to collect, prepare, analyze, and publish the data and information required.

[171] 88 FR 27960 at 28006.

Additionally, a few commenters expressed concerns about the burden associated with the proposed rule and stated that they did not believe the requirement to publish Medicaid payment rates through the payment rate transparency publication would benefit the Medicaid program by providing States and CMS with an effective and meaningful way of ensuring access to care is sufficient. One commenter stated that they expect their State Medicaid program to limit future program enhancements and improvements because they would need to redirect resources to complying with the provisions of the proposed rule, if finalized.

Response: We appreciate the commenters' concerns, and we would like to note that the FFS provisions, including the payment rate transparency, comparative payment rate analysis, and payment rate disclosure requirements (§ 447.203(b)(1) through (5)), interested parties' advisory group requirements (§ 447.203(b)(6)), and State analysis procedures for payment rate reductions or payment restructuring (§ 447.203(c)), finalized in this rule are expected to result in a net burden reduction on States compared to the previous AMRP requirements, as discussed in the proposed rule and in section III. of this final rule. We are also providing States with a full 2-year compliance period between the effective date of this final rule and the initial applicability date of July 1, 2026, rather than 6 or 9 months as finalized with the previous AMRP process.[172] Given that the previously referenced requirements of this final rule should be less burdensome for States than the rescinded, previous AMRP requirements, and the length of time States have to prepare to implement these new requirements, we expect that States will be able to meet the payment rate transparency, interested parties' advisory group, and State analysis procedures for payment rate reductions or payment restructuring requirements, if a rate reduction or restructuring is proposed through a SPA, without needing to limit future program enhancements or increase the level of State resources dedicated to ensuring compliance with the access requirement in section 1902(a)(30)(A) of the Act.

We would also like to reassure States that the provisions of § 447.203(b)(1) in this final rule include flexibilities that could further ease the burden on States. For example, the payment rate transparency publication requirements described in paragraph (b)(1) and paragraph (b)(1)(ii) have limited formatting requirements, and therefore we expect many States that already publish at least some of their Medicaid FFS fee schedule payment rates directly on fee schedules posted on the State agency's website would only need to make minor revisions or updates (if any) to comply with the new requirements with respect to these already-published payment rates. States are not required to create new fee schedules if their published payment rate information is already organized in such a way that a member of the public can readily determine the amount that Medicaid would pay for each covered service, consistent with § 447.203(b)(1). Additionally, because commenters informed us that some States use a contractor to maintain their fee schedules on the contractor's website, we have revised the language in § 447.203(b)(1) to permit the State to ''publish all Medicaid fee-for-service payment rates on a website that is accessible to the general public'' by removing the proposed requirement that the payment rates be published on a website that is ''developed and maintained by the single State agency.'' This flexibility is being provided for States to continue utilizing a contractor to develop fee schedules as well as utilizing a contractor's (or other third party's) website to publish the payment rate transparency publication so long as the State publishes a readily accessible link on its State-maintained website to the required content and ensures on an ongoing basis that the linked content meets all applicable requirements of this final rule. We continue to require that ''[t]he website where the State agency publishes its Medicaid fee-for-service payment rates must be easily reached from a hyperlink on the State Medicaid agency's website'' in § 447.203(b)(1)(ii). We acknowledge that States utilization of contractors to meet certain programmatic responsibilities is a common occurrence, and with this modification, we are ensuring flexibility for States to rely on these relationships to meet the payment rate transparency publication requirement.

With respect to the comparative payment rate analysis in § 447.203(b)(2) and (3), as discussed in the proposed

[172] In the 2015 final rule with comment period (80 FR 67576), the previous AMRPs were originally due on July 1 providing States with approximately 6 months between the final rule effective date of January 4, 2016, and due date of July 1, 2016. Based on comments received on the 2015 final rule with comment period, the 2016 final rule (81 FR 21479) extended the due date to October 1, 2016, providing States with an additional 3 months to submit their first AMRPs for a total of approximately 9 months from the effective date of the 2015 final rule when States were first notified they would be required to submit AMRPs.

rule, States have the flexibility to map their geographical areas to those used for Medicare payment for purposes of meeting the requirement that States break down their payment rates by geographical location, as applicable.[173] We will provide States with a list of the CPT/HCPCS codes to be used for comparison in subregulatory guidance, including an example list, that will be issued prior to the effective date of this final rule.[174] While the first published list will be an example list of codes that would have been subject to the comparative payment rate analysis if it were in effect for CY 2023, we will publish the initial list of E/M CPT/HCPCS codes subject to the comparative payment rate analysis no later than June 30, 2025, to provide States 1 full calendar year between the issuance of the CMS-published list of E/M CPT/HCPCS codes and the due date of the comparative payment rate analysis, as described in the proposed rule.[175]

For the payment rate disclosure in § 447.203(b)(2) and (3), which requires States to publish the average hourly Medicaid FFS fee schedule payment rate for personal care, home health aide, homemaker, and habilitation services, as discussed in detail in a later response to comments in this section, there is no Medicare comparison component. Because the disclosure will reflect only the State's payment rate data, we chose not to specify codes; this will provide States more flexibility in meeting the requirements in line with each State's unique circumstances. For example, the payment rate disclosure requirements can accommodate the flexibility States have in setting their payment rates and methodologies for personal care, home health aide, homemaker, and habilitation services, as well as the provider types licensed to deliver these services to beneficiaries.

We disagree with commenters that the requirement to publish Medicaid payment rates through the payment rate transparency publication would not benefit the Medicaid program by providing States and CMS with an effective and meaningful way of ensuring access to care is sufficient. As discussed in the proposed rule, payment rate transparency is a critical component of assessing compliance with section 1902(a)(30)(A) of the Act. By publishing their Medicaid payment rates publicly, States will be providing the necessary information to evaluate if State payment rates are consistent with efficiency, economy, and quality of care and are sufficient to enlist enough providers so that care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area and interested parties have basic information available to them to understand Medicaid payment levels and the associated effects of payment rates on access to care so that they may raise concerns to State Medicaid agencies via the various forms of public processes available to interested parties.[176] Also as discussed in section V.D. of the proposed rule, we considered, but did not propose, to require Medicaid payment information be directly submitted to CMS, rather than publicly published, because this requirement to publicly display payment rate information is methodologically similar to the previous regulation at § 447.203, which required previous AMRPs be submitted to us and publicly published by the State and CMS. We found this aspect of the rule to be an effective method of publicly sharing access to care information, as well as ensuring State compliance, and are carrying it forward into the provisions finalized in this rule.[177] Additionally, the Supreme Court's *Armstrong* decision underscored the importance of CMS' determinations, as the responsible Federal agency, regarding the sufficiency of Medicaid payment rates.

Comment: A couple of commenters requested clarification regarding CMS exempting States that deliver all of their Medicaid services through managed care from all of the payment rate transparency provisions under § 447.203(b).

Response: All States are required to comply with the payment rate transparency publication, comparative payment rate analysis, and payment rate disclosure provisions finalized in this rule under § 447.203(b), regardless of the quantity of services covered or delivered or beneficiaries enrolled in managed care. Due to coverage transition periods, such as where an individual is Medicaid eligible but not yet enrolled in a managed care plan or benefits are covered retroactively,[178] even States that generally enroll all beneficiaries into managed care plans pay for some services on a FFS basis that are carved out of the managed care plan contracts, and therefore, are expected to have Medicaid FFS fee schedule payment rates in effect. Such Medicaid FFS fee schedule payment rates are subject to the provisions finalized in this rule under § 447.203(b).

Comment: Several commenters requested CMS clearly define the services considered to be categories of services subject to all provisions under § 447.203(b). One commenter requested CMS publish information regarding the timing of when States can expect the CMS published list of E/M CPT/HCPCS codes subject to the comparative payment rate analysis.

Response: For the payment rate transparency requirements in § 447.203(b)(1), as further discussed in a later response to comments in this section, services for which providers are paid Medicaid FFS fee schedule payment rates within the meaning of this final rule, which generally are payment amounts made to a provider and known in advance of a provider delivering a service to a beneficiary, are subject to the requirements of § 447.203(b)(1)(i) through (vi).

For the comparative payment rate analysis described in § 447.203(b)(3)(i), the list of the E/M CPT/HCPCS codes that specifies the services subject to the analysis will be published in subregulatory guidance. Prior to the effective date of this final rule, we will issue subregulatory guidance, including a hypothetical example list of the E/M CPT/HCPCS codes that would be subject to the comparative payment rate analysis, if the comparative rate analysis requirements were applicable with respect to payment rates in effect for CY 2023. This example list defines the services that would be subject to the comparative payment rate analysis through the identification of specific E/M CPT/HCPCS codes that are in effect for CY 2023. In other words, the example list of E/M CPT/HCPCS codes includes codes that meet the following criteria: the code is effective for CY 2023; the code is classified as an E/M CPT/HCPCS code by the American Medical Association (AMA) CPT Editorial Panel; the code is included on the Berenson-Eggers Type of Service (BETOS) code list effective for the same time period as the hypothetical comparative payment rate analysis (CY 2023) and falls into the E/M family grouping and families and subfamilies for primary care services, obstetrics and gynecological services, and outpatient behavioral services (now called

[173] 88 FR 27960 at 28013.

[174] 88 FR 27960 at 28008.

[175] 88 FR 27960 at 28008 through 28009.

[176] 88 FR 27960 at 27967.

[177] 88 FR 27960 at 28075.

[178] Once an individual is enrolled in Medicaid, coverage is effective either on the date of application or the first day of the month of application. Benefits also may be covered retroactively for up to three months prior to the month of application if the individual would have been eligible during that period had he or she applied. Coverage generally stops at the end of the month in which a person no longer meets the requirements for eligibility. *https://www.medicaid.gov/medicaid/eligibility/index.html.*

outpatient mental health and substance use disorder services in this final rule); and the code has an A (Active), N (Non-Covered), R (Restricted), or T (Injections) code status on the Medicare Physician Fee Schedule (PFS) with a Medicare established relative value unit (RVU) and payment amount for CY 2023. As discussed in the proposed rule, we expect to provide States with approximately 1 full calendar year of access to the CMS-published list of E/M CPT/HCPCS codes and Medicare non-facility payment rates as established in the annual Medicare PFS rule for a calendar year to provide States with sufficient time to develop and publish their comparative payment rate analyses as described in § 447.203(b)(4).[179] Therefore, we expect that the first CMS-published list of the E/M CPT/HCPCS codes that actually will be subject to the comparative payment rate analysis requirements will be published by July 1, 2025 for CY 2025, to facilitate States' publication of their comparative payment rate analyses by the applicability date of July 1, 2026.

The categories of services subject to the payment rate disclosure requirements described in § 447.203(b)(3)(ii), as discussed later in this preamble, are personal care, home health aide, homemaker, and habilitation services provided under FFS State plan authority, including sections 1915(i), 1915(j), 1915(k) State plan services; section 1915(c) waiver authority; and under section 1115 demonstration authority. We are not identifying codes for these categories of services because States may use a wide variety of codes to bill and pay for these services, and because the payment rate disclosure does not have a comparison element that would necessitate uniformity with another payer. While we encourage States to organize their payment rate disclosure on a code basis, when possible, for clarity and formatting consistency with the comparative payment rate analysis, States have flexibility in meeting the payment rate disclosure requirements to ensure each State's unique circumstances can be accounted for in the disclosure.

Comment: Several commenters urged CMS to delay the proposed applicability date of the § 447.203(b) provisions, including the compliance actions described in § 447.203(b)(5), to allow States sufficient time for compliance. Commenters stated that the amount of recently proposed Federal changes, including this rulemaking and the Managed Care proposed rule, raised concerns about State resources necessary to comply with all new Federal regulations. Some commenters expressed concern that withholding administrative FFP would further hinder States' ability to meet the requirements and CMS should only act after exhausting all other efforts to ensure States are compliant (including adopting a tiered approach to enforcement and directly engaging with non-compliant States to create a corrective action plan).

Commenters suggested the following alternative applicability dates: approximately 3 years from the effective date of a final rule (that is, January 1, 2027), 4 years (that is, January 1, 2028), or 5 years (that is, January 1, 2029). Alternatively, a few commenters urged CMS to accelerate the proposed applicability date of the § 447.203(b) provisions by one year from January 1, 2026, to January 1, 2025, to ensure payment rate information is published timely to help address questions about access, particularly for HCBS. In addition to the proposed compliance procedures described in § 447.203(b)(5), a couple of commenters suggested CMS publish an annual calendar for States to follow and CMS should also report on the timeliness of each State's compliance with the payment rate transparency, comparative payment rate analysis, and payment rate disclosure requirements.

Response: We are finalizing the payment rate transparency requirements in § 447.203(b) with an applicability date of July 1, 2026, which is 6 months later than we proposed. This date is an alternative applicability date that was described in the proposed rule to allow for States to have a period of at least 2 years between the effective date of the final rule and the applicability date for the § 447.203(b) provisions. The July 1, 2026, applicability date applies to the payment rate transparency, comparative payment rate analysis, and payment rate disclosure requirements. For payment rate transparency, the initial publication of the Medicaid FFS payment rates shall occur no later than July 1, 2026, and include approved Medicaid FFS payment rates in effect as of July 1, 2026. For the comparative payment rate analysis and payment rate disclosure, the initial comparative payment rate analysis and payment rate disclosure must include Medicaid payment rates in effect as of July 1, 2025, and be published no later than July 1, 2026. As finalized in this rule, the Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year included in the comparative payment rate analysis must be effective for the same time period for the same set of E/M CPT/HCPCS codes used for the base Medicaid FFS fee schedule payment rate. The Medicare PFS is published through annual notice and comment rulemaking, and takes effect January 1 of the upcoming calendar year. As discussed in the proposed rule, we acknowledged that Medicare may issue a correction to the Medicare PFS after the final rule is in effect, and this correction may impact our published list of E/M CPT/HCPCS codes and we would like to reemphasize that we expect States to rely on the CMS published list of E/M CPT/HCPCS codes subject to the comparative payment rate analysis for complying with the requirements in paragraphs (b)(2) through (4).[180] States are required to use the Medicare non-facility payment rates as established in the Medicare PFS final rule for calendar year 2025 for purposes of the initial comparative payment rate analysis to be published by July 1, 2026. In accordance with paragraph (b)(4), the comparative payment rate analysis is required to be updated no less than every 2 years and by no later than July 1 of the second year following the most recent update, therefore, the second comparative payment rate analysis would be for calendar year 2027, the third analysis would be for calendar year 2029, so on and so forth. Each comparative payment rate analysis would use the respective year's CMS published list of E/M CPT/HCPCS codes which will be updated by CMS approximately one full calendar year before the due date of the next comparative payment rate analysis and the list will include changes made to the AMA CPT Editorial Panel and the Medicare PFS based on the most recent Medicare PFS final rule, as described in the proposed rule.[181]

We are not finalizing the alternative applicability dates, including dates sooner and later than the July 1, 2026, due date finalized in this rule, as suggested by commenters. We are not accelerating the date as we are mindful of the numerous new regulatory requirements established in this final rule, the Managed Care final rule (as published elsewhere in this **Federal Register**), and the Streamlining Eligibility & Enrollment final rule. We want to ensure States have adequate time to implement all newly finalized provisions, with at least 2 years between the effective date and applicability date as described in the proposed rule.[182] We

[179] 88 FR 27960 at 28008–28009.

[180] 88 FR 27960 at 28009.

[181] 88 FR 27960 at 28008.

[182] 88 FR 27960 at 28008.

are also not delaying the applicability date as we believe the applicability date for the provisions finalized in section II.C. of this final rule are reasonable given that States should have their Medicaid FFS fee schedule payment rates data readily available, Medicare payment rate data are publicly available, and we are making available supportive guidance and templates with this final rule. In the beginning of section II. of this final rule, we include a table with the provisions and relevant timing information and applicability dates of all provisions in the rule. We believe this table delivers the information the commenter was seeking. We expect the information published in this final rule is sufficient for States to comply in a timely manner and we currently do not intend to publish a calendar in any other format. We are finalizing the compliance provisions at § 447.203(b)(5) as proposed. While we currently do not intend to publish a report of the timeliness of each State's compliance with the payment rate transparency, comparative payment rate analysis, and payment rate disclosure requirements, as suggested by a couple of commenters, given that our work to better ensure access in the Medicaid program is ongoing, we intend to gain implementation experience with this final rule, and we will consider the recommendations provided on the proposed rule to help inform any future rulemaking in this area, as appropriate.

Comment: A number of commenters suggested CMS conduct the proposed payment rate transparency publication, comparative payment rate analysis, and payment rate disclosure on behalf of States to ensure a consistent, national approach to analyzing and publishing payment rate information. These commenters stated CMS could do this by requiring States to submit their fee schedules to CMS or CMS could collect fee schedule rate information during the SPA approval process. Specifically for the payment rate disclosure, two commenters suggested using existing data collection tools, specifically the State of the Workforce Survey, to source the information required for the disclosure to ease burden on States.[183] Additionally, a couple of commenters suggested CMS create a centralized data repository of all States' payment rate transparency, comparative payment rate analysis, and payment rate disclosure publications for public use, including data analysis, if the proposed requirements are applied to States.

Response: As described in section V.D.3 of this final rule, prior to the issuance of the 2023 proposed rule, we specifically considered ways for CMS to produce and publish the comparative payment rate analysis proposed in § 447.203(b)(2) through (3) whereby we would develop reports for all States demonstrating Medicaid payment rates for all services or a subset for Medicaid services as a percentage of Medicare payment rates.[184] We decided not to propose this approach because it would rely on T–MSIS data, which would increase the lag in available data due to the need for CMS to prepare it and then validate the data with States to ensure the publication is accurate, in addition to introducing uncertainty into the results due to ongoing variation in State T–MSIS data quality and completeness. Given the increased lag time associated with T–MSIS data and uncertainty in results that would diminish the utility of the comparative payment rate analysis, we decided producing and publishing the analysis would likely result in inaccuracies, resulting in burden on States to correspond with CMS to provide missing information and correct other information. After considering, and ultimately not proposing, CMS complete a comparative payment rate analysis on behalf of States, we did not further consider conducting the payment rate transparency publication or payment rate disclosure on behalf of States due to the previously stated reasons (that is, lagging data from T–MSIS and the need that would remain to validate data with States).

We are not creating a centralized data repository of all States' payment rate transparency, comparative payment rate analysis, and payment rate disclosure publications for public use as suggested by commenters because we are striving to balance Federal and State administrative burden with our shared obligation to ensure compliance with section 1902(a)(30)(A) of the Act. Requiring States to submit the information they already published on their State or contractor's website would be duplicative and create additional burden on States. We acknowledge that we could also pull data from State or contractor websites to create a central Federal repository; however, we intend our initial focus to be on establishing the new payment rate transparency, comparative payment rate analysis, and payment rate disclosure requirements; providing States with support during the compliance period; and ensuring these data are available to beneficiaries, providers, CMS, and other interested parties for the purposes of assessing access to care issues. Additionally, we believe that the States, as stewards of Medicaid payment rate information in each of their Medicaid programs, are the party in the best position to publish and analyze their own payment rate information. States' ownership of payment rate information will ensure accurate payment rate transparency publications, comparative payment rate analyses, and payment rate disclosures. Given that our work to better ensure access in the Medicaid program is ongoing, we intend to gain implementation experience with this final rule, and we will consider the recommendations provided on the proposed rule to help inform any future rulemaking in this area, as appropriate.

While we appreciate the suggestion to utilize existing data collection tools, specifically the State of the Workforce Survey, we will not be relying on the State of the Workforce Survey because the data do not include all States, the District of Columbia, and the Territories (2021 Survey only sourced data from 28 States and the District of Columbia);), account for payment rate variation by population (pediatric and adult), provider type, and geographical location (2021 Survey only includes mean starting wage, the median starting wage, as well as the minimum and maximum starting hourly wages); or include individual providers (2021 Survey only sourced data from provider agencies). Accordingly, it would not be a sufficient data source to meet the requirements for the payment rate disclosure as finalized in this final rule.

Comment: We received some comments about CMS requiring States to change their payment rates. A couple of commenters requested CMS require States to change their payment rates when deficiencies are identified through the payment rate transparency publication, comparative payment rate analysis, or payment rate disclosure; when provider shortages are documented; and when reimbursement or payment rates fall below a certain threshold, such as 50 percent of the corresponding Medicare payment rate; however, most commenters who suggested CMS set a threshold did not

[183] The State of the Workforce Survey collects comprehensive data on provider agencies and the Direct Support Professional (DSP) workforce providing direct supports to adults (age 18 and over) with intellectual and developmental disabilities (IDD). The goal of the survey and the resulting data is to help States examine workforce challenges, identify areas for further investigation, benchmark their workforce data, measure improvements made through policy or programmatic changes, and compare their State data to those of other States and the NCI–IDD average. *https://idd.nationalcoreindicators.org/staff-providers/.*

[184] 88 FR 27960 at 28075.

suggest a specific number for the threshold. One commenter specifically asked if CMS would require States to increase institutional service payment rates. The commenter was concerned that an increase in a direct care worker's Medicaid hourly rate, without a corresponding increase in a Medicaid payment rate for institutional services, would result in fewer hours of care able to be delivered. We received one comment requesting CMS to expressly permit States to pay more than Medicare for services furnished through the FFS system. Additionally, one commenter expressed caution that increasing payment rate transparency does not necessarily ensure access to care or coverage of services in Medicaid.

Response: To clarify, the provisions in this final rule do not require States to change their payment rates. Although we intend for States to consider the information produced for the payment rate transparency publication, comparative payment rate analysis, and payment rate disclosure in an ongoing process of evaluating the State's payment rate sufficiency and when considering changing payment rates or methodologies (and we intend to make similar use of the information in performing our oversight activities and in making payment SPA approval decisions), we did not propose and are not finalizing that any payment rate changes necessarily would be triggered by the proposed requirements.

Specifically, we did not propose, nor are we finalizing, a requirement that States must increase their institutional or non-institutional service payment rates through this final rule. Based on the information provided by the commenter (and without additional information about providers, such as, number of providers in a State or number of provider accepting new patients or accepting Medicaid), we understand the concerns raised to generally be an issue with a State's limitations on service coverage (that is, a coverage limit of $1,000/month limit on institutional services is insufficient for the amount of care required). While we do not have the authority to require States to change their Medicaid payment rates, we remind States that the Medicaid program is a Federal-State partnership and States have the flexibility and responsibility to set payment rates that are consistent with efficiency, economy, quality of care, and access as required by section 1902(a)(30)(A) of the Act and a coverage limit could be inconsistent with this standard. We encourage the commenter to utilize the public process procedures described in § 447.204 to raise these concerns with their State. We also did not propose and are not finalizing a regulatory change that explicitly permits States to pay more than Medicare for services furnished through the FFS system. We acknowledge that existing UPL requirements limit Medicaid payments to a reasonable estimate of what Medicare would have paid.[185] However, outside of the services subject to UPL requirements limiting aggregate State Medicaid payment amounts, as the Medicaid program is a Federal-State partnership, States have the flexibility and responsibility to set payment rates that are consistent with efficiency, economy, and quality of care as required by section 1902(a)(30)(A) of the Act. Currently, States can set FFS payment rates that are more than Medicare for numerous services, provided any applicable aggregate UPL is satisfied, and creating an explicit permission in regulation would not change the existing flexibilities States have in setting their payment rates.

We understand the commenter's concerns that increasing payment rate transparency does not necessarily ensure access to care or coverage of services in Medicaid. We acknowledged in the proposed rule that there may be other causes of access to care issues outside of provider payment rates, such as beneficiaries experiencing difficulty scheduling behavioral health care appointments due to a provider shortage where the overall number of behavioral health providers within a State is not sufficient to meet the demands of the general population.[186] However, we believe it is important to address one of the potential causes of access to care issues: payment rates that are not sufficient to enlist an adequate supply of providers as required by section 1902(a)(30)(A) of the Act. Given that our work to better ensure access in the Medicaid program is ongoing, we intend to gain implementation experience with this final rule, and we will consider additional areas of access to care outside of payment rates to help inform any future rulemaking to promote improved access to care, as appropriate.

Comment: A number of commenters requested CMS provide States with guidance, templates, tools, examples, or descriptions of acceptable forms for publishing the payment rates, comparative payment rate analysis, and payment rate disclosure to ensure States understand how to comply with these provisions. A few commenters requested guidance on specific aspects of provisions of the proposed rule: accessible web pages and accounting for additional ways payment rates can vary (such as site of service and patient acuity). Those commenters also noted that some States use value-based payment (VBP) methodologies and requested guidance on how the various provisions of the proposed rule has accounted for these payment methodologies. Additionally, a couple of commenters suggested CMS provide guidance to the public to ensure the newly published data are understandable.

Response: Prior to the effective date of this final rule, we will issue subregulatory guidance including a hypothetical example list of the E/M CPT/HCPCS codes that would be subject to the comparative payment rate analysis, if the comparative rate analysis requirements were applicable with respect to payment rates in effect for CY 2023; illustrative examples of compliant payment rate transparency, comparative payment rate analysis, and payment rate disclosure publications (including to meet accessibility standards); and a template to support completion of the additional State rate analysis under § 447.203(c)(2). We encourage States to review the subregulatory guidance to be issued prior to the effective date of this final rule and reach out to CMS for technical guidance regarding compliance with the comparative payment rate analysis and any other requirement of this final rule.

We are only requiring the payment rate transparency publication, comparative payment rate analysis, and payment rate disclosure include payment rate breakdowns by population (pediatric and adult), provider type, and geographical location, as applicable. Payment rate variations by site of service are not required, but States have flexibility to include this optional payment rate break down in the payment rate transparency publication. While not required in this final rule, should a State opt to breakdown their payment rates by site of service, the State should use the minimum payment amount for purposes of the requirements of § 447.203(b), because a provider is assured to receive at least this amount for furnishing the service at any site of service. At State option, the State could also include additional payment rate breakdowns a provider might receive at other sites of service in the State (for example: office, inpatient hospital, school, mobile unit, urgent

[185] § 447.272 for inpatient hospitals, § 447.321 for outpatient hospitals and clinic services, § 447.325 for other inpatient and outpatient facilities (nursing facilities, intermediate care facilities for the developmentally disabled (ICF/DD), psychiatric residential treatment facilities (PRTF), and institutions for mental disease (IMDs).

[186] 88 FR 27960 at 28016.

care facility, nursing facility). We did not propose or finalize in this rule a requirement for States to include a payment rate breakdown for site of services because we want our initial focus to be on establishing the new payment rate transparency, comparative payment rate analysis, and payment rate disclosure requirements, providing States with support during the compliance period, and ensuring the data required under this final rule are available to beneficiaries, providers, CMS, and other interested parties for the purpose of assessing access to care issues. We believe that payment rate breakdowns by population (pediatric and adult), provider type, and geographical location will provide a sufficient amount of transparency to ensure that interested parties have basic information available to them to understand Medicaid payment levels and the associated effects of payment rates on access to care so that they may raise concerns to State Medicaid agencies via the various forms of public processes available to interested parties.

Additionally, payment rate variations based on patient acuity are also not explicitly required in the payment rate transparency publication. Payment adjustments for patient acuity generally are limited to institutional settings (for example, inpatient hospitals and nursing facilities). Should a State opt to breakdown their payment rates by patient acuity, to the State should use the minimum payment amount for purposes of the requirements of § 447.203(b), because a provider is assured to receive at least this amount for furnishing the service to any patient. At State option, the State could also include additional payment rate breakdowns the provider might receive for other levels of patient acuity. We also acknowledge that prospective payment system rates, such as Medicare's Patient Driven Payment Model (PDPM) for nursing facilities and inpatient prospective payment system (IPPS) for inpatient hospitals, typically account for patient acuity. As further discussed in a later response to comments in this section, PPS rates for inpatient hospital, outpatient hospital, and nursing facility services that are paid to most hospitals and nursing facilities and are payments based on a predetermined, fixed amount are subject to the payment rate transparency provision in this final rule. This is because these PPS rates are typically known in advance of a provider delivering a service to a beneficiary and fall into the scope of a Medicaid FFS fee schedule payment rate within the meaning of this final rule, as discussed in a later response to comments in this section.

We understand the commenters' concerns about ensuring the various payment rate transparency publications of this final rule are understandable to the public. We expect State publications of Medicaid payment rate transparency information, comparative payment rate analysis, and payment rate disclosures that comply with the requirements of this final rule to be transparent and clearly understandable to beneficiaries, providers, CMS, and other interested parties. Therefore, we do not anticipate a need for guidance for the public at this time, but we will continue to assess once the requirements are in effect.

Comment: A couple of commenters suggested CMS conduct provider shortage assessments and engage providers, beneficiary advocacy organizations, direct service workers, caregivers, and other relevant interested parties in the data collection and analysis processes in the proposed rule and create a Federal-level public comment process within the CMS review of SPAs and HCBS waiver applications or renewals.

Response: We appreciate the commenters' suggestions; however, we did not propose to conduct provider shortage assessments, or to engage with interested parties in the data collection and analysis processes outside of the work of the interested parties' advisory group in § 447.203(b)(6). After obtaining implementation experience of these new policies, we will keep these suggestions in mind as we consider whether additional requirements may be appropriate to propose through future rulemaking.

Comment: One commenter suggested CMS consider future rulemaking to require States survey HCBS participants and their support systems to identify additional access issues and perceived causes, with a particular focus on assessing access related to unpaid and paid support. The commenter provided an example of a parent of an adult child providing a significant number of hours, both paid and unpaid, which the commenter suggested could be an indicator that the family cannot find a qualified provider for the services.

Response: We appreciate the commenter's suggestion. Given that our work to better ensure access in the Medicaid program is ongoing, we intend to gain implementation experience with this final rule, and we will consider the recommendations provided on the proposed rule to help inform any future rulemaking in this area, as appropriate.

Comment: One commenter questioned the relationship between higher payment rates in FFS and higher rates of accepting new Medicaid patients, as well as the potential for affecting rates across payers and delivery systems, noting that even if the State raise the rates for the Medicaid FFS that does not mean that Medicaid or Medicare managed care plans, including managed care plans for individuals dually eligible for both Medicare and Medicaid, also will raise their provider payment rates. The commenter noted that raising the rates for Medicaid FFS does not mean that the State will ensure that the managed care plans operating in the State also pay higher rates, noting that practitioners are less likely to accept Medicaid if the managed care plans do not raise payment rates to align when FFS rates have been increased.

Response: We appreciate the views of the commenter. The provisions of § 447.203(c) only apply to Medicaid FFS, and do not apply to Medicaid managed care plans. Requirements for Medicaid managed care are discussed in the Medicaid Managed Care final rule (as published elsewhere in this **Federal Register**). Payment rates that managed care plans pay to providers are not required to be set at the Medicaid FFS rate levels as managed care is a risk-based arrangement whereby States pay managed care plans prospective capitation rates, and plans contract with network providers and negotiate provider payment rates. Managed care plans have their own access to care requirements, including the network adequacy requirements in 42 CFR 438.68. Managed care plan capitation rates are subject to actuarial soundness requirements at § 438.4.

1. Fully Fee-For-Service States

We solicited comments on whether additional access standards for States with a fully FFS delivery system may be appropriate. Because the timeliness standards of the proposed Medicaid and Children's Health Insurance Program Managed Care Access, Finance, and Quality proposed rule (Managed Care proposed rule) at § 438.68 would not apply to any care delivery in such States, we stated that we were considering whether a narrow application of timeliness standards to fully FFS States that closely mirrored the proposed appointment wait time standards, secret shopper survey requirements, and publication requirements (as applied to outpatient mental health and substance use disorder, adult and pediatric; primary care, adult and pediatric; obstetrics and gynecology; and an additional type of

service determined by the State) in that rule might be appropriate. Given that timeliness standards would apply directly to States, we also solicited comments on a potentially appropriate method for CMS to collect data demonstrating that States meet the established standards at least 90 percent of the time.

In developing the proposed rule, with respect to FFS, our intent and focus was on replacing the previous AMRP process. While we saw value in discussing and seeking public input on timeliness standards for fully FFS States that would mirror those proposed in the Managed Care proposed rule, creating additional alignment between the delivery systems, we were mindful of the volume of proposed changes that would require State resources for implementation. Therefore, we chose to maintain our goal with the FFS provisions of this access rule to replace the previous AMRP process, and we believed that timeliness standards were better suited to a larger, ongoing access strategy, to be considered and proposed in future rulemaking. Nevertheless, we saw value in gauging the appetite for CMS to adopt timeliness standards in fully FFS States, and as such included a short section about the possibility of those standards in the fully FFS context in the proposed rule. Although we are not finalizing any FFS timeliness standards in this final rule, we intend to propose them in future rulemaking, informed by the comments received on this discussion in the proposed rule. Additionally, by keeping this current rulemaking focused on replacing the previous AMRP process and not implementing FFS timeliness standards at this time, we afford ourselves an opportunity to observe and learn from those standards being established in managed care (and in the marketplace). Those experiences will provide greater insights into how to best propose these standards in FFS and provide time to engage with interested parties on how we might best include newly proposed FFS timeliness standards in existing requirements, including those we are finalizing in this rule, mitigating unnecessary burden on States.

We received public comments in response to this request for comment. The following is a summary of the comments we received and our responses.

Comment: Several commenters noted general support for timeliness standards for fully FFS States. Generally, these commenters agreed that there is value in aligning access monitoring strategies across delivery systems so that all Medicaid beneficiaries would benefit from a new policy, and that these standards could improve access by confirming whether beneficiaries are actually able to access care in a timely manner. Some commenters had suggestions if CMS were to adopt timeliness standards in FFS, such as phasing in the requirements over time or by service, collecting information on geographic variations in wait times, and either applying the standards to all FFS programs or allowing exception for States with minimal covered services delivered through FFS. Others cited concerns that they would want a future proposal to address, such as establishing protections for providers who do not have direct control over their scheduling. Commenters varied on whether they believed providers should have to perform any additional work to meet new standards, with one requesting that providers, not just States, be held accountable for outcomes based on these standards, while another commenter wanted to ensure these requirements would not add any burden on providers. One commenter suggested including provider surveys in addition to participant surveys.

Response: We appreciate the support expressed by a number of commenters for the concept of applying timeliness standards in fully FFS delivery systems as a further means to ensure beneficiary access to covered services. We are also grateful for the suggestions that will allow us to formulate future proposed rulemaking that considers various needs and concerns. We note that the request for comment was with respect to fully FFS States (that deliver no services through managed care), but we will consider for future rulemaking whether to expand on that limit, for example, applying standards to States that cover only a small number of services through managed care delivery, to apply them to FFS generally, or to maintain the focus on fully FFS States. We intend to use the experience of the managed care plans and the States implementing timeliness requirements to assess things like a phased-in approach, or whether such standards should be proposed for FFS delivery systems in non-fully FFS States.

Comment: We received a number of comments expressing general opposition to establishing timeliness standards for services delivered on a FFS basis, particularly in the context of implementing them simultaneously with the other access provisions in the proposed rule. These commenters expressed concern about the burden, both in time and cost, of establishing the necessary administrative infrastructure to meet timeliness requirements as well as the requirements proposed in the proposed rule. One commenter suggested CMS explore how these areas could be better monitored using existing data collections and processes. Another pointed out the differences in available resources between managed care and FFS, such as increased matching rates associated with managed care External Quality Review that does not exist with respect to FFS Medicaid, making FFS timeliness standards more cost prohibitive to implement. Another commenter pointed out that in FFS delivery systems, States would not know whether wait time issues identified through monitoring were specific to Medicaid or whether similar wait time issues were encountered by other patients with other payers.

Response: We understand the concerns about burden on States, and for that reason we limited the proposed rule and are only finalizing provisions that, generally, serve to replace the previous AMRP process. We see value in the oversight and positive program outcomes that could be achieved through proposing and implementing FFS timeliness standards in the future, and also understand there will be differences between managed care and FFS that create unique issues to address in any future proposal. For example, there are differences in how providers interact with plans in a managed care system versus how they interact with the State Medicaid agency in a FFS system. There are also differences in the idea of a ''network'' between these delivery models that may impact how we would assess network adequacy. We will explore how we can best support States with the administrative burden, and how we can establish standards that identify problems unique to providing services to Medicaid beneficiaries.

Comment: Many commenters expressed support for specific aspects of our request, such as for establishing wait time standards in a FFS delivery system or utilizing secret shopper surveys for oversight. These commenters generally pointed to the access improvements such standards can provide, as they would highlight where there are deficiencies in finding available providers. One commenter shared personal experience of longer wait times as a Medicaid beneficiary than those experienced by non-Medicaid enrollees. One commenter shared suggestions regarding which benefit categories needed more focus, both for oversight and in length of wait times, and this commenter along with a couple others encouraged CMS to align with the Health Insurance

Marketplace®.[187] Another commenter cautioned that provider shortages must be addressed as part of the overall access strategy.

Response: We appreciate hearing from commenters on the specifics of the timeliness standards request for comments, as we hope to use this feedback to inform and enhance a future set of proposals. We also fully intend to include lessons from the experience of the marketplace and Medicaid managed care in proposing these future standards for the FFS delivery system and will continue to engage with interested parties between now and when we undertake future rulemaking on this topic. We agree that provider shortages present a challenge to access and the efficacy of wait time standards, and we will examine how best to acknowledge that reality while holding States and providers to appropriate standards.

Comment: Several commenters opposed the specific standards listed in our request for comment. One encouraged CMS to achieve its access goals through a focus on payment adequacy rather than wait times. Similarly, another requested CMS allow States to provide verification and assurances of sufficient access through other, existing data collection mechanisms. Another stated wait time standards that do not account for differences in provider availability, as in whether there are sufficient providers in a geographic area to meet the standards based on the beneficiary population in that area, would not achieve the desired effect of increasing access. One commenter expressed that a secret survey process would be duplicative of existing directory review processes already undertaken by States and would also force States to switch vendors from an existing outside entity performing the role, and stated CMS should instead allow States to continue with current practices that achieve a similar purpose. Another questioned the data integrity of a secret survey approach to oversight, stating there are inherent challenges in collecting consistent information.

Response: We intend to make every effort to utilize existing processes and to mitigate duplication wherever possible when we propose FFS timeliness standards in the future. However, we are exploring proposing these standards because, in our view, appointment wait time maximums and secret shopper surveys may provide for unique and valuable oversight of access that we may wish to propose in the future. As stated previously, in this rule we prioritized a replacement for an existing rate-based process, but our evaluation and enhancement of means to ensure beneficiary access will be ongoing. We will utilize lessons learned from the implementation of timeliness standards under managed care to inform our future FFS proposals.

Comment: Some commenters were unclear as to whether CMS was proposing to implement the timeliness standards for fully FFS States as proposed in the Managed Care proposed rule. One commenter was concerned how and when CMS would communicate to States that these requirements had taken effect. Another pointed out specifically that CMS had included preamble language without including proposed regulatory text or burden estimates, which they noted would be significant. The commenter was concerned that the public had not been afforded a meaningful opportunity for notice and comment.

Response: We apologize for the confusion experienced by some as to whether this section of the rule was intended as a proposed policy. This discussion in the proposed rule was a request for comment, not a proposed policy. We intend to propose these timeliness standards under FFS in future rulemaking, affording States and other interested parties the ability to examine a complete proposal and provide comments that we would consider in a subsequent finalization decision. We are not finalizing any timeliness standards for FFS delivery systems in this final rule.

2. Documentation of Access to Care and Service Payment Rates (§ 447.203(b))

We proposed to rescind § 447.203(b) in its entirety and replace it with new requirements to ensure FFS Medicaid payment rate adequacy, including a new process to promote payment rate transparency. This new proposed process would require States to publish their FFS Medicaid payment rates in a clearly accessible, public location on the State's website, as described later in this section. Then, for certain services, States would be required to conduct a comparative payment rate analysis between the States' Medicaid payment rates and Medicare rates or provide a payment rate disclosure for certain HCBS that would permit CMS to develop and publish HCBS payment benchmark data.

a. Payment Rate Transparency § 447.203(b)(1)

In paragraph (b)(1), we proposed to require the State agency to publish all Medicaid FFS payment rates on a website developed and maintained by the single State agency that is accessible to the general public. We proposed that published Medicaid FFS payment rates would include fee schedule payment rates made to providers delivering Medicaid services to Medicaid beneficiaries through a FFS delivery system. We also proposed to require that the website be easily reached from a hyperlink on the State Medicaid agency's website.

Within this payment rate publication, we proposed that FFS Medicaid payment rates must be organized in such a way that a member of the public can readily determine the amount that Medicaid would pay for the service and, in the case of a bundled or similar payment methodology, identify each constituent service included within the rate and how much of the bundled payment is allocated to each constituent service under the State's methodology. We also proposed that, if the rates vary, the State must separately identify the Medicaid FFS payment rates by population (pediatric and adult), provider type, and geographical location, as applicable.

We noted that longstanding legal requirements to provide effective communication with individuals with disabilities and the obligation to take reasonable steps to provide meaningful access to individuals with limited English proficiency also apply to the State's website containing Medicaid FFS payment rate information. Under Title II of the Americans with Disabilities Act of 1990, section 504 of the Rehabilitation Act, section 1557 of the Affordable Care Act, and implementing regulations, qualified individuals with disabilities may not be excluded from participation in, or denied the benefits of any programs or activities of the covered entity, or otherwise be subjected to discrimination by any covered entity, on the basis of disability, and programs must be accessible to people with disabilities.[188] Individuals with disabilities are entitled to communication that is as effective as communication for people without disabilities, including through the provision of auxiliary aids and services.[189] Section 1557 of the Affordable Care Act requires recipients of Federal financial assistance, including State Medicaid programs, to take reasonable steps to provide

[187] Health Insurance Marketplace® is a registered service mark of the US Department of Health & Human Services.

[188] 29 U.S.C. 794; 42 U.S.C. 18116(a); 42 U.S.C. 12132; 28 CFR 35.130(a); 45 CFR 84.4 (a); 45 CFR 92.2(b).

[189] 28 CFR 35.160; 45 CFR 92.102; *see also* 45 CFR 84.52(d).

meaningful access to their health programs or activities for individuals with limited English proficiency, which may include the provision of interpreting services and translations when reasonable.[190]

We proposed that for States that pay varying Medicaid FFS payment rates by population (pediatric and adult), provider type, and geographical location, as applicable, those States would need to separately identify their Medicaid FFS payment rates in the payment rate transparency publication by each grouping or multiple groupings, when applicable to a State's program. In the event rates vary according to these factors, as later discussed in this final rule, our intent is that a member of the public be readily able to determine the payment amount that will be made, accounting for all relevant circumstances. For example, a State that varies their Medicaid FFS payment rates by population may pay for a service identified by code 99202 when provided to a child at a rate of $110.00 and when provided to an adult at a rate of $80.00. Because the Medicaid FFS payment rates vary based on population, both of these Medicaid FFS payment rates would need to be included separately as Medicaid FFS payment rates for 99202 in the State's payment rate transparency publication. As another example, a State that varies their Medicaid FFS payment rates by provider type may pay for 99202 when delivered by a physician at a rate of $50.00, and when delivered by a nurse practitioner or physician assistant at a rate of $45.00.

In the proposed rule, we acknowledged that we are aware that some State plans include language that non-physician practitioners (NPPs), such as a nurse practitioner or physician assistant, are paid a percentage of the State's fee schedule rate. Because the Medicaid FFS payment rates vary by provider type, both of the Medicaid FFS payment rates in both situations (fee schedule rates of $50.00 and $45.00) would need to be separately identified as Medicaid FFS payment rates for 99202 in the State's payment rate transparency publication, regardless of whether the State has individually specified each amount certain in its approved payment schedule or has State plan language specifying the nurse practitioner or physician assistant rate as a percentage of the physician rate. Additionally, for example, a State that varies their Medicaid FFS payment rates by geographical location may pay for 99202 delivered in a rural area at a rate of $70, in an urban or non-rural area as a rate of $60, and in a major metropolitan area as a rate of $50. We are also aware that States may vary their Medicaid FFS payment rates by geographical location by zip code, by metropolitan or micropolitan areas, or other geographical location breakdowns determined by the State. Because the Medicaid FFS payment rates vary based on geographical location, all Medicaid FFS payment rates based on geographical location would need to be included separately as Medicaid FFS payment rates for 99202 in the State's payment rate transparency publication.

For a State that varies its Medicaid FFS payment rates by any combination of these groupings, then the payment rate transparency publication would be required to reflect these multiple groupings. For example, the State would be required to separately identify the rate for a physician billing 99202 provided to a child in a rural area, the rate for a nurse practitioner billing 99202 provided to a child in a rural area, the rate for a physician billing 99202 provided to an adult in a rural area, the rate for a nurse practitioner billing 99202 provided to an adult in a rural area, the rate for a physician billing 99202 provided to a child in an urban area, the rate for a nurse practitioner billing 99202 provided to a child in an urban area, and so on. We proposed that this information would be required to be presented clearly so that a member of the public can readily determine the payment rate for a service that would be paid for each grouping or combination of groupings (population (pediatric and adult), provider type, and geographical location), as applicable. We acknowledged that States may also pay a single Statewide rate regardless of population (pediatric and adult), provider type, and geographical location, and as such would only need to list the single Statewide rate in their payment rate transparency publication.

We acknowledged that there may be additional burden associated with our proposal that the payment rate transparency publication include a payment rate breakdown by population (pediatric and adult), provider type, and geographical location, as applicable, when States' Medicaid FFS payment rates vary based on these groupings. Despite the additional burden, we noted our belief that the additional level of granularity in the payment rate transparency publication is important for ensuring compliance with section 1902(a)(30)(A) of the Act, given State Medicaid programs rely on multiple provider types to deliver similar services to Medicaid beneficiaries of all ages, across multiple Medicaid benefit categories, throughout each area of each State.

We further proposed that Medicaid FFS payment rates published under the proposed payment rate transparency requirement would only include fee schedule payment rates made to providers delivering Medicaid services to Medicaid beneficiaries through a FFS delivery system. To ensure maximum transparency in the case of a bundled fee schedule payment rate or rate determined by a similar payment methodology where a single payment rate is used to pay for multiple services, we proposed that the State must identify each constituent service included in the bundled fee schedule payment rate or rate determined by a similar payment methodology. We also proposed that the State must identify how much of the bundled fee schedule payment rate or rate determined by a similar payment methodology is allocated to each constituent service under the State's payment methodology. For example, if a State's fee schedule lists a bundled fee schedule rate that pays for day treatment under the rehabilitation benefit and the following services are included in the day treatment bundle: community based psychiatric rehabilitation and support services, individual therapy, and group therapy, then the State would need to identify community based psychiatric rehabilitation and support services, individual therapy, and group therapy separately and each portion of the bundled fee schedule payment rate for day treatment that is allocated to community based psychiatric rehabilitation and support services, individual therapy, and group therapy. We proposed to require States identify the portion of the bundled fee that is allocable to each constituent service included in the bundled fee schedule payment rate, which would add an additional level of granularity to the payment rate transparency publication to enable a member of the public to readily be able to determine the payment amount that would be made for a service, accounting for all relevant circumstances, including the payment rates for each constituent service within a bundle and as a standalone service. We also proposed to require that the website be easily reached from a hyperlink to ensure transparency of payment rate information is available to beneficiaries, providers, CMS, and other interested parties.

In the proposed rule, we proposed the initial publication of Medicaid FFS

[190] 45 CFR 92.101; *see also https://www.hhs.gov/civil-rights/for-providers/laws-regulations-guidance/guidance-federal-financial-assistance-title-vi/index.html.*

payment rates would occur no later than January 1, 2026, and include approved Medicaid FFS payment rates in effect as of that date, January 1, 2026. We proposed this timeframe to provide States with at least 2 years from the possible effective date of the final rule, if this proposal were finalized, to comply with the payment rate transparency requirement. We explained that the proposed timeframe would initially set a consistent baseline for all States to first publish their payment rate transparency information and then set a clear schedule for States to update their payment rates based on the cadence of the individual States' payment rate changes.

We noted that the same initial publication due date for all States to publish their payment rates would promote comparability between States' payment rate transparency publications. In proposing an initial due date applicable to all States, we reasoned that, once States would begin making updates to their payment rate transparency publications, there would be a clear distinction between States that have recently updated their payment rates and States that have long maintained the same payment rates. For example, say two States initially publish their payment rates for E/M CPT code 99202 (office or outpatient visit for a new patient) at $50. One State annually increases its payment rate by 5 percent over the next 2 years, and would update its payment rate transparency publication accordingly in 2027 with a payment rate of $52.50, then in 2028 with a payment rate of $55.13, while the other State's payment rate for the same service remains at $50 in 2027 and 2028. The transparency of a State's recent payment rates including the date the payment rates were last updated on the State Medicaid agency's website, as discussed later, as well as the ability to compare payment rates between States on accessible and easily reachable websites, highlights how the proposed payment rate transparency would help to ensure that Medicaid payment rate information is available to beneficiaries, providers, CMS, and other interested parties for the purposes of assessing access to care issues to better ensure compliance with section 1902(a)(30)(A) of the Act.

We also proposed that the initial publication include approved Medicaid FFS payment rates in effect as of January 1, 2026. We proposed this language to narrow the scope of the publication to CMS-approved payment rates and methodologies, thereby excluding any rate changes for which a SPA or similar amendment request is pending CMS review or approval. SPAs are submitted throughout the year, can include retroactive effective dates, and are subject to a CMS review period that varies in duration.[191] [192]

As discussed later in this final rule regarding paragraph (b)(2) and (b)(3), we encouraged States to use the proposed payment rate transparency publication as a source of Medicaid payment rate data for compliance with the paragraph (b)(3)(i)(B) proposed comparative payment rate analysis and paragraph (b)(3)(ii)(B) proposed payment rate disclosure requirements. However, we noted that the comparative payment rate analysis and payment rate disclosure requirements would look to rates in effect one year before the publication of the required analysis or disclosure. We include a more in-depth discussion of the timeframes for publication of the comparative payment rate analysis and payment rate disclosure in paragraph (b)(4) later in this final rule, where we note that the 1-year shift in timeframe is necessitated by the timing of when Medicare publishes their payment rates in November and the rates taking effect on January 1, leaving insufficient time for CMS to publish the code list for States to use for the comparative payment rate analysis and for States develop and publish their comparative payment rate analysis by January 1. We noted that the ongoing payment transparency publication requirements would allow the public to view readily available, current Medicaid payment rates at all times, even if slightly older Medicaid payment rate information must be used for comparative payment rate analyses due to the cadence of Medicare payment rate changes as well as the payment rate disclosure. We are cognizant that the payment rate disclosure does not depend on the availability of Medicare payment rates; however, we proposed to provide States with the same amount of time to comply with both the proposed comparative payment rate analysis and payment rate disclosure requirements.

We stated that, if this proposal were finalized at a time that would not allow for States to have a period of at least 2 years between the effective date of the final rule and the proposed January 1, 2026, due date for the initial publication of Medicaid FFS payment rates, then we proposed an alternative date of July 1, 2026, for the initial publication of Medicaid FFS payment rates and for the initial publication to include approved Medicaid FFS payment rates as of that date, July 1, 2026. This shift would allow more than 2 years from the effective date of this final rule for States to comply with the payment rate transparency requirements.

We proposed to require the that the single State agency include the date the payment rates were last updated on the State Medicaid agency's website. We also proposed to require that the single State agency ensure that Medicaid FFS payment rates are kept current where any necessary updates to the State fee schedules made no later than 1 month following the date of CMS approval of the SPA, section 1915(c) HCBS waiver, or similar amendment revising the provider payment rate or methodology. Finally, in paragraph (b)(1), we proposed that, in the event of a payment rate change that occurs in accordance with a previously approved rate methodology, the State would be required to update its payment rate transparency publication no later than 1 month after the effective date of the most recent update to the payment rate. This provision is intended to capture Medicaid FFS payment rate changes that occur because of previously approved SPAs containing payment rate methodologies. For example, if a State sets its Medicaid payment rates for Durable Medical Equipment, Prosthetics, Orthotics and Supplies (DMEPOS) at a percentage of the most recent Medicare fee schedule rate, then the State's payment rate would change when Medicare adopts a new fee schedule rate through the quarterly publications of the Medicare DMEPOS fee schedule, unless otherwise specified in the approved State plan methodology that the State implements a specific quarterly publication, for example, the most recent April Medicare DMEPOS fee schedule. Therefore, the State's Medicaid FFS payment rate automatically updates when Medicare publishes a new fee schedule, without the submission of a SPA because the State's methodology pays a percentage of the most recent State plan-specified Medicare fee schedule rate. In this example, the State would need to

[191] In accordance with 42 CFR 430.20, an approved SPA can be effective no earlier than the first day of the calendar quarter in which an approvable amendment is submitted. For example, a SPA submitted on September 30th can be retroactively effective to July 1st.

[192] In accordance with 42 CFR 430.16, a SPA will be considered approved unless CMS, within 90 days after submission, requests additional information or disapproves the SPA. When additional information is requested by CMS and the State has respond to the request, CMS will then have another 90 days to either approve, disapprove, and request the State withdraw the SPA or the State's response to the request for additional information. This review period includes two 90-day review periods plus additional time when CMS has requested additional information which can result is a wide variety of approval timeframes.

update its Medicaid FFS payment rates in the payment rate transparency publication no later than 1 month after the effective date of the most recent update to the Medicare fee schedule payment rate made applicable under the approved State plan payment methodology.

While there is no current Federal requirement for States to consistently publish their rates in a publicly accessible manner, we noted our awareness that most States already publish at least some of their payment rates through FFS rate schedules on State agency websites. Currently, rate information may not be easily obtained from each State's website in its current publication form, making it difficult to understand the amounts that States pay providers for items and services furnished to Medicaid beneficiaries and to compare Medicaid payment rates to other health care payer rates or across States. However, through this proposal, we sought to ensure all States do so in a format that is publicly accessible and where all Medicaid FFS payment rates can be easily located and understood. The new transparency requirements under this final rule help to ensure that interested parties have access to updated payment rate schedules and can conduct analyses that would provide insights into how State Medicaid payment rates compare to, for example, Medicare payment rates and other States' Medicaid payment rates. The policy intends to help ensure that payments are transparent and clearly understandable to beneficiaries, providers, CMS, and other interested parties. We solicited comments on the proposed requirement for States to publish their Medicaid FFS payment rates for all services paid on a fee schedule, the proposed structure for Medicaid FFS payment rate transparency publication on the State's website, and the timing of the publication of and updates to the State's Medicaid FFS payment rates for the proposed payment rate transparency requirements in § 447.203(b)(1).

We received public comments on these provisions. The following is a summary of the comments we received and our responses.

Comment: Commenters overwhelmingly supported the proposed payment rate transparency provision at § 447.203(b)(1) in its entirety. A couple of commenters specifically expressed support for ensuring the State's website where the payment rate transparency is published is fully accessible and provides meaningful access for individuals with limited English proficiency. Additionally, a couple of commenters stated that their State already publishes their fee schedules as proposed by the payment rate transparency requirements.

However, a couple of commenters expressed opposition to the proposed payment rate transparency provision in its entirety. Commenters in opposition stated the proposed payment rate transparency requirements would be administratively burdensome for States and that the payment rate transparency publication would not result in a meaningful access analysis. One commenter questioned CMS' authority to require States to publish their payment rates because section 1902(a)(30) of the Act does not explicitly grant CMS this authority.

Response: We thank the commenters for their support of the proposed payment rate transparency provision at § 447.203(b)(1). We are finalizing the payment rate transparency provisions by adding and deleting regulatory language for clarification, making minor revisions to the organizational structure, updating the required timeframe for compliance and for updating payment rates after SPA or other payment authority approval, and incorporating a technical change to account for States submitting SPAs with prospective effective dates. We list and describe the specific revisions we made to the regulatory language for the payment rate transparency provision at § 447.203(b)(1) at the end of this section of responses to comments. The policies in this final rule allow flexibility that we believe will allow some States to use existing fee schedule publications for compliance, and we expect additional States will only need minor revisions. We encourage States that already publish their fee schedules to review the final regulatory language and reach out to CMS with any questions regarding compliance.

We disagree with the commenters regarding administrative burden of the payment rate transparency publication. As documented in section III. of this final rule, the FFS provisions, including the payment rate transparency, comparative payment rate analysis, and payment rate disclosure requirements (§ 447.203(b)(1) through (5)), interested parties' advisory group requirements (§ 447.203(b)(6)), and State analysis procedures for payment rate reductions or payment restructuring (§ 447.203(c)), finalized in this rule are expected to result in a net burden reduction on States compared to the previous AMRP requirements. Additionally, as addressed in another comment response generally discussing commenters' concerns about State burden, we have described numerous flexibilities States will have for compliance with this final rule. Specifically for the payment rate transparency publication, and as discussed in a later response to comments, States have flexibility to (1) organize and format their publication, so that they can use existing fee schedule publications for compliance (assuming all requirements in § 447.203(b)(1) are met); (2) utilize contractors or other third party websites to publish the payment rate transparency publication on (however, we remind States that they are still requiring to publish the hyperlink to the website where the publication is located on the State Medicaid agency's website as required in § 447.203(b)(1)(ii) of this final rule); and (3) for the initial publication, if necessary historical information about bundled payment rates is unavailable to the State, then the State does not need to include the bundled payment rate breakdown as required in § 447.203(b)(1)(iv) of this final rule (however, we remind States that upon approval of a SPA that revised the bundled payment rate, the State will be required to update the publication to comply with § 447.203(b)(1)(iv)). Additionally, we are providing examples of payment rates that are not subject to the payment rate transparency publication and an illustrative example of a compliant payment rate transparency (including to meet accessibility standards) through subregulatory guidance issued prior to the effective date of this final rule. We expect these flexibilities and clarifications to minimize the State administrative burden commenters expressed concern about, which potentially stemmed from an imprecise understanding of the Medicaid FFS fee schedule payment rates that are required to be published in the payment rate transparency publication. Finally, we would expect that States already have the data for the payment rate transparency publication readily available through existing fee schedules, SPAs, or other internal documentation, so the work to compile that data into a format that complies with this final rule should require minimal effort.

To clarify, the payment rate transparency publication is not an analysis requirement, but a transparency requirement for States to publish their Medicaid FFS fee schedule payment rates, as discussed in detail in a later response to comments in this section. However, an analysis component is being finalized in § 447.203(b)(2) and (3) called the comparative payment rate

analysis, which we believe will result in a meaningful access analysis because it requires States to compare certain of their Medicaid FFS payment rates to the Medicare non-facility payment rate as established in the annual Medicare PFS final rule for a calendar year. This access analysis will help States and CMS to assess compliance with section 1902(a)(30)(A) of the Act where Medicare payment rates serve as a benchmark for comparing Medicaid payment rates to another of the nation's large public health coverage programs. As described in the proposed rule and in greater detail later in this final rule, Medicare and Medicaid programs cover and pay for services provided to beneficiaries residing in every State and territory of the United States, Medicare payment rates are publicly available, and broad provider acceptance of Medicare makes Medicare non-facility payment rates as established on the Medicare PFS for a calendar year an available and reliable comparison point for States to use in the comparative payment rate analysis.[193]

We disagree that we do not have the authority to require States to publish their payment rates. As discussed in the proposed rule, payment rate transparency is a critical component of assessing compliance with section 1902(a)(30)(A) of the Act, which requires that State plans assure that payments are consistent with efficiency, economy, and quality of care and are sufficient to enlist enough providers so that care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area.[194] Transparency, particularly the requirement that States must publicly publish their payment rates, helps to ensure that interested parties have basic information available to them to understand Medicaid payment levels and the associated effects of payment rates on access to care so that they may raise concerns to State Medicaid agencies via the various forms of public process available to interested parties. As noted in the proposed rule, most States already published at least some of their payments through FFS rate schedule on State agency websites.[195] Our efforts finalized in this rule will help ensure all States publish their payment rates consistently and accessibly so interested parties have fundamental information about payment rates and can utilize existing public processes to raise concerns about access. Additionally, the Supreme Court's *Armstrong* decision placed added importance on CMS' determinations, as the responsible Federal agency, regarding the sufficiency of Medicaid payment rates. The payment rate transparency requirements included in this final rule reflect that statutory responsibility to ensure compliance with section 1902(a)(30)(A) of the Act. We also note that the previous AMRP process that was in effect prior to this final rule established a transparent data-driven process to measure access to care in States, including oversight of provider payment rates, actual or estimated levels of provider payment available from other payers, and the percentage comparison of Medicaid payment rates to other public and private health insurer payment rates. This final rule merely streamlines the approach under the same statutory authority and shared responsibility that applied for the previous AMRP process. We remind States of longstanding, general requirement for the State to maintain statistical, fiscal, and other records necessary for reporting and accountability under § 431.17(b)(2).

Comment: Some commenters expressed concerns about the burden associated with the payment rate transparency publication. They specifically cited concern about meeting strict State-level website accessibility requirements, extensive changes that could be needed to existing claims payment systems (that is, for a State that does not currently include beneficiary copayment information on their existing fee schedules, the State may need to make change requests of their contractor to modify their claims payment system to produce the Medicaid payment information required in the payment rate transparency publication to include the total payment amount a provider would receive inclusive of beneficiary cost sharing), conducting research on when payment rates were last updated, and monthly monitoring of Medicare rates to ensure State fee schedule rates set at a percentage of Medicare are updated timely.

Response: As described in the proposed rule, longstanding legal requirements to provide effective communication with individuals with disabilities and the obligation to take reasonable steps to provide meaningful access to individuals with limited English proficiency also apply to the websites containing Medicaid FFS payment rate information. These requirements apply to all State agency, contractor, or other third-party websites and any burden associated with meeting those Federal obligations is not created by policies finalized in this rule. With respect to any State-level accessibility requirements that might exceed Federal requirements, we refer the commenter to the State Medicaid agency or other agency responsible for compliance with State accessibility requirements for guidance or technical assistance concerning State-imposed accessibility requirements.

Regarding commenters' concerns that States would need to change existing claims payment systems (that is, the State may need to make change requests of their contractor to modify their claims payment system to produce the Medicaid payment information required for the payment rate transparency publication that includes beneficiary cost sharing in fee schedule amounts), we want to clarify State claiming and payment systems, and the output of these systems, generally are not subject to the payment rate transparency publication requirements as the provision only applies to Medicaid FFS fee schedule payment rates. We do not anticipate it would be unduly burdensome for a State to maintain its Medicaid FFS fee schedules in an appropriate format outside of its claiming and payment systems. States are not required to publish claims data or data about actual payments made to providers under the payment rate transparency publication provision.

Commenters were concerned about whether beneficiary cost sharing information should be included in the payment rate transparency publication. To clarify, the payment rates published under § 447.203(b)(1)(i) must be inclusive of the payment amount from the Medicaid agency plus any applicable coinsurance and deductibles to the extent that a beneficiary is expected to be liable for those payments. By requiring States to publish the payment amount the Medicaid agency would pay and any beneficiary cost sharing as a single payment amount, we focus on the total Medicaid payment amount a provider would expect to receive for furnishing a given service to a Medicaid beneficiary and which is therefore most relevant to a provider's decision to accept the Medicaid payment rate, thereby furthering our section 1902(a)(30)(A) access goals to ensure payment rates are sufficient to enlist enough providers so that care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area. Furthermore, this representation of payment rates is consistent with the

[193] 88 FR 27960 at 28011.

[194] 88 FR 27960 at 27967.

[195] 88 FR 27960 at 28000.

comparative payment rate analysis,[196] which minimizes burden on States by requiring the Medicaid FFS fee schedule payment rate be displayed in the same way for both publications. Additionally, we recognize that beneficiary cost sharing amounts can vary depending on the State Medicaid program and the status of the Medicaid enrollee. Therefore, we expect States with cost-sharing requirements could experience additional burden in complying with the payment rate transparency publication, if States were required to remove variable cost sharing amount from the Medicaid FFS fee schedule payment rate for each service subject to the publication.

Regarding commenters' concerns about conducting research on when payment rates were last updated, we want to clarify that the requirement to include the date the rates were last updated refers to a date for the website publication. In other words, the date should provide assurance that the rates on the website are current as of the specified date. We do not expect, nor did we propose, States to examine historical records to find the dates every rate was last updated. However, if a State wishes to include that information for all or a subset of published rates, it can.

Regarding commenters' concerns about monthly monitoring of Medicare rates to ensure the payment rate transparency publication is up to date, firstly, to clarify, only States that set their Medicaid payment rates at a percentage of a Medicare payment rate would be affected by this consideration. For those States that set their Medicaid payments rates as a percentage of a Medicare payment rate, we expect the State to already be monitoring changes in Medicare rates in accordance with their approved payment methodology and §§ 430.10 and 430.20 and part 447, subpart B, which require States to pay the approved State plan payment rates in their State plan effective on or after the approved effective date of the State plan provision. Therefore, if a State's approved State plan pays a rate based on the most current Medicare payment rate for a particular service, then payment of any rate outside of the approved State plan methodology would result in a State plan compliance issue. We expect that States with such payment methodologies routinely are monitoring Medicare payment rates to ensure that their Medicaid payment rates are updated according to the approved methodology. Medicare fee schedule updates are well documented and accessible to States on cms.gov, even in the event of a change to a Medicare payment rate outside the usual cadence of Medicare updates for that rate (an off-cycle update) and keeping up with Medicare fee schedule updates is critical for ensuring a State's payment rate transparency publication is accurate and updated timely.[197]

Comment: A few commenters requested clarification on the format of the payment rate transparency publication, particularly if Medicaid FFS payment rates should be organized by CPT code.

Response: In this final rule, in regard to the payment rate transparency provision, we are not requiring States to publish their payment rates by CPT/HCPCS code, which is required in the comparative payment rate analysis discussed later in this section. However, we encourage States to consider organizing their publication by CPT/HCPCS code, due to the common use of CPT/HCPCS for billing for medical services across the country, including in State Medicaid programs. The goal of the payment rate transparency publication is to ensure all States publish their Medicaid FFS fee schedule payment rates in a format that is publicly accessible and where all these rates can be easily located and understood. States can determine what organizational and formatting structure is most suitable for organizing rates in a manner that will be easily understood by providers and beneficiaries.

Comment: A couple of commenters requested clarification on the requirement that States separately identify Medicaid FFS fee schedule payment rates by population, specifically inquiring if ''population'' referred to beneficiary demographics or waiver/program population.

Response: As indicated in the regulation text, population refers to beneficiary demographics, specifically adult and pediatric populations. Under this final rule, States will be required to publish their Medicaid FFS fee schedule payment rates separately identified by rates paid for the adult population and the pediatric population, if the rates differ in the State. As stated in the proposed rule, we acknowledge that a State may pay a single Statewide rate regardless of population, provider type, or geographical location, and such a State would only need to list the single Statewide rate in its payment rate transparency publication. We also acknowledge that States define pediatric differently (such as, 18 years old or younger, 19 years old or younger, and 21 years old or younger) and we encourage States to disclose the age range the State's Medicaid program uses in the payment rate transparency publication for transparency purposes.

Comment: Some commenters requested clarification regarding which payments are subject to the payment rate transparency requirements outlined in paragraph (b)(1). Multiple commenters questioned if the following payment methodologies would be subject to the payment rate transparency requirements under paragraph (b)(1): manually priced items (for example, physician administered drugs), provider-specific rates (for example, PPS rates typically paid to FQHCs or all-inclusive per-visit rates typically paid to clinics (we assume commenters meant clinics as defined in § 440.90)), per diem rates, cost and cost-based payment methodologies (including interim payments) typically paid to facility-based providers, and negotiated rates. Additionally, many commenters questioned if disproportionate share hospital (DSH) payments, FFS supplemental payments, or managed care State directed payments (SDPs) would be included in the payment rate transparency publication. A couple of commenters stated that only requiring States to publish base payment rates would not provide a member of the public with the ability to readily determine the amount Medicaid would pay for a service because excluding DSH payments and supplemental payments is an inaccurate, incomplete, and misleading representation of a Medicaid provider's actual, overall payments from the Medicaid program.

Response: In § 447.203(b)(1) of the proposed rule, we proposed that ''[t]h State agency is required to publish all Medicaid fee-for-service payment rates . . . . Published Medicaid [FFS] payment rates include fee schedule payment rates made to providers delivering Medicaid services to Medicaid beneficiaries through a [FFS] delivery system.'' We acknowledge that this language was not clear that we intended to require the publication requirement to include only Medicaid FFS fee schedule payment rates. Accordingly, in this final rule, we have made some revisions to the proposed regulatory language in § 447.203(b)(1) to change the organizational structure of (b)(1) by adding romanettes and clarify that only Medicaid FFS fee schedule payment rates are required to be published in the payment rate transparency publication. Throughout (b)(1), references to ''fee schedule payment'' were replaced with

[196] 88 FR 27960 at 28013.

[197] *https://www.cms.gov/medicare/payment/fee-schedules.*

''Medicaid fee-for-service fee schedule payment rates'' for clarity and consistency. Therefore, in (b)(1) we state that, the State agency is required to publish all Medicaid FFS fee schedule payment rates. Further, in § 447.203(b)(1)(i), we specify that, ''for purposes of paragraph (b)(1), the payment rates that the State agency is required to publish are Medicaid fee-for-service fee schedule payment rates made to providers delivering Medicaid services to Medicaid beneficiaries through a fee-for-service delivery system.''

We would like to clarify which Medicaid FFS fee schedule payment rates are subject to the payment rate transparency provisions in § 447.203(b). Medicaid FFS fee schedule payment rates are payment amounts made to a provider, known in advance of a provider delivering a service to a beneficiary by reference to a fee schedule. A fee schedule is a list, table, or similar presentation of covered services and associated payment amounts that are generally determined at the State's discretion. We also consider a State to use a fee schedule when the State has not yet organized its payment amounts into such a straightforward list, table, or similar presentation, but under the State's approved payment methodology, the State determines payment rates based on the application of a mathematical formula to another fee schedule or other reference rate stated as an amount certain. In other words, a fee schedule that utilizes a formula, but has not yet been organized into a list, table, or similar presentation of covered services and associated payment amounts, is included in the scope of fee schedules subject to the payment rate transparency provisions. For example, a Medicaid payment methodology that provides for payment at 80 percent of the corresponding Medicare PFS rate would constitute a Medicaid fee schedule payment methodology because it applies a formula to a fee schedule to produce a fee schedule payment rate that is known in advance of a provider delivering the service. This formula reflects that the State's fee schedule payment methodology starts with the Medicare PFS fee schedule, then reduces the fee schedule amount to 80 percent of the Medicare PFS amount to arrive at the Medicaid fee schedule payment rate. States that utilize the previously described formula-based methodology that may not currently publish these payment rates on a fee schedule will be required to publish the actual payment amounts as determined by their formula in the payment rate transparency publication under this final rule. This final rule focuses on ensuring transparency of Medicaid FFS fee schedule payment rates so that they are ''. . . organized in such a way that a member of the public can readily determine the amount that Medicaid would pay for the service,'' as stated in the proposed regulatory language in § 447.203(b)(1), which we are finalizing in § 447.203(b)(1)(iii) of this final rule with a slight modification to replace ''the service'' with ''a given service.'' Merely publishing the mathematical formula that a member of the public would need to use to calculate each payment rate the State has set for a particular service would not meet this requirement of this final rule. To summarize, fee schedule payment methodologies that utilize a formula applied to another fee schedule are included in the scope of fee schedules, and the payment rate transparency publication must reflect the actual fee schedule payment rate amounts.

Certain bundled payment rates (as discussed later in this comment response) and PPS rates for inpatient hospital, outpatient hospital, and nursing facility services are considered fee schedules payment rates subject to the payment rate transparency publication because these payment amounts are also known in advance of a provider delivering a service to a beneficiary and are stated (or can readily be stated) as a list, table, or similar presentation.

We recognize that PPS rates are utilized in different contexts in Medicaid to pay for various services (including for services of FQHCs, RHCs, inpatient hospitals, outpatient hospitals, inpatient psychiatric facilities, inpatient rehabilitation facilities, long-term care hospitals, and nursing facilities) and can be calculated differently, depending on the service. PPS rates in Medicaid used to pay for services provided by inpatient hospitals, outpatient hospitals, inpatient psychiatric facilities, inpatient rehabilitation facilities, long-term care hospitals, and nursing facilities would be included. In the context of payment rates to hospitals and nursing facilities, the term ''encounter rate'' or ''per diem rate'' can also be used to describe the PPS rate received by these providers. This term generally describes a daily payment rate that is paid to a hospital or nursing facility during a patient's admission to a hospital or nursing facility. In this situation, the PPS payment methodology typically makes payment based on a predetermined, fixed amount. States often use or model their payment methodologies after Medicare's prospective payment systems to pay for outpatient hospital, inpatient hospital, and nursing facility services. In these situations, under Medicare's prospective payment systems, Medicare typically pays providers for a particular service an amount derived based on the services expected to be received during a visit or course of treatment (for more complex conditions). For example, under the Medicare IPPS, payment is made based on the Diagnosis Related Group (DRG) to which the patient discharge is assigned. States also often use other grouping systems, such as Medicare's PDPM for nursing facilities, Ambulatory Payment Classifications under Medicare's hospital outpatient PPS for hospital outpatient services items, or Medicare's End Stage Renal Disease PPS for facilities or hospital-based providers that furnish dialysis services and supplies. These PPS rates for inpatient hospital, outpatient hospital, and nursing facility services are paid to most hospitals and nursing facilities and are typically known in advance of a health care provider delivering a service to a beneficiary. Therefore, these types of PPS rates would be subject to the payment rate transparency publication in this final rule.

In contrast, FQHCs and RHCs are paid PPS rates that are developed under a methodology that is statutorily mandated under section 1902(bb) of the Act, which generally requires that FQHCs and RHCs receive a per visit, or encounter, rate that is provider-specific and must be based on a health center's unique cost and visit data.[198] This requirement creates a payment rate floor where FQHC and RHCs cannot be paid less than the PPS rate developed under this statutorily mandated methodology. Because this statutory payment floor is set by Congress, FQHC and RHC payment rates are uniquely situated in a manner that does not exist for other Medicaid payment rates under State discretion.[199] Although States must comply with section 1902(a)(30)(A) of the Act, this statutory provision does

[198] In the context of payment rates to FQHCs and RHCs, the terms ''encounter rate,'' ''per visit rate,'' and ''provider-specific rate'' can also be used to describe the PPS payment rate.

[199] We acknowledge that Medicaid payment rates for hospice services also have a statutorily mandated payment floor: the Medicaid hospice payment rates are calculated based on the annual hospice rates established under Medicare. These rates are authorized by section 1814(i)(1)(C)(ii) of the Act, which also provides for an annual increase in payment rates for hospice care services. However, we do not believe these rates would be burdensome on States to include because they are paid to all Medicaid participating hospice providers and are therefore not carving them out of this requirement.

not set a specific payment rate floor. Therefore, because of the unique provider-specific payment floor mandated by Congress for FQHCs and RHCs, we believe access concerns related to payment rates for FQHCs and RHCs are attenuated and as such, we are not including FQHC and RHC PPS rates in the payment rate transparency publication requirement. Furthermore, because the FQHC and RHC PPS rates are provider-specific based on an individual provider's costs and scope of service and required to be paid by States as a floor set by Congress, we generally do not believe that publication of the individual providers' payment rates as part of the payment rate transparency provision finalized in this rule would not result in actionable information for CMS to consider in ensuring compliance with section 1902(a)(30)(A) of the Act as intended through this final rule at this time.

In addition, if we were to require States to also publish FQHC and RHC PPS rates, we would expect a significant increase in burden on States in meeting this requirement. FQHC and RHC PPS rates are unique to each FQHC and RHC in a State (rather than a single fee schedule rate that Medicaid would pay for a given service to any provider in a State) and, therefore, publicizing the FQHC and RHC rates would represent a sharp increase in States' efforts for rates that are less concerning to CMS due to the statutory payment floor in section 1902(bb) of the Act. We do not believe the increase in burden is justifiable given our aim to balance Federal and State administrative burden with our shared obligation to ensure compliance with section 1902(a)(30)(A) of the Act with this final rule. Finally, and as discussed in detail in an earlier response to comments in this section, like all State plan services for which the State proposes a rate reduction or restructuring in circumstances where the changes could result in reduced access, FQHC and RHC services are subject to the access analyses in § 447.203(c) for proposed rate reductions and restructuring.

Certain FFS VBP payment methodologies are also fee schedule payment methodologies, even if the exact dollar amount that a particular provider will receive for a given service is not known in advance because of the need to adjust for metric-based performance. In such a case, a State might have an approved FFS VBP payment methodology in the State plan that includes a 2 percent withhold of the fee schedule payment amount and the potential for an additional 3 percent bonus to the provider based on the provider's performance for the year on certain quality measures. Assuming the State's payment methodology starts with a base payment of 80 percent of the Medicare PFS payment amount, the provider's minimum payment for the service would be .98 * (PFS * .80), and the maximum payment (achieved through a retrospective true-up payment based on final quality performance for the year) would be 1.03 * (PFS * .80). The provider's minimum and maximum possible payment amounts are known in advance (2 percent less than the Medicaid fee schedule amount, and 3 percent more, respectively) and are based on the application of a formula to a fee schedule. We also consider this type of FFS VBP arrangement to constitute a fee schedule payment methodology, because although the State does not know in advance the final payment amount a given provider will receive for a particular service (since the provider's quality performance is not known in advance), the minimum payment amount is calculable in advance based on the application of a mathematical formula to a fee schedule amount. We expect the State to use the minimum payment amount for purposes of the requirements of § 447.203(b), because this is the amount that a provider is assured to receive for furnishing the service. At State option, the State could also include information on the maximum payment amount the provider might receive under the FFS VBP payment methodology.

We would also like to clarify what payments are not subject to the payment rate transparency publication provision. Payment rates that are not subject to the transparency provisions include those where the minimum fee schedule payment is not known in advance of a provider delivering a service to a beneficiary because certain variables required for the payment calculation are unknown until after the provider has delivered the service. For example, cost-based and reconciled cost payment methodologies (including those that involve interim payments) are not subject to the payment rate transparency provisions because actual cost is unknown until the end of the provider's reporting period. As another example, FFS supplemental payment methodologies are not subject to the payment rate transparency publication provision because these methodologies often utilize variables, such as claims volume or number of qualifying providers, for dividing up a pre-determined payment pool, and actual supplemental payment amounts are unknown until the end of the provider's (or providers') reporting period.

While a relatively simple FFS VBP payment methodology (such as the one discussed earlier in this response, with a bonus and withhold percentage added to or subtracted from a fee schedule rate based on provider performance) is considered to result in a fee schedule payment rate subject to the payment rate publication requirement, we acknowledge that some States already utilize more complex FFS VBP payment methodologies (including episodes of care [200] and integrated care models [201]) that utilize quality and cost measures to determine the provider's unique payment amount. Providers who participate in one of these complex VBP payment arrangements generally report quality and cost data to the State at the end of the provider's reporting period and then the State uses that data to determine the provider's payment amount after the provider has furnished services. Excluding complex VBP payment methodologies from the payment rate transparency publication balances burden on States to publish the required information with the ability of interested parties to understand key Medicaid payment levels so that they may raise concerns to State Medicaid agencies. If we were to require States to publish payment rates determined by complex FFS VBP payment methodologies, it would be burdensome on States, as these payment rates are

[200] We consider episodes of care to be a complex VBP because the payment methodology determines the total payment by comparing the provider's cost of care for an episode to the State determined thresholds for how much the State expects a provider to spend on an episode. The provider's cost of care is an unknown variable that can be higher, the same, or lower than the State's threshold and will vary from provider to provider and episode to episode. Therefore, the unknown amount of a provider's cost of care for an episode relative to the State's threshold affects the actual payment the provider will receive for delivering a service, creating a situation where the State is unable to reasonably know a provider's payment in advance.

[201] We consider integrated care models to be a complex VBP because the payment methodologies used in these models, for example, shared savings methodologies, determine the total payment by comparing the provider's cost of care to the State determined total cost of care benchmark for how much the State expects a provider to spend. The provider's cost of care is an unknown variable that can be higher, the same, or lower than the State's threshold and will vary from provider to provider. Additionally, States can apply risk and gain-sharing arrangements that decreases or increases provider's payment rate based on their performance in meeting specific quality goals. Therefore, the unknown amount of a provider's cost of care relative to the State's total cost of care benchmark and additional decreases or increases to payment rates based on performance meeting quality goals affects the actual payment the provider will receive for delivering a service, creating a situation where the State is unable to reasonably know a provider's payment in advance.

unique to the provider and are determined using variables (the provider's quality performance and cost of furnishing services) that are unknown until after a provider's reporting period has ended. As these measures are generally unknown until after the provider's reporting period has ended, the State does not know a provider's payment in advance. Therefore, complex VBP payment methodologies as previously described are not fee schedule payment methodologies within the meaning of this final rule that are subject to the payment rate transparency provision.

We also recognize that an advanced payment methodology, as described in SMDL 20–004, could utilize fee schedule payments within the meaning of this final rule.[202] For example, a State could calculate an advanced payment of $10,000 for a provider that is expected to furnish 1,000 services and each service is paid at a fee schedule payment rate of $10. The advanced payment amount was originally determined by a fee schedule payment rate, which is known in advance of a provider delivering a service to a beneficiary, and therefore these rates would appear to be covered by this requirement. However, there are also features of certain advanced payment methodologies that could place them outside the scope of this requirement. For example, an advanced payment methodology that permits States to include risk adjustments and quality performance adjustments to the advanced payment amount, and/or requires the State to perform a reconciliation to the actual number of claims, could mean that the Medicaid payment amount that the provider could expect to receive could not be known in advance. At the time of publication of this final rule, there are no approved SPAs that utilize an advanced payment methodology as discussed in SMDL 20–004, so we are unable to state definitively whether any advanced payment methodology that may be used in FFS Medicaid pursuant to a future SPA would be subject to the payment rate transparency publication requirement. Without implementation experience of advanced payment methodologies, we will review future advanced payment methodologies on a case-by-case basis to determine if the methodology uses a fee schedule payment methodology within the meaning of this final rule. We encourage States that propose advanced payment methodology after finalization of this rule to reach out to CMS for technical assistance on determining whether advanced payment amounts are subject to the payment rate transparency publication requirements.

We interpret the commenter's reference to ''manually priced items'' to mean a provider payment rate that the State determines after a service or item has been delivered to a beneficiary and the provider has billed for it. For example, certain durable medical equipment items that are infrequently furnished to beneficiaries may be paid at the manufacturer's suggested retail price minus a percentage. This is described in the approved State plan, and when such an item is furnished to a beneficiary, the State must manually adjust the amount paid for the claim to equal the manufacturer's suggested retail price minus the percentage listed in the State plan, rather than pay a particular Medicaid FFS fee schedule payment rate. Because these services and items are infrequently furnished and States manually price each service and item as they are delivered to the beneficiary, we understand that it would be impractical and burdensome on States to maintain current lists of the manufacturer's suggested retail price for all potential items or services a beneficiary might require and a provider may bill for, and that States often source these items and services from multiple manufacturers. Therefore, for the purposes of the payment rate transparency publication, we consider manually priced payment methodologies that utilize the manufacturer's suggested retail price to result in a payment amount that is not known in advance of a provider delivering a service or item to a beneficiary, and thus not to be a fee schedule payment methodology subject to the payment rate transparency publication requirements.

We interpret the commenter's reference to ''negotiated rates'' to mean a provider payment rate where the individual provider's final payment rate is agreed upon through negotiation with the State Medicaid agency. For example, negotiated rates may be offered by a State when a particular service has very low utilization, a custom item is required (for example, certain wheelchairs), or the State does not have information needed to establish a payment rate under an approved State plan payment methodology (for example, information from other payers, such as Medicare or the State's employee health insurance on how much they pay for the service or item) to establish a fixed payment rate. In these instances, generally, the State has not developed a rate prior to service delivery; payment for the service or item on a case-by-case-basis in the circumstances does not constitute a fee schedule payment methodology. Additionally, DSH payments and supplemental payments are not subject to the payment rate transparency publication requirement because they do not fall into the description of Medicaid FFS fee schedule payment rates for purposes of the payment rate transparency provision in § 447.203(b)(1). Finally, SDPs in Medicaid managed care delivery systems are outside the scope of § 447.203(b)(1)(i), which is specific to the FFS delivery system.

We invite States to reach out to CMS for technical assistance if they have a FFS payment rate or methodology that may not clearly align with the previous descriptions and examples of Medicaid FFS fee schedule payment rates that are subject to the payment rate transparency publication provision, and other payment methodologies that are not.

We disagree with commenters that that only requiring States to publish base payment rates would not provide a member of the public with the ability to readily determine the amount Medicaid would pay for a service. To clarify, we did not intend for the payment rate transparency publication to reflect the entire universe of payments a provider may receive. Setting the scope of the publication to Medicaid FFS fee schedule payment rates, as previously discussed in this response to commenters, balances burden on States to publish the required information with the ability of interested parties to understand key Medicaid payment levels so that they may raise concerns to State Medicaid agencies. If we were to require States to also include DSH payments and supplemental payments along with the Medicaid FFS fee schedule payment rates, it would significantly increase burden on States and might not result in the public clearly understanding the amount that any given provider could expect to receive for furnishing the service to a Medicaid beneficiary, as DSH payments and supplemental payments are generally paid on a provider-level basis rather than a service-level basis, and not all providers of a given service will qualify for these payments.

Comment: One commenter requested clarification regarding whether payment rates paid to the direct support workforce are subject to the payment rate transparency publication requirements. Another commenter questioned if self-directed service payment rates should be published

[202] *https://www.medicaid.gov/sites/default/files/2020-09/smd20004.pdf.*

separately from agency model personal care services.

Response: We interpret the commenter's reference to ''the direct support workforce'' to generally mean the direct support workers or direct support professionals that provide hands-on and in-person Medicaid services to beneficiaries. To the extent a State's payment rates to direct support workforce utilize Medicaid FFS fee schedule payment rates within the meaning of this final rule, as discussed in detail in an earlier response to comments in this section, those payment rates would be subject to payment rate transparency requirements under § 447.203(b)(1).

Regarding self-directed service payment rates being separately published from agency model personal care services, we assume the commenter was referring to self-directed models with service budget and agency-provider models authorized under 42 CFR 441.545. We would like to clarify that, to the extent a State pays an agency-provider a Medicaid FFS fee schedule payment rate as discussed in detail in an earlier response to comments in this section, then those payment rates are subject to the payment rate transparency requirements in § 447.203(b)(1). Self-directed models with service budget [203] are not subject to the payment rate transparency publication requirement in § 447.203(b)(1). As previously stated, payment rates that are not subject to the payment rate transparency publication requirement include those that that are not known in advance of a provider delivering a service to a beneficiary. Under the self-directed model with service budget, the State only sets the beneficiary's overall service budget, and the beneficiary negotiates the payment rate with the direct support worker; therefore, the State is not setting the payment rate and does not know in advance what rate the direct service worker will be paid for furnishing services to the beneficiary. This does not constitute a fee schedule payment methodology for purposes of the payment rate transparency publication requirement, and as such these types of payment rates are excluded from the publication requirement. We further clarify that we do not expect States to list each beneficiary's individual self-directed service budget in the payment rate transparency publication.

Comment: One commenter expressed concern that requiring States to publish all Medicaid FFS payment rates online could have unintended consequences, such as beneficiary confusion about how much their copayment amount would be if it was included on the State's fee schedule which typically lists the amount allowed for the service, as well as State burden from increased documentation on the State's website. The commenter recommended CMS permit States to provide easily accessible links where the fee schedules are located to copayment information already available to providers and clients in a clear and concise manner.

Response: We understand commenters' concerns about the effects of the payment rate transparency publication in practice. Regarding commenters' concerns about beneficiary confusion, we want to clarify that the payment rates published under § 447.203(b)(1)(i) must be inclusive of the payment amount from the Medicaid agency plus any applicable coinsurance and deductibles to the extent that a beneficiary is expected to be liable for those payments, as discussed earlier in a response to comments this section. We encourage States, as part of transparency efforts, to include in the payment rate transparency publication a link to the page on the website where existing beneficiary cost sharing information is located so beneficiaries and other interested parties will be able to easily access this existing source of information about beneficiary cost sharing obligations. Additionally, regarding commenters' concerns about burden from increased documentation on the State's website, as documented in section III. of this final rule, the FFS provisions, including the payment rate transparency, comparative payment rate analysis, and payment rate disclosure requirements (§ 447.203(b)(1) through (5)), interested parties' advisory group requirements (§ 447.203(b)(6)), and State analysis procedures for payment rate reductions or payment restructuring (§ 447.203(c)), are expected to result in a net burden reduction on States compared to the previous AMRP requirements. With the finalization of the provisions in this rule, we aim to balance Federal and State administrative burden with our shared obligation to ensure compliance with section 1902(a)(30)(A) of the Act (and our obligation to oversee State compliance with the same). As previously stated, States also have the flexibility to utilize contractors or other third-party websites to publish the payment rate transparency publication on (however, we remind States that they are still requiring to publish the hyperlink to the website where the publication is located on the State Medicaid agency's website as required in § 447.203(b)(1)(ii) of this final rule).

Comment: One commenter requested clarification on the 1-month update requirement for the payment rate transparency requirement. The commenter stated that there are instances where SPAs are submitted with prospective effective dates or where States may face a delayed operationalization in their claims system that includes approved rate changes. The commenter noted that, in both instances under the proposed regulatory language for the payment rate transparency requirement, a State would be expected to publish rates that are not yet in effect or not currently being paid to providers. The commenter suggested revising the regulatory language to require States update rate changes in the payment rate transparency publication within 1 month of CMS approval of a SPA, the effective date of payment rate changes, or the date system changes are operationalized by a State, whichever date occurs latest. Additionally, one commenter suggested extending the requirement for updates to the payment rate transparency publication to 2 months instead of 1 month as proposed.

Response: In response to comments, we have revised the regulatory language to account for SPAs with prospective effective dates. As finalized in this rule, § 447.203(b)(1)(vi) now states, ''[t]he agency is required to include the date the payment rates were last updated on the State Medicaid agency's website and to ensure these data are kept current where any necessary update must be made no later than 1 month following the latter of the date of CMS approval of the State plan amendment, section 1915(c) HCBS waiver amendment, or similar amendment revising the provider payment rate or methodology, or the effective date of the approved amendment.'' We are adding this language as a technical change to account for States submitting SPAs with prospective effective dates as the proposed regulatory language would have required State to publish payment rates in the payment rate transparency publication that were approved, but not yet effective. We thank the commenter for pointing out this possibility, and we believe this change will ensure a State's payment rate transparency publication is as current as possible, and accurate once published.

[203] Self-directed services are paid for using an individualized budget. States are required to describe the method for calculating the dollar values of individual budgets based on reliable costs and service utilization, define a process for making adjustments to the budget when changes in participants' person-centered service plans occur, and define a procedure to evaluate participants' expenditures. *https://www.medicaid.gov/medicaid/long-term-services-supports/self-directed-services/index.html.*

However, we have not included regulatory language to account for system changes with a delayed operationalization date as suggested by this commenter. In accordance with §§ 430.10 and 430.20 and part 447, subpart B, States are required to pay the approved State plan payment rates in their State plan effective on or after the approved effective date. Therefore, payment of any rate outside of the approved State plan would result in a State plan compliance issue, and non-compliance is not a circumstance we would accommodate in regulations. We have also not extended the timeframe from 1 month to 2 months for States to update their payment rate transparency publications after a payment rate change. States are aware that a payment rate change is forthcoming and its requested effective date when they submit a SPA, and as such, we believe 1 month is more than sufficient to update the payment rate transparency publication. We invite States to reach out to CMS for technical guidance regarding any technological or operational limitations that may impact a State's compliance with the payment rate transparency publication requirement.

Comment: We received a few comments expressing concern about which bundled payment rates would be subject to the payment rate transparency publication as well as concern about the burden imposed on States from operational challenges to break down bundled payment rates into constituent services and rates allocated to each constituent service in the bundle. These commenters also requested clarification on how States will be required to publish bundled payment rates in the payment rate transparency publication. Commenters requested clarification regarding the following instances where bundled payment rates are used by States: team-based services, provider-specific rates (for example, PPS rates typically paid for FQHC and RHC services or an encounter rate typically paid to clinics for clinic services (we assume commenters meant clinic services as defined in § 440.90) and CCBHC services), and per diem rates paid for facility or institutional (that is, hospital and nursing facility) services. These commenters stated that this requirement would be burdensome, operationally difficult, or not feasible because individual rates for constituent services within the bundle do not exist or bundled rates are established on a provider-specific basis using provider-specific historical cost data and inflationary adjustments. These commenters requested further clarification regarding a definition of constituent services, how States should unbundle rates and services from a bundled rate, as well as additional explanation of the value CMS believes this requirement will contribute to the Medicaid program. They encouraged CMS to explicitly exempt facility and institutional providers from the payment rate transparency publication requirements.

Response: Bundled payments are a versatile payment methodology that States can utilize within and across numerous Medicaid benefit categories. Bundled payments are generally developed using State-specific assumptions about the type, quantity, and intensity of services included in the bundle, and generally are based on the payment rates for the individual constituent services when they are furnished outside the bundled rate.

In this final rule, we clarify bundled payment rates that are subject to the requirement in the payment rate transparency publication provision that States identify how much of the bundled fee schedule payment rate is allocated to each constituent service under the State's payment methodology. In the case of a bundled payment methodology, the State must publish the Medicaid FFS bundled payment rate and, where the bundled payment rate is based on fee schedule payment rates for each constituent service, must identify each constituent service included within the rate and how much of the bundled payment rate is allocated to each constituent service under the State's methodology.

To explain further, the bundled payment rates that are subject to this requirement are State-developed payment rates that provide a single payment rate for furnishing a bundle of services, including multiple units of service, multiple services within a single benefit category, or multiple services across multiple benefit categories. In any of these instances, multiple providers and provider types could contribute to a bundle of services, which is what we interpret the comment about team-based services to mean. Bundled payment rates that are based on fee schedule payment rates for each constituent service are subject to the requirement to identify each constituent service included within the rate and how much of the bundled payment rate is allocated to each constituent service under the State's methodology.

States can develop bundled payment rates for multiple units of a single service, for example, by setting a daily rate for up to 4 hours of personal care services a day that includes multiple 15-minute units of personal care services for which there is a fee schedule payment rate. States can also develop a bundled payment rate for multiple services within a single benefit category. For example, within the rehabilitative services Medicaid benefit, a daily rate for assertive community treatment, which can include constituent services set at fee schedule payment rates for assessments, care coordination, crisis intervention, therapy, and medication management, is considered a bundled rate. Finally, States can also develop a bundled payment rate for one or more services across multiple benefit categories. For example, a daily rate that includes constituent services set at fee schedule payment rates for up to 2 hours of personal care services, up to 2 hours of targeted case management services, and 1 hour of physical therapy services is considered a bundled rate. As all of these examples describe bundled payment rates comprised of constituent services that are based on fee schedule payment rates, they are subject to the bundled rate breakdown requirement in the payment rate transparency provision. Later in this response, we will discuss how States are required to allocate the bundled payment rate to each constituent service under the State's methodology.

Within a bundled payment rate, a constituent service is a Medicaid-covered service included in a bundle of multiple units of service and/or multiple services. These constituent services within the bundled payment rate must correspond to service descriptions in section 3.1–A of the State plan, which describes covered services. When initially adding a bundled payment rate to the State plan, States are required to separately list out each constituent service included in the bundle to ensure that non-covered services are not included in the bundled rate.[204] For example, a bundle for assertive community treatment covered under the rehabilitative services State plan benefit should not include room and board, as rehabilitative services are not covered in institutional settings. Therefore, ''room and board'' is a non-covered service under the rehabilitative services benefit and would not be a constituent service in the bundled payment rate.

We also clarify payment rates that pay for various services and could be considered a bundled payment rate that

[204] *https://www.medicaid.gov/sites/default/files/state-resource-center/downloads/spa-and-1915-waiver-processing/bundled-rate-payment-methodology.pdf.*

are not subject to the requirement in the payment rate transparency publication provision. For purposes of the requirement of this final rule, this bundled payment rate breakdown requirement only applies to bundled payment rates that are based on fee schedule payment rates for each constituent service. Payment rate methodologies that do not utilize fee schedule payment rates for each constituent service to create a single State-developed bundled payment rate to pay for a combination of services, including multiple units of the same service, multiple services within a single benefit category, or multiple services across multiple benefit categories, are not subject to the bundled rate breakdown requirement in the payment rate transparency publication provision. For example, prospective payment system rates that States use to pay for services provided in inpatient hospitals, outpatient hospitals, inpatient psychiatric facilities, inpatient rehabilitation facilities, long-term care hospitals, and nursing facilities are not subject to the bundled rate breakdown requirement, because these PPS rates (as previously mentioned, in the context of payment rates to hospitals and nursing facilities, the terms ''encounter rate'' or ''per diem rate'' can also be used to describe the prospective payment system rate received by these providers) do not utilize fee schedule payment rates to create a single payment rate to pay for a bundle of services. These PPS payment methodologies generally pay providers an amount derived based on a formula that accounts for the resources required to treat a patient, such as the patient's condition (that is, illness severity or clinical diagnosis), the provider's operating costs (that is, labor, supplies, insurance), and adjustment factors (that is, cost of living, case-mix, State determined factors), such as when an individual has an inpatient hospital stay for knee replacement surgery. While these PPS rates generally are subject to the payment rate transparency publication requirement in this final rule because they are typically known in advance of a provider delivering a service to a beneficiary, they are not subject to the breakdown requirement to the extent they do not utilize exclusively fee schedule payment rates to create a single payment rate for the bundle of services. Therefore, if we were to require States to also break down PPS rates, it would significantly increase burden on States and might not result in the public clearly understanding the amount that any given provider could expect to receive for the furnishing the services to a Medicaid beneficiary, as PPS rates are generally not determined based only on payment rates for constituent services within the meaning of this final rule. We believe a fee schedule payment rate for each constituent service is needed to enable the State to perform a straightforward and reliable allocation of the bundled payment rate to each included service. Therefore, because PPS rates are not determined based on fee schedule payment rates for each constituent service within the meaning of this final rule, States do not need to identify each constituent service included within a PPS rate and how much of the PPS rate is allocated to each constituent service under the State's methodology. In response to the comment asking about FQHC and RHC PPS rates, please see the discussion earlier in this section explaining why these rates are carved out of this requirement due to the statutory floor for rates and consideration of potentially undue burden on States.

Regarding whether payment rates for CCBHC services are subject to the bundled payment rate breakdown requirement, PPS rates for CCBHC demonstration services authorized under section 223 of the Protecting Access to Medicare Act of 2014 are not subject to the payment rate transparency publication requirement, including the bundled rate breakdown requirement, because these payments rates are outside of Medicaid FFS State plan authority. For CCBHC services covered and paid for under Medicaid FFS State plan authority, States that use Medicaid FFS fee schedule rates within the meaning of this rule to pay for CCBHC services must include these payment rates in the payment rate transparency provisions. Additionally, Medicaid FFS fee schedule rates that are bundled payment rates within the meaning of this rule paid to clinics (as defined in § 440.90), are subject to the bundled rate breakdown requirement.

Based on this, if a State determines a bundled payment rate is subject to the bundled payment rate breakdown requirement, we will now discuss how to allocate the bundled payment rate to each constituent service under the State's methodology. States have flexibility in determining the assumptions regarding the type, quantity, intensity, and price of the constituent services that they factor into the initial development of a bundled rate.[205] When States establish the payment rate for a bundle, States may include the current fee schedule payment rates for the constituent services to determine the total bundled rate. For example, a State might pay a $480 bundled rate for assertive community treatment, based on the application of a small discount factor to the fee schedule payment rates for all of the constituent services (assessments, care coordination, crisis intervention, therapy, and medication management). In this scenario, the State's fee schedule payment rates might be $50 for an assessment, $30 for care coordination, $200 for crisis intervention, $200 for 2 hours of individual therapy, and $20 for medication management. Separately, the State would pay a total of $500 for all of these services; however, the State might determine that a provider likely would realize efficiencies from providing the services together in a coordinated fashion, and so might reduce the bundled payment rate by 4 percent to account for these expected savings. Thus, the State's bundled payment rate would be $480, which would be allocated as follows: $480 * ($50/$500) = $48 for assessment; $480 * ($30/$500) = $28.80 for care coordination; $480 * ($200/$500) = $192 for crisis intervention; $480 * ($200/$500) = $192 for 2 hours of individual therapy; and $480 * ($20/$500) = $19.20 for medication management. In this example, the State would identify each of these constituent services and use these allocation amounts to meet the requirements finalized in paragraph (b)(1)(iv).

In response to commenters' request for an explanation of the value CMS believes the bundled payment rate breakdown requirement will contribute to the Medicaid program, our rationale is the same as for this payment rate publication requirement generally. Bundled rates are not inherently transparent, and in order to achieve the same goal of transparency in service of ensuring adequate access to covered care and services, it is important for interested parties to know what is covered in a bundled rate and how much of the bundle is attributable to each constituent service, which provides information relevant to whether the bundled rate is adequate in relation to its constituent services and enables comparison to how the constituent services are paid when

[205] For new bundled rates, CMS requests information on how States developed the rates, including: assumptions regarding the type, quantity, intensity, and price of the component services typically provided to support the economy and efficiency of the rate. *https://www.medicaid.gov/sites/default/files/state-resource-center/downloads/spa-and-1915-waiver-processing/bundled-rate-payment-methodology.pdf.*

furnished outside the bundle. Our primary goal with the payment rate transparency publication is ensuring Medicaid payment rates are publicly available in such a way that a member of the public can readily determine the amount that Medicaid would pay for a given service. Transparency helps to ensure that interested parties have basic information available to them to understand Medicaid payment levels and the associated effects of payment rates on access to care so that they may raise concerns to State Medicaid agencies via the various forms of public process available to interested parties.

In response to commenters' concerns that the bundled payment rate breakdown provision would be burdensome, operationally difficult, or not feasible because individual rates for constituent services within the bundle do not exist, we are providing guidance on how States are expected to address these circumstances. We acknowledge there are instances where States may have bundled payment rates that have been in place for many years, even decades, and the State currently does not have available information about how the payment rates were developed. Therefore, the State may lack historical data to perform a reasonable allocation of the bundled payment rate to constituent services. We also recognize there are instances where States utilizing bundled payment rates do not permit providers to bill for the constituent services separately. In this instance, States may no longer regularly update the fee schedule amounts for the constituent services included in the bundled payment rate because the bundle is primarily how the services are delivered and billed by providers. Therefore, the current fee schedule payment rates for the constituent services do not reflect how the State would pay for the constituent services outside of the bundle.

States have flexibility in determining how best to allocate the bundled payment rate to each constituent service in these scenarios. Should a State not have certain historical data about the bundled payment rate available, we are offering a few solutions for the State to consider. If a State can reasonably calculate missing rates, we expect them to do so for the purposes of completing the bundled payment rate allocation. For example, a State may have a bundled payment rate that includes five constituent services, which the State knows was calculated by summing the undiscounted fee schedule payment rates for each of the five constituent services. Today, the State may be unable to locate the fee schedule amount for one of the constituent services. In this instance, we would expect the State to reasonably deduce the allocated rate for the fifth constituent service by summing the four known rates for the four constituent services and subtracting that amount from the total bundled payment rate. If a State cannot calculate a missing portion of a bundled payment rate, they may use current fee schedule rates. For example, a State may have a bundled payment rate, but it does not have historical information about how the bundled payment rate was originally calculated from the constituent services. In this instance, we would expect the State to use the current fee schedule rates for the constituent services included in the bundle to allocate the bundled payment rate for the payment rate transparency publication. Regardless of the approach States utilize to allocate the bundled payment rate to the constituent services, we expect States to include a description of how the bundled payment rate was allocated in the payment rate transparency publication to ensure that a member of the public can readily determine the amount that Medicaid would pay for the bundled service and understand how the State has accomplished a reasonable allocation of this amount to each constituent service included in the bundle, as required in § 447.203(b)(1)(iii).

In situations where the State cannot reasonably deduce how to allocate the bundled payment rate to the constituent services included in the bundle or the current fee schedule rates for the constituent services do not serve as a reasonable proxy to determine the allocation of the bundled payment rate to its constituent services, we invite States to reach out to us for technical assistance on how to comply with § 447.203(b)(1)(iv) on a case-by-case basis. We expect this guidance to provide States with relief from burden associated with allocating the bundled payment rate to constituent services when historical information is unavailable, including in certain situations raised by commenters where individual historical rates for constituent services within the bundle are no longer available. Regardless of how a State chooses to address a lack of data related to a bundled payment rate, we expect the State to update the payment rate transparency publication with an accurate allocation information following the effective date or CMS approval date of a SPA, a section 1915(c) HCBS waiver amendment, or similar amendment amending the bundled payment rate in question in accordance with § 447.203(b)(1)(vi). These processes require the State to provide information about the fee schedule payment rates for the constituent services included in the bundle, therefore making available the necessary data to perform an allocation for the payment rate transparency publication.

We also invite States to contact CMS for technical assistance if they have a bundled payment methodology that does not clearly align with the previous descriptions and examples of bundled payment rates that are and are not subject to the bundled payment rate breakdown requirement. We also encourage States to review our existing Bundled Rate Payment Methodology resource on Medicaid.gov for more information about bundled payment methodologies.[206]

Regarding commenters' concerns about burden on States to break down institutional services bundled payment rates into constituent services in the payment rate transparency publication, we understand these concerns were primarily about operational challenges States would face if rates paid to hospitals and nursing facilities, as well as cost-based rates generally, were subject to this provision. As previously discussed in this response, PPS rates that are not determined based on fee schedule payment rates for each constituent service within the meaning of this final rule are not subject to the bundled rate breakdown requirement in § 447.203(b)(1)(iv); however, PPS rates generally are considered Medicaid FFS fee schedule payment rates in the context of this rule and are required to be published in the payment rate transparency publication under § 447.203(b)(1) as finalized in this rule. Also previously discussed in this response, PPS rates for FQHCs and RHCs are not subject to the bundled rate breakdown requirement in § 447.203(b)(1)(iv) because these payment rates are not subject to the payment rate transparency publication requirement under § 447.203(b)(1).

In this final rule, we are revising the regulatory language to make clear what bundled payment rates are subject to the constituent service allocation, or breakdown, requirement. We proposed in § 447.203(b)(1) to provide that the State must, ''. . . in the case of a bundled or similar payment methodology, identify each constituent service included within the rate and

[206] *https://www.medicaid.gov/sites/default/files/state-resource-center/downloads/spa-and-1915-waiver-processing/bundled-rate-payment-methodology.pdf.*

how much of the bundled payment rate is allocated to each constituent service under the State's methodology.'' We are finalizing § 447.203(b)(1)(iv) to state, ''In the case of a bundled payment methodology, **the State must publish the Medicaid fee-for-service bundled payment rate and, where the bundled payment rate is based on fee schedule payment rates for each constituent service, must** identify each constituent service included within the rate and how much of the bundled payment is allocated to each constituent service under the State's methodology.'' (new language identified in bold). We also deleted ''or similar'' from ''In the case of a bundled payment methodology . . .'' because we determined that this language is unnecessary and potentially confusing; instead, in this final rule, we are clarifying specifically which bundled payment rates are subject to the requirement to identify each constituent service included within the rate and how much of the bundled payment is allocated to each constituent service under the State's methodology.

Comment: Several commenters offered suggestions and recommendations for the proposed payment rate transparency requirements. These suggestions and recommendations include linking together FFS and managed care plan web pages for full transparency, allowing State contractors to publish the State's payment rates, requiring the published format of the payment rates be ready for data analysis, requiring States to publish information about payment rate models and methodologies (that is, payment rate development information, potentially including cost factors and assumptions underlying a rate, such as wages, employee-related expenses, program-related expenses, and general and administrative expenses) as well as the frequency and processes for rate reviews, and requiring States publish additional granular data, particularly for dental services (for example, utilization, median payment rates, and service frequency).

Response: We appreciate commenters' suggestions and recommendations for the payment rate transparency publication requirement. While the transparency provisions in the Managed Care final rule (as published elsewhere in this **Federal Register**) and this final rule share a similar goal, we are not incorporating the suggestion to require States to link together FFS and managed care plan web pages for full transparency because there is often no relationship between FFS Medicaid payment rates and managed care plan provider rates, as the rates are determined through different processes, subject to different Federal requirements, and States, managed care plans, and CMS assess access to care differently for FFS and managed care. Therefore, we believe that requiring States link their FFS payment rate transparency publication websites with managed care plan web pages would not provide beneficiaries, providers, CMS, and other interested parties with relevant payment information for the purposes of assessing access to care issues to better ensure compliance of FFS payment rates with section 1902(a)(30)(A) of the Act.

As discussed in an earlier response to comments in this section, we have revised the regulatory language in § 447.203(b)(1) from what we originally proposed to permit States the flexibility to continue to utilize contractors and other third parties for developing and publishing their fee schedules on behalf of the State. Specifically, in § 447.203(b)(1), we deleted the language requiring that the website where Medicaid fee-for-service fee schedule payment rates be published be ''developed and maintained by the single State agency.'' As finalized, § 447.203(b)(1) requires the State ''. . . publish all Medicaid fee-for-service fee schedule payment rates on a website that is accessible to the general public.'' We continue to require that ''The website where the State agency publishes its Medicaid fee-for-service payment rates must be easily reached from a hyperlink on the State Medicaid agency's website.'' in § 447.203(b)(1)(ii).

We are not incorporating the suggestion to require the format of the payment rate transparency publication be ready for any particular form of data analysis. Our primary goal with the payment rate transparency publication is ensuring Medicaid payment rates are publicly available in such a way that a member of the public can readily determine the amount that Medicaid would pay for a given service. Transparency helps to ensure that interested parties have basic information available to them to understand Medicaid payment levels and the associated effects of payment rates on access to care so that they may raise concerns to State Medicaid agencies via the various forms of public process available to interested parties. Transparency will provide us and other interested parties with information necessary that is not currently available at all or not available in a clear and accessible format for us to ensure the payment rates for consistency with efficiency, economy, and quality of care and are sufficient to enlist enough providers so that care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area. The payment rate transparency publication is the first step in ensuring payment rate data is transparent, then the comparative payment rate analysis is the next step in analyzing the payment rate data relative to Medicare as a benchmark. Additionally, given the requirements that the payment rate transparency publications be publicly available, clear, and accessible, we anticipate that various interested parties will be able to adapt the published information manually or through technological means so that it is suited to any analysis they wish to perform.

We are not incorporating the suggestion to require States to publish information about payment rate models and methodologies (that is, payment rate development information, potentially including cost factors and assumptions underlying a rate, such as wages, employee-related expenses, program-related expenses, and general and administrative expenses), the frequency and processes for rate reviews, or additional granular data, particularly for dental services (for example, utilization, median payment rates, and service frequency), because we want our initial focus to be on establishing the new payment rate transparency publication, comparative payment rate analysis, and payment rate disclosure requirements, providing States with support during the compliance period, and ensuring these data are available to beneficiaries, providers, CMS, and other interested parties for the purposes of assessing access to care issues. While the payment rate transparency publication does not require additional granular data outside of payment rate variations by population (pediatric and adult), provider type, and geographical location, we would like to note that utilization in the form of the number of Medicaid-paid claims and the number of Medicaid enrolled beneficiaries who received a service is required to be included in the comparative payment rate analysis and payment rate disclosure; however, these requirements do not include dental services. We acknowledge that the commenters' suggestions would add relevant and beneficial context to the payment rate information required to be published by States in this final rule. Given that our work to better ensure access in the Medicaid program is ongoing, we intend to gain implementation experience with

this final rule, and we will consider the recommendations provided on the proposed rule to help inform any future rulemaking in this area, as appropriate. While we are not adopting all of these suggestions and recommendations, we note that States have the flexibility to add the elements described to their payment rate transparency publications if they so choose.

We believe that there are minimal qualities that the website containing the payment rate transparency publication necessarily must include, such as being able to function quickly and as an average user would expect; requiring minimal, logical navigation steps; taking reasonable steps to provide meaningful access to individuals with limited English proficiency; and ensuring accessibility for persons with disabilities in accordance with section 504 of the Rehabilitation Act and Title II of the ADA. An example of this includes a single web page clearly listing the names of the State's published fee schedules (such as Physician Fee Schedule, Rehabilitation Services Fee Schedule, etc.)) as links that transport the user to the relevant State fee schedule file, which file should be in a commonly accessible file format that generally can be viewed within a web browser without requiring the user to download a file for viewing in separate software. In this example, there is no unnecessary burden (including requiring payment (paywall)) creation of an account and/or password to view the web page, or need to install additional software to view the files) on the individual to trying to view the published fee schedules. We invite States to reach out to CMS for technical guidance regarding compliance with the payment rate transparency publication requirement. We also encourage States to review the subregulatory guidance, which includes an example of what a compliant payment rate transparency publication might look like, that we will issue prior to the effective date of this final rule.

Comment: A few commenters suggested narrowing the scope of the payment rate transparency requirement. Commenters recommended narrowing the scope by requiring publication of payment rate transparency information only about a representative subset of services, a State's most common provider types and covered services, or the same CMS-published list of E/M codes that we proposed for the comparative payment rate analysis requirement. A subset of these commenters suggested that, once States have acclimated to the requirements of payment rate transparency, then CMS could expand the requirement gradually to include all Medicaid FFS payment rates, to ease burden on States.

Response: We appreciate the commenters' suggestions on narrowing the scope of the payment rate transparency requirement; however, we are not changing the scope in this final rule. As previously discussed in detail in an earlier response to comments in this section, for purposes of the payment rate transparency provision in § 447.203(b)(1), Medicaid FFS fee schedule payment rates are FFS payment amounts made to a provider, and known in advance of a provider delivering a service to a beneficiary by reference to a fee schedule. While we understand the broad scope of included rates will require some work for many States to implement, we believe the time between the effective date of this final rule and the applicability date of July 1, 2026, for the first publication of payment rate transparency information is sufficient for these requirements. Given that our work to better ensure access in the Medicaid program is ongoing, we intend to gain implementation experience with this final rule, and we will consider the recommendations provided on the proposed rule to help inform any future rulemaking in this area, as appropriate.

Comment: One commenter suggested requiring States identify an additional level of payment rate variation within the population (pediatric and adult) where, within the pediatric population, Medicaid and CHIP pay different rates, which should be disclosed separately in the payment rate transparency publication.

Response: We appreciate the commenter's suggestion; however, we are not including a requirement that States break down payment rates to include separate Medicaid and CHIP payment rate information within the pediatric population payment rate reporting. Regulations applicable to CHIP under 42 CFR part 457 and relevant guidance are beyond the scope of this rulemaking. After obtaining implementation experience with these new policies, we will consider proposing to require States to identify additional levels of payment rate variations in the Medicaid FFS payment rate transparency publication through future rulemaking.

Comment: One commenter suggested applying the payment rate transparency requirements to all Medicaid HCBS programs.

Response: To the extent a State's Medicaid HCBS program utilizes Medicaid FFS fee schedule payment rates within the meaning of this final rule, as discussed in detail earlier in this section, those payment rates would be subject to payment rate transparency publication requirements described in § 447.203(b)(1). Additionally, we are finalizing a similar provision to the Medicaid FFS fee schedule payment rate transparency requirement for HCBS direct care worker compensation elsewhere in this final rule. The HCBS Payment Adequacy and Reporting requirements in this final rule require that States report annually, in the aggregate for each service, on the percent of payments for homemaker, home health aide, personal care, and habilitation services that are spent on compensation for direct care workers, and separately report on payments for such services when they are self-directed and facility-based.

Comment: One commenter suggested collecting provider-level data on all payments, not just fee schedule payment rates, as well as the source(s) of non-Federal share for payments, to determine net Medicaid payments (total Medicaid provider payments received minus the provider's contributions to the non-Federal share through mechanisms including provider-related donations, health care-related taxes, intergovernmental transfers, and certified public expenditures) to each provider.

Response: Existing UPL and the supplemental payment reporting requirements under section 1903(bb) of the Act, as established by Division CC, Title II, Section 202 of the Consolidated Appropriations Act, 2021 (CAA) (Pub L. 116–260),) already require States to submit provider-level payment data for certain services to CMS. Therefore, we are not incorporating the suggestion to collect provider-level data on all payments because this would be duplicative of existing requirements and because that is not the intention of the payment rate transparency publication requirement. While we do collect information about the non-Federal share through SPA reviews, regulatory requirements regarding collection of non-Federal share data are beyond the scope of this rulemaking.

Comment: A couple of commenters stated that dually eligible beneficiaries and their providers face unique issues when accessing and delivering Medicaid services (such as beneficiaries facing worse outcomes and having complex needs that require providers to coordinate and deliver specialized care) and requested CMS include additional provisions in the payment rate transparency publication requirements specifically for this group. One commenter suggested CMS require the

payment rate transparency publication, comparative payment rate analysis, and payment rate disclosure address the experience of people who are dual-eligible and include factors related to Medicare coverage. Another commenter suggested requiring that the payment rates be disaggregated for the purposes of comparing providers serving dually eligible beneficiaries from those serving Medicare-only or Medicaid-only beneficiaries to ensure differences in access to care and payment rates are documented. The commenter also recommended the payment rate transparency publication identify when Medicaid is the primary or secondary payer in the context of a State's lesser-of payment policies (that is, for dually eligible Qualified Medicare Beneficiaries, States are obligated to pay Medicare providers for deductibles and co-insurance after Medicare has paid; however, States limit those payments to the lesser of the Medicaid rate for the service or the Medicare co-insurance amount).

Response: We appreciate the commenters' concern for and suggestions on how we might evaluate access to care for dually eligible beneficiaries. We are not incorporating the suggestion to require the payment rate transparency publication, comparative payment rate analysis, and payment rate disclosure address the experience of people who are dual-eligible and include factors related to Medicare coverage because these provisions focus on requiring States to publish and analyze quantitative data (such as, payment rates, claims volume, beneficiary counts) to assess access to care, rather than qualitive data (such as, surveys on beneficiary experience). We are also not incorporating the suggestion to identify when Medicaid is the primary or secondary payer in the context of a State's lesser-of payment policies in the payment rate transparency publication because we remain focused on the transparency of States' payment rates, rather than States' payment policies, as a method of assessing consistency with section 1902(a)(30)(A) of the Act. Additionally, we are not incorporating the suggestion to require States disaggregate their Medicaid FFS fee schedule payment rates for providers serving dually eligible beneficiaries from those serving Medicare-only or Medicaid-only beneficiaries because we want our initial focus to be on establishing the new payment rate transparency, comparative payment rate analysis, and payment rate disclosure requirements, providing States with support during the compliance period, and ensuring the data required under this final rule are to beneficiaries, providers, CMS, and other interested parties for the purpose of assessing access to care issues. We believe that payment rate breakdowns by population (pediatric and adult), provider type, and geographical location will provide a sufficient amount of transparency to ensure that interested parties have basic information available to them to understand Medicaid payment levels and the associated effects of payment rates on access to care so that they may raise concerns to State Medicaid agencies via the various forms of public processes available to interested parties.

Monitoring access to care is an ongoing priority of the agency and we will continue to work with States and other interested parties as we seek to expand access monitoring in the future, including potentially through future rulemaking. However, we remain focused on maintaining a balance in Federal and State administrative burden with our shared obligation to ensure compliance with section 1902(a)(30)(A) of the Act (and our obligation to oversee State compliance with the same).

Comment: A couple of commenters recommended that the payment rate transparency requirements under § 447.203(b) be applied to payment rates for services delivered to beneficiaries through managed care to ensure managed care plan rates are published publicly.

Response: While we appreciate the value in transparency of provider payment rates in managed care delivery systems, regulations applicable to managed care under 42 CFR parts 438 and 457 are beyond the scope of this rulemaking.

Comment: One commenter requested CMS work with States to correct deficient payment rates once identified by the transparency requirements.

Response: To clarify, the provisions in this final rule do not require States to change their provider payment rates. The goal of the payment rate transparency publication is to ensure all States publish their Medicaid FFS fee schedule payment rates in a format that is publicly accessible and where all Medicaid FFS fee schedule payment rates can be easily located and understood.

Transparency, particularly the requirement that States must publicly publish their Medicaid FFS fee schedule payment rates, helps to ensure that interested parties have basic information available to them to understand Medicaid payment levels and the associated effects of payment rates on access to care so that they may raise concerns to State Medicaid agencies via the various forms of public process available to interested parties. We will utilize the information in the payment rate transparency publication during SPA reviews and other situations when States are proposing provider payment rate changes for services included in the publication and when the public process in § 447.204 is used to raise access to care issues related to possible deficient payment rates for services included in the publication.

After consideration of public comments, we are finalizing all provisions under § 447.203(b)(1) as proposed, apart from the following changes:

- Updated the organizational structure of (b)(1) to add romanettes.
- Added clarifying language to the proposed language stating what Medicaid FFS payment rates need to be published.

++ In paragraph (b)(1), the proposed language was revised from ''The State agency is required to publish all Medicaid fee-for-service payment rates . . .'' to finalize the language as ''The State agency is required to publish all Medicaid fee-for-service **fee schedule** payment rates . . .'' (new language identified in bold)

++ In paragraph (b)(1)(i), the proposed language was revised from ''Published Medicaid fee-for-service payment rates include fee schedule payment rates . . .'' to finalize the language as ''**For purposes of paragraph (b)(1), the payment rates that the State agency is required to publish are** Medicaid fee-for-service payment rates . . .'' (new language identified in bold)

- Deleted the proposed language specifying that the payment rate transparency must be developed and maintained on the State Medicaid agency's website. The proposed language was revised from ''The State agency is required to publish all Medicaid fee-for-service payment rates on a website developed and maintained by the single State agency that is accessible to the general public'' to finalize the language as ''The State agency is required to publish all Medicaid fee-for-service payment rates on a website that is accessible to the general public.'' in paragraph (b)(1).
- Revised the proposed language about a member of the public being able to readily determine the payment amount for a service from ''Medicaid fee-for-service payment rates must be organized in such a way that a member of the public can readily determine the amount that Medicaid would pay for the service'' to finalize the language as

''Medicaid fee-for-service payment rates must be organized in such a way that a member of the public can readily determine the amount that Medicaid would pay for a given service.'' in paragraph (b)(1)(iii). (new language identified in bold)

- Revised the proposed language about bundled payment rates from ''. . . in the case of a bundled or similar payment methodology, identify each constituent service included within the rate and how much of the bundled payment is allocated to each constituent service under the State's methodology'' to:

++ Delete ''or similar'' from ''In the case of a bundled or similar payment methodology . . .''

++ Add ''the State must publish the Medicaid fee-for-service bundled payment rate and, where the bundled payment rate is based on fee schedule payment rates for each constituent service, must . . .''

The language is finalized as ''In the case of a bundled payment methodology, **the State must publish the Medicaid fee-for-service bundled payment rate and, where the bundled payment rate is based on fee schedule payment rates for each constituent service, must** identify each constituent service included within the rate and how much of the bundled payment is allocated to each constituent service under the State's methodology.'' in paragraph (b)(1)(iv). (new language identified in bold)

- Revised the applicability date for this section from the proposed January 1, 2026, to require that the initial publication of the Medicaid FFS payment rates shall occur no later than July 1, 2026, and include approved Medicaid FFS payment rates in effect as of July 1, 2026, in paragraph (b)(1)(vi).
- Revised the proposed language about updating the publication after SPA approval from ''The agency is required to include the date the payment rates were last updated on the State Medicaid agency's website and to ensure these data are kept current where any necessary update must be made no later than 1 month following the date of CMS approval of the State plan amendment, section 1915(c) HCBS waiver amendment, or similar amendment revising the provider payment rate or methodology.'' to finalize the language as ''The agency is required to include the date the payment rates were last updated on the State Medicaid agency's website and to ensure these data are kept current, where any necessary update must be made no later than 1 month following the latter of the date of CMS approval of the State plan amendment, section 1915(c) HCBS waiver amendment, or similar amendment revising the provider payment rate or methodology, or the effective date of the approved amendment.'' in paragraph (b)(1)(vi). (new language identified in bold)

b. Comparative Payment Rate Analysis and Payment Rate Disclosure § 447.203(b)(2) Through (5)

In paragraph (b)(2), we proposed to require States to develop and publish a comparative payment rate analysis of Medicaid payment rates for certain specified services, and a payment rate disclosure for certain HCBS. We specified the categories of services that States would be required to include in a comparative payment rate analysis and payment rate disclosure of Medicaid payment rates. Specifically, we proposed that for each of the categories of services in paragraphs (b)(2)(i) through (iii), each State agency would be required to develop and publish a comparative payment rate analysis of Medicaid payment rates as specified in proposed § 447.203(b)(3). We also proposed that for each of the categories of services in paragraph (b)(2)(iv), each State agency would be required to develop and publish a payment rate disclosure of Medicaid payment rates as specified in proposed § 447.203(b)(3). We proposed for both the comparative payment rate analysis and payment rate disclosure that, if the rates vary, the State must separately identify the payment rates by population (pediatric and adult), provider type, and geographical location, as applicable. The categories of services listed in paragraph (b)(2) include: primary care services; obstetrical and gynecological services; outpatient mental health and substance use disorder services; and personal care, home health aide, and homemaker services, as specified in § 440.180(b)(2) through (4), provided by individual providers and providers employed by an agency.

In paragraph (b)(2), we proposed to require States separately identify the payment rates in the comparative payment rate analysis and payment rate disclosure, if the rates vary, by population (pediatric and adult), provider type, and geographical location, as applicable. These proposed breakdowns of the Medicaid payment rates, similar to how we proposed payment rates would be broken down in the payment rate transparency publication under proposed § 447.203(b)(1), would apply to all proposed categories of services listed in paragraph (b)(2): primary care services, obstetrical and gynecological services, outpatient mental health and substance use disorder services, and personal care, home health aide, and homemaker services provided by individual providers and providers employed by an agency.

We acknowledged that not all States pay varied payment rates by population (pediatric and adult), provider type, and geographical location, which is why we have included language ''if the rates vary'' and ''as applicable'' in the proposed regulatory text. We included this language in the proposed regulatory text to ensure the comparative payment rate analysis and payment rate disclosure capture all Medicaid payment rates, including when States pay varied payment rates by population (pediatric and adult), provider type, and geographical location. We also included proposed regulatory text for the payment rate disclosure to ensure that the average hourly payment rates for personal care, home health aide, and homemaker services provided by individual providers and providers employed by an agency would be separately identified for payments made to individual providers and to providers employed by an agency, if the rates vary, as later discussed in connection with § 447.203(b)(3)(ii). For States that do not pay varied payment rates by population (pediatric and adult), provider type, and geographical location and pay a single Statewide payment rate for a single service, then the comparative payment rate analysis and payment rate disclosure would only need to include the State's single Statewide payment rate.

We proposed to include a breakdown of Medicaid payment rates by population (pediatric and adult), provider type, and geographical location, as applicable, on the Medicaid side of the comparative payment rate analysis in paragraph (b)(2) to align with the proposed payment rate transparency provision, to account for State Medicaid programs that pay variable Medicaid payment rates by population (pediatric and adult), provider type, and geographical location, and to help ensure the State's comparative payment rate analyses accurately align with Medicare. Following the initial year that the proposed provisions proposed would be in effect, these provisions would align with and build on the payment rate transparency requirements described in § 447.203(b)(1), because States could source the codes and their corresponding Medicaid payment rates that the State already would publish to meet the payment rate transparency requirements.

We explained that these proposed provisions are intended to help ensure that the State's comparative payment rate analysis contains the highest level of granularity in each proposed aspect by considering and accounting for any variation in Medicaid payment rates by population (pediatric and adult), provider type, and geographical location, as previously required in the AMRP process under § 447.203(b)(1)(iv) and (v), and (b)(3). Additionally, Medicare varies payment rates for certain NPPs (nurse practitioners, physician assistants, and clinical nurse specialists) by paying them 85 percent of the full Medicare PFS amount and varies their payment rates by geographical location through calculated adjustments to the pricing amounts to reflect the variation in practice costs from one geographical location to another; therefore, we explained that the comparative payment rate analysis accounting for these payment rate variations is crucial to ensuring the Medicaid FFS payment rates accurately align with FFS Medicare PFS rates.[207] Medicare payment variations for provider type and geographical location would be directly compared with State Medicaid payment rates that also apply the same payment variations, in addition to payment variation by population (pediatric and adult) which is unique to Medicaid, yet an important payment variation to take into consideration when striving for transparency of Medicaid payment rates. For States that do not pay varied payment rates by population (pediatric and adult), provider type, or geographical location and pay a single Statewide payment rate for a single service, Medicare payment variations for provider type and geographical location would be considered by calculating a Statewide average of Medicare PFS rates which is later discussed in this final rule.

Similar to the payment rate transparency publication, we acknowledged that there may be additional burden associated with our proposal that the payment rate transparency publication and the comparative payment rate analysis include a payment rate breakdown by population (pediatric and adult), provider type, and geographical location, as applicable, when States' payment rates vary based on these groupings. However, we believe that any approach to requiring a comparative payment rate analysis would involve some level of burden that is greater for States that choose to employ these payment rate differentials, since any comparison methodology would need to take account—through a separate comparison, weighted average, or other mathematically reasonable approach—of all rates paid under the Medicaid program for a given service. In all events, we believe this proposal would create an additional level of granularity in the analysis that is important for ensuring compliance with section 1902(a)(30)(A) of the Act. We noted that multiple types of providers, for example, physicians, physician assistants, and nurse practitioners, are delivering similar services to Medicaid beneficiaries of all ages, across multiple Medicaid benefit categories, throughout each State.

Section 1902(a)(30)(A) requires ''. . . that payments are consistent with efficiency, economy, and quality of care and are sufficient to enlist enough providers so that care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area,'' and we noted our belief that having sufficient access to a variety of provider types is important to ensuring access for Medicaid beneficiaries meets this statutory standard. For example, a targeted payment rate reduction to nurse practitioners, who are often paid less than 100 percent of the State's physician fee schedule rate, could have a negative impact on access to care for services provided by nurse practitioners, but this reduction would not directly impact physicians or their willingness to participate in Medicaid and furnish services to beneficiaries. By proposing that the comparative payment rate analysis include a breakdown by provider type, where States distinguish payment rates for a service by provider type, we explained that the analysis would capture this payment rate variation among providers of the same services and provide us with a granular level of information to aid in determining if access to care is sufficient, particularly in cases where beneficiaries depend to a large extent on the particular provider type(s) that would be affected by the proposed rate change for the covered service(s).

We identified payment rate variation by population (pediatric and adult), provider type, and geographical location as the most commonly applied adjustments to payment rates that overlap between FFS Medicaid and Medicare and could be readily broken down into separately identified payment rates for comparison in the comparative payment rate analysis. For transparency purposes and to help to ensure the comparative payment rate analysis is conducted at a granular level of analysis, we explained our belief that it is important for the State to separately identify their rates, if the rates vary, by population (pediatric and adult), provider type, and geographical location, as applicable. We solicited comments on the proposal to require the comparative payment rate analysis to include, if the rates vary, separate identification of payment rates by population (pediatric and adult), provider type, and geographical location, as applicable, in the comparative payment rate analysis in proposed § 447.203(b)(2).

We acknowledged that States may apply additional payment adjustments or factors, for example, the Consumer Price Index, Medicare Economic Index, or State-determined inflationary factors or budget neutrality factors, to their Medicaid payment rates other than population (pediatric and adult), provider type, and geographical location. We stated that we expect any other additional payment adjustments and factors to already be included in the State's published Medicaid fee schedule rate or calculable from the State plan, because § 430.10 requires the State plan to be a ''comprehensive written statement . . . contain[ing] all information necessary for CMS to determine whether the plan can be approved to serve as a basis for . . . FFP . . .'' Therefore, for States paying for services with a fee schedule payment rate, the Medicaid fee schedule is the sole source of information for providers to locate their final payment rate for Medicaid services provided to Medicaid beneficiaries under a FFS delivery system. For States with a rate-setting methodology where the approved State plan describes how rates are set based upon a fee schedule (for example, payment for NPPs are set a percentage of a certain published Medicaid fee schedule), the Medicaid fee schedule would again be the source of information for providers to identify the relevant starting payment rate and apply the rate-setting methodology described in the State plan to ascertain their Medicaid payment.[208] We solicited comments on any additional types of payment adjustments or factors States make to their Medicaid payment rates as listed on their State fee schedules that should be identified in the comparative payment rate analysis that we have not

[207] *https://www.medpac.gov/wp-content/uploads/2021/11/MedPAC_Payment_Basics_22_Physician_FINAL_SEC.pdf.*

already discussed in § 447.203(b)(i)(B) of this final rule, and how the inclusion of any such additional adjustments or factors should be considered in the development of the Medicare PFS rate to compare Medicaid payment rates to, as later described in § 447.203(b)(3)(i)(C), of this final rule.

In paragraphs (b)(2)(i) through (iv), we proposed that primary care services, obstetrical and gynecological services, and outpatient behavioral health services would be subject to a comparative payment rate analysis of Medicaid payment rates and personal care, home health aide, and homemaker services provided by individual providers and providers employed by an agency would be subject to a payment rate disclosure of Medicaid payment rates. We begin with a discussion about the importance of primary care services, obstetrical and gynecological services, and outpatient behavioral health services as proposed in § 447.203(b)(2)(i) through (iii), and the reason for their inclusion in this proposed requirement. Then, we will discuss the importance and justification for including personal care, home health aide, and homemaker services provided by individual providers and providers employed by an agency as proposed in § 447.203(b)(2)(iv).

In § 447.203(b)(2)(i) through (iii), we proposed to require primary care services, obstetrical and gynecological services, and outpatient mental health and substance use disorder services be included in the comparative payment rate analysis, because we believe that these categories of services are critical preventive, routine, and acute medical services in and of themselves, and that they often serve as gateways to access to other needed medical services, including specialist services, laboratory and x-ray services, prescription drugs, and other mandatory and optional Medicaid benefits that States cover. Including these categories of services in the comparative payment rate analysis would require States to closely examine their Medicaid FFS payment rates to comply with section 1902(a)(30)(A) of the Act. As described in the recent key findings from public comments on the February 2022 RFI that we published, payment rates are a key driver of provider participation in the Medicaid program.[209] By proposing that States compare their Medicaid payment rates for primary care services, obstetrical and gynecological services, and outpatient mental health and substance use disorder services to Medicare payment rates, States would be required to analyze if and how their payments are consistent with efficiency, economy, and quality of care and are sufficient to enlist enough providers so that care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area.

In the proposed rule, we noted our belief that Medicare payment rates for these services are likely to serve as a reliable benchmark for a level of payment sufficient to enlist providers to furnish the relevant services to a beneficiary because Medicare delivers services through a FFS delivery system across all geographical regions of the US and historically, the vast majority of physicians accept new Medicare patients, with extremely low rates of physicians opting out of the Medicare program, suggesting that Medicare's payment rates are generally consistent with a high level of physician willingness to accept new Medicare patients.[210] Additionally, Medicare payment rates are publicly published in an accessible and consistent format by CMS making Medicare payment rates an available and reliable comparison point for States, rather than private payer data which typically is considered proprietary information and not generally available to the public. Therefore, we explained that the proposed requirement that States develop and publish a comparative payment rate analysis would enable States, CMS, and other interested parties to closely examine the relationship between State Medicaid FFS payment rates and those paid by Medicare. This analysis would continually help States to ensure that their Medicaid payment rates are set at a level that is likely sufficient to meet the statutory access standard under section 1902(a)(30)(A) of the Act that payments be sufficient to enlist enough providers so that care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area.

We noted our belief that the comparative payment rate analysis would provide States, CMS, and other interested parties with clear and concise information for identifying when there is a potential access to care issue, such as Medicaid payment rates not keeping pace with changes in corresponding Medicare rates and decreases in claims volume and beneficiary utilization of services. As discussed later in this section, numerous studies have found a relationship between Medicaid payment rates and provider participation in the Medicaid program and, given the statutory standard of ensuring access for Medicaid beneficiaries, a comparison of Medicaid payment rates to other payer rates, particularly Medicare payment rates as justified later in this rule, is an important barometer of whether State payment rates and policies are sufficient for meeting the statutory access standard under section 1902(a)(30)(A) of the Act.

We proposed to focus on these particular services because they are critical medical services and of great importance to overall beneficiary health. Beginning with primary care, these services provide access to preventative services and facilitate the development of crucial doctor-patient relationships. Primary care providers often deliver preventive health care services, including immunizations, screenings for common chronic and infectious diseases and cancers, clinical and behavioral interventions to manage chronic disease and reduce associated risks, and counseling to support healthy living and self-management of chronic diseases; Medicaid coverage of preventative health care services promotes disease prevention which is critical to helping people live longer, healthier lives.[211] Accessing primary care services can often result in beneficiaries receiving referrals or recommendations to schedule an appointment with physician specialists, such as gastroenterologists or neurologists, that they would not be able to obtain without the referral or recommendation by the primary care physician. Additionally, primary care physicians provide beneficiaries with orders for laboratory and x-ray services as well as prescriptions for necessary medications that a beneficiary would not be able to access without the primary care physician. Research over the last century has shown that the impact of the doctor-patient relationship on

[209] Summary of Public Comments in response to the CMS 2022 Request for Information: Access to Coverage and Care in Medicaid & CHIP. December 2022. For the report, see *https://www.medicaid.gov/medicaid/access-care/downloads/access-rfi-2022-report.pdf.*

[210] Physicians and practitioners who do not wish to enroll in the Medicare program may ''opt-out'' of Medicare. This means that neither the physician, nor the beneficiary submits the bill to Medicare for services rendered. Instead, the beneficiary pays the physician out-of-pocket and neither party is reimbursed by Medicare. A private contract is signed between the physician and the beneficiary that states that neither one can receive payment from Medicare for the services that were performed. See *https://data.cms.gov/provider-characteristics/medicare-provider-supplier-enrollment/opt-out-affidavits.*

[211] *https://www.medicaid.gov/medicaid/benefits/prevention/index.html.*

patient's health care experience, health outcomes, and health care costs exists [212] and more recent studies have shown that the quality of the physician-patient relationship is positively associated with functional health among patients.[213] Another study found that higher primary care payment rates reduced mental illness and substance use disorders among non-elderly adult Medicaid enrollees, suggesting that positive spillover from increasing primary care rates also positively impacted behavioral health outcomes.[214] Lastly, research has shown that a reduction in barriers to accessing primary care services has been associated with helping reduce health disparities and the risk of poor health outcomes.[215] [216] These examples illustrate how crucial access to primary care services is for overall beneficiary health and to enable access to other medical services. We solicited comments on primary care services as one of the proposed categories of services subject to the comparative payment rate analysis requirements in proposed § 447.203(b)(2)(i).

Similar to primary care services, both obstetrical and gynecological services and outpatient behavioral health services provide access to preventive and screening services unique to each respective field. A well-woman visit to an obstetrician–gynecologist often provides access to screenings for cervical and breast cancer; screenings for Rh(D) incompatibility, syphilis infection, and hepatitis B virus infection in pregnant persons; monitoring for healthy weight and weight gain in pregnancy; immunization against the human papillomavirus infection; and perinatal depression screenings among other recommended preventive services.[217] [218] Behavioral health care promotes mental health, resilience, and wellbeing; the treatment of mental and substance use disorders; and the support of those who experience and/or are in recovery from these conditions, along with their families and communities. Outpatient behavioral health services can overlap with preventative primary care and obstetrical and gynecological services, for example screening for depression in adults and perinatal depression screenings, but also provide unique preventive and screening services such as screenings for unhealthy alcohol use in adolescents and adults, anxiety in children and adolescents, and eating disorders in adolescents and adults, among other recommended preventive services.[219]

The US is simultaneously experiencing a maternal health crisis and mental health crisis, putting providers of obstetrical and gynecological and outpatient behavioral health services, respectively, at the forefront.[220] [221] According to Medicaid and CHIP Payment and Access Commission (MACPAC), ''Medicaid plays a key role in providing maternity-related services for pregnant women, paying for slightly less than half of all births nationally in 2018.'' [222] Given Medicaid's significant role in maternal health during a time when maternal mortality rates in the US continue to worsen and the racial disparities among mothers continues to widen,[223] [224] accessing obstetrical and gynecological care, including care before, during, and after pregnancy is crucial to positive maternal and infant outcomes.[225] We solicited comments on obstetrical and gynecological services as one of the proposed categories of services subject to the comparative payment rate analysis requirements in proposed § 447.203(b)(2)(ii).

Improving access to behavioral health services is a critical, national issue facing all payors, particularly for Medicaid which plays a crucial role in mental health care access as the single largest payer of services and has a growing role in payment for substance use disorder services, in part due to Medicaid expansion and various efforts by Congress to improve access to behavioral health services.[226] [227] Several studies have found an association between reducing the uninsured rate through increased Medicaid enrollment and improved and expanded access to critically needed behavioral health services.[228] Numerous studies have found positive outcomes associated with Medicaid expansion: increases in the insured rate and access to care and medications for adults with depression, increases in coverage rates and a greater likelihood of being diagnosed with a mental health condition as well as the use of prescription medications for a mental health condition for college students from disadvantaged backgrounds,[229] and a decrease in delayed or forgone necessary care in a nationally representative sample of non-elderly adults with serious psychological distress.[230] While individuals who are covered by Medicaid have better access to behavioral health services compared to people who are uninsured, some coverage gaps remain in access to behavioral health care for many people, including those with Medicaid.

In the proposed rule, we noted that some of the barriers to accessing

[217] Rh(D) incompatibility is a preventable pregnancy compilation where a woman who is Rh negative is carrying a fetus that is Rh positive (Rh factor is a protein that can be found on the surface of red blood cells). When the blood of an Rh-positive fetus gets into the bloodstream of an Rh-negative woman, her body will recognize that the Rh-positive blood is not hers. Her body will try to destroy it by making anti-Rh antibodies. These antibodies can cross the placenta and attack the fetus's blood cells. This can lead to serious health problems, even death, for a fetus or a newborn. Prevention of Rh(D) incompatibility requires screening for Rh negative early in pregnancy (or before pregnancy) and, if needed, giving a medication to prevent antibodies from forming.

behavioral health treatment in Medicaid reflect larger system-wide access problems: overall shortage of behavioral health providers in the United States and relatively small number of psychiatrists who accept any form of insurance or participate in health coverage programs.[231] Particularly for outpatient behavioral health services for Medicaid beneficiaries, one reason physicians are unwilling to accept Medicaid patients is because of low Medicaid payment rates.[232] One study found evidence of low Medicaid payment rates by examining outpatient Medicaid claims data from 2014 in 11 States with a primary behavioral health diagnosis and an evaluation and management (E/M) procedure code of 99213 (Established patient office visit, 20–29 minutes) or 99214 (Established patient office visit, 30–39 minutes) and found that psychiatrists in nine States were paid less, on average, than primary care physicians.[233] These pieces of research and data about the importance of outpatient behavioral health services and the existing challenges beneficiaries face in trying to access outpatient behavioral health services underscore how crucial access to outpatient behavioral health services is, and that adequate Medicaid payment rates for these services is likely to be an important driver of access for beneficiaries. We solicited comments on outpatient behavioral health services as one of the proposed categories of services subject to the comparative payment rate analysis requirements in proposed § 447.203(b)(2)(iii) which we are finalizing as ''Outpatient mental health and substance use disorder services.''

In § 447.203(b)(2)(iv), we proposed to require personal care, home health aide, and homemaker services provided by individual providers and providers employed by an agency in the payment rate disclosure requirements proposed in § 447.203(b)(3)(ii). We noted that many HCBS providers nationwide are facing workforce shortages and high staff turnover that have been exacerbated by the COVID–19 pandemic, and these issues and related difficulty accessing HCBS can lead to higher rates of costly, institutional stays for beneficiaries.[234] As with any covered service, the supply of HCBS providers has a direct and immediate impact on beneficiaries' ability to access high quality HCBS, therefore, we included special considerations for LTSS, specifically HCBS, through two proposed provisions in § 447.203. The first provision in proposed paragraph (b)(2)(iv) would require States to include personal care, home health aide, and homemaker services provided by individual providers and providers employed by an agency to be included in the payment rate disclosure in proposed paragraph (b)(3)(ii). The second provision in paragraph (b)(6), discussed in the next section, would require States to establish an interested parties' advisory committee to advise and consult on rates paid to certain HCBS providers. We explained that this provision is intended to help contextualize lived experience of direct care workers and beneficiaries who receive the services they deliver by providing direct care workers, beneficiaries and their authorized representatives, and other interested parties with the ability to make recommendations to the State Medicaid agency regarding the sufficiency of Medicaid payment rates for these specified services to help ensure sufficient provider participation so that these HCBS are accessible to beneficiaries consistent with section 1902(a)(30)(A) of the Act.

The proposed payment rate disclosure would require States to publish the average hourly payment rates made to individual providers and to providers employed by an agency, separately, if the rates vary, for each category of services specified in § 447.203(b)(2)(iv). No comparison to Medicare payment rates would be required in recognition that Medicare generally does not cover and pay for these services, and when these services are covered and paid for by Medicare, the services are very limited and provided on a short-term basis, rather than long-term basis as with Medicaid HCBS. While Medicare covers part-time or intermittent home health aide services (only if a Medicare beneficiary is also getting other skilled services like nursing and/or therapy at the same time) under Medicare Part A (Hospital Insurance) or Medicare Part B (Medical Insurance), Medicare does not cover personal care or homemaker services.[235]

We proposed to require these services be subject to a payment rate disclosure because this rule aims to standardize data and monitoring across service delivery systems with the goal of improving access to care. To remain consistent with the proposed HCBS provisions at § 441.311(d)(2) and (e), where we proposed to require annual State reporting on access and payment adequacy metrics for homemaker, home health aide, and personal care services, we proposed to include these services, provided by individual providers and providers employed by an agency in the FFS payment rate disclosure proposed in 447.203(b)(2). We explained that we selected these specific services because we expect them to be most commonly conducted in individuals' homes and general community settings and, therefore, constitute the vast majority of FFS payments for direct care workers delivering services under FFS. We acknowledged that the proposed analyses required of States in the HCBS provisions at § 441.311(d)(2) and (e) and in the FFS provisions at § 447.203(b)(2) are different, although, unique to assessing access in each program and delivery system. We proposed to include personal care, home health aide, and homemaker services for consistency with HCBS access and payment adequacy provisions, and also to include these services in the proposed provisions of § 447.203(b)(2) to require States to conduct and publish a payment rate disclosure. We noted our belief the latter proposal is important because the payment rate disclosure of personal care, home health aide, and homemaker services would provide CMS with sufficient information, including average hourly payment rates, claims volume, and number of Medicaid enrolled beneficiaries who received a service as specified in proposed § 447.203(b)(3)(ii), from States for ensuring compliance with section 1902(a)(30)(A) of the Act, which requires that payments be consistent with efficiency, economy, and quality of care and sufficient to enlist enough providers so that care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area.

Additionally, we explained that this proposal to include personal care, home health aide, and homemaker services provided by individual providers and providers employed by an agency is

supported by the statutory mandate at section 2402(a) of the Affordable Care Act. Among other things, section 2402(a) of the Affordable Care Act directs the Secretary to promulgate regulations ensuring that all States develop service systems that ensure that there is an adequate number of qualified direct care workers to provide self-directed services. We solicited comments on personal care, home health aide, and homemaker services provided by individual providers and providers employed by an agency as the proposed categories of services subject to the payment rate disclosure requirements in proposed § 447.203(b)(2)(iv).

After discussing our proposed categories of services for the comparative payment rate analysis and payment rate disclosure requirements, we discussed the similarities and differences between the proposed rule and services previously included in the AMRP requirements. We explained that while the proposed rule would eliminate the previous triennial AMRP process, there are some similarities between the service categories for which we proposed to require a comparative payment rate analysis or payment rate disclosure in § 447.203(b)(2) and those subject to the previous AMRP requirements under § 447.203(b)(5)(ii). Specifically, § 447.203(b)(5)(ii)(A) previous required the State agency to use data collected through the previous AMRP process to provide a separate analysis for each provider type and site of service for primary care services (including those provided by a physician, FQHC, clinic, or dental care). We proposed the comparative payment rate analysis include primary care services, without any parenthetical description. We explained our belief this is appropriate because the proposed rule includes a comparative payment rate analysis that is at the Current Procedural Terminology (CPT) or Healthcare Common Procedure Coding System (HCPCS) code level, as applicable, the specifics for which are discussed later in this section. This approach requires States to perform less sub-categorization of the data analysis, and as discussed later, the analysis would exclude FQHCs and clinics.

We explained that the previous AMRP process also includes in § 447.203(b)(5)(ii)(C) behavioral health services (including mental health and substance use disorder); however, we proposed that the comparative payment rate analysis only would include outpatient behavioral health services to narrow the scope of the analysis by excluding inpatient behavioral health services (including inpatient behavioral health services furnished in psychiatric residential treatment facilities, institutions for mental diseases, and psychiatric hospitals). While we acknowledged that behavioral health services encompass a broad range of services provided in a wide variety of settings, from outpatient screenings in a physician's office to inpatient hospital treatment, we proposed to narrow the scope of behavioral health services to outpatient services only to focus the comparative payment rate analysis on ambulatory care provided by practitioners in an office-based setting without duplicating existing requirements, or analysis that must be completed to satisfy existing requirements, for upper payment limits (UPL) and the supplemental payment reporting requirements under section 1903(bb) of the Act, as established by Division CC, Title II, Section 202 of the CAA, 2021.

The proposed categories of services are delivered as ambulatory care where the patient does not need to be hospitalized to receive the service being delivered. Particularly for behavioral health services, we proposed to narrow the scope to outpatient behavioral health services to maintain consistency within the categories of service included in the proposed comparative payment rate analysis and payment rate disclosure all being classified as ambulatory care. Additionally, as discussed further in this section of the final rule, we proposed that the comparative payment rate analysis would be conducted on a CPT/HCPCS code level, focusing on E/M codes. By narrowing the comparative payment rate analysis to E/M CPT/HCPCS codes, we proposed States' analyses includes a broad range of core services which would cover a variety of commonly provided services that fall into the categories of service proposed in paragraphs (b)(2)(i) through (iii). To balance State administrative burden with our oversight of State compliance with the access requirement in section 1902(a)(30)(A) of the Act, we also proposed to limit the services to those delivered primarily by physicians and NPPs in an office-based setting for primary care, obstetrical and gynecological, and outpatient behavioral health services. By excluding facility-based services, particularly inpatient behavioral health services, we explained our intent to ensure the same E/M CPT/HCPCS code-level methodology could be used for all categories of services included in the proposed comparative payment rate analysis, including the use of E/M CPT/HCPCS codes used for outpatient behavioral health services. Rather than fee schedule rates, States often pay for inpatient behavioral health services using prospective payment rate methodologies, such as DRGs, or interim payment methodologies that are reconciled to actual cost.[236] These methodologies pay for a variety of services delivered by multiple providers that a patient receives during an inpatient hospital stay, rather than a single ambulatory service billed by a single provider using a single CPT/HCPCS code. Variations in these payment methodologies and what is included in the rate could complicate the proposed comparison to FFS Medicare rates for the services identified in paragraphs (b)(2)(i) through (iii) and could frustrate comparisons between States and sometimes even within a single State. Therefore, we explained that we do not believe the E/M CPT/HCPCS code level methodology proposed for the comparative payment rate analysis would be feasible for inpatient behavioral health services or other inpatient and facility-based services in general.

While we considered including inpatient behavioral health services as one of the proposed categories of services in the comparative payment rate analysis, we ultimately did not because we already collect and review Medicaid and Medicare payment rate data for inpatient behavioral health services through annual UPL and supplemental payment reporting requirements under section 1903(bb) of the Act. SMDL 13–003 discusses the annual submission of State UPL demonstrations for inpatient hospital services, among other services, including a complete data set of payments to Medicaid providers and a reasonable estimate of what Medicare would have paid for the same services.[237] [238] UPL requirements go beyond the proposed requirements by requiring States to annually submit the following data for all inpatient hospital services, depending on the State's UPL methodology, on a provider level basis:

[236] *https://www.cms.gov/icd10m/version37-fullcode-cms/fullcode_cms/Design_and_development_of_the_Diagnosis_Related_Group_(DRGs).pdf.*

[238] If a State's payment methodology describes payment at no more than 100 percent of the Medicare rate for the period covered by the UPL, then the State does not need to submit a demonstration. See FAQ ID: 92201. *https://www.medicaid.gov/faq/index.html?search_api_fulltext=ID%3A92201&sort_by=field_faq_date&sort_order=DESC.*

Medicaid charges, Medicaid base payments, Medicaid supplemental payments, Medicaid discharges, Medicaid case mix index, Medicaid inflation factors, other adjustments to Medicaid payments, Medicaid days, Medicare costs, Medicare payments, Medicare discharges, Medicare case mix index, Medicare days, UPL inflation factors, Medicaid provider tax cost, and other adjustments to the UPL amount. If we proposed and finalized inpatient behavioral health services as one of the categories of services subject to the comparative payment rate analysis, then this final rule would require States to biennially submit the following data for only inpatient behavioral health services on a CPT/HCPCS code level basis: base Medicaid FFS fee schedule payment rate for select E/M CPT/HCPCS codes (accounting for rate variation based on population (pediatric and adult), provider type, and geographical location, as applicable), the corresponding Medicare payment rates, Medicaid base payment rate as a percentage of Medicare payment rate, and the number of Medicaid-paid claims. While the UPL requires aggregated total payment and cost data at the provider level and the proposed comparative payment rate analysis calls for more granular base payment data at the CPT/HCPCS code level, the UPL overall requires aggregate Medicaid provider payment data for both base and supplemental payments as well as more detailed data for calculating what Medicare would have paid as the upper payment amount. Therefore, we explained that proposing to require States include Medicaid and Medicare payment rate data for inpatient behavioral health services in the comparative payment rate analysis would be duplicative of existing UPL requirements that are inclusive of and more comprehensive than the payment information proposed in the comparative payment rate analysis.

Additionally, section 1903(bb) of the Act requires us to establish a Medicaid supplemental payment reporting system that collects detailed information on State Medicaid supplemental payments, including total quarterly supplemental payment expenditures per provider; information on base payments made to providers that have received a supplemental payment; and narrative information describing the methodology used to calculate a provider's payment, criteria used to determine which providers qualify to receive a payment, and explanation describing how the supplemental payments comply with section 1902(a)(30)(A) of the Act. Section 1903(bb)(1)(C) of the Act requires us to make State-reported supplemental payment information publicly available. For States making or wishing to make supplemental payments, including for inpatient behavioral health services, States must report supplemental payment information to us, and we must make that information public and, therefore, transparent. Although the proposed rule sought to increase transparency, with the proposed provisions under § 447.203(b)(1) through (5) focusing on transparency of FFS base Medicaid FFS fee schedule payment rate, including inpatient behavioral health services as a category of service in § 447.203(b)(2) subject to the comparative payment rate analysis would be duplicative of the existing upper payment limit and supplemental payment reporting requirements, which capture and make transparent base and supplemental payment information for inpatient behavioral health services. However, we solicited comments regarding our decision not to include inpatient behavioral health services as one of the categories of services subject to the comparative payment rate analysis requirements in proposed § 447.203(b)(2) in the final rule, should we finalize the comparative payment rate analysis proposal.

The AMRP process also previously included in § 447.203(b)(5)(ii)(D) pre- and post-natal obstetric services including labor and delivery; we proposed to include these services in the comparative payment rate analysis requirements under proposed § 447.203(b)(2)(ii), but we explained in the proposed rule that we intended to broaden the scope of this category of services to include both obstetrical and gynecological services. This expanded proposed provision would capture a wider array of services, both obstetrical and gynecological services, for States and CMS to assess and ensure access to care in Medicaid FFS is at least as great for beneficiaries as is generally available to the general population in the geographic area, as required by with section 1902(a)(30)(A) of the Act. Lastly, similar to previous § 447.203(b)(5)(ii)(E), which specifies that home health services were included in the previous AMRP process, we proposed to include personal care, home health aide, and homemaker services, provided by individual providers and providers employed by an agency. This refined proposed provision would help ensure a more standardized effort to monitor access across Medicaid delivery systems, including for Medicaid-covered LTSS. We explained our belief that this proposal also would address public comments received in response to the February 2022 RFI.[239] Many commenters highlighted the workforce crisis among direct care workers and the impact on HCBS. Specifically, commenters indicated that direct care workers receive low payment rates, and for agency-employed direct care workers, home health agencies often cite low Medicaid payment as a barrier to raising wages for workers. Commenters suggested that States should be collecting and reporting to CMS the average of direct care worker wages while emphasizing the importance of data transparency and timeliness. We explained that we were responding to these public comments by proposing to require States to transparently publish a payment rate disclosure that collects and reports the average hourly rate paid to individual providers and providers employed by an agency for services provided by certain direct care workers (personal care, home health aide, and homemaker services).

In public comments that we received during the public comment period for the 2015 final rule with comment period, many commenters requested that we require States to publish access to care analyses for pediatric services, including pediatric primary care, behavioral health, and dental care. At the time, we responded that pediatric services did not need to be specified in the required service categories because States were already required through § 447.203(b)(1)(iv) to consider the characteristics of the beneficiary population, ''including . . . payment variations for pediatric and adult populations,'' within the previous AMRPs.[240] Although we proposed to eliminate the previous AMRP requirements, we noted that the proposed rule would continue to include special considerations for pediatric populations that are addressed in the discussion of proposed § 447.203(b)(2).

We proposed to eliminate the following from the previous AMRP process without replacement in the comparative payment rate analysis requirement, § 447.203(b)(5)(ii)(F): Any additional types of services for which a review is required under previous § 447.203(b)(6); § 447.203(b)(5)(ii)(G): Additional types of services for which

[239] Summary of Public Comments in response to the CMS 2022 Request for Information: Access to Coverage and Care in Medicaid & CHIP. December 2022. For the report, see *https://www.medicaid.gov/medicaid/access-care/downloads/access-rfi-2022-report.pdf*.

[240] 80 CFR 67576 at 67592.

the State or CMS has received a significantly higher than usual volume of beneficiary, provider or other interested party access complaints for a geographic area, including complaints received through the mechanisms for beneficiary input consistent with previous § 447.203(b)(7); and § 447.203(b)(5)(ii)(H): Additional types of services selected by the State.

We proposed to eliminate § 447.203(b)(5)(ii)(F) and (G) without a direct replacement because the proposed State Analysis Procedures for Rate Reduction or Restructuring described in § 447.203(c) are inclusive of and more refined than the previous AMRP requirements for additional types of services for which a review is required under previous § 447.203(b)(6). Specifically, as discussed later in this section, we proposed in § 447.203(c)(1) that States seeking to reduce provider payment rates or restructure provider payments would be required to provide written assurance and relevant supporting documentation that three conditions are met to qualify for a streamlined SPA review process, including that required public processes yielded no significant access to care concerns for beneficiaries, providers, or other interested parties, or if such processes did yield concerns, that the State can reasonably respond to or mitigate them, as appropriate. If the State is unable to meet all three of the proposed conditions for streamlined SPA review, including the absence of or ability to appropriately address any access concern raised through public processes, then the State would be required to submit additional information to support that its SPA is consistent with the access requirement in section 1902(a)(30)(A) of the Act, as proposed in § 447.203(c)(2). We proposed to modify this aspect of the previous AMRP process, because our implementation experience since the 2017 SMDL has shown that States typically have been able to work directly with the public (including beneficiaries and beneficiary advocacy groups, and providers) to resolve access concerns, which emphasizes that public feedback continues to be a valuable source of knowledge regarding access in Medicaid. We explained our belief that this experience demonstrates that public processes that occur before the submission of a payment SPA to CMS often resolve initial access concerns, and where concerns persist, they will be addressed through the SPA submission and our review process, as provided in proposed § 447.203(c). Rather than services affected by proposed provider rate reductions or restructurings (previous § 447.203(b)(5)(ii)(F)) and services for which the State or CMS received significantly higher than usual volume of complaints (previous § 447.203(b)(5)(ii)(G)) being addressed through the previous AMRP process, these services subject to rate reductions or restructurings and services where a high volume of complaints have been expressed would now be addressed by the State analysis procedures in proposed § 447.203(c). We noted our belief that this approach would ensure public feedback is fully considered in the context of a payment SPA, without the need to specifically require a comparative payment rate analysis for the service(s) subject to payment rate reduction or restructuring under proposed § 447.203(b)(2).

Lastly, we proposed to eliminate previous § 447.203(b)(5)(ii)(H), requiring the previous AMRP process to include analysis regarding ''Additional types of services selected by the State,'' without a direct replacement because our implementation experience has shown that the majority of States did not select additional types of service to include in their previous AMRPs beyond the required services § 447.203(b)(5)(ii)(A) through (G). When assessing which services to include in the proposed rule, we determined that the absence of an open-ended type of service option, similar to § 447.203(b)(5)(ii)(H) is unlikely to affect the quality of the analysis we proposed to require and therefore, we did not include it in the proposed set of services for the comparative payment rate analysis. These proposed shifts in policy were informed by our implementation experience and our consideration of State concerns about the burden and value of the previous AMRP process.

In paragraph (b)(3), we proposed that the State agency would be required to develop and publish, consistent with the publication requirements described in proposed § 447.203(b)(1) for payment rate transparency data, a comparative payment rate analysis and payment rate disclosure. This comparative payment rate analysis is divided into two sections based on the categories of services and the organization of each analysis or disclosure. Paragraph (b)(3)(i) describes the comparative payment rate analysis for the categories of services described in paragraphs (b)(2)(i) through (iii): primary care services, obstetrical and gynecological services, and outpatient behavioral health services. Paragraph (b)(3)(ii) describes the payment rate disclosure for the categories of service described in paragraphs (b)(2)(iv): personal care, home health aide, and homemaker services provided by individual providers and providers employed by an agency.

Specifically, in paragraph (b)(3)(i), we proposed that for the categories of service described in paragraphs (b)(2)(i) through (iii), the State's analysis would compare the State's Medicaid FFS payment rates to the most recently published Medicare payment rates effective for the same time period for the E/M CPT/HCPCS codes applicable to the category of service. The proposed comparative payment rate analysis of FFS Medicaid payment rates to FFS Medicare payment rates would be conducted on a code-by-code basis at the CPT/HCPCS code level using the most current set of codes published by us. We explained that this proposal is intended to provide an understanding of how Medicaid payment rates compare to the payment rates established and updated under the FFS Medicare program.

We stated that we would expect to publish the E/M CPT/HCPCS codes to be used for the comparative payment rate analysis in subregulatory guidance along with the final rule, if this proposal is finalized. We proposed that we would identify E/M CPT/HCPCS codes to be included in the comparative payment rate analysis based on the following criteria: the code is effective for the same time period of the comparative payment rate analysis; the code is classified as an E/M CPT/HCPCS code by the American Medical Association (AMA) CPT Editorial Panel; the code is included on the Berenson-Eggers Type of Service (BETOS) code list effective for the same time period as the comparative payment rate analysis and falls into the E/M family grouping and families and subfamilies for primary care services, obstetrics and gynecological services, and outpatient behavioral services (now called outpatient mental health and substance use disorder services in this final rule); and the code has an A (Active), N (Non-Covered), R (Restricted), or T (Injections) code status on the Medicare PFS with a Medicare established relative value unit (RVU) and payment amount for the same time period of the comparative payment rate analysis.[241] [242] [243]

The CMS-published list of E/M CPT/HCPCS codes subject to the comparative

[241] *https://www.ama-assn.org/practice-management/cpt/cpt-evaluation-and-management.*

[242] *https://data.cms.gov/provider-summary-by-type-of-service/provider-service-classifications/restructured-betos-classification-system.*

[243] *https://www.cms.gov/medicare/medicare-fee-for-service-payment/physicianfeesched.*

payment rate analysis would classify each E/M CPT/HCPCS code into a corresponding category of service as described in proposed § 447.203(b)(2)(i) through (iii). As previously discussed, by narrowing the comparative payment rate analysis to CMS-specified E/M CPT/HCPCS codes, we proposed States' analyses include a broad range of core services that would cover a variety of commonly provided services that fall into the categories of service proposed in paragraphs (b)(2)(i) through (iii), while also limiting the services to those delivered primarily by physicians and NPPs in an office-based setting. Based on the categories of services specified in proposed § 447.203(b)(2)(i) through (iii), we stated that we would expect the selected E/M CPT/HCPCS codes to fall under mandatory Medicaid benefit categories, and therefore, that all States would cover and pay for the selected E/M CPT/HCPCS codes. To clarify, we did not narrow the list of E/M CPT/HCPCS codes on the basis of Medicare coverage of a particular code. We are cognizant that codes with N (Non-Covered), R (Restricted), or T code statuses have limited or no Medicare coverage; however, Medicare may establish RVUs, and payment amounts for these codes. Therefore, when Medicare does establish RVUs and payment amounts for codes with N (Non-Covered), R (Restricted), or T (Injections) code statuses on the Medicare PFS, we proposed to include these codes in the comparative payment rate analysis to ensure the analysis includes a comprehensive set of codes, for example pediatric services, including well child visits (for example, 99381 through 99384), that are commonly provided services that fall into the categories of service proposed in paragraphs (b)(2)(i) through (iii) and delivered primarily by physicians and NPPs in an office-based setting, as previously described.

We proposed that the comparative payment rate analysis would be updated no less than every 2 years. Therefore, prior to the start of the calendar year in which States would be required to update their comparative payment rate analysis, we noted our intent to publish an updated list of E/M CPT/HCPCS codes for States to use for their comparative payment rate analysis updates through subregulatory guidance. The updated list of E/M CPT/HCPCS codes would include changes made by the AMA CPT Editorial Panel (such as additions, removals, or amendments to a code definition where there is a change in the set of codes classified as an E/M CPT/HCPCS code billable for primary care services, obstetrics and gynecological services, or outpatient behavioral services) and changes to the Medicare PFS based on the most recent Medicare PFS final rule (such as changes in code status or creation of Medicare-specific codes).[244]

We explained that we would intend to publish the initial and subsequent updates of the list of E/M CPT/HCPCS codes subject to the comparative payment rate analysis in a timely manner that allows States approximately one full calendar year between the publication of the CMS-published list of E/M CPT/HCPCS codes and the due date of the comparative payment rate analysis. We may issue a correction to the Medicare PFS after the final rule is in effect, and this correction may impact our published list of E/M CPT/HCPCS codes. In this instance, for codes included on our published list of E/M CPT/HCPCS codes that are affected by a correction to the most recent Medicaid PFS final rule, we may add or remove an E/M CPT/HCPCS code from the published list, as appropriate, depending on the change to the Medicare PFS. Alternatively, depending on the nature of the change, we stated that we would expect States to accurately identify which code(s) are used in the Medicaid program during the relevant period that best correspond to the CMS-identified E/M CPT/HCPCS code(s) affected by the Medicare PFS correction. We would expect States to rely on the CMS published list of E/M CPT/HCPCS codes subject to the comparative payment rate analysis for complying with the proposed requirements in paragraphs (b)(2) through (4).

We acknowledged that there are limitations to relying on E/M CPT/HCPCS codes to select payment rates for comparative payment rate analysis to aid States, CMS, and other interested parties in assessing if payments are consistent with efficiency, economy, and quality of care and are sufficient to enlist enough providers so that care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area. Providers across the country and within each State deliver a variety of services to patients, including individuals with public and private sources of coverage, and then bill them under a narrow subset of CPT/HCPCS codes that fit into the E/M classification as determined by the AMA CPT Editorial Panel. The actual services delivered can require a wide array of time, skills, and experience of the provider which must be represented by a single five-digit code for billing to receive payment for the services delivered. While there are general principles that guide providers in billing the most representative E/M CPT/HCPCS code for the service they delivered, two providers might perform substantially similar activities when delivering services and yet bill different E/M CPT/HCPCS codes for those activities, or bill the same E/M CPT/HCPCS code for furnishing two very different services. The E/M CPT/HCPCS code itself is not a tool for capturing the exact service that was delivered, but medical documentation helps support the billing of a particular E/M CPT/HCPCS code.

Although they do not encompass all Medicaid services covered and paid for in the Medicaid program which are subject to the requirements in section 1902(a)(30)(A) of the Act, E/M CPT/HCPCS codes are some of the most commonly billed codes and including them in the comparative payment rate analysis would allow us to uniformly compare Medicaid payment rates for these codes to Medicare PFS rates. As such, to balance administrative burden on States and our enforcement responsibilities, we proposed to use E/M CPT/HCPCS codes in the comparative payment rate analysis to limit the analysis to how much Medicaid and the FFS Medicare program would pay for services that can be classified into a particular E/M CPT/HCPCS code. We solicited comments on the proposed comparative payment rate analysis requirement in § 447.203(b)(3)(i), including the proposed requirement to conduct the analysis at the CPT/HCPCS code level, the proposed criteria that we would apply in selecting E/M CPT/HCPCS codes for inclusion in the required analysis, and the proposed requirement for States to compare Medicaid payment rates for the selected E/M CPT/HCPCS codes to the most recently published Medicare non-facility payment rate as established in the annual Medicare PFS final rule effective for the same time period, which is discussed in more detail later in this rule when describing the proposed provisions of § 447.203(b)(3)(i)(C).

In paragraph (b)(3)(i), we further proposed that the State's comparative payment rate analysis would be required to meet the following requirements: (A) the analysis must be organized by category of service as described in § 447.203(b)(2)(i) through (iii); (B) the analysis must clearly identify the base Medicaid FFS fee

[244] *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.*

schedule payment rate for each E/M CPT/HCPCS code identified by us under the applicable category of service, including, if the rates vary, separate identification of the payment rates by population (pediatric and adult), provider type, and geographical location, as applicable; (C) the analysis must clearly identify the Medicare PFS non-facility payment rates effective for the same time period for the same set of E/M CPT/HCPCS codes, and for the same geographical location as the base Medicaid FFS fee schedule payment rate, that correspond to the Medicaid payment rates identified under paragraph (b)(3)(i)(B); (D) the analysis must specify the Medicaid payment rate identified under paragraph (b)(3)(i)(B) as a percentage of the Medicare payment rate identified under paragraph (b)(3)(i)(C) for each of the services for which the Medicaid payment rate is published under paragraph (b)(3)(i)(B); and (E) the analysis must specify the number of Medicaid-paid claims within a calendar year for each of the services for which the Medicaid payment rate is published under paragraph (b)(3)(i)(B). We solicited comments on the proposed requirements and content of the items in proposed § 447.203(b)(3)(i)(A) through (E).

In paragraph (b)(3)(i)(A), we proposed to require States to organize their comparative payment rate analysis by the service categories described in paragraphs (b)(2)(i) through (iii). We explained that this proposed requirement is included to ensure the analysis breaks out the payment rates for primary care services, obstetrical and gynecological services, and outpatient behavioral health services separately for individual analyses of the payment rates for each CMS-selected E/M CPT/HCPCS code, grouped by category of service. We solicited comments on the proposed requirement for States to break out their payment rates at the CPT/HCPCS code level for primary care services, obstetrical and gynecological services, and outpatient behavioral health services, separately, in the comparative payment rate analysis as specified in proposed § 447.203(b)(3)(i)(A).

In paragraph (b)(3)(i)(B), after organizing the analysis by § 447.203(b)(2)(i) through (iii) categories of service and CMS-specified E/M CPT/HCPCS code, we proposed to require States to clearly identify the Medicaid base payment rate for each code, including, if the rates vary, separate identification of the payment rates by population (pediatric and adult), provider type, and geographical location, as applicable. We proposed that the Medicaid base payment rate in the comparative payment rate analysis would only include the State's Medicaid fee schedule rate, that is, the State's Medicaid base rate for each E/M CPT/HCPCS code. By specifying the services included in the comparative payment rate analysis by E/M CPT/HCPCS code, we noted that we would expect the Medicaid base payment rate in the comparative payment rate analysis to only include the State's Medicaid fee schedule rate for that particular E/M CPT/HCPCS code as published on the State's Medicaid fee schedule effective for the same time period covered by the comparative payment rate analysis. As an example, the State's Medicaid fee schedule rate as published on the Medicaid fee schedule effective for the time period of the comparative payment rate analysis for 99202 is listed as $50.00. This rate would be the Medicaid base payment rate in the State's comparative payment rate analysis for comparison to the Medicare non-facility rate, which is discussed later in this section.

Medicaid base payment rates are typically determined through one of three methods: the resource-based relative value scale (RBRVS), a percentage of Medicare's fee, or a State-developed fee schedule using local factors.[245] The RBRVS system, initially developed for the Medicare program, assigns a relative value to every physician procedure based on the complexity of the procedure, practice expense, and malpractice expense. States may also adopt the Medicare fee schedule rate, which is also based on RBRVS, but select a fixed percentage of the Medicare amount to pay for Medicaid services. States can develop their own PFSs, typically determined based on market value or an internal process, and often do this in situations where there is no Medicare or private payer equivalent or when an alternate payment methodology is necessary for programmatic reasons. States often adjust their payment rates based on provider type, geography, site of services, patient age, and in-State or out-of-State provider status. Additionally, base Medicaid FFS fee schedule payment rate can be paid to physicians in a variety of settings, including clinics, community health centers, and private offices.

We acknowledged that only including Medicaid base payments in the analysis does not necessarily represent all of a provider's revenues that may be related to furnishing services to Medicaid beneficiaries, and that other revenues not included in the proposed comparative analysis may be relevant to a provider's willingness to participate in Medicaid (such as beneficiary cost sharing payments, and supplemental payments). We discussed that public comments we received on the 2011 proposed rule and responded to in the 2015 final rule with comment period regarding the previous AMRPs expressed differing views regarding which provider ''revenues'' should be included within comparisons of Medicaid to Medicare payment rates. One commenter ''noted that the preamble of the 2011 proposed rule refers to 'payments' and 'rates' interchangeably but that courts have defined payments to include all Medicaid provider revenues rather than only Medicaid FFS rates.'' The commenter stated that if the final rule consider[ed] all Medicaid revenues received by providers, States may be challenged to make any change to the Medicaid program that might reduce provider revenues.'' [246] We proposed to narrow the base Medicaid FFS fee schedule payment rate to the amount listed on the State's fee schedule in order for the comparative payment rate analysis to accurately and analogously compare Medicaid fee schedule rates to Medicare non-facility payment rate as established in the annual Medicare PFS final rule for a calendar year.

We explained our belief that this approach would represent the best way to create a consistent metric across States against which to evaluate access. Specifically, we did not propose to include supplemental payments in the comparative payment rate analysis. Requiring supplemental payment data be collected and included under this rule would be duplicative of existing requirements. State supplemental payment and DSH payment data are already subject to our review in various forms, such as through DSH audits for DSH payments, and through annual upper payment limits demonstrations, and through supplemental payment reporting under section 1903(bb) of the Act.[247] [248] As such, we explained that

[248] CMS State Medicaid Director Letter: SMDL 21–006. December 2021. New Supplemental Payment Reporting and Medicaid Disproportionate Share Hospital Requirements under the Consolidated Appropriations Act, 2021. Available at *https://www.medicaid.gov/federal-policy-guidance/downloads/smd21006.pdf.*

we do not see a need to add additional reporting requirements concerning supplemental payments as part of the proposals in this rulemaking to allow us the opportunity to review the data. Also, supplemental payments are often made for specific Medicaid-covered services and targeted to a subset of Medicaid-participating providers; not all Medicaid-participating providers, and not all providers of a given Medicaid-covered service, may receive supplemental payments in a State. Therefore, including supplemental payments in the comparative payment rate analysis would create additional burden for States without then also providing an accurate benchmark of how payments may affect beneficiary access due to the potentially varied and uneven distribution of supplemental payments. Accordingly, we proposed to require that States conduct the comparative payment rate analysis for only Medicaid base payment rates for selected E/M CPT/HCPCS codes. For each proposed category of service listed in paragraphs (b)(2)(i) through (iii), this would result in a transparent and parallel comparison of Medicaid base payment rates that all Medicaid-participating providers of the service would receive to the payment rates that Medicare would pay for the same E/M CPT/HCPCS codes.

Additionally, in paragraph (b)(3)(i)(B), we proposed that, if the States' payment rates vary, the Medicaid base payment rates must include a breakdown by payment rates paid to providers delivering services to pediatric and adult populations, by provider type, and geographical location, as applicable, to capture this potential variation in the State's payment rates. This proposed provision to breakdown the Medicaid payment rate is first stated in proposed paragraph (b)(2) and carried through in proposed paragraph (b)(3)(i)(B) to provide clarity to States about how the Medicaid payment rate should be reported in the comparative payment rate analysis.

In paragraph (b)(3)(i)(C), we proposed to require States' comparative payment rate analysis clearly identify the Medicare non-facility payment rates as established in the annual Medicare PFS final rule effective for the same time period for the same set of E/M CPT/HCPCS codes, and for the same geographical location, that correspond to the Medicaid payment rates identified under paragraph (b)(3)(i)(B), including separate identification of the payment rates by provider type. We did not propose to establish a threshold percentage of Medicare non-facility payment rates that States would be required to meet when setting their Medicaid payment rates. Rather, we proposed to use Medicare non-facility payment rates as established in the Medicare PFS final rule for a calendar year as a benchmark to which States would compare their Medicaid payment rates to inform their and our assessment of whether the State's payment rates are compliant with section 1902(a)(30)(A) of the Act. We explained that benchmarking against FFS Medicare, another of the nation's large public health coverage programs, serves as an important data point in determining whether payment rates are likely to be sufficient to ensure access for Medicaid beneficiaries at least as great as for the general population in the geographic area, and whether any identified access concerns may be related to payment sufficiency. Similar to Medicaid, Medicare provides health coverage for a significant number of Americans across the country. In December 2023, total Medicaid enrollment was at 77.9 million individuals [249] while total Medicare enrollment was at 66.8 million individuals.[250] [251] Both the Medicare and Medicaid programs cover and pay for services provided to beneficiaries residing in every State and territory of the United States. As previously described, Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year for covered, non-covered, and limited coverage services generally are determined on a national level as well as adjusted to reflect the variation in practice costs from one geographical location to another. Medicare also ensures that their payment rate data are publicly available in a format that can be analyzed. The accessibility and consistency of the Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year, compared to negotiated private health insurance payment rates that typically are considered proprietary information and, therefore, not generally available to the public, makes Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year an available and reliable comparison point for States to use in the comparative payment rate analysis.

Additionally, Medicare is widely accepted nationwide according to recent findings from the National Electronic Health Records Survey. In 2019, 95 percent of physicians accepting new patients overall, and 89 percent of office-based physicians, were accepting new Medicare patients, and the percentage of office-based physicians accepting new Medicare patients has remained stable since 2011 when the value was 88 percent, with modest fluctuations in the years in between.[252] In regards to physician specialties that align with the categories of services in this rule, 81 percent of general practice/family medicine physicians and 81 percent of physicians specializing in internal medicine were accepting new Medicare patients, 93 percent of physicians specializing obstetrics and gynecology were accepting new Medicare patients, and 60 percent of psychiatrists were accepting new Medicare patients in 2019. Although the percentage of psychiatrists who accept Medicare is lower than other types of physicians providing services included in the comparative payment rate analysis, this circumstance is not unique to Medicare amongst payers. For example, 60 percent of psychiatrists were also accepting new privately insured patients in 2019.[253] Therefore, the decreased rate of acceptance by psychiatrists relative to certain other physician specialists does not make Medicare an inappropriate benchmark when evaluated against other options for comparison.[254]

Historically, Medicare has low rates of physicians formally opting out of the Medicare program with 1 percent of physicians consistently opting out between 2013 and 2019 and of that 1 percent of physicians opting out of Medicare, 42 percent were

[249] *https://www.medicaid.gov/medicaid/national-medicaid-chip-program-information/downloads/December-2022-medicaid-chip-enrollment-trend-snapshot.pdf.*

[250] Total Medicare enrollment equals the Tot_Benes variable in the Medicare Monthly Enrollment Data for December (Month) 2023 (Year) at the national level (Bene_Geo_Lvl). Tot_Benes is a count of all Medicare beneficiaries, including beneficiaries with Original Medicare and beneficiaries with Medicare Advantage and Other Health Plans. We utilized the count of all Medicare beneficiaries because Original Medicare, Medicare Advantage, and other Health Plans offer fee-for-service payments to providers. See the Medicare Monthly Enrollment Data Dictionary for more information about the variables in the Medicare Monthly Enrollment Data: *https://data.cms.gov/sites/default/files/2023-02/1ec24f76-9964-4d00-9e9a-78bd556b7223/Medicare%20Monthly%20Enrollment_Data_Dictionary%2020230131_508.pdf.*

psychiatrists.[255] This information suggests that Medicare's payment rates generally are consistent with a high level of physician willingness to accept new Medicare patients, with the vast majority of physicians willing to accept Medicare's payment rates. For the reasons previously described, we proposed to use Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year as a national benchmark for States to compare their Medicaid payment rates in the comparative payment rate analysis because we believe that the Medicare payment rates for these services are likely to serve as a reliable benchmark for a level of payment sufficient to enlist providers to furnish the relevant services to an individual. We solicited comments on the proposed use of Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year as a benchmark for States to compare their Medicaid payment rates to in the comparative payment rate analysis requirements in proposed § 447.203(b)(3)(i) to help assess if Medicaid payments are consistent with efficiency, economy, and quality of care and are sufficient to enlist enough providers so that care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area.

In paragraph (b)(3)(i)(C), we proposed to require States to compare their Medicaid payment rates to the Medicare non-facility payment rates as established in the annual Medicare PFS final rule effective for the same time period as the same set of E/M CPT/HCPCS codes paid under Medicaid as specified under paragraph (b)(3)(i)(B) of this section, including separate identification of the payment rates by provider type. We proposed to require States to compare their payment rates to the corresponding Medicare PFS non-facility rates because we are seeking a payment analysis that compares Medicaid payment rates to Medicare payment rates at comparable location of service delivery (that is, in a non-clinic, non-hospital, ambulatory setting such as a physician's office). States often pay physicians operating in an office based on their Medicaid fee schedule whereas they may pay physicians operating in hospitals or clinics using an encounter rate. The Medicaid fee schedule rate typically reflects payment for an individual service that was rendered, for example, an office visit that is billed as a single CPT/HCPCS code. An encounter rate often reflects reimbursement for total facility-specific costs divided by the number of encounters to calculate a per visit or per encounter rate that is paid to the facility for all services received during an encounter, regardless of which specific services are provided during a particular encounter. For example, the same encounter rate may be paid for a beneficiary who has an office visit with a physician, a dental examination and cleaning from a dentist, and laboratory tests and for a beneficiary who receives an office visit with a physician and x-rays. Encounter rates are typically paid to facilities, such as hospitals, FQHCs, RHCs, or clinics, many of which function as safety net providers that offer a wide variety of medical services. Within the Medicaid program, encounter rates can vary widely in the rate itself and services paid for through the encounter rate. We explained that States demonstrating the economy and efficiency of their encounter rates would be an entirely different exercise to the fee schedule rate comparison proposed in this rule because encounter rates are often based on costs unique to the provider, and States often require providers to submit cost reports to States for review to support payment of the encounter rate. Comparing cost between the Medicaid and Medicare program would require a different methodology, policies, and oversight than the comparative payment rate analysis requirement that we proposed due to the differences within and between each program. While the Medicare program has a broad, national policy for calculating encounter rates for providers, including prospective payment systems for hospitals, FQHCs, and other types of facilities, Medicare calculates these encounter rates differently than States may calculate analogous rates in Medicaid. Therefore, we explained that disaggregating each of their encounter rates and services covered in each encounter rate to compare to Medicare's encounter rates would be challenging for States.

From that logic, we likewise determined that the Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year would afford the best point of comparison because it is the most accurate and most analogous comparison of a service-based access analysis using Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year as a benchmark to compare Medicaid fee schedule rates on a CPT/HCPCS code level basis, as opposed to an encounter rate which could include any number of services or specialties. The Medicare non-facility payment rate as established in the annual Medicare PFS final rule for a calendar year is described as ''. . . the fee schedule amount when a physician performs a procedure in a non-facility setting such as the office'' and ''[g]enerally, Medicare gives higher payments to physicians and other health care professionals for procedures performed in their offices [compared to those performed elsewhere] because they must supply clinical staff, supplies, and equipment.'' [256] As such, we stated our belief that the Medicaid fee schedule best represents the payment intended to pay physicians and non-physician practitioners for delivery of individual services in an office (non-facility) setting, and the Medicare non-facility payment rate as established in the annual Medicare PFS final rule for a calendar year represents the best equivalent to that amount and consideration.

For the purposes of the comparative payment rate analysis, we explained in the proposed rule that we would expect States to source the Medicare non-facility payment rate from the published Medicare fee schedule amounts that are established in the annual Medicare PFS final rule through one or both of the following sources: the Physician Fee Schedule Look-Up Tool [257] on *cms.gov* or Excel file downloads of the Medicare PFS Relative Value with Conversion Factor files [258] for the relevant calendar year from *cms.gov.* We acknowledge that the Physician Fee Schedule Look-Up Tool is a display tool that functions as a helpful aid for physicians and NPPs as a way to quickly look up PFS payment rates, but does not provide official payment rate information. While we encouraged States to begin sourcing Medicare non-facility payment rates from the Physician Fee Schedule Look-Up Tool and utilize the Physician Fee

[255] Physicians and practitioners who do not wish to enroll in the Medicare program may ''opt-out'' of Medicare. This means that neither the physician, nor the beneficiary submits the bill to Medicare for services rendered. Instead, the beneficiary pays the physician out-of-pocket and neither party is reimbursed by Medicare. A private contract is signed between the physician and the beneficiary that states that neither one can receive payment from Medicare for the services that were performed. See 2022 opt-out affidavit data published by the Centers for Medicare & Medicaid services: *https://data.cms.gov/provider-characteristics/medicare-provider-supplier-enrollment/opt-out-affidavits.*

Schedule Guide for instructions on using the Look-Up Tool in the proposed rule, we would like to clarify in this final rule that States should first download and review the Medicare PFS Relative Value with Conversion Factor File where States can find the necessary information for calculating Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year. With the publication of this final rule, we have also issued subregulatory guidance, which includes an instructional guide for identifying, downloading, and using the relevant Excel files for calculating the Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year that States will need to include in their comparative payment rate analysis.

Statutory provisions at section 1848 of the Act and regulatory provisions at 42 CFR 414.20 [259] require that most physician services provided in Medicare are paid under the Medicare PFS. The fee schedule amounts are established for each service, generally described by a particular procedure code (including HCPCS, CPT, and CDT) using resource-based inputs to establish relative value units (RVUs) in three components of a procedure: work, practice expense, and malpractice. The three component RVUs for each service are adjusted using CMS-calculated geographic practice cost indexes (GPCIs) that reflect geographic cost differences in each fee schedule area as compared to the national average.[260] [261]

For many services, the Medicare PFS also includes separate fee schedule amounts based on the site of service (non-facility versus facility setting). The applicable PFS the rate for a service, facility or non-facility, is based on the setting where the beneficiary received the face-to-face encounter with the billing practitioner, which is indicated on the claim form by a place of service (POS) code. We proposed States use the Medicare non-facility payment rate as established in the annual Medicare PFS final rule for a calendar year in the comparative payment rate analysis. We directed States to the Excel file downloads of the ''PFS Relative Value Files'' which include the RVUs, GPCIs, and the ''National Physician Fee Schedule Relative Value File Calendar Year 2023'' file which contains the associated relative value units (RVUs), a fee schedule status indicator, and various payment policy indicators needed for payment adjustment (for example, payment of assistant at surgery, team surgery, or bilateral surgery). We stated that we would expect States to use the formula for the Non-Facility Pricing Amount in ''National Physician Fee Schedule Relative Value File Calendar Year 2023'' file to calculate the ''Non-Facility Price'' using the RVUs, GPCIs, and conversion factors for codes not available in the Look-Up Tool.

We explained that Medicaid FFS fee-schedule payment rates should be representative of the total computable payment amount a provider would expect to receive as payment-in-full for the provision of Medicaid services to individual beneficiaries. Section 447.15 defines payment-in-full as ''the amounts paid by the agency plus any deductible, coinsurance or copayment required by the plan to be paid by the individual.'' Therefore, the State's Medicaid base payment rates used for comparison should be inclusive of total base payment from the Medicaid agency plus any applicable coinsurance and deductibles to the extent that a beneficiary is expected to be liable for those payments. If a State Medicaid fee schedule does not include these additional beneficiary cost-sharing payment amounts, then the Medicaid fee schedule amounts would need to be modified to align with the inclusion of expected beneficiary cost sharing in Medicare's non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year.[262]

In paragraph (b)(3)(i)(C), we proposed that the Medicare non-facility payment rates as established in the annual Medicare PFS final rule must be effective for the same time period for the same set of E/M CPT/HCPCS codes that correspond to the base Medicaid FFS fee schedule payment rate identified under paragraph (b)(3)(i)(B). We included this language to ensure the comparative payment rate analysis is as accurate and analogous as possible by proposing that the Medicaid and Medicare payment rates that are effective during the same time period for the same set of E/M CPT/HCPCS codes. As later described in this rule, in paragraph (b)(4), we proposed the initial comparative payment rate analysis and payment rate disclosure of Medicaid payment rates would be a retroactive analysis of payment rates that are in effect as of January 1, 2025, with the analysis and disclosure published no later than January 1, 2026. For example, the first comparative payment rate analysis a State develops and publishes would compare base Medicaid FFS fee schedule payment rate in effect as of January 1, 2025, to the Medicare non-facility payment rates as established in the annual Medicare PFS final rule effective January 1, 2025, to ensure the Medicare non-facility payment rates are effective for the same time period for the same set of E/M CPT/HCPCS codes that correspond to the Medicaid FFS fee schedule payment rate identified under paragraph (b)(3)(i)(B).

Additionally, in paragraph (b)(3)(i)(C), we proposed that the Medicare non-facility payment rates as established in the annual Medicare PFS final rule used for the comparison must be for the same geographical location as the Medicaid FFS fee schedule payment rate. For States that pay Medicaid payment rates based on geographical location (for example, payment rates that vary by rural or non-rural location, by zip code, or by metropolitan statistical area), we proposed that States' comparative payment rate analyses would need to use the Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year for the same geographical location as the Medicaid FFS fee schedule payment rate to achieve an equivalent comparison. We stated that we would expect States to review Medicare's published listing of the current PFS locality structure organized by State, locality area, and when applicable, counties assigned to each locality area and identify the comparable Medicare locality area for the same geographical area as the Medicaid FFS fee schedule payment rate.[263]

We recognized that States that make Medicaid payment based on geographical location may not use the same locality areas as Medicare. For example, a State may use its own State-determined geographical designations, resulting in 5 geographical areas in the State for purposes of Medicaid payment while Medicare recognizes 3 locality areas for the State based on Metropolitan Statistical Area (MSA) delineations determined by the US Office of Management and Budget (OMB) that are the result of the application of published standards to

[259] The Medicare Claims Processing Manual contains additional information about physician service payments in Medicare that are based on the cited statutory and regulatory requirements. *https://www.cms.gov/regulations-and-guidance/guidance/manuals/internet-only-manuals-ioms-items/cms018912.*

[262] *According to the Medicare Physician Fee Schedule Guide, for most codes, Medicare pays 80% of the amount listed and the beneficiary is responsible for 20 percent.*

[263] *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Locality.*

Census Bureau data.[264] In this instance, we would expect the State to determine an appropriate method to accomplish the comparative payment rate analysis that aligns the geographic area covered by each payer's rate as closely as reasonably feasible. For example, if the State identifies two geographic areas for Medicaid payment purposes that are contained almost entirely within one Medicare geographic area, then the State reasonably could determine to use the same Medicare non-facility payment rate as established in the annual Medicare PFS final rule in the comparative payment rate analysis for each Medicaid geographic area. As another example, if the State defined a single geographic area for Medicaid payment purposes that contained two Medicare geographic areas, then the State might determine a reasonable method to weight the two Medicare payment rates applicable within the Medicaid geographic area, and then compare the Medicaid payment rate for the Medicaid-defined geographic area to this weighted average of Medicare payment rates. Alternatively, as discussed in the next paragraph, the State could determine to use the unweighted arithmetic mean of the two Medicare payment rates applicable within the Medicaid-defined geographic area. We solicited comments on the proposed use of Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year as a benchmark for States to compare their Medicaid payment rates to in the comparative payment rate analysis requirements in proposed § 447.203(b)(3)(i) to help assess if Medicaid payments are consistent with efficiency, economy, and quality of care and are sufficient to enlist enough providers so that care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area.

We noted our awareness that States may not determine their payment rates by geographical location. For States that do not pay Medicaid payment rates based on geographical location, we proposed that States compare their Medicaid payment rates (separately identified by population, pediatric and adult, and provider type, as applicable) to the Statewide average of Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year for a particular CPT/HCPCS code. The Statewide average of the Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year for a particular CPT/HCPCS code would be calculated as a simple average or arithmetic mean where all Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year for a particular CPT/HCPCS code for a particular State would be summed and divided by the number of all Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year for a particular CPT/HCPCS code for a particular State. This calculated Statewide average of the Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year would be calculated for each CPT/HCPCS code subject to the comparative payment rate analysis using the Non-Facility Price for each locality in the State as established in the annual Medicare PFS final rule for a calendar year. As previously mentioned, Medicare has published a listing of the current PFS locality structure organized by State, locality area, and when applicable, counties assigned to each locality area, and we would expect States to use this listing to identify the Medicare locality areas in their State. For example, the Specific Medicare Administrative Contractor (MAC) for Maryland is 12302 and there are two Specific Locality codes, 1230201 for BALTIMORE/SURR. CNTYS and 1230299 for REST OF STATE. After downloading and reviewing the CY 2023 Medicare PFS Relative Value Files to identify the Medicare Non-Facility Price(s) for CY 2023 for 99202 in the Specific MAC locality code for Maryland (12302 MARYLAND), the following information can be obtained: Medicare Non-Facility Price of $77.82 for BALTIMORE/SURR. CNTYS and $74.31 for REST OF STATE.[265] These two Medicare Non-Facility Price(s) would be averaged to obtain a calculated Statewide average for Maryland of $76.07.

For States that do not determine their payment rates by geographical location, we proposed that States would use the Statewide average of the Medicare Non-Facility Price(s) as listed on the PFS, as previously described, because it ensures consistency across all States' comparative payment rate analysis, aligns with the geographic area requirement of section 1902(a)(30)(A) of the Act, and ensures the Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year that States use in their comparative payment rate analysis accurately reflect how Medicare pays for services. We explained that this proposal would ensure that all States' comparative payment rate analyses consistently include Medicare geographical payment rate adjustments as proposed in paragraph (b)(3)(i)(C). As previously discussed, we proposed that States that do pay varying rates by geographical location would need to identify the comparable Medicare locality area for the same geographical area as their Medicaid FFS fee schedule payment rate. However, for States that do not pay varying rates by geographical location, at the operational level, the State is effectively paying a Statewide Medicaid payment rate, regardless of geographical location, that cannot be matched to a Medicare non-facility payment rate as established in the annual Medicare PFS final rule for a calendar year in a comparable Medicare locality area for the same geographical area as the Medicaid FFS fee schedule payment rate. Therefore, to consistently apply the proposed provision that the Medicare non-facility payment rate as established in the annual Medicare PFS final rule for a calendar year must be for the same geographical location as the Medicaid FFS fee schedule payment rate, States that do not pay varying rates by geographical location would be required to calculate a Statewide average of the Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year to compare the State's Statewide Medicaid payment rate.

Additionally, we proposed that States that do not determine their payment rates by geographical location should use the Statewide average of the Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year to align the implementing regulatory text with the statute's geographic area requirement in section 1902(a)(30)(A) of the Act. Section 1902(a)(30)(A) of the Act requires that Medicaid payments are sufficient to enlist enough providers so that care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area. Therefore, the proposed provisions of this rule, which are implementing section 1902(a)(30)(A) of the Act, must include a method of ensuring we have sufficient information for determining sufficiency of access to care as compared to the general population in the geographic area. As we have

[264] *https://www.census.gov/programs-surveys/metro-micro/about/delineation-files.html.*

[265] *https://www.cms.gov/medicare/physician-fee-schedule/search?Y=0&T=4&HT=0&CT=1&H1=99202&C=43&M=5.*

proposed to use Medicare non-facility payment rates as a benchmark for comparing Medicaid FFS fee schedule payment rate, we believe that utilizing a Statewide average of Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year for States that do not pay varying rates by geographical location would align the geographic area requirement of section 1902(a)(30)(A) of the Act, treating the entire State (throughout which the Medicaid base payment rate applies uniformly) as the relevant geographic area.

We considered requiring States weight the Statewide average of the Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year by the proportion of the Medicare beneficiary population covered by each rate, but we did not propose this due to the additional administrative burden this would create for States complying with the proposed comparative payment rate analysis as well as limited availability of Medicare beneficiary and claims data necessary to weight the Statewide average of the Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year in this manner. As proposed, States that do not determine their payment rates by geographical location would be required to consider Medicare's geographically determined payment rates by Statewide average of the Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year. We explained our belief that an additional step to weight the Statewide average by the proportion of the Medicare beneficiary population covered by each rate would not result in a practical version of the Medicare non-facility payment rate as established in the annual Medicare PFS final rule for a calendar year for purposes of the comparative payment rate analysis. Additionally, requiring only States that do not determine their payment rates by geographical location to weight Medicare payment rates in this manner would result in additional administrative burden for such States that is not imposed on States that do determine their Medicaid payment rates by geographical location. Additionally, in order to accurately weight the Statewide average of the Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year by the proportion of the Medicare beneficiary population covered by each rate, States would likely require Medicare-paid claims data for each code subject to the comparative payment rate analysis, broken down by each of the comparable Medicare locality areas for the same geographical area as the Medicaid FFS fee schedule payment rate that are included in the Statewide average of Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year. While total Medicare beneficiary enrollment data broken down by State and county level is publicly available on *data.cms.gov,* Medicare-paid claims data broken down by the Medicare locality areas used in the Medicare PFS and by code level is not published by CMS and would be inaccessible for the State to use in weighting the Statewide average of the Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year by the proportion of the Medicare beneficiary population covered by each rate. Accordingly, we explained our belief that, for States that do not determine their Medicaid payment rates by geographical location, calculating a simple Statewide average of the Medicare non-facility rates in the State would ensure consistency across all States' comparative payment rate analyses, align with the geographic area requirement of section 1902(a)(30)(A) of the Act, and ensure the Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year that States use in their comparative payment rate analyses accurately reflect how Medicare pays for services. We solicited comments regarding our decision not to propose requiring States that do not pay varying Medicaid rates by geographical location to weight the Statewide average of the Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year by the distribution of Medicare beneficiaries in the State.

Furthermore, in paragraph (b)(3)(i)(C), we proposed that the Medicare non-facility payment rate as established in the annual Medicare PFS final rule must separately identify the payment rates by provider type. We previously discussed that some States and Medicare pay a percentage less than 100 percent of their fee schedule payment rates to NPPs, including, for example, nurse practitioners, physician assistants, and clinical nurse specialists. To ensure a State's comparative payment rate analysis is as accurate as possible when comparing their Medicaid payment rates to Medicare, we proposed that States include a breakdown of Medicare's non-facility payment rates by provider type. The proposed breakdown of Medicare's payment rates by provider type would be required for all States, regardless of whether or how the State's Medicaid payment rates vary by provider type, because it ensures the comparative payment rate analysis accurately reflects this existing Medicare payment policy on the Medicare side of the analysis. Therefore, every comparative payment rate analysis would include the following Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year for the same set of E/M CPT/HCPCS codes paid under Medicaid as described in § 447.203(b)(3)(i)(B): the non-facility payment rate as established in the annual Medicare PFS rate as the Medicare payment rate for physicians and the non-facility payment rate as listed on Medicare PFS rate multiplied by 0.85 as the Medicare payment rate for NPPs.

As previously mentioned in this final rule, Medicare pays nurse practitioners, physician assistants, and clinical nurse specialists at 85 percent of the Medicare PFS rate. Medicare implements a payment policy where the fee schedule amounts, including the Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year, are reduced to 85 percent when billed by NPPs, including nurse practitioners, physician assistants, and clinical nurse specialists, whereas physicians are paid 100 percent of the fee schedule amounts Medicare non-facility payment rate as established in the annual Medicare PFS final rule for a calendar year.[266] As proposed, States' comparative payment rate analysis would need to match their Medicaid payment rates for each provider type to the corresponding Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year for each provider type, regardless of the State paying varying or the same payment rates to their providers for the same service. As an example of a State that pays varying rates based on provider type, if a State's Medicaid fee schedule lists a rate of $100.00 when a physician delivers and bills for 99202, then the $100.00 Medicaid base payment rate would be compared to 100 percent of the Medicare non-facility payment rate as established in the annual Medicare PFS final rule for a calendar year. If the same State's Medicaid fee schedule lists a rate of $75 when a nurse practitioner delivers and bills for 99202 (or the State's current approved State plan

[266] *https://www.cms.gov/files/document/physician-fee-schedule-guide.pdf.*

language states that a nurse practitioner is paid 75 percent of the State's Medicaid fee schedule rate), then the $75 Medicaid base payment rate would be compared to the Medicare non-facility payment rate as established in the annual Medicare PFS final rule for a calendar year multiplied by 0.85. Both Medicare non-facility payments rates would need to account for any applicable geographical variation, including the Non-Facility Price Medicare non-facility payment rate as established in the annual Medicare PFS final rule for a calendar year for each relevant locality area or the calculated Statewide average of the Non-Facility Price Medicare non-facility payment rate as established in the annual Medicare PFS final rule for a calendar year for all relevant areas of a State, as previously discussed in this section, for an accurate comparison to the corresponding Medicaid payment rate. Alternatively, if a State pays the same $80 Medicaid base payment rate for the service when delivered by physicians and by nurse practitioners, then the $80 would be listed separately for physicians and nurse practitioners as the Medicaid base payment rate and compared to the Medicare non-facility payment rate as established in the annual Medicare PFS final rule for a calendar year for physicians and the Medicare non-facility payment rate as established in the annual Medicare PFS final rule for a calendar year multiplied by 0.85 for nurse practitioners.

This granular level of comparison provides States with the opportunity to benchmark their Medicaid payment rates against Medicare as part of the State's and our process for ensuring compliance with section 1902(a)(30)(A) of the Act. For example, a State's comparative payment rate analysis may show that the State's Medicaid base payment rate for physicians is 80 percent of the Medicare non-facility payment rate as established in the annual Medicare PFS final rule for a calendar year and their Medicaid base payment rate for nurse practitioners is 71 percent of the Medicare non-facility payment rate for NPPs, because the State pays a reduced rate to nurse practitioners. Although Medicare also pays a reduced rate to nurse practitioners, the reduced rate the State pays to nurse practitioners compared to Medicare's reduced rate is still a lower percentage than the physician rate. However, another State's comparative payment rate analysis may show that the State's Medicaid base payment rate for physicians is 95 percent of the Medicare non-facility payment rate as established in the annual Medicare PFS final rule for a calendar year and their Medicaid base payment rate for nurse practitioners is 110 percent of the Medicare non-facility payment rate because the State pays all providers the same Medicaid base payment rate while Medicare pays a reduced rate of 85 percent of the Medicare non-facility payment rate as established in the annual Medicare PFS final rule for a calendar year when the service is furnished by an NPP. By conducting this level of analysis through the comparative payment rate analysis, States would be able to pinpoint where there may be existing or potential future access to care concerns rooted in payment rates. We solicited comments on the proposed requirement for States to compare their Medicaid payment rates to the Medicare non-facility payment rate as established in the annual Medicare PFS final rule for a calendar year, effective for the same time period for the same set of E/M CPT/HCPCS codes, and for the same geographical location as the Medicaid FFS fee schedule payment rate, that correspond to the Medicaid FFS fee schedule payment rate identified under paragraph (b)(3)(i)(B) of this section, including separate identification of the payment rates by provider type, as proposed in § 447.203(b)(3)(i)(C).

In paragraph (b)(3)(i)(D), we proposed to require States specify the Medicaid base payment rate identified under proposed § 447.203(b)(3)(i)(B) as a percentage of the Medicare non-facility payment rate as established in the annual Medicare PFS final rule identified under proposed § 447.203(b)(3)(i)(C) for each of the services for which the Medicaid base payment rate is published under proposed § 447.203(b)(3)(i)(B). For each E/M CPT/HCPCS code that we select, we proposed that States would calculate each Medicaid base payment rate as specified in paragraph (b)(3)(i)(B) as a percentage of the corresponding Medicare non-facility payment rate as established in the annual Medicare PFS final rule specified in paragraph (b)(3)(i)(C). Both rates would be required to be effective for the same time period of the comparative payment rate analysis. As previous components of the proposed comparative payment rate analysis have considered variance in payment rates based on population the service is delivered to (adult or pediatric), provider type, and geographical location to extract the most granular and accurate Medicaid and Medicare payment rate data, we proposed that States would calculate the Medicaid base payment rate as a percentage of the Medicare non-facility payment rate as established in the annual Medicare PFS final rule in the comparative payment rate analysis to obtain an informative metric that can be used in the State's and our assessment of whether the State's payment rates are compliant with section 1902(a)(30)(A) of the Act. As previously discussed, benchmarking against Medicare serves as an important data point in determining whether payment rates are likely to be sufficient to ensure access for Medicaid beneficiaries at least as great as for the general population in the geographic area, and whether any identified access concerns may be related to payment sufficiency. We proposed that States would calculate their Medicaid payment rates as a percentage of the Medicare non-facility payment rate as established in the annual Medicare PFS final rule because it is a common, simple, and informative statistic that can provide us with a gauge of how Medicaid payment rates compare to Medicare non-facility payment rates in the same geographic area. Initially and over time, States, CMS, and other interested parties would be able to compare the State's Medicaid payment rates as a percentage of Medicare's non-facility payment rates to identify how the percentage changes over time, in view of changes that may take place to the Medicaid and/or the Medicare payment rate. We explained that being able to track and analyze the change in percentage over time would help States and CMS identify possible access concerns that may be related to payment insufficiency.

We noted that the organization and content of the comparative payment rate analysis, including the expression of the Medicaid base payment rate as a percentage of the Medicare payment rate, can provide us with a great deal of information about access in the State. For example, we would be able to identify when and how the Medicaid base payment rate as a percentage of the Medicare non-facility payment rate as established in the annual Medicare PFS final rule for E/M CPT/HCPCS codes for primary care services may decrease over time if Medicare adjusts its rates and a State does not and use this information to more closely examine for possible access concerns. This type of analysis would provide us with actionable information to help ensure consistency with section 1902(a)(30)(A) of the Act by using Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year paid across the same geographical

areas of the State as a point of comparison for payment rate sufficiency as a critical element of beneficiary access to care. When explaining the rationale for proposing to use Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year for comparison earlier in this rule, we emphasized the ability to demonstrate to States that certain Medicaid payment rates have not kept pace with changes to Medicare non-facility payment rates and how the comparative payment rate analysis would help them identify areas where they also might want to consider rate increases that address market changes. We solicited comments on the proposed requirement for States to calculate their Medicaid payment rates as a percentage of the Medicare non-facility payment rate for each of the services for which the Medicaid base payment rate is published under proposed paragraph (b)(3)(i)(B), as described in proposed § 447.203(b)(3)(i)(D). We also solicited comments on any challenges States might encounter when comparing their Medicaid payment rates to Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year under proposed § 447.203(b)(3)(i)(D), particularly for any of the proposed categories of service in paragraphs (b)(2)(i) through (iii), as well as suggestions for an alternative comparative analysis that might be more helpful, or less burdensome and equally helpful, for States, CMS, and other interested parties to assess whether a State's Medicaid payment rates are consistent with the access standard in section 1902(a)(30)(A) of the Act.

We noted our awareness in the proposed rule that provider payment rates are an important factor influencing beneficiary access; as expressly indicated in section 1902(a)(30)(A) of the Act, insufficient provider payment rates are not likely to enlist enough providers willing to serve Medicaid beneficiaries to ensure broad access to care; however, there may be situations where access issues are principally due to other causes. For example, even if Medicaid payment rates are generally consistent with amounts paid by Medicare (and those amounts have been sufficient to ensure broad access to services for Medicare beneficiaries), Medicaid beneficiaries may have difficulty scheduling behavioral health care appointments because the overall number of behavioral health providers within a State is not sufficient to meet the demands of the general population. Therefore, a State's rates may be consistent with the requirements of section 1902(a)(30)(A) of the Act even when access concerns exist, and States and CMS may need to examine other strategies to improve access to care beyond payment rate increases. By contrast, comparing a State's Medicaid behavioral health payment rates to Medicare may demonstrate that the State's rates fall far below Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year, which would likely impede beneficiaries from accessing needed care when the demand already exceeds the supply of providers within a State. In that case, States may need to evaluate budget priorities and take steps to ensure behavioral health rates are consistent with section 1902(a)(30)(A) of the Act.

Lastly, in paragraph (b)(3)(i)(E), we proposed to require States to specify in their comparative payment rate analyses the number of Medicaid-paid claims and the number of Medicaid enrolled beneficiaries who received a service within a calendar year for each of the services for which the Medicaid base payment rate is published under paragraph (b)(3)(i)(B). The previous components of the comparative payment rate analysis focus on the State's payment rate for the E/M CPT/HCPCS code and comparing the Medicaid base payment rate to the Medicare non-facility payment rate as established in the annual Medicare PFS final rule for a calendar year for the same code (separately, for each Medicaid base payment rate by population (adult or pediatric), provider type, and geographic area, as applicable). This component examines the Medicaid-paid claims volume of each E/M CPT/HCPCS code included in the comparative payment rate analysis relative to the number of Medicaid enrolled beneficiaries receiving each service within a calendar year. We proposed to limit the claims volume data to Medicaid-paid claims, and the number of beneficiaries would be limited to Medicaid-enrolled beneficiaries who received a service in the calendar year of the comparative payment rate analysis, where the service would fall into the list of CMS-identified E/M CPT/HCPCS code(s). In other words, a beneficiary would be counted in the comparative payment rate analysis for a particular calendar year when the beneficiary received a service that is included in one of the categories of services described in paragraphs (b)(2)(i) through (iii) for which the State has a Medicaid base payment rate (the number of Medicaid-enrolled beneficiaries who received a service). A claim would be counted in the comparative payment rate analysis for a particular calendar year when that beneficiary had a claim submitted on their behalf by a provider who billed one of the codes from the list of CMS-identified E/M CPT/HCPCS code(s) to the State and the State paid the claim (number of Medicaid-paid claims). With the proposal, we explained that we were seeking to ensure the comparative payment rate analysis reflects actual services received by beneficiaries and paid for by the State or realized access.[267]

We considered but did not propose requiring States to identify the number of unique Medicaid-paid claims and the number of unique Medicaid-enrolled beneficiaries who received a service within a calendar year for each of the services for which the Medicaid base payment rate is published pursuant to paragraph (b)(3)(i)(B). We considered this detail in order to identify the unique, or deduplicated, number of beneficiaries who received a service that falls into one of the categories of services described in in paragraph (b)(2)(i) through (iii) in a calendar year. For example, if a beneficiary has 6 visits to their primary care provider in a calendar year and the provider bills 6 claims with 99202 for the same beneficiary, then the beneficiary and claims for 99202 would only be counted as one claim and one beneficiary. Therefore, we chose not to propose this aspect because we intend for the comparative payment rate analysis to capture the total amount of actual services received by beneficiaries and paid for by the State. We solicited comments regarding our decision not to propose that States would identify the number of unique Medicaid-paid claims and the number of unique Medicaid enrolled beneficiaries who received a service within a calendar year for each of the services for which the Medicaid base payment rate is published pursuant to paragraph (b)(3)(i)(B) in the comparative payment rate analysis as proposed in § 447.203(b)(3)(i)(E).

We also considered but did not propose to require States to identify the total Medicaid-enrolled population who could potentially receive a service within a calendar year for each of the services for which the Medicaid base

[267] Andersen, R.M., and P.L. Davidson (2007). Improving access to care in America: Individual and contextual indicators. In Changing the U.S. health care system: Key issues in health services policy and management, 3rd edition, Andersen, R.M., T.H. Rice, and G.F. Kominski, eds. San Francisco, CA: John Wiley & Sons.

payment rate is published under paragraph (b)(3)(i)(B), in addition to the proposed requirement for States to identify the number of Medicaid-enrolled beneficiaries who received a service. This additional data element in the comparative payment rate analysis would reflect the number of Medicaid-enrolled beneficiaries who could have received a service, or potential access, in comparison to the number of Medicaid-enrolled beneficiaries who actually received a service. We did not propose this aspect because this could result in additional administrative burden on the State, as we already collect and publish similar data through Medicaid and CHIP Enrollment Trends Snapshots published on Medicaid.gov. We also solicited comments regarding our decision not to propose that States would identify the total Medicaid-enrolled population who could receive a service within a calendar year for each of the services for which the Medicaid base payment rate is published pursuant to paragraph (b)(3)(i)(B) in the comparative payment rate analysis as proposed in § 447.203(b)(3)(i)(E).

We proposed to include beneficiary and claims information in the comparative payment rate analysis to contextualize the payment rates in the analysis, and to be able to identify longitudinal changes in Medicaid service volume in the context of the Medicaid beneficiary population receiving services, since utilization changes could be an indication of an access to care issue. For example, a decrease in the number of Medicaid-paid claims for primary care services furnished to Medicaid beneficiaries in an area (when the number of Medicaid-enrolled beneficiaries who received primary care services in the area is constant or increasing) could be an indication of an access to care issue. Without additional context provided by the number of Medicaid enrolled beneficiaries who received a service, changes in claims volume could be attributed to a variety of changes in the beneficiary population, such as a temporary loss of coverage when enrollees disenroll and then re-enroll within a short period of time.

Further, if the Medicaid base payment rate for the services with decreasing Medicaid service volume has failed to keep pace with the corresponding Medicare non-facility payment rate as established in the annual Medicare PFS final rule for a calendar year over the period of decrease in utilization (as reflected in changes in the Medicaid base payment rate expressed as a percentage of the Medicare non-facility payment rate as required under proposed § 447.203(b)(3)(i)(D)), then we would be concerned and would further scrutinize whether any access to care issue might be caused by insufficient Medicaid payment rates for the relevant services. With each biennial publication of the State's comparative payment rate analysis, as proposed in § 447.203(b)(4), discussed later in this section, States and CMS would be able to compare the number of paid claims in the context of the number of Medicaid enrolled beneficiaries receiving services within a calendar year for the services subject to the comparative payment rate analysis with previous years' comparative payment rate analyses. Collecting and comparing the number of paid claims data in the context of the number of Medicaid enrolled beneficiaries receiving services alongside Medicaid base payment rate data may reveal trends where an increase in the Medicaid base payment rate is correlated with an increase in service volume and utilization, or vice versa with a decrease in the Medicaid base payment rate correlated with a decrease in service volume and utilization. As claims utilization and number of Medicaid enrolled beneficiaries receiving services are only correlating trends, we acknowledge that there may be other contextualizing factors outside of the comparative payment rate analysis that affect changes in service volume and utilization, and we would (and would expect States and other interested parties to) take such additional factors into account in analyzing and ascribing significance to changes in service volume and utilization. We are solicited comments on the proposed requirement for States to include the number of Medicaid-paid claims and the number of Medicaid enrolled beneficiaries who received a service within a calendar year for which the Medicaid base payment rate is published under proposed paragraph (b)(3)(i)(B), as specified in proposed § 447.203(b)(3)(i)(E).

We noted our belief that the comparative payment rate analysis proposed in paragraph (b)(3) is needed to best enable us to ensure State compliance with the requirement in section 1902(a)(30)(A) of the Act that payments are sufficient to enlist enough providers so that care and services are available to Medicaid beneficiaries at least to the extent they are available to the general population in the geographic area. As demonstrated by the findings of Sloan, et al.,[268] which have since been supported and expanded upon by numerous researchers, multiple studies examining the relationship between Medicaid payment and physician participation,[269] [270] at the State level,[271] and among specific provider types,[272] [273] have found a direct, positive association between Medicaid payment rates and provider participation in the Medicaid program. While multiple factors may influence provider enrollment (such as administrative burden), section 1902(a)(30)(A) of the Act specifically concerns the sufficiency of provider payment rates. Given this statutory requirement, a comparison of Medicaid payment rates to other payer rates is an important barometer of whether State payment policies are likely to support the statutory standard of ensuring access for Medicaid beneficiaries such that covered care and services are available to them at least to the extent that the same care and services are available to the general population in the geographic area.

The AMRP requirements previous addressed this standard under section 1902(a)(30)(A) of the Act by requiring States to compare Medicaid payment rates to the payment rates of other public and private payers in current

§ 447.203(b)(1)(v) and (b)(3). While we proposed to eliminate the previous AMRP requirements, we noted our belief that our proposal to require States to compare their Medicaid payment rates for services under specified E/M CPT/HCPCS codes against Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year for the same codes, as described in § 447.203(b)(3), would well position States and CMS to continue to meet the statutory access requirement. Some studies examining the relationship between provider payments and various access measures have quantified the relationship between the Medicaid-Medicare payment ratio and access measures. Two studies observed that increases in the Medicaid-Medicare payment ratio is associated with higher physician acceptance rates of new Medicaid patients and with an increased probability of a beneficiary having an office-based physician as the patient's usual source of care.[274] [275] We explained that these studies led us to conclude that Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year are likely to be a sufficient benchmark for evaluating access to care, particularly ambulatory physician services, based on provider payment rates.

By comparing FFS Medicaid payment rates to corresponding FFS Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year, where Medicare is a public payer with large populations of beneficiaries and participating providers whose payment rates are readily available, we aim to establish a uniform benchmarking approach that allows for more meaningful oversight and transparency and reduces the burden on States and CMS relative to the previous AMRP requirements that do not impose specific methodological standards for comparing payment rates and that contemplate the availability of private payer rate information that has proven difficult for States to obtain due to its often proprietary nature. We noted that this aspect of the proposal specifically responds to States' expressed concerns that the previous AMRP requirement to include ''actual or estimated levels of provider payment available from other payers, including other public and private payers'' was challenging to accomplish based on the general unavailability of this information, as discussed elsewhere in this final rule.

Following the 2011 proposed rule, and as addressed by us through public comment response in the 2015 final rule with comment period, States expressed concerns that private payer payment rates were proprietary information and not available to them and that large private plans did not exist within some States so there were no private payer rates to compare to, therefore, the State would need to rely on State employee health plans or non-profit insurer rates.[276] States also expressed that other payer data, including public and private payers, in general may be unsound for comparisons because of a lack of transparency about the payment data States would have compared their Medicaid payment rates to. We discussed how, since 2016, we have learned a great deal from our implementation experience of the previous AMRP process. We have learned that very few States were able to include even limited private payer data in their previous AMRPs. States that were able include private payer data were only able to do so because the State had existing Statewide all payer claiming or rate-setting systems, which gave them access to private payer data in their State, or the State previously based their State plan payment rates off of information about other payers (such as the American Dental Association's Survey of Dental Fees) that gave them access to private payer data.[277] Based on our implementation experience and concerns from States about the previous requirement in § 447.203(b)(1)(v) to obtain private payer data, we proposed to require States only compare their Medicaid payment rates to Medicare's, for which payment data are readily and publicly available.

Next, in paragraph (b)(3)(ii), we proposed that for each category of services described in proposed paragraph (b)(2)(iv), the State agency would be required to publish a payment rate disclosure that expresses the State's payment rates as the average hourly payment rates, separately identified for payments made to individual providers and to providers employed by an agency, if the rates differ. The payment rate disclosure would be required to meet specified requirements. We explained that we intended this proposal to remain consistent with the proposed HCBS provisions at § 441.311(d)(2) and (e) and to take specific action regarding direct care workers per Section 2402(a) of the Affordable Care Act. HCBS and direct care workers that deliver these services are unique to Medicaid and often not covered by other payers, which is why we proposed a different analysis of payment rates for providers of these services that does not involve a comparison to Medicare. As previously stated, Medicare covers part-time or intermittent home health aide services (only if a Medicare beneficiary is also getting other skilled services like nursing and/or therapy at the same time) under Medicare Part A (Hospital Insurance) or Medicare Part B (Medical Insurance); however, Medicare does not cover personal care or homemaker services. Therefore, comparing personal care and homemaker services to Medicare, as we proposed in paragraph (b)(3)(i) for other specified categories of services, would not be feasible for States, and a comparison of Medicaid home health aide payment rates to analogous rates for Medicare would be of limited utility given the differences in circumstances when Medicaid and Medicare may pay for such services.

As previously discussed, private payer data are often considered proprietary and not available to States, thereby eliminating private payers as feasible point of comparison. Even if private payer payment rate data were more readily available, like Medicare, many private payers do not cover HCBS as HCBS is unique to the Medicaid program, leaving Medicaid as the largest or the only payer for personal care, home health aide, and homemaker services. Given Medicaid's status as the most important payer for HCBS, we believe that scrutiny of Medicaid HCBS payment rates themselves, rather than a comparison to other payer rates that frequently do not exist, is most important in ascertaining whether such Medicaid payment rates are sufficient to enlist adequate providers so that the specified services are available to Medicaid beneficiaries at least to the same extent as to the general population in the geographic area. We acknowledge that individuals without insurance may self-pay for medical services provided in their home or community; however, similar to private payer data, self-pay data is unlikely to be available to States. Because HCBS coverage is unique to Medicaid, Medicaid beneficiaries are generally the only individuals in a given geographic area with access to HCBS.

Through the proposed payment rate disclosure, Medicaid payments rates would be transparent and comparable among States and would assist States to analyze if and how their payment rates are compliant with section 1902(a)(30)(A) of the Act.

As noted previously in this section, we proposed to require States to express their rates separately as the average hourly payments made to individual providers and providers employed by an agency, if the rates differ, as applicable for each category of service specified in proposed § 447.203(b)(2)(iv). We noted our belief that expressing the data in this manner would best account for variations in types and levels of payment that may occur in different settings and employment arrangements. Individual providers are often self-employed or contract directly with the State to deliver services as a Medicaid provider while providers employed by an agency are employed by the agency, which works directly with the Medicaid agency to provide Medicaid services. These differences in employment arrangements often include differences in the hourly rate a provider would receive for services delivered, for example, providers employed by an agency typically receive benefits, such as health insurance, and the cost of those benefits is factored into the hourly rate that the State pays for the services delivered by providers employed by an agency (even though the employed provider does not retain the entire amount as direct monetary compensation). However, these benefits are not always available for individual providers who may need to separately purchase a marketplace health plan or be able to opt into the State-employee health plan, for example. Therefore, the provider employed by an agency potentially could receive a higher hourly rate because benefits are factored into the hourly rate they receive for delivering services, whereas the individual provider might be paid a rate that does not reflect employment benefits.

With States expressing their payment rates separately as the average hourly payment rate made to individual and agency employed providers for personal care, home health aide, and homemaker services, States, CMS, and other interested parties would be able to compare payment rates among State Medicaid programs. Such comparisons may be particularly relevant for States in close geographical proximity to each other or that otherwise may compete to attract providers of the services specified in proposed paragraph (b)(2)(iv) or where such providers may experience similar costs or other incentives to provide such services. For example, from reviewing all States' payment rate analyses for personal care, home health aide, and homemaker services, we would be able to learn that two neighboring States have similar hourly rates for providers of these services, but a third neighboring State has much lower hourly rates than both of its neighbors. This information could highlight a potential access issue, since providers in the third State might have an economic incentive to move to one of the two neighboring States where they could receive higher payments for furnishing the same services. Such movement could result in beneficiaries in the third State having difficulty accessing covered services, compared to the general population in the tri-State geographic area.

In paragraph (b)(3)(ii), we proposed that the State's payment rate disclosure must meet the following requirements: (A) the State must organize the payment rate disclosure by category of service as specified in proposed paragraph (b)(2)(iv); (B) the disclosure must identify the average hourly payment rates, including, if the rates vary, separate identification of the average hourly payment rates for payments made to individual providers and to providers employed by an agency by population (pediatric and adult), provider type, and geographical location, as applicable; and (C) the disclosure must identify the number of Medicaid-paid claims and the number of Medicaid enrolled beneficiaries who received a service within a calendar year for each of the services for which the Medicaid base payment rate is published under proposed paragraph (b)(3)(ii)(B). We solicited comments on the proposed requirements and content of the items in proposed § 447.203(b)(3)(ii)(A) through (C).

In paragraph (b)(3)(ii)(A), we proposed to require States to organize their payment rate disclosures by each of the categories of services specified in proposed paragraph (b)(2)(iv), that is, to break out the payment rates for personal care, home health aide, and homemaker services provided by individual providers and providers employed by an agency, separately for individual analyses of the payment rates for each category of service and type of employment structure. We solicited comments on the proposed requirement for States to break out their payment rates for personal care, home health aide, and homemaker services separately for individual analyses of the payment rates for each category of service in the comparative payment rate analysis, as described in proposed § 447.203(b)(3)(ii)(A).

In paragraph (b)(3)(ii)(B), we proposed to require States identify in their disclosure the Medicaid average hourly payment rates by applicable category of service, including, if the rates vary, separate identification of the average hourly payment rates for payments made to individual providers and to providers employed by an agency, as well as by population (pediatric and adult), provider type, and geographical location, as applicable. Given that direct care workers deliver unique services in Medicaid that are often not covered by other payers, we proposed to require a payment rate disclosure, instead of comparative payment rate analysis. To be clear, we did not propose to require a State's payment rate disclosure for personal care, home health aide, and homemaker services be broken down and organized by E/M CPT/HCPCS codes, nor did we propose States compare their Medicaid payment rates to Medicare for these services.

We proposed to require States to calculate their Medicaid average hourly payment rates made to providers of personal care, home health aide, and homemaker services, separately, for each of these categories of services, by provider employment structures (individual providers and agency employed providers). For each of the categories of services in paragraph (b)(3)(ii)(A), one Medicaid average hourly payment rate would be calculated as a simple average (arithmetic mean) where all payment rates would be adjusted to an hourly figure, summed, then divided by the number of all hourly payment rates. As an example, the State's Medicaid average hourly payment rate for personal care providers may be $10.50 while the average hourly payment rate for a home health aide is $15.00. A more granular analysis may show that within personal care providers receiving a payment rate of $10.50, an individual personal care provider is paid an average hourly payment rate of $9.00, while a personal care provider employed by an agency is paid an average hourly payment rate of $12.00 for the same type of service. Similarly for home health aides, a more granular analysis may show that within home health aides receiving a payment rate of $15.00, an individual home health aide is paid an average hourly payment rate of $13.00, while a home health aide employed by an agency is paid an average hourly payment rate of $17.00.

We explained that we understand that States may set payment rates for personal care, home health aide, and

homemaker services based on a particular unit of time for delivering the service, and that time may not be in hourly increments. For example, different States might pay for personal care services using 15-minute increments, on an hourly basis, through a daily rate, or based on a 24-hour period. By proposing to require States to represent their rates as an hourly payment rate, we would be able to standardize the unit (hourly) and payment rate for comparison across States, rather than comparing to Medicare. To the extent a State pays for personal care, home health aide, or homemaker services on an hourly basis, the State would simply use that hourly rate in its Medicaid average hourly payment rate calculation of each respective category of service. However, if for example a State pays for personal care, home health aide, or homemaker services on a daily basis, we would expect the State to divide that rate by the number of hours covered by the rate.

Additionally, and similar to proposed paragraph (b)(3)(i)(E), we proposed in paragraph (b)(3)(ii)(B), that, if the States' Medicaid average hourly payment rates vary, the rates must separately identify the average hourly payment rates for payments made to individual providers and to providers employed by an agency, by population (pediatric and adult), provider type, and geographical location, as applicable. We included this proposed provision with the intent of ensuring the payment rate disclosure contains the highest level of granularity in each element. As previously discussed, States may pay providers different payment rates for billing the same service based on the population being served, provider type, and geographical location of where the service is delivered. We solicited comments on the proposed requirement for States to calculate the Medicaid average hourly payment rate made separately to individual providers and to agency employed providers, which accounts for variation in payment rates by population (pediatric and adult), provider type, and geographical location, as applicable, in the payment rate disclosure.

In paragraph (b)(3)(ii)(C), we proposed to require that the State disclosure must identify the number of Medicaid-paid claims and the number of Medicaid enrolled beneficiaries who received a service within a calendar year for each of the services for which the Medicaid payment rate is published under proposed paragraph (b)(3)(ii)(B), so that States, CMS, and other interested parties would be able to contextualize the previously described payment rate information with information about the volume of paid claims and number of beneficiaries receiving personal care, home health aide, and homemaker services.

We proposed that the number of Medicaid-paid claims and number of Medicaid enrolled beneficiaries who received a service be reported under the same breakdown as paragraph (b)(3)(ii), where the State provides the number of paid claims and number of beneficiaries receiving services from individual providers versus agency-employed providers of personal care, home health aide services, and homemaker services. As with the comparative payment rate analysis, we proposed the claims volume data would be limited to Medicaid-paid claims and the number of beneficiaries would be limited to Medicaid enrolled beneficiaries who received a service in the calendar year of the payment rate disclosure, where the services fall into the categories of service for which the average hourly payment rates are published pursuant to paragraph (b)(3)(ii)(B). In other words, the beneficiary would be counted in the payment rate disclosure for a particular calendar year when the beneficiary received a service that is included in one of the categories of services described in paragraph (b)(2)(iv) for which the State has calculated average hourly payment rates (the number of Medicaid enrolled beneficiaries who received a service). A claim would be counted when that beneficiary had a claim submitted on their behalf by a provider who billed for one of the categories of services described in paragraph (b)(2)(iv) and the State paid the claim (number of Medicaid-paid claims). We noted we were seeking to ensure the payment rate disclosure reflects actual services received by beneficiaries and paid for by the State, or realized access.[278]

Similar to the comparative payment rate analysis, we considered but did not propose requiring States to identify the number of unique Medicaid-paid claims and the number of unique Medicaid enrolled beneficiaries who received a service within a calendar year for each of the services for which the average hourly payment rates are published pursuant to paragraph (b)(3)(ii)(B). We also considered but did not propose to require States to identify the total Medicaid enrolled population who could receive a service within a calendar year for each of the services for which the average hourly payment rates are published pursuant to paragraph (b)(3)(ii)(B) in addition to proposing States identify the number of Medicaid enrolled beneficiaries who received a service. As discussed in the comparative payment rate discussion, we solicited comments on our decision not to require these levels of detail for the payment rate disclosure.

Also similar to the comparative payment rate analysis requirement under proposed paragraph (b)(3)(i)(E), we explained that this disclosure element would help States, CMS, and other interested parties identify longitudinal changes in Medicaid service volume and beneficiary utilization that may be an indication of an access to care issue. Again, with each biennial publication of the State's comparative payment rate analysis and payment rate disclosure, States and CMS would be able to compare the number of Medicaid-paid claims and number of Medicaid enrolled beneficiaries who received a service within a calendar year for services subject to the payment rate disclosure with previous years' disclosures. Collecting and comparing data on the number of paid claims and number of Medicaid enrolled beneficiaries alongside Medicaid average hourly payment rate data may reveal trends, such as where a provider type that previously delivered a low volume of services to beneficiaries has increased their volume of services delivered after receiving an increase in their payment rate.

We acknowledged that one limitation of using the average hourly payment rate is that the statistic is sensitive to highs and lows, so one provider receiving an increase in their average hourly payment rate would bring up the average overall while other providers may not see an improvement. As these are only correlating trends, we also acknowledged that there may be other contextualizing factors outside of the payment rate disclosure that may affect changes in service volume and utilization. We solicited comments on the proposed requirement for States to include the number of Medicaid-paid claims and number of Medicaid enrolled beneficiaries who received a service within a calendar year for which the Medicaid payment rate is published under paragraph (b)(3)(ii)(B), as specified in proposed § 447.203(b)(3)(ii)(C).

Additionally, in recognition of the importance of services provided to individuals with intellectual or

[278] Andersen, R.M., and P.L. Davidson. 2007. Improving access to care in America: Individual and contextual indicators. In Changing the U.S. health care system: Key issues in health services policy and management, 3rd edition, Andersen, R.M., T.H. Rice, and G.F. Kominski, eds. San Francisco, CA: John Wiley & Sons.

developmental disabilities and in an effort to remain consistent with the proposed HCBS payment adequacy provisions at § 441.302(k) (discussed in section II.B.5 of this rule), we solicited comments on whether we should propose a similar provision that would require at least 80 percent of all Medicaid FFS payments with respect to personal care, home health aide, and homemaker services provided by individual providers and providers employed by an agency must be spent on compensation for direct care workers. In this final rule, we want to clarify that this request for comment was distinct from the proposal at § 441.302(k) as discussed in section II.B.5 of this rule. The payment adequacy provision finalized in § 441.302(k) is applicable to rates for certain specified services authorized under section 1915(c) of the Act, as well as sections 1915(j), (k), and (i) of the Act as finalized at §§ 441.464(f), 441.570(f), and 441.745(a)(1)(vi), respectively. The request for comment in this section of the rule considered expanding that requirement to Medicaid FFS payments under FFS State plan authority.

In paragraph (b)(4), we proposed to require the State agency to publish the initial comparative payment rate analysis and payment rate disclosure of its Medicaid payments in effect as of January 1, 2025, as required under § 447.203(b)(2) and (b)(3), by no later than January 1, 2026. Thereafter, the State agency would be required to update the comparative payment rate analysis and payment rate disclosure no less than every 2 years, by no later than January 1 of the second year following the most recent update. The comparative payment rate analysis and payment rate disclosure would be required to be published consistent with the publication requirements described in proposed § 447.203(b)(1) for payment rate transparency data.

As previously discussed in this final rule, we proposed that the Medicaid payment rates included in the initial comparative payment rate analysis and payment rate disclosure would be those in effect as of January 1, 2025. Specifically, for the comparative payment rate analysis, we proposed States would conduct a retrospective analysis to ensure CMS can publish the list of E/M CPT/HCPCS codes for the comparative payment rate analysis and States have timely access to all information required to complete comparative payment rate analysis. As described in paragraph (b)(3)(i)(C), we proposed States would compare their Medicaid payment rates to the Medicare non-facility payment rates as established in the annual Medicare PFS final rule effective for the same time period for the same set of E/M CPT/HCPCS codes, therefore, the Medicare non-facility payment rates as published on the Medicare PFS for the same time period as the State's Medicaid payment rates would need to be available to States in a timely manner for their analysis and disclosure to be conducted and published as described in paragraph (b)(4). Medicare publishes its annual PFS final rule in November of each year and the Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year are effective the following January 1. For example, the 2025 Medicare PFS final rule would be published in November 2024 and the Medicare non-facility payment rates as established in the annual Medicare PFS final rule would be effective January 1, 2025, so States would compare their Medicaid payment rates effective as of January 1, 2025, to the Medicare PFS payment rates effective January 1, 2025, when submitting the initial comparative payment rate analysis that we proposed would be due on January 1, 2026.

Also, previously discussed in this final rule, we noted our intent to publish the initial and subsequent updates to the list of E/M CPT/HCPCS codes subject to the comparative payment rate analysis in a timely manner that allows States approximately one full calendar year between the publication of the CMS-published list of E/M CPT/HCPCS codes and the due date of the comparative payment rate analysis. Because the list of E/M CPT/HCPCS codes is derived from the relevant calendar year's Medicare PFS, the Medicare non-facility payment rates as established in the annual Medicare PFS final rule that the State would need to include in their comparative payment rate analysis would also be available to States. We explained that we expect approximately one full calendar year of the CMS-published list of E/M CPT/HCPCS codes and Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year being available to States would provide the States with sufficient time to develop and publish their comparative payment rate analyses as described in paragraph (b)(4). We considered proposing the same due date and effective time period for Medicaid and Medicare payment rates where the initial publication of the comparative payment rate analysis would be due January 1, 2026, and would contain payment rates effective January 1, 2026; however, we believe a 2-month time period between Medicare publishing its PFS payment rates in November and the PFS payment rates taking effect on January 1 would be an insufficient amount of time for CMS to publish the list of E/M CPT/HCPCS codes subject to the comparative payment rate analysis and for States to develop and publish their comparative payment rate analyses by January 1. While the proposed payment rate disclosure would not require a comparison to Medicare, we proposed to use the same due date and effective period of Medicaid payment rates for both the proposed comparative payment rate analysis and payment rate disclosure to maintain consistency.

We noted our expectation the proposed initial publication timeframe would provide sufficient time for States to gather necessary data, perform, and publish the first required comparative payment rate analysis and payment rate disclosure. We determined this timeframe was sufficient based on implementation experience from the previous AMRP process, where we initially proposed a 6-month timeframe between the January 4, 2016, effective date of the 2015 final rule with comment period in the **Federal Register**, and the due date of the first AMRP, July 1, 2016. At the time, we believed that this timeframe would be sufficient for States to conduct their first review for service categories newly subject to ongoing AMRP requirements; however, after receiving several public comments from States on the 2015 final rule with comment period that State agency staff may have difficulty developing and submitting the initial AMRPs within the July 1, 2016 timeframe, we modified the policy as finalized in the 2016 final rule.[279] Specifically, we revised the deadline for submission of the initial AMRP until October 1, 2016 and we made a conforming change to the deadline for submission in subsequent review periods at § 447.203(b)(5)(i) to October 1.[280] We also found that, despite this additional time, some State were still late in submitting their first AMRP to us. Therefore, we noted our belief that a proposed initial publication date of January 1, 2026, thereby providing States with approximately 2 years between the effective date of the final rule and the due date of the first comparative payment rate analysis and payment rate disclosure, would be sufficient. In alignment with the proposed payment rate transparency requirements, we proposed an alternate date if this rule is finalized at a time that

[279] 81 FR 21479 at 21479–21480.

[280] 81 FR 21479 at 21480.

does not allow for States to have a period of 2 years from the effective date of the final rule and the proposed January 1, 2026, date to publish the initial comparative payment rate analysis and payment rate disclosure. We proposed an alternative date of July 1, 2026, for the initial comparative payment rate analysis and payment rate disclosure and for the initial comparative payment rate analysis and payment rate disclosure to include Medicaid payment rates approved as of July 1, 2025, to allow more time for States to comply with the initial comparative payment rate analysis and payment rate disclosure requirements. We acknowledged that the date of the initial comparative payment rate analysis and payment rate disclosure publication would be subject to change based on the final rule publication schedule and effective date. If further adjustment is necessary beyond the July 1, 2026, timeframe to allow more time for States to comply with the payment rate transparency requirements, then we proposed that we would adjust date of the initial payment rate transparency publication in 6-month intervals, as appropriate.

Also, in § 447.203(b)(4), we proposed to require the State agency to update the comparative payment rate analysis and payment rate disclosure no less than every 2 years, by no later than January 1 of the second year following the most recent update. We proposed that the comparative payment rate analysis and payment rate disclosure would be required to be published consistent with the publication requirements described in proposed paragraph (b)(1) for payment rate transparency data. After publication of the 2011 proposed rule, and as we worked with States to implement the previous AMRP requirements after publication of the 2015 final rule with comment period, many States expressed concerns that the previous requirements of § 447.203, specifically those in previous § 447.203(b)(6) imposed additional analysis and monitoring requirements in the case of provider rate reductions or restructurings that could result in diminished access, were overly burdensome. As described in the 2018 and 2019 proposed rules, ''a number of States expressed concern regarding the administrative burden associated with the requirements of § 447.203, particularly those States with a very high beneficiary enrollment in comprehensive, risk-based managed care and a limited number of beneficiaries receiving care through a FFS delivery system.'' [281] [282] Additionally, from our implementation experience, we learned that the triennial due date for updated AMRPs required by previous § 447.203(b)(5)(ii) was too infrequent for States or CMS to identify and act on access concerns identified by the previous AMRPs. For example, one State timely submitted its initial ongoing AMRP on October 1, 2016, consistent with the requirements in § 447.203(b)(1) through (5), and timely submitted its first AMRP update (the next ongoing AMRP) 3 years later, on October 1, 2019. The 2016 AMRP included data about beneficiary utilization and Medicaid-participating providers accepting new Medicaid patients from 2014 to 2015 (the most recent data available at the time the State was developing the AMRP), while the 2019 AMRP update included similar data for 2016 to 2017 (the most recent data then available). The 2019 AMRP showed that the number of Medicaid-participating providers accepting new Medicaid patients significantly dropped in 2016, and the State received a considerable number of public comments during the 30-day public comment period for the 2019 AMRP update prior to submission to us per the requirements in § 447.203(b) and (b)(2). This data lag between a drop in Medicaid-participating providers accepting new Medicaid patients in 2016 and CMS receiving the next AMRP update with information about related concerns in 2019 illustrates how the infrequency of the triennial due date for the AMRP updates could allow a potential access concern to develop without notice by the State or CMS in between the due dates of the ongoing AMRP updates. Although § 447.203(b)(7) previously required States to have ongoing mechanisms for beneficiary and provider input on access to care, and States are expected to promptly respond to concerns expressed through these mechanisms that cite specific access problems, beneficiaries and providers themselves may not be aware of even widespread access issues if such issues are not noticed before published data reveal them.

We also learned from our previous AMRP implementation experience that the timing of the ongoing AMRP submissions required by previous § 447.203(b)(5)(ii) and access reviews associated with rate reduction or restructuring SPA submissions required by § 447.203(b)(6) have led to confusion about the due date and scope of routine, ongoing AMRP updates and SPA-connected access review submissions, particularly when States were required to submit access reviews within the 3-year period between AMRP updates when proposing a rate reduction or restructuring SPA, per the requirements in previous § 447.203(b)(6). For example, one State timely submitted its initial ongoing AMRP on October 1, 2016, consistent with the requirements in § 447.203(b)(1) through (5), then the State submitted a SPA that proposed to reduce provider payment rates for physical therapy services with an effective date of July 1, 2018, along with an access review for the affected service completed within the prior 12 months, consistent with the requirements in § 447.203(b)(6). The State's access review submission consisted of its 2016 AMRP submission, updated with data from the 12 months prior to this SPA submission, with the addition of physical therapy services for which the SPA proposed to reduce rates. Because the State submitted an updated version of its 2016 AMRP in 2018 in support of the SPA submission, the State was confused whether its next AMRP update submission was due in 2019 (3 years from 2016), or in 2021 (3 years from 2018). Based on the infrequency of a triennial due date for AMRP updates and the numerous instances of similar State confusion during the implementation process for the previous AMRPs, we identified that the triennial timeframe was insufficient for the proposed comparative payment rate analysis and payment rate disclosure.

As we considered a new timeframe for updates to the comparative payment rate analysis and payment rate disclosure to propose in this rulemaking, we initially considered proposing to require annual updates. However, we explained our belief that annual updates would add unnecessary administrative burden as annual updates would be too frequent because many States do not update their Medicaid fee schedule rates for the codes subject to the comparative payment rate analysis and payment rate disclosure on an annual basis. As proposed, the categories of services subject to the proposed comparative payment rate analysis and payment rate disclosure are for office-based visits and, in our experience, the Medicaid payment rates generally do not change much over time due to the nature of an office visit.[283] Office visits primarily

[281] 83 FR 12696 at 12697.

[282] 84 FR 33722 at 33723.

[283] We acknowledged that Medicaid primary care payment increase, a provision in the Patient Protection and Affordable Care Act (ACA, Pub. L. 111–148, as amended), temporarily raised Medicaid

include vital signs being taken and the time a patient meets with a physician or NPP; therefore, States would likely have a considerable amount of historical payment data for supporting the current payment rates for such services. Given the relatively stable nature of payment rates for office visits, our proposal aimed to help ensure the impact of the comparative payment rate analysis is maximized for ensuring compliance with section 1902(a)(30)(A) of the Act while minimizing unnecessary burden on States by holding all States to a proposed update frequency of 2 years to capture all Medicaid (and corresponding Medicare) payment rate changes.

As the proposed rule sought to reduce the amount of administrative burden from the previous AMRP process on States while also fulfilling our oversight responsibilities, we explained our belief that updating the comparative payment rate analysis and payment rate disclosure no less than every 2 years would achieve an appropriate balance between administrative burden and our oversight responsibilities with regard to section 1902(a)(30)(A) of the Act. We noted our intent for the comparative payment rate analysis and payment rate disclosure States develop and publish to be time-sensitive and useful sources of information and analysis to help ensure compliance with section 1902(a)(30)(A) of the Act. If this proposal is finalized, we stated that both the comparative payment rate analysis and payment rate disclosure would provide the State, CMS, and other interested parties with cross-sectional data of Medicaid payment rates at various points in time. This data could be used to track Medicaid payment rates over time as a raw dollar amount and as a percentage of Medicare non-facility payment as established in the annual Medicare PFS final rule for a calendar year, as well as changes in the number of Medicaid-paid claims volume and number of Medicaid enrolled beneficiaries who receive a service over time. The availability of this data could be used to inform State policy changes, to compare payment rates across States, or for research on Medicaid payment rates and policies. While we noted our belief that the comparative payment rate analysis and payment rate disclosure would provide useful and actionable information to States, we explained that we did not want to overburden States with annual updates to the comparative payment rate analysis and payment rate disclosure. As we proposed to replace the previous triennial AMRP process with less administratively burdensome processes (payment rate transparency publication, comparative payment rate analysis, payment rate disclosure, and State analysis procedures for rate reductions and restructurings) for ensuring compliance with section 1902(a)(30)(A) of the Act, we stated our belief that annual updates to the comparative payment rate analysis and payment rate disclosure would negate at least a portion of the decrease in administrative burden from eliminating the previous AMRP process.

With careful consideration, we stated our belief that our proposal to require updates to the comparative payment rate analysis and payment rate disclosure to occur no less than every 2 years is reasonable. We noted our expectation that the proposed biennial publication requirement for the comparative payment rate analysis and payment rate disclosure after the initial publication date would be feasible for State agencies, provide a straightforward timeline for updates, limit unnecessary State burden, help ensure public payment rate transparency, and enable us to conduct required oversight. We solicited comments on the proposed timeframe for the initial publication and biennial update requirements for the comparative payment rate analysis and payment rate disclosure as proposed in § 447.203(b)(4).

Lastly, we also proposed in paragraph (b)(4) to require States to publish the comparative payment rate analysis and payment rate disclosure consistent with the publication requirements described in proposed paragraph (b)(1) for payment rate transparency data. Paragraph (b)(1) would require the website developed and maintained by the single State Agency to be accessible to the general public. We proposed States utilize the same website developed and maintained by the single State Agency to publish their Medicaid FFS payment rates and their comparative payment rate analysis and payment rate disclosure. We solicited comments on the proposed required location for States to publish their comparative payment rate analysis and payment rate disclosure proposed in § 447.203(b)(4).

In § 447.203(b)(5), we proposed a mechanism to ensure compliance with paragraphs (b)(1) through (b)(4). Specifically, we proposed that, if a State fails to comply with the payment rate transparency and comparative payment rate analysis and payment rate disclosure requirements in paragraphs (b)(1) through (b)(4) of proposed § 447.203, including requirements for the time and manner of publication, that, under section 1904 of the Act and procedures set forth in regulations at 42 CFR part 430 subparts C and D, future grant awards may be reduced by the amount of FFP we estimate is attributable to the State's administrative expenditures relative to the total expenditures for the categories of services specified in paragraph (b)(2) of proposed § 447.203 for which the State has failed to comply with applicable requirements, until such time as the State complies with the requirements. We also proposed that unless otherwise prohibited by law, FFP for deferred expenditures would be released after the State has fully complied with all applicable requirements. We explained that this proposed enforcement mechanism is similar in structure to the mechanism that applies with respect to the Medicaid DSH reporting requirements in § 447.299(e), which specifies that State failure to comply with reporting requirements will lead to future grant award reductions in the amount of FFP CMS estimates is attributable to expenditures made for payments to the DSH hospitals as to which the State has not reported properly. We proposed this long-standing and effective enforcement mechanism because we believed it is proportionate and clear, and to remain consistent with other compliance actions we take for State non-compliance with statutory and regulatory requirements. We solicited comments on the proposed method for ensuring compliance with the payment rate transparency and comparative payment rate analysis and payment rate disclosure requirements, as specified in proposed § 447.203(b)(5).

We received public comments on these proposed provisions. The following is a summary of the comments we received and our responses.

Comparative Payment Rate Analysis Comments and Responses

Comment: Among comments received on the comparative payment rate analysis, the majority of commenters generally supported the proposal to require States to develop and publish a comparative payment rate analysis of Medicaid payment rates for certain categories of services. These commenters specifically supported the proposed categories of services, comparing only base payment rates,

physician fees for evaluation and management services (Current Procedural Terminology codes 99201–99499) and vaccine administration services and counseling related to children's vaccines (Current Procedural Terminology codes 90460, 90461, and 90471–90474). This provision expired on December 31, 2014. *https://www.macpac.gov/wp-content/uploads/2015/03/An-Update-on-the-Medicaid-Primary-Care-Payment-Increase.pdf.*

breakdown of Medicaid payment rates by population (pediatric and adult), use of Medicare non-facility rates as a benchmark for comparing Medicaid rates, and number of Medicaid services as a data element in the comparative payment rate analysis. Commenters in support of the comparative payment rate analysis agreed with CMS that the analysis requirement would help to ensure necessary information, specifically Medicaid payment rates and the comparison to Medicare, is available to CMS for ensuring compliance with section 1902(a)(30)(A) of the Act and to interested parties for raising access to care concerns through public processes.

However, a couple of commenters expressed opposition to the proposed comparative payment rate analysis. Commenters in opposition stated the proposed comparative payment rate analysis requirements would be administratively burdensome on States and create challenges for States in benchmarking services to Medicare because Medicare uses a rate setting methodology that is different from each State's Medicaid program. These commenters expressed concerns about the burden associated with the comparative payment rate analysis, specifically about further burden on States that do not use the same procedure/diagnostics codes or same payment methodologies as Medicare, as well as data challenges to stratify State payment rates by population, provider type, and geographic location, and challenges of comparing community mental health center payment rates to the Medicare equivalent.

Response: We appreciate the commenters' support of the comparative payment rate analysis at § 447.203(b)(3)(i). We are finalizing the comparative payment rate analysis provisions as proposed apart from some minor revisions that ensure clarity and consistent terminology throughout § 447.203(b), as well as update the name of ''outpatient behavioral health services'' to ''outpatient mental health and substance use disorder services'' and the compliance timeframe, as discussed earlier in this section. We list and describe the specific revisions we made to the regulatory language for the comparative payment rate analysis provision at § 447.203(b)(2) through (b)(5) at the end of this section of responses to comments.

We disagree with commenters regarding burden of the comparative payment rate analysis and challenges benchmarking services to Medicare. As documented in section III. of this final rule, the FFS provisions, including the payment rate transparency, comparative payment rate analysis, and payment rate disclosure requirements (§ 447.203(b)(1) through (5)), interested parties' advisory group requirements (§ 447.203(b)(6)), and State analysis procedures for payment rate reductions or payment restructuring (§ 447.203(c)), are expected to result in a net burden reduction on States compared to the previous AMRP requirements. Additionally, as addressed in another comment response generally discussing commenters' concerns about State burden, we have described numerous flexibilities States have for compliance with this final rule. Specifically for the comparative payment rate analysis, States have flexibility to (1) utilize contractors or other third party websites to publish the payment rate transparency publication on (however, we remind States that they are still requiring to publish the hyperlink to the website where the publication is located on the State Medicaid agency's website as required in § 447.203(b)(1)(ii) of this final rule); and (2) for the requirement that States break down their payment rates by geographical location, as applicable, States have the flexibility to determine an appropriate method to accomplish the comparative payment rate analysis that aligns the geographic area covered by each payer's rate as closely as reasonably feasible. Additionally, we are providing an example list that defines the categories of services subject to the comparative payment rate analysis through the finite number of E/M CPT/HCPCS codes in the list, if it were in effect for CY 2023 and an illustrative example of a compliant comparative payment rate analysis (including to meet accessibility standards) through subregulatory guidance that we will issue prior to the effective date of this final rule.

We do not expect States to experience excessive burden or challenges in benchmarking services to Medicare because we will issue subregulatory guidance prior to the effective date of this final rule, including a hypothetical example list of the CMS-published list of E/M CPT/HCPCS codes that would be subject to the comparative payment rate analysis, if the comparative rate analysis requirements were applicable with respect to payment rates in effect for CY 2023, where all codes on the CMS-published list of E/M CPT/HCPCS codes have an existing Medicare payment rate. By ensuring there is an existing Medicare payment rate for States to compare their Medicaid payment rate to and providing States with information about where and how to find the Medicare non-facility payment rate as established in the annual Medicare PFS final rule for a calendar year for these codes to include in their analysis (that is, through Excel file downloads of the Medicare PFS Relative Value Files),[284] we do not expect States to face challenges with identifying the applicable Medicare benchmark rates.

Regarding States that do not use same procedure/diagnostics codes as Medicare, as described in the proposed rule, E/M CPT/HCPCS codes are comprised of primarily preventive services which are generally some of the most commonly billed codes in the U.S.,[285] therefore, we do not believe there will be issues with States not using the same procedure/diagnostics codes as Medicare. However, we recognize that States may amend existing CPT/HCPCS codes with additional numbers or letters for processing in their own claims system. If a State does not use the exact code included in the CMS-published list of E/M CPT/HCPCS codes, then we expect the State to review the CMS-published list of E/M CPT/HCPCS codes and identify which of their codes are most comparable for purposes of the comparative payment rate analysis. We anticipate States may need to review code descriptions as part of the process of identifying which codes on the CMS-published list of E/M CPT/HCPCS codes are comparable to the codes that States utilizes.

Regarding States that expect to experience challenges benchmarking services to Medicare because they do not use the same payment methodologies as Medicare, while Medicare and State Medicaid agencies may use different methodologies to determine the rate published on their fee schedules, the comparative payment rate analysis only requires the base Medicaid FFS fee schedule payment rates as published on the State's fee schedule and Medicare's rate as published on the PFS for a particular code to be published in the analysis. The methodology to determine the payment rate is not relevant to the comparative payment rate analysis, therefore, having different methodologies to determine the rate does not affect a States' ability to comply with the comparative payment rate analysis requirements. Under the comparative payment rate analysis requirements we are finalizing in this final rule, Medicare rates serve as a benchmark to which States will compare certain of their base Medicaid FFS fee schedule payment rates to

[284] 88 FR 27960 at 28012.

[285] 88 FR 27960 at 28009.

inform their and our assessment of whether the State's payment rates are compliant with section 1902(a)(30)(A) of the Act.

Regarding commenters' concerns about data challenges to stratify State payment rates by population, provider type, and geographic location for the comparative payment rate analysis, we acknowledge that not all States pay varied payment rates by population (pediatric and adult), provider type, and geographical location, which is why we proposed and are finalizing language noting ''if the rates vary'' and ''as applicable'' in the regulatory text. Therefore, States that do not pay varied payment rates by population (pediatric and adult), provider type, and geographical location will not need to list varied rates based on factors that the State does not use in its rates. For example, a State that pays different rates by population (pediatric and adult) but does not vary the rates by provider type or geographic location will list separate payment rates for services furnished to a pediatric and to an adult beneficiary, but will not list separate rates based on provider type or geographical location. If the State pays a single Statewide payment rate for a single service, the State will only include the State's single Statewide payment rate in the comparative payment rate analysis. For States that do pay varied payment rates by population (pediatric and adult), provider type, and geographical location, in accordance with § 430.10 and given that States are the stewards of setting and maintaining Medicaid FFS payment rates, States are required to maintain sufficient records about current payment rates, including when payment rates vary, to enable them to meet the comparative payment rate analysis requirements of this final rule.

Regarding the commenter's concerns about comparing community mental health center payments to Medicare rates, we would like to clarify that mental health services provided in a facility-based setting, such as FQHC, RHC, CCBHC, or clinics (as defined in § 440.90) are excluded from the comparative payment rate analysis due to the challenges we expect States to face in disaggregating their rates (including PPS rates paid to FQHCs or RHCs which are often paid encounter, per visit, or provider-specific rates and all-inclusive per-visit rates, encounter rates, per visit rates, or provider-specific rates paid to clinics (as defined in § 440.90)) for comparison to Medicare, as discussed in the proposed rule.[286]

[286] 88 FR 27960 at 28011–28012.

Comment: We received a comment requesting clarification about the entity responsible for publishing the comparative payment rate analysis.

Response: The State agency is required to publish a hyperlink where the comparative, as well as the payment rate disclosure and payment rate transparency publication, on the State Medicaid agency's website. As finalized in this rule, § 447.203(b)(3) requires that States' comparative payment rate analysis, as well as payment rate disclosure, must be published consistent with the publication requirements in paragraphs (b)(1) and (b)(1)(ii). Paragraph (b)(1) requires the State ''. . . publish all Medicaid fee-for-service fee schedule payment rates on a website that is accessible to the general public.'' As discussed in an earlier response to comments in this section, this language has been revised from what we originally proposed to permit States the flexibility to continue to utilize contractors and other third parties for developing and publishing their fee schedules on behalf of the State. We continue to require that ''[t]he website where the State agency publishes its Medicaid fee-for-service payment rates must be easily reached from a hyperlink on the State Medicaid agency's website.'' in § 447.203(b)(1)(ii).

Comment: One commenter requested clarification regarding how the comparative payment rate analysis will be organized, particularly if the FFS rates included in the analysis would be organized by CPT code.

Response: As finalized by this rule, § 447.203(b)(3)(i) requires that ''State[s] must conduct the comparative payment rate analysis at the Current Procedural Terminology (CPT) or Healthcare Common Procedure Coding System (HCPCS) code level, as applicable, using the most current set of codes published by CMS . . .'' As such, the publication is required to be organized at the CPT level. However, to the extent there are differences in a State's rates based on population (pediatric and adult), provider type, and geographical location, the publication may need to have multiple CPT-level rate comparisons to account for each differing rate.

Comment: One commenter raised concerns regarding the accessibility of the comparative payment rate analysis due to the extensive amount of data, which may be overwhelming and difficult for individuals to understand, for example individuals with disabilities and those who use screen readers. The commenter recommended that CMS require the analysis and disclosure be contained in a designated website, rather than linked from the State Medicaid agency's website to avoid creating potential confusion. They further recommended CMS require States include plain language descriptions of the published payment rate data to ensure the analysis is accessible for individuals with disabilities.

Response: We understand the concern that the amount of data in the analysis could prove overwhelming to some individuals. However, we believe it is important for these data to be easily reached for those interested parties that are trying to locate it. Transparency, particularly the requirement that States must publicly publish their payment rates, helps to ensure that interested parties have basic information available to them to understand Medicaid payment levels and the associated effects of payment rates on access to care so that they may raise concerns to State Medicaid agencies via the various forms of public processes available to interested parties. Therefore, as finalized in this rule, § 447.203(b)(1) requires the State ''. . . publish all Medicaid fee-for-service fee schedule payment rates on a website that is accessible to the general public.'' As discussed in an earlier response to comments in this section, this language has been revised from what we originally proposed to permit States the flexibility to continue to utilize contractors and other third parties for developing and publishing their fee schedules on behalf of the State. We continue to require at § 447.203(b)(1)(ii) that the website where the State agency publishes its Medicaid FFS payment rates must be easily reached from a hyperlink on the State Medicaid agency's website.

As described in the proposed rule, longstanding legal requirements to provide effective communication with individuals with disabilities and the obligation to take reasonable steps to provide meaningful access to individuals with limited English proficiency also apply to the State's website containing Medicaid FFS payment rate information. We invite States to reach out to CMS for technical guidance regarding compliance with the comparative payment rate analysis. We also encourage States to review the subregulatory guidance, which includes an example of what a compliant comparative payment rate analysis might look like, that will be issued prior to the effective date of this final rule.

Comment: A couple of commenters suggested that the proposed breakdown of the comparative payment rate analysis would result in an

overwhelming volume of information for the average individual viewing the data. One commenter suggested requiring States to report the aggregate fee schedule rate, instead of breaking down a State's payment rates by categories of services in addition to population, provider type and geographic location to ensure data is accessible and meaningful to someone viewing the data.

Response: We understand the commenters' concerns about the potential for the comparative payment rate analysis to contain a large amount of information. However, the level of detail we are requiring will afford States, CMS, and the public the best opportunity to assess individual rates and how they might impact access to certain services. Our hope is that the requirements and guidance around the elements to include, and the consistency this will create across States, will make the data readily navigable and understandable, even though a high volume of information may need to be presented to account for the array of services subject to the comparative payment rate analysis requirement and the potential complexity of the State's payment rate structure.

We assume the commenter who suggested an aggregated fee schedule rate meant we should only require States publish a single Statewide payment rate or a calculated Statewide average Medicaid payment rate if they do have varying payment rates for a service by population (pediatric and adult), provider type, and/or geographic location. We are not adopting this suggestion because only requiring an aggregated fee schedule rate would lose the opportunity for States, CMS, and the public to contextualize payment rates and how they might be impacting access for different populations in different geographical areas, or for beneficiaries seeking services from particular provider types. However, we note that States have the flexibility to add an aggregated fee schedule rate in addition to breaking down a State's payment rates for a given service by population (pediatric and adult), provider type, and geographic location, as applicable, with their comparative payment rate analysis if they so choose. If a State utilizes this flexibility to include this or optional additional information, then required data elements in § 447.203(b)(2) through (3) must be listed first on the State's website to ensure the analysis presents payment rate information in a clear and accurate way, particularly for States that do pay varied rates based on population (pediatric and adult), provider type, and/or geographic location and opted to include an aggregated fee schedule rate (that is, a calculated Statewide average Medicaid payment rate).

The previous AMRP process established a transparent data-driven process to measure access to care in States; however, during the implementation period, we found that States produced varied AMRPs that were difficult to interpret or to use in assessing compliance with section 1902(a)(30)(A) of the Act. With this final rule, we are focusing on payment rate transparency and streamlining information States are required to publish. Therefore, we expect the comparative payment rate analysis to be easier to understand and more consistent across States than the previous AMRPs.

Comment: A few commenters suggested narrowing the scope of the comparative payment rate analysis to a representative subset of services or commonly used services with a Medicare equivalent. On the other hand, one commenter stated that limiting the scope of the comparative payment rate analysis to E/M codes would not be adequate to meaningfully assess access to care for all services under the proposed categories of services.

Response: We appreciate the commenters' suggestions on the scope of the comparative payment rate analysis. Prior to the effective date of this final rule, we will issue subregulatory guidance, including a hypothetical example list of the E/M CPT/HCPCS codes that would be subject to the comparative payment rate analysis, if the comparative rate analysis requirements were applicable with respect to payment rates in effect for CY 2023. The initial CMS-published list of the E/M CPT/HCPCS codes to be published no later than July 1, 2025, will contain a finite number of E/M CPT/HCPCS codes subject to the initial comparative payment rate analysis. While the commenters did not specify their recommendation for what a representative subset of services would include or how they would identify commonly provided services with a Medicare equivalent, we believe the criteria we used to select the E/M CPT/HCPCS codes for the comparative payment rate analysis [287] fulfills these commenters' suggestion for a representative set of commonly provided services with Medicare payment rates for comparison. We believe the categories of services included in the rule (primary care services, obstetrical and gynecological services, and outpatient mental health and substance use disorder services) are a representative subset of Medicaid services available to beneficiaries that are of great importance to overall beneficiary health, as described in the proposed rule.[288] Additionally, E/M CPT/HCPCS codes are some of the most commonly billed codes and one of the criteria in the CMS-published list of the E/M CPT/HCPCS codes is that the Medicare PFS has a payment amount on the fee schedule, therefore, we believe our list of codes includes commonly used services with a Medicare equivalent payment rate.

Also as previously discussed in detail in an earlier response to comments in this section, for purposes of the payment rate transparency provision in § 447.203(b)(1), Medicaid FFS fee schedule payment rates are FFS payment amounts made to a provider, and known in advance of a provider delivering a service to a beneficiary by reference to a fee schedule. For consistency, we are using the same description of Medicaid FFS fee schedule payment rates to describe the payment rates that need to be included in the comparative payment rate analysis in paragraph (b)(3)(ii)(B) of this section which would also consider bundled payment rates to be Medicaid FFS fee schedule payment rates for the purposes of the comparative payment rate analysis. We would also like to clarify that while prospective payment system rates for services provided in inpatient hospitals, outpatient hospitals, inpatient psychiatric facilities, inpatient rehabilitation facilities, long-term care hospitals, and nursing facilities are subject to the payment rate transparency publication, these rates are effectively excluded from the comparative payment rate analysis because of the criteria we discussed in the proposed rule that we used to identify which CPT/HCPCS codes would be subject to the analysis (that is, the code is classified as an E/M CPT/HCPCS code by the AMA CPT Editorial Panel and the code has an A (Active), N (Non-Covered), R (Restricted), or T (Injections) code status on the Medicare PFS with a Medicare established RVU and payment amount for the same time period of the comparative payment rate analysis).[289] Prospective payment system rates are generally used to pay for institutional services (for example, hospitals and nursing facilities) where E/M services are not provided. Prospective payment system rates are also not listed on the Medicare PFS because they do not pay

[287] 88 FR 27960 at 28008.

[288] 88 FR 27960 at 28003.

[289] 88 FR 27960 at 28008.

for a single code, and therefore, they would not have a code or a payment rate on the PFS. Also, as discussed in an earlier response to comments, PPS rates for FQHCs and RHCs are not subject to the payment rate transparency publication requirement under § 447.203(b)(1). Rather than further broadening the services subject to the comparative payment rate analysis requirement, we want our initial focus of this rulemaking to be on establishing the new payment rate transparency, comparative payment rate analysis, and payment rate disclosure requirements, providing States with support during the compliance period, and ensuring these data are available to beneficiaries, providers, CMS, and other interested parties for the purposes of assessing access to care issues.

We disagree with the commenter that our scope of services subject to the comparative payment rate analysis will not provide a meaningful assessment of access. To reemphasize, we believe this list of codes, including primary care services, obstetrical and gynecological services, and outpatient mental health and substance use disorder services, are critical medical services and of great importance to overall beneficiary health, as described in the proposed rule.[290] We acknowledge that the code list is limited to services delivered in an ambulatory setting, such as a physician's office, and services that are paid a Medicaid FFS fee schedule rate within the meaning of this final rule. Therefore, the code list for the comparative payment rate analysis excludes services delivered in a facility setting and/or services States pay for using a prospective payment system, for example hospitals, nursing facilities, FQHCs, and RHCs; however, we believe these limitations are appropriate to balance administrative burden on States and our enforcement responsibilities. As previously discussed, we believe that asking States to disaggregate their prospective payment system rates for facility-based services to compare to Medicare's prospective payment system rates often would be challenging for States. Given that our work to better ensure access in the Medicaid program is ongoing, we intend to gain implementation experience with this final rule, and we will consider the recommendations provided on the proposed rule to help inform any future rulemaking in this area, as appropriate.

Comment: A couple of commenters suggested aligning the proposed categories of services with Medicaid service categories as defined in statute and regulation to minimize confusion and ambiguity about the services subject to the comparative payment rate analysis. Another commenter suggested, rather than requiring a specified set of services, that CMS require the comparative payment rate analysis based on the percentage of services paid for by the State (that is, each State would include the services they pay the most for in their Medicaid program).

Response: We understand commenters' concerns about possible confusion of the categories of services subject to the comparative payment rate analysis that do not align directly with a Medicaid services category. Prior to the effective date of this final rule, we will issue subregulatory guidance including a hypothetical example list of the E/M CPT/HCPCS codes that would be subject to the comparative payment rate analysis, if the comparative rate analysis requirements were applicable with respect to payment rates in effect for CY 2023. This example list defines the categories of services subject to the comparative payment rate analysis through the finite number of E/M CPT/HCPCS codes in the list, if it were in effect for CY 2023. The initial CMS-published list of the E/M CPT/HCPCS codes actually subject to the comparative payment rate analysis will be published no later than July 1, 2025. We believe this list of codes will eliminate any confusion and ambiguity commenters expressed in response to the proposed rule because it will contain the actual E/M CPT/HCPCS codes subject to the initial comparative payment rate analysis. We will only be including codes that satisfy all the defined criteria set forth in this rule. This list will be updated every other year after 2025, that is, July 1, 2027, 2029, so on and so forth. We expect States to review the CMS-published list of the E/M CPT/HCPCS codes to identify the base Medicaid FFS fee schedule payment rate as specified in § 447.203(b)(3)(i)(B) that is required to be included in the comparative payment rate analysis.

We are not adopting the commenter's suggestion to require the comparative payment rate analysis be based on the percentage of services paid for by the State (that is, each State would include the services they pay the most for in their Medicaid program), rather than requiring a specified set of services. In the comparative payment rate analysis, we are striving for consistency and comparability between States and Medicare, therefore, we have decided to require States use the same categories of services and CMS published list of E/M CPT/HCPCS codes for the analysis.

Comment: A couple of commenters suggested alternative terms for the categories of services in the proposed rule. One commenter recommended using the terms ''substance use disorder and mental health services'' in place of ''behavioral health services'' and requiring the comparative payment rate analysis include separate analyses for each condition. Another commenter suggested using gender-inclusive language such as ''reproductive and sexual health services'' in place of ''obstetrical and gynecological services'' as a category of services in the comparative payment rate analysis.

Response: We appreciate the commenters' suggestions. We understand and appreciate the commenter's request for further granularity in the comparative payment rate analysis by specifying ''substance use disorder and mental health services'' in place of ''behavioral health services.'' We have decided to revise the outpatient behavioral health services category of service in § 447.203(b)(2)(iii) and finalize it as ''Outpatient mental health and substance use disorder services.'' While this revision does not change the criteria used to identify the discrete codes included in the BETOS E/M family grouping and families and subfamilies for the CMS published list of E/M CPT/HCPCS subject to the comparative payment rate analysis, this revision does ensure this final rule is consistent with the services in the Managed Care final rule (as published elsewhere in this **Federal Register**) for consistency across Medicaid FFS and managed care delivery systems and reflects a more granular level of service description as suggested by the commenter.

We agree with the importance of gender-inclusive language, where appropriate. However, current medical and procedural terminology generally still uses the terminology ''obstetrical and gynecological services.'' We determined consistent language would provide interested parties the most clarity. Additionally, we selected obstetrical and gynecological services as a category of service due Medicaid's key role in providing and paying for maternity-related services for pregnant women during a maternal health crisis in the US.[291] We acknowledge that using the term ''reproductive and sexual health services'' would be inclusive of more services, that is, male reproductive services in addition to pregnancy and female reproductive services. However, if we were to utilize the term ''reproductive and sexual health

[290] 88 FR 27960 at 28003.

[291] 88 FR 27960 at 28004.

services'' then this would expand the number of services that would be subject to comparative rate analysis and increase burden on States complying with the analysis. We want our initial focus to be on establishing the new payment rate transparency, comparative payment rate analysis, and payment rate disclosure requirements, providing States with support during the compliance period, and ensuring these data are available to beneficiaries, providers, CMS, and other interested parties for the purposes of assessing access to care issues. Therefore, we are finalizing ''obstetrical and gynecological services'' as a category of service in § 447.203(b)(2)(ii) subject to the comparative payment rate analysis. Given that our work to better ensure access in the Medicaid program is ongoing, we intend to gain implementation experience with this final rule, and we will consider the recommendations provided on the proposed rule to help inform any future rulemaking in this area, as appropriate.

Comment: A couple of commenters raised concerns about inpatient behavioral health services not being a category of service in the comparative payment rate analysis. One of those commenters disagreed with CMS' justification that including inpatient behavioral health services would be duplicative of the information captured through UPL demonstrations because UPL demonstrations do not include the same level of analysis as proposed in the comparative payment rate analysis. In particular, the commenter stated that UPL demonstrations do not ensure hospital base payments are adequate, do not track if Medicaid payments align with Medicare payment rate increases, and the new supplemental payment reporting requirements established by the CAA, 2021 focus on supplemental payments, rather than base payments. Additionally, one commenter recommended that, if inpatient behavioral health services are not subject to the comparative payment rate analysis, CMS take alternative steps to assess access to inpatient behavioral health services, such as monitoring care transitions between inpatient and outpatient facilities during temporary or permanent transitions to inpatient care.

Response: We understand the commenters' concerns about excluding inpatient behavioral health services from the categories of services subject to the comparative payment rate analysis. We acknowledge the importance of inpatient behavioral health services in the spectrum of behavioral health services for which coverage is available under the Medicaid program. As discussed in the proposed rule, we recognize that Medicaid plays a crucial role in mental health care access as the single largest payer of these services with a growing role in payment for substance use disorder services, in part due to Medicaid expansion and various efforts by Congress to improve access to mental health and substance use disorder services.[292] In this final rule, we are revising the outpatient behavioral health services category of service in § 447.203(b)(2)(iii) and finalizing it as ''Outpatient mental health and substance use disorder services.'' While the scope of the comparative payment rate analysis requirement is limited to outpatient mental health and substance use disorder services, to the extent States pay for inpatient behavioral health services (including inpatient services furnished in psychiatric residential treatment facilities, institutions for mental diseases, and psychiatric hospitals) with a Medicaid FFS fee schedule payment rate that falls within the meaning of this rule, as discussed in an earlier response to comments in this section, then those payment rates would be subject to the payment rate transparency publication. In addition to subjecting certain inpatient behavioral health payment rates to the payment rate transparency publication requirement, we already collect and review Medicaid and Medicare payment rate data for inpatient behavioral health services through annual UPL demonstrations and supplemental payment reporting requirements under section 1903(bb) of the Act. We recognize UPL data are not an exact duplicate of the data required under the policies we are finalizing in this rule. With this final rule, our focus is on improving our oversight of Medicaid payment rates to identify where rates may be negatively impacting access to care while minimizing burden imposed on States, which requires us to prioritize areas of focus. Although the UPL and the supplemental payment reporting requirements under section 1903(bb) of the Act represent a different array of data, they still afford us an opportunity for payment oversight. Therefore, we chose to focus on services and rates not covered by those requirements.

We disagree with the commenter that UPL demonstrations do not ensure hospital base payments are adequate and do not track if Medicaid payments align with Medicare payment rate increases. We began requiring annual UPL demonstrations in 2013 to ensure CMS and States have a better understanding of the variables surrounding rate levels, supplemental payments and total providers participating in the Medicare and Medicaid programs and the funding supporting each of the payments subject to UPL demonstrations.[293] UPL demonstrations are a comparison of total Medicaid payments for a particularly benefit category to a reasonable estimate of what Medicare would have paid. Therefore, UPL demonstrations fundamentally track if Medicaid payments align with Medicare payment rates at an aggregate level and provide CMS with important information for assessing if payment rates comply with economy and efficiency provisions at section 1902(a)(30)(A) of the Act, specifically how total Medicaid payments compare to what Medicare would have paid for similar services where Medicare acts as a payment limit, or ceiling, for economic and efficient. We do acknowledge that the new supplemental payment reporting requirements under section 1903(bb) of the Act focus on supplemental payments, rather than base payments; however, base payment data continues to be collected through UPL demonstrations, providing us, in the aggregate, with detailed information about both base and supplemental payments for hospitals.

Additionally, the comparative payment rate analysis utilizes Medicare rates as a benchmark to which States will compare their Medicaid FFS fee schedule payment rate to inform their and our assessment of whether the State's payment rates are compliant with section 1902(a)(30)(A) of the Act. We are not requiring States to meet a threshold percentage of Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year or align with Medicare payment rate increases.

We acknowledge the commenter's request for CMS to take alternative steps to assess access to inpatient behavioral health services, such as monitoring care transitions between inpatient and outpatient facilities during temporary or permanent transitions to inpatient care. We want our initial focus to be on establishing the new payment rate transparency, comparative payment rate analysis, and payment rate disclosure requirements, providing States with support during the compliance period, and ensuring these data are available to beneficiaries, providers, CMS, and other interested parties for the purposes of

[292] 88 FR 27960 at 28004.

[293] *https://www.medicaid.gov/sites/default/files/Federal-Policy-Guidance/Downloads/SMD-13-003-02.pdf.*

assessing access to care issues. Given that our work to better ensure access in the Medicaid program is ongoing, we intend to gain implementation experience with this final rule, and we will consider the recommendations provided on the proposed rule to help inform any future rulemaking in this area, as appropriate. We are committed to helping States and their providers undertake efforts to improve transitions and improve medical and LTSS coordination by providing technical assistance, resources, and facilitating the exchange of information about promising practices of high quality, high impact, and effective care transition models and processes and we encourage States to review existing resources about improving care transitions on *Medicaid.gov*.[294]

Comment: Some commenters submitted comments about behavioral health services as a category of service in the comparative payment rate analysis. A few commenters suggested particular or additional categories of services for behavioral health services, including inpatient behavioral health services, substance use disorder services, mental health services, intensive outpatient services, partial hospitalization care, opioid treatment programs, services delivered by providers who do not bill E/M codes, and specialist services provided to individuals with chronic diseases and disabilities. These commenters also suggested including codes outside of the E/M category, such as ''H'' HCPCS codes that psychologists, social workers, and marriage and family therapists often bill to ensure a comprehensive analysis of behavioral health services in the comparative payment rate analysis.

Response: We appreciate commenters' suggestion for the comparative payment rate analysis. As stated previously, we are excluding inpatient behavioral health services because existing UPL and supplemental payment reporting requirements under section 1903(bb) of the Act provide for payment oversight for inpatient behavioral health services, and with the provisions of this final rule, we chose to focus on services and payment rates not covered by those requirements. Additionally, we are not considering behavioral health services, now called outpatient mental health and substance use disorder services in this final rule, outside the E/M category as suggested by commenters because E/M CPT/HCPCS codes are some of the most commonly billed codes and including them in the comparative payment rate analysis would allow us to uniformly compare Medicaid payment rates for these codes to Medicare PFS rates. If we were to expand outside of E/M category of codes, then it is possible Medicare may not have rates established on the Medicare PFS for States to compare their base Medicaid FFS fee schedule payment rates too in the comparative payment rate analysis. Based on the criteria used to narrow the scope of the comparative payment rate analysis, we are requiting that the code has an A (Active), N (Non-Covered), R (Restricted), or T (Injections) code status on the Medicare PFS with a Medicare established RVU and payment amount for the same time period of the comparative payment rate analysis as well as the code must be included in the BETOS Classification System which only includes Psychotherapy—Group and Psychotherapy—Nongroup (family) under the E/M (category), Behavioral Health Services (subcategory). Psychotherapy is a type of treatment, or service, that can help individuals experiencing a wide array of mental health conditions and emotional challenges, including substance use disorder and mental health.[295] While the CMS published list of E/M CPT/HCPCS codes will not specifically include intensive outpatient services, partial hospitalization care, opioid treatment programs, services delivered by providers who do not bill E/M codes, specialist services provided to individuals with chronic diseases and disabilities, or H codes for Alcohol and Drug Abuse Treatment [296] as suggested by commenters, we believe the services included on the CMS published list of E/M CPT/HCPCS codes are critical medical services and of great importance to overall beneficiary health, as described in the proposed rule.[297] As previously discussed, the CMS published list of E/M CPT/HCPCS codes narrows the scope of the comparative payment rate analysis to selected services delivered in an ambulatory setting, such as a physician's office, and services that are paid a Medicaid FFS fee schedule rate within the meaning of this final rule to balance administrative burden on States and our enforcement responsibilities. Given that our work to better ensure access in the Medicaid program is ongoing, we intend to gain implementation experience with this final rule, and we will consider the recommendations provided on the proposed rule to help inform any future rulemaking in this area, as appropriate.

Comment: A couple of commenters expressed concerns regarding the exclusion of facility-based services from the comparative payment rate analysis. These commenters requested CMS consider additional provisions for services that are delivered by facility-based providers, which are often paid via an encounter rate, reimbursement of actual cost, or cost-based payment methodologies. One commenter suggested requiring States that pay for behavioral health services using cost-based payment methodologies publish the provider's payment rate compared to provider's actual incurred cost because States are already collecting this information from providers as it is necessary for the State's cost-based payment methodology.

Response: We appreciate the commenter's suggestions. We assume by encounter rate that the commenters were referring more broadly to PPS rates paid to both institutional facilities, such as hospitals and nursing facilities which are often paid encounter or per diem rates, as well as non-institutional facilities, such as FQHCs or RHCs which are often paid encounter, per visit, or provider-specific rates, as discussed in detail in an earlier response to comments in this section. We did not propose and are not finalizing in this rule the requirement that States disaggregate each of their PPS rates (including encounter, per diem, per visit, and provider-specific rates) and services covered in each rate to compare to Medicare's prospective payment system rates when Medicare pays a prospective payment system rate for the same service. Likewise, we also did not propose and are not finalizing in this rule the requirement that States publish cost reports or provider's unique cost information when the State's methodology is reimbursement of actual cost or cost-based methodologies and services covered in the reimbursement methodology to compare to actual incurred cost. Therefore, any policies that require States to disaggregate each of their PPS rates and services covered in each PPS rate or publish cost reports or provider's unique cost information in order to compare to Medicare's prospective payment system rates or the commenter's suggestion to compare to actual incurred cost, would be challenging for States because we would require a different methodology, policies, and oversight relative to the comparative payment rate analysis, as

[294] *https://www.medicaid.gov/medicaid/quality-of-care/quality-improvement-initiatives/improving-care-transitions/index.html.*

[296] *https://www.aapc.com/codes/hcpcs-codes-range/.*

[297] 88 FR 27960 at 28003.

discussed in the proposed rule.[298] As we are seeking an appropriate balance between administrative burden and our oversight responsibilities with regard to section 1902(a)(30)(A) of the Act, requiring States to publish cost-based Medicaid payments as well as actual, incurred cost for each unique provider would impose more burden on States that was not accounted for in the proposed rule. Given that our work to better ensure access in the Medicaid program is ongoing, we intend to gain implementation experience with this final rule, and we will consider the recommendations provided on the proposed rule to help inform any future rulemaking in this area, as appropriate.

Comment: Several commenters recommended changes to the analysis, such as additional categories of services or revisions to the proposed categories of services subject to the comparative payment rate analysis. While some commenters generally recommended expanding the categories of services, including all mandatory Medicaid services, other commenters recommended specific additional categories of services, provider types, or costs such as supplies. Those recommendations included: physician specialist services and specialty/specialist care (for example, cancer care); subspecialty services (for example, pediatric ophthalmology); services provided by NPPs; services delivered in clinics and other settings; prosthetic supplies (for example, ostomy and urological supplies), home health services (for example, homemaker and home health aide), sexual and reproductive health services (for example, midwives, doulas, providers who primarily serve the sexual and reproductive health needs of people assigned male at birth, etc.); dental and oral health services (including pediatric dentistry), ground emergency medical transportation services; cell and gene therapies; hospital and emergency department services; vaccine administration services; and habilitation and rehabilitation services provided by physical therapists. Commenters also suggested processes to add services when certain criteria are met, for example, adding any service to the comparative payment rate analysis when access concerns are raised or identified.

Response: We thank the commenters for the many recommendations for additional or alternate categories of service. In order to balance Federal and State administrative burden with our shared obligation to ensure compliance with section 1902(a)(30)(A) of the Act (and our obligation to oversee State compliance with the same), we are finalizing this rule with a narrow scope of categories of services subject to the comparative payment rate analysis and not including additional categories of services suggested by commenters. As discussed in the proposed rule, we chose primary care services, obstetrical and gynecological services, and outpatient behavioral health services (which we are finalizing as outpatient mental health and substance use disorder services) because they are critical medical services and of great importance to overall beneficiary health.[299] Primary care providers often deliver preventative health care services, write referrals or recommendations to schedule an appointment with physician specialists, and write orders for lab and x-ray services and prescriptions that a beneficiary would not be able to access without the primary care provider, therefore, access to a primary care provider is often a gateway to accessing other care. Obstetrical and gynecological providers and behavioral health providers also deliver preventive services respective to their field, such as well-woman visits and screenings for behavioral health conditions (such as alcohol disorders, anxiety, and eating disorders), respectively. As described in the proposed rule, the U.S. is simultaneously experiencing a maternal health crisis and mental health crisis, putting providers of obstetrical and gynecological and mental health and substance use disorder services at the forefront.[300]

We clarify that we did propose to include in the comparative payment rate analysis a couple of the services commenters suggested: care delivered by NPPs, and sexual and reproductive health services (to the extent these are included within the category of obstetrical and gynecological services). If a State's base Medicaid FFS fee schedule payment rate varies by provider type for a particular code subject to the comparative payment rate analysis, then the payment rates must be separately identified by provider type, including, but not limited to, physician, nurse practitioner, and physician assistant, as specified in § 447.203(b)(3)(i)(B). While we are not including the broader category of sexual and reproductive health services, obstetrical and gynecological services are one of the categories of services subject to the analysis. Lastly, homemaker and home health aide services are subject to the payment rate disclosure, but not the comparative payment rate analysis because of a lack of comparable Medicare payment rate.

Finally, we are not including the following services suggested by commenters in the comparative payment rate analysis: services delivered in clinics and other settings (as the commenter did not specify, we assume the commenter meant settings similar to clinics (as defined in § 440.90)), sexual and reproductive health services (for example, midwives, doulas, providers who primarily serve the sexual and reproductive health needs of people assigned male at birth, etc.) to the extent these are not included within the category of obstetrical and gynecological services, hospital and emergency department services, and medical supplies. Our current access strategy focuses broadly on Medicaid FFS fee schedule payment rates for outpatient practitioner services. As described in the proposed rule, encounter rates (generally based on total facility-specific costs divided by the number of encounters to calculate a per visit or per encounter rate that is paid to the facility for all services received during an encounter, regardless of which specific services are provided during a particular encounter) are typically paid to facilities, such as hospitals, FQHCs, RHCs, and clinics, and proposing States demonstrate the economy and efficiency of their encounter rates would be an entirely different exercise to the comparative payment rate analysis.[301] Therefore, we are not including services delivered in clinics and other settings (as the commenter did not specify, we assume the commenter meant settings similar to clinics (as defined in § 440.90)) or hospital and emergency department services in the comparative payment rate analysis. As previously stated, obstetrical and gynecological services are one of the categories of services subject to the analysis, but we are not including the broader category of sexual and reproductive health services because our focus in this rule is ensuring access to care to services that can most directly respond to the maternal health crisis occurring the U.S. As Medicaid plays a key role in providing and paying for maternity-related services for pregnant women, obstetrical and gynecological services generally represent the services received before, during, and after pregnancy.[302]

[298] 88 FR 27960 at 28012.

[299] 88 FR 27960 at 28003.

[300] 88 FR 27960 at 28004.

[301] 88 FR 27960 at 28012.

[302] 88 FR 27960 at 28004.

We note that one of the criteria used to narrow the CMS published list of E/M CPT/HCPCS codes requires that the code is included on the Berenson-Eggers Type of Service (BETOS) code list effective for the same time period as the comparative payment rate analysis and falls into the E/M family grouping and families and subfamilies for obstetrics and gynecological services; this includes prostate cancer screenings (G0102). Additionally, our current access strategy focuses on Medicaid FFS fee schedule payment rates for the provision of outpatient practitioner services, rather than medical supplies.

We are also not including the suggestion to create processes to add services to the comparative payment rate analysis when certain criteria are met, for example, adding any service to the comparative payment rate analysis when access concerns are raised or identified, because these situations will generally trigger the processes in § 447.203(c) which include similar requirements to the comparative payment rate analysis (that is, requiring State publish or submit information to CMS about Medicaid payment rates, number of Medicaid beneficiaries receiving services, and number of Medicaid services furnished/paid claims). Given that our work to better ensure access in the Medicaid program is ongoing, we intend to gain implementation experience with this final rule, and we will consider the recommendations provided on the proposed rule to help inform any future rulemaking in this area, as appropriate.

Comment: A few commenters submitted specific CPT/HCPCS codes and services for CMS' consideration when developing the CMS-published list of E/M CPT/HCPCS codes subject to the comparative payment rate analysis. These codes and services included specific obstetric codes including surgical procedures billed by providers of obstetric-gynecological services, reproductive care codes, pediatric ophthalmology codes including surgical procedures and clinical evaluations, vaccine administration, and other E/M codes. We also received requests to require analysis of the most frequently billed surgical codes for obstetrical-gynecological services, as well as behavioral health services that do not have E/M codes or a Medicare analog.

Response: We appreciate the commenters' suggestions. Prior to the effective date of this final rule, we will issue subregulatory guidance including a hypothetical example list of the E/M CPT/HCPCS codes that would be subject to the comparative payment rate analysis, if the comparative rate analysis requirements were applicable with respect to payment rates in effect for CY 2023. This example list defines the categories of services subject to the comparative payment rate analysis through the finite number of E/M CPT/HCPCS codes in the list, if it were in effect for CY 2023. Several of the commenter's suggested codes are included in the example list; however, this list is subject to change when the first CMS-published list of the E/M CPT/HCPCS codes subject to the comparative payment rate analysis for CY 2025 is published no later than July 1, 2025. Of the specific codes suggested by commenters, we can confirm that the following codes would be included in the CMS published list of E/M CPT/HCPCS codes subject to the analysis, if it were in effect for CY 2023: CPT 59400–59612, 58300–58301, 59120–59160, 59812–59857, 99401–99404, 90832–90853, 90791–90792, 96158, and 96165. Because of the criteria outlined in the proposed rule intended to narrow the scope of codes subject to the comparative payment rate analysis, CPT 59852 and 59857, peer support services, psychosocial rehab, and assertive community treatment, as well as vaccine administration codes are excluded from the comparative payment rate analysis due to their classification outside of the BETOS Classification System as E/M codes that are primary care, obstetrical and gynecological services, or outpatient mental health and substance use disorder services. Additionally, pediatric ophthalmology surgical procedures and the top 10 surgical codes billed by obstetrician-gynecologists to the Medicaid program are excluded from the analysis because one of the criteria used to narrow the scope of the comparative payment rate analysis was that for a code to be included on the CMS published list of E/M CPT/HCPCS codes, the code has to be included on the Berenson-Eggers Type of Service (BETOS) code list effective for the same time period as the comparative payment rate analysis and falls into the E/M family grouping and families and subfamilies for primary care services, obstetrics and gynecological services, and outpatient behavioral services (now called outpatient mental health and substance use disorder services in this final rule). E/M CPT/HCPCS codes are some of the most commonly billed codes and including them in the comparative payment rate analysis would allow us to uniformly compare Medicaid payment rates for these codes to Medicare PFS rates. Therefore, we narrowed the scope of codes to just E/M codes and surgical codes fall outside of this scope. As described in the proposed rule, the following criteria were used to identify the E/M CPT/HCPCS codes to be included in the comparative payment rate analysis: the code is effective for the same time period of the comparative payment rate analysis; the code is classified as an E/M CPT/HCPCS code by the AMA CPT Editorial Panel; the code is included on the Berenson-Eggers Type of Service (BETOS) code list effective for the same time period as the comparative payment rate analysis and falls into the E/M family grouping and families and subfamilies for primary care services, obstetrics and gynecological services, and outpatient behavioral services (now called outpatient mental health and substance use disorder services in this final rule); and the code has an A (Active), N (Non-Covered), R (Restricted), or T (Injections) code status on the Medicare PFS with a Medicare established RVU and payment amount for the same time period of the comparative payment rate analysis. As discussed in an earlier response to comments in this section, the revision from outpatient behavioral services to outpatient mental health and substance use disorder services does not change the criteria used to identify the discrete codes included in the BETOS E/M family grouping and families and subfamilies for the CMS published list of E/M CPT/HCPCS subject to the comparative payment rate analysis. While the payment rate transparency publication does not require a comparison to the Medicare non-facility payment rate as established in the annual Medicare PFS final rule for a calendar year, it does require transparency of Medicaid payment rates by requiring States publicly publish all Medicaid FFS fee schedule payment rates, which will often include a number of the services requested by commenters to be subject to the comparative payment rate analysis. Our primary goal with the payment rate transparency publication is ensuring Medicaid payment rates are publicly available in such a way that a member of the public can readily determine the amount that Medicaid would pay for a given service. Transparency helps to ensure that interested parties have basic information available to them to understand Medicaid payment levels and the associated effects of payment rates on access to care so that they may raise concerns to State Medicaid agencies via the various forms of public process available to interested parties. Given that our work to better ensure access in the Medicaid program is

ongoing, we intend to gain implementation experience with this final rule, and we will consider the recommendations provided on the proposed rule to help inform any future rulemaking in this area, as appropriate.

Comment: A few commenters suggested additional data elements and analyses for the comparative payment rate analysis. A couple of commenters suggested data elements specifically for comparing FQHC and non-FQHC settings: number of primary care claims provided in FQHC and non-FQHC settings, number of patients served in FQHC and non-FQHC settings, total spending in FQHC and non-FQHC settings. Commenters also suggested data elements specifically for nursing facility payments, such as comparing payments to total cost of care, examining the relationship between payments and quality of care and health disparities in nursing facilities, and trend data on medical inflation and practice costs.

Response: We appreciate commenters' suggestions for the comparative payment rate analysis. As described in the proposed rule, we excluded encounter rates often paid for facility-based services, including FQHC and nursing facility services, from the comparative payment rate analysis due to the challenges we expect States to face in disaggregating encounter rates for comparison to Medicare. While we are not adopting these suggestions, we note that States have the flexibility to add the elements described to their comparative payment rate analysis if they so choose. We would encourage any State choosing to disclose additional comparative payment rate analysis for facility-based services also to publish detailed information about the State's methodology for disaggregating its payment rates, as applicable, and identifying analogous Medicare payment rates for comparison.

Comment: We received a few comments in response to our consideration of requiring States to identify the number of unique Medicaid-paid claims and the number of unique Medicaid-enrolled beneficiaries who received a service within a calendar year for each of the services for which the Medicaid base payment rate is published pursuant to paragraph (b)(3)(i)(B). We received one comment that opposed requiring the unique number of claims and beneficiaries while a few commenters encouraged CMS to require this data element to improve the collection and quality of data on Medicaid service utilization.

Response: We appreciate the commenters' feedback. As described in the proposed rule, we considered but did not propose requiring States to identify the number of unique Medicaid-paid claims and the number of unique Medicaid-enrolled beneficiaries who received a service within a calendar year.[303] Upon further review, we determined the request regarding unique beneficiaries was inaccurately framed, as a beneficiary would not duplicate. Nevertheless, we decided not to require States to identify the number of Medicaid-paid claims (bold added to highlight the difference between data element we considered and the data element we are finalizing in this rule). Instead, we are finalizing the comparative payment rate analysis to require States to include the number of Medicaid-paid claims (which may duplicate codes) and the number of Medicaid-enrolled beneficiaries who received a service within a calendar year for each of the services for which the base Medicaid FFS fee schedule payment rate is published pursuant to paragraph (b)(3)(i)(B) of this section, as proposed. Although we do see value in obtaining unique, or deduplicated, claims counts, we did not propose this data element because we intend for the comparative payment rate analysis to capture the total amount of actual services received by beneficiaries and paid for by the State. To illustrate, and to correct the example provided in the proposed rule, for a beneficiary with 6 visits to their primary care provider in a calendar year where the provider bills 6 claims with CPT code 99202 for the same beneficiary, the State is required to report 6 claims for CPT code 99202. The beneficiary count would remain 1. If 6 separate beneficiaries each received a service and the provider bills CPT code 99202 for all of them, the claims count would still be 6, but the beneficiary count would also be 6. Given that our access work is ongoing, we intend to gain implementation experience with this final rule, and we will consider the recommendations provided on the proposed rule for any additional changes we may propose through future rulemaking.

Comment: One commenter recommended CMS allow States to have a 6-month period to account for lags in claims reporting by providers and States paying providers' claims for codes required to be in the comparative payment rate analysis.

Response: We believe the commenter was referring to the claims run out period where a State may not have received all of their providers' claims for the codes subject to the comparative payment rate analysis by the time the analysis is due, which could result in an undercount of both claims for services furnished and beneficiaries who received a service during the year. In response to comments and based on the timing of this final rule, we have revised the timeframes for the comparative payment rate analysis. The regulatory language finalized in this rule at paragraph (b)(4) now states the following, ''[t]he State agency must publish the initial comparative payment rate analysis and payment rate disclosure of its Medicaid payment rates in effect as of July 1, 2025, as required under paragraphs (b)(2) and (3) of this section, by no later than July 1, 2026. Thereafter, the State agency must update the comparative payment rate analysis and payment rate disclosure no less than every 2 years, by no later than July 1 of the second year following the most recent update.'' Therefore, for the initial comparative payment rate analysis, States will need to include their claims and beneficiary data required in paragraph (b)(3)(i)(E) for CY 2025 in the analysis to be published no later than July 1, 2026. This timing provides a 6-month period for claims run out, as requested by the commenter.

Comment: One commenter raised concerns regarding the requirement to separately identify the base Medicaid FFS fee schedule payment rate by provider type without the inclusion of an additional analysis to assess whether the State's rate setting process complies with the Mental Health Parity and Addiction Equity Act (MHPAEA or the Parity Act).

Response: CMS works closely with State Medicaid agencies to ensure compliance with MHPAEA in Medicaid managed care arrangements, Medicaid alternative benefit plans (managed care and FFS), and CHIP benefits (managed care and FFS) whenever changes to coverage of mental health or SUD benefits are proposed by States. Parity requirements do not apply to MH or SUD benefits for enrollees who receive only Medicaid non-ABP FFS State plan coverage; however, CMS encourages States to comply with parity for all Medicaid beneficiaries.[304] [305] Congress has not extended MHPAEA requirements to non-ABP Medicaid benefits provided solely through FFS delivery systems. Nonetheless, we encourage our State Medicaid agency

[303] 88 FR 27960 at 28016.

[304] *https://www.medicaid.gov/medicaid/benefits/behavioral-health-services/parity/index.html.*

[305] *https://www.medicaid.gov/sites/default/files/2023–09/cmcs-mental-health-parity-092023.pdf.*

partners to ensure their non-ABP FFS benefits voluntarily comply with MHPAEA. Moreover, CMS reviews State proposals regarding rate reductions or restructuring to ensure compliance with overarching requirements under section 1902(a)(30)(A) of the Social Security Act ''to assure that payments are consistent with efficiency, economy, and quality of care and are sufficient to enlist enough providers so that care and services are available under the plan, at least to the extent that such care and services are available to the general population in the geographic area.'' This review thus helps promote the fundamental objective of MHPAEA to ensure access to mental health and substance use disorder treatment services.

Comment: One commenter requested clarification about the Medicare rate to be used in the comparative payment rate analysis.

Response: As finalized by this rule, § 447.203(b)(3)(i)(C) requires States to compare their base Medicaid FFS fee schedule payment rate to the Medicare non-facility payment rates as established in the annual Medicare PFS final rule effective for the same time period for the same set of E/M CPT/HCPCS codes, and for the same geographical location as the base Medicaid FFS fee schedule payment rate, that correspond to the base Medicaid FFS fee schedule payment rate rates identified under paragraph (b)(3)(i)(B) of this section, including separate identification of the payment rates by provider type. That is, States are required to compare their base Medicaid FFS fee schedule payment rates to the corresponding Medicare non-facility payment rate as established in the annual Medicare PFS final rule for a calendar year. As described in the proposed rule, we expected States to source the Medicare non-facility payment rate as established in the annual Medicare PFS final rule for a calendar year from the published Medicare fee schedule amounts on the Medicare PFS through one or both of the following sources: the Physician Fee Schedule Look-Up Tool [306] on *cms.gov* or Excel file downloads of the Medicare PFS Relative Value Files [307] for the relevant calendar year from *cms.gov*. We acknowledge that the Physician Fee Schedule Look-Up Tool is a display tool that functions as a helpful aid for physicians and NPPs as a way to quickly look up PFS payment rates, but does not provide official payment rate information. While we encouraged States to begin sourcing Medicare non facility payment rates from the Physician Fee Schedule Look-Up Tool and utilize the Physician Fee Schedule Guide for instructions on using the Look-Up Tool in the proposed rule, we would like to clarify in this final rule that States should first by downloading and reviewing the Medicare PFS Relative Value with Conversion Factor File where States can find the necessary information for calculating Medicare non facility payment rates. Prior to the effective date of this final rule, we will issue subregulatory guidance, which includes an instructional guide for identifying, downloading, and using the relevant Excel files for calculating the Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year that States will need to include in their comparative payment rate analysis. Therefore, for the initial comparative payment rate analysis, after Medicare's publication of the CY 2025 Physician Fee Schedule rate by November 2024, we encourage States to begin sourcing Medicare non-facility payment rates as established in the annual Medicare PFS final rule for CY 2025 by downloading and reviewing the CY 2025 Medicare PFS Relative Value with Conversion Factor File from cms.gov.[308]

Comment: While we received overwhelming support from commenters for proposing to use Medicare non-facility rates for comparison to Medicaid rates in the comparative payment rate analysis, some commenters expressed concerns or suggested alternative comparison points. Many commenters stated that Medicare payment rates are low and have not kept up with inflation; therefore, these commenters stated that Medicare is not an appropriate comparison point for payment rates for many services, including dental, anesthesiology, and physical therapy. Some commenters stated that there is limited comparability between Medicaid and Medicare due to the differences in coverage of services and populations (for example, Medicare's limited coverage of pediatric services, behavioral health services (including substance use disorder and mental health care), and dental care) which results in fundamentally different payment rate methodologies. A few commenters expressed that Medicare is not a perfect comparator and should not be used as the standard for adequacy of Medicaid payment rates, but agreed it was a useful starting place because Medicare rates are publicly available. One commenter stated that States aligning Medicaid payment rates with Medicare rates for psychiatrist services as well as decreasing administrative burden could help encourage more providers to enroll in Medicaid.

Many commenters who opposed using Medicare non-facility rates for the comparative payment rate analysis offered alternative suggestions for States to compare their payment rates to. Several commenters suggested private payer rates. One commenter suggested Medicaid rates from geographically similar States that CMS identifies for States. A few commenters suggested rates from Federal or State employee dental plans. Two commenters suggested FAIR Health data [309] (particularly for dental services). One commenter suggested Medicare Advantage for dental, vision, and hearing services. We also received a comment suggesting CMS develop an alternative to Medicare as a point of comparison in the comparative payment rate analysis, particularly for inpatient administered therapies that are paid using DRGs.

Response: We thank the commenters for their support of using the Medicare non-facility rates for comparison to Medicaid rates in the comparative payment rate analysis. We understand the commenters' concerns about using Medicare as a benchmark for Medicaid rates to be compared to in the comparative payment rate analysis; however, we do not agree that Medicare payment rates are low and have not kept up with inflation. As described in the proposed rule, Medicare PFS payment rates are established for each service, generally described by a particular procedure code (including HCPCS, CPT, and CDT),) using resource-based inputs to establish RVUs in three components of a procedure: work, practice expense, and malpractice. The three component RVUs for each service are adjusted using CMS-calculated geographic practice cost indexes (GPCIs) that reflect geographic cost differences in each fee schedule area as compared to the national average.[310] The Medicare PFS is revised annually by CMS ensure that our payment systems are updated to reflect changes in medical practice and the

[310] 88 FR 27960 at 28012. Note this language has been revised for accuracy in this final rule,

relative value of services, as well as changes in the statute.[311]

With regard to commenters who raised concerns about using Medicare as a point of comparison, we disagree with the commenter that differences in coverage and populations limits comparability between Medicare and Medicaid in any way that would make Medicare an inappropriate comparator. As described in the proposed rule, Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year are utilized in this rule as a benchmark to compare Medicaid fee schedule rates on a CPT/HCPCS code level basis.[312] Medicare PFS payment rates simply serve as a point of comparison for CMS to consider in assessing if Medicaid payments are consistent with section 1902(a)(30)(A) of the Act. Differences in the methodology that Medicare uses and States use to determine their FFS fee schedule payment rates does not compromise the value of Medicare as a reliable benchmark for assessing payment rate sufficiency for enlisting providers to furnish services to an individual, as required by section 1902(a)(30)(A) of the Act. As described in the proposed rule, Medicare and Medicaid programs cover and pay for services provided to beneficiaries residing in every State and territory of the United States, Medicare payment rates are publicly available, and broad provider acceptance of Medicare makes Medicare non-facility payment rates as established on the Medicare PFS for a calendar year an available and reliable comparison point for States to use in the comparative payment rate analysis.[313] Also as described in the proposed rule, base Medicaid FFS fee schedule payment rate are typically determined through one of three methods: the resource-based relative value scale (RBRVS), a percentage of Medicare's fee, or a State-developed fee schedule using local factors.[314] The RBRVS system, initially developed for the Medicare program, assigns a relative value to every physician procedure based on the complexity of the procedure, practice expense, and malpractice expense. States may also adopt the Medicare fee schedule rate, which is based on RBRVS, but select a fixed percentage of the Medicare amount to pay for Medicaid services. States can develop their own fee schedules, typically determined based on market value or an internal process, and often do this in situations where there is no Medicare or private payer equivalent or when an alternate payment methodology is necessary for programmatic reasons. Again, one of the criteria for including codes on the CMS-published list of E/M CPT/HCPCS codes subject to the comparative payment rate analysis is that there must be a payment rate on the Medicare PFS so States have a Medicare payment rate to compare their Medicaid base payment to.

We also disagree with commenters that there is limited comparability between Medicaid and Medicare due to the differences in coverage of services and populations. We acknowledge that Medicare and Medicaid vary in terms of covered services and populations served; however, the Medicare PFS includes payment rates for covered, non-covered, and limited coverage services and applies the same resource-based formula to ensure all PFS rates are determined on a national level as well as adjusted to reflect the variation in practice costs from one geographical location to another. As described in the proposed rule, Medicare PFS non-facility rates serves as a reliable benchmark for assessing the level of payment sufficiency to enlist providers to furnish the relevant services to an individual for the following reasons.[315] As we have narrowed the scope of the comparative payment rate analysis to E/M CPT/HCPCS codes, Medicare PFS non-facility payment rates are comparable to Medicaid FFS fee schedule payment rates because both fee schedule rates are generally for services provided in a physician's office and specify the rate paid to a provider for delivering an individual service (that is, a single FFS payment for a single service, rather than an encounter rate paying for any number for services). The accessibility and consistent format of the published Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year makes these rates an available and reliable comparison point for States to use in the comparative payment rate analysis for the foreseeable future as the Medicare PFS is free to the public, updated on an annual basis, and posted online on an easily located website, relative to private payer rates that States would need to request access to and perhaps pay for the information. Medicare also has a low rate of physicians formally opting out of the program, suggesting that Medicare's payment rates generally are consistent with a high level of physician willingness to furnish services to Medicare patients, with the vast majority of physicians willing to accept Medicare's payment rates. Additionally, Medicare is another of the nation's large public health coverage programs which serves as an important data point in determining whether payment rates are likely to be sufficient to ensure access for Medicaid beneficiaries at least as great as for the general population in the geographic area, and whether any identified access concerns may be related to payment sufficiency.

We appreciate commenters' alternative suggestions to using Medicare as a benchmark in the comparative payment rate analysis; however, we are not incorporating these suggestions due to the following reasons. As discussed in the proposed rule, we learned from our implementation experience with the previous AMRP process that very few States were able to include even limited private payer data in their AMRPs due to the payment data being proprietary or unsound due to a lack of transparency about the construction of the payment data or because States did not have large private plans in their State so there were no private payer rates to compare to. This resulted in States being unable fully to comply with the previous AMRP regulations, to the extent they required an analysis that included private payer rate information.[316] Without this final rule, requiring States to compare their Medicaid rates to geographically similar States would not be possible because not all States currently post their Medicaid FFS fee schedule payment rates in a transparent and consistent format that would permit data analysis among States. While some States were able to compare their payment rates to other States' rates in their previous AMRPs, this was inconsistent across AMRPs and risked a subjective comparison where States selected which rates and States they compared themselves to. Requiring a comparison to Medicare ensures all States are using the same consistent data point to compare their rates to. Regarding the suggestion that CMS could identify the geographically similar States for States to compare their payment rates to, this would require a different approach than what we proposed due to the variation across State Medicaid programs and would require careful consideration and policy development to ensure that any proposal would be consistent with the statutory requirement in section

[311] *https://www.federalregister.gov/documents/2023/11/16/2023-24184/medicare-and-medicaid-programs-cy-2024-payment-policies-under-the-physician-fee-schedule-and-other.*

[312] 88 FR 27960 at 28012.

[313] 88 FR 27960 at 28011.

[314] 88 FR 27960 at 28010.

[316] 88 FR 27960 at 28018.

1902(a)(30)(A) of the Act that looks to the ''geographic area'' in determining whether payment rates are sufficient. Similarly, we would also not require States compare their rates to rates from Federal or State employee dental plans because this information might not be generally available to State Medicaid agencies.

At this time and for the purposes of the comparative payment rate analysis, we are not advocating or requiring States source payment rate information from any particular data source other than the State's own Medicaid agency (who is responsible for setting and paying the payment rates required in the analysis and, therefore has direct access to base Medicaid FFS fee schedule payment rates required in the analysis) and publicly available Medicare fee schedule rates (which we have previously described as an available and reliable comparison point for States to use in the comparative payment rate analysis). Therefore, we are not requiring States compare their rates to FAIR Health data because this data source is outside of the State agency and Medicare's publicly available fee schedule rates. We would also not require States compare their rates to Medicare Advantage for dental, vision, and hearing services because these are not categories of services subject to the comparative payment rate analysis. As previously stated, only codes listed on the CMS-published list of E/M CPT/HCPCS codes are subject to the comparative payment rate analysis. The list does not include dental, anesthesiology, physical therapy, vision, and hearing services and these services, among others not on the CMS-published list of E/M CPT/HCPCS codes, are not subject to the comparative payment rate analysis requirement. Given that our work to better ensure access in the Medicaid program is ongoing, we intend to gain implementation experience with this final rule, and we will consider the recommendations provided on the proposed rule to help inform any future rulemaking in this area, as appropriate.

For the previously stated reasons, we believe the Medicare payment rates for the categories of services subject to the comparative payment rate analysis are likely to serve as a reliable benchmark for a level of payment sufficient to enlist providers to furnish the relevant services to an individual. Therefore, we are finalizing this rule with the requirement that States use the Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year as the comparison point for States to compare their Medicaid payment rates to in the comparative payment rate analysis.

We would also like to clarify that the provisions in this final rule do not require States to change their payment rates, including requiring States to align their Medicaid payment rates with Medicare rates for psychiatrist services. Although we intend for States to consider the information produced for the payment rate transparency publication, comparative payment rate analysis, and payment rate disclosure in an ongoing process of evaluating the State's payment rate sufficiency and when considering changing payment rates or methodologies (and we intend to make similar use of the information in performing our oversight activities and in making payment SPA approval decisions, for example), we did not propose and are not finalizing that any payment rate changes necessarily would be triggered by the proposed requirements.

Comment: Some commenters were concerned about how States would be expected to conduct the comparative payment rate analysis for services that Medicaid pays for, but Medicare does not. A few commenters suggested CMS develop a methodology for calculating a proxy rate for Medicaid services with no equivalent Medicare rate or Medicaid services that are provided very infrequently in Medicare, so Medicare rates are not a reliable comparison. Two commenters suggested working with MedPAC or MACPAC to set appropriate comparison points for services that are not covered by Medicare, for example contraceptive and pregnancy-related services.

Response: To clarify, only codes listed on the CMS-published list of E/M CPT/HCPCS codes are subject to the comparative payment rate analysis. All codes on this list have an existing Medicare payment rate, therefore, the development of a proxy rate is unnecessary. Codes outside of this list, including services that Medicaid pays for, but Medicare does not, are not subject to the comparative payment rate analysis requirement. Given that our work to better ensure access in the Medicaid program is ongoing, we intend to gain implementation experience with this final rule, and we will consider the recommendations provided on the proposed rule to help inform any future rulemaking in this area, as appropriate.

We disagree with the commenter that Medicare rates are not a reliable comparison when services are provided infrequently to Medicare beneficiaries. As previously described, Medicare PFS payment rates are computed using a resource-based formula made up of three components of a procedure's RVU: physician work, practice expense, and malpractice as well as geographical differences in each locality area of the country.[317] The Medicare PFS is revised annually by CMS to ensure that our payment systems are updated to reflect changes in medical practice and the relative value of services, as well as changes in the statute.[318] Despite a service being covered and paid for infrequently by Medicare, the payment rates on the Medicare PFS are consistently updated with relevant data on a frequent, annual basis.

Comment: A few commenters suggested alternative update frequencies for the comparative payment rate analysis. Commenter suggestions included updates annually, every 3 years, and every 4 years. Commenters' justification ranged from more frequent than 2 years due to the need for timely publication of Medicaid data to less frequent to align with the State's existing rate study schedule or because they did not believe rates would change significantly during a 2-year period. Additionally, one commenter suggested CMS require States to document when rates have not changed between comparative payment rate analysis biennial publications.

Response: We are finalizing the payment rate transparency requirements, including the comparative payment rate analysis, with an applicability date of July 1, 2026; however, we are not changing the proposed timeframe of 2 years for States to update their publications. We believe requiring updates to the comparative payment rate analysis every 2 years balances State burden with maintaining up-to-date information. Given that our work to better ensure access in the Medicaid program is ongoing, we intend to gain implementation experience with this final rule, and we will consider the recommendations provided on the proposed rule to help inform any future rulemaking in this area, as appropriate.

Comment: One commenter expressed concerns about cross walking a State's geographical areas to Medicare in the comparative payment rate analysis. The commenter stated that States may define a geographical region differently than Medicare and result in a complex and confusing analysis that would be contrary to CMS' transparency goals.

Response: As discussed in the proposed rule, we recognize that States

[317] 88 FR 27960 at 28012.

[318] *https://www.federalregister.gov/documents/2023/11/16/2023-24184/medicare-and-medicaid-programs-cy-2024-payment-policies-under-the-physician-fee-schedule-and-other.*

that make Medicaid payment based on geographical location may not use the same locality areas as Medicare.[319] We expect the State to determine an appropriate method to accomplish the comparative payment rate analysis that aligns the geographic area covered by each payer's rate as closely as reasonably feasible. For example, if the State identifies two geographic areas for Medicaid payment purposes that are contained almost entirely within one Medicare geographic area, then the State reasonably could determine to use the same Medicare non-facility payment rate as established in the annual Medicare PFS final rule in a calendar year in the comparative payment rate analysis for each Medicaid geographic area. As another example, if the State defined a single geographic area for Medicaid payment purposes that contained two Medicare geographic areas, then the State might determine a reasonable method to weight the two Medicare payment rates applicable within the Medicaid geographic area, and then compare the Medicaid payment rate for the Medicaid-defined geographic area to this weighted average of Medicare payment rates. States could also calculate the unweighted arithmetic mean of the two Medicare payment rates applicable within the Medicaid-defined geographic area. While States have flexibility in mapping their geographical areas to Medicare's for the comparative payment rate analysis, we invite States to reach out to CMS for technical assistance.

Comment: A few commenters stated that other factors besides rates impact access to care. Commenters suggested CMS consider regional cost differences, provider shortages (including number of providers and their location), and the unique needs of specific populations (such as dually eligible beneficiaries, or beneficiaries in rural areas of a State) as factors that impact access to care.

Response: We agree with commenters that other factors besides rates impact access to care.[320] After considering feedback received from States and other interested parties about the previous AMRP process issued through the 2015 final rule with comment period, as well as our obligation to ensure continued compliance with section 1902(a)(30)(A) of the Act, we are finalizing a streamlined and standardized process to assess access to care that focuses on payment rate transparency. Given that our work to better ensure access in the Medicaid program is ongoing, we intend to gain implementation experience with this final rule, and we will consider the recommendations provided on the proposed rule to help inform any future rulemaking in this area, as appropriate.

Comment: A couple of commenters expressed concerns regarding the privacy of beneficiary information when it comes to the requirement that the comparative payment rate analysis and payment rate disclosure must specify the number of Medicaid-paid claims and the number of Medicaid enrolled beneficiaries who received a service. Commenters suggested CMS provide an exception when the volume of claims or beneficiaries is small.

Response: We take privacy and our obligations to protect beneficiary information very seriously. We remind States of their obligations to comply with applicable Federal and State privacy laws with respect to such information, such as the HIPAA Privacy Rule and Federal Medicaid requirements in section 1902(a)(7) of the Social Security Act and 42 CFR part 431, subpart F. We are not requiring States to publish any beneficiary-identifiable information in the comparative payment rate analysis or payment rate disclosure. We expect States will ensure that any claims and Medicaid beneficiary data made publicly available under these requirements have been de-identified in accordance with the HIPAA Privacy Rule at 45 CFR 164.514(b).

We strongly encourage States to have policies to ensure that all information, particularly claims and beneficiary data, published in their comparative payment rate analysis and payment rate disclosure is de-identified prior to publishing on July 1, 2026. Such policies should address circumstances in which the number of Medicaid-paid claims and/or Medicaid enrolled beneficiaries is small. For example, States may consider implementing a small cell size suppression policy for publishing data on the State's website, similar to CMS' cell size suppression policy that no cell (for example, admissions, discharges, patients, services, etc.) containing a value of 1 to 10 can be reported directly.[321] We invite States to reach out to CMS regarding any data privacy concerns that may impact a States' compliance with the comparative payment rate analysis or payment rate disclosure requirements.

Additionally, to address privacy concerns at the individual level, we would like to share the following resources for filing civil rights and HIPAA complaints with the Office for Civil Rights:

- Filing a civil rights complaint;[322] and
- Filing a health information privacy or security complaint.[323]

Comment: A commenter raised concerns that the comparative payment rate analysis would incentivize States to raise payment rates for the categories of services subject to the analysis, but might also lead or contribute to rate cuts for other services, since the proposed rule would not provide that States may not cut some rates to make funds available to raise other rates.

Response: We understand the commenter's concerns about the effects of the comparative payment rate analysis in practice. We emphasize that the comparative payment rate analysis will afford more transparency to CMS and the public about rates for primary care, obstetrical and gynecological, and outpatient mental health and substance use disorder services, and will also provide States with an opportunity to identify where existing rates could create an access issue for the services subject to the comparative payment rate analysis requirement. If a State chooses to raise payment rates for the categories of services subject to the analysis, and in order to do so seeks to reduce rates for other services, then the State would be required to follow the State Analysis Procedures for Rate Reduction or Restructuring in § 447.203(c) to ensure the proposed rate reductions do not reduce access to care to the services for which payment rates would be reduced below the statutory standard. A public input process to raise access concerns with States is described in § 447.203(c)(4) of this final rule. We are confident our policies finalized in this rule will work in conjunction with each other to ensure ongoing and improved access to care.

Comment: A couple of commenters requested clarification regarding the circumstance whereby a comparative payment rate analysis reveals that a State's Medicaid payment rates are significantly below Medicare rates. One commenter suggested requiring States to submit a corrective action plan in those instances.

Response: Transparency, particularly the requirement that States must publicly publish their payment rates and compare their payment rates to Medicare, helps to ensure that interested parties have basic

[319] 88 FR 27960 at 28013

[320] 88 FR 27960 at 28016–28017.

[321] *https://resdac.org/articles/cms-cell-size-suppression-policy.*

[322] *https://www.hhs.gov/civil-rights/filing-a-complaint/index.html.*

[323] *https://www.hhs.gov/hipaa/filing-a-complaint/complaint-process/index.html.*

information available to them to understand Medicaid payment levels and the associated effects of payment rates on access to care so that they may raise concerns to State Medicaid agencies via the various forms of public process available to interested parties. We intend to utilize the information published by States in their payment rate transparency publication and comparative payment rate analysis whenever the provisions of § 447.203(c) are invoked, when a State submits a SPA that proposes to reduce provider payment rates or restructure provider payments in circumstances when the changes could result in diminished access. We did not propose and are not requiring States to submit a corrective action plan when Medicaid payment rates included in the comparative payment rate analysis are lower than Medicare payment rates. While the results of a comparative payment rate analysis would not themselves require a corrective action plan, § 447.203(c)(5) does require a State to submit a corrective action plan to remedy an access deficiency within 90 days from when it is identified to the State.

Comment: One commenter requested that CMS make UPL demonstration data and methodologies publicly available for purposes of data analysis, particularly for inpatient behavioral health services as CMS did not propose to include these services in the comparative payment rate analysis.

Response: While the comparative payment rate analysis is limited in scope to base Medicaid FFS fee schedule payment rates, the payment rate transparency publication does include PPS rates that are considered fee schedules payment rates within the meaning of this final rule, including for inpatient hospital, outpatient hospital, and nursing facility services. The PPS rates, which are generally the base payment for these services, and reported through UPLs, will be publicly available through the payment rate transparency publication. We acknowledge that supplemental payments as well as UPL data and methodologies typically are not publicly available currently. Nevertheless, UPL demonstrations provide us with an opportunity for payment oversight and we consider UPL demonstrations in assessing State compliance with the access requirement in section 1902(a)(30)(A) of the Act.[324] As previously discussed in an earlier response to comments, we stated that UPL demonstrations provide CMS with important information for assessing if payment rates comply with economy and efficiency provisions at section 1902(a)(30)(A) of the Act, specifically how total Medicaid payments compare to what Medicare would have paid for similar services where Medicare acts as a payment limit, or ceiling, for economic and efficient. Requiring supplemental payments as well as UPL data and methodologies be publicly available would contribute to our transparency efforts; however, the current reporting format of UPL data would not align with § 447.203(b)(1)(iii) which requires Medicaid FFS fee schedule payment rates be published and organized in such a way that a member of the public can readily determine the amount that Medicaid would pay for a given service. Therefore, we would need to develop a different methodology, policies, and oversight than what is being finalized in this rule to ensure UPL data is transparent. With this final rule, our focus is on improving our oversight of Medicaid payment rates to identify where rates may be negatively impacting access to care while minimizing burden imposed on States, which requires us to prioritize areas of focus. We want our initial focus to be on establishing the new payment rate transparency, comparative payment rate analysis, and payment rate disclosure requirements, providing States with support during the compliance period, and ensuring the data required under this final rule are available to beneficiaries, providers, CMS, and other interested parties for the purpose of assessing access to care issues.

Payment Rate Disclosure Comments and Responses

Comment: We received general support for our proposal to require States to develop and publish a payment rate disclosure for certain HCBS. Commenters specifically expressed support for the proposed categories of services and calculation of the average hourly payment rate.

However, a couple of comments expressed opposition of the payment rate disclosure provision. Commenters in opposition stated the proposed payment rate disclosure requirements would be administratively burdensome for States and that it was unclear how calculating an average hourly payment rate along with publishing data about claims and beneficiaries would be valuable and informative for payment policy purposes.

Response: We appreciate the commenters' support of the payment rate disclosure provision at § 447.203(b)(3)(ii). We are finalizing the payment rate disclosure provisions with an additional category of service, habilitation, a few minor revisions for clarification purposes and consistent terminology usage within § 447.203(b), and an update to the compliance timeframe, the latter of which was discussed earlier in this section. The addition of habilitation services to the payment rate disclosure is further discussed in a later response to comments in this section. In this final rule, we are revising the regulatory language to clarify which services and payment rates are subject to this requirement. We proposed in § 447.203(b)(3)(ii) that the State would be required to publish the ''average hourly payment rate, separately identified for payments made to individual providers and to providers employed by an agency, if the rates vary'' for each category of service specified in paragraph (b)(2)(iv). We are finalizing in § 447.203(b)(3)(ii) that States are required to publish the ''average hourly **Medicaid fee-for-service fee schedule** payment rates, separately identified for payments made to individual providers and **provider agencies,** if the rates vary.'' (new language identified in bold). We proposed in § 447.203(b)(3)(ii)(B) that the State would be required to ''identify the average hourly payment rates by applicable category of service, including, if the rates vary, separate identification of the average hourly payment rates for payments made to individual providers and to providers employed by an agency, by population (pediatric and adult), provider type, and geographical location, as applicable.'' We are finalizing in § 447.203(b)(3)(ii)(B) that the States are required to ''identify the average hourly Medicaid fee-for-service fee schedule payment rates by applicable category of service, including, if the rates vary, separate identification of the average hourly Medicaid fee-for-service fee schedule payment rates for payments made to individual providers and provider agencies, by population (pediatric and adult), provider type, geographical location, **and whether the payment rate includes facility-related costs,** as applicable.'' (new language identified in bold). For clarification and consistent terminology usage of ''Medicaid fee-for-service fee schedule payment rates,'' similar revisions were made in § 447.203(b)(2)(iv) and (b)(3)(ii)(B) and (C) and described in detail at the end of responses to comments in this section. We utilized the term ''average hourly Medicaid fee-for-service fee schedule payment rates'' in the payment rate disclosure for

[324] 88 FR 27960 at 28006.

consistency throughout § 447.203(b) where the term Medicaid FFS fee schedule payment rates is used to describe what payment rates are subject to the payment rate transparency publication in § 447.203(b)(1)(i). Additionally, we are incorporating the term ''provider agencies'' for clarification purposes to more accurately reflect what payment rate we are requiring be published. Lastly, we added the requirement that payments that include facility-related costs must be separately identified to ensure transparency of payment rates that may differ due to the inclusion of facility-related costs. Additional information about these regulatory language changes is discussed in later responses to comments in this section.

We disagree with the commenters regarding administrative burden of the payment rate disclosure. As documented in section III. of this final rule, the FFS provisions, including the payment rate transparency, comparative payment rate analysis, and payment rate disclosure requirements (§ 447.203(b)(1) through (5)), interested parties' advisory group requirements (§ 447.203(b)(6)), and State analysis procedures for payment rate reductions or payment restructuring (§ 447.203(c)), are expected to result in a net burden reduction on States compared to the previous AMRP requirements. Additionally, as addressed in another comment response generally discussing commenters' concerns about State burden, we have described numerous flexibilities States will have for compliance with this final rule. Specifically for the payment rate disclosure, and as discussed in a later response to comments, States have flexibility to (1) utilize contractors or other third party websites to publish the payment rate disclosure on (however, we remind States that they are still requiring to publish the hyperlink to the website where the publication is located on the State Medicaid agency's website as required in § 447.203(b)(1)(ii) of this final rule), (2) format and organize the payment rate disclosure how they chose (that is, we are not requiring certain codes be included as required in the comparative payment rate analysis) (however, we remind States that the disclosure is still subject to the publication requirements described in proposed paragraphs (b)(1) and (b)(1)(ii) for payment rate transparency data), and (3) calculate the average hourly Medicaid FFS fee schedule payment rate as a simple average or arithmetic mean where all payment rates would be adjusted to an hourly figure, summed, then divided by the number of all hourly payment rates, rather than a weighted average which would impose more burden on States to calculate. Additionally, we are providing an illustrative example of a compliant payment rate disclosure (including to meet accessibility standards) through subregulatory guidance that we will issue prior to the effective date of this final rule.

We are not identifying codes for the categories of services subject to the payment rate disclosure. We are providing States with flexibility in determining which codes to include in the calculated average hourly Medicaid FFS fee schedule payment rate for the payment rate disclosure because States may use a wide variety of codes to bill and pay for personal care, home health aide, homemaker, and habilitation services, such as HCPCS codes T1019–T1022 and/or CPT codes 99500- 99602. For example, HCPCS codes T1019–T1022 for home health services includes T1019 (personal care services that are part of the individualized plan of treatment, per 15 minutes), T1020 (personal care services that are part of the individualized plan of treatment, per diem), T1021 (home health aide or certified nurse assistant, per visit), and T1022 (contracted home health agency services, all services provided under contract, per day). One State may use T1019 or T1020 depending on the unit (daily or per diem), a second State may only use T1021, and a third State may use none of these codes. We expect States to review their Medicaid FFS fee schedule payment rates for the payment rate and unit the State uses to pay for each of category of service and calculate the Medicaid average hourly Medicaid FFS fee schedule payment rate for personal care, home health aide, homemaker, and habilitation services, separately by service and provider employment structure as well as for payments that include facility-related costs, as provided in this final rule and discussed in later responses to comments in this section.

Additionally, the list of possible codes States may pay for personal care, home health aide, homemaker, and habilitation services is already limited by the available CPT/HCPCS codes, so we did not see a need to narrow the codes with a CMS-published list of E/M CPT/HCPCS like the comparative payment rate analysis. As previously discussed, we recognize that States may amend existing CPT/HCPCS codes with additional numbers or letters for processing in their own claims system. If a State does not use CPT or HCPCS codes as published by AMA and CMS, then we expect the State to review the published lists of CPT or HCPCS codes and identify which of their codes are most comparable for purposes of the payment rate disclosure. We anticipate States may need to review code descriptions of CPT and HCPCS codes for personal care, home health aide, homemaker, and habilitation services as part of the process of identifying which CPT and HCPCS codes are comparable to the codes that States utilizes. We want to ensure the full scope of personal care, home health aide, homemaker, and habilitation services, and providers of these services, are included in the payment rate disclosure for transparency purposes, rather than narrowing the scope to certain codes and/or provider types, which would result in a limited disclosure of provider payment rates.

Regarding commenters that were unclear how calculating an average hourly payment rate along with publishing data about claims and beneficiaries would be valuable and informative for payment policy purposes, we are requiring States to separately identify the average hourly Medicaid FFS fee schedule payment rates for personal care, home health aide, homemaker, and habilitation services by population (pediatric and adult), provider type, geographical location, and whether the payment rate includes facility-related costs, as applicable, and by provider employment structures (individual providers and provider agencies). Calculating an average hourly Medicaid FFS fee schedule payment rate for categories of services subject to the payment rate disclosure will ensure a standardized unit and permit States, CMS, and other interested parties to compare payment rates among State Medicaid programs. As discussed in the proposed rule, HCBS and direct care workers that deliver these services are unique to Medicaid and often not covered by other payers, which is why we are proposing a different disclosure of payment rates for providers of these services that does not involve a comparison to Medicare. Additionally, private payer data and self-pay data are often considered proprietary and not available to States, thereby eliminating private payers as feasible point of comparison. Because HCBS coverage is unique to Medicaid, Medicaid beneficiaries are generally the only individuals in a given geographic area with access to HCBS that is covered by a third-party payer.[325]

[325] 88 FR 27960 at 28019

Comment: Some commenters requested CMS clarify and add to the proposed categories of services included in the payment rate disclosure requirements. A few commenters requested clarification regarding whether services covered under waiver authority or State plan authority are subject to the disclosure requirements. A couple of commenters suggested adding regulatory language to explicitly include services provided through State plan and waiver authority in the payment rate disclosure. Another couple of commenters requested clarification specifically about self-directed services when an individual has budget authority and residential services. A few commenters encouraged CMS to require States to report payment rate variations by populations served (that is, populations receiving services under a waiver versus State plan authority) due to States varying rates for the same service furnished to different targeted populations under different coverage authorities.

A few commenters recommended additional categories of services to the proposed categories of services subject to the payment rate disclosure. While some commenters recommended expanding the categories of services generally, a number of commenters specifically recommended expanding the categories of service to include habilitation services (including residential habilitation services, day habilitation services, and home-based habilitation services).

Response: Personal care, home health aide, homemaker, and habilitation services provided under FFS State plan authority, including sections 1915(i), 1915(j), 1915(k) State plan services; section 1915(c) waiver authority; and under section 1115 demonstration authority are subject to the payment rate disclosure described in § 447.203(b)(3)(ii). We are clarifying that, consistent with the applicability of other HCBS regulatory requirements to such demonstration projects, the requirements for section 1915(c) waiver programs and section 1915(i), (j), and (k) State plan services included in this final rule, apply to such services included in approved section 1115 demonstration projects, unless we explicitly waive or identify as not applicable one or more of the requirements as part of the approval of the demonstration project. Please see section II.B for additional information on the inclusion of section 1115 demonstrations under the provisions of this final rule. While we appreciate the commenters' suggestion to add regulatory language to explicitly include services provided through State plan and waiver authority in the payment rate disclosure, we are not incorporating this suggestion as we previously provided clarification on which authorities are subject to the disclosure.

As previously discussed, self-directed services delivery models under which an individual beneficiary has budget authority do not constitute a fee schedule payment methodology for purposes of the payment rate transparency publication requirement, as well as the payment rate disclosure. Generally, under such self-directed services delivery models, the individual beneficiary determines a reasonable payment rate for the service in the State-authorized budget for that beneficiary. As such, these types of payment rates are excluded from the disclosure requirement. Regarding commenters' request for clarification about residential services being subject to the disclosure, as discussed in a later response to comments, personal care, home health aide, homemaker, and habilitation services, are inherently delivered in a home or community setting, outside of an institutional or residential facility. However, we acknowledge that the addition of habilitation services to the disclosure would now include residential habilitation services and we further address this in the later portion of this comment response.

We appreciate commenters' suggestion to require States report payment rate variations by populations served (that is, populations receiving services under a waiver versus State plan authority). However, that level of detailed reporting is beyond the scope of what we are seeking to implement in this current rulemaking, and would represent additional burden to States. We are requiring States to separately identify the average hourly Medicaid FFS fee schedule payment rates for personal care, home health aide, homemaker, and habilitation services by various factors that we believe will provide beneficial insights into these rates.

As stated in the proposed rule, we intend to standardize data and monitoring across service delivery systems with the goal of improving access to care, to the extent possible, and particularly for the payment rate disclosure requirements in § 447.203(b)(2)(iv) and (3)(ii), we intend to remain consistent with the HCBS provisions we are finalizing at § 441.311(d)(2) and (e).[326] Given the addition of habilitation services to these HCBS provisions in this final rule as well as the Managed Care final rule (as published elsewhere in this **Federal Register**) provisions at § 438.207(b)(3)(ii) and after consideration of comments, we are adding habilitation services, including residential habilitation, day habilitation, and home-based habilitation services, to the payment rate disclosure requirements in § 447.203(b)(2)(iv) and (3)(ii). Specifically, the regulatory language finalized in this rule at § 447.203(b)(2)(iv) requires States to publish the average hourly Medicaid FFS payment rate for personal care, home health aide, homemaker, and habilitation services, as specified in § 440.180(b)(2) through (4) and (6) in the payment rate disclosure. We note that § 447.203(b)(2)(iv) refers to ''habilitation'' services, without distinguishing between residential habilitation services, day habilitation services, and home-based habilitation services. As previously discussed in section II.B., these categories will be further described in subregulatory guidance. As discussed in a later response to comments in this section, we also adding a requirement in the payment rate disclosure that States must separately identify the Medicaid FFS fee schedule payment rates for services that include facility-related costs. We believe this distinction will generally only arise for habilitation service rates, but we are applying it across all four service categories to remain consistent with the amended provisions at § 441.311(e)(2), and for consistency in reporting across all four services within the payment rate disclosure.

As discussed in the proposed rule, we initially proposed to include in the payment rate disclosure requirement only personal care, home health aide, and homemaker services because they are most commonly conducted in beneficiaries' homes and general community settings and, therefore, constituted the majority of FFS payments for direct care workers delivering services under FFS.[327] However, and as previously stated, we agree with commenters' recommendation that the payment rate disclosure should include payment rates for habilitation services. As such, and to remain consistent with the HCBS provisions at § 441.311(d)(2) and (e) finalized in this rule, we are adding habilitation services as a category of service subject to the payment rate disclosure.

We acknowledge that habilitation services are also generally high-volume,

[326] 88 FR 27960 at 28005.

[327] 88 FR 27960 at 28005.

high-cost services particularly in States where individuals with intellectual or developmental disabilities receive personal care services through habilitation. In other words, we acknowledge that some States design the delivery of and payment rates for habilitation services to include personal care services in these instances. If we were to exclude habilitation services from the payment rate disclosure provisions, then we would effectively exclude an important component of personal care services provided to individuals with intellectual or developmental disabilities from the payment rate disclosure, which would not align with our intent to ensure transparency of payment rates of personal care services within this provision. In instances where States combine the delivery and payment of habilitation services with personal care services, requiring reporting on both services supports our goal of enhancing the transparency of payment rates that support the delivery of personal care services while accommodating the potential variation in classification a State utilizes. We want to note a State has the option to indicate when a habilitation service rate includes personal care services or otherwise provide further data nuances while meeting the requirements of this final rule. In addition, this change provides clarity to States that might have reported on habilitation services under the personal care category of services in the payment rate disclosure were it not for this revision to the disclosure. Given the variation in how States deliver and pay for habilitation services, separately identifying habilitation as a category of service supports our payment rate transparency goals to ensure that interested parties have basic information available to them to understand Medicaid payment levels and the associated effects of payment rates on access to care so that they may raise concerns to State Medicaid agencies via the various forms of public process available to interested parties.

As previously discussed in detail in an earlier response to comments in section II. of this final rule, including habilitation services in HCBS reporting requirements at § 441.311(d)(2) and (e), as well as the payment rate disclosure at § 447.203(b)(2) and (3)(ii), will ensure that services of particular importance to certain beneficiary populations, namely individuals with intellectual or developmental disabilities, are not excluded from our efforts to promote payment rate transparency in the interest of ensuring adequate access to care. As previously stated, in accordance with commenters' recommendation, and to remain consistent with the proposed HCBS provisions at § 441.311(d)(2) and (e) as stated in the proposed rule,[328] we are adding habilitation services to the payment rate disclosure to ensure transparency of rates that disproportionately affect access to services required by a unique population, individuals with intellectual or developmental disabilities.

Comment: A few commenters expressed concern over certain terms used in the proposed rule. Two commenters noted the terms ''rates,'' ''payments,'' ''wage,'' and ''compensation'' were used throughout the rule and were concerned about potential confusion about complying with the payment rate disclosure with the terms not clearly defined. One commenter was concerned the payment rate disclosure required States to request detailed financial records and information from provider organizations/agencies, which are often private businesses. Another couple of commenters requested a Federal-level definition or description of ''provider type'' and ''geographical location'' in the context of the payment rate disclosure.

Response: The payment rate disclosure requires States to separately identify the average hourly Medicaid FFS fee schedule payment rates for personal care, home health aide, homemaker, and habilitation services by population (pediatric and adult), provider type, geographical location, and whether the payment rate includes facility-related costs, as applicable, and by provider employment structures (individual providers and provider agencies). We are not requiring in the payment rate disclosure provisions at § 447.203(b)(3)(ii) that States collect wage, compensation (including benefits), or financial records and information from provider agencies or to publish information about the compensation the provider agency pays to its employee, where applicable. In section II.C. of this final rule, wage is only mentioned while summarizing comments received on the February 2022 RFI.[329] Likewise, compensation is only mentioned in section II.C. of this final rule while describing the difference between individual providers and provider agencies and when requesting public comments on whether we should have proposed a provision similar to the HCBS provisions we proposed at § 441.302(k)(3)(i) (where we proposed to require at least 80 percent of all Medicaid FFS payments for certain services be spent on compensation for direct care workers). Therefore, we are not requiring that States collect wage or compensation (including benefits) information from provider agencies to publish information about the compensation that the provider agency pays to its employee in the payment rate disclosure provisions at § 447.203(b)(3)(ii). We consistently used average hourly payment rate to refer to the payment rate that States are required to publish in the payment rate disclosure. As finalized in this rule, we are replacing the term ''average hourly payment rate'' with ''average hourly Medicaid FFS fee schedule payment rate'' for clarity and consistency throughout § 447.203(b).

We are not specifying a Federal definition for provider type because of the variety of provider types a State could license and pay for delivering Medicaid services. States are responsible for licensing providers in their State and have the flexibility to license a wide variety of provider types for personal care, home health aide, homemaker, and habilitation services, including, but not limited to, personal care attendants, home health aides, certified nursing assistants, or registered nurses. We would like to ensure the full scope of providers of personal care, home health aide, homemaker, and habilitation services across States are included in the payment rate disclosure for transparency purposes.

Finally, we also are not providing a Federal definition of geographical location. Because the payment rate disclosure does not involve a comparison to Medicare (or other payer), the data need only reflect the State's specific circumstances. Different States have different methods of assigning payment rates to particular regions and are therefore best situated to determine how rates must reflect their State-determined geographical designations.

Comment: A few commenters requested clarification regarding what CMS meant by ''individual providers'' and ''providers employed by an agency'' in the payment rate disclosure. Commenters were generally unsure if States are required to publish the average hourly payment rate paid to the agency or the compensation the agency pays to its employee. One commenter

[328] 88 FR 27960 at 28005.

[329] Summary of Public Comments in response to the CMS 2022 Request for Information: Access to Coverage and Care in Medicaid & CHIP. December 2022. For the report, see *https://www.medicaid.gov/medicaid/access-care/downloads/access-rfi-2022-report.pdf.*

requested clarification on what CMS considers ''payments made to individual providers'' and ''payments made. . .to providers employed by an agency.'' Another commenter noted an example where agencies have multiple direct care workers as employees and was unsure from the language in the proposed rule (''providers employed by agency'') what CMS considered to be the payment rate, either total compensation (including benefits) divided by total hours, or the hourly base wage of the direct care workers. One commenter specifically noted the use of the terms ''direct care worker'' and ''provider'' are both used in 42 CFR 447.203(b)(3)(ii) and stated these terms are often misaligned. The commenter explains that ''direct care worker'' or ''home care worker'' refers to personal care aides and home health aides, who provide hands-on services to those in need while ''providers'' are the agencies that employ direct care workers, train and screen them (health status and background checks), supervise them, schedule their services, reimburse their travel expenses, and support their professional development as well as liaise with service recipients and their families, handle all service billing, prepare for and respond to emergencies, and ensure day-to-day compliance with State and Federal standards.

Response: We appreciate the commenters' examples to illustrate the requested areas of clarification in the rule. As previously stated, in this final rule, we are revising the language ''to providers employed by an agency'' in § 447.203(b)(2)(iv), (b)(3)(ii), and (b)(3)(ii)(B) and finalizing the language as ''provider agencies'' for clarification purposes to more accurately reflect what payment rate we are requiring be published which is discussed shortly in this response to comments. To clarify, in the payment rate disclosure, we are requiring States to calculate and publish the average hourly Medicaid FFS fee schedule payment rate that States pay to individual providers and provider agencies, if the rates vary, and for payments that include facility-related costs. As described in the proposed rule and this final rule, individual providers in the context of the payment rate disclosure at § 447.203(b)(3)(ii) refers to individuals that are direct care workers and often self-employed or contract directly with the State to deliver services as a Medicaid provide; additionally, the individual provider bills the States directly and is paid directly by the State for services provided. To clarify, individual providers does not refer to providers delivering services through self-directed models with service budget authorized under 42 CFR 441.545, as these are not considered Medicaid FFS fee schedule payment rates for the purposes of the payment rate transparency publication, as well as the payment rate disclosure at § 447.203(b)(3)(ii), which was discussed in an earlier response to commenters.

Provider agency in the context of the payment rate disclosure at § 447.203(b)(3)(ii) refers to the agency contracted or enrolled with the State to deliver Medicaid services and the agency in turn employs or contracts with direct care workers as employees of the agency that works directly with the Medicaid agency to provide Medicaid services; additionally, the agency bills the State directly and is paid directly by the State for services their employees or contractors provide. Also, as previously stated, to the extent a State pays a provider agency a Medicaid FFS fee schedule payment rate (as discussed in detail in an earlier response to comments in this section), then those payment rates are subject to the payment rate disclosure requirements at § 447.203(b)(3)(ii).

As previously discussed in an earlier response to comments in this section, we are not requiring in the payment rate disclosure provisions at § 447.203(b)(3)(ii) that States collect wage or compensation (including benefits) information from provider agencies to publish information about the compensation the provider agency pays to its employee. While the comment focuses on the daily work of a ''direct care worker'' and the functions of a ''provider'' to distinguish these terms, for the purposes of this rule, we focused on the type of employment structure (that is, individual provider or provider agency) to best account for variations in types and levels of payment that may occur for different provider types. We clarify that the codified regulation text for § 447.203(b)(3)(ii) does not include the phrase ''direct care worker.''

Comment: Many commenters raised concerns and requested clarification regarding CMS requiring the payment rate being an hourly unit in the payment rate disclosure. A few commenters requested CMS clearly define what to include in the average hourly payment rate (for example, wages or benefits) to ensure the average hourly payment rates are comparable across States. A couple of commenters requested clarification on how States should convert half day, per diem, or per visit payment rates into an average hourly payment rate while one commenter requested CMS permit States to publish an average payment rate in the unit the State pays to ease burden on States. Lastly, one commenter stated that services, such as adult day habilitation or assisted living waiver, that cannot be calculated as an hourly rate should be reported as daily rates.

Response: For personal care, home health aide, homemaker, or habilitation services under FFS State plan authority, including sections 1915(i), 1915(j), 1915(k) State plan services; section 1915(c) waiver authority; and under section 1115 demonstration authority, this final rule requires States to publish a payment rate disclosure that expresses the State's payment rates as the average hourly Medicaid FFS fee schedule payment rates, separately identified for payments made to individual providers and provider agencies, if the rates vary, and for payments that include facility-related costs, as applicable. States have flexibility in operating their Medicaid programs to set payment rates and payment policies for services that cover a particular unit of time for delivering the service and, therefore, States currently pay for these services in a wide range of units, from minutes to hourly to daily to monthly units. As described in the proposed rule, because of Medicaid's status as the most important payer for HCBS and lack of other points of comparison (that is, Medicare, private payers, self-pay), transparency and comparability among States is most important for assessing compliance with section 1902(a)(30)(A) of the Act. To ensure the payment rate disclosure supports our transparency efforts to help ensure that interested parties have basic information available to them to understand Medicaid payment levels and the associated effects of payment rates on access to care so that they may raise concerns to State Medicaid agencies via the various forms of public processes available to interested parties, we are requiring States publish their payment rates in a uniform and comparable format, that is, an average hourly Medicaid FFS fee schedule payment rate. As previously discussed in an earlier response to comments in this section, we are not requiring in the payment rate disclosure provisions at § 447.203(b)(3)(ii) that States to collect wage, compensation (including benefits), or financial records and information from provider agencies or to publish information about the compensation the provider agency pays to its employee, where applicable.

Regarding commenters requesting clarification on how States should convert half day, per diem, or per visit payment rates into an average hourly

payment rate, we would like to clarify that States that pay for the categories of services specified in paragraph (b)(2)(iv) in a unit other than an hourly payment rate are expected to calculate an hourly payment rate using the unit of the rate the State pays for the service and the number of hours covered by that unit. For example, if a State provides home health aide services as a half day or on a per diem (daily) or per visit basis, then the State would be expected to divide their payment rate for a half day, day, or visit by the number of hours covered by the rate, such as 8 hours for a full day, to calculate an average hourly Medicaid FFS fee schedule payment rate for the payment rate disclosure. States have flexibility in operating their Medicaid programs to set payment rates and payment policies for services that cover a particular unit of time for delivering the service. We expect States have a maximum number of hours factored into their payment rate for services set on a per diem or per visit basis and States should use that maximum number in calculating the average hourly Medicaid FFS fee schedule payment rate, which is a simple average (arithmetic mean) where all payment rates are summed, then divided by the number of all hourly payment rates. Regarding commenters who stated that services, such as adult day habilitation or assisted living waiver, that cannot be calculated as an hourly rate should be reported as daily rates, we are not incorporating this suggestion into the final rule as we would expect States to use the previously described process to calculate an hourly payment rate from a per diem (daily) rate.

As previously mentioned in an earlier response to comments, this final rule adds habilitation services to the categories of services subject to the payment rate disclosure. This final rule is also adding a requirement that States must separately identify whether the average hourly Medicaid FFS fee schedule payment rate for services includes facility-related costs in § 447.203(b)(2) and (3)(ii)(B) to remain consistent with HCBS provisions finalized in this rule at § 441.311(e)(2). We recognize that habilitation services can mean residential habilitation, day habilitation, or home-based habilitation services; as such, payment rates for habilitation services generally may include facility-related costs, as in the case of residential or day habilitation services delivered in a residential group home or day center, whereas home-based habilitation would not include facility-related costs.[330] We remind States that we proposed an ''as applicable'' clause in § 447.203(b)(3)(ii)(B) that applies to the ways payment rates can vary (that is, by employment structure, population (pediatric and adult), provider type, geographical location). The requirement to identify whether a payment rate includes facility-related costs would also be covered by the ''as applicable'' clause. As such, we would not expect States to identify facility-related costs for personal care, home health aide, homemaker, and habilitation service payment rates when they are delivered in a home-based setting. While § 447.203(b)(2) and (3)(ii)(B) requires that States must separately identify whether the average hourly Medicaid FFS fee schedule payment rate includes facility-related costs may not apply to all services and delivery sites (that is, in home or community settings), we believe this provision will help to ensure transparency of payment rates that may differ due to the inclusion of facility-related costs.

Comment: One commenter requested clarification regarding individually negotiated rates and bundled rates being included in the average hourly payment rate calculation in the payment rate disclosure.

Response: As previously described in detail in an earlier response to comments in this section, we interpret the commenter's reference to ''negotiated rates'' to mean a provider payment rate where the individual provider's final payment rate is agreed upon through negotiation with the State Medicaid agency. For consistency with the payment rate transparency publication requirement, negotiated rates are not subject to the payment rate disclosure provision because these payment rates are not subject to the payment rate transparency publication as negotiated rates are not Medicaid FFS fee schedule payment rates that are known in advance of a provider delivering a service to a beneficiary.

Also, as previously discussed in detail in an earlier response to comments in this section, for purposes of the payment rate transparency provision in § 447.203(b)(1), Medicaid FFS fee schedule payment rates are FFS payment amounts made to a provider, and known in advance of a provider delivering a service to a beneficiary by reference to a fee schedule. For consistency, we are using the same description of Medicaid FFS fee schedule payment rates to describe the payment rates that need to be included in the payment rate disclosure in paragraph (b)(3)(ii)(B) of this section which would also consider bundled payment rates to be Medicaid FFS fee schedule payment rates for the purposes of the payment rate disclosure.

We also clarify that while PPS rates for services provided in inpatient hospitals, outpatient hospitals, inpatient psychiatric facilities, inpatient rehabilitation facilities, long-term care hospitals, and nursing facilities are subject to the payment rate transparency publication, these PPS rates are effectively excluded from the payment rate disclosure because the categories of services specified in § 447.203(b)(2)(iv), personal care, home health aide, homemaker, and habilitation services, inherently delivered in a home or community setting, outside of an institutional facility.

Comment: Many commenters suggested additional data elements and levels of analysis for the payment rate disclosure. A couple of commenters suggested additional breakdowns of the average hourly payment rates, including when a State pays different rates for higher level of need or complexity (such as paying tiered rates for a single service when provided on nights, weekends, or in a particular geographical area), demographic information (such as gender and race of the direct care worker), and type of service provided. Another commenter suggested CMS require States to identify the average portion of the average payment rate that is used for compensation to pay the direct care worker in the payment rate disclosure to enable easier comparison of compensation between individual providers and to providers employed by an agency. One commenter suggested requiring States to publish the rates that provider agencies pay their employees to ensure payment rates are fully disclosed at the State and provider levels. One commenter suggested additional data elements be reported by States in the payment rate disclosure: Medicaid-authorized payment rates; minimum base wages that would be paid to direct care workers if the proposed 80 percent requirement is met; average Medicaid payment rates and average direct care worker wages; the minimum, maximum, and median rates of wages; and number of direct care workers employed by the agency.

[330] We remind States that room and board is generally only coverable and payable to an individual who has been admitted to a medical institution as an ''inpatient'' as defined in 42 CFR 440.2 and 435.1010. Therefore, room and board in a facility setting that provides residential or day habilitation service must be excluded from the average hourly Medicaid FFS fee schedule payment rate for habilitation services.

Response: We appreciate commenters' suggestions for the payment rate disclosure. As previously discussed in an earlier response to commenters, in this final rule, we are revising the proposed language ''to providers employed by an agency'' in in § 447.203(b)(2)(iv), (b)(3)(ii), and (b)(3)(ii)(B) and finalizing it as ''provider agencies'' for clarification purposes to more accurately reflect what payment rate we are requiring be published, that is, the payment rate the State pays a provider agency for services its employees have delivered. While the commenters did not provide additional explanation or examples of what they meant by requiring an additional break down of the average hourly payment rate by ''type of service provided,'' we clarify that the payment rate disclosure requires States to publish the average hourly Medicaid FFS fee schedule payment rate for personal care, home health aide, homemaker, and habilitation services, which are types of services, separately. Additionally, while we are not explicitly requiring States break down their payment rates by higher level of need or complexity, we did propose and are finalizing the requirement to break down the average hourly Medicaid FFS fee schedule payment rate by geographical location, which was one of the examples of additional criteria the commenter provided for suggested further breakdown.

However, we are not incorporating the other suggestions to require the other, additional breakdowns of the average hourly payments rates as suggested by commenters or to require additional data elements be reported by States in the payment rate disclosure, to remain consistent across provisions of this final rule. If we were to include these suggestions only for the payment rate disclosure, then the payment rate breakdowns would be inconsistent with the payment rate transparency publication and comparative payment rate analysis in terms of requiring, for example, demographic information about the direct care worker. During the initial compliance period of this final rule and in consideration of the numerous, concurrent regulatory changes States are facing, we believe consistency, where possible, across provisions will contribute to our goal to standardize data and monitoring across service delivery systems with the goal of improving access to care.

Likewise, we are not incorporating the suggestion to identify the average portion of the average payment rate that is used for compensation to pay the direct care worker in the payment rate disclosure. While the suggestion aligns with the intent of HCBS provisions we are finalizing in this rule at § 441.302(k) as discussed in section II.B.5 of this rule, we did not propose to require 80 percent of all payments with respect to services at § 440.180(b)(2) through (4) must be spent on compensation for direct care workers within the payment rate disclosure, as discussed in a later response to comments in this section. As we remain focused on consistency, because we are not requiring a certain percentage of all payments be spent on compensation for direct care workers, we are also not requiring at § 447.203(b)(3)(ii) that States to identify the average portion of the average payment rate that is used for compensation to pay the direct care worker.

We are also not incorporating the suggestion to require States publish the rates that provider agencies pay their employees because, similar to private payer data as a point of rate comparison, rates that provider agencies pay their employees is generally considered proprietary and this information may not be available to States. As previously discussed in an earlier response to comments in this section, we are not requiring in the payment rate disclosure provisions at § 447.203(b)(3)(ii) that States to collect wage, compensation (including benefits), or financial records and information from provider agencies or to publish information about the compensation the provider agency pays to its employee, where applicable.

We want our initial focus to be on establishing the new payment rate transparency, comparative payment rate analysis, and payment rate disclosure requirements, providing States with support during the compliance period, and ensuring these data are available to beneficiaries, providers, CMS, and other interested parties for the purposes of assessing access to care issues. While we are not adopting these suggestions, we note that States have the flexibility to add the elements described to their payment rate disclosure publication if they so choose. We will also review how our finalized policies work in conjunction with other policies finalized in this rule to identify any potential areas for future enhancements suggested by the commenters.

Comment: One commenter suggested CMS could ease burden on States by collecting State payment rates from Dual Special Needs Plans (D–SNPs) through Medicare Advantage, rather than requiring States to calculate and publish their average hourly payment rate for the payment rate disclosure.

Response: We appreciate the commenters' suggestion; however, D–SNPs do not provide us with the specific data elements (that is, State Medicaid payment rates, number of Medicaid-paid claims, and number of Medicaid enrolled beneficiaries) we are requiring in this rule. Some D–SNPs only cover Medicare services and do not directly pay for Medicaid services. Other D–SNPs do cover Medicaid services (either directly or through an affiliated Medicaid managed care plan), but this rule only applies to Medicaid FFS payment rates. Therefore, as D–SNPs do not collect or provide us with Medicaid payment rate information that is relevant to this rule, we will not be incorporating this suggestion. Additionally, we believe that the States, as stewards of Medicaid payment rates in the Medicaid program, would be the party best situated to publish and analyze their own payment rate information for the payment rate transparency requirements finalized in this rule, including the payment rate disclosure. States' ownership of payment rate information will ensure accurate payment rate transparency publications, comparative payment rate analyses, and payment rate disclosures.

Comment: A few commenters suggested alternative timelines for States updating their payment rate disclosures. One commenter suggested extending the requirement for updates to the payment rate disclosure to every 3 years, instead of the proposed 2 years, to align with the State's existing data publication cycle. However, another commenter suggested the update frequency of the payment rate disclosure be every year.

Response: We are finalizing the payment rate transparency requirements, including the payment rate disclosure, with an applicability date of July 1, 2026; however, we are not changing the proposed timeframe of 2 years for States to update their payment rate disclosure. We believe requiring updates to the payment rate disclosure every 2 years appropriately balances State burden and maintaining up-to-date information in the payment rate disclosure.

Comment: Most commenters were supportive in response to our request for public comment on whether we should propose a provision to what we proposed at § 441.302(k) (where we proposed to require that at least 80 percent of all Medicaid FFS payments with respect to personal care, home health aide, and homemaker services provided by individual providers and providers employed by an agency must be spent on compensation for direct care

workers) in § 447.203(b) on the basis that this provision would help address the direct care workforce crisis and access issues. One commenter suggested that if such a provision were proposed and implemented, then CMS should implement an accountability requirement where States would be required to validate that direct care workers are receiving 80 percent of all Medicaid FFS payments.

Some commenters opposed this consideration and suggested that, if this provision is finalized, the requirement would negatively affect access to care. These commenters aligned with those in opposition to the proposed HCBS provisions at § 441.302(k), as discussed in section II.B.5 of this rule. These commenters opposed this because the policy does not consider that given low levels of payment for relevant services, the remaining 20 percent of the payment rate would be insufficient for the administrative costs (that is, staff, technology, training, travel, oversight) of running a business, provider agencies are already challenged by worker shortages, providers would withdraw from the Medicaid program or stop serving Medicaid beneficiaries, and the requirement would be ineffective without supportive policies in place to implement standards for determining sufficient Medicaid payment rates that provide competitive wages, promote quality services, and ensure compliance with all State and Federal regulations. Commenters in opposition recommended alternatives including: a lower percentage than 80 percent of all Medicaid FFS payments going to compensation for direct care workers, establishing quality outcome metrics, and focusing on wage review and transparency.

Response: We thank commenters for their input and suggestions. We also understand the commenters' concerns. Given that our work to better ensure access in the Medicaid program is ongoing, we intend to gain implementation experience with this final rule, particularly from the HCBS provisions finalized in this rule at § 441.302(k) as discussed in section II.B.5, and we will consider the recommendations provided on the proposed rule to help inform any future rulemaking in this area, as appropriate.

Comment: Many commenters expressed concerns about requiring States to publish the average hourly payment rate that States pay for personal care, home health aide, and homemaker services. These commenters were generally concerned that requiring States to publish this information could result in unintended consequences or be ineffective for assessing and improving access to care. The unintended consequences commenters were primarily concerned about included contributing to providers leaving areas where there are low Medicaid payment rates which could create or exacerbate access to care issues in that area and misunderstandings of the required average hourly payment rate without additional context about employee benefits (for example, paid time off, health insurance, pension, employee assistance program) that are not easily disaggregated from an hourly Medicaid service payment rate. Regarding commenter concerns that publishing the average hourly rate would be ineffective, one commenter stated that their State already publishes provider rates, and it has not resolved issues with low and unequal payment rates among providers employed by agencies.

Response: We understand commenters' concerns about the effects of the payment rate disclosure in practice. Regarding commenters' concerns that providers could leave an area where there are low Medicaid payment rates, we would like to emphasize that the payment rate disclosure requirements will afford more transparency to CMS and the public about rates for HCBS, but they will also provide States with an opportunity to identify where existing rates could create an access issue. If the difference in rates between two areas enlists more providers to one area over another, States may need to consider revisions to their payment rates to comply with section 1902(a)(30)(A) of the Act to ''assure that payments . . . are sufficient to enlist enough providers so that care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area.'' Therefore, if the transparency created by the payment rate disclosure requirements induces providers to switch locations, affecting access to care, we would expect States to address the rate disparities that the commenter has correctly identified are negatively impacting access.

Regarding commenters' concerns that there could be misunderstandings of the published average hourly payment rate without additional context about employee benefits, the payment rate disclosure provisions at § 447.203(b)(3)(ii) requires States to separately identify the average hourly Medicaid FFS fee schedule payment rates for personal care, home health aide, homemaker, and habilitation services by population (pediatric and adult), provider type, geographical location, and whether the payment rate includes facility-related costs, as applicable, and by provider employment structures (individual providers and provider agencies). As previously discussed in an earlier response to comments in this section, we are not requiring in the payment rate disclosure provisions at § 447.203(b)(3)(ii) that States to collect wage, compensation (including benefits), or financial records and information from provider agencies or to publish information about the compensation the provider agency pays to its employee, where applicable. In other words, we are focused on payment rate transparency for personal care, home health aide, homemaker, and habilitation services rather than what the providers of these services does with their payment rate (that is, pay for employee benefits). Given that our work to better ensure access in the Medicaid program is ongoing, we intend to gain implementation experience with this final rule, and we will consider the recommendations provided on the proposed rule to help inform any future rulemaking in this area, as appropriate.

We disagree with the commenters that publishing the average hourly Medicaid FFS fee schedule payment rate of personal care, home health aide, homemaker, and habilitation providers through the payment rate disclosure requirement will be ineffective, including because one commenter's State already publishes this information, and the commenter has not seen improvement in low and unequal payment rates among providers employed by agencies. We believe a broad requirement for all States that provide personal care, home health aide, homemaker, and habilitation services through the FFS delivery system will help ensure consistency across delivery systems in monitoring and ensuring access to care, particularly with the HCBS provisions at § 441.311(d)(2) and (e), which require annual State reporting on access and payment adequacy metrics for the same set of services as the payment rate disclosure as well as with the Managed Care final rule (as published elsewhere in this **Federal Register**) provisions at § 438.207(b)(3)(ii) for Medicaid to require a payment analysis of the total amount paid for homemaker services, home health aide services, and personal care services and the percentage that results from dividing the total amount paid by the amount the State's Medicaid FFS program would have paid for the same claims. While the commenter did not provide additional details about

their State's publication of payment rates, we believe that with a broad rate transparency requirement across delivery systems, we can reasonably expect that States, CMS, and interested parties will have transparent payment rate information available to them across delivery systems. Transparency would continually help States and CMS to ensure that their Medicaid payment rates are set at a level that is likely sufficient to meet the statutory access standard under section 1902(a)(30)(A) of the Act that payments be sufficient to enlist enough providers so that care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area. Transparency also helps to ensure that interested parties have basic information available to them to understand Medicaid payment levels and the associated effects of payment rates on access to care so that they may raise concerns to State Medicaid agencies via the various forms of public process available to interested parties.

Comment: Several commenters expressed concern over low payment rates in Medicaid, particularly for HCBS, dental services, and behavioral health care, and the negative impact on access to care. Many commenters suggested that the primary causes of these low payment rates in Medicaid are stagnant and insufficient payment rates left unadjusted for rising costs, inflation, new regulatory requirements, and increased service expectations over time, particularly for the HCBS direct care workforce.

A few of these commenters suggested CMS could address these issues directly by requiring States conduct regular rate reviews (for example, annual, biennial, triennial, or when a programmatic change occurs), publish the results, and update their payment rates, when necessary, based on criteria that CMS sets. One commenter suggested this could be achieved thorough regular SPA and waiver reviews where CMS could prevent stagnant and insufficient rates from being maintained. Particularly for HCBS, one commenter recommended setting a national standard base pay rate for direct care workers as determined by the States' cost of living index or requiring States have parity for all State payment rates, regardless of geographic location, but allow differences in payment rates for services provided to pediatric and adult populations.

Response: We appreciate the commenters' suggestions. However, we are limited in our authority to directly address the commenters' concerns regarding stagnant and insufficient payment rates. With limited statutory exceptions (such as for hospice services under section 1902(a)(13)(B) of the Act and FQHC/RHC services under section 1902(bb) of the Act, which each establish a floor for provider payment rates which prohibits States from implementing rate reductions below the amount calculated through the methodology provided in the statute), we do not have the authority to require States update their payment rates to a particular level. Section 1902(a)(30)(A) of the Act requires that State plans assure that payments are consistent with efficiency, economy, and quality of care and are sufficient to enlist enough providers so that care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area. Under the statutory authority at section 1902(a)(30)(A) of the Act and through this final rule, we are requiring States to develop and publish a payment rate transparency publication, comparative payment rate analysis of certain services, and payment rate disclosure for certain HCBS, which are directed at helping the States and CMS ensure that State payment rates are consistent with the payment standards under section 1902(a)(30)(A) of the Act.

While we are not explicitly requiring that States update their payment rates to a particular level or regularly submit SPAs and/or waivers (except where desired by the State to implement a programmatic change, consistent with existing requirements) waivers in this rulemaking, we believe there are three requirements within our statutory authority and finalized by this rule that effectively address the concerns raised by commenters. First, this final rule requires States to review their payment rates during the development and publication of their payment rate transparency publications, comparative payment rate analyses, and payment rate disclosures. Specifically, the payment rate transparency publication requires States to regularly review their rates in the course of publishing them and maintaining the current accuracy of the publication, including publishing the date the payment rate publication website was last updated, which will reveal any rates that may be stagnant and potentially insufficient. States must also ensure the data in the publication is kept current (that is, updates must be made within 1 month of a rate change). With this final rule, we focused on transparency to help ensure that interested parties have basic information available to them to understand Medicaid payment levels and the associated effects of payment rates on access to care so that they may raise concerns to State Medicaid agencies via the various forms of public process available to interested parties. We acknowledge the provisions finalized in this rule do not specifically require rate reviews to ensure payment rates are adjusted for rising costs, inflation, new regulatory requirements, and increased service expectations that commenters suggested are factors contributing to a crisis in the HCBS direct care workforce. However, this provision creates a process to help validate that payment rates are compliant with section 1902(a)(30)(A) of the Act.

Second, this final rule requires States to establish an advisory group for interested parties to advise and consult on certain current and proposed Medicaid provider payment rates to ensure the relevant Medicaid payment rates are sufficient to ensure access to homemaker services, home health aide services, and personal care services for Medicaid beneficiaries at least as great as available to the general population in the geographic area. We strongly encourage States to use this group as part of a process to conduct rate reviews and encourage eligible participants (including direct care workers, beneficiaries, beneficiaries' authorized representatives, and other interested parties impacted by the services rates in question, as determined by the State) to join their State's interested parties advisory group once established to bring their concerns directly to States that are setting the payment rates for HCBS.

Third, this final rule establishes a two-tiered approach for determining the level of access analysis States would be required to conduct when proposing provider payment rate reductions or payment restructurings. The first tier of this approach, § 447.203(c)(1), sets out three criteria for States to meet when proposing payment rate reductions or payment restructurings in circumstances when the changes could result in diminished access that, if met, would not require a more detailed analysis to establish that the proposal meets the access requirement in section 1902(a)(30)(A) of the Act. However, meeting the three criteria described in the first tier does not guarantee that the SPA would be approved, if other applicable Federal requirements are not met. The second tier of this approach, § 447.203(c)(2) requires the State to conduct a more extensive access analysis in addition to providing the results of the analysis in the first tier. We believe this two-tiered approach, in

combination with updated public process requirements in § 447.203(c)(4) (which this final rule relocates from § 447.203(b)(7)) will help us ensure that a State's proposed Medicaid payment rates and/or payment structure are consistent with the access requirement in section 1902(a)(30)(A) of the Act at the time the State proposes a payment rate reduction or payment restructuring in circumstances when the changes could result in diminished access.

After consideration of public comments, we are finalizing all provisions under § 447.203(b)(2) to (4) as proposed, apart from the following changes.

• Deleted the word ''following'' in two places in the following sentence in § 447.203(b)(2) ''The State agency is required to develop and publish a comparative payment rate analysis of Medicaid payment rates for each of the **following** categories of services in paragraphs (b)(2)(i) through (iii) of this section and a payment rate disclosure of Medicaid payment rates for each of the **following** categories of services in paragraph (b)(2)(iv) of this section, as specified in paragraph (b)(3) of this section.'' The finalized language now states ''The State agency is required to develop and publish a comparative payment rate analysis of Medicaid payment rates for each of the categories of services in paragraphs (b)(2)(i) through (iii) of this section and a payment rate disclosure of Medicaid payment rates for each of the categories of services in paragraph (b)(2)(iv) of this section, as specified in paragraph (b)(3) of this section.'' (bold added to emphasize the deleted word).

• Replaced ''Medicaid payment rates'' with ''Medicaid fee-for-service fee schedule payment rates'' in § 447.203(b)(2) with regard to the comparative payment rate analysis. The finalized language now states ''. . . publish a comparative payment rate analysis of Medicaid fee-for-service fee schedule payment rates. . .'' for clarification and consistent terminology usage within § 447.203(b).

• Replaced ''Medicaid payment rates'' with ''average hourly Medicaid fee-for-service fee schedule payment rates'' in § 447.203(b)(2) with regard to the payment rate disclosure. The finalized language now states ''. . . [publish] . . . payment rate disclosure of the average hourly Medicaid fee-for-service fee schedule payment rates'' for clarification and consistent terminology usage within § 447.203(b).

• Revised sentence structure organization and added clarifying language to the proposed language stating how the Medicaid FFS payment rates published in the comparative payment rate analysis and the payment rate disclosure need to be listed, if the rates vary. The proposed language in § 447.203(b)(2) stated ''The State agency is required to develop and publish a comparative payment rate analysis of Medicaid payment rates for each of the following categories of services in paragraphs (b)(2)(i) through (iii) of this section and a payment rate disclosure of Medicaid payment rates for each of the following categories of services in paragraph (b)(2)(iv) of this section, as specified in paragraph (b)(3) of this section. If the rates vary, the State must separately identify the payment rates by population (pediatric and adult), provider type, and geographical location, as applicable.''

++ Added the following sentence to address payment rate variation for the comparative payment rate analysis: ''If the rates vary, the State must separately identify the payment rates by population (pediatric and adult), provider type, and geographical location, as applicable.'' in § 447.203(b)(2).

++ Revised the following sentence to add payment rate variation related to facility-related costs for the payment rate disclosure: ''If the rates vary, the State must separately identify the payment rates by population (pediatric and adult), provider type, geographical location, **and whether the payment rate includes facility-related costs,** as applicable.'' (new language identified in bold).

The language is finalized as ''The State agency is required to develop and publish a comparative payment rate analysis of Medicaid fee-for-service fee schedule payment rates for each of the categories of services in paragraphs (b)(2)(i) through (iii) of this section. **If the rates vary, the State must separately identify the payment rates by population (pediatric and adult), provider type, and geographical location, as applicable. The State agency is further required to develop and publish** a payment rate disclosure of the average hourly Medicaid fee-for-service fee schedule payment rates for each of the categories of services in paragraph (b)(2)(iv) of this section, as specified in paragraph (b)(3) of this section. If the rates vary, the State must separately identify the payment rates by population (pediatric and adult), provider type, geographical location, **and whether the payment rate includes facility-related costs,** as applicable.'' in paragraph (b)(2). (new language identified in bold).

• Updated ''Outpatient behavioral health services'' as a category of service in § 447.203(b)(2)(iii) to ''Outpatient mental health and substance use disorder services.''

• Added ''habilitation'' as a category of service in the payment rate disclosure described in § 447.203(b)(2)(iv) and added a reference to § 440.180(b)(6). The finalized language now states ''Personal care, home health aide, homemaker, **and habilitation** services, as specified in § 440.180(b)(2) through (4) and (6), provided by individual providers and provider agencies (new language identified in bold).

• Clarified which publication requirements apply to the comparative payment rate analysis and payment rate disclosure in § 447.203(b)(3) and (b)(4) to align with a previously described update to the organizational structure of paragraph (b)(1) to add romanettes to specify the ''publication requirements described in paragraph (b)(1) **through (b)(1)(ii)** of this section.'' (new language identified in bold).

• Replaced ''Medicaid base payment rates'' with ''base Medicaid fee-for-service fee schedule payment rates'' in § 447.203(b)(3)(i)(B) through (E) for clarification and consistent terminology usage within § 447.203(b).

• Replaced ''Medicare non-facility payment rate'' with ''Medicare non-facility payment rate as established in the annual Medicare Physician Fee Schedule final rule'' in § 447.203(b)(3)(i)(C) and (D) for clarification.

• Added ''and whether the payment rate includes facility-related costs'' in § 447.203(b)(3)(ii)(B) to account for facility-related costs in habilitation settings, particularly residential habilitation or day habilitation. The finalized language now states, ''[t]he disclosure must identify the average hourly Medicaid fee-for-service fee schedule payment rates by applicable category of service, including, if the rates vary, separate identification of the average hourly Medicaid fee-for-service fee schedule payment rates for payments made to individual providers and provider agencies, by population (pediatric and adult), provider type, geographical location, **and whether the payment rate includes facility-related costs,** as applicable in § 447.203(b)(3)(ii)(B) (new language identified in bold).

• Replaced ''average hourly payment rate'' with ''average hourly Medicaid fee-for-service fee schedule payment rates'' in § 447.203(b)(3)(ii) and (ii)(B) and (C) for clarification and consistent terminology usage within § 447.203(b).

• Replaced ''to providers employed by an agency'' with ''provider agencies''

in § 447.203(b)(2)(iv), (b)(3)(ii), and (b)(3)(ii)(B) for clarification.

- Replaced ''Medicaid payment rates'' with ''Medicaid fee-for-service fee schedule payment rates'' in § 447.203(b)(4) for clarification and consistent terminology usage within § 447.203(b).
- Updated the applicability date in § 447.203(b)(4) from January 1, 2026 and effective date of the Medicaid payment rates subject to the comparative payment rate analysis and payment rate disclosure from January 1, 2025 to read: ''The State agency must publish the initial comparative payment rate analysis and payment rate disclosure of its Medicaid fee-for-service fee schedule payment rates in effect as of July 1, 2025, as required under paragraphs (b)(2) and (b)(3) of this section, by no later than July 1, 2026. Thereafter, the State agency must update the comparative payment rate analysis and payment rate disclosure no less than every 2 years, by no later than July 1 of the second year following the most recent update.''

c. Interested Parties Advisory Group § 447.203(b)(6)

In the proposed rule, we noted that a fundamental element of ensuring access to covered services is the sufficiency of a provider network.[331] As discussed elsewhere in this rule, the HCBS direct care workforce is currently experiencing notable worker shortages.[332] A robust workforce providing HCBS allows more beneficiaries to obtain necessary services in home and community-based settings. We proposed to use data-driven benchmarks in requiring comparative payment rate analyses relative to Medicare non-facility payment rates as established in the annual Medicare PFS final rule for a calendar year for the categories of service specified in proposed § 447.203(b)(2)(i) through (iii), but Medicare non-facility payment rates are generally not relevant in the context of HCBS, as discussed earlier in this section. Furthermore, data alone cannot replace the lived experience of direct care workers and recipients of the services they provide.

Understanding how Medicaid payment rates compare in different geographic areas of a State and across State programs is also an important access to care data point for covered benefits where Medicaid is a predominant payer of services, as in the case of HCBS. In the absence of HCBS coverage and a lack of available payment rate and claims utilization data from other health payers, such as Medicare or private insurers, and with the significant burden and potential infeasibility associated with gathering payment data for individuals who pay out of pocket (that is, self-pay), we noted our belief that it would be a reasonable standard for States to compare their rates to geographically similar State Medicaid program payment rates as a basis for understanding compliance with section 1902(a)(30)(A) of the Act for those services. In addition, even for services where other payers establish payment rates, comparisons to rates paid by other geographically similar States could be important to understanding compliance with section 1902(a)(30)(A) of the Act since Medicaid beneficiaries may have unique health care needs that are not typical of the general population in particular geographic areas.

Section 2402(a) of the Affordable Care Act directs the Secretary to issue regulations ensuring that all States develop service systems that, among other things, improve coordination and regulation of providers of HCBS to oversee and monitor functions, including a complaint system, and ensure that there are an adequate number of qualified direct care workers to provide self-directed services. This statutory mandate, coupled with the workforce shortages exacerbated by the COVID–19 pandemic, necessitates action specific to direct care workers. As such, we proposed to require States to establish an interested parties advisory group to advise and consult on FFS rates paid to direct care workers providing self-directed and agency-directed HCBS, at a minimum for personal care, home health aide, and homemaker services as described in § 440.180(b)(2) through (4), and States may choose to include other HCBS.

We proposed the definition of direct care workers under § 441.302(k)(1)(ii), which is being finalized under § 441.311(e)(1)(ii) in this final rule. We proposed to use that definition to consider a direct care worker a registered nurse, licensed practical nurse, nurse practitioner, or clinical nurse specialist who provides nursing services to Medicaid-eligible individuals receiving HCBS; a licensed nursing assistant who provides such services under the supervision of a registered nurse, licensed practical nurse, nurse practitioner, or clinical nurse specialist; a direct support professional; a personal care attendant; a home health aide; or other individuals who are paid to provide services to address activities of daily living or instrumental activities of daily living directly to Medicaid-eligible individuals receiving HCBS available under part 441, subpart G. A direct care worker may be employed by a Medicaid provider, State agency, or third party; contracted with a Medicaid provider, State agency, or third party; or delivering services under a self-directed service model.

We proposed that the group would consult on rates for service categories under the Medicaid State plan, section 1915(c) waiver and demonstration programs, as applicable, where payments are made to individual providers or providers employed by an agency for, at a minimum, the previously described types of services, including for personal care, home health aide, and homemaker services provided under sections 1905(a), 1915(i), 1915(j), and 1915(k) State plan authorities, and section 1915(c) waivers. These proposed requirements also would extend to rates for HCBS provided under section 1115 demonstrations, as is typical for rules pertaining to HCBS authorized using demonstration authority. We proposed that the interested parties advisory group may consult on other HCBS, at the State's discretion.

In this final rule, we are adding an additional service to the group's purview, habilitation services as found under § 440.180(b)(6). In the proposed rule, we proposed an alignment of services subject to the requirements between the HCBS payment adequacy and access to care metrics requirements, and the payment rate disclosure and interested parties advisory group provisions. Within the payment adequacy and access to care metrics provisions of the proposed rule, we requested comment on whether to expand services subject to those requirements to include habilitation services from the proposed personal care, home health aide, and homemaker services. In this final rule, we are adding habilitation services to the reporting requirements for direct care worker compensation data under § 441.311(e) and access to care metrics under § 441.311(d)(2), and therefore are adding habilitation services to the interested parties' advisory group's purview (and, as previously discussed, to the payment rate disclosure requirements). This addition will create consistency between HCBS-related provisions of this final rule. It will also simplify the process for States to provide the relevant materials to members of the interested parties advisory group, and avoid any confusion on the scope of review. We also want to note the point made in earlier provisions of this final

[331] 88 FR 27960 at 28023.

[332] *https://www.macpac.gov/wp-content/uploads/2022/03/MACPAC-brief-on-HCBS-workforce.pdf.*

rule, that habilitation services can mean residential habilitation, day habilitation, or home-based habilitation services. All three types are included within the ''habilitation services'' we are adding to this provision.

In § 447.203(b)(6), we proposed that the State agency would be required to establish an advisory group for interested parties to advise and consult on provider rates with respect to service categories under the Medicaid State plan, section 1915(c) waiver and demonstration programs, as applicable, where payments are made to the direct care workers specified in § 441.311(e)(1)(ii) for the self-directed or agency-directed services found at § 440.180(b)(2) through (4). In this final rule, as noted, we are adding habilitation services as found at § 440.180(b)(6). The interested parties advisory group would be required to include, at a minimum, direct care workers, beneficiaries and their authorized representatives, and other interested parties. We explained that ''authorized representatives'' refers to individuals authorized to act on the behalf of the beneficiary, and other interested parties may include beneficiary family members and advocacy organizations. To the extent a State's MAC established under proposed § 431.12, if finalized, meets these requirements of this regulation, we proposed that the State could use that committee for this purpose. However, we noted the roles of the MAC under proposed § 431.12 and the interested parties advisory group under proposed § 447.203(b)(6) would be distinct, and the existence or absence of one committee or group (for example, if one of these proposals is not finalized) would not affect the requirements with respect to the other as established in a final rule.

We further proposed in § 447.203(b)(6)(iii) that the interested parties advisory group would advise and consult with the Medicaid agency on current and proposed payment rates, HCBS payment adequacy data as required at § 441.311(e), and access to care metrics described in § 441.311(d)(2), associated with services found at § 440.180(b)(2) through (4), to ensure the relevant Medicaid payment rates are sufficient to ensure access to homemaker services, home health aide services, and personal care services for Medicaid beneficiaries at least as great as available to the general population in the geographic area and to ensure an adequate number of qualified direct care workers to provide self-directed personal assistance services. We want to clarify that the group would not be required to advise and consult on the HCBS payment adequacy data as required under § 441.311(e), and access to care metrics under § 441.311(d)(2), until such a time as those data are available under the newly established requirements. We also want to note again here that we are expanding the service categories to include habilitation services as found at § 440.180(b)(6).

In § 447.203(b)(6)(iv), we proposed that the interested parties' advisory group would meet at least every 2 years and make recommendations to the Medicaid agency on the sufficiency of State plan, 1915(c) waiver, and demonstration direct care worker payment rates, as applicable. The State agency would be required to ensure the group has access to current and proposed payment rates, HCBS provider payment adequacy minimum performance and reporting standards as described in § 441.311(e), and applicable access to care metrics for HCBS as described in § 441.311(d)(2) to produce these recommendations. These materials would be required to be made be available with sufficient time for the advisory group to consider them, formulate recommendations, and transmit those recommendations to the State. If the State has asked the group to consider a proposed rate change, the State would need to provide the group with sufficient time to review and produce a recommendation within the State's intended rate adjustment schedule. We noted that this would be necessary because the group's recommendation would be considered part of the interested parties input described in proposed §§ 447.203(c)(4) and 447.204(b)(3), which States would be required to consider and analyze. The interested parties advisory group would make recommendations to the Medicaid agency on the sufficiency of the established and proposed State plan, section 1915(c) waiver and demonstration payment rates, as applicable. In other words, the group would provide information to the State regarding whether, based on the group's knowledge and experience, current payment rates are sufficient to enlist a sufficiently large work force to ensure beneficiary access to services, and whether a proposed rate change would be consistent with a sufficiently large work force or would disincentivize participation in the work force in a manner that might compromise beneficiary access. We clarify here, as well that the State would not be required to make available the HCBS provider payment adequacy minimum performance and reporting standards under § 441.311(e), and applicable access to care metrics for HCBS under § 441.311(d)(2), until such a time as those data are available per the applicable applicability dates of those respective provisions in this final rule.

We proposed to require States to convene this interested parties' advisory group every 2 years, at a minimum, to advise and consult on current and suggested payment rates and the sufficiency of these rates to ensure access to HCBS for beneficiaries consistent with section 1902(a)(30)(A) of the Act. This timing aligns with the comparative payment rate analysis and payment rate disclosure publication requirements proposed in § 447.203(b)(4), although we noted that this would be a minimum requirement and a State may find that more frequent meetings would be necessary or helpful for the advisory group to provide meaningful and actionable feedback. We further proposed that the process by which the State selects its advisory group members and convenes meetings would be required to be made publicly available, but other matters, such as the tenure of members, would be left to the State's discretion. We want to note that the 2-year cadence could require the group to convene its first meeting and produce a recommendation before the HCBS payment adequacy data as required under § 441.311(e), and access to care metrics under § 441.311(d)(2), will be available. We do not expect the State to furnish information to the group that is not yet available or for the group to comment on those topics for which the State has not yet provided data. We nevertheless are maintaining the 2-year cadence that would require a recommendation 2 years from the effective date of this final rule, as we believe the benefits to the State and group in convening that initial time, even with a limited availability of data for the first meeting, will be beneficial for getting the group to be operational. States have the flexibility to convene the group within a shorter timeframe to adjust the future cadence to align with other publication schedules, if desired.

Finally, in § 447.203(b)(6)(v), we proposed that the Medicaid agency would be required to publish the recommendations of the interested parties' advisory group consistent with the publication requirements described in paragraph (b)(1) of this section for payment rate transparency data, within 1 month of when the group provides the recommendation to the agency. We intend that States would consider, but not be required to adopt, the recommendations of the advisory group. Under this proposal, the work of the

advisory group would be regarded as an element of the State's overall rate-setting process. Additionally, the feedback of this advisory group would not be required for rate changes. That is to say, should a State need or want to adjust rates and it is not feasible to obtain a recommendation from the advisory group in a particular instance, the State would still be permitted to submit its rate change SPA to CMS. However, to the extent the group comments on proposed rate changes, its feedback would be considered part of the interested parties input described in proposed §§ 447.203(c)(4) and 447.204(b)(3), which States would be required to consider and analyze, and submit such analysis to us, in connection with any SPA submission that proposes to reduce or restructure Medicaid service payment rates. In addition, by way of clarification, we noted our intent that the advisory group would be permitted to suggest alternate rates besides those proposed by the State for consideration.

We solicited comments on the proposed interested parties' advisory group and about whether other categories of services should be included in the requirement for States to consult with the interested parties advisory group. We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: We received many comments expressing general support for the establishment of the interested parties advisory group. Commenters agreed that individuals with lived experience would provide invaluable insight into appropriate rates for direct care services, including both beneficiaries and direct care workers, which the proposed group would include. Commenters also pointed to a number of anticipated benefits, such as helping to increase pay for these valuable workers, giving beneficiaries a voice on decisions that impact them, providing additional insights into a unique area of the healthcare market, identifying what can attract workers, and addressing an area of critical concern for staffing, which is necessary for the stability of access to HCBS. Multiple commenters stated it was important to have payment rate decisions focus on community needs rather than be determined solely by a State's budget, and thus better meeting the needs of beneficiaries. One commenter stated this group would be valuable for staying abreast of the day-to-day provision of services as it relates to current pay rates, while another noted how it is important to focus on rates in a service area for which there is no Medicare comparison. Another stated this proposal should be used as the template for group feedback and reporting for all provider payment systems in a State.

Some commenters also chose to specifically highlight aspects of the proposals for this group they agreed with. These include having a group to advise on wages, the cadence of group meetings, the publication requirements, the composition of the group members, and allowing States to set the tenure for members. One commenter also pointed out how this group will complement payment adequacy requirements by identifying rates that may meet a set threshold for direct compensation but remains low generally.

Response: We thank commenters for taking the time to express support for the provision and for highlighting many of the areas where we expect this group will add value. We are finalizing the provisions related to the interested parties' advisory group as proposed, with the addition of habilitation services. The shortage of direct care workers demands special attention, and we hope that finalizing these requirements will be one of several steps contained in this final rule toward addressing those concerns.

Comment: A very large proportion of commenters on these provisions had recommendations for changes or enhancements to the interested parties advisory group. A number of those comments related to the composition of the group, with commenters requesting certain proportions for types of members, or specific member positions be added generally or defined as an interested party. Specifically, various commenters recommended a required composition of 25 percent beneficiary representation, 25 percent direct care workers, and 25 percent provider employers, such as representatives from an agency providing HCBS and employing direct care workers. Some commenters expressed similar sentiments without precise numbers, instead recommending representation by various individuals: agency-based model providers; consumer-directed model providers; union representatives; patient advocates; program administrators; politicians; or members of the general public. Some commenters recommended that a majority of members be beneficiaries, unpaid beneficiary caregivers, and advocacy organizations. These commenters had concerns about the possibility that certain key voices could be silenced if not sufficiently represented within the overall composition of the group.

A number of commenters stated that the regulations should require other specific member types without defining in what proportion. There were multiple requests to require members from unions, worker advocacy organizations, consumer advocates, and representatives from provider agencies and provider State associations. These commenters wanted to ensure certain technical expertise would be available amongst the group members. For example, a qualified consumer advocate may have knowledge of technical program aspects that other members may not.

One commenter requested nurses be included in the group, and another requested physician anesthesiologists, noting that they are subject to a uniquely structured payment system. Several commenters stated the group should bar employees of the State agency to ensure independence in developing the recommendations.

Finally, a few commenters requested members who were already among those included in the proposed regulation. Specifically, one commenter stated the group should include paid direct service workers, while another stated HCBS providers should be included.

Response: As stated, we are finalizing the interested party advisory group requirement as proposed apart from the addition of habilitation services, and that includes the provisions defining the membership of the group without specifying particular proportions of required membership. We agree generally that additional types of members such as those suggested by commenters could bring unique perspectives or expertise to the group. Nevertheless, we are finalizing as proposed the membership requirements, because we intentionally proposed a great deal of flexibility for States in recognition of the unique circumstances of State Medicaid programs. We also want to ensure States can meaningfully implement the requirements for this group, and every additional member or type of member presents additional considerations for recruitment needed to set up the group, as well as logistical considerations for coordinating meetings. We believe a limited but inclusive list, with considerable State flexibility in determining the composition of the group, will ensure that interested parties' voices are heard and not silenced, but as with any new policy, we will monitor implementation to identify if adjustments may be needed through future rulemaking.

As the proposed rule contained many changes to existing requirements and processes, we were mindful at every

step of the burden this would place on States, and balanced potential State burden against the proposal's potential to help ensure and improve access. After careful consideration, we determined it was more important to implement a basic framework for the interested party advisory group and leave many details of its precise composition and operation to the States. Our access work is ongoing, and we will consider the recommendations provided on the proposed rule for any additional changes we may propose through future rulemaking.

We would encourage States, when recruiting members, to consider the composition of members that would best satisfy the goals of this group and identify where there is a need for technical expertise, sufficient representation, etc., and work to establish the group in a manner that promotes its efficient functioning and meaningful contribution to Medicaid policies in the State. The inclusion of ''other interested parties'' affords States the flexibility to do so. We believe the lived experiences of the members of this group when coupled with the requirements for States to provide relevant documents and reports for the group's consideration, will be adequate to provide the type of perspective on rates we are seeking through this group.

Finally, we want to clarify which members States are required to include as part of the interested parties advisory group. States are required to include direct care workers, beneficiaries, beneficiaries' authorized representatives, and other interested parties impacted by the rates in question, as determined by the State, which may include beneficiary family members (other than those who may be authorized representatives for beneficiaries) and advocacy organizations. Representation from each type of individual specified on this list is required. As such, the group could not be solely beneficiaries, or solely direct care workers, or solely other individuals meeting neither of those criteria but whom a State would deem an interested party.

Comment: Another area where many commenters made suggestions was with respect to the scope of the group's work and the requirements related to consideration of the group's recommendations. Many commenters recommended that CMS require States to consult with the group for any rate or payment methodology changes, highlighting the value of the group's input, and to require a written, public response to the recommendation of the group, with evidence and rationale, where the final rates differ from what the group recommended. One commenter also requested a public comment process for the group's recommendations. Some emphasized the importance of transparency of this process, and one suggested recommendations and responses be made public for a minimum of 30 days prior to the effective date of a new rate. Several commenters, noting the proposal made the group advisory in nature, recommended that States be required to justify when they choose to go against the recommendation of the group, with some of those commenters offering that at a minimum the State must engage again with the group when intending to finalize rates that differ from the group's recommendation, including meaningful negotiations with the providers represented on the group, perhaps with steps defined by CMS to reach consensus. One commenter wanted the public process regulations at § 447.204(a)(2) updated to explicitly include obtaining and considering the interested parties advisory group's input. The importance of the group's recommendation came up in multiple comments, with one stating it is not enough merely to require the State to receive, and provide a written response to, the advisory groups' input, but that we should ensure the group has authority to shape policy.

Some commenters had detailed recommendations for additional requirements related to the group's output. One suggested a structured and routine process for regular review and approval of new rates or changes, with meaningful input from beneficiaries. The commenter requested the structured process to be coupled with a requirement for States to explain the roles and responsibilities of a rate review advisory body. Another wanted CMS to require States to clearly delineate how a proposed rate change has factored in inflation and any unfunded mandates on providers. One commenter stated that the group's recommendations should go to the State Medicaid director, as well as to the governor, the State legislature, and HHS. Like other commenters, this commenter wanted the State to communicate acceptance or denial of recommendations to the group, with explanations of the State's decisions in writing, but also stressed that CMS must monitor the State advisory committees as part of accountability and transparency and provide feedback to the State.

Some comments also contained other, related recommendations for the group's purview. Two commenters recommended the group be allowed to advise and comment on a broad range of HCBS provider rates, with one suggesting CMS consider leveraging the group for feedback on HCBS access issues more broadly. That commenter stressed the importance to the Medicaid program to evaluate rates and access for HCBS, especially considering the unique market power of Medicaid for HCBS infrastructure. A commenter requested the group's rate review consider the experience of individuals dually eligible for Medicare and Medicaid and factors related to Medicare coverage. One commenter stated the group should advocate for creating a sustainable wage program to attract and retain staff to benefit both recipients and providers of the specified services. Another commenter recommended that the group should review and comment on provider payment rates in managed care delivery systems. One commenter, in response for our request for comment on the services under review, stated the group should focus on direct care work across all waiver categories. Finally, a couple commenters sought clarity on how States must acknowledge or respond to the group's recommendations.

Response: We are finalizing as proposed the advisory nature of the interested parties advisory group. We agree that the group's input will be valuable in setting rates, assessing payment adequacy and applicable access to care metrics, and may provide a perspective on rates and access that could be lacking in existing processes. As one commenter noted, Medicaid has an important and large role in the market for HCBS. However, we believe the policies as we are finalizing them strike the right balance of accountability and flexibility for a wholly new rate advisory group process. The State will be required to publish the recommendations of the interested parties advisory group for transparency, under § 447.203(b)(6)(v). In addition, when the group has a recommendation on a proposed rate change, the State will be required to consider and respond to that recommendation as it would be deemed part of the input of interested parties described in §§ 447.203(c)(4) and 447.204(b)(3). In light of the public notice and public input requirements already in place when a State proposes a rate change, and treatment of the recommendation as public input to which a State is required to consider and address under these requirements, we are not establishing any specific, new public notice or comment process requirements for the recommendations

of the interested parties advisory group. The group could recommend a sustainable wage program, but we are not adding a requirement to develop one. We intend for the group to have broad discretion, within their remit, to make recommendations to the State, which could thereby result in such recommendations. We encourage the group to provide feedback to assist the State in implementing a sustainable HCBS program.

By keeping the group's recommendations recommendation advisory only (that is, non-binding on the State), we intend for the State to give serious consideration to the group's recommendations while avoiding the imposition of policy strictures on the State that could require sudden shifts in budget priorities or create conflicts, for example, with the State legislature. Fundamentally, the single State Medicaid agency must maintain ultimate responsibility to operate the State's Medicaid program. Also, because the group is advisory only, we are not including requirements for the State to negotiate with providers or the group on rate changes, or justify when a rate change is made that is not consistent with the recommendation of the group. However, we remind States that the group's recommendation, to the extent it has commented on rates included in a SPA, would be considered part of the public feedback to which the State must respond, under §§ 447.203(c)(4) and 447.204.

As part of the requirement to establish the interested parties' advisory group in this final rule, States will be responsible for giving appropriate guidance to the group so that it understands its role and responsibilities in producing recommendations. We defer to States on how to best communicate this information to the group. We also want to emphasize for States that the information they provide the group can be expected to shape the nature of the group's recommendations. As such, although we are not requiring the State to explain if and how inflation has factored in to a proposed rate, for example, or provide information to the group on costs imposed on providers beyond what is required under the payment adequacy metrics required under 441.311(e), it would benefit a State to provide as much context as possible to the group so that it can produce the strongest, best-informed, most useful recommendations. Because the group's recommendations must be published publicly, interested parties such as State legislators and HHS will be able to see and review any recommendations.

In addition, with the meeting cadence we are finalizing (at least every 2 years), and with recent examples of when a rate change may be needed to be enacted quickly (for example, to address urgent programmatic needs in connection with the COVID–19 pandemic and public health emergency), it is not feasible to require consultation with the group for every possible rate change. We also note that the mandate of the group and the minimum required meeting cadence should not be viewed as limitations, and States have flexibility to rely on this group in ways that will best help to enhance HCBS or Medicaid more broadly. States may have the group review broader HCBS issues or rates if it so chooses; we merely focused the required scope on the most frequently used HCBS. They can also have the group advise on provider payment rates in managed care delivery systems even though that was not our prioritized focus in this new requirement, under the flexibility States have to direct the work of the group. We also note that although we are not requiring dually eligible beneficiaries specifically in the group to maximize the available pool for recruiting beneficiary members of the group, the majority of HCBS recipients are dually eligible. Finally, we appreciate the many recommendations and suggestions that we will consider if and when we examine the regulations for this group for potential changes through future rulemaking as part of our ongoing access work.

Comment: Several commenters had recommendations for the nature of materials, data, explanations, and information the group should have access to, to ensure the group's input could be fully informed by data, both public and internal to the agency, as to how any rates were calculated. These comments included advice on what materials the group should have access to or suggestions of sources the group should be required to review and consider. Specifically, a couple of commenters wanted the group to be required to consult any analyses performed pursuant to the requirements we are finalizing in § 447.203(c), since those analyses would include valuable data on the number of home care claims, the number of enrollees receiving home care services, and the number of providers furnishing such services. Another commenter recommended the group to be required to consult wage data, such as data from the Bureau of Labor Statistics or from unions, to use as a basis of rate recommendations. Another commenter encouraged CMS to partner with the Department of Labor to provide States with data on competitive wages for other occupations with similar low entry level requirements, to avoid putting burden on States while providing the advisory group with State-level economic data to assess the competitiveness of direct care worker wages.

One commenter provided a detailed recommendation for data to provide the group, including explanations and supporting information on how any proposed rates were calculated, in addition to the metrics required under the payment adequacy and reporting requirements provisions of this final rule. Specifically, the commenter stated this information should include clear, consistent definitions of the cost elements that are considered in establishing a rate, noting that if the definitions of cost components such as employee travel or training are not clear and the bases for these calculations are not shared with sufficient granularity, then the advisory group will not be able to meaningfully comment. Similarly, a commenter urged CMS to ensure that the interested parties advisory group have access to both public-facing reports that States are required to produce and publish described in payment transparency provisions of this rule, and to the underlying data that States use to prepare these reports, which may allow the interested parties advisory group to identify trends or access issues that are not readily apparent in the public reports. One commenter recommended that States be required, through a phase-in, to both collect and provide to the group data on turnover and vacancy rates for direct care workers. The commenter explained that tools currently used by States, such as the National Core Indicators-Intellectual and Developmental Disabilities Staff Stability Survey, or the National Core Indicators-Aging and Physical Disabilities tool currently being piloted, only provide data for agency-directed workers, and as such, more information was needed about independent providers in self-directed programs. The commenter noted these are important data elements to assess the adequacy of wages and compensation.

Finally, a few commenters stated that States should make compensation, including information on median wages and historic trends in compensation, available to all members of the public, for transparency and to assist current or future members of the group itself.

Response: We are finalizing as proposed, apart from the addition of habilitation services, the regulation requiring that the group will advise and consult on current and proposed

payment rates, HCBS provider payment adequacy reporting information under § 441.311(e),), and applicable access to care metrics under § 441.311(d)(2), associated with services found at § 440.180(b)(2) through (4) and (6). The responsibility for the group to advise and consult on these matters necessarily implies that the State must ensure that the group is provided access to current and proposed rate information, HCBS provider payment adequacy data, and applicable access to care metrics. We believe that these requirements, coupled with requirements we are finalizing for payment rate disclosures for HCBS at § 447.203(b)(2) through (3), will provide the group with sufficient data to develop and support their recommendations, and we also believe those additional finalized provisions will provide reassurance to commenters interested in more publicly available data. We further note that certain data, such as certain BLS wage data, are already publicly available and can be used by the group. We remind States that they are not limited to the requirements we are finalizing and are free to consider and provide as much data that the State considers relevant and reasonably available to support the group in its work.

We did not propose and are not finalizing any data collection requirements specifically with respect to the interested parties' advisory group to inform their consideration of Medicaid payment rates for certain HCBS, although we understand that currently available tools and data may have some gaps. In view of the otherwise existing information sources just discussed, we do not believe the value of requiring States to identify or develop and make available additional data sources, such as reporting on independent providers in self-directed programs, would outweigh the added burden of a new data collection. We are similarly not taking on any additional data collection to support these efforts, again noting that we think the policies in this final rule will be sufficient, but as with any new or existing policy we will work with our State partners to assist them in establishing these groups and identifying where we can support State efforts that may extend beyond the requirements in this final rule.

Comment: We received a number of comments around various administrative aspects of § 447.203(b)(6), from member recruitment to the meeting cadence. Several commenters stated that the State should publicly recruit members and requested States to publicly disclose the process of how those members are recruited and the process to convene meetings. A few commenters recommended the members have term-limits, coupled with the protection to only be removed for cause during a term, in order to protect the individuals and the group from reprisal or disbandment.

Comments about the meeting cadence varied. A few recommended the group should meet for every rate change proposed by the State, one agreed with a biannual cadence, while another suggested to increase the cadence to annually in addition to meeting for every rate change. Another commenter supported annual meetings and noted that issues impacting the lives of beneficiaries and workers that should be addressed by rates can happen at a more frequent rate than biannual State budget cycles. One commenter stated the meeting cadence should be every 6 months.

A few commenters suggested a number of additional recommendations such as the regulation should include a requirement of recordkeeping, and the regulation should focus on the distinction between independent and agency-employed workers. Finally, one commenter suggested a name change for the group, ''direct care workforce payment advisory committee,'' to clarify the role and importance of the group.

Response: We appreciate the feedback about the specifics of the administration of the interested parties advisory group. We are finalizing these aspects as proposed. The meeting cadence, as noted by the commenter, is intended to align with usual State budgetary cycles. While other factors may impact the needs of beneficiaries, providers and direct care workers, the State budget creates the framework in which decisions and recommendations can be made, and we believe aligning with that cycle appropriately balances the value gained from the interested parties advisory group's recommendations with burden on States. Similarly, we are finalizing the ability of States to determine the tenure of members, as States are best situated to assess their beneficiaries' and workers' ability to participate in an advisory group and for what length of time. Term limits and removal for cause will be at the State's discretion to ensure the effective operation of the group. We note that the regulation does specify that the process by which the State selects interested parties advisory group members and convenes its meetings must be made publicly available, which aligns with recommendations from some commenters.

States have requirements to maintain records of public input under § 447.203(c)(4)(iii), and as stated we would regard the recommendation of the group a form of public input to the extent the group comments on proposed rates.

With respect to individual and agency-employed providers, the payment rate disclosure requirements under § 447.203(b)(3)(ii2)(iv) require States to publish average hourly Medicaid FFS fee schedule payment rates for individual providers and provider agencies separately to the extent they differ, creating a new method through which the State, CMS, and the public can scrutinize any rate difference between individual providers and provider agencies. We are not adding additional requirements for the group to examine further distinctions between individual and provider agencies, but as the group will be reviewing current and proposed rates, they will have the opportunity to see where such rates differ and make recommendations accordingly.

Finally, we appreciate the suggestion to change the name of the group, but we want to remind that the purview of this group is not solely payments for HCBS, although that is the primary focus. The work includes access metrics, specifically HCBS payment adequacy data as required at § 441.311(e), and access to care metrics under § 441.311(d)(2). We understand the name is rather generic, and we will make every effort to ensure any materials or communications are clear about when an ''interested parties advisory group'' is in reference to § 447.203(b)(6).

Comment: We received some comments in opposition to an interested parties advisory group. A primary, recurring element of these comments was related to the burden of establishing this group relative to the value the commenters thought the group would add. One commenter stated this group would be duplicative of other State efforts, without adding value. Another was concerned that the group would establish a pattern for more, similar groups to be created, resulting in significant State burden. Another stated the group would create undue interference in a State's ability to manage its Medicaid program. One commenter stated that limiting the group's purview to three services would create disjointedness in discussions about HCBS or broader rates in general.

One commenter stated that their MCAC (or, following the effective date of this final rule, their MAC), already performs the same functions as the

proposed interested parties advisory group. Another requested an exception to the requirement for States that already have a group established for similar topics. Two commenters in opposition to the requirement had recommendations for adjustments. One commenter stated that the group should not include members who have a conflict of interest because they stand to receive a financial benefit from the decisions of the group, or that the scope of the group's recommendations should exclude payment rates if group members have financial conflicts of interest. Another commenter, who thought the group was unworkable and likely would not be productive, indicated it would be more productive to require States to establish a separate advisory group for each rate setting activity they undertake and to include both industry and consumer (beneficiary) representatives.

Response: We understand that there will be costs and work for States to set up a new advisory group. We do not take lightly the decision to finalize this policy. However, the circumstance of HCBS and the direct care workforce shortage described earlier in this section demand immediate action. We kept the required scope of the group's remit narrow to allow States that need to minimize the work of the group the ability to focus most acutely on certain services and certain topics around rates, access, and payment adequacy. However, we also wrote into these regulations a great deal of flexibility for States. We understand the burden our requirements put on States, which is why we take steps to create and highlight flexibility for States to minimize the burden of new requirements and help ensure that States are able to comply with new requirements in a manner likely to result in the greatest benefit given the particular circumstances of the State and its provider and beneficiary communities. We make these assessments with every rulemaking proposal. The creation of this group does not mean that we necessarily will propose to require the formation of additional similar, discrete groups in the future; we are mindful that any such proposal would be likely to involve additional burden on States, and analysis of that burden would inform any future proposal.

If a State believes the group, in the form which we are finalizing in this final rule, will not add value, there is room to expand and enhance the group to a point where that State realizes value to its program. The group's purview includes the requirement to examine rates for three services, but States can always have the group advise on more. In addition, the group will not be in a position to unduly influence the State's Medicaid program, as its role is only advisory in nature and the single State agency will maintain full responsibility to administer the State's Medicaid program. We also want to remind States what we included in the proposed rule, that to the extent a State's MAC established under § 431.12 meets the requirements of this regulation, the State could utilize that committee for this purpose, thereby eliminating duplication between these entities. Furthermore, while we are unaware of specific examples, if a State has another, extant group that meets the requirements of § 447.203(b)(6), then we expect the State could use that group for this purpose as well, similar to what we indicated for MACs. Finally, we do not agree that having members in the group with a financial interest, such as the direct care workers whose wages may be impacted, and advising on rates creates a problematic conflict of interest. Rather, in the case of direct care workers, we believe their lived experience will supply a valuable perspective, and their input on rates specifically could be useful to the State agency that (although operating under a fiduciary obligation to administer the Medicaid program in the best interest of beneficiaries under section 1902(a)(19) of the Act) also has a fiscal interest in a proposed rate change. This final rule leaves States free to establish conflict of interest policies applicable to the members of the interested parties' advisory group, which we expect States will do in a manner that protects the integrity of the group while not unduly restricting input from individuals with perspectives the final rule is intended to ensure are heard.

Comment: Several commenters responded to language included in the proposed rule that, to the extent a State's MAC established under proposed § 431.12 also meets the requirements of this advisory group regulation, the State could utilize that committee for this purpose. The majority of those comments recommended keeping the MAC separate. These commenters explained that the work involved merits two groups and any overlap of membership between the groups would be acceptable and potentially beneficial. One of those commenters stated that the work of the interested parties' advisory group was much more specialized than that of the MAC. One suggested the interested parties' advisory group be a subgroup of the MAC, similar to the BAG. Finally, one commenter suggested that the MAC and interested parties' advisory group meetings be kept separate, or the MAC could have a dedicated subgroup responsible for HCBS, to ensure adequate attention to the topic. There were a few commenters who appreciated the flexibility to allow for the MAC to serve this dual purpose of meeting both the MAC requirements and the interested parties' advisory group requirements, and one expected some States may pursue this flexibility.

Response: When we were developing the proposed rule, which included proposals under § 431.12 to reconfigure the MCAC as the MAC and BAG (now BAC), we noted that the membership and scope of the MAC could potentially align with what we were proposing for the interested parties' advisory group. While we agree that the work of each is distinct and important, deserving of dedicated time and focus, we also seek to avoid duplication where possible. If a MAC has membership that includes direct care workers, beneficiaries, beneficiaries' authorized representatives, and other interested parties impacted by the services and rates of focus in the interested parties' advisory group, then we believe it would be unnecessarily duplicative to require a separate group and deny the State the ability to include the remit of the interested parties' advisory group in the work of the MAC under the flexibility given to States and their MACs under § 431.12(g)(8), which we are finalizing to include in the MAC's scope ''[o]ther issues that impact the provision or outcomes of health and medical care services in the Medicaid program as determined by the MAC, BAC, or State.'' States potentially also could establish the interested parties' advisory group as a subgroup of the MAC, similar to the BAC, consistent with the requirements of this final rule. States will have the discretion to determine if the groups and/or their meetings need to be kept distinct in order best to fulfil the obligations of each.

However, we caution States that this flexibility is not creating any type of exception. The cadence of required meetings, focus, and work products of the interested parties advisory group are distinct, and States wishing to utilize their MAC will need to take adequate steps to ensure the MAC is meeting the regulatory requirements for both entities. Some States may find keeping the interested parties group distinct will allow for easier recruitment, retention, and focus on the relevant subject matter. We also want to highlight the concerns expressed by commenters requesting the groups be kept distinct and emphasizing

the specialized work of this interested parties advisory group. Although we did not elect to add requirements to keep the groups or meetings distinct, States should do so if combining the groups or their meetings would hinder the work of either the MAC or interested parties advisory group.

Comment: A few commenters requested additional clarity about what support would be available for States to establish the advisory group. A couple of commenters requested CMS confirm that States can claim FFP for activities related to establishing and running this group, similar to the confirmation provided in the MAC/BAG provisions explicitly saying FFP would be available.[333] Others requested CMS make States aware of any available funding streams or opportunities for enhanced match.

Response: In the proposed rule, we specified that ''FFP would be available for expenditures that might be necessary to implement the activities States would need to undertake to comply with the provisions of the proposed rule, if finalized.''[334] As we are finalizing the requirements related to this advisory group, FFP will be available for States claiming qualifying expenditures for related activities. We note that generally, the applicable matching rate will be the general 50 percent administrative matching rate, but to the extent a State incurs expenditures it believes qualify for a higher match rate, higher statutory matching rates potentially could be available to the extent the expenditures meet applicable Federal requirements. There is not a separate, unique funding source for this provision of the final rule.

After consideration of public comments, we are finalizing all provisions under § 447.203(b)(6) with the following changes:

- Added a regulatory reference for habilitation services as a category of service in § 447.203(b)(6)(i). The finalized language now states ''. . . for the self-directed or agency-directed services found at § 440.180(b)(2) through (4) **and (6)**.'' (new language identified in bold).
- Added a regulatory reference for habilitation services and ''habilitation'' as a category of service in § 447.203(b)(6)(iii). The finalized language now states ''. . . associated with services found at § 440.180(b)(2) through (4) **and (6)**, to ensure the relevant Medicaid payment rates are sufficient to ensure access to personal care, home health aide, homemaker, and **habilitation** services'' (new language identified in bold).
- Added language to clarify the ''. . . publication requirements described in paragraph (b)(1) **through (b)(1)(ii)** of this section . . .'' (new language identified in bold).
- Minor technical changes to wording.

3. State Analysis Procedures for Rate Reduction or Restructuring (§ 447.203(c))

As stated previously, the Supreme Court's Armstrong decision underscored the importance of CMS' administrative review of Medicaid payment rates to ensure compliance with section 1902(a)(30)(A) of the Act. CMS' oversight role is particularly important when States propose to reduce provider payment rates or restructure provider payments, since provider payment rates can affect provider participation in Medicaid, and therefore, beneficiary access to care. In § 447.203(c), we proposed a process for State access analyses that would be required whenever a State submits a SPA proposing to reduce provider payment rates or restructure provider payments.

As noted previously, the 2015 final rule with comment period required that, for any SPA proposing to reduce provider payment rates or restructure provider payments in circumstances when the changes could result in diminished access, States must submit a detailed analysis of access to care under previous §§ 447.203(b)(1) and (b)(6) and 447.204(b)(1). This analysis includes, under previous § 447.203(b)(1), the extent to which beneficiary needs are fully met; the availability of care through enrolled providers to beneficiaries in each geographic area, by provider type and site of service; changes in beneficiary utilization of covered services in each geographic area; the characteristics of the beneficiary population (including considerations for care, service and payment variations for pediatric and adult populations and for individuals with disabilities); and actual or estimated levels of provider payment available from other payers, including other public and private payers, by provider type and site of service. Previously, this information was required for any SPA that proposes to reduce provider payment rates or restructure provider payments in circumstances when the changes could result in diminished access, regardless of the provider payment rates or levels of access to care before the proposed reduction or restructuring.

Following the implementation of the 2015 final rule with comment period, as we worked with States to implement the previous AMRP requirements, many States expressed concerns that the requirements that accompany proposed rate reductions or restructurings are overly burdensome. Specifically, States pointed to instances where proposed reductions or restructurings are nominal, or where rate changes are made via the application of a previously approved rate methodology, such as when the State's approved rate methodology ties Medicaid payment rates to a Medicare fee schedule and the Medicare payment rate is reduced. We acknowledged these concerns through previous proposed rulemaking. In the 2018 proposed rule, we agreed that our experience implementing the previous AMRP process from the 2015 final rule with comment period raised questions about the benefit of the access analysis when proposed rate changes include nominal rate reductions or restructurings that are unlikely to result in diminished access to care.[335]

We did not finalize the 2018 proposed rule; instead, in response to feedback, we proposed a rescission of the previous AMRP process in the 2019 proposed rule.[336] In that proposed rule, we indicated that future guidance would be forthcoming to provide information on the required data and analysis that States might submit with rate reduction or restructuring SPAs in place of the previous AMRP process to support compliance with section 1902(a)(30)(A) of the Act.[337] We did not finalize the rescission proposed in the 2019 proposed rule. Although we were concerned that the previous AMRP process was overly burdensome for States and CMS in relation to the benefit obtained in helping ensure compliance with the access requirement in section 1902(a)(30)(A) of the Act, our 2018 and 2019 proposed rules did not adequately consider our need for information and analysis from States seeking to reduce provider payment rates or restructure provider payments to enable us to determine that the statutory access requirement is met when making SPA approval decisions.

To improve the efficiency of our administrative procedures and better inform our SPA approval decisions, we proposed to establish standard information that States would be required to submit with any proposed rate reductions or proposed payment restructurings in circumstances when

[333] 88 FR 27960 at 27967.

[334] 88 FR 27960 at 27962.

[336] 84 FR 3372.2.

[337] Id at 33723.

the changes could result in diminished access, including a streamlined set of data when the reductions or restructurings are nominal, the State rates are above a certain percentage of Medicare payment rates, and there are no evident access concerns raised through public processes; and an additional set of data elements that would be required when States propose FFS provider payment rate reductions or restructurings in circumstances when the changes could result in diminished access and these criteria are not met. For both sets of required or potentially required elements, we proposed to standardize the data and information States would be required to submit with rate reduction or restructuring SPAs. Although the previous AMRP process has helped to improve our administrative reviews and helped us make informed SPA approval determinations, we explained that the proposed procedures would provide us with similar information in a manner that reduces State burden. Additionally, the proposed procedures would provide States increased flexibility to make program changes with submission of streamlined supporting data to us when current Medicaid rates and proposed changes fall within specified criteria that create a reasonable presumption that proposed reductions or restructuring would not reduce beneficiary access to care in a manner inconsistent with section 1902(a)(30)(A) of the Act.

This final rule seeks to achieve a more appropriate balance between reducing unnecessary burden for States and CMS and ensuring that we have the information necessary to make appropriate determinations for whether a rate reduction or restructuring SPA might result in beneficiary access to covered services failing to meet the standard in section 1902(a)(30)(A) of the Act. In § 447.203(c), we proposed to establish analyses that States would be required to perform, document, and submit concurrently with the submission of rate reduction and rate restructuring SPAs, with additional analyses required in certain circumstances due to potentially increased access to care concerns.

We proposed a two-tiered approach for determining the level of access analysis States would be required to conduct when proposing provider payment rate reductions or payment restructurings. The first tier of this approach, proposed at § 447.203(c)(1), sets out three criteria for States to meet when proposing payment rate reductions or payment restructurings in circumstances when the changes could result in diminished access that, if met, would not require a more detailed analysis to establish that the proposal meets the access requirement in section 1902(a)(30)(A) of the Act. The State agency would be required to provide written assurance and relevant supporting documentation that the three criteria specified in those paragraphs are met, as well as a description of the State's procedures for monitoring continued compliance with section 1902(a)(30)(A) of the Act. As explained in more detail later in this section, these criteria proposed in § 447.203(c)(1) represent thresholds we believe would be strong indicators that Medicaid payment rates would continue to be sufficient following the change to enlist enough providers so that care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area.

We noted that, in the course of our review of a payment SPA that meets these criteria, as with any SPA review, we may need to request additional information to ensure that all Federal SPA requirements are met. We also note that meeting the three criteria described in proposed § 447.203(c)(1) does not guarantee that the SPA would be approved, if other applicable Federal requirements are not met. Furthermore, if any criterion in the first tier is not met, we proposed a second tier in § 447.203(c)(2), which would require the State to conduct a more extensive access analysis in addition to providing the results of the analysis in the first tier. A detailed discussion of the second tier follows the details of the first tier in this section.

Under proposed § 447.203(c)(1)(i), the State would be required to provide a supported assurance that Medicaid payment rates in the aggregate (including base and supplemental payments) following the proposed reduction or restructuring for each benefit category affected by the proposed reduction or restructuring would be at or above 80 percent of the most recently published Medicare payment rates for the same or a comparable set of Medicare-covered services. While we acknowledge that 80 percent of Medicare rates may not provide absolute assurance that providers will participate in the Medicaid program, we proposed to use 80 percent as a threshold to help determine the level of analysis and information a State must provide to CMS to support consistency with section 1902(a)(30)(A) of the Act. Establishing this threshold will allow CMS to focus its resources on reviewing payment proposals that are at highest risk for access to care concerns. Notably, there are other provisions of the proposal that would provide opportunities for the public to raise access to care concerns to State agencies and to CMS should the 80 percent prove insufficient to provide for adequate access to care for certain care and services.

In proposed § 447.203(c)(1)(i), we explained that we mean for ''benefit category'' to refer to all individual services under a category of services described in section 1905(a) of the Act for which the State is proposing a payment rate reduction or restructuring. Comparing the payment rates in the aggregate would involve first performing a comparison of the Medicaid to the Medicare payment rate on a code-by-code basis, meaning CPT, CDT, or HCPCS as applicable, to derive a ratio for individual constituent services, and then the ratios for all codes within the benefit category would be averaged by summing the individual ratios then dividing the sum by the number of ratios. For example, if the State is seeking to reduce payment rates for a subset of physician services, the State would review all current payment rates for all physician services and determine if the proposed reduction to the relevant subset of codes would result in an average Medicaid payment rate for all physician services that is at or above 80 percent of the average corresponding Medicare payment rates. For supplemental payments, we are relying upon the definition of supplemental payments in section 1903(bb)(2) of the Act, which defines supplemental payments as ''a payment to a provider that is in addition to any base payment made to the provider under the State plan under this title or under demonstration authority . . . [b]ut such term does not include a disproportionate share hospital payment made under section 1923 [of the Act].'' With the inclusion of supplemental payments, States would need to aggregate the supplemental payments paid to qualifying providers during the State fiscal year and divide by all providers' total service volume (including service volume of providers that do not qualify for the supplemental payment) to establish an aggregate, per-service supplemental payment amount, then add that amount to the State's fee schedule rate to compare the aggregate Medicaid payment rate to the corresponding Medicare payment rate. As this supported assurance in proposed § 447.203I(1)(i) is expected to be provided with an accompanying

SPA, we noted that CMS may ask the State to explain how the analysis was conducted if additional information is needed as part of the analysis of the SPA. We solicited comments on the proposed § 447.203I(1)(i) supported assurance that Medicaid payment rates in the aggregate (including base and supplemental payments) following the proposed reduction or restructuring for each benefit category affected by the proposed reduction or restructuring would be at or above 80 percent of the most recently published Medicare payment rates for the same or a comparable set of Medicare-covered services should include a weighted average of the payment rate analysis by service volume, number of beneficiaries receiving the service, and total amount paid by Medicaid for the code in a year using State's Medicaid utilization data from the MMIS claims system rather than using a straight code-by-code analysis.

We explained that we understand this approach may have a smoothing effect on the demonstrated overall levels of Medicaid payment within a benefit category under the State plan. In many circumstances, only a subset of providers are recipients of Medicaid supplemental payments with the rest of the providers within the benefit category simply receiving the State plan fee schedule amount. This could result in a demonstration showing the Medicaid payments being high relative to Medicare, but the actual payments to a large portion of the providers would be less than the overall demonstration would suggest. As an alternative, we considered whether to adopt separate comparisons for providers who do and who do not receive supplemental payments, where a State makes supplemental payments for a service to some but not all providers of that service. We solicited comments on the proposed approach and this alternative.

We selected FFS Medicare, as opposed to Medicare Advantage, as the proposed payer for comparison for a number of reasons. A threshold issue is payment rate data availability: private payer data may be proprietary or otherwise limited in its availability for use by States. In addition, Medicare sets its prices rather than negotiating them through contracts with providers, and is held to many similar statutory standards as Medicaid with respect to those prices, such as efficiency, access, and quality.[338] For example, section 1848(g)(7) of the Act directs the Secretary of HHS to monitor utilization and access for Medicare beneficiaries provided through the Medicare fee schedule rates, and directs that the Medicare Payment Advisory Commission (MedPAC) shall comment on the Secretary's recommendations. In developing its comments, MedPAC convenes and consults a panel of physician experts to evaluate the implications of medical utilization patterns for the quality of and access to patient care. In a March 2001 report, MedPAC summarized its evaluation of Medicare rates, stating ''Medicare buys health care products and services from providers who compete for resources in private markets. To ensure beneficiaries' access to high-quality care, Medicare's payment systems therefore must set payment rates for health care products and services that are: high enough to stimulate adequate numbers of providers to offer services to beneficiaries, sufficient to enable efficient providers to supply high-quality services, given the trade-offs between cost and quality that exist with current technology and local supply conditions for labor and capital, and low enough to avoid imposing unnecessary burdens on taxpayers and beneficiaries through the taxes and premiums they pay to finance program spending.'' [339] Medicare's programmatic focus on beneficiary access aligns with the requirements of section 1902(a)(30)(A) of the Act.

In addition, Medicare PFS fee schedule rates are stratified by geographic areas within the States, which we seek to consider as well to ensure that payment rates are consistent with section 1902(a)(30)(A) of the Act. The fee schedule amounts are established for each service, generally described by a particular procedure code (including HCPCS, CPT, and CDT),) using resource-based inputs to establish relative value units (RVUs) in three components of a procedure: work, practice expense, and malpractice. The three component RVUs for each service are adjusted using CMS-calculated geographic practice cost indexes (GPCIs) that reflect geographic cost differences in each fee schedule area as compared to the national average. The current Medicare PFS locality structure was implemented in 2017 in accordance with the Protecting Access to Medicare Act of 2014 (PAMA 2014). Under the current locality structure, there are 112 total PFS localities.[340]

When considering geography in their rate analyses, we noted that we expect States to conduct a code-by-code analysis of the ratios of Medicaid-to-Medicare provider payment rates for all applicable codes within the benefit category, either for each of the GPCIs within the State, or by calculating an average Medicare rate across the GPCIs within the State (such as in cases where a State does not vary its rates by region). In cases where a State does vary its Medicaid rates based on geography, but that variation does not align with the Medicare GPCI, we explained that the State should utilize the Medicare payment rates as published by Medicare for the same geographical location as the base Medicaid FFS fee schedule payment rate to achieve an equivalent comparison and align the Medicare GPCI to the locality of the Medicaid payment rates, using the county and locality information provided by Medicare for the GPCIs, for purposes of creating a reasonable comparison of the payment rates.[341] To conduct such an analysis that meets the requirements of proposed § 447.203(c)(1)(i), States may compare the Medicaid payment rates applicable to the same Medicare GPCI to each Medicare rate by GPCI individually, and then aggregate that comparison into an average rate comparison for the benefit category. To the extent that Medicaid payment rates do not vary by geographic locality within the State, the State may also calculate a Statewide average Medicare rate based upon all of the rates applicable to the GPCIs within that State and compare that average Medicare rate

[340] Section 220(b) of PAMA 204 added section 1848(e)(6) of the Act, which requires that, for services furnished on or after January 1, 2017, the locality definitions for California, which has the most unique locality structure, be based on the Metropolitan Statistical Area (MSA) delineations as defined by the Office of Management and Budget (OMB). The resulting modifications to California's locality structure increased its number of localities from 9 under the previous structure to 27 under the MSA-based locality structure (operational note: for the purposes of payment the actual number of localities under the MSA-based locality structure is 32). Of the 112 total PFS localities, 34 localities are Statewide areas (that is, only one locality for the entire State). There are 75 localities in the other 16 States, with 10 States having 2 localities, 2 States having 3 localities, 1 State having 4 localities, and 3 States having 5 or more localities. The District of Columbia, Maryland, and Virginia suburbs, Puerto Rico, and the Virgin Islands are additional localities that make up the remainder of the total of 112 localities. to the average Medicaid rate for the benefit category.

Once we decided to propose using Medicare payment rates as a point of comparison, we needed to decide what threshold ratio of proposed Medicaid to Medicare payment rates should trigger additional consideration and review for potential access issues. First, we considered how current levels of Medicaid payment compares to the Medicare payment for the same services. In a 2021 *Health Affairs* article, Zuckerman, et al, found that ''Medicaid physician fees were 72 percent of Medicare physician fees for twenty-seven common procedures in 2019.'' [342] This ratio varied by service type. For example, ''the 2019 Medicaid-to-Medicare fee index was lower for primary care (0.67) than for obstetric care (0.80) or for other services (0.78).'' The authors also found that ''between 2008 and 2019 Medicare and Medicaid fees both increased (23.6 percent for Medicare fees and 19.9 percent for Medicaid fees), leaving the fee ratios similar.'' [343]

Next, considering that Medicaid rates are generally lower than Medicare, we wanted to examine the relationship between these rates and a beneficiary's ability to access covered services. This led us to first look into a comparison of physician new patient acceptance rates based on a prospective new patient's payer. In a June 2021 fact sheet, MACPAC found ''in 2017 (the most recent year available), physicians were significantly less likely to accept new patients insured by Medicaid (74.3 percent) than those with Medicare (87.8 percent) or private insurance (96.1 percent).'' [344] MACPAC found this to be true ''regardless of physician demographic characteristics (age, sex, region of the country); and type and size of practice.'' [345]

We then wanted to confirm whether this was related to the rates themselves. In a 2019 *Health Affairs* article, the authors found that, ''higher payment continues to be associated with higher rates of accepting new Medicaid patients. . .physicians most commonly point to low payment as the main reason they choose not to accept patients insured by Medicaid.'' [346] The study found that physicians in States that pay above the median Medicaid-to-Medicare fee ratio accepted new Medicaid patients at higher rates than those in States that pay below the median, with acceptance rates increasing by nearly 1 percentage point (0.78) for every percentage point increase in the fee ratio.[347]

Similarly, in a 2020 study published by the *National Bureau of Economic Research,* researchers found that there was a positive association between increasing Medicaid physician fees and increased likelihood of having a usual source of care, improved access to specialty doctor care, and large improvements in caregivers' satisfaction with the adequacy of health coverage, among children with special health care needs with a public source of health coverage.[348] Further, Berman, et al, focused on pediatricians and looked at Medicaid-Medicare fee ratio quartiles, finding that the percent of pediatricians accepting all Medicaid patients and relative pediatrician participation in Medicaid increased at each quartile, but improvement was most significant up to the third quartile.[349] According to the Kaiser Family Foundation, in 2016, following the expiration of section 1202 of the Affordable Care Act (Pub. L. 111–148), which amended section 1902(a)(13) of the Act to implement a temporary payment floor for certain Medicaid primary care physician services, the third quartile of States had Medicaid-Medicare fee ratios of between 79 and 86 percent for all services provided under all State Medicaid FFS programs.[350] Importantly, considering the proposed requirements at paragraph (c) would pertain to proposed payment rate reductions or payment restructurings in circumstances when the changes could result in diminished access, multiple recent studies have also shown that the association between Medicaid physician fees and measures of beneficiary access are consistent whether physician payments are increased or decreased to reach a particular level at which access is assessed.[351]

The Kaiser Family Foundation found that 23 States have Medicaid-to-Medicare fee ratios of at least 80 percent for all services, 17 States have fee ratios of 80 percent for primary care services, 32 States have fee ratios of 80 percent for obstetric care, and 27 States have fee ratios of 80 percent for other services.[352] Additional studies support the Holgash and Heberlein findings that physicians most commonly point to low payment as the main reason they choose not to accept patients insured by Medicaid, showing that States with a Medicaid to Medicare fee ratio at or above 80 percent show improved access for children to a regular source of care,[353] and decreased use of hospital-based facilities, versus States with a lower Medicaid to Medicare fee ratio.

We noted our concern that higher rates of acceptance by some providers of new patients with payers other than Medicaid (specifically, Medicare and private coverage), and indications by some providers that low Medicaid payments are a primary reason for not accepting new Medicaid patients, may suggest that some beneficiaries could have a more difficult time accessing covered services than other individuals in the same geographic area. We are encouraged by findings that suggest that some increases in Medicaid payment rates may drive increases in provider acceptance of new Medicaid patients, with one study finding that new Medicaid patient acceptance rates increased by 0.78 percent for every percentage point increase in the Medicaid-to-Medicare fee ratio, for certain providers for certain States above the median Medicaid-to-Medicare fee ratio.[354] [355] In line with the Berman

Continued

study, which found that increases in the percentage of pediatricians participating in Medicaid and of pediatricians accepting new Medicaid patients occurred with Medicaid payment rate increases at each quartile of the Medicaid-to-Medicare fee ratio but were most significant up to the third quartile, we believe that beneficiaries in States that provide this level of Medicaid payment generally may be less likely to encounter access to care issues at rates higher than the general population.[356] In line with the Kaiser Family Foundation reporting of the Medicaid-to-Medicare fee ratio third quartile as ranging from 79 to 86 percent in 2016, depending on the service, we stated our belief that a minimum 80 percent Medicaid-to-Medicare fee ratio is a reasonable threshold to propose in § 447.203(c)(1)(i) as one of three criteria State proposals to reduce or restructure provider payments would be required to meet to qualify for the proposed streamlined documentation process.[357] As documented by the Kaiser Family Foundation, many States currently satisfy this ratio for many Medicaid-covered services, and according to findings by Zuckerman, et al. in *Health Affairs,* in 2019, the average nationwide fee ratio for obstetric care met this proposed threshold.[358] [359] We proposed that this percentage would hold across benefit categories, because we did not find any indication that a lower threshold would be adequate, or that a higher threshold would be strictly necessary, to support a level of access to covered services for Medicaid beneficiaries at least as great as for the general population in the geographic area. We noted that the disparities in provider participation for some provider types may be larger than this overview suggests, as such we proposed a uniform standard in the interest of administrative simplicity but cautioned that States must meet all three of the criteria in proposed paragraph (c)(1) to qualify for the streamlined analysis process; otherwise, the additional analysis specified in proposed paragraph (c)(2) would be required.

Given the results of this literature review, and by proposing this provision as only one part of a three-part assessment of the likely effect of a proposed payment rate reduction or payment restructuring on access to care, as further discussed in this section, we proposed 80 percent of the most recently published Medicare payment rates, as identified on the applicable Medicare fee schedule for the same or a comparable set of Medicare-covered services, as a benchmark for the level of Medicaid payment for benefit categories that are subject to proposed provider payment reductions or restructurings that is likely to enlist enough providers so that care and services are available to Medicaid beneficiaries at least to the extent as to the general population in the geographic area, where the additional tests in proposed § 447.203(c)(1) also are met. While we acknowledge that 80 percent of Medicare rates may not provide absolute assurance that providers will participate in the Medicaid program, we proposed to use 80 percent as a threshold to help determine the level of analysis and information a State must provide to CMS to support consistency with section 1902(a)(30)(A) of the Act. Establishing this threshold will allow CMS to focus its resources on reviewing payment proposals that are at highest risk for access to care concerns. Notably, there are other provisions of the proposal that would provide opportunities for the public to raise access to care concerns to State agencies and to CMS should the 80 percent prove insufficient to provide for adequate access to care for certain care and services.

We explained that the published Medicare payment rates means the amount per applicable procedure code identified on the Medicare fee schedule. The established Medicare fee schedule rate includes the amount that Medicare pays for the claim and any applicable co-insurance and deductible amounts owed by the patient. Medicaid fee-schedule rates should be representative of the total computable payment amount a provider would expect to receive as payment-in-full for the provision of Medicaid services to individual beneficiaries. Section 447.15 defines payment-in-full as ''the amounts paid by the agency plus any deductible, coinsurance or copayment required by the plan to be paid by the individual.'' Therefore, State fee schedules should be inclusive of total base payments from the Medicaid agency plus any applicable coinsurance and deductibles to the extent that a beneficiary is expected to be liable for those payments. If a State Medicaid fee schedule does not include these additional beneficiary cost-sharing payment amounts, then the Medicaid fee schedule amounts would need to be modified to include expected beneficiary cost sharing to align with Medicare's fee schedule.

We noted that Medicaid benefits that do not have a reasonably comparable Medicare-covered analogue, and for which a State proposes a payment rate reduction or payment restructuring in circumstances when the changes could result in diminished access, would be subject to the expanded review criteria proposed in § 447.203(c)(2), because the State would be unable to demonstrate its Medicaid payment rates are at or above 80 percent of Medicare payment rates for the same or a comparable set of Medicare-covered services after the payment rate reduction or payment restructuring. For identifying a comparable set of Medicare-covered services, we stated that we would expect to see services that bear a reasonable relationship to each other. For example, the clinic benefit in Medicaid does not have a directly analogous clinic benefit in Medicare. In Medicaid, clinic services generally are defined in § 440.90, as ''preventive, diagnostic, therapeutic, rehabilitative, or palliative services that are furnished by a facility that is not part of a hospital but is organized and operated to provide medical care to outpatients.'' This can include a number of primary care services otherwise available through physician practices and other primary care providers, such as nurse practitioners. Therefore, in seeking to construct a comparable set of Medicare-covered services to which the State could compare its proposed Medicaid payment rates, the State reasonably could include Medicare payment rates for practitioner services, such as physician and nurse practitioner services, or payments for facility-based services that bear a reasonable similarity to clinic services, potentially including those provided in Ambulatory Surgical Centers. We would expect the State to develop a reasonably comparable set of Medicare-covered services to which its proposed Medicaid payment rates could be compared and to include with its submission an explanation of its reasoning and methodology for

constructing the Medicare rate to compare to Medicaid payment rates.

In § 447.203(c)(1)(ii), we proposed that the State would be required to provide a supported assurance that the proposed reduction or restructuring, including the cumulative effect of all reductions or restructurings taken throughout the State fiscal year, would result in no more than a 4 percent reduction in aggregate FFS Medicaid expenditures for each benefit category affected by proposed reduction or restructuring within a single State fiscal year. We explained that the documentation will need to show the change stated as a percentage reduction in aggregate FFS Medicaid expenditures for each affected benefit category. We recognized that the effects of payment rate reductions and payment restructurings on beneficiary access generally cannot be determined through any single measure, and applying a 4 percent threshold without sufficient additional safeguards would not be prudent. Therefore, we proposed to limit the 4 percent threshold as the cumulative percentage of rate reductions or restructurings applied to the overall FFS Medicaid expenditures for a particular benefit category affected by the proposed reduction(s) or restructuring(s) within each State fiscal year. We proposed the cumulative application of the threshold to State plan actions taken within a State fiscal year as opposed to a SPA-specific application to avoid circumstances where a State may propose rate reductions or restructurings that cumulatively exceed the 4 percent threshold across multiple SPAs without providing additional analysis.

For example, if a State proposed to reduce payment rates for a broad set of obstetric services by 3 percent in State fiscal year 2023 and had not proposed any other payment changes affecting the benefit category of obstetric care during the same State fiscal year, that payment change would meet the criterion proposed in § 447.203(c)(1)(ii) because it would be expected to result in no more than a 3 percent reduction in aggregate Medicaid expenditures for obstetric care within a State fiscal year. However, if the State had received approval earlier in the State fiscal year to revise its obstetric care payment methodology to include value-based arrangements expected to reduce overall Medicaid expenditures for obstetric care by 2 percent per State fiscal year, then it is likely that the cumulative effect of the proposal to reduce payment rates for a broad set of obstetric services by 3 percent and the Medicaid obstetric care expenditure reductions under the earlier-approved payment restructuring would result in an aggregate reduction to FFS Medicaid expenditures for obstetric services of more than 4 percent in a State fiscal year. If so, the State's proposal would not meet the criterion proposed in § 447.203(c)(1)(ii), and the proposal would be subject to the additional review criteria proposed in § 447.203(c)(2). The State would need to document for our review whether the three percent payment rate reduction proposal for the particular subset of obstetric services would be likely to result in a greater than 2 percent further reduction in aggregate FFS Medicaid expenditures for obstetric care as compared to the expected expenditures for such services for the State fiscal year before any payment rate reduction or payment restructuring; if this expected aggregate reduction is demonstrated to be 2 percent or less, then the proposal still could meet the criterion proposed in § 447.203(c)(1)(ii).

We proposed to codify a 4 percent reduction threshold for aggregate FFS Medicaid expenditures in each benefit category affected by a proposed payment rate reduction or payment restructuring within a State fiscal year. This threshold is consistent with one we proposed in the 2018 proposed rule, which proposed to require the States to submit an AMRP with any SPA that proposed to reduce provider payments by greater than 4 percent in overall service category spending in a State fiscal year or greater than 6 percent across 2 consecutive State fiscal years, or restructure provider payments in circumstances when the changes could result in diminished access.[360] The proposed rule received positive feedback from States regarding its potential for mitigating administrative burden, and providing States with flexibility to administer their programs and make provider payment rate changes. Some States and national organizations requested that we increase the rate reduction threshold to 5 percent and increase the consecutive year threshold to 8 percent.[361] [362] Non-State commenters cautioned CMS against providing too much administrative flexibility and to not abandon the Medicaid access analysis the previous AMRP regulations required. Commenters also raised that 4 and 6 percent may seem nominal for larger medical practices and health care settings, but for certain physician practices or direct care workers a 6 percent reduction in payment could be considerable.[363] This feedback has been essential in considering how we proceed with this rulemaking, in which we emphasize that the size of the rate reduction threshold proposed in § 447.203(c)(1)(ii) would operate in conjunction with the two other proposed elements in § 447.203(c)(1)(i) and (iii) to qualify the State for a streamlined analysis process and would not exempt the proposal from scrutiny for compliance with section 1902(a)(30)(A) of the Act.

We proposed a 4 percent threshold on cumulative provider payment rate reductions throughout a single State fiscal year as one of the criteria of the streamlined process in proposed paragraph (c)(1), and therefore, emphasizing that while we believe this payment threshold to be nominal and unlikely to diminish access to care, we proposed to include paragraph (c)(1)(i) to require States to review current levels of provider payment in relation to Medicare and proposed to include paragraph (c)(1)(iii) to require that States rely on the public process to inform the determination on the sufficiency of the proposed payment rates after reduction or restructuring, with consideration for providers and practice types that may be disproportionately impacted by the State's proposed rate reductions or restructurings.

As previously noted, we would not consider any payment rate reduction or payment rate restructuring proposal to qualify for the streamlined analysis process in the proposed paragraph (c)(1) unless all three of the proposed paragraph (c)(1) criteria are met. Using information from the Kaiser Family Foundation's Medicaid-to-Medicare fee index [364] as an example, only 15 States could have reduced primary care service provider payment rates by up to 4 percent in 2019 and continued to meet the 80 percent of Medicare threshold in proposed paragraph (c)(1). Even those 15 States with rates above the 80 percent of Medicare threshold would be subject to proposed paragraph (c)(2) requirements if the State received significant public feedback that the proposed payment reduction or restructuring would result in an access

to care concern, if the State were unable to reasonably respond to or mitigate such concerns. All States with primary care service payment rates below the 80 percent of Medicare threshold, no matter the size of the payment rate reduction or restructuring and no matter whether interested parties expressed access concerns through available public processes, would have to conduct an additional access analysis required under proposed paragraph (c)(2).

We issued SMDL #17–004 to provide States with guidance on complying with regulatory requirements to help States avoid unnecessary burden when seeking approval of and implementing payment changes, because States often seek to make payment rate and/or payment structure changes for a variety of programmatic and budgetary reasons with limited or potentially no effect on beneficiary access to care, and we recognized that State legislatures needed some flexibility to manage State budgets accordingly. We discussed a 4 percent spending reduction threshold with respect to a particular service category in SMDL #17–004 as an example of a targeted reduction where the overall change in net payments within the service category would be nominal and any effect on access difficult to determine (although we reminded States that they should document that the State followed the public process under § 447.204, which could identify access concerns even with a seemingly nominal payment rate reduction). To our knowledge, since the release of SMDL #17–004, the 4 percent threshold for regarding a payment rate reduction as nominal has not resulted in access to care concerns in State Medicaid programs, and it received significant State support for this reason in comments submitted in response to the 2018 proposed rule.[365]

In instances where States submitted payment rate reduction SPAs after the publication of SMDL #17–004, we routinely have asked the State for an explanation of the purpose of the proposed change, whether the FFS Medicaid expenditure impact for the service category would be within a 4 percent reduction threshold, and for an analysis of public comments received on the proposed change, and approved those SPAs to the extent that the State was able to resolve any potential access to care issues and determined that access would remain consistent for the Medicaid population. For example, in the proposed rule, we stated that, of the 849 SPAs approved in 2019, there were 557 State payment rate changes. Of those, 39 were classified as payment rate reductions or methodology changes that resulted in a reduction in overall provider payment. Within those 39, there were 18 SPAs that sought to reduce payments by less than 4 percent of overall spending within the benefit category, most of which were decreases related to changes in Medicare payment formulas. Sixteen of the remaining 21 SPAs fell into an area discussed in SMDL #17–004 as being unlikely to result in diminished access to covered services, where with the State's analytical support, we were able to determine that the payment rates would continue to comply with section 1902(a)(30)(A) of the Act without the State submitting an AMRP with the SPA. Six of these SPAs represented rate freezes meant to continue forward a prior year's rates or eliminate an inflation adjustment. Six SPAs reduced a payment rate to comply with Federal requirements, such as the Medicaid UPLs in §§ 447.272 and 447.321, the Medicaid DME FFP limit in section 1903(i)(27) of the Act, or the Medicaid hospice rate, per section 1902(a)(13)(B) of the Act. Four SPAs contained reductions that resulted from programmatic changes such as the elimination of a Medicaid benefit or shifting the delivery system for a benefit to coverage by a pre-paid ambulatory health plan. Finally, we identified five SPAs for which States were required to submit AMRPs. In each instance, the SPAs were approved by CMS, with three of the SPAs being submitted to us in 2017 and updated for 2019 with the appropriate AMRP data submission required by the 2015 final rule with comment period. Overall, our review of SPAs revealed that smaller reductions may often be a result of elements or other requirements that may be outside of the State's control, such as Federal payment limits or changes in the Medicare payment rate that might be included in a State's proposed payment methodology (such as where some Medicare payment rates for certain services increased and others decreased as a result of the Medicare payment formulas, which may disproportionately impact one benefit category), or coding changes that might affect the amount of payment related to the unit of service. We determined, using this information, that it is necessary to provide States with some degree of flexibility in making changes, even if that change is a reduction in provider payment. For example, if a State submits a SPA to reduce or restructure inpatient hospital base or supplemental payments, where inaction on the State's part would result in the State exceeding the applicable UPL, the State will need to reduce inpatient hospital payments or risk a compliance action against the State for violating Medicaid UPL requirements authorized under section 1902(a)(30)(A) of the Act and implementing regulations in 42 CFR 447 subparts C and F. We recognized that this flexibility does not eliminate the need to monitor or consider access to care when making payment rate decisions, but also recognized the need to provide some relief in circumstances where the State must take a rate action to address an issue of compliance with another statutory or regulatory requirement.

Accordingly, we proposed that, where a State has provided the information required under proposed paragraphs (c)(1)(i) through (iii), we would consider that the proposed reduction would result in a nominal payment adjustment unlikely to diminish access below the level consistent with section 1902(a)(30)(A) of the Act and would approve the SPA, provided all other criteria for approval also are met, without requiring the additional analysis that otherwise would be required under proposed § 447.203(c)(2).

Finally, in § 447.203(c)(1)(iii), we proposed that the State would be required to provide a supported assurance that the public processes described in § 447.203(c)(4) yielded no significant access to care concerns or yielded concerns that the State can reasonably respond to or mitigate, as appropriate, as documented in the analysis provided by the State under § 447.204(b)(3). The State's response to any access concern identified through the public processes, and any mitigation approach, as appropriate, would be expected to be fully described in the State's submission to us.

We noted that the proposed requirement in § 447.203(c)(4) would not duplicate the requirements in previous § 447.204(a)(2), as the previous § 447.204(a)(2) required States to consider provider and beneficiary input as part of the information that States are required to consider prior to the submission of any SPA that proposes to

reduce or restructure Medicaid service payment rates. The proposed § 447.203(c)(4) describes material that States would be required to include with any SPA submission that proposes to reduce or restructure provider payment rates. As discussed in the CMCS informational bulletin dated June 24, 2016,[366] before submitting SPAs to us, States were required under previous § 447.204(a)(2) to make information available so that beneficiaries, providers, and other interested parties may provide input on beneficiary access to the affected services and the impact that the proposed payment change would have, if any, on continued service access. We explained that States are expected to obtain input from beneficiaries, providers, and other interested parties, and analyze the input to identify and address access to care concerns. States must obtain this information prior to submitting a SPA to us and maintain a record of the public input and how the agency responded to the input. When a State submits the SPA to us, § 447.204(b)(3) requires the State to also submit a specific analysis of the information and concerns expressed in input from affected interested parties. We would rely on this and other documentation submitted by the State, including under proposed § 447.203(c)(1)(iii), (c)(2)(vi), and (c)(4), to inform our SPA approval decisions.

In addition, we noted that States are required to use the applicable public process required under section 1902(a)(13) of the Act, as applicable, and follow the public notice requirement in § 447.205, as well as any other public processes required by State law (for example, State-specified budgetary process requirements), in setting payment rates and methodologies in view of potential access to care concerns. States have an important role in identifying access to care concerns, including through ongoing and collaborative efforts with beneficiaries, providers, and other interested parties. We acknowledged that not every concern would be easily resolvable, but we anticipate that States would be meaningfully engaged with their beneficiary, provider, and other interested party communities to identify and mitigate issues as they arise. We explained that we would consider information about access concerns raised by beneficiaries, providers, and other interested parties when States propose SPAs to reduce Medicaid payment rates or restructure Medicaid payments and would not approve proposals that do not comport with all applicable requirements, including the access standard in section 1902(a)(30)(A) of the Act.

In feedback received regarding implementation of the previous AMRP requirements in the 2015 final rule with comment period, States expressed concern about burdensome requirements to draft, solicit public input on, and update their AMRPs after receiving beneficiary or provider complaints that were later resolved by the State's engagement with beneficiaries and the provider community. we explained that our proposal to require access review procedures specific to State proposals to reduce payment rates or restructure payments would provide an opportunity for the State meaningfully to address and respond to interested parties' input, and seeks to balance State burden concerns with the clear need to understand the perspectives of the interested parties most likely to be affected by a Medicaid payment rate reduction or payment restructuring. Previously, § 447.203(b)(7) requires States to have ongoing mechanisms for beneficiary and provider input on access to care through various mechanisms, and to maintain a record of data on public input and how the State responded to such input, which must be made available to us upon request. We proposed to retain this important mechanism and to relocate it to § 447.203(c)(4). Through the cross reference to proposed § 447.203(c)(4) in proposed § 447.203(c)(1)(iii), we would require States to use the ongoing beneficiary and provider feedback mechanisms to aid in identifying and assessing any access to care issues in cooperation with their interested parties' communities, as a component of the streamlined access analysis criteria in proposed § 447.203(c)(1).

Together, we stated our belief that the proposed criteria of § 447.203(c)(1)(i) through (iii), where all are met, would establish that a State's proposed Medicaid payment rates and/or payment structure are consistent with the access requirement in section 1902(a)(30)(A) of the Act at the time the State proposes a payment rate reduction or payment restructuring in circumstances when the changes could result in diminished access. Importantly, as noted above, proposed § 447.203(c)(4) (proposed to be relocated from previous § 447.203(b)(7)) would ensure that States have ongoing procedures for compliance monitoring independent of any approved Medicaid payment changes.

We previously outlined in SMDL #17–004 several circumstances where Medicaid payment rate reductions generally would not be expected to diminish access: reductions necessary to implement CMS Federal Medicaid payment requirements; reductions that will be implemented as a decrease to all codes within a service category or targeted to certain codes, but for services where the payment rates continue to be at or above Medicare and/or average commercial rates; and reductions that result from changes implemented through the Medicare program, where a State's service payment methodology adheres to the Medicare methodology. We did not propose to codify this list of policies that may produce payment rate reductions unlikely to diminish access to Medicaid-covered services. However, as a possible addition to the proposed streamlined access analysis criteria in proposed § 447.203(c)(1), we solicited comments on whether this list of circumstances discussed in SMDL #17–004 should be included in a new paragraph under proposed § 447.203(c)(1) and, if one or more of these circumstances were applicable, the State's proposal would be considered to qualify for the streamlined analysis process under proposed § 447.203(c)(1) notwithstanding the other criteria in proposed paragraph(c)(1).

In proposed paragraph (c)(1), we specified the full set of written assurances and relevant supporting documentation that States would be required to submit with a proposed payment rate reduction or payment restructuring SPA in circumstances when the changes could result in diminished access, where the requirements in proposed paragraphs (c)(1)(i) through (c)(1)(iii) are met. The inclusion of documentation that confirms all criteria proposed in paragraph (c)(1) are met would exempt the State from the requirements in proposed § 447.203(c)(2), discussed later in this section; however, it would not guarantee SPA approval. Proposed payment rate reduction SPAs and payment rate restructuring SPAs meeting the requirements in proposed § 447.203(c)(1) would still be subject to CMS' standard review requirements for all proposed SPAs to ensure compliance with section 1902(a) of the Act, including implementing regulations in part 430. Specifically, and without limitation, we noted that this includes compliance with section 1902(a)(2) of the Act, requiring financial participation

[366] CMCS Informational Bulletin, ''Federal public notice and public process requirements for changes to Medicaid payment rates.'' Published June 24, 2016. *https://www.medicaid.gov/federal-policy-guidance/downloads/cib062416.pdf.* Accessed November 3, 2022.

by the State in payments authorized under section 1903 of the Act. We review SPAs involving payments to ensure that the State has identified an adequate source of non-Federal share financing for payments under the SPA so that section 1902(a)(2) of the Act is satisfied; in particular, section 1903(w) of the Act and its implementing regulations establish requirements for certain non-Federal share financing sources that CMS must ensure are met. We further noted that a proposed SPA's failure to meet the criteria in proposed paragraph (c)(1) would not result in automatic SPA disapproval; rather, such proposals would be subject to additional documentation and review requirements, as specified in proposed § 447.203(c)(2).

In paragraph (c)(2), we proposed the additional, more rigorous State access analysis that States would be required to submit where the State proposes to reduce provider payment rates or restructure provider payments in circumstances when the changes could result in diminished access where the requirements in paragraphs (c)(1)(i) through (iii) are not met. We explained our belief that this more rigorous access analysis should be required where the State is unable to demonstrate that the proposed paragraph (c)(1) criteria are met, because more scrutiny then is needed to ensure that the proposed payment rates and structure would be sufficient to enlist enough providers so that covered services would be available to beneficiaries at least to the same extent as to the general population in the geographic area. Accordingly, we proposed in § 447.203(c)(2) to have States document current and recent historical levels of access to care, including a demonstration of counts and trends of actively participating providers, counts and trends of FFS Medicaid beneficiaries who receive the services subject to the proposed payment rate reduction or payment restructuring; and service utilization trends, all for the 3-year period immediately preceding the submission date of the proposed rate reduction or payment restructuring SPA, as a condition for approval. As with the previous AMRP process, the information provided by the State would serve as a baseline of understanding current access to care within the State's program, from which the State's payment rate reduction or payment restructuring proposal would be scrutinized.

The 2015 final rule with comment period included requirements that the previous AMRP process include data on the following topics, in previous § 447.203(b)(1)(i) through (v): the extent to which beneficiary needs are fully met; the availability of care through enrolled providers to beneficiaries in each geographic area, by provider type and site of service; changes in beneficiary utilization of covered services in each geographic area; the characteristics of the beneficiary population (including considerations for care, service and payment variations for pediatric and adult populations and for individuals with disabilities); and actual or estimated levels of provider payment available from other payers, including other public and private payers, by provider type and site of service. The usefulness of the previous ongoing AMRP data was directly related to the quality of particular data measures that States selected to use in their AMRPs, and one of the biggest concerns we heard about the process was that States were not always certain that they were providing us with the relevant data that we needed to make informed decisions about Medicaid access to care because the 2015 final rule provided States with a considerable amount of flexibility in determining the type of data that may be provided in support of the State's access analysis included in their AMRP. In addition, States were required to consult with the State's medical advisory committees and publish the draft AMRP for no less than 30 days for public review and comment, per § 447.203(b). Therefore, the final AMRP, so long as the base data elements were met and supported the State's conclusion that access to care in the Medicaid program met the requirements of section 1902(a)(30)(A) of the Act, then the AMRP was accepted by us. As a result, the previous AMRPs were often very long and complex documents that sometimes included data that was not necessarily useful for understanding the extent of beneficiary access to services in the State or for making administrative decisions about SPAs. In an effort to promote standardization of data measures and limit State submissions to materials likely to assist in ensuring consistency of payment rates with the requirements of section 1902(a)(30)(A) of the Act, we proposed to maintain a number of the previously required data elements from the previous AMRP process but to be more precise about the type of information that would be required.

In § 447.203(c)(2), we proposed that, for any SPA that proposes to reduce provider payment rates or restructure provider payments in circumstances when the changes could result in diminished access, where the requirements in paragraphs (c)(1)(i) through (iii) are not met, the State would be required to also provide specified information to us as part of the SPA submission as a condition of approval, in addition to the information required under paragraph (c)(1), in a format prescribed by us. Specifically, in § 447.203(c)(2)(i), we proposed to require States to provide a summary of the proposed payment change, including the State's reason for the proposal and a description of any policy purpose for the proposed change, including the cumulative effect of all reductions or restructurings taken throughout the current State fiscal year in aggregate FFS Medicaid expenditures for each benefit category affected by proposed reduction or restructuring within a State fiscal year. We proposed to collect this information for SPAs that require a § 447.203(c)(2) analysis, but for those that meet the criteria proposed under § 447.203(c)(1), we did not proposed to require a summary of the proposed payment change, including the State's reason for the proposal and a description of any policy purpose for the proposed change beyond that which is already provided as part of a normal State plan submission or as may be requested by CMS through the normal State plan review process; we solicited comments whether these elements should apply to both proposed § 447.203(c)(1) and (c)(2) equally.

In § 447.203(c)(2)(ii), we proposed to require the State to provide Medicaid payment rates in the aggregate (including base and supplemental payments) before and after the proposed reduction or restructuring for each benefit category affected by proposed reduction or restructuring, and a comparison of each (aggregate Medicaid payment before and after the reduction or restructuring) to the most recently published Medicare payment rates for the same or a comparable set of Medicare-covered services and, as reasonably feasible, to the most recently available payment rates of other health care payers in the State or the geographic area for the same or a comparable set of covered services. We noted that this proposed element is similar to the previous § 447.203(b)(1)(v) rate comparison requirement, which required the previous AMRPs to include ''[a]ctual or estimated levels of provider payment available from other payers, including other public and private payers, by provider type and site of service.'' However, the proposed analysis specifically would require an aggregate comparison including Medicaid base and supplemental

payments, as applicable, before and after the proposed reduction or restructuring are implemented, compared to the most recently published Medicare payment rates for the same or comparable set of Medicare-covered services and, as reasonably feasible, to the most recently available payment rates of other health care payers in the State or the geographic area for the same or a comparable set of covered services. We found that, first, States struggled with obtaining and providing private payer data as contemplated by the 2015 final rule with comment period, and second, States were confused about how to compare Medicaid rates to Medicare rates where there were no comparable services between Medicare and Medicaid. We wanted to acknowledge the feedback we received from States during the previous AMRP process and modify the requirements in the final rule by focusing on the more readily available Medicare payment data as the most relevant payment comparison for Medicaid, as discussed in detail above. We explained that the E/M CPT/HCPCS code comparison methodology included in the proposed § 447.203(b)(3)(i) and the payment rate disclosure in proposed § 447.203(b)(3)(ii) could serve, at a minimum, as frameworks for States that struggled to compare Medicaid rates to Medicare where there may be no other comparable services between the two programs. Otherwise, where comparable services exist, States would be required to compare all applicable Medicaid payment rates within the benefit category to the Medicare rates for the same or comparable services under proposed § 447.203(c)(2)(ii). For reasons mentioned previously in this section, Medicare through MedPAC engages in substantial analysis of access to care as it reviews payment rates for services, so we noted our belief that this is a sufficient benchmark for the Medicaid payment rate analysis.

In § 447.203(c)(2)(iii), we proposed to require States to provide information about the number of actively participating providers of services in each benefit category affected by the proposed reduction or restructuring. For this purpose, we stated that an actively participating provider is a provider that is participating in the Medicaid program and actively seeing and providing services to Medicaid beneficiaries or accepting Medicaid beneficiaries as new patients. The State would be required to provide the number of actively participating providers of services in each affected benefit category for each of the 3 years immediately preceding the SPA submission date, by State-specified geographic area (for example, by county or parish), provider type, and site of service. The State would be required to document observed trends in the number of actively participating providers in each geographic area over this period. The State could provide estimates of the anticipated effect on the number of actively participating providers of services in each benefit category affected by the proposed reduction or restructuring, by geographic area. This data element is similar to previous § 447.203(b)(1)(ii), under which States must analyze the availability of care through enrolled providers to beneficiaries in each geographic area, by provider type and site of service, in the previous AMRP process; however, the proposal would require specific quantitative information describing the number of providers, by geographic area, provider type, and site of service available to furnish services to Medicaid beneficiaries and would leave less discretion to the States on specific data measures. With all of the data elements included in proposed paragraph (c)(2), we proposed that the data come from the 3 years immediately preceding the State plan amendment submission date, as this would provide us with the most recent data and would allow for considerations for data anomalies that might otherwise distort a demonstration of access to care if only 1 year of data was used.

In § 447.203(c)(2)(iv), we proposed to require States to provide information about the number of Medicaid beneficiaries receiving services through the FFS delivery system in each benefit category affected by the proposed reduction or restructuring. The State would be required to provide the number of beneficiaries receiving services in each affected benefit category for each of the 3 years immediately preceding the SPA submission date, by State-specified geographic area (for example, by county or parish). The State would be required to document observed trends in the number of Medicaid beneficiaries receiving services in each affected benefit category in each geographic area over this period. The State would be required to provide quantitative and qualitative information about the beneficiary populations receiving services in the affected benefit categories over this period, including the number and proportion of beneficiaries who are adults and children and who are living with disabilities, and a description of the State's consideration of the how the proposed payment changes may affect access to care and service delivery for beneficiaries in various populations. The State would be required to provide estimates of the anticipated effect on the number of Medicaid beneficiaries receiving services through the FFS delivery system in each benefit category affected by the proposed reduction or restructuring, by geographic area. We explained that this proposed provision is a combination of previous § 447.203(b)(1)(i) and (iv), which require States to provide an analysis of the extent to which beneficiary needs are met, and the characteristics of the beneficiary population (including considerations for care, service, and payment variations for pediatric and adult populations and for individuals with disabilities). Even though we did not propose to require this analysis to be updated broadly with respect to many benefit categories on an ongoing basis, we proposed to require current information on the number of beneficiaries currently receiving services through the FFS delivery system in each benefit category affected by the proposed reduction or restructuring to inform our SPA review process to ensure that the statutory access standard is met. The inclusion of this beneficiary data is relevant because it provides information about the recipients of Medicaid services and where, geographically, these populations reside to ensure that the statutory access standard is met.

In § 447.203(c)(2)(v), we proposed to require information about the number of Medicaid services furnished through the FFS delivery system in each benefit category affected by the proposed reduction or restructuring. The State would be required to provide the number of Medicaid services furnished in each affected benefit category for each of the 3 years immediately preceding the SPA submission date, by State-specified geographic area (for example, by county or parish), provider type, and site of service. The State would be required to document observed trends in the number of Medicaid services furnished in each affected benefit category in each geographic area over this period. The State would be required to provide quantitative and qualitative information about the Medicaid services furnished in the affected benefit categories over this period, including the number and proportion of Medicaid services furnished to adults and children and who are living with disabilities, and a description of the State's consideration of the how the proposed payment

changes may affect access to care and service delivery. The State would be required to provide estimates of the anticipated effect on the number of Medicaid services furnished through the FFS delivery system in each benefit category affected by the proposed reduction or restructuring, by geographic area. We noted that this proposed data element was similar to that previously required in § 447.203(b)(1)(iii), which required an analysis of changes in beneficiary utilization of covered services in each geographic area. However, as stated earlier, the difference here is that this proposed analysis would be limited to the beneficiary populations impacted by the rate reduction or restructuring, for a narrower set of data points, rather than requiring the State to conduct a full review of the Medicaid beneficiary population every 3 years on an ongoing basis. Even though we did not propose to require this analysis to be updated broadly with respect to many benefit categories on an ongoing basis, we proposed to require current information on the number and types of Medicaid services being delivered to Medicaid beneficiaries through the FFS delivery system in each benefit category affected by the proposed reduction or restructuring to inform our SPA review process to ensure that the statutory access standard is met. The inclusion of this data is relevant because it provides information about the actual distribution of care received by Medicaid beneficiaries and where, geographically, these services are provided to ensure that the statutory access standard is met.

Finally, in § 447.203(c)(2)(vi), we proposed to require a summary of, and the State's response to, any access to care concerns or complaints received from beneficiaries, providers, and other interested parties regarding the service(s) for which the payment rate reduction or restructuring is proposed as required under § 447.204(a)(2). We noted that this proposed requirement mirrors the requirement in § 447.204(b)(3), which requires that for any SPA submission that proposes to reduce or restructure Medicaid service payment rates, a specific analysis of the information and concerns expressed in input from affected interested parties must be provided at the time of the SPA submission. The new proposed § 447.203(c)(2)(vi) would require the same analysis while providing more detail as to what we expect the State to provide. Proposed § 447.203(c)(2)(vi) would require information about concerns and complaints from beneficiaries and providers specifically, as well as from other interested parties, and would underscore that the required analysis would be required to include the State's responses.

Where any of the previously discussed proposed data elements requires an analysis of data over a 3-year period, we proposed this time span to smooth statistical anomalies, and so that data variations can be understood. For example, any 3-year period look-back that includes portions of time during a public health emergency, such as that for the COVID–19 pandemic, might include much more variation in the access to care measures than periods before or after the public health emergency. By using a 3-year period, it is more likely that the State, CMS, and other interested parties would be able to identify and appropriately account for short term disruptions in access-related measures, for example, when the number of services performed dropped precipitously in 2020 as elective visits and procedures were postponed or canceled due to the public health emergency.[367] If the proposed rule only included a 12-month period, for example, it might not be clear that the data represent an accurate reflection of access to care at the time of the proposed reduction or restructuring. For example, a State may see variation in service utilization if there have been programmatic changes that are introduced over time, such as a move to increase care provided through a managed care delivery system in the State through which the FFS utilization declines steadily until managed care enrollment targets are achieved, but a one-time review of that FFS utilization capturing just a 12-month period might not capture data most reflective of the current FFS utilization demonstrating access to care consistent with section 1902(a)(30)(A) of the Act. We solicited comments on the proposed use of a 3-year period where the proposed rule would require data about trends over time in the data elements proposed to be required under § 447.203(c)(2). We also solicited comments on the data elements required in § 447.203(c)(2) as additional State rate analysis.

Proposed paragraph (c)(2) would require that States conduct and provide to us a rigorous analysis of a proposed payment rate reduction's or payment restructuring's potential to affect beneficiary access to care. However, by limiting these analyses to only those proposed payment rate reductions and payment restructurings in circumstances when the changes could result in diminished access that do not meet the criteria in proposed paragraph (c)(1), we believe that the requirements proposed in paragraph (c)(2) would help to enable us to determine whether the proposed State Medicaid payment rates and payment methodologies are consistent with section 1902(a)(30)(A) of the Act while minimizing State and Federal administrative burden, to the extent possible. We would use this State-provided information and analysis to help us understand the current levels of access to care in the State's program, and determine, considering the provider, beneficiary, and other interested party input collected through proposed § 447.203(c)(4), whether the proposed payment rate reduction or payment restructuring likely would maintain access to care for the particular service(s) consistent with the statutory standard in section 1902(a)(30)(A) of the Act. If we approve the State's proposal, the data provided would serve as a baseline for prospective monitoring of access to care within the State.

We explained that the proposed analysis and documentation requirements in paragraph (c)(2) draw, in part, from the requirements of the previous AMRP process in the previous § 447.203(b)(1) and reflect the diverse methods and measures that are and can be used to monitor access to care. We also drew on some of the comments received on the 2011 proposed rule, as discussed in the 2015 final rule with comment period, where several commenters recommended that CMS consider identifying a set of uniform measures that States must collect data on or that CMS weighs more heavily in its analysis.[368] We proposed to provide more specificity on the types of uniform data elements in § 447.203(c) than is provided under previous § 447.203(b)(1). States have shown that they have access to the data listed in the proposed § 447.203(c)(2) when we have requested it during SPA reviews and through the previous AMRP process, and through this proposed rule, we proposed to specify the type of data that we would expect States to provide with rate reduction or restructuring SPAs that do not meet the proposed criteria for streamlined analysis under § 447.203(c)(1). As noted elsewhere in the preamble, the ongoing AMRP requirements previously presented an administratively burdensome process for States to follow every 3 years,

[367] Stuart, B. ''How The COVID–19 Pandemic Has Affected Provision Of Elective Services: The Challenges Ahead.'' *Health Affairs,* October 8, 2020. Available at *https://www.healthaffairs.org/do/10.1377/forefront.20201006.263687* (accessed February 27, 2023).

particularly where we did not provide States with the specific direction on the types of data elements we preferred for States to include. However, the data elements involved in the previous AMRP process in § 447.203(b)(1) can provide useful information about beneficiary access to care in previous § 447.203(b)(1)(i), (iii), and (iv); Medicaid provider availability in previous § 447.203(b)(1)(ii); and about payment rates available from other payers, which may affect Medicaid beneficiaries' relative ability to access care, in previous § 447.203(b)(1)(v). We found that the previous AMRPs were most relevant when updated to accompany a submission of rate reduction or restructuring SPAs as specified in the previous § 447.203(b)(6); accordingly, to better balance ongoing State and Federal administrative burden with our need to obtain access-related information to inform our approval decisions for payment rate reduction or restructuring SPAs, we proposed to end the ongoing AMRP requirement but maintain a requirement that States include similar data elements when submitting such SPAs to us that do not qualify for the proposed streamlined analysis process under § 447.203(c)(1).

We explained that the proposed analyses in paragraph (c)(2) would enable us to focus our review of Medicaid access to care on proposals that are at highest risk to result in diminished access to care, enabling us to more substantively review a proposed rate reduction's or restructuring's potential impact on access (for example, counts of participating providers), realized access (for example, service utilization trends), and the beneficiary experience of care (for example, characteristics of the beneficiary population, beneficiary utilization data, and information related to feedback from beneficiaries and other interested parties collected during the public process and through ongoing beneficiary feedback mechanisms, along with the State's responses to that feedback), while also being able to more quickly work through a review of nominal rate reduction SPAs for which States have demonstrated certain levels of payment and for which the public process did not generate access to care concerns. By including information on provider type and site of service, we believe States would be able to demonstrate access to the services provided under a specific benefit category within a number of different settings across the Medicaid program, such as the availability of physician services delivered in a physician practice, clinic setting, FQHC or RHC, or even in a hospital-based office setting. We noted our belief that defining specific data elements that must be provided to support a payment rate reduction SPA would create a more predictable process for States and for CMS in conducting the SPA review than under the previous AMRP process in § 447.203(b)(6).

Furthermore, data elements proposed to be required under proposed § 447.203(c)(2) would be based on State-specified geographic stratifications, to help ensure we can perform access review consistent with the requirements of section 1902(a)(30)(A) of the Act. We expect that States would have readily available access to geographically differential beneficiary and provider data. We observed that some of this information is available through CMS-maintained resources, such as the Transformed Medicaid Statistical Information System (T–MSIS), and other data is available through the National Plan and Provider Enumeration System (NPPES), but States should have their own data systems that would allow them to generate the most up-to-date beneficiary utilization and provider enrollment data, stratified by geographic areas within the State. States should use the most recent complete data available for each of the proposed data elements, and each would be required to be demonstrated to CMS by State-specified geographic area. We noted our belief that the geographic stratification would enable CMS to establish a baseline for Medicaid access to care within the geographic areas so that we can determine if current levels of access to care are consistent with section 1902(a)(30)(A) of the Act and can make future determinations if access is diminished subsequently within the geographic area. For all of the data elements in proposed § 447.203(c)(2), we stated that the more geographic differentiation that can be provided (that is, the smaller and more numerous the distinct geographic areas of the State that are selected for separate analysis), the more we believe that the State can meaningfully demonstrate that the proposed rate changes are consistent with the access standard in section 1902(a)(30)(A) of the Act, which requires that States assure that payments are sufficient to enlist enough providers so that care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area.

If finalized, we stated that we would anticipate releasing subregulatory guidance, including a template to support completion of the analysis that would be required under paragraph (c)(2), prior to the beginning date of the *Comparative Payment Rate Analysis Timeframe* proposed in § 447.203(b)(4). In the intervening period, we would anticipate working directly with States through the SPA review process to ensure compliance with section 1902(a)(30)(A) of the Act.

In § 447.203(c)(3), we proposed mechanisms for ensuring compliance with requirements for State analysis for rate reduction or restructuring, as specified in proposed paragraphs (c)(1) and (c)(2), as applicable. We proposed that a State that submits a SPA that proposes to reduce provider payments or restructure provider payments that fails to provide the required information and analysis to support approval as specified in proposed paragraphs (c)(1) and (2), as applicable, may be subject to SPA disapproval under § 430.15(c). Additionally, States that submit relevant information, but where there are unresolved access to care concerns related to the proposed SPA, including any raised by CMS in our review of the proposal and any raised through the public process as specified in proposed paragraph (c)(4) of this section, or under § 447.204(a)(2), may be subject to SPA disapproval under § 430.15(c). Disapproving a SPA means that the State would not have authority to implement the proposed rate reduction or restructuring and would be required to continue to pay providers according to the rate methodology described in the approved State plan. Proposed paragraph (c)(3) would further provide that if, after approval of a proposed rate reduction or restructuring, State monitoring of beneficiary access shows a decrease in Medicaid access to care, such as a decrease in the provider-to-beneficiary ratio for any affected service, or the State or CMS experiences an increase in the number of beneficiary or provider complaints or concerns about access to care that suggests possible noncompliance with the access requirements in section 1902(a)(30)(A) of the Act, we may take a compliance action. As described in § 447.204(d), compliance actions would be carried out using the procedures described in § 430.35.

As discussed in the prior section, we proposed to move previous § 447.203(b)(7) to § 447.203(c)(4) as finalized in this rule. We did not propose any changes to the public process described in paragraph (b)(7). We proposed that if the other provisions of the proposed rule are finalized, we would redesignate paragraph (b)(7) as paragraph (c)(4). The ability for

providers and beneficiaries to provide ongoing feedback to the State regarding access to care and a beneficiary's ability to access Medicaid services is essential to the Medicaid program in that it provides the primary interested parties the opportunity to communicate with the State and for the State to track and take account of those interactions in a meaningful way. We stated that the ongoing mechanisms for provider and beneficiary feedback must be retained, as this process serves an important role in determining whether or not the public has raised concerns regarding access to Medicaid-covered services, which would inform the State's approach to ongoing Medicaid provider payment rates and methodologies, and whether related proposals would be approvable.

We proposed to move previous § 447.203(b)(8) to § 447.203(c)(5), as finalized in this rule, to better organize § 447.203 to reflect the policies in the proposed rule. We did not propose any changes to the methods for addressing access questions and remediation of inadequate access to care, as described in paragraph (b)(8). We proposed that if the other provisions of the proposed rule are finalized, we would redesignate paragraph (b)(8) as paragraph (c)(5). We stated that it is important to retain this provision because we acknowledge that there may be access issues that come about apart from a specific State payment rate action, and there must be mechanisms through which those issues can be identified, and corrective action taken.

Finally, we proposed to move previous § 447.204(d) to proposed § 447.203(c)(6). We noted our belief that the subject matter, of compliance actions for an access deficiency, is better aligned to the proposed changes in § 447.203. We did not propose any changes to the remedy for the identification of an unresolved access deficiency, as described in § 447.204(d). We proposed that if the other provisions of this proposed rule are finalized, we would redesignate § 447.204(d) as paragraph (c)(6).

We solicited public comment on our proposed procedures and requirements for State analysis when submitting payment rate reduction or payment restructuring SPAs. We received public comments on these proposals. The following is a summary of the comments we received and our responses, organized by regulatory section.

a. General Comments

Comment: Many commenters supported the approaches to reviewing rate changes. Specifically, a number of commenters noted support for the two-tiered process to provide specific levels of information and data with a request to reduce or restructure payment rates in circumstances where such changes could result in diminished access to care, with some commenters specifically supporting the inclusion of concerns raised during the public comment process. Other commenters noted general support for requiring State justification for rate reductions and restructurings as it would provide greater transparency and accountability into State justifications for potentially harmful rate reductions. A couple commenters noted support for CMS' administrative review of rate changes to ensure continued access. One commenter was encouraged that CMS proposed to include protections to mitigate the risk that payment reductions will translate into reduced access. Another commenter agreed with CMS that additional scrutiny is warranted when a rate reduction is more than nominal, and when public concerns are raised regarding the rate. Finally, one commenter expressed appreciation for CMS' detailed review and summary of the literature on the impact of payment rates for providers on access to care for beneficiaries.

Response: We appreciate the support of the commenters on both our overall approach and for certain specific aspects of our proposed policies, which we are finalizing as proposed. We agree that the public process is an important component of Medicaid program changes.

Comment: One commenter supported requiring States to demonstrate that a reduction in payment rates will not adversely impact access to care. The commenter stated that the effort required for States to make such a showing will guard against rate reductions that would be detrimental to Medicaid recipients' ability to access care.

Response: We appreciate the support of the commenter. We believe there will be States, in certain circumstances, that will be able to meet the requirements of the streamlined access process under § 447.203(c)(1). The intention of the § 447.203(c) provisions is to balance the requirement that State's ensure compliance with section 1902(a)(30)(A) of the Act with reducing unnecessary burden in the State's administration of their Medicaid programs. We believe that the streamlined process under § 447.203(c)(1) is itself consistent with the statutory access standard, because the policies in this final rule ensure that only rate reductions or restructurings that are likely to be consistent with that standard will be approvable under this streamlined process.

Comment: One commenter stated that in some States, there is high potential for interruption in access due to delays created by the SPA process. The commenter was concerned that long delays caused by the SPA process can interrupt access to the latest standard of care. They stated that clarification on CMS regulations for SPAs for changes that increase access to the standard of care could reduce the risk of care interruptions.

Similarly, another commenter recommended that CMS give States the flexibility to increase rates to 100 percent of the equivalent Medicare rate without a SPA, and to make midyear adjustments to rates without a SPA. The commenter also indicated SPAs should only be required beyond specified thresholds.

Response: We appreciate the concern of the commenter related to any delays in the approval of SPAs. We are interested in approving approvable SPAs as expeditiously as possible, which is one of the reasons for issuing this final rule with an included template. SPAs generally may be effective no earlier than the first day of the quarter in which they are submitted per 42 CFR 430.20. The policies in this final rule and the template process provide States with clear documentation requirements for SPAs proposing to reduce or restructure provider payment rates. Without exception, our policy, as set forth in § 447.201(b), is that States must receive approval through the SPA process to modify Medicaid payment methodologies. CMS approval ensures that the changes in service payment methodologies comply with all applicable regulatory and statutory requirements and that resulting State expenditures are eligible for FFP. Changes to these requirements are beyond the scope of this rulemaking. In addition, regardless of this final rule, all SPAs are reviewed using the criteria and timeframes outlined in 42 CFR part 430 subpart B.

Comment: One commenter requested that CMS clarify how the § 447.203(c) provisions would apply to performance-based incentives, withholds, and alternative payment models, indicating that States should not be penalized for moving away from a FFS model that is not tied to performance.

Response: Performance-based incentives, innovative care models, and alternative payment models are often designed to improve quality of care, promote better patient outcomes, and reward providers for improvements to quality of care and patient outcomes,

while lowering the cost of care. In the 2015 final rule with comment period, we signaled our interest in working with States in promoting innovative patient care models and delivery system changes that seek to reward the provision of quality patient care that also lowered cost to the Medicaid program.[369]

The provisions of the final rule in § 447.203(c) provide processes for rate reductions or restructurings, with the goal of determining when those changes could result in diminished access. In most instances, a performance-based incentive, innovative care models, or alternative payment models that restructure provider payments do so in a manner that would not result in diminished access and that we would not regard as a restructuring subject to § 447.203(c). For example, a State may propose an episode of care arrangement that bundles all of the care related to a defined medical event, including the care for the event itself, any precursors to the event and follow-up care. As a component of this methodology, the State would make one payment for the whole episode that is meant to encompass the medical event including the precursors and follow-up care, with up-side and down-side incentives paid or collected based on the providers' performance against the mean. Providers must volunteer to enroll in this program, and any other provider would continue to be paid as they normally would under the State plan. Such a restructuring proposal does not diminish access because the providers are electing to participate and understand the risk, but since care must be provided for the performance incentives to be determined and non-participating providers would not experience a change in payment, Medicaid beneficiaries will not experience diminished access to services. We also note that other simple add-on payments for achievement of specified quality targets where there is no possibility of a reduction to any provider's payment would not be considered a restructuring subject to the requirements of § 447.203(c).

However, to the extent that a State implements a performance-based incentive, withhold, or alternative payment model would reduce payment rates, such as models that involve down-side risk arrangements where provider payments could decrease from current levels in certain circumstances, these changes likely would have the potential to result in diminished access to care and therefore would be a restructuring that would fall under the requirements of § 447.203(c). For example, if a State proposed to implement a quality improvement payment arrangement involving downside risk, meaning that providers could their payment rates reduced the State's quality improvement proposal, for which providers were required to participate then CMS could view this arrangement as being a payment reduction or restructuring that could affect access to care. The State in this instance would be expected to conduct the appropriate level(s) of analysis required under § 447.203(c).

We want to note that the requirement to perform an initial or initial and additional analysis under § 447.203(c) does not mean the State will be unable to enact the proposed payment arrangement; it simply means CMS wants to verify that access will not be negatively impacted with additional documentation to demonstrate this fact. As such, this final rule does not limit a State's ability to reduce or restructure rates based on information that the rates are not economic and efficient; rather, it ensures that States take appropriate measures to document access to care consistent with section 1902(a)(30)(A) of the Act. We do not view this as a penalty, as the commenter suggested, but rather a documentation of consistency with the statute. Under the Act, rates must be both economic and efficient, and they also must ensure that individuals have sufficient access to covered services. We interpret section 1902(a)(30)(A) of the Act as requiring a balanced approach to Medicaid rate-setting and we encourage States to use appropriate information and program experience to develop rates to meet all of its requirements. Further, we expect States to document that Medicaid rates are economic and efficient when the State submits changes to payment methodologies through a SPA. If a State is unsure whether its proposed performance-based incentive, innovative care model, or alternative payment models contains a restructuring subject to § 447.203(c), they can engage with CMS prior to submission of a SPA. CMS can and may request § 447.203(c) analyses upon receipt of a proposal as well.

Comment: A few commenters expressed concern that the provisions of § 447.203(c) appear to be operating under the assumption that current payment rates are adequate, with some commenters focusing on HCBS service payment, and concern that there is no express requirement to regularly review the payment methodology to account for inflationary updates. For example, one commenter indicated that there would be no analysis required by a State that today pays less than the cost of delivering care and does not increase rates for the next 5 years, but also does not propose any rate reductions. Another indicated that the new rate review process requires no accountability from a State that may currently have rates below the cost of care or where rates remain static for several years. These commenters strongly encouraged CMS to include provisions that would require States to review current payment rates for adequacy and update payment rates immediately and on an ongoing basis either annually or up to every 2 years to account for inflation, new regulatory requirements that impose costs on providers, and other changes that may impact the cost of doing business.

Response: We agree with the commenter on the importance of States having adequate rates, even when they are not proposing to reduce or restructure those provider payment rates. We direct the commenter to the other provisions of this final rule, including the payment rate transparency publication in § 447.203(b)(1), comparative rate analysis in § 447.203(b)(2), and payment rate disclosure in § 447.203(b)(3), which are intended to make available readily accessible information relevant to whether the rates States currently are paying (beginning with the initial publications on or before July 1, 2026) are adequate. We also note that beneficiaries and providers have opportunities to raise access to care concerns to the State through the State's mechanisms for ongoing beneficiary and provider input described in § 447.203(c)(4). This final rule addresses how States can demonstrate sufficient access to care as required by section 1902(a)(30)(A) of the Act when submitting SPAs that propose to reduce or restructure provider payment rates. Neither provider cost nor inflation is a required review element in meeting the requirements of the final rule. States may certainly consider these elements when engaging in rate setting or conducting rate reviews, but it is not a required component of this final rule.

Comment: Two commenters supported the proposal to revamp previous requirements in effect for SPAs that propose to reduce rate or restructure payments and strongly urged CMS to consider changes to the final rule to ensure the new proposed structure does not permit States to alter rates in ways that negatively impact beneficiary access.

[369] 80 FR 67578 and 67579.

Response: We appreciate the commenters' support. We are finalizing the provisions as proposed. The final rule provides CMS with an administrative process through which States can demonstrate that they have considered access to care and responded to public concerns in the implementation of payment rate reduction or restructuring SPAs. We are confident these steps will ensure rate changes do not impact access in a manner inconsistent with section 1902(a)(30)(A) of the Act.

Comment: Some commenters supported efforts to bring more transparency to the rate-setting process but did not support CMS' proposed change to replace the current rate reduction review process for one that examines proposed rate reductions on a State fiscal year basis. One commenter expressed concern that the proposal to establish an across-the-board threshold for provider payment rate reductions subject to the access review process fails to recognize the need for variable rate assumptions consistent with the characteristics of different Medicaid eligibility groups. The commenters expressed concern that it is not always appropriate to use the same assumptions for all populations or providers serving these eligibility groups, especially for complex populations, and noted that this proposal fails to recognize the impact individual provider rate reductions may have on a class of providers, noting that it is not appropriate to aggregate the impact of provider rate reductions, particularly for services provided to complex populations served under the Temporary Aid for Needy Families; Aged, Blind, and Disabled; and LTSS eligibility groups.

Response: We understand the commenters' concerns. States, under the finalized § 447.203(c)(1) and (2), as applicable, will be required to analyze the impact on provider payments based on the affected benefit category, but we acknowledge that particular services within a benefit category may be provided across different provider classes or settings. For example, physicians may provide services in an office setting, a hospital setting, or a clinic setting. The provider may receive a different payment rate for physician services depending upon the setting where services are performed as a result of differences between facility and non-facility payment rate types, which account for the difference in provider overhead cost assumptions based on the setting where the services occur.

We also note, as the commenter specifically raised concerns regarding complex populations and eligibility groups, that CMS policy has long established policy, consistent with statutory requirements for comparability in amount, duration, or scope of medical assistance, that States may not establish differential rates based upon an individual's eligibility category. States are able to set rates based on a patient's acuity, service complexity, or other service-related consideration, but to set different rates for different eligibility categories could promote inequity across the Medicaid program if providers were offered greater financial incentives to furnish services to beneficiaries in some eligibility groups than others. Such differentiation of payment rates would also not be considered economic and efficient in a manner consistent with section 1902(a)(30)(A) of the Act because some payment rates would be higher than necessary considering relevant service-related factors, for example, if rates were higher for certain eligibility groups than others in relation to the Federal matching rate available for expenditures for the respective groups.

Comment: One commenter recommended CMS clarify that FQHC services are included in protections for payment rate reductions in § 477.203(c).

Response: The requirements in § 447.203(c) are applicable to all Medicaid FFS services under the Medicaid State plan, including services furnished by FQHCs.

Comment: One of the commenters recommended that CMS consider proposals to address stagnant and insufficient Medicaid payment rates that are not high enough to support paying competitive wages. One commenter recommended that CMS require States to perform a one-time rate review analysis (requiring States to submit the data described in paragraph (c)(1) and, if not all three of the requirements are met, (c)(2)) upon implementation of this rule to ensure payment adequacy necessary to support access to quality care.

Response: We understand the commenters' concerns regarding stagnant provider payment rates and rates that may not support competitive wages. We encourage providers to engage with their State Medicaid programs through forums available to them, such as the interested parties advisory group and the mechanisms for ongoing beneficiary and provider input, described in § 447.203(c)(4). In addition, we direct the commenter to the other provisions of this final rule, including the payment rate transparency publication in § 447.203(b)(1), comparative rate analysis in § 447.203(b)(2), and payment rate disclosure in § 447.203(b)(3), which are intended to make available readily accessible information relevant to whether the rates States currently are paying (beginning with the initial publications on or before 7/1/26) are adequate.

We explained in the proposed rule that our primary objective was to replace the previous AMRP process with something that could better assess access while decreasing burden on States. Requiring the analysis described by the commenters would represent an enormous one-time burden on States. We note that we are finalizing the rate transparency and analysis requirements proposed under § 447.203(b), which we expect will provide greater insight into rates relative to access issues, while maintaining a scope that seeks to minimize unnecessary burden on States.

Comment: A few commenters noted how CMS indicated in the preamble of the proposed rule that the term ''benefit category'' under § 447.203(c) would refer to services under a category of services as described in section 1905(a) of the Act. One commenter stated that CMS has declined to define ''benefit category'' in a meaningful way and requested clarification. The commenter was concerned that extremely large swaths of services can be grouped together for the purposes of conducting the analysis, which could circumvent the analysis of real-world impact of payment cuts on specific provider types. Another commenter requested that CMS clarify that the required analyses apply to both home care services (that is, personal care and home health services) provided under section 1905(a) of the Act and to services provided under 1915 authorities. However, rather than treating (for example) personal care services as a single benefit category across all authorities for the purpose of the required analysis, the commenter suggested that CMS view 1905(a) PCS as one benefit and treat the set of HCBS coverable under 1915 and other authorities as a separate single benefit.

Response: Reiterating the definition in the preamble, we mean for ''benefit category'' to refer to all individual services under a category of services described in the Medicaid State plan for which the State is proposing a payment rate reduction or restructuring. Just as with our review of Medicaid payment rates, we do not review the inclusion of individual services within a benefit category unless the intention of a SPA is to specifically add or remove coverage for a particular service from the State plan. Further, we have concerns about the usefulness of information that

would inform our SPA review as the relevant unit of analysis becomes smaller (from benefit category to individual service level). For example, it is unclear that a reduction in the number of group occupational therapy services furnished by therapy providers during a given time frame would indicate that there is an issue with provider payment rates being insufficient to support adequate beneficiary access, or if the reduction merely represented a data anomaly that is unrelated to the rate of payment. We believe that the higher level of review of payment rate sufficiency at the benefit category level is consistent with the requirement in section 1902(a)(30)(A) of the Act that rates be sufficient to ensure that ''care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area.''

That being said, if a State proposes to group together services together that are not reasonably considered to be within the same benefit category (including where the grouping is not consistent with how the State covers and/or pays for the services under the State plan) to attempt to meet the paragraph (c)(1) thresholds and avoid the need to submit additional analysis under paragraph (c)(2), we will request additional information from the State including demonstrations that the paragraph (c)(1) criteria are met using a reasonable benefit category definition, or the additional analysis required under paragraph (c)(2), to support SPA approval.

Finally, in response to the commenter that requested that CMS clarify that the required analyses apply to home care services (including personal care and home health services) under section 1905(a) of the Act and to those covered under section 1915 authorities, we affirm that the analyses apply to both types of home care services under State plan, section 1915(c) waiver and demonstration payment rates, as applicable. To the extent that it is applicable, the 1905(a) PCS is one benefit category and the set of HCBS coverable PCS under 1915 and other authorities are considered as individual benefits as the payment methodologies for these services of often distinct methodologies across the different State plan or waiver authorities.

Comment: One commenter suggested CMS provide a template for the code-by-code analysis level to support the State analysis procedures for rate reductions or restructurings.

Response: We produced and are finalizing a template for States to ease the administration of the requirements of this final rule, including a code-by-code analysis to the support the payment analysis. The template will assist the States with meeting the § 447.203(c)(1)(i) and (c)(2)(ii) requirements for an aggregate analysis of Medicaid base and supplemental payments relative to Medicare, but it is important for us to clarify that these provisions do not necessarily require submission to CMS of a code-by-code analysis as suggested by the commenter. Section 447.203(c)(1)(i) requires States to provide written assurance and relevant supporting documentation that Medicaid payment rates in the aggregate (including base and supplemental payments) following the proposed reduction or restructuring for each benefit category affected by the proposed reduction or restructuring would be at or above 80 percent of the most recently published Medicare payment rates for the same or a comparable set of Medicare-covered services. Section 447.203(c)(2)(ii) requires States to provide Medicaid payment rates in the aggregate (including base and supplemental payments) before and after the proposed reduction or restructuring for each benefit category affected by proposed reduction or restructuring, and a comparison of each (aggregate Medicaid payment before and after the reduction or restructuring) to the most recently published Medicare payment rates for the same or a comparable set of Medicare-covered services and, as reasonably feasible, to the most recently available payment rates of other health care payers in the State or the geographic area for the same or a comparable set of covered services. In each case, the analysis performed would be an aggregate comparison of the State's proposed Medicaid rates to Medicare; however, CMS may request that the State provide supporting documentation, for example, where CMS has concerns with the accuracy of the analysis performed.

Comment: One commenter stated that, while imperfect as a point of comparison, Medicare is at least a reliable source of data that utilizes cost studies and other factors in its own rate setting processes. The commenter stated that if Medicare is retained as the benchmark, they would endorse use of an aggregate, as opposed to code-by-code, comparison with Medicaid rates. They explained that a code-by-code analysis would be extremely difficult, as CMS would need to define a methodology to determine if there is a one-to-one match between service descriptions and procedural codes in Medicare and Medicaid; Medicaid agencies report significant variation in codes and service descriptions.

Response: We agree with the commenter and note that the final rule in § 447.203(c)(1)(i), and the similar provision in § 447.203(c)(2)(ii), require that Medicaid payment rates in the aggregate (including base and supplemental payments) following the proposed reduction or restructuring for each benefit category affected by the proposed reduction or restructuring be compared to the most recently published Medicare payment rates for the same or a comparable set of Medicare-covered services. For this purpose, the Medicare services selected for comparison should align reasonably with the Medicaid services covered by the State within the affected Medicaid benefit category. We would expect the State to develop a reasonably comparable set of Medicare-covered services to which its proposed Medicaid payment rates could be compared and to include with its submission an explanation of its reasoning and methodology for constructing the comparison of Medicaid to Medicare payment rates.

Comment: A few commenters opposed the two-tiered approach, believing that this approach is insufficient to ensure access. Those commenters urged CMS to only use the tier two (§ 447.203(c)(2)) analysis on any SPA that proposes to reduce or restructure provider payment rates. One of the commenters opposed the two-tiered system on the basis that it would result in States implementing significant cuts to Medicaid rates without scrutiny for prolonged periods of time as long as they are exempt from second-tier analysis.

Response: We appreciate the commenters' viewpoints, but we are finalizing the two-tiered analysis as proposed. We do not agree that the two-tiered system would result in States implementing significant cuts to Medicaid without scrutiny for prolonged periods of time. We are finalizing § 447.203(c)(1) to require that all three provisions of § 447.203(c)(1) must be met in order for the SPA to qualify for the streamlined analysis provision of the final rule. In our view, the streamlined review for qualifying SPAs under § 447.203(c)(1) is sufficient because the State's payment rates would remain at or above 80 percent of the Medicare rate; the proposed reduction or restructuring would be likely to result in no more than a 4 percent reduction in aggregate FFS Medicaid expenditures for each benefit category affected by

proposed reduction or restructuring within a State fiscal year; and the public process yielded no significant access to care concerns from beneficiaries, providers, or other interested parties regarding the service(s) for which the payment rate reduction or payment restructuring is proposed, or if such processes did yield concerns, the State can reasonably respond to or mitigate the concerns, as appropriate. Taken together, the streamlined State analysis provides safeguards to mitigate the impact of State rate reductions while also providing protection for compounding reductions that could occur over a prolonged period of time. We anticipate that compounding rate reductions or restructurings would lower the possibility that a State's payment rates remain at or above 80 percent of Medicare and the public input process would generate significant provider and beneficiary feedback in the event that such reductions are taken at 4 percent per State fiscal year which would disqualify a State Plan rate reduction or restructuring proposal from meeting the requirements for the streamlined § 447.203(c)(1) process. We included this aspect of the analysis, in part, to protect against a large reduction spread over time through smaller reductions that pass initial scrutiny having an unacceptable negative impact on beneficiary access. As noted above, we anticipate that any State that is making significant cuts to provider payment rates over time will have a significant challenge in meeting the requirements for the initial State analysis in § 447.203(c)(1).

Comment: One commenter noted that the proposed rule would require States to provide additional information to justify their requests for reduced or restructured payment rates in SPAs, but the commenter noted that CMS does not commit to denying the requests where the State proposes payment rates below 80 percent of Medicare and did not agree with CMS's lack of commitment to disapprove such requested rate actions. The commenter did not believe this would sufficiently dissuade rate reductions, and that the language indicating CMS might not approve such proposed payment rate reduction or restructuring SPAs would just generate confusion, as well as attempts by States to ''game the system'' to try to figure out what language they should submit to win approval of their applications.

Response: Much like the previous AMRP process from the 2015 final rule with comment period, the access provisions contained in § 447.203(c) are intended to create a baseline measurement from which the State rate reduction or restructuring proposals may be evaluated. CMS has not taken the position that State payment rate proposals that set provider payment rates below 80 percent of Medicare are to be automatically disapproved, but instead we are committing States to a process by which they demonstrate that access is sufficient in their State so the agency can properly evaluate these State proposals under the section 1902(a)(30)(A) of the Act requirements. SPAs that fail to include the information required under the applicable provisions of § 447.203(c) will be disapproved by CMS. For proposals that do not meet the streamlined State analysis requirements under § 447.203(c)(1), States are required to provide the following with all payment rate reduction or restructuring SPAs: a summary of the proposed change, including the State's reason for the proposal and a description of any policy purpose for the proposed change, including the cumulative effect of all reductions or restructurings taken throughout the current State fiscal year in aggregate FFS Medicaid expenditures for each benefit category affected by proposed reduction or restructuring within a State fiscal year; Medicaid payment rates in the aggregate (including base and supplemental payments) before and after the proposed reduction or restructuring for each benefit category affected by proposed reduction or restructuring, and a comparison of each (aggregate Medicaid payment before and after the reduction or restructuring) to the most recently published Medicare payment rates for the same or a comparable set of Medicare-covered services and, as reasonably feasible, to the most recently available payment rates of other health care payers in the State or the geographic area for the same or a comparable set of covered services; information about the number of actively participating providers of services in each benefit category affected by the proposed reduction or restructuring; information about the number of Medicaid beneficiaries receiving services through the FFS delivery system in each benefit category affected by the proposed reduction or restructuring; information about the number of Medicaid services furnished through the FFS delivery system in each benefit category affected by the proposed reduction or restructuring; and a summary of, and the State's response to, any access to care concerns or complaints received from beneficiaries, providers, and other interested parties regarding the service(s) for which the payment rate reduction or restructuring is proposed, as required under § 447.204(a)(2). In addition to being used to establish a baseline, as mentioned above, CMS will use the information in determining whether access is sufficient based on the State's submission of the required data and analysis, including of Medicaid provider enrollment, service utilization, and number of beneficiaries receiving affected services (including observed trends). We expect State proposals to be accompanied by documentation of meaningful engagement with providers, beneficiaries, and potentially other interested parties, to ensure that the proposed payment rate reductions or restructurings will not reduce access to care for Medicaid beneficiaries below the standard set in section 1902(a)(30)(A) of the Act. However, we acknowledge that the individual circumstances of the SPA proposal will inform the precise information required to be submitted under this final rule. We are confident that the provisions of the final rule are clear and outline a process which States will be required to follow when reducing or restructuring provider payment rates which CMS will review on a case-by-case basis, but we are confident that the documentation requirements will not allow States to game the system, as the commenter contends.

Comment: One commenter urged CMS to take an approach that is more straightforward than the two-tiered proposal to better monitor provider payment adequacy. For example, the commenter stated that payment reductions in excess of 5 percent for any given service or CPT code should be reviewed by CMS to determine if beneficiary access is at risk. Another commenter was concerned that CMS' proposed ''aggregate'' standard, reviewing rates across a benefit category rather than at the service-specific level, could mean that some Medicaid services may be paid well below the percentage threshold even if the overall benefit category achieves the threshold. They recommended setting the threshold on a disaggregated basis to protect access to key services and avoid permitting States to obscure low payment rates.

Response: We approve States' rate methodologies for compliance with regulation and statute, but may not approve individual service rates unless a State presents a final rate, or a fee schedule, as the output of a rate methodology. This final rule does not change that policy or imply that CMS will review individual rates for sufficiency in all cases. Reviewing individual rates within a fee schedule

would not necessarily provide a better determination of whether the rates are adequate to enlist sufficient providers into the Medicaid program or not, provided that the State is using a consistent payment rate methodology for the entirety of the fee schedule, since we do not believe that providers generally make decisions about whether to participate with a payer (and accept the payer's rates) based on the rate for a single service. However, we will review individual payment rate codes to the extent that the rate changes fall outside of the typical methodology used by the State in their payment rate setting methodology under the State plan. For example, if the State uses the Medicare fee schedule for items of DME under the Medicaid State plan but decides to alter the payment rate for the oxygen codes (E0441, for example) to set Medicaid-specific rates, we will review those individual payment rate changes as they fall outside of the State's payment rate setting methodology under the State plan. Further, the payment rate transparency publication in § 447.203(b)(1) will require States to publish their fee schedule rates for services specified in that section of the final rule, which will include individual fee schedule payment rates for services for CMS and public review.

b. Initial State Analysis for Rate Reduction or Restructuring (§ 447.203(c)(1))

Comment: One commenter stated their general support for the streamlined initial review process, noting it provides States with clear safe harbor guidelines.

Response: We appreciate the support of the commenter. However, we note that section 447.203(c)(1) does not necessarily provide a ''safe harbor'' guaranteeing approval of a SPA. All applicable Federal requirements must be met for SPA approval. And even where paragraph (c)(1)(i) and (ii) are met because the aggregate Medicaid payment rates for the benefit category after reduction or restructuring would be at or above 80 percent of the most recently published Medicare rates for the same or a comparable set of Medicare-covered services, and the cumulative effect of all reductions or restructurings throughout the current State fiscal year would be likely to result in no more than a 4 percent reduction in aggregate FFS Medicaid expenditures for the benefit category, paragraph (c)(1)(iii) still must be met. That is to say, even when the quantitative standards of the first two prongs of the (c)(1) test are satisfied, we will carefully review the information the State provides to us under section 447.204(b)(3) specifically analyzing any information and concerns expressed in input from affected interested parties in connection with the proposed SPA. As specified in section 447.203(c)(1)(iii), there must be no significant access to care concerns from beneficiaries, providers, or other interested parties regarding the service(s) for which the payment rate reduction or payment restructuring is proposed, or if public processes did yield such concerns, the State must be able to reasonably respond to or mitigate them, as appropriate.

Comment: One commenter noted their support of CMS' first-tier proposal for handling rate reductions. However, they recommended that CMS establish a process for granting States flexibility from the requirements under unique circumstances. For example, a reduction may occur as the result of a decrease in CMS' RVUs or Medicare payment schedules. Some State fee schedules are indirectly tied to CMS RVUs or other Medicare payment schedules, and decreases occurring there are likely to also occur on the State's fee schedule. The commenter stated that an exemption from rate reduction requirements would be justified in this circumstance.

Response: For States that have set their approved State plan payment methodology at the current Medicare RVU prices, CMS would interpret such a methodology as accounting for changes that Medicare makes to components of their RVU-based methodology without the need for additional SPA action on the State's part. This would only include scenarios where the State has specifically indicated that the payment rates for Medicaid services are set at the current Medicare price for the State plan services and would not apply to circumstances where the State creates a static fee schedule that simply relies on a particular snapshot of Medicare prices to inform a State fee schedule, or for methodologies that rely upon a prior iteration of the Medicare prices for the current Medicaid payment rates.

Comment: One commenter suggested that provider associations and participant representatives be part of reviewing and analyzing the impacts on rate reductions and access that would be required under § 447.203(c)(1) and (2).

Response: Section 447.203(c)(4) as finalized in this final rule provides that States must have ongoing mechanisms for beneficiary and provider input (through hotlines, surveys, ombudsman, review of grievance and appeals data, or another equivalent mechanism), through which interested parties can raise concerns about access, including payment sufficiency. Provider associations and participant representatives, which we understand to be representatives of beneficiaries that may be under the age of 21, are able to participate in public engagement through these mechanisms, related to State actions that could result in a reduction or restructuring of State plan payment rates. To be clear, the public process in § 447.203(c)(4) serves as a means for the State to receive feedback on real-time access to care issues that may be addressed on an ad hoc basis; interested parties do not need to wait for the State to develop a payment SPA to raise access to care issues through mechanisms under § 447.203(c)(4). This input, as well as input collected through the public input process under § 447.204, will be considered under § 447.203(c)(1)(iii) and used to determine whether or not the proposed reduction or restructuring SPA is consistent with section 1902(a)(30)(A) of the Act.

Comment: A few commenters suggested CMS use its authority to encourage States toward a national floor for rates, with some stating the Medicaid-to-Medicare fee ratio threshold proposed in § 447.203(c)(1)(i) should become a Federal floor for all SPA and waiver approvals. For example, they recommended that CMS could phase-in an explicit regulatory floor or implement standards tying improvements in Medicaid rates to approvals of related Medicaid flexibilities, such as section 1115 approvals, SDPs, etc. One commenter pointed out that some States have rates well below Medicare levels and change rates infrequently. This means that, assuming a State does nothing, currently inadequate rates could simply persist for decades more under CMS' approach, and in fact regress relative to inflation. Another commenter specifically recommended that CMS require both an initial in-depth analysis of access metrics as well as an analysis over time for any State that implements payment rates lower than Medicare.

Response: Unless explicitly authorized by statute, CMS does not have the authority to establish a national floor for Medicaid payment rates. Refusing to approve any payment rate reductions or restructurings that do not specifically meet the thresholds in § 447.203(c)(1)(i) could be construed as setting a national floor for rates. We understand that some States may infrequently update their payment rates, but section 1902(a)(30)(A) of the Act provides States with flexibility to establish payment rates in a manner that

balances consideration of State budgetary needs and restrictions with the obligation to provide medical assistance under the State plan in accordance with Federal requirements. With the policies finalized throughout this final rule, we hope that both States and the public will more closely examine existing rates. Our policies around rate transparency and adequacy will enhance opportunities to determine where an existing rate may negatively impact access to care and identify for States where a need should be addressed by providing beneficiaries, providers, other and interested parties with easier access to State plan payment rates through payment rate transparency publications, comparative payment rate analyses, and payment rate disclosures. Our policies around the mechanisms for ongoing beneficiary and provider input in § 447.203(c)(4) and addressing access questions and remediation of inadequate access to care in § 447.203(c)(5) will further provide beneficiaries and providers opportunities to engage with States where existing payment rates may have an impact on beneficiaries' access to care.

The purpose of this final rule is to create a process that is less administratively burdensome than the previous, ongoing AMRP process under the 2015 final rule with comment period, while also maintaining a data submission process for payment rate reduction and restructuring SPAs that do not meet the thresholds set out in § 447.203(c)(1), and note that the FFS provisions, including the payment rate transparency, comparative payment rate analysis, and payment rate disclosure requirements (§ 447.203(b)(1) through (5)), interested parties' advisory group requirements (§ 447.203(b)(6)), and State analysis procedures for payment rate reductions or payment restructuring (§ 447.203(c)), finalized in this rule are expected to result in a net burden reduction on States compared to the previous AMRP requirements, as discussed in the proposed rule and in section III. of this final rule. This final rule provides CMS and States with an administrative process through which rate reductions or restructurings can be reviewed and approved, so long as the proposed SPA satisfactorily includes the information required under this final rule and meets all applicable Federal requirements.

We note that the policies finalized in § 447.203(c)(2) do include an analysis of data that looks back at a 3-year period of time to help ascertain whether access to care for the relevant services is consistent with the statutory access standard. Further, the rule includes a requirement for ongoing access monitoring to the extent that access issues are identified that require State intervention, as provided in § 447.203(c)(5), which requires the State to take corrective action resulting in measurable and sustainable access improvements.

Comment: One commenter recommended that CMS amend § 447.203(c)(1) and (2) to require States to demonstrate compliance with the Mental Health Parity and Addiction Equity Act of 2008 (MHPAEA), as applicable, for any proposed rate reduction or restructuring and provide technical assistance to States on compliance with this provision that would include guidance on the required comparative analysis both for the standard as written and in operation.

Response: CMS works closely with State Medicaid agencies to ensure compliance with MHPAEA in Medicaid managed care arrangements, Medicaid alternative benefit plans (managed care and FFS), and CHIP benefits (managed care and FFS) whenever changes to coverage of mental health or SUD benefits are proposed by States. We did not specifically require that States demonstrate compliance with the MHPAEA as part of this final rule, as the final rule focuses on payment rates established by the State Medicaid agencies to pay for allowable Medicaid services under the Medicaid State plan through FFS. Congress has not extended MHPAEA requirements to Medicaid benefits provided solely through FFS delivery systems. Nonetheless, we encourage our State Medicaid and CHIP agency partners to ensure their FFS benefits comply with MHPAEA. Moreover, CMS reviews State proposals regarding rate reductions or restructuring to ensure compliance with the requirements of section 1902(a)(30)(A) of the Social Security Act ''to assure that payments are consistent with efficiency, economy, and quality of care and are sufficient to enlist enough providers so that care and services are available under the plan, at least to the extent that such care and services are available to the general population in the geographic area.'' This review thus includes the fundamental objective of MHPAEA—to ensure access to mental health and substance use disorder treatment.

Comment: One commenter requested further information on what circumstances CMS would expect to result in diminished access for a SPA that would restructure, but not reduce, rates.

Response: We acknowledge that there may be any number of payment methodology changes that could harm access to care even when there is a restructuring but not reduction in rates, and unfortunately, we are unable to identify all such circumstances in advance. However, as discussed previously, one common type of restructuring is a change in the targeting of supplemental payments. States may alter payments, including in ways that are budget neutral for a benefit category as a whole (that is, they do not decrease overall Medicaid spending for the benefit category), but the changes would reduce payments for some providers, potentially harming beneficiary access.

Comment: One commenter requested that CMS clarify what is meant by ''restructure'' and confirm that this would not include any type of rate increase.

Response: A rate restructuring is a payment action where a State amends its methodology for an interrelated set of rates whereby individual rates may increase, decrease, or remain the same, which the State typically undertakes to achieve some programmatic purpose, such as achieving more efficient payment for services that frequently are furnished together. While a rate restructuring potentially could include rate increases, if increasing rates is the only effect of the rate restructuring, then we generally would not expect these to be circumstances when the changes could result in diminished access, and the requirements of § 447.203(c)(1) through (3) would not have to be met. Although we cannot set forth an exhaustive list of rate restructurings, one common type of restructuring is a change in the targeting of supplemental payments, under which the set of providers qualifying for a supplemental payment might change and/or the amounts received by each provider might increase or decrease. States may use a methodology to identify amounts that a provider would receive, which would not require a SPA to initiate a change in the amounts providers receive. For example, a State sets up supplemental payment pools of $10 million for trauma care centers in the State and that payment pool is distributed based upon a provider's pro rata share of Medicaid services. The amounts paid to providers eligible for that pool may vary from year to year based upon each providers' relative Medicaid utilization within the State, but the total amount of available funds remains the same. If that State submits a SPA to change the distribution methodology or to add more qualifying providers to the payment methodology,

but not change the $10 million pool, then this change would be considered a payment restructuring. If the State were to reduce the total pool from $10 million to $8 million, then that would be considered a reduction. A change in supplemental payments that reduces the total amounts that providers receive or shifts funds from one provider to another could result in access to care issues and is one example of a potential payment restructuring that could negatively impact access to care. Where there is uncertainty, we will work with States to help identify situations where a rate restructuring could diminish access to care such that the processes under § 447.203(c)(1) through (3) will apply.

Comment: One commenter suggested streamlined approval should apply to any rate reduction that meets any one of the three criteria listed in the proposed rule. The commenter specifically recommended providing streamlined approval for rate reductions that result in the rates being 100 percent or higher of the comparable Medicare rate regardless of the reduction in overall expenditures for the benefit category (otherwise stated, without the application of § 447.203(c)(1)(ii)).). Another commenter recommended that CMS' primary goal should be to encourage increasing rates to Medicare levels and generating feedback through processes with interested parties.

Response: To the extent a State proposes a payment rate reduction or restructuring which results in payment rates at or above 100 percent of Medicare, it would certainly meet one of the three criteria in § 447.203(c)(1) for the initial State analysis for rate reduction or restructuring, but would still require that the other two criteria in § 447.203(c)(1) be met. We are requiring all three criteria in § 447.203(c)(1) be satisfied for the State to qualify for the streamlined process, to protect access across varied circumstances. For example, a proposed rate may be 100 percent of Medicare, but if the currently approved Medicaid payment rate is higher such that the change represents a payment reduction, then the proposed rate reduction still could harm beneficiary access to the relevant services and potentially reduce access to below the statutory standard.

Although we generally believe that setting rate thresholds at a level recommended by the commenter (100 percent of the corresponding Medicare rate, or higher) could help support adequate access to care for Medicaid beneficiaries, we believe there are circumstances where balancing State budgetary considerations, and the willingness of providers to accept a given level of payment for services provided to the Medicaid population, will suggest a Medicaid payment rate that diverges from a corresponding Medicare rate but is still consistent with the access requirement under section 1902(a)(30)(A) of the Act.

Comment: One commenter requested that CMS provide additional guidance about how to conduct the Medicaid to Medicare comparison required under § 447.203(c)(1) and (2).

Response: As part of the proposed rule PRA process, we proposed a template for States to use to complete the analyses under § 447.203(c). The template includes detailed instructions for how States should complete each tier and component of the analysis, as applicable. We are finalizing that template as proposed.

Comment: Several commenters inquired about whether the guidance provided in SMDL #17–004 [370] would remain applicable under the new proposals, wherein CMS determined that there were circumstances unlikely to diminish access, and as such, would not invoke the requirements of § 447.203(b)(6) of the 2015 final rule with comment period: reductions necessary to implement CMS Federal Medicaid payment requirements (for example, Federal upper payment limits and financial participation limits), but only in circumstances under which the State is not exercising discretion as to how the requirement is implemented in rates; reductions that will be implemented as a decrease to all codes within a service category or targeted to certain codes, but for services where the payment rates continue to be at or above Medicare and/or average commercial rates; and reductions that result from changes implemented through the Medicare program, where a State's service payment methodology adheres to the Medicare methodology (For example, modifications to diagnostic related groups and the resource based relative value scale, adoption of new Medicare payment systems, consistency with value-based purchasing initiatives, etc.). One commenter specifically inquired about circumstances where payment rates would be below the threshold of 100 percent of the most recently published Medicare rates for the same or comparable services in the impacted benefit area before and after the proposed restructuring. A few other commenters encouraged CMS to allow a tier 1 review for rate reductions in circumstances where rate reductions: (1) are necessary to implement CMS Medicaid payment requirements (for example, UPL); (2) result in payment rates that remain at or above Medicare or average commercial rate amounts; or (3) are prompted by a change in Medicare payment rates when the State's rate methodology adheres to Medicare methodology. One commenter specifically recommended that the exemptions provided under SMDL #17–004 be included in the exemptions under § 447.203(c)(1), specifically citing circumstances in the SMDL where Medicaid payment rate reductions generally would not be expected to diminish access, such as: reductions necessary to implement CMS Federal Medicaid payment requirements; reductions that will be implemented as a decrease to all codes within a service category or targeted to certain codes, but for services where the payment rates continue to be at or above Medicare and/or average commercial rates; and reductions that result from changes implemented through the Medicare program, where a State's service payment methodology adheres to the Medicare methodology.

Response: We did specifically request comment on whether and how the policies discussed in SMDL #17–004 should be included in the final rule, and we thank the commenters for their helpful suggestions. As stated, we are finalizing § 447.203(c)(1) as proposed, and we are not finalizing any exceptions to the tier 1 (or tier 2) analysis. We believe the analysis is warranted under any rate reduction or restructuring. The three circumstances described by commenters from SMDL #17–004 are either inapplicable to this final rule or already accounted for. Specifically, in the first circumstance, where Federal Medicaid payment requirements are otherwise established in statute or regulation, we recognize that States often have multiple ways of complying with multiple Federal requirements that may bear upon payment rates, and the review required in this final rule in § 447.203(c) is necessary to ensure that the State's programmatic decisions are consistent with all applicable Federal requirements including that they ensure sufficient beneficiary access to care. In the third circumstance, reductions that result from changes implemented through the Medicare program, where such a change does not require a SPA to implement would also fall outside of § 447.203(c)(1) through (3), which are only applicable when a State must submit a SPA. The final rule provisions only apply to the extent that a SPA is

[370] SMDL #17–004. November 16, 2017. *https://www.medicaid.gov/sites/default/files/federal-policy-guidance/downloads/smd17004.pdf.*

needed to implement the proposed reduction or restructuring.

The second circumstance is the only one subject to the provisions of this final rule, for reductions that will be implemented as a decrease to all codes within a service category or targeted to certain codes, but for services where the payment rates continue to be at or above Medicare and/or average commercial rates. These reductions or restructurings would need to meet all of the requirements of § 447.203(c)(1) in order to be eligible for the streamlined access review criteria. We decided not to include this criterion from SMDL #17–004 in this final rule because we received a number of comments on this final rule that suggested that providers and beneficiaries should have input where non-nominal rate reductions or restructurings may occur, regardless of the current or proposed payment level. Including this particular provision could provide a State with a means to significantly reduce provider payment rates without needing to engage with the provider and beneficiary community on the impact such a reduction might have on access to care.

Comment: One commenter expressed concern that CMS' proposals would slow or in some cases prevent altogether the adoption of VBP arrangements or other alternative payment models. Under these models, the commenter stated that it is common for some providers to experience increases in payment reflective of outcomes attributable to those providers, and it is also common for some providers to experience decreases in payment, including when aggregate levels of payment are increasing for a relevant service or services. Given that any SPA proposing to implement or substantially modify a VBP payment arrangement could reasonably be considered a proposal to ''restructure'' payments, the commenter was concerned that the proposed rule essentially would treat all VBP payment arrangements as inherently suspect and as requiring additional scrutiny and administrative burden. The commenter encouraged CMS to continue to identify ways to support and encourage the adoption of VBP models in Medicaid, noting that CMS should not adopt rules that create additional obstacles for States seeking to implement VBP models. A few other commenters suggested that streamlined review should be available in situations where rate reductions are used to implement VBPs through a withhold payment rate restructuring that does not reduce the total payments within the overall service category, because the withheld amounts subsequently are paid out based on performance.

Response: We agree with the commenter that VBP arrangements can be useful tools to promote high-quality services for Medicaid beneficiaries while promoting efficient and economic care delivery, fully consistent with beneficiary access to covered services that meets the statutory standard. Although a proposed SPA seeking to implement or significantly modify a VBP arrangement likely may be considered a payment rate restructuring, nothing in the final rule would prohibit or is intended to discourage States from adopting such structures. Performance-based incentives, innovative care models, and alternative payment models are often designed to improve quality of care, promote better patient outcomes, and reward providers for improvements to quality of care and patient outcomes, while lowering the cost of care. In the 2015 final rule with comment period, we signaled our interest in working with States in promoting innovative patient care models and delivery system changes that seek to reward the provision of quality patient care that also lowered cost to the Medicaid program.[371]

The provisions of the final rule in § 447.203(c) provide processes for rate reductions or restructurings, with the goal of determining when those changes could result in diminished access. In most instances, a performance-based incentive, innovative care models, or alternative payment models that restructure provider payments do so in a manner that would not result in diminished access and that we would not regard as a restructuring subject to § 447.203(c). For example, a State may propose an episode of care arrangement that bundles all of the care related to a defined medical event, including the care for the event itself, any precursors to the event and follow-up care. As a component of this methodology, the State would make one payment for the whole episode that is meant to encompass the medical event including the precursors and follow-up care, with up-side and down-side incentives paid or collected based on the providers' performance against the mean. Providers must volunteer to enroll in this program, and any other provider would continue to be paid as they normally would under the State plan. Such a restructuring proposal does not diminish access because the providers are electing to participate and understand the risk, but since care must be provided for the performance incentives to be determined and non-participating providers would not experience a change in payment, Medicaid beneficiaries will not experience diminished access to services. We also note that other simple add-on payments for achievement of specified quality targets where there is no possibility of a reduction to any provider's payment would not be considered a restructuring subject to the requirements of § 447.203(c).

However, to the extent that a State implements a performance-based incentive, withhold, or alternative payment model would reduce payment rates, such as models that involve down-side risk arrangements where provider payments could decrease from current levels in certain circumstances, these changes likely would have the potential to result in diminished access to care and therefore would be a restructuring that would fall under the requirements of § 447.203(c). For example, if a State proposed to implement a quality improvement payment arrangement involving downside risk, meaning that providers could their payment rates reduced the State's quality improvement proposal, for which providers were required to participate then CMS could view this arrangement as being a payment reduction or restructuring that could affect access to care. The State in this instance would be expected to conduct the appropriate level(s) of analysis required under § 447.203(c).

We want to note that the requirement to perform an initial or initial and additional analysis under § 447.203(c) does not mean the State will be unable to enact the proposed payment arrangement; it simply means CMS wants to verify that access will not be negatively impacted with additional documentation to demonstrate this fact. As such, this final rule does not limit a State's ability to reduce or restructure rates based on information that the rates are not economic and efficient; rather, it ensures that States take appropriate measures to document access to care consistent with section 1902(a)(30)(A) of the Act. We do not view this as a penalty, as the commenter suggested, but rather a documentation of consistency with the statute. Under the Act, rates must be both economic and efficient, and they also must ensure that individuals have sufficient access to covered services. We interpret section 1902(a)(30)(A) of the Act as requiring a balanced approach to Medicaid rate-setting and we encourage States to use appropriate information and program experience to develop rates to meet all of its requirements. Further, we expect

[371] 80 FR 67578–67579.

States to document that Medicaid rates are economic and efficient when the State submits changes to payment methodologies through a SPA. If a State is unsure whether its proposed performance-based incentive, innovative care model, or alternative payment models contains a restructuring subject to § 447.203(c), they can engage with CMS prior to submission of a SPA. CMS can and may request § 447.203(c) analyses upon receipt of a proposal as well.

Comment: One commenter strongly suggested that the State rate analysis be required on an annual basis, not only upon rate reductions or restructuring, and further suggested that any rate examinations by CMS should also include rates paid in managed care, noting the volume of HCBS provided under managed care, and as such, focusing only on FFS rates is a disservice to much of the industry.

Response: We intend for the payment rate transparency provisions in § 447.203(b) to provide interested parties with insight into State plan payment rates relative to the Medicare payment rates for the same services. While these payment analyses will be updated every other year, as opposed to annually as mentioned by the commenter, the § 447.203(b) analysis will be available for CMS and for interested parties to review, while the § 447.203(c) analysis will apply only to SPA submissions that propose to reduce or restructure provider payment rates. The § 447.203(c) provisions of this final rule concern SPAs proposing to reduce or restructure payment rates in Medicaid FFS. Other components of this final rule address payment rate adequacy and transparency for HCBS specifically, and access to care in managed care is being addressed through the Managed Care final rule (as published elsewhere in this **Federal Register**).

Comment: One commenter stated that SPAs that would result in Medicaid payments that are at or above 80 percent of Medicare rates for the same or comparable services should be approvable without resorting to the larger access analysis described in proposed § 447.203(c)(2). The commenter noted that it is common for Medicaid to pay a percentage of Medicare rates (for example, 85 percent of Medicare) and stated that a proposed payment methodology should not have to result in Medicaid payments that are exactly the same as Medicare rates to avoid access concerns.

Response: This final rule does not require that the proposed payment methodology result in payments that are exactly the same as Medicare rates, or any specific percentage of the Medicare rates for the same or a comparable set of services. States that have rates at or above 80 percent of Medicare in the aggregate, including base and supplemental payments, can qualify for the streamlined initial State analysis for rate reduction or restructuring in § 447.203(c)(1) of the final rule, provided that the other criteria of § 447.203(c)(1) are met. As discussed in an earlier response to comment in this final rule; however, we do not agree that State payment proposals that meet the 80 percent of Medicare threshold should be exempt from the other qualification criteria specified in § 447.203(c)(1)(ii) and (iii), nor the additional analysis elements in § 447.203(c)(2) if all the criteria for the streamlined process are not met.

Comment: One commenter commended CMS for moving towards more clear and transparent processes for rate analyses associated with State-proposed payment changes. However, the commenter indicated that the first tier's streamlined requirements are unlikely to ever be met, as the commenter noted that there are rarely any changes in rates that are proposed that do not elicit complaints and/or concerns about impacts to access from the public and/or interested parties, even in such circumstances as rate increases. The commenter suggested that CMS reconsider the tier guidelines to make it more feasible for a State to meet the requirements of the initial, streamlined tier.

Response: We disagree that the streamlined requirements are unlikely to ever be met. We discussed a State's ability to meet the streamlined criteria in the preamble, and direct the commenter to sections II.C.3 and III.C.11.d.i. of the final rule, which discusses the overall impact of this policy on State proposals to reduce or restructure provider payment rates. Similar to our experience after the issuance of SMDL #17–004, as discussed in the above referenced sections of the final rule, we anticipate that there will be States that propose rate reductions or restructurings that will be able to demonstrate compliance with § 447.203(c)(1). The final rule provides that significant access concerns can be raised, and the proposal can still meet the (c)(1) threshold, provided that the State can reasonably respond to or mitigate the concerns, as appropriate. States should be working with their provider and beneficiary communities and engaging with constructive criticism and complaints, and provide justification to those interested parties as to why the reductions are necessary, and discuss alternatives considered. An important purpose of § 447.203(c)(1)(iii) is to encourage meaningful engagement between States and s interested parties.

Comment: Multiple commenters recommended that CMS increase the proposed threshold to qualify for the streamlined payment SPA analysis proposed at § 447.203(c)(1)(i) from 80 percent of Medicare, with some commenters suggesting that the threshold be changed to 100 percent of Medicare to make the streamlined process more meaningful. These commenters noted that, although Medicare FFS pays physicians considerably more, on average, than Medicaid, it is not competitive in markets with a large percent of commercial payers and Medicare Advantage plans, which typically pay more than traditional Medicare. Therefore, these commenters stated that setting a benchmark at 80 percent of a rate that is not competitive in many parts of the country would undermine efforts to ensure Medicaid payments comply with section 1902(a)(30)(A) of the Act. Another commenter stated that many people cannot access Medicaid acute-care services of the types that Medicare pays for because States do not pay providers adequate rates to induce them to accept Medicaid as payment, and the commenter noted that this problem has existed for a very long time, and it is not related to whether a State wants to reduce or restructure rates from their current levels. One commenter noted that many providers are already paid at 80 percent of Medicare and thus recommended that it seems appropriate to select a higher standard by which to assess whether a reduction would diminish access. Further, a couple of commenters suggested that if access problems persist after a State has achieved the 80 percent threshold for a suitable period of time, and those problems can be traced to inadequate rates, then the State should be required to raise those rates to 85 percent, then 90 percent and so on until the rates reach 100 percent of the Medicare rate. One commenter suggested that such a graduated approach to the § 447.203(c)(1)(i) threshold should be included regardless of whether there are persistent documented access to care issues. Some commenters had similar recommendations to increase the threshold without recommending a specific number, noting that Medicare payments are often low relative to provider costs, and one of these

commenters also recommended a phase-in approach.

Some commenters suggested that CMS take a different approach for different services where the commenters suggested that Medicare may undervalue a service, such as mental health, or where certain service providers do not take insurance, which leads to higher charges in the private market. One specifically suggested a 100 percent threshold for behavioral health, for these reasons.

Response: We appreciate the viewpoints and suggestions of the commenters. First, where the commenters suggested raising the 80 percent threshold to a higher level, such as a 100 percent threshold, to make the streamlined process more protective of beneficiary access, we believe the 80 percent threshold continues to present a meaningful threshold, particularly as it is coupled with the other standards in § 447.203(c)(1). As we discussed in the preamble, after careful review of the literature, we determined that 80 percent of Medicare would be a reasonable payment rate threshold to aid States' and our assessment of compliance with section 1902(a)(30)(A) of the Act. Based on a review of evidence discuss elsewhere in the proposed rule and preamble of this final rule, we do not currently have evidence that a ratio higher than 80 percent is necessary to ensure compliance with the statutory access standard.[372] However, we are committed to monitoring implementation and would consider proposing a sliding percentage threshold for the Streamlined analysis required under § 447.203(c)(1) through future rulemaking, if it is determined that such a change would be appropriate. The threshold is not a level set for approval (or disapproval) of a SPA, but merely to inform the level of analysis would be required. Additionally, the other commenter's assertion that many providers are already paid at 80 percent of Medicare does not, in our view, indicate a need for stricter thresholds, but rather provides that some States may simply be able to meet the § 447.203(c)(1)(i) threshold. If these providers, the beneficiaries they serve, and/or other interested parties have access-related concerns about current or proposed payment rates in their State, they may raise those concerns to the State through the various available forms of public process, which the State would need to address consistent with § 447.203(c)(1)(iii) to qualify for the streamlined analysis process in the event of a payment SPA that would reduce or restructure rates in circumstances that could result in diminished access. We note that, in general, there is no requirement that payment rates for Medicaid services include explicit consideration of a provider's cost of care. The level of payment rates in relation to provider costs is not necessarily the only or the decisive factor in ensuring access to care consistent with the statutory standard, and we do not require that States establish that rates are sufficient to ensure access by reviewing the relationship of payment rates to provider costs.

Second, we agree that Medicare payment rates are typically higher than Medicaid, but do not agree the fact that some private payer rates and Medicare Advantage rates are higher than Medicare FFS rates requires that we select a threshold rate of higher than 80 percent of the Medicare FFS rate to achieve a meaningful comparison that helps ensure that Medicaid rates are adequate to meet the statutory access standard. In addition, regarding the comment that certain providers that do not take insurance, which leads to higher charges, we do not consider a charged amount to be comparable to a payment rate unless the provider actually receives the charged amount as payment amount from a payer (including self-pay individuals). Some providers bill patients on a sliding fee scale, dependent on factors like the individual's income level, even if the provider does not take insurance. This does not mean that using a provider's customary charge is a reasonable proxy for an economic and efficient payment rate or for a payment level that is necessary to support adequate access to care, because not all providers receive payment at their charge rate, even if they bill the patient directly.

We are finalizing the § 447.203(c)(1)(i) threshold at 80 percent of Medicare FFS because we wanted to balance an achievable threshold for States while also establishing a threshold that we believe would be strongly indicative that Medicaid payment rates would be likely to comply with section 1902(a)(30)(A) of the Act. While we acknowledge that 80 percent of Medicare rates may not provide absolute assurance that a given provider, or a sufficient number of providers, will participate in the Medicaid program, we are using 80 percent as a threshold to determine the level of analysis and information a State must provide to CMS to support consistency of payment rates with section 1902(a)(30)(A) of the Act. Notably, there are other provisions of the final rule that provide opportunities for the public to raise access to care concerns to State agencies and to CMS should Medicaid payment rates be insufficient to ensure adequate provider participation so that the statutory access standard is met, as provided in §§ 447.203(c)(4) and 447.204.

Finally, we acknowledge the commenter that suggested that 80 percent of Medicare does not take into account circumstances in which Medicare may undervalue a service, such as mental health. In the 2024 Medicare PFS final rule, Medicare did finalize an adjustment to the payment for certain timed behavioral health services paid under the PFS.[373] In the same rule, we acknowledged the systemic valuation problem and finalized an adjustment to help mitigate the impact which is scheduled to be phased-in over 4 years. While there are certainly going to be issues within any selected rate comparison approach, do not believe that Medicare payment rates for certain services or in general are insufficient in a manner that would suggest a need to use a threshold higher than 80 percent of the Medicare PFS rate. We acknowledge that the reluctance of some provider types to accept payment from various payers, including public and private payers, is concerning, as this can have a negative effect on access to needed care for Medicaid and Medicare beneficiaries, as well as the public at large, including those who are privately insured. However, to the extent the broader public has difficulty accessing a particular service due to high levels of refusal among providers of that service to accept payment offered by public and private payers, then it is possible that the access standard under section 1902(a)(30)(A) of the Act could be met even if Medicaid beneficiaries are experiencing significant difficultly obtaining services from these providers. Although CMS would encourage States in such circumstances to explore all available options to encourage greater provider participation in Medicaid, we have not seen evidence that leads us to believe this circumstance warrants a different approach to evaluating the sufficiency of payment rates for behavioral health services that is different than the approach for physical health services.

Comment: One commenter recommended that CMS establish a minimum payment threshold that States must adhere to if there are significant, demonstrated access problems, noting

[372] 88 FR 28027 through 28029.

[373] 88 FR 79006.

that States where the 80 percent threshold has been met or exceeded have significantly fewer problems with access to Medicaid services than States where that has not happened. Therefore, the commenter recommended that CMS require States to set all rates under the Medicaid State plan to at least 80 percent of the comparable Medicare rate, unless the State can demonstrate that it does not have a significant access problem with the services for which Medicaid payment rates are below that threshold.

Response: We appreciate the recommendations of the commenters, but the statute does not provide CMS with the authority to establish a floor for Medicaid payment rates as recommended by the commenter, with limited statutory exceptions (such as for hospice services under section 1902(a)(13)(B) of the Act and FQHC/RHC services under section 1902(bb) of the Act, which each establish a floor for provider payment rates which prohibits States from implementing rate reductions below the amount calculated through the methodology provided in the statute). We are finalizing the § 447.203(c)(1) and (2) provisions as proposed. Payment rates are not the sole indicators of access to care, and States should pursue any means to improve access to care to the extent that they are able. To the extent that there are significant access issues where the provider payment rates are at least 80 percent of Medicare, the other components of § 447.203(c)(1) would also be reviewed to determine if the payment rate reductions or restructurings meet the § 447.203(c)(1) thresholds. If there are access to care issues, then in following the process described in this final rule, we anticipate that the public processes in paragraph (c)(4) and § 447.204 may yield significant access to care concerns from beneficiaries, providers, or other interested parties regarding the service(s) for which the payment rate reduction or payment restructuring is proposed. We would only consider approving a payment SPA in such circumstances under the streamlined process under § 447.203(c)(1) if the State were able to reasonably respond to or mitigate the concerns, as appropriate, as documented in the analysis provided by the State pursuant to § 447.204(b)(3).

Comment: One commenter encouraged CMS to conduct enhanced reviews, consistent with § 447.203(c)(2), of payment rates for States that are already below the 80 percent threshold, even if the State has not submitted a triggering rate reduction SPA.

Response: We appreciate the suggestion of the commenter. The payment rate transparency publication, comparative payment rate analysis, and payment rate disclosure requirements we are finalizing in § 447.203(b) will allow States, CMS, and the public a better insight into rates regardless of whether a SPA is submitted. However, we are not requesting a § 447.203(c)(2) analysis where the State has not submitted a SPA because we are moving away from the previous AMRP process from the 2015 final rule with comment period and replacing that process with the new § 447.203 provisions of this final rule. We will continue in our oversight role of the Medicaid program and note that we can initiate a State plan compliance action if we have evidence that the State's Medicaid payment rates do not meet the access standards in section 1902(a)(30)(A) of the Act, regardless of whether the State is seeking to change them with a SPA.

Comment: For the 80 percent of Medicare analysis, two commenters recommended weighting codes in the analysis by service volume to reflect payment levels more meaningfully across the benefit category. These commenters were concerned that CMS' proposed ''aggregate'' standard, reviewing rates across a benefit category rather than at the service-specific level, will mean that some Medicaid services are paid below 80 percent (including frequently provided services) even if the overall benefit category (including equally weighted but infrequently provided services) achieves the 80 percent threshold. They recommended that CMS set the threshold on a disaggregated basis to avoid permitting States to obscure low payment rates for key services.

Response: We approve States' rate methodologies for compliance with regulation and statute, but may not approve individual service rates unless a State presents a final rate, or a fee schedule, as the output of a rate methodology. This final rule does not change that policy or imply that CMS will review individual rates for sufficiency in all cases. Reviewing individual rates within a fee schedule would not necessarily provide a better determination of whether the rates are adequate to enlist sufficient providers into the Medicaid program or not, since we do not believe that providers generally make decisions about whether to participate with a payer (and accept the payer's rates) based on the rate for a single service. However, we will review individual payment rate codes to the extent that the rate changes fall outside of the typical methodology used by the State in their payment rate setting methodology under the State plan, or to the extent that we have reason to believe that common billing codes most frequently used by providers within the State are disproportionately impacted, as determined by the State's public input process, by the payment rate reduction or restructuring proposal. Further, the payment rate transparency publication in § 447.203(b)(1) will require States to publish their fee schedule rates for services specified in that section of the final rule, which will include individual fee schedule payment rates for services for CMS and public review.

Comment: One commenter recommended that, for services for which the State does not use a cost-based payment methodology, CMS should require States to transition to a cost-based methodology. Alternatively, they recommended that CMS require Medicaid rates be no less than 80 percent of Medicare, private insurance, private payment (which we interpret to mean self-pay), or rates for State-furnished or paid services or other comparable service rates.

Response: We appreciate the recommendations of the commenter, but with limited statutory exceptions (such as for hospice services under section 1902(a)(13)(B) of the Act and FQHC/RHC services under section 1902(bb) of the Act, which each establish a floor for provider payment rates which prohibits States from implementing rate reductions below the amount calculated through the methodology provided in the statute), the statute does not provide CMS with the authority to establish a floor or a particular payment methodology for Medicaid payment rates as recommended by the commenter. There is also no statutory requirement to pay providers at the cost of providing services or rates that are equivalent to cost. Prior to 1997, the Omnibus Reconciliation Act of 1980 included the ''Boren Amendment'' which required under then section 1902(a)(13) of the Act that some institutional providers, in particular nursing facilities and intermediate care facilities, receive payments were reasonable and adequate to meet the costs which much be incurred by efficiently and economically operated facilities in order to provide care and services in conformity with applicable State and Federal laws, regulations, and quality and safety standards. In 1997, through the Balance Budget Act of 1997, the Boren Amendment was repealed and replaced with the current section 1902(a)(13) of Act to instead require States to use a public process to set

institutional provider payment rates. Since these statutory changes have occurred, States are not required to consider the cost of care in the development of provider payment rates, but instead rely on input from those providers in their rate setting, which input also is important under the requirements set forth in this final rule. We are finalizing the § 447.203(c)(1) and (2) provisions as proposed.

Comment: A couple of commenters questioned the use of Medicare rates as the basis for comparison in § 447.203(c), as it is not a significant payor of certain Medicaid-covered services and serves a significantly different population. These commenters suggested that services such as substance-use disorder services, facility-based treatment, dental services, and certain LTSS lack a comparable set of Medicare-covered services that would ''bear a reasonable similarity'' to the Medicaid-covered services. One commenter expressed concern about whether States may compare against Medicare rates that are perhaps similar in concept but not in practice. Specifically, the commenter noted that Medicare Home Health Aides and Medicare in-home skilled nursing services seem like they might be comparable to certain Medicaid HCBS and LTSS, but in practice serve different populations in vastly different volumes and as such are not appropriate comparisons. Commenters urged CMS to issue guidance to States on service categories that would require the submission of additional data under this circumstance. One commenter acknowledged that the aggregate comparison, rather than a rate-by-rate comparison, alleviated some of the challenges of finding a Medicare equivalent for certain services.

Further, one commenter suggested a more nuanced approach to examining payment rates as they relate to access, such as benchmarking against rates for a subset of the highest performing States in terms of access to care for these service categories. That commenter cited recent research from the American Dental Association's Health Policy Institute, which does not suggest a strong relationship between the ratio of Medicaid-to-private payer rates and dental provider participation in Medicaid, meaning that a comparison to private payer rates is not necessarily instructive for all services in the absence of Medicare comparator rates.

Response: We are finalizing § 447.203(c)(1) and (2) as proposed. The regulations account for circumstances where Medicare does not cover comparable services, by requiring States to compare, ''as reasonably feasible, to the most recently available payment rates of other health care payers in the State or the geographic area for the same or a comparable set of covered services, ''which comparison is required even if it is impossible to compare'' to the most recently published Medicare payment rates for the same or a comparable set of Medicare-covered services because no such set of Medicare-covered services exists. We also agree with the commenter who pointed out that the aggregate comparison at the level of the benefit category makes it more feasible to find a reasonable Medicare comparison. While the regulations allow States some flexibility in determining how to perform the required comparison in developing and submitting their SPA analysis, all State-submitted information will be reviewed by CMS through the SPA process, and we reserve the right to request any additional information necessary to further understand the SPA or the accompanying analysis, which may include a request for additional rate comparison information.

Although we appreciate the concern of the commenter about circumstances where neither Medicare nor private payer rates provide a reasonable analog to assess access to care, we have to balance our requirements against the feasibility of obtaining data for comparison. Although the rate transparency requirements we are finalizing in this rule will increase the availability of State rate data, determining the highest performing States for use as the commenter suggested would require additional burden on both States and the Federal Government to determine which States would be benchmark States for which services. In addition, it is not necessarily clear that this approach would be appropriate to ensure compliance with the statutory access standard, which looks to whether beneficiaries have access to covered services at least as great as that enjoyed by the general population in the same geographic area. We believe the policies we are finalizing strike an appropriate balance that reasonably considers availability of data and State burden, as well as the need to ensure sufficient beneficiary access.

We acknowledge the commenters' concern that services such as substance-use disorder services, facility-based treatment, dental services, and certain LTSS lack a comparable set of Medicare-covered services that would ''bear a reasonable similarity'' to the Medicaid-covered services, and the concern about whether States may compare against Medicare rates that are perhaps similar in concept but not in practice. Particularly for facility-based services, we recognize that Medicare and Medicaid provider types may not be identical in certain cases. However, often, facility-based services furnished by a provider type enrolled in one program are covered when furnished in a different setting or by a provider with a different enrollment type in the other program. In such cases, States should look to the nature of the service rather than, for example, the enrollment type of the provider, to identify a reasonably similar set of Medicare-covered services for comparison. We acknowledge that Medicare also establishes payment rates for certain services for which Medicare seldom pays; however, States still should consider these rates when constructing their comparisons to Medicare in accordance with the provisions of this final rule.

Comment: Some commenters requested that CMS remove the 4 percent threshold under 447.203(c)(1), noting that a 4 percent, or even lower, standard would in most cases be reducing a rate which is already far below Medicare levels. One commenter suggested that if a 1 or 2 percent threshold is not feasible for every State, then CMS should use this standard (that is, 1 or 2 percent, instead of 4 percent) for States whose aggregate Medicaid FFS payments average less than the national average of 72 percent for the most common E/M services.

One of these commenters supported CMS' proposal to assess such rate reductions on a cumulative basis over the course of a State fiscal year. Another commenter urged CMS to consider designing a limit to ensure that States could not implement a large cut (for example, 20 percent) to payments for a particular service, which the commenter perceived as a risk due to our proposal to analyze changes at the benefit category level, where we proposed to examine whether aggregate payment rate changes for the benefit category as a whole would exceed the 4 percent threshold. The commenter also suggested that CMS could also consider disaggregating service analysis in future rulemaking.

Response: We are finalizing § 447.203(c)(1) and (2) as proposed. As discussed previously, the 4 percent threshold is one of three criteria identified in § 447.203(c)(1), which, if not met, will require the State to submit additional information required under § 447.203(c)(2). Where a State's payment rates are already below 80 percent of the Medicare FFS payment rate for the same or a comparable set of services, then any rate reductions from that State would be subject to the requirements of

§ 447.203(c)(2). This feature will ensure States with rates already below 80 percent of comparable Medicare FFS rate levels will have to take additional steps to establish that the rate change will not result in access below the level required under section 1902(a)(30)(A) of the Act. We declined to include a lower threshold because we believe that the 4 percent is sufficient based upon our experience with State proposals received after the publication of SMDL #17–004. State proposals that included a reduction less than or equal to 4 percent of the aggregate FFS Medicaid expenditures for each benefit category impacted by the reduction or restructuring generally did not result in access to care issues for affected services.

Comment: Multiple commenters were concerned that the 4 percent reduction criterion is not nominal, as CMS had described it. These commenters urged CMS to re-assess the appropriateness of the 4 percent threshold.

Response: As discussed in the proposed rule, States often seek to make payment rate and/or payment structure changes for a variety of programmatic and budgetary reasons with limited or potentially no effect on beneficiary access to care, and we recognized that State legislatures needed some flexibility to manage State budgets accordingly.[374] We discussed a 4 percent spending reduction threshold with respect to a particular service category in SMDL #17–004 as an example of a targeted reduction where the overall change in net payments within the service category would be nominal and any effect on access difficult to determine (although we reminded States that they should document that the State followed the public process under § 447.204, which could identify access concerns even with a seemingly nominal payment rate reduction). To our knowledge, since the release of SMDL #17–004 six years ago, the 4 percent threshold for regarding a payment rate reduction as nominal has not resulted in access to care concerns in State Medicaid programs, and it received significant State support for this reason in comments submitted in response to the 2018 proposed rule, as well as in response to the proposed rule in this rulemaking. The provisions of the final rule in § 447.203(c)(1) are not intended to be individually applicable, as they were under the SMDL #17–004, and are instead intended for each element of § 447.203(c)(1) to be met in order for the rate reduction or restructuring SPA to be considered consistent with section 1902(a)(30)(A) of the Act under the streamlined analysis process. In each instance, the State's proposal would need to demonstrate that Medicaid payment rates in the aggregate (including base and supplemental payments) following the proposed reduction or restructuring for each benefit category affected by the proposed reduction or restructuring would be at or above 80 percent of the most recently published Medicare payment rates for the same or a comparable set of Medicare-covered services; the proposed reduction or restructuring, including the cumulative effect of all reductions or restructurings taken throughout the current State fiscal year, would be likely to result in no more than a 4 percent reduction in aggregate FFS Medicaid expenditures for each benefit category affected by proposed reduction or restructuring within a State fiscal year; and the public processes described in paragraph (c)(4) and § 447.204 yielded no significant access to care concerns from beneficiaries, providers, or other interested parties regarding the service(s) for which the payment rate reduction or payment restructuring is proposed, or if such processes did yield concerns, the State can reasonably respond to or mitigate the concerns, as appropriate, as documented in the analysis provided by the State pursuant to § 447.204(b)(3).

Comment: One commenter noted that the 4 percent reduction threshold is consistent with the 2018 proposed rule, but suggested that CMS assess any rate reduction compared to broader trends in the economy, particularly when considering rising medical cost and adjusting for inflation, a 4 percent payment cut should not be considered nominal, especially in States where Medicaid payments are already low. Furthermore, the accumulating effect of yearly cuts to provider payments, which could still meet the thresholds of the rule, would be extremely detrimental to access for beneficiaries in the Medicaid program. For example, the Medicare Economic Index (MEI) measures the impact of inflation faced by physicians with respect to practice costs and general wage levels, and as such show the year-over-year change in cost of providing the same basket of services. The commenter stated that rate reductions should be compared against this type of measure rather than against an arbitrary percentage. The commenter also noted that the 4 percent rate reduction threshold would operate in conjunction with the other criteria in § 447.203(c)(1), and therefore not exempt a State proposal from compliance with the broader access framework in the rule, but expressed concern about the disproportionate impact a 4 percent reduction can have on certain practice types, such as pediatric.

Response: We appreciate the suggestion of the commenter. We are finalizing § 447.203(c)(1)(ii) as proposed. We did not want to rely upon the MEI to supply an inflation factor that must be considered in examining the approvability of payment rate changes or restructurings because we wanted to provide flexibility for States within their budgetary constraints. We also note that the comparison of State payment rates to Medicare would accomplish a similar goal to that stated by the commenter. By requiring State rate actions be compared to the most recently published Medicare rate, which are trended forward annually, the (c)(1)(i) threshold does take into account inflation that may occur in the health care industry.

We reiterate the statement of the commenter that the provisions of the final rule in § 447.203(c)(1) are not intended to be individually applicable, as they were under the SMDL #17–004, and are instead intended for each element of § 447.203(c)(1) to be met in order for the rate reduction or restructuring SPA to be considered consistent with section 1902(a)(30)(A) of the Act under the streamlined analysis process. In each instance, the State's proposal would need to demonstrate that Medicaid payment rates in the aggregate (including base and supplemental payments) following the proposed reduction or restructuring for each benefit category affected by the proposed reduction or restructuring would be at or above 80 percent of the most recently published Medicare payment rates for the same or a comparable set of Medicare-covered services; the proposed reduction or restructuring, including the cumulative effect of all reductions or restructurings taken throughout the current State fiscal year, would be likely to result in no more than a 4 percent reduction in aggregate FFS Medicaid expenditures for each benefit category affected by proposed reduction or restructuring within a State fiscal year; and the public processes described in paragraph (c)(4) and § 447.204 yielded no significant access to care concerns from beneficiaries, providers, or other interested parties regarding the service(s) for which the payment rate reduction or payment restructuring is proposed, or if such processes did yield concerns, the State can reasonably

[374] 88 FR 28030.

respond to or mitigate the concerns, as appropriate, as documented in the analysis provided by the State pursuant to § 447.204(b)(3).

We disagree that 4 percent is an arbitrary threshold. As noted in a prior response, States often seek to make payment rate and/or payment structure changes for a variety of programmatic and budgetary reasons with limited or potentially no effect on beneficiary access to care, and we recognized that State legislatures needed some flexibility to manage State budgets accordingly. We discussed a 4 percent spending reduction threshold with respect to a particular service category in SMDL #17–004 as an example of a targeted reduction where the overall change in net payments within the service category would be nominal and any effect on access difficult to determine (although we reminded States that they should document that the State followed the public process under § 447.204, which could identify access concerns even with a seemingly nominal payment rate reduction). To our knowledge, since the release of SMDL #17–004, the 4 percent threshold for regarding a payment rate reduction as nominal has not resulted in access to care concerns in State Medicaid programs, and it received significant State support for this reason in comments submitted in response to the 2018 proposed rule and the proposed rule in this rulemaking. In addition, we did not receive comments indicating that specific State rate reductions that were less than 4 percent had an impact on beneficiary access to care in their State Medicaid programs. In addition, the 4 percent threshold is then a measure to ensure that payment rates are not reduced by too significant of an amount over a single State fiscal year. The two quantitative thresholds in paragraphs (c)(1)(i) and (ii), taken together with the public input requirements in paragraph (c)(1)(iii), work in conjunction to ensure that State payment rates are consistent with section 1902(a)(30)(A) of the Act.

Comment: One commenter suggested where States make changes to a cost-related payment methodology that may result in diminished access (for example, by placing a new cap on administrative costs, requiring a ''rebase,'' or otherwise altering cost-reporting procedures), it may be challenging to determine whether the change would result in a 4 percent or more decrease in payment.

Response: We understand the commenter's concern and note that the 4 percent threshold is a cumulative percentage of rate reductions or restructurings applied to the overall FFS Medicaid expenditures for a particular benefit category affected by the proposed reduction(s) or restructuring(s) within each State fiscal year. During the SPA process, States are required to estimate the amount of the financial impact on their CMS form 179 and in their public notice as required by § 447.205(c)(2), which states that the public notice must ''give an estimate of any expected increase or decrease in annual aggregate expenditures.'' Where States are unsure how they should demonstrate whether the proposed change meets the 4 percent threshold in § 447.203(c)(1)(ii), they should look to existing criteria and methodologies used to estimate financial impacts for the CMS form 179 and public notice under § 447.205.

Comment: One commenter noted that § 447.203(c)(1)(iii) requires an assessment of ''significant concerns'' from providers and others, and requested additional detail regarding the definition of ''significant concern,'' and what the State's response to significant concerns must entail. A couple of commenters stated that requiring States to demonstrate that no concerns were raised or to ''address'' concerns raised in public comment would be a difficult requirement to meet, noting that any proposed rate reduction is likely to result in significant public comment. One of these commenters stated it is unclear what level of concern or complaint would shift a State from one tier (that is, the streamlined process under § 447.203(c)(1)) to the next (that is, to requiring the additional analysis under § 447.203(c)(2)). The other of these commenters added that, as CMS does not define the term ''address'' in the rule, it is concerning that a State must meet all of the criteria in § 447.203(c)(1) to qualify for the streamlined analysis.

Response: The term ''significant'' can be dependent upon the circumstances, but we generally consider ''significant concerns'' to mean those that are not easily resolvable through engagement with beneficiaries, providers, and other interested parties. We also note that the regulation does not actually use the word ''address'' but rather requires that, to the extent that States received public input on their proposed SPA to reduce or restructure payment rates that ''yielded . . . significant access to care concerns from beneficiaries, providers, or other interested parties,'' the State must demonstrate that it is able to ''respond to or mitigate the concerns, as appropriate.'' For example, a State may receive a large number of public comments on a proposed rate change, but if all the comments merely seek to clarify an aspect of the change, this situation, despite the high volume of comments, would not be a significant concern, because no concern has been raised other than a request for clarification of the proposal As an alternative example, where providers are raising concerns about the level of payment they would receive under a State's new payment rate proposal, the State could discuss with interested parties other legislative initiatives underway or programmatic goals that might be considered as offsetting any decrease in provider payments that might be expected from the proposed rate action. This is common with value-based purchasing initiatives in States. Section 447.203(c)(4), where we are recodifying § 447.203(b)(7) as finalized in the 2015 final rule with comment period, continues to require that ''States have ongoing mechanisms for beneficiary and provider input on access to care (through hotlines, surveys, ombudsman, review of grievance and appeals data, or another equivalent mechanism), consistent with the access requirements and public process described in § 447.204.'' Furthermore, § 447.203(c)(4)(ii) provides that ''States should promptly respond to public input through these mechanisms . . . with an appropriate investigation, analysis, and response,'' and ''States must maintain a record of data on public input and how the State responded to this input,'' which record the State must make available to us upon request. If the State is not able to demonstrate that its proposal will not decrease access below the statutory standard, including by credibly refuting any reasonable, supported concern raised in public comments that it will harm access excessively, then the proposed rate reduction or restructuring will not meet the requirements for the streamlined (c)(1) process and will be subject to the tier 2 process in paragraph (c)(2), where additional data and analysis will be required to be submitted. In all cases, we will review to ensure that statutory access standard and all other applicable Federal requirements are met.

Comment: A few commenters commended CMS for including the third criterion, which centers the importance of public concerns about rate reductions or restructuring, but these commenters opposed CMS implementing any threshold for rate reduction or restructuring SPAs under § 447.203(c)(1).

Response: We appreciate the support of the commenters. With respect to the inclusion of this criterion as one of three

requirements needed to qualify for a streamlined access analysis and in response to the commenters' opposition to implementing any threshold for rate reductions or restructuring SPAs under § 447.203(c)(1), we note that the intention of this final rule is to balance the administrative burden on the States associated with rate reduction or restructuring SPAs with the need to have sufficient information to make an administrative decision on State payment rate proposals, and whether they satisfy the access standard in section 1902(a)(30)(A) of the Act, while also providing providers, beneficiaries, and interested parties to raise concerns directly to the State through the mechanisms for ongoing beneficiary and provider feedback in § 447.203(c)(4) of the final rule.

Comment: A few commenters strongly supported the public input process provision in § 447.203(c), particularly in § 447.203(c)(1)(iii), since developing robust mechanisms for States to hear feedback from providers and interested parties about access concerns will be critical to assuring that access analysis in connection with payment SPAs has its intended effect. One commenter suggested that CMS should further consider formalizing a specific role for the MAC/BAG in this process.

Response: We appreciate the support of the commenters and note that the public input processes defined in § 447.203(c)(4), where we are recodifying requirements previously located in § 447.203(b)(7), requires that States have ongoing mechanisms for beneficiary and provider input on access to care (through hotlines, surveys, ombudsman, review of grievance and appeals data, or another equivalent mechanism), consistent with the access requirements and public process described in § 447.204. We did not specifically provide a defined role for the MAC or BAC in the regulatory rate reduction or restructuring process, but States are not prohibited from including such entities in their public input process to the extent that they believe it would be valuable. However, if the MAC/BAC under § 431.12 of this final rule, or the interested parties' advisory group under § 447.203(b)(6) produces a comment on a State proposal to reduce or restructure payment rates, then the State would be required to consider and respond to it as public input under § 447.204.

Comment: A few commenters stated that providers that receive Medicaid payments always raise concerns about any proposed rate reduction or restructuring. These concerns are typically framed as concerns about access. While one commenter reiterated the value of the input of providers and other interested parties in the rate-setting process, a requirement to conduct an access analysis any time a provider voices concerns during the public input process is a de facto requirement to conduct an access analysis for all SPAs. The commenter stated that this will increase the administrative burden for States and CMS and undermine the two-tiered level of analysis envisioned by CMS.

Response: We understand the viewpoint of the commenter and can affirm that the mere existence of one or more comments is not in and of itself a measure of whether the comments have raised a significant access to care concern or whether the State is able to respond to and mitigate any significant concern, as appropriate. If comments received do not raise any significant access to care concern, or if they do but the State documents a reasonable response to all significant concerns that demonstrates that the proposal will not reduce access below the statutory standard notwithstanding the concerns, or that mitigations identified by the State will prevent such a degradation of access, then the proposed reduction or restructuring will qualify for the streamlined initial State analysis under § 447.203(c)(1). We also point out that the requirement that States provide adequate notice and consider public comment for payment rate changes is a long-standing requirement of the Medicaid program in 42 CFR part 447, subpart B.

Comment: One commenter expressed concern that § 447.203(c)(1)(iii), which states as a criterion that ''public feedback yielded no significant access to care concerns or yielded concerns that the State can reasonably respond to or mitigate, as appropriate,'' presents a dangerous loophole through which States can drastically cut payment for services, including, for example, specialist office visits, without triggering additional regulatory scrutiny. The commenter expressed doubt that the subjective inquiry on whether State efforts might be reasonable coupled with the non-specific activity the State would undertake (''respond'' or ''mitigate'') would provide an actual hurdle to payment cuts, including cuts that could constrict access for beneficiaries with rare and ultra-rare conditions.

Response: We disagree that this provision provides States with a loophole enact drastic cuts for services. First and foremost, the provision in question is just one of three criteria a State must meet in order to perform only a streamlined access analysis under § 447.203(c)(1). Second, qualification for the streamlined analysis does not result in automatic approval of the SPA. We will still review both the SPA itself and the streamlined analysis as submitted by the State to determine accuracy and whether the State has met all applicable Federal requirements. We fully expect that some States may submit documentation for the streamlined analysis, and CMS will determine that a more extensive analysis under § 447.203(c)(2) is necessary. For example, if we disagreed that a State's streamlined access analysis submission adequately documented that the State had reasonably responded to or mitigated all significant access concerns raised through public processes in connection with a SPA to reduce or restructure payment rates, we would require the State to submit the additional access analysis provided for in this final rule to enable us to verify that the SPA satisfies the access standard in section 1902(a)(30)(A) of the Act.

To be clear, the State's response to any significant access concern identified through the public processes, and any mitigation approach, as appropriate, would be expected to be fully described in the State's submission to us. In addition, § 447.203(c)(4), where we are recodifying § 447.203(b)(7), continues to require that ''States have ongoing mechanisms for beneficiary and provider input on access to care (through hotlines, surveys, ombudsman, review of grievance and appeals data, or another equivalent mechanism), consistent with the access requirements and public process described in § 447.204.'' Furthermore, § 447.203(c)(4)(ii) provides that ''States should promptly respond to public input through these mechanisms . . . with an appropriate investigation, analysis, and response,'' and ''States must maintain a record of data on public input and how the State responded to this input,'' which record the State must make available to us upon request. A major benefit and intent of this repeated emphasis on public process is to protect against the situation the commenter describes. Our regulations ensure other parties besides the State have visibility into a proposed rate reduction or restructuring, and are able to voice related concerns, so we do not need to rely solely on a State's assertion that there are no access-related concerns or that all such concerns have been addressed.

c. Additional State Rate Analysis (§ 447.203(c)(2))

Comment: One commenter expressed support for the proposed changes to strengthen and clarify requirements for the analysis required for reductions in rates or restructuring of provider payments under § 447.203(c)(2); however, the commenter raised concerns about comparing Medicaid rates solely to Medicare rates, as Medicare does not have comparable services for every benefit category in Medicaid. As such, the commenter suggested using private pay where no Medicare payment rates are available.

Response: We appreciate the support of the commenter and point out that a comparison to Medicare payment rates is not the sole means of assessing access to care in this final rule. This final rule requires that, for States submitting a proposed rate reduction or restructuring, the proposed reduction or restructuring must meet all three criteria set out in § 447.203(c)(1), which include the 80 percent of Medicare comparison, or else the additional analysis under § 447.203(c)(2) would be required. We also finalized in in § 447.203(c)(2)(ii) to require a comparison of Medicaid payment rates to Medicare ''and, as reasonably feasible, to the most recently available payment rates of other health care payers in the State or the geographic area for the same or a comparable set of covered services'' but note that the availability of private payer rate information that has proven difficult for States to obtain due to its often proprietary nature. Similarly, under § 447.203(c)(2), a comparison to Medicare rates is just one part of the full, required analysis for States that must complete the tier 2 analysis. The full tier 2 analysis, which we are finalizing as proposed, requires the following in addition to the full tier 1 analysis: a summary of the proposed payment change including the cumulative effect of all reductions or restructurings taken throughout the current State fiscal year in aggregate FFS Medicaid expenditures for each benefit category affected by proposed reduction or restructuring; an analysis of the Medicaid payment rates in the aggregate (including base and supplemental payments) before and after the proposed reduction or restructuring for each benefit category affected by the proposed reduction or restructuring and a comparison of each to the most recently published Medicare payment rates for the same or a comparable set of Medicare-covered services and, as reasonably feasible, to the most recently available payment rates of other health care payers in the State or geographic area; information about the number of actively participating providers of services in each benefit category affected by the proposed reduction or restructuring for each of the immediately preceding 3 years including trend information; information about the number of Medicaid beneficiaries receiving services through the FFS delivery system in each benefit category affected by the proposed reduction or restructuring for each of the immediately preceding 3 years including trend and beneficiary population information and anticipated effects; information about the number of Medicaid services furnished through the FFS delivery system in each benefit category affected by the proposed reduction or restructuring for each of the immediately preceding 3 years including trend and service-recipient beneficiary population information and anticipated effects; and a summary of, and the State's response to, any access to care concerns or complaints received from beneficiaries, providers, and other interested parties regarding the service(s) for which the payment rate reduction or restructuring is proposed as required under § 447.204(a)(2). For services for which a Medicare comparator is not available, the § 447.203(c)(2) analysis is required to be submitted by the State along with the SPA proposing to reduce or restructure provider payment rates as the State is unable to demonstrate compliance with § 447.203(c)(1). The regulations being finalized in § 447.203(c)(2)(ii) account for circumstances where Medicare does not cover comparable services, by requiring States to compare, ''as reasonably feasible, to the most recently available payment rates of other health care payers in the State or the geographic area for the same or a comparable set of covered services to the most recently published Medicare payment rates for the same or a comparable set of Medicare-covered services because no such set of Medicare-covered services exists.

Comment: One commenter expressed concern that, while CMS understandably seeks to clarify which SPAs are subject to heightened scrutiny under the tier 2 analysis requirements in § 447.203(c)(2), the criteria are skewed toward services that are paid for off a fee schedule, and which correspond to Medicare-covered services.

Response: We acknowledge that there is an administrative ease associated with meeting the requirements of § 447.203(c) where States pay according to a fee schedule. However, it is also possible to compare payment amounts where no such fee schedule exists. State UPL demonstrations are a valuable resource in determining level of payment of both base and supplemental payments compared to a reasonable estimate of the amount that Medicare would pay for the same services, and our experience has shown that States are able to make these comparisons on both a provider-specific level and in the aggregate. The methodology States use for required UPL demonstrations would support the analysis required under § 447.203(c) of this final rule, even where the payment methodology is not based on a fee schedule.

Comment: One commenter noted that the proposed first-tier analysis requires States to compare proposed Medicaid rates to Medicare rates, but as CMS acknowledges in the preamble, the absence of a comparable Medicare service for some services would mean the State would need to perform the full two-step access analysis, since they would not be able to meet all three criteria in § 447.203(c)(1). The commenter stated that this expectation is not clearly reflected in proposed § 447.203(c) and suggested that CMS add language clarifying that when there is no comparable set of Medicare services, the State must perform the second tier of analysis under § 447.203(c)(2). Another commenter expressed support for CMS's preamble provision that, for services in which a reasonably comparable Medicare-covered analogue is not available, the State would be obligated to support its rate reduction or restructuring proposal through the submission of additional information under § 447.203(c)(2).

Response: We reiterate that we are finalizing § 447.203(c)(1) and (2) as proposed. In addition, we are finalizing our statement in preamble that for any service for which the State has proposed to reduce or restructure the Medicaid payments in circumstances when the changes could result in diminished access, for which there are no comparable Medicare services that would enable the State to make the showing required under § 447.203(c)(1)(i), the State is required to conduct the secondary analysis required under § 447.203(c)(2). For example, where Medicare does not cover routine dental care, payment rate reductions or restructurings of such services would be subject to § 447.203(c)(2) since comparable Medicare payment information required under § 447.203(c)(1)(i) of the final rule would be unavailable.

Comment: One commenter stated that the information States are required to

collect and examine, especially the number of providers, beneficiaries, and services, will be particularly valuable in assessing the impact of rate changes on access to home care services. One commenter specifically expressed support for the § 447.203(c)(2)(iii) proposal to require States to provide the number of actively participating providers of services in each affected benefit category for each of the 3 years immediately preceding the SPA submission date, by State-specified geographic area, provider type, and site of service. That commenter acknowledged that this would be valuable information to be made publicly available. Another agreed, saying CMS should require States to publicly post the enhanced analysis, including data submissions, to ensure full transparency.

Response: We appreciate the support of the commenters. At this time, there is no plan for CMS to make the information States provide in these analyses publicly available. Approved SPAs are public facing documents and are posted on Medicaid.gov after they are approved by CMS. Payment rates used to provide the § 447.203(b) and (c) of the final rule should come from these approved SPAs, and these SPAs should help to clarify questions about the State's particular rate model. We further note that the requirements we are finalizing at §§ 447.203(c)(1)(iii), (c)(4), and 447.204 regarding public process and mechanisms for ongoing beneficiary and provider input should provide interested parties opportunity for meaningful input on State rate actions. Otherwise, information may be available upon request from either States or CMS, and we note that some of this information may be subject to Freedom of Information Act (FOIA) disclosure requirements.

Comment: Several commenters expressed that States should be required to provide detailed information described in § 447.203(c)(2)(i) through (vi) about proposed rate reductions or restructuring any time it proposes to reduce rates or restructure rates in a way that could result in diminished access, and not only when the proposed rate fails to meet certain criteria such as those specified in § 447.203(c)(1). These commenters stated concern that the proposed two-tier structure would still permit States to alter rates in ways that harm beneficiary access.

Response: The purpose of this final rule is to create a process that is less administratively burdensome than the previous, ongoing AMRP process outlined in the 2015 final rule with comment period, while also maintaining a data submission process for payment rate reduction and restructuring SPAs that do not meet the thresholds set out in § 447.203(c)(1). The commenters' recommendation seems to suggest something closer to a continuation of the previous AMRP process, whereas we believe this final rule strikes a more appropriate balance of easing State burden where SPAs meet the § 447.203(c)(1) criteria (making them unlikely to result in reducing beneficiary access to care to a level inconsistent with section 1902(a)(30)(A) of the Act), and requiring more rigorous data and analysis requirements for SPAs that do not meet the § 447.203(c)(1) criteria and may present more cause for concern related to beneficiary access to care.

Comment: A commenter recommended that, in addition to requiring States to provide summary information about proposed changes, and information about the rates in aggregate in § 447.203(c), CMS should require States to provide the specific range of rates, including any variation in rates (for example, regional differences, or differences based on provider specialty).

Response: We approve States' rate methodologies for compliance with regulation and statute, but may not approve individual service rates unless a State presents a final rate, or a fee schedule, as the output of a rate methodology. This final rule does not change that policy or imply that CMS will review individual rates for sufficiency in all cases. Reviewing individual rates within a fee schedule would not necessarily provide a better determination of whether the rates are adequate to enlist sufficient providers into the Medicaid program or not, provided that the State is using a consistent payment rate methodology for the entirety of the fee schedule, since we do not believe that providers generally make decisions about whether to participate with a payer (and accept the payer's rates) based on the rate for a single service. However, we will review individual payment rate codes to the extent that the rate changes fall outside of the typical methodology used by the State in their payment rate setting methodology under the State plan, or to the extent that we have reason to believe that common billing codes most frequently used by providers within the State are disproportionately impacted by the payment rate reduction or restructuring proposal. Further, the payment rate transparency publication in § 447.203(b) will require States to publish their fee schedule rates for services specified in that section of the final rule, which will include individual fee schedule payment rates for services for CMS and public review.

Comment: Several commenters noted appreciation that the additional information that would be required from States that seek to reduce payment rates or restructure payments in a manner that could result in decreased access noting their belief that the § 447.203(c)(2) provision will create important safeguards to prevent decisions that are solely based on State budgetary concerns rather than an actual analysis of the cost of providing services in the Medicaid program. A few commenters noted that they were glad to see that, because of the nature of HCBS, the majority of rate reductions for home care services and supports would always be subject to the provisions mandating greater scrutiny under § 447.203(c)(2), because Medicare rates for the same or a reasonably similar set of services generally will not be available to make such SPAs eligible for the streamlined access review process under § 447.203(c)(1).

Response: We appreciate the support of the commenters, but note for clarity, as discussed earlier in this preamble, there is no requirement in the Medicaid program that payment rates be based on provider cost.

Comment: A few commenters recommended that, at a minimum, CMS should require all States to complete the more extensive access analysis under § 447.203(c)(2) shortly after publication of the final rule to establish a baseline assessment of access to care for Medicaid beneficiaries. Such analysis should include FFS as well as managed care, enabling comparison of payment and access within and across delivery systems. These commenters urged that this baseline analysis should serve as a comparison point for future access monitoring. Other commenters suggested that the requirement for the analysis in § 447.203(c) should be decoupled from a State's intention to reduce or restructure rates, suggesting instead that all States should be required to conduct this analysis annually, every 2 years, or at least every 3 years across all rates for all Medicaid FFS and managed care programs for which a Medicare comparison is possible.

Response: We appreciate the suggestion of the commenters. The purpose of this final rule is to create a process that is less administratively burdensome than the previous, ongoing AMRP process outlined in the 2015 final rule with comment period, while also maintaining a data submission process for payment rate reduction and

restructuring SPAs that do not meet the thresholds set out in § 447.203(c)(1), and note that the FFS provisions, including the payment rate transparency, comparative payment rate analysis, and payment rate disclosure requirements (§ 447.203(b)(1) through (5)), interested parties' advisory group requirements (§ 447.203(b)(6)), and State analysis procedures for payment rate reductions or payment restructuring (§ 447.203(c)), finalized in this rule are expected to result in a net burden reduction on States compared to the previous AMRP requirements, as discussed in the proposed rule and in section III. of this final rule. This final rule provides CMS and States with an administrative process through which rate reductions or restructurings can be reviewed and approved, so long as the proposed SPA satisfactorily includes the information required under this final rule and meets all applicable Federal requirements. CMS is discontinuing the previous AMRP process in this final rule, and did not propose and is not finalizing a substantially similar process, as we believe doing so would impose a great deal of burden on States and CMS without commensurate programmatic value, as discussed in the proposed rule and in this final rule (88 FR 27965). We note that the § 447.203(c)(4) mechanisms for ongoing beneficiary and provider input provide impacted parties opportunities to raise access concerns or issues to the State at any point through State-provided input processes.

Comment: One commenter requested that CMS clarify the criteria in both tiers which CMS will use to determine the appropriate level of access on which to provide analyses and documentation of adequate access, claiming there are no details available on the criteria. The commenter requested that CMS define a measurable methodology with which to determine and demonstrate adequacy of access to care in relation to the criteria of the analysis required in the applicable provisions of § 447.203(c).

Response: We are finalizing § 447.203(c)(1) and (2) as proposed, and are providing a template which will assist States with the data demonstrations which will be used to comply with the provisions of the final rule. We produced a template that was submitted to OMB for public review under control number 0938–1134 (CMS–10391) and will be submitted for approval with this final rule and a final template will be available shortly thereafter. Between the regulation text, the preamble of this final rule, and the components of the analysis template, we believe that the criteria we will use to evaluate SPA proposals are clear. We are electing not to otherwise define adequate levels of access to care under § 447.203(c) because section 1902(a)(30)(A) of the Act establishes that a measure for access is that payment rates are ''sufficient to enlist enough providers so that care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area,'' which level of access (based on whatever metric might be selected) will vary based on geographic area and the level of access available to the general population for a given service. Although CMS reserves the right to request additional information, we have developed the template to ensure that a State has a mechanism through which all of the data elements in § 447.203(c) can be gathered and presented in a straightforward format. Completing the applicable fields of the template will ensure that the State provides all required data elements of under § 447.203(c), and we will review the materials provided by the State to determine that the State has demonstrated current and anticipated levels of access under the SPA in a manner demonstrates compliance with section 1902(a)(30)(A) of the Act. CMS will review each proposal and the State-provided supporting information to ensure compliance with section 1902(a)(30)(A) of the Act and all other applicable Federal requirements before approving any SPA.

Comment: One commenter urged CMS to require States to identify the unique number of Medicaid-paid claims for beneficiaries (in addition to the full number of services required in the regulations as proposed) and the unique number of beneficiaries who received services. The commenter also stated that measuring providers' capacity to provide Medicaid services, by including an estimated number of beneficiaries who could have received the respective services, would allow States to fully assess the gaps in service and number of providers required to meet the need, noting that this assessment would be needed to assess proposed rate reductions or restructuring under proposed § 447.203(c).

Response: We are finalizing § 447.203(c)(2)(v) as proposed. The measures mentioned by the commenter are often associated with health care system capacity by looking at enrolled providers with open panels, which is very useful in addressing individual beneficiary requests for services, or finding care for individuals within a geographic area, which are the type of request we would expect to be made through the § 447.203(c)(4) mechanisms for ongoing beneficiary and provider input, and States should be using any information they can to address beneficiary needs in this way. We encourage any interested parties to engage with their State partners to ensure that real-time access to care concerns are able to be addressed by the State as applicable. Further, the provisions of § 447.203(c)(2) are designed to present an overall picture of access to care for each affected benefit category in the State's program. States are welcome to use any additional measures the State believes would be helpful to assess access to care within each affected benefit category, above and beyond the requirements of this final rule.

Comment: One commenter, citing the 3-year period where the proposed rule would require data about trends over time in the data elements proposed to be required under § 447.203(c)(2), supported the use of statistical methods that provide an accurate picture of utilization trends, but recommended that CMS use its discretion in analyzing the information States provide to meet the required data elements. The commenter stated use of a 3-year analysis as a blanket approach may not be required in periods of stable utilization.

Response: The requirements in § 447.203(c)(2)(iii), (iv), and (v) to use 3-year periods are being finalized as proposed. The purpose of the 3-year analysis is to help identify and appropriately account for statistical anomalies that might appear in the data demonstration. Further, we wanted to provide a clear expectation for what States would be required to provide and thereby remove ambiguity, which we believe existed in the previous AMRP process from the 2015 final rule with comment period. In the 2015 final rule with comment period, the previous AMRP data elements were limited to those specified in § 447.203(b)(1)(i) through 447.203(b)(1)(v), which stated that the AMRP and monitoring analysis will consider: the extent to which beneficiary needs are fully met; the availability of care through enrolled providers to beneficiaries in each geographic area, by provider type and site of service; changes in beneficiary utilization of covered services in each geographic area; the characteristics of the beneficiary population (including considerations for care, service and payment variations for pediatric and adult populations and for individuals with disabilities); and actual or estimated levels of provider payment available from other payers, including

other public and private payers, by provider type and site of service. Within the final rule with comment period, there was discussion regarding the types of data States might use to provide the required information, but much of the final rule with comment period left the specifics of the particular data elements up to the States. In this rulemaking, we proposed and are finalizing considerably more detail in § 447.203(c)(2) than was present in the previous AMRP requirements in the former 447.203(b)(1).

We are also finalizing the 3-year time frame for data analysis in this final rule in § 447.203(c)(2) because we determined that a 3-year look back on provider enrollment, beneficiary enrollment, and beneficiary utilization provides sufficient data to show trends in the data while also helping to identify data anomalies. Where the commenter stated that the use of a 3-year analysis as a blanket approach may not be required in periods of stable utilization, we disagree. The commenter's statement implies that a determination would still need to be made that utilization was stable, therefore by requiring 3 years' worth of data, CMS and the State will be able to document that utilization was stable during the prior 3 years.

Comment: One commenter opposed the requirement to provide an additional summary of the proposed payment change, as described in § 447.203(c)(2)(i), to both § 447.203(c)(1) and (2) equally. The commenter was concerned about the administrative burden these requirements place on States, which could delay SPA submission and in turn affect access to services. The commenter also specifically pointed out that SPAs for services without comparable Medicare rates would, by default, need to complete the additional analysis under § 447.203(c)(2), adding administrative burden. The commenter further recommended CMS implement a form similar to the Standard Funding Questions submitted for Medicaid payment SPAs, in which the State would be able to answer a specific set of questions that would capture the analysis that is being sought. Another commenter noted that the § 447.203(c)(2) data submission requirements may impact significant portions of Medicaid services, such as LTSS, and creates administrative burdens, disincentivizing States from modernizing rate methodologies for these services. This commenter recommended that for services without comparable Medicare rates, the initial analysis be sufficient if all other criteria of the initial review (that is, § 447.203(c)(1)(ii) and (iii)) are satisfied.

Response: States are responsible to ensure that their proposed reduction or restructuring SPA submission includes all of the information required under § 447.203(c)(1) prior to submission. If the proposed reduction or restructuring SPA does not meet all of the paragraph (c)(1) requirements, then the State would need to provide the additional analysis required under § 447.203(c)(2).

We understand that there is burden associated with these new requirements. However, as discussed in the proposed rule in section III.C.11.d, this new process will be less burdensome on States than the previous AMRP process. We also do not believe a State could adequately demonstrate access by answering a standard set of questions as suggested by the commenter, as we would be concerned that static questions may not be well suited to solicit the full scope of data elements that could be necessary to evaluate a particular proposal and therefore prefer to keep data submission requirements open-ended so that States are able to provide the most complete and appropriate information possible to stablish that their proposal satisfies section 1902(a)(30)(A) of the Act as implemented in this final rule. We anticipate providing a considerable amount of technical assistance and templates to assist States with the preparation and submission of data and analysis required under § 447.203(c)(1) and (2).

The rule does not limit a State's ability to reduce or restructure rates where the State believes it appropriate to do so, for example, based on information that the rates are not economic and efficient; rather, it ensures that States take appropriate measures to document access to care consistent with section 1902(a)(30)(A) of the Act. This includes efforts to modernize rates, as noted by the commenter, including by implementing or adjusting. VBP arrangements. While we appreciate that the analysis creates a burden for States, we note that we are replacing a process that was more burdensome. For services for which a Medicare comparator is not available, the § 447.203(c)(2) analysis is required to be submitted by the State along with the SPA proposing to reduce or restructure provider payment rates. As the § 447.203(c)(2) elements are based upon and similar to the elements included in the former § 447.203(b)(1) of the 2015 final rule with comment period, we do not believe the new requirements are more burdensome than the 2015 final rule with comment period which created the previous AMRP process. Therefore, we do not believe this final rule disincentivizes States from modernizing payment rates or methodologies as compared to the previous requirements under the 2015 final rule with comment period. For some services, particularly for those for which the State can demonstrate that the § 447.203(c)(1) requirements are met, the final rule considerably reduces burden on States.

Comment: A few commenters urged caution not to impose overly rigid restrictions on States' and CMS' ability to adjust provider payment rates, noting that State Medicaid programs are constrained by the same factors that constrain all State spending, including general economic conditions, State balanced budget requirements, and State general fund revenue. One commenter noted that requiring a significant analysis for proposed reductions in Medicaid FFS payment rates will create administrative burden for States that have been mandated by their legislatures to reduce certain rates or Medicaid spending in general. The commenter noted that in such circumstances, States have a limited number of ''levers'' at their disposal—(1) they can reduce the number of individuals enrolled in Medicaid, (2) they can impose reductions on the covered services that Medicaid beneficiaries receive, or (3) they can adjust provider payment rates. If CMS makes it impossible (or inordinately difficult) to restructure provider payment rates, then States may be forced to make other undesirable reductions to coverage and/or eligibility in order to cope with difficult economic conditions.

Response: We understand the concerns of the commenters. States are required to operate their Medicaid programs within their budgetary constraints, and we agree with the commenter that, of the options available for States facing budgetary issues, none of the available approaches typically is ideal. However, we also note that States are also obligated to comply with section 1902(a)(30)(A) of the Act, which requires States to ''assure that payments are consistent with efficiency, economy, and quality of care and are sufficient to enlist enough providers so that care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area.'' The requirement specifically references payment rates for ''care and services available under the plan'' such that the services that are covered under the State plan as both mandatory and optional

benefits, must be supported by adequate payment rates for those services. We anticipate providing a considerable amount of technical assistance to ease the administrative burden on States that both need to reduce rates and need to satisfy the requirements of § 447.203(c) to ensure that the statutory access standard is met. We are also finalizing the template we proposed to accompany these requirements and assist States with supplying the necessary data to fulfil these requirements.

Comment: One commenter recommended that CMS build into the review and approval of all SPAs, waiver amendments, and waiver renewals a process for the review of payment rates. The commenter further suggested that CMS require adequate payment rates prior to approving these amendments and renewals. The commenter indicated that this would allow CMS to review rates more often and prevent years or decades passing without rates being reviewed or adjusted.

Response: CMS reviews all SPAs affecting Medicaid payment for compliance with section 1902(a)(30)(A) of the Act. Outside of the SPA process, the corrective action plan process under § 447.203(c)(5) (which we are recodifying from § 447.203(b)(8)) is available to address access issues that may arise even when the State has not submitted a payment SPA. Further, to the extent that a State submits a SPA that updates coverage of a Medicaid service but does not amend Medicaid payment rates or the rate methodology in the Attachment 4.19A (for Medicaid inpatient services such as inpatient hospital services), 4.19B (for Medicaid non-institutional services such as physician services), or 4.19D (for Medicaid nursing facility services) State plan pages, CMS will not necessarily disapprove that SPA on the basis of insufficient Medicaid payment rates as the payment rates were not submitted along with the corresponding coverage and benefit changes for our consideration. States certainly can submit payment rate information to CMS of the State's own volition or upon request during review of a coverage SPA; however, CMS provides States in this situation (where the SPA would amend State plan coverage, but not payment, pages) with an option to instead defer review of the payment rate compliance issue through a mechanism called a ''companion letter,'' as noted in the 2010 SMDL #10–0020.[375] As noted above, even in the absence of a SPA, the corrective action plan process under § 447.203(c)(5) (which we are recodifying from § 447.203(b)(8)) is available to for CMS to take compliance action where it is aware of an access problem due to insufficient rates.

With the policies finalized throughout this final rule, we hope and anticipate that both States and the public will more closely examine existing rates. Our policies around payment rate transparency publications, comparative payment rate analyses, and payment rate disclosures will enhance opportunities to determine where an existing rate may not be supporting adequate access to care and identify for States where a need for increased payments and/or updated payment methodologies should be addressed. Our policies around the mechanisms for ongoing beneficiary and provider input in § 447.203(c)(4) and addressing access questions and remediation of inadequate access to care in § 447.203(c)(5) will further provide beneficiaries, providers, and other interested parties opportunities to engage with States on existing payment rates and their impact on beneficiaries' access to care.

d. Compliance With Requirements for State Analysis for Rate Reduction or Restructuring (§ 447.203(c)(3))

Comment: A few commenters applauded CMS for including a clear enforcement mechanism for these provisions at § 447.203(c)(3). One of the commenters specifically offered that this provision helpfully codifies CMS's longstanding authority to enforce access standards under section 1902(a)(30)(A) of the Act by denying SPAs or taking compliance action to protect access for Medicaid enrollees.

Response: We appreciate the support of the commenters.

Comment: One commenter opposed the provision at § 447.203(c)(3) that SPAs may be subject to disapproval. The commenter did not believe that approval of a SPA should be contingent on the submission of a satisfactory access analysis required under paragraphs (c)(1) and (c)(2) of this section of the final rule.

Response: The final rule requires States to submit information with their payment rate reduction or restructuring SPAs in circumstances where those types of rate changes may result in diminished access to care. We are requiring this information in order to determine compliance with section 1902(a)(30)(A) of the Act, which requires that a State plan for medical assistance ''assure that payments are consistent with efficiency, economy, and quality of care and are sufficient to enlist enough providers so that care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area.'' In the event that a State does not provide the information required under this final rule, we would be unable to determine that the State's proposal is consistent with the statute, and therefore, we would be unable to approve the SPA.

e. Public Input Process (§ 447.203(c)(4))

Comment: Several commenters supported the proposal at § 447.203(c)(4) regarding ongoing mechanisms for beneficiary and provider input on access. One commenter specifically appreciated CMS' recognition of the importance of ongoing feedback from providers and beneficiaries to the State regarding access to care and for the State to track and take account of those interactions in a meaningful way. Another commenter supported this requirement, noting that HCBS recipients enrolled in managed care are currently provided with a grievance system and indicating that FFS recipients must be afforded this same right.

Response: We appreciate the support of the commenters. We believe that the provision in § 447.203(c)(4) of this final rule provides beneficiaries with opportunities to raise their concerns through hotlines, surveys, ombudsman, grievance, and appeals processes that the State makes available, or other equivalent mechanisms offered by the State.

Comment: One commenter recommended that CMS update the public notice requirements in § 447.205 to require notice 30 days before the effective date in order to increase the transparency of the proposed SPA process and ensure that States provide interested parties with meaningful notice and opportunity to provide feedback.

Response: Changes to the public notice requirements in § 447.205 are outside the scope of this rulemaking.

Comment: One commenter recommended that CMS change ''should'' to ''must'' at § 447.203(c)(4)(ii). They pointed out that § 447.203(c)(4)(i) and (iii) under ''Mechanisms for ongoing beneficiary and provider input,'' both use ''must,'' while item (ii) notes States ''should promptly respond to public input through these mechanisms citing specific access problems, with an appropriate investigation, analysis, and

[375] SMDL #10–020, ''Revised State Plan Amendment Review Process.'' Published October 1, 2010. *https://www.medicaid.gov/sites/default/files/Federal-Policy-Guidance/downloads/SMD10020.pdf.*

response.'' The commenter stated this provision is important and that if it is not mandated on States, some States may ignore it.

Response: This provision is being finalized as proposed because this section is carried over from prior regulatory language at § 447.203(b)(7) and was proposed to be recodified without change. We acknowledge that responses to public input can take time and resources to manage, and point out that this final rule provision is carrying forward the same regulatory language from the 2015 final rule with comment period. In our experience, States do respond timely and appropriately, and therefore did not think it necessary to propose a change to this provision. We note that § 447.203(c)(4)(iii) requires States to maintain a record of data on public input and how the State responded to this input, and the record of input and responses ''will be made available to CMS upon request.''

Comment: One commenter supported requiring States to maintain a record of data on public input and how the State responded to this input, which will be made available to CMS upon request.

Response: We thank the commenter for their support and are finalizing the recodification of § 447.203(b)(7) at § 447.203(c)(4) as proposed.

Comment: One commenter stated that States should establish mechanisms for ongoing monitoring, evaluation, and feedback from beneficiaries, direct care workers, and underserved communities, and that States should create opportunities for meaningful engagement through advisory boards, focus groups, public comment periods, and partnerships with advocacy organizations. The commenter suggested that such an approach ensures that the perspectives and needs of these interested parties are considered in policy development and implementation.

Response: We are finalizing the provisions of § 447.203(c)(4) as proposed, as we believe that the mechanisms for ongoing beneficiary and provider input in paragraph (c)(4) provide opportunities for meaningful engagement by requiring States to develop some of the mechanisms suggested by the commenter. However, in addition to the mechanisms required under § 447.203(c)(4) for ongoing beneficiary and provider input, States are welcome to develop additional processes to facilitate beneficiary and provider feedback, as well as feedback from other interested parties.

Comment: One commenter stated that the mechanisms for ongoing beneficiary and provider input provision in § 447.203(c)(4) lack enforcement to get States to respond in a meaningful way to concerns about access, noting that the question of whether there is a ''deficiency'' will be left to the States themselves to determine. The commenter suggested that there needs to be some way for interested parties to elevate concerns to CMS in a formal fashion when this process does not work at the State level.

Response: The steps States must take to respond to concerns about access raised through input pursuant to § 447.203(c)(4) are detailed in § 447.203(c)(5), which we are finalizing as proposed as a recodification from § 447.203(b)(8). Section 447.203(c)(5) requires States to develop and submit a corrective action plan to CMS within 90 days of discovery of an access deficiency. The submitted action plan must aim to remediate the access deficiency within 12 months. This requirement ensures that the access deficiency is addressed in a timely manner while allowing the State time to address underlying causes of the access issue, be it payment rates, provider participation, etc. These remediation efforts can include but are not limited to: increasing payment rates; improving outreach to providers; reducing barriers to provider enrollment; providing additional transportation to services; or improving care coordination.

Because each State designs and administers its own Medicaid program within the Federal framework, we believe it is most appropriate for beneficiaries and interested parties to raise access concerns with the State directly, rather than to CMS. To the extent that a beneficiary or interested parties' access concerns are not addressed by the State adequately, we continue to urge interested parties to elevate concerns to the State through the § 447.203(c)(4) mechanisms for ongoing beneficiary and provider feedback. We further note that we are finalizing as proposed compliance actions for access deficiencies that have not been remedied under § 447.203(c)(6), as recodified from § 447.204(d).

Comment: One commenter noted that some of the proposed policies, such as strengthening the role of Medicaid beneficiaries in the policymaking process, have been pioneered at the State level.

Response: We appreciate the perspective of the commenter and agree that many of these activities have been pioneered at the State level. We often look to actions undertaken by our State partners to identify areas of policy that may be appropriate to enact at the Federal level.

f. Addressing Access Questions and Remediation of Inadequate Access to Care (§ 447.203(c)(5))

Comment: A couple commenters strongly supported the retention of § 447.203(b)(8) language concerning a State's response to problems with access to Medicaid services, which now appears in § 447.203(c)(5). However, one commenter also expressed concerns about whether that requirement has historically served to require States to make meaningful efforts to correct access issues, considering that the commenter stated there are serious problems with access to Medicaid services in many States today, which the commenter asserted CMS has also acknowledged. The commenter suggested this may be a problem of the resources that CMS devotes to enforcement and insisted that CMS needs to commit to stricter and more effective enforcement of this language.

Response: We appreciate the support of the commenters and the sentiment expressed in the comment. CMS is committed to an agency-wide strategy for oversight and enforcement of Federal requirements concerning access to care. Although the language pointed out by the commenter is unchanged from how it previously appeared in § 447.203(b)(8), we are confident the changes to § 447.203(c)(1)(iii), § 447.203(c)(2)(vi), and § 447.203(c)(4) in this final rule will enhance oversight of access and work to enhance the importance of input from beneficiaries, providers, and other interested parties.

Comment: One commenter noted that concerns around timely access may be identified by enrollees, patient advocacy organizations, or providers long before they become apparent to Medicaid managed care plans or State officials, particularly if those access challenges are specific to a disease group such as complex and rare cancers. The commenter urged CMS to clarify that, if such groups present plausible access concerns to State officials, that can be sufficient to make the State aware of the access issue, such that the State must submit a proposed remedy plan to CMS within 90 days of receiving a report of such concern.

Response: We encourage beneficiaries, patient advocacy organizations, and providers to work closely with States in order to raise issues such as inability to connect patients to care, or inability to find an appointment within the patient's geographic area, through the mechanisms for ongoing beneficiary and provider input the State established under § 447.203(c)(4). Section

447.203(c)(5), which was formerly § 447.203(b)(8), then requires States to submit a corrective action plan to remedy the access deficiency within 90 days from when it is identified to the State. We agree with the commenters that beneficiaries, patient advocacy organizations, and providers raising plausible access concerns to State officials would be considered as identifying an access deficiency when raised to the State through appropriate State channels.

g. Compliance Actions for Access Deficiencies (§ 447.203(c)(6))

Comment: One commenter supported the proposal to clarify that CMS may use the procedures set forth in § 430.35 when necessary to ensure compliance with access requirements.

Response: We appreciate the support of the commenter. We are finalizing as proposed to recodify § 447.204(d) at § 447.203(c)(6).

After consideration of public comments, we are finalizing the provisions of § 447.203(c) as proposed aside from minor typographical corrections.

4. Medicaid Provider Participation and Public Process To Inform Access to Care (§ 447.204)

In § 447.204, we proposed conforming changes to reflect proposed changes in § 447.203, if finalized. These conforming edits are limited to § 447.204(a)(1) and (b) and are necessary for consistency with the newly proposed changes in § 447.203(b). The remaining paragraphs of § 447.204 would be unchanged.

Specifically, we proposed to update the language of § 447.204(a)(1), which previously referenced § 447.203, to reference § 447.203(c). Because we proposed wholesale revisions to § 447.203(b) and the addition of § 447.203(c), the proposed data and analysis referenced in the previous citation to § 447.203 would be located more precisely in § 447.203(c). Previous § 447.204(b)(1) referred to the State's most recent AMRP performed under previous § 447.203(b)(6) for the services at issue in the State's payment rate reduction or payment restructuring SPA; we proposed to remove this requirement to align with our proposal to rescind the previous AMRP requirements in § 447.203(b). Previous § 447.204(b)(2) and (3) required the State to submit with such a payment SPA an analysis of the effect of the change in the payment rates on access and a specific analysis of the information and concerns expressed in input from affected interested parties; we noted our belief that the previous requirements are addressed in proposed § 447.203(c)(1) and (2), as applicable. We explained our belief that the continued inclusion of these paragraphs (b)(2) and (3) would be unnecessary or redundant in light of the proposals in § 447.203(c)(1) and (2), if finalized. The objective processes proposed under § 447.203(c)(1) and (2), which would require States to submit quantitative and qualitative information with a proposed payment rate reduction or payment restructuring SPA, would be sufficient for us to obtain the information necessary to assess the State's proposal with the same or similar information as previously required under § 447.204(b)(2) and (3).

With the removal of § 447.204(b)(1) through (b)(3), we proposed to revise § 447.204(b) to read, ''[t]he State must submit to us with any such proposed State plan amendment affecting payment rates documentation of the information and analysis required under § 447.203(c) of this chapter.''

Finally, as noted in the previous section, we proposed to remove and relocate § 447.204(d), as we believed the nature of that provision is better suited to codification in § 447.203(c)(6).

We solicited comments on the proposed amendments to § 447.204. We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the conforming edits to § 447.204. Another commenter specifically supported the proposal to make technical changes to § 447.204(a) to cross-reference the analysis that CMS proposes to require under § 447.203(c).

Response: We appreciate the support of the commenters.

Comment: One commenter recommended that CMS amend § 447.204(a)(2) to specifically include reference to the interested parties advisory group described in § 447.203(b)(6).

Response: We appreciate the recommendation of the commenter. We are confident that the mechanisms for ongoing beneficiary and provider input in § 447.203(c)(4) of the final rule will provide interested parties opportunity for meaningful input on State rate actions.

After consideration of public comments, we are finalizing the provisions of § 447.204 as proposed.

III. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*), we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a ''collection of information'' requirement is submitted to the Office of Management and Budget (OMB) for review and approval. For the purpose of the PRA and this section of the rule, collection of information is defined under 5 CFR 1320.3(c) of the PRA's implementing regulations.

To fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the PRA requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

In the proposed rule (88 FR 28037 through 28066) we solicited public comment on each of these issues for the following sections of the proposed rule (CMS–2442–P, RIN 0938–AU68) that contained collection of information requirements. Comments were received with respect to ICR #4 (Incident Management System). A summary of the comment and our response is set out below.

A. Wage Estimates

States and the Private Sector: To derive average costs, we used data from the U.S. Bureau of Labor Statistics' (BLS') May 2022 [376] National Occupational Employment and Wage Estimates for all salary estimates (*http://www.bls.gov/oes/2022/may/oes_nat.htm*). In this regard, Table 2 presents BLS' mean hourly wage, our estimated cost of fringe benefits and other indirect costs [377] (calculated at 100 percent of salary), and our adjusted hourly wage.

[376] In this final rule, we used the most recently available data, May 2022, from the BLS. This is an update from the proposed rule, (88 FR 27960), which used data from the BLS' May 2021 National Occupational Employment and Wage Estimates for salary estimates.

[377] *https://aspe.hhs.gov/reports/valuing-time-us-department-health-human-services-regulatory-impact-analyses-conceptual-framework.*

TABLE 2: National Occupational Employment and Wage Estimates

Occupation Title	Occupational Code	Mean Hourly Wage ($/hr)	Fringe Benefits and Other Indirect Costs($/hr)	Adjusted Hourly Wage ($/hr)
Administrative Services Manager	11-3012	55.59	55.59	111.18
Business Operations Specialist	13-1000	40.04	40.04	80.08
Business Operations Specialist, All Other	13-1199	39.75	39.75	79.50
Chief Executive	11-1011	118.48	118.48	236.96
Compensation, Benefits, and Job Analyst	13-1141	36.50	36.50	73.00
Computer and Information Analyst	15-1210	53.15	53.15	106.30
Computer Programmer	15-1251	49.42	49.42	98.84
Data Entry Keyers	43-9021	18.26	18.26	36.52
General and Operations Manager	11-1021	59.07	59.07	118.14
Human Resources Manager	11-3121	70.07	70.07	140.14
Management Analyst	13-1111	50.32	50.32	100.64
Social and Community Service Managers	11-9151	38.13	38.13	76.26
Social Science Research Assistants	19-4061	27.77	27.77	55.54
Statistician	15-2041	50.73	50.73	101.46
Survey Researcher	19-3022	31.94	31.94	63.88
Training and Development Specialist	13-1151	33.59	33.59	67.18

For States and the private sector, the employee hourly wage estimates have been adjusted by a factor of 100 percent. This is necessarily a rough adjustment, both because fringe benefits and other indirect costs vary significantly across employers, and because methods of estimating these costs vary widely across studies. Nonetheless, we believe that doubling the hourly wage to estimate total cost is a reasonably accurate estimation method.

Beneficiaries: We believe that the costs for beneficiaries undertaking administrative and other tasks on their own time is a post-tax hourly wage rate of $20.71/hr.

We adopt an hourly value of time based on after-tax wages to quantify the opportunity cost of changes in time use for unpaid activities. This approach matches the default assumptions for valuing changes in time use for individuals undertaking administrative and other tasks on their own time, which are outlined in an ASPE report on ''Valuing Time in U.S. Department of Health and Human Services Regulatory Impact Analyses: Conceptual Framework and Best Practices.'' [*] We start with a measurement of the usual weekly earnings of wage and salary workers of $998. [**] We divide this weekly rate by 40 hours to calculate an hourly pre-tax wage rate of $24.95. We adjust this hourly rate downwards by an estimate of the effective tax rate for median income households of about 17 percent, resulting in a post-tax hourly wage rate of $20.71. We adopt this as our estimate of the hourly value of time for changes in time use for unpaid activities.[378] [379] Unlike our State and private sector wage adjustments, we are not adjusting beneficiary wages for fringe benefits and other indirect costs since the individuals' activities, if any, would occur outside the scope of their employment.

B. Adjustment to State Cost Estimates

To estimate the financial burden on States, it was important to consider the Federal government's contribution to the cost of administering the Medicaid program. For medical assistance services, the Federal government provides funding based on an FMAP that is established for each State, based on the per capita income in the State as compared to the national average. FMAPs range from a minimum of 50 percent in States with higher per capita incomes to a maximum of 83 percent in States with lower per capital incomes. For Medicaid, all States receive a 50 percent Federal matching rate for most administration expenditures. States also receive higher Federal matching rates for certain systems improvements, redesign, or operations. As such, and taking into account the Federal contribution to the costs of administering the Medicaid programs for purposes of estimate State burden with respect to collection of information, we elected to use the higher end estimate that the States would contribute 50 percent of the costs, even though the burden would likely be smaller.

C. Information Collection Requirements (ICRs)

1. ICRs Regarding Medicaid Advisory Committee and Beneficiary Advisory Council (§ 431.12)

The following changes will be submitted to OMB for approval under

[378] Department of Health and Human Services, Office of the Assistant Secretary for Planning and Evaluation. 2017. ''Valuing Time in U.S. Department of Health and Human Services Regulatory Impact Analyses: Conceptual Framework and Best Practices.'' *https://aspe.hhs.gov/reports/valuing-time-us-department-health-human-services-regulatory-impact-analyses-conceptual-framework.*

[379] U.S. Bureau of Labor Statistics. Employed full time: Median usual weekly nominal earnings (second quartile): Wage and salary workers: 16 years and over [LEU0252881500A], retrieved from FRED, Federal Reserve Bank of St. Louis; *https://fred.stlouisfed.org/series/LEU0252881500A.* Annual Estimate, 2021.

control number 0938–TBD (CMS–10845).

Currently, most States have an established Medical Care Advisory Committee (MCAC), which we are renaming the Medicaid Advisory Committee (MAC), whereby each State has the discretion on how to operate its MCAC. A small number of States also use consumer advisory subcommittees as part of their current MCACs, similar to the Beneficiary Advisory Council (BAC) in § 431.12. We reviewed data from 10 States to determine the current status of MCACs and to determine the burden needed to comply with the § 431.12 requirements across 50 States and the District of Columbia.

Under the provision, States will be required to:

- Select members to the MAC and BAC on a rotating and continuous basis.
- Develop and publish a process for MAC and BAC member recruitment and selection of MAC and BAC leadership.
- Develop and publish:

++ Bylaws for governance of the MAC.

++ A current list of MAC and BAC membership.[380]

++ Past meeting minutes, including a summary from the most recent BAC Meeting.

- Develop, publish, and implement a regular meeting schedule for the MAC and BAC.

Additionally, the State must provide and post to its website an annual report written by the MAC to the State describing its activities, topics discussed, recommendations. The report must also include actions taken by the State based on the MAC recommendations.

The requirements will require varying levels of effort by States. For example, a handful of States already have a BAC. However, we believe that most States will be required to create new structures and processes. The majority of States reviewed are already meeting some of the new requirements for MACs, such as publication of meeting schedules, publication of membership lists, and publication of bylaws. However, all MAC bylaws will need to be updated to meet the new requirements. Our review showed that most States are not currently publishing their recruitment and appointment processes for MAC members, and those that did will need to update these processes to meet the new requirements. About half of the States reviewed published meeting minutes with responses and State actions, as required under the new requirements. However, only one State reviewed published an annual report, so this will likely be a new requirement for almost all State MACs. States will not need to modify or build reporting systems to create and post these annual reports. Due to the wide range in the use and maturity of current MCACs across the States, we are providing a range of estimates to address these variations.

We recognize that some States, which do not currently operate a MCAC, will have a higher burden to implement the requirements of § 431.12 to shift to the MAC and BAC structure. However, our research showed that the majority of States do have processes and procedures for their current MCACs, which will require updating, but at a much lower burden. Therefore, we believe it is appropriate to offer average low and high burden estimates.

For a low estimate, we estimate it will take a team of business operations specialists 120 hours at $79.50/hr to develop and publish the processes and report. In aggregate, we estimate an annual burden of 6,120 hours (120 hr/response × 51 responses) at a cost of $486,540 (6,120 hr × $79.50/hr). Taking into account the Federal administrative match of 50 percent, the requirement will cost States $243,270 ($486,540 × 0.50). We also estimate that it will take 40 hours at $140.14/hr for a human resources manager to review and approve bylaws and help with recruitment and appointment and selection of MAC and BAC leadership which will occur every 2 years. In aggregate, we estimate a biennial burden of 2,040 hours (40 hr/response × 51 responses) at a cost of $285,885 (2,040 hr × $140.14/hr). Taking into account the Federal administrative match of 50 percent, the requirement will cost States $142,942 ($285,885 × 0.50). Additionally, we estimate it will take 10 hours at $118.14/hr for an operations manager to review the updates and prepare the required reports for annual publication. In aggregate, we estimate an annual burden of 510 hours (10 hr/response × 51 responses) at a cost of $60,251 (510 hr × $118.14/hr). Taking into account the Federal administrative match of 50 percent, the requirement will cost States $30,125 ($60,251 × 0.50).

We derived the high estimate by doubling the hours from the low estimate. We used this approach because all States already have a MCAC requirement which means the type of work being discussed is already underway in most States and that there is reference point for the type of work described. For example, we estimate it will take a team of business operations specialists 240 hours at $79.50/hr to develop and publish the processes and annual report. In aggregate, we estimate an annual burden of 12,240 hours (240 hr/response × 51 responses) at a cost of $973,080 (12,240 hr × $79.50/hr). Taking into account the Federal administrative match of 50 percent, the requirement will cost States $486,540 ($973,080 × 0.50). We also estimate that it will take 80 hours at $140.14/hr for a human resources manager to review and approve bylaws and help with recruitment and appointment and selection of MAC and BAC leadership which will occur every 2 years. In aggregate, we estimate a biennial burden of 4,080 hours (80 hr/response × 51 responses) at a cost of $571,771 (4,080 hr × $140.14). Taking into account the Federal administrative match of 50 percent, the requirement will cost States $285,885 ($571,771 × 0.50). Additionally, we estimate it will take 20 hours at $118.14/hr for an operations manager to review the updates and prepare the required annual report for publication. In aggregate, we estimate an annual burden of 1,020 hours (20 hr/response × 51 responses) at a cost of $120,503 (1,020 hr × $118.14/hr). Taking into account the Federal administrative match of 50 percent, the requirement will cost States $60,251 ($120,503 × 0.50).

We have summarized the total burden in Table 3. To be conservative and not underestimate our burden analysis, we are using the high end of our estimates to score the PRA-related impact of the finalized requirements.

[380] BAC members may choose to not have their names listed on the publicly posted membership list.

TABLE 3: Summary of High Burden Estimates for Medical Care Advisory Committee Requirements

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
§ 431.12 (develop/ publish report)	51	51	Annual	240	12,240	79.50	973,080	486,540
§ 431.12 (review/approve bylaws)	51	51	Biennial	80	4,080	140.14	571,771	285,885
§ 431.12 (review updates/prepare reports)	51	51	Annual	20	1,020	118.14	120,503	60,251
Total	51	153	varies	Varies	17,340	varies	1,665,354	832,676

While a few commenters made general or high-level comments regarding concerns about burden (which are addressed in section II.A of this final rule) we did not receive specific comments on this ICR. The general comments we received were about the overall burden related to the MAC and BAC provisions and not about the burden estimated in the ICR Table 3 nor the information outlined in this section. In this rule we are finalizing the MAC and BAC reporting requirements and burden estimates as proposed.

2. ICRs Regarding Person-Centered Service Plans (§ 441.301(c)(3); Applied to Other HCBS Authorities at §§ 441.450(c), 441.540(c), and 441.725(c), and 438.72(b) and to Managed Care at § 438.72(b))

The following changes will be submitted to OMB for approval after this final rule is finalized and our survey instrument has been developed. The survey instrument and burden will be made available to the public for their review under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices. In the meantime, we are setting out our burden figures (see below) as a means of scoring the impact of this rule's changes. The availability of the survey instrument and more definitive burden estimates will be announced in both **Federal Register** notices. The CMS ID number for that collection of information request is CMS–10854 (OMB control number 0938–TBD). Since this will be a new collection of information request, the OMB control number has yet to be determined (TBD) but will be issued by OMB upon their approval of the new collection of information request.

Section 1915(c)(1) of the Act requires that services provided through section 1915(c) waiver programs be provided under a written plan of care (hereinafter referred to as ''person-centered service plans'' or ''service plans''). Existing Federal regulations at § 441.301(c)(1) through (3) address the person-centered planning process and include a requirement at § 441.301(c)(3) that the person-centered service plan be reviewed and revised upon reassessment of functional need, at least every 12 months, when the individual's circumstances or needs change significantly or at the request of the individual.

In 2014, we released guidance for section 1915(c) waiver programs [381] (hereinafter the ''2014 guidance'') that included expectations for State reporting of State-developed performance measures to demonstrate compliance with section 1915(c) of the Act and the implementing regulations in part 441, subpart G through six assurances, including assurances related to person-centered service plans. The 2014 guidance also indicated that States should conduct systemic remediation and implement a Quality Improvement Project when they score below an 86 percent threshold on any of their performance measures.

In this rule, we are finalizing a new requirement at § 441.301(c)(3)(i) to specify that States demonstrate that the person-centered service plan **for every individual** is reviewed, and revised, as appropriate, based upon the reassessment of functional need as required by § 441.365(e), at least every 12 months, when the individual's circumstances or needs change significantly, or at the request of the individual. At § 441.301(c)(3)(ii)(A) we are finalizing a requirement that States demonstrate that a reassessment of functional need was conducted at least annually for at least 90 percent of individuals continuously enrolled in the waiver for at least 365 days. We are also finalizing, at new § 441.301(c)(3)(ii)(B), that States demonstrate that they reviewed for every individual the person-centered service plan and revised the plan as appropriate based on the results of the required reassessment of functional need at least every 12 months for at least 90 percent of individuals continuously enrolled in the waiver for at least 365 days.

We are finalizing the application of these requirements to services delivered under FFS or managed care delivery systems. Further, we are finalizing the application of the finalized requirements sections 1915(j), (k), and (i) State plan services by cross-referencing at §§ 441.450(c), 441.540(c), and 441.725(c), respectively.

In addition, we also proposed (and are finalizing) several changes to current regulations for person-centered planning at § 441.301(c)(1) to reposition, clarify, and remove extraneous language from § 441.301(c)(1).

We are finalizing the person-centered planning requirements at § 441.301(c)(1) and (3) without substantive changes. Below are our burden estimates for these requirements.

[381] Modifications to Quality Measures and Reporting in § 1915(c) Home and Community-Based Waivers. March 2014. Accessed at *https://www.hhs.gov/guidance/sites/default/files/hhs-guidance-documents/3-cmcs-quality-memo-narrative_0_2.pdf.*

a. One Time Person-Centered Service Plan Requirements: State (§ 441.301(c)(3))

As discussed above, at new § 441.301(c)(3)(ii)(A), we are finalizing a requirement that States demonstrate that a reassessment of functional need was conducted at least annually for at least 90 percent of individuals continuously enrolled in the waiver for at least 365 days. We are also finalizing, at § 441.301(c)(3)(ii)(B), a requirement that States demonstrate for every individual that they reviewed the person-centered service plan and revised the plan as appropriate based on the results of the required reassessment of functional need at least every 12 months for at least 90 percent of individuals continuously enrolled in the waiver for at least 365 days. The burden associated with the person-centered service plan reporting requirements at § 441.301(c)(3)(ii)(A) and (B) affects the 48 States (including the District of Columbia) that deliver HCBS under sections 1915(c), (i), (j), or (k) authorities.[382] We anticipate that States will need to update State policy, as well as oversight and monitoring processes related to the codification of the new 90 percent minimum performance level associated with these requirements.

However, because we are codifying a minimum performance level associated with existing regulations but not otherwise changing the regulatory requirements under § 441.301(c)(3)(ii)(A) and (B), we do not estimate any additional burden related to those requirements. We also hold that there is no additional burden associated with repositioning, clarifying, and removing extraneous language from the regulatory text at § 441.301(c)(1). In this regard we are only estimating burden for updating State policy and oversight and monitoring processes related to the codification of the finalized 90 percent minimum performance level requirement.

We estimate it will take 8 hours at $111.18/hr for an administrative services manager to update State policy and oversight and monitoring processes, 2 hours at $118.14/hr for a general and operations manager to review and approve the updates to State policy and oversight and monitoring processes, and 1 hour at $236.96/hr for a chief executive to review and approve the updates to State policy and oversight and monitoring processes. In aggregate, we estimate a one-time burden of 528 hours (48 States × [8 hr + 2 hr + 1 hr]) at a cost of $65,409 (48 States × [(8 hr × $111.18/hr) + (2 hr × $118.14/hr) + (1 hr × $236.96/hr)]). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost is $32,704 ($65,409 × 0.50).

TABLE 4: Summary of One-Time Burden Estimates for States for the Person-Centered Service Plan Requirements at § 441.301(c)(3)

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
Update State policy and oversight and monitoring processes	48	48	Once	8	384	111.18	42,693	21,347
Review and approval of State policy update at the management level	48	48	Once	2	96	118.14	11,341	5,671
Review and approval of State policy update at the chief executive level	48	48	Once	1	48	236.96	11,374	5,687
Total	48	48	Once	Varies	528	Varies	65,409	32,704

b. One Time Person-Centered Service Plan Requirements: Managed Care Plans (§ 441.301(c)(3))

As discussed above, we are requiring managed care delivery systems to also comply with the requirements finalized at § 441.301(c)(3) to demonstrate that a reassessment of functional need was conducted at least annually for at least 90 percent of individuals continuously enrolled in the waiver for at least 365 days and to demonstrate that they reviewed the person centered service plan and revised the plan as appropriate based on the results of the required reassessment of functional need at least every 12 months for at least 90 percent of individuals continuously enrolled in the waiver for at least 365 days. As with the burden estimate for States, we do not estimate an ongoing burden related to the codification of a minimum performance level associated with the requirements at § 441.301(c)(3).

For managed care plans, we estimate it would take 5 hours at $111.18/hr for an administrative services manager to update organizational policy and oversight and monitoring processes related to the codification of a new minimum performance level and 1 hour at $236.96/hr for a chief executive to review and approve the updates to organizational policy and oversight and monitoring processes. In aggregate, we estimate a one-time burden of 966 hours (161 managed care plans × [5 hr + 1 hr]) at a cost of $127,650 (161 managed care plans × [(5 hr × $111.18/hr) + (1 hr × $236.96/hr)]).

[382] Arizona, Rhode Island, and Vermont do not have HCBS programs under any of these authorities.

TABLE 5: Summary of One-Time Burden Estimates for Managed Care Plans for the Person-Centered Service Plan Requirements at § 441.301(c)(3)

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
Update organizational policy and oversight and monitoring processes	161	161	Once	5	805	111.18	89,500	n/a
Review and approval of policy and oversight and monitoring processes	161	161	Once	1	161	236.96	38,151	n/a
Total	161	161	Once	Varies	966	Varies	127,650	n/a

3. ICRs Regarding Grievance System (§ 441.301(c)(7); Applied to Other HCBS Authorities at §§ 441.464(d)(2)(v), 441.555(b)(2)(iv), and 441.745(a)(1)(iii))

The following changes will be submitted to OMB for approval after this final rule is finalized and when our reporting tools and survey instrument has been developed. The survey instrument and burden will be made available to the public for their review under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices. In the meantime, we are setting out our burden figures (see below) as a means of scoring the impact of this rule's changes. The availability of the survey instrument and more definitive burden estimates will be announced in both **Federal Register** notices. The CMS ID number for that collection of information request is CMS–10854 (OMB control number 0938–TBD). Since this will be a new collection of information request, the OMB control number has yet to be determined (TBD) but will be issued by OMB upon their approval of the new collection of information request.

At § 441.301(c)(7), we are finalizing requirements that States establish grievance procedures for Medicaid beneficiaries receiving section 1915(c) waiver program services through a FFS delivery system to file a complaint or expression or dissatisfaction related to the State's or a provider's compliance with the person-centered planning and service plan requirements at § 441.301(c)(1) through (3) and the HCBS settings requirements at § 441.301(c)(4) through (6).

We are finalizing at § 441.301(c)(7)(vii) a list of recordkeeping requirements related to grievances. Specifically, at § 441.301(c)(7)(vii)(A), we are finalizing that States maintain records of grievances and review the information as part of their ongoing monitoring procedures. At § 441.301(c)(7)(vii)(B)(*1*) through (*7*), we are finalizing that the record of each grievance must contain the following information at a minimum: a general description of the reason for the grievance, the date received, the date of each review or review meeting (if applicable), resolution and date of the resolution of the grievance (if applicable), and the name of the beneficiary for whom the grievance was filed. Further, at § 441.301(c)(7)(vii)(C), we are finalizing that grievance records be accurately maintained and in a manner that would be available upon our request.

We are finalizing the application of these requirements in § 441.301(c)(7) to sections 1915(j), (k), and (i) State plan services by cross-referencing at §§ 441.464(d)(2)(v), 441.555(b)(2)(iv), and 441.745(a)(1)(iii), respectively. However, to avoid duplication with the grievance requirements for managed care plans at part 438, subpart F, we did not propose to apply these requirements to managed care delivery systems.

We are finalizing the grievance process requirements we proposed at § 441.301(c)(7) with one substantive change. As discussed in section II.B.2. of this final rule, we are not finalizing the requirements we proposed at § 441.301(c)(7)(iv)(B) that States must have a 14-day expedited resolution process in addition to a standard 90-day resolution process for grievances. We do not anticipate that this change affects the burden estimates, as it does not change the recordkeeping requirements finalized at § 441.301(c)(7)(vii). In general, even with this change, the States will still have to perform all activities described below in order to establish and maintain the standard grievance process outlined in § 441.301(c)(7). Additionally, as we encourage States to develop their own expedited grievance process, we are calculating the burden estimate with the assumption that all States will choose to create their own version of an expedited resolution process within the grievance process required at § 441.301(c)(7).

We are finalizing the other grievance process proposals without substantive changes. Burden estimates for our finalized grievance process requirements are below.

a. States

The burden associated with the grievance system requirements finalized at § 441.301(c)(7) affect the 48 States (including the District of Columbia) that deliver at least some HCBS under sections 1915(c), (i), (j), or (k) authorities through FFS delivery systems.[383] [384]

[383] Arizona, Rhode Island, and Vermont do not have HCBS programs under any of these authorities.

[384] While some States deliver the vast majority of HCBS through managed care delivery systems, States would be subject to these requirements if they deliver any HCBS under section 1915(c), (i), (j), or (k) authorities through a fee-for service delivery system. Based on data showing that the percent of LTSS expenditures delivered through managed LTSS delivery systems varied between 3 percent and 93 percent in 2019 across all States with managed LTSS, we assume that all States deliver at least some HCBS through fee-for-service delivery systems (*https://www.medicaid.gov/medicaid/long-term-services-supports/downloads/ltssexpenditures2019.pdf*). We anticipate that the burden associated with implementing these requirements will be lower for States that deliver the vast majority of HCBS through managed care delivery systems.

While some States may have existing grievance systems in place for their FFS delivery systems, we were unable to determine the number of States with existing grievance systems or whether those grievance systems would meet the finalized requirements at § 441.301(c)(7). As a result, we do not take this information into account in our burden estimate calculated below. We estimate a one-time and ongoing burden to implement these requirements at the State level.

Specifically, States will have to: (1) develop and implement policies and procedures; (2) establish processes and data collection tools for accepting, tracking, and resolving, within required timeframes, beneficiary grievances, including processes and tools for: providing beneficiaries with reasonable assistance with filing a grievance, for accepting grievances orally and in writing, for reviewing grievance resolutions with which beneficiaries are dissatisfied, and for providing beneficiaries with a reasonable opportunity to present evidence and testimony and make legal and factual arguments related to their grievance; (3) inform beneficiaries, providers, and subcontractors about the grievance system; and (4) develop beneficiary notices; and (5) collect and maintain information on each grievance, including the reason for the grievance, the date received, the date of each review or review meeting (if applicable), resolution and date of the resolution of the grievance (if applicable), and the name of the beneficiary for whom the grievance was filed.

i. One-Time Grievance System Requirements: States (§ 441.301(c)(7))

With regard to the one-time requirements, we estimate it will take: 240 hours at $111.18/hr for an administrative services manager to draft policy and procedure content, prepare notices and informational materials, draft rules for publication, and conduct public hearings; 100 hours at $98.84/hr for a computer programmer to build, design, and operationalize internal systems for data collection and tracking; 120 hours at $67.18/hr for a training and development specialist to develop and conduct training for staff; 40 hours at $118.14/hr for a general and operations manager to review and approve policies, procedures, rules for publication, notices, and training materials; and 20 hours at $236.96/hr for a chief executive to review and approve all operations associated with this collection of information requirement. In aggregate, we estimate a one-time burden of 24,960 hours (520 hr × 48 States) at a cost of $2,596,493 (48 States × [(240 hr × $111.18/hr) + (100 hr × $98.84/hr) + (120 hr × $67.18/hr) + (40 hr × $118.14/hr) + (20 hr × $236.96/hr)]). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $1,298,246 ($2,596,493 × 0.50).

TABLE 6: Summary of One-Time Burden Estimates for States for the Grievance System Requirements at § 441.301(c)(7)

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
Draft policy and procedures, rules for publication; prepare beneficiary notices, informational materials; conduct public hearings	48	48	Once	240	11,520	111.18	1,280,794	640,397
Build, design, operationalize internal systems for data collection and tracking	48	48	Once	100	4,800	98.84	474,432	237,216
Develop and conduct training for staff	48	48	Once	120	5,760	67.18	386,957	193,478
Review and approve policies, procedures, rules for publication, notices, and training materials at the management level	48	48	Once	40	1,920	118.14	226,829	113,415
Review and approve all operations in collection of information requirement at the chief executive level	48	48	Once	20	960	236.96	227,482	113,741
TOTAL	48	48	Once	Varies	24,960	Varies	2,596,493	1,298,246

ii. Ongoing Grievance System Requirements: States (§ 441.301(c)(7))

With regard to the on-going requirements, we estimate that approximately 2 percent of 1,460,363 Medicaid beneficiaries who receive HCBS under section 1915(c), (i), (j), or (k) authorities through FFS delivery systems annually [385] will file a grievance or appeal (29,207 grievances = 1,460,363 × 0.02).[386] We estimate it will take: 0.333 hours or 20 minutes at $79.50/hr for a business operations specialist to collect the required information for each grievance from the beneficiary (29,207 total grievances), 0.166 hours or 10 minutes at $36.52/hr for a data entry worker to record the required information on each grievance (29,207 total grievances), 20 hours at $98.84/hr for a computer programmer to maintain the system for storing information on grievances (48 States), 12 hours at $118.14/hr for a general and operations manager to monitor and oversee the collection and maintenance of the required information (48 States), and 2 hours at $236.96/hr for a chief executive to review and approve all operations associated with this collection of information requirement (48 States). In aggregate, we estimate an on-going burden of 16,206 hours at a cost of $1,135,949 ([(29,207 grievances × 0.333 hr × $79.50/hr) + (29,207 grievances × 0.166 hr × $36.52/hr) + (48 States × 20 hr × $98.84/hr) + (48 States × 12 hr × $118.14/hr) + (48 States × 2 hr × $236.96/hr)]). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost is $567,975 ($1,135,949 × 0.50) per year.

TABLE 7: Summary of Ongoing Burden for States for the Grievance System Requirements at § 441.301(c)(7)

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
Collect required grievance data and information	48	29,207	On occasion	0.333	9,726	79.50	773,217	386,609
Enter required grievance data and information into data collection and tracking system	48	29,207	On occasion	0.166	4,848	36.52	177,049	88,525
Perform maintenance on system for storing data and information on grievances	48	48	Annually	20	960	98.84	94,886	47,443
Monitor and oversee the collection and maintenance of the required information at the management level	48	48	Annually	12	576	118.14	68,049	34,025
Review and approve all operations associated with collection of information requirement at the executive level	48	48	Annually	2	96	236.96	22,748	11,374
TOTAL	48	29,255 (29,207 + 48)	Varies	Varies	16,206	Varies	1,135,949	567,975

[385] *https://www.medicaid.gov/medicaid/long-term-services-supports/downloads/ltss-user-brief-2019.pdf.*

[386] We based this percent on an estimate of the percent of Medicaid beneficiaries that file appeals and grievances in Medicaid managed care in Supporting Statement A for the information collection requirements for the Medicaid Managed Care file rule (CMS–2408–F, RIN 0938–AT40). See *https://omb.report/icr/202205-0938-015/doc/121334100* for more information.

4. ICRs Regarding Incident Management System (§ 441.302(a)(6); Applied to Other HCBS Authorities at §§ 441.464(e), 441.570(e), 441.745(a)(1)(v), and to Managed Care at § 438.72(b))

The following changes will be submitted to OMB for approval after this final rule is finalized and our survey instrument has been developed. The survey instrument and burden will be made available to the public for their review under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices. In the meantime, we are setting out our burden figures (see below) as a means of scoring the impact of this rule's changes. The availability of the survey instrument and more definitive burden estimates will be announced in both **Federal Register** notices. The CMS ID number for that collection of information request is CMS–10854 (OMB control number 0938–TBD). Since this would be a new collection of information request, the OMB control number has yet to be determined (TBD) but will be issued by OMB upon their approval of the new collection of information request.

At § 441.302(a)(6), we are finalizing a requirement that States provide an assurance that they operate and maintain an incident management system that identifies, reports, triages, investigates, resolves, tracks, and trends critical incidents. At § 441.302(a)(6)(i)(A), we are finalizing that States must establish a minimum standard definition of a critical incident. At § 441.302(a)(6)(i)(B) we are finalizing a requirement that States must have electronic incident management systems that, at a minimum, enable electronic collection, tracking (including tracking of the status and resolution of investigations), and trending of data on critical incidents.

We are finalizing the requirements we proposed at § 441.302(a)(6)(i) without substantive changes, but we are finalizing a change to the applicability date for the electronic management system requirement. We had proposed that States would need to comply with the requirements at § 441.302(a)(6) in 3 years. We are finalizing the 3-year applicability date for the requirements at § 441.302(a)(6) with the exception of the electronic incident management system finalized at § 441.302(a)(6)(i)(B), which has a finalized applicability date of 5 years. We do not anticipate that this change will affect the activities described in these burden estimates; the primary effect of this change is to grant States two additional years in which to develop electronic incident management systems, for which they will perform the same activities.

At § 441.302(a)(6)(i)(C), we finalized that States require providers to report to States any critical incidents that occur during the delivery of section 1915(c) waiver program services as specified in a waiver participant's person-centered service plan or are a result of the failure to deliver authorized services. At § 441.302(a)(6)(i)(D), we finalized that States must use claims data, Medicaid Fraud Control Unit data, and data from other State agencies such as Adult Protective Services or Child Protective Services to the extent permissible under applicable State law to identify critical incidents that are unreported by providers and occur during the delivery of section 1915(c) waiver program services, or as a result of the failure to deliver authorized services. At § 441.302(a)(6)(i)(E) we finalized a new requirement that the State must ensure medical records being used as part of the incident management system are handled in compliance with 45 CFR 164.510(b) to ensure that records with protected health information used during critical incident review are obtained and used with beneficiaries' consent. We are finalizing at § 441.302(a)(6)(i)(F) a requirement that States share information on the status and resolution of investigations if the State refers critical incidents to other entities for investigation. We are finalizing at § 441.302(a)(6)(i)(G) a requirement that States separately investigate critical incidents if the investigative agency fails to report the resolution of an investigation within State-specified timeframes. We are finalizing at § 441.302(a)(6)(i)(H) a requirement that States meet the reporting requirements at § 441.311(b)(1) related to the performance of their incident management systems.

At § 441.302(a)(6)(iii), we are the application of these requirements to services delivered under FFS or managed care delivery systems. We also finalized the application of the requirements finalized at § 441.302(a)(6) to sections 1915(j), (k), and (i) State plan services by cross-referencing at §§ 441.570(e), 441.464(e), and 441.745(a)(1)(v), respectively.

With the exception of the change to the effective date for electronic incident management systems noted above, we are finalizing the requirements described herein without substantive modification. Burden estimates for these requirements are discussed below.

We received one comment on the proposed burden estimate for the incident management provision. This comment, and our response, is summarized below.

Comment: One commenter noted that when their State investigated developing a single electronic incident management system in 2014, the State estimated the cost of consolidating multiple State systems into a single system would be $100 million and believed that it would be even more expensive to create such a system now.

Response: We thank the commenter for their feedback. Without more detailed information, provided, we decline to update our burden estimate for the incident management ICR based on this comment. We believe most States that require upgrades to their system could do so within the costs that we estimated; we will provide technical assistance on an as-need basis for States to identify efficient ways to upgrade their systems.

We also note that according to the finalized requirements in § 441.302(a)(6), States must have electronic critical incident systems that, at a minimum, enable electronic collection, tracking (including of the status and resolution of investigations), and trending of data on critical incidents. We are recommending, but not requiring, that States develop a single electronic critical incident system for all of their HCBS programs under sections 1915(c), (i), (j), and (k) authorities, as we believe that a single system will best enable States to prevent the occurrence of critical incidents and protect the health and safety of beneficiaries across their lifespan. We recognize that States may have to make certain decisions about the development of their electronic incident management system according to current system constraints.

a. States

The burden associated with the incident management system requirements proposed at § 441.302(a)(6) will affect the 48 States (including Washington DC) that deliver HCBS under section 1915(c), (i), (j), or (k) authorities.[387] We estimate a one-time and on-going burden to implement these requirements at the State level. The burden for the reporting requirements at § 441.311(b)(1) is included in the ICR #8, which is the ICRs Regarding Compliance Reporting (§ 441.311(b)).

All of the States impacted by § 441.302(a)(6)(i)(B), requiring that States use an information system, as

[387] Arizona, Rhode Island, and Vermont do not have HCBS programs under any of these authorities.

defined in 45 CFR 164.304 and compliant with 45 CFR part 164, have existing incident management systems in place. However, we assume that all States will need to make at least some changes to their existing systems to fully comply with the proposed requirements. Specifically, States will have to update State policies and procedures; implement new or update existing electronic incident management systems; publish revised provider requirements through State notice and publication processes; update provider manuals and other policy guidance; amend managed care contracts; collect required information from providers; use other required data sources to identify unreported incidents; and share information with other entities in the State responsible for investigating critical incidents.

i. One Time Incident Management System Requirements: States (§ 441.302(a)(6))

With regard to the one-time requirements related to § 441.302(a)(6), we estimate it will take: 120 hours at $111.18/hr for an administrative services manager to draft policy content, prepare notices and draft rules for publication, conduct public hearings, and draft contract modifications for managed care plans; 20 hours at $100.64/hr for a management analyst to update provider manuals; 80 hours at $67.18/hr for a training and development specialist to develop and conduct training for providers; 80 hours at $79.50/hr for a business operations specialist to establish processes for information sharing with other entities; 80 hours at $106.30/hr for a computer and information analyst to build, design, and implement reports for using claims and other data to identify unreported incidents; 24 hours at $118.14/hr for a general and operations manager to review and approve managed care contract modifications, policy and rules for publication, and training materials; and 10 hours at $236.96/hr for a chief executive to review and approve all operations associated with this requirement.

In aggregate, we estimate a one-time burden of 19,872 hours (414 hr × 48 States) at a cost of $1,958,292 (48 States × [(120 hr × $111.18/hr) + (20 hr × $100.64/hr) + (80 hr × $67.18/hr) + (80 hr × $79.50/hr) + (80 hr × $106.30/hr) + (24 hr × $118.14/hr) + (10 hr × $236.96/hr)]). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $979,146 ($1,958,292 × 0.50).

In addition, we estimate that States, based on the results of the incident management system assessment discussed earlier in section II.B.3. of this preamble, that 82 percent of States, or 39 States (48 States × 0.82), will need to update existing electronic incident management systems, while the remaining 9 States would need to implement new electronic incident management systems, to meet the proposed requirement at § 441.302(a)(6)(i)(B). We estimate based on information reported by some States in spending plans for section 9817 of the American Rescue Plan Act of 2021 that the cost per State to update existing electronic systems is $2 million while the cost per State to implement new electronic systems is $5 million.[388] In aggregate, we estimate a one-time technology burden of $123,000,000 [($2,000,000 × 39 States) + ($5,000,000 × 9 States)]. Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $61,500,000 ($123,000,000 × 0.50).

BILLING CODE 4120–01–P

[388] Enhanced Federal Financial Participation (FFP) is available at a 90 percent Federal Medical Assistance Percentage (FMAP) rate for the design, development, or installation of improvements of mechanized claims processing and information retrieval systems, in accordance with applicable Federal requirements. Enhanced FFP at a 75 percent FMAP rate is also available for operations of such systems, in accordance with applicable Federal requirements. However, the receipt of these enhanced funds is conditioned upon States meeting a series of standards and conditions to ensure investments are efficient and effective. As a result, we do not assume for the purpose of this burden estimate that States will qualify for the enhanced Federal match. This estimate overestimates State burden to the extent that States qualify for the enhanced Federal match.

TABLE 8: Summary of One-Time Burden for States for the Incident Management System Requirements (§ 441.302(a)(6))

Requirement	No. Respond-ents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
Draft policy content, prepare notices and draft rules for publication, conduct public hearings, and draft contract modifications for managed care plans	48	48	Once	120	5,760	111.18	640,397	320,198
Update provider manuals	48	48	Once	20	960	100.64	96,614	48,307
Develop and conduct training for providers	48	48	Once	80	3,840	67.18	257,971	128,986
Establish processes for information sharing with other entities	48	48	Once	80	3,840	79.50	305,280	152,640
Build, design, and implement reports for using claims and other data to identify unreported incidents	48	48	Once	80	3,840	106.30	408,192	204,096
Review and approve managed care contract modifications, policy and rules for publication, and training materials at the management level	48	48	Once	24	1,152	118.14	136,097	68,049
Review and approve all operations associated with this requirement at the executive level	48	48	Once	10	480	236.96	113,741	56,871

BILLING CODE 4120–01–C

ii. Ongoing Incident Management System Requirements: States (§ 441.302(a)(6))

With regard to the ongoing requirements § 441.302(a)(6), we estimate that there are 0.5 critical incidents annually [389] for each of the 1,889,640 Medicaid beneficiaries who receive HCBS under sections 1915(c), (i), (j), or (k) authorities annually, or 944,820 (1,889,640 × 0.5) critical incidents annually.[390] We further estimate that, based on data on unreported incidents, these requirements will result in the identification of 30 percent more critical incidents annually, or 283,446 (944,820 × 0.3) critical incidents; [391] that 76 percent, or 215,419 (283,446 × 0.76) will be reported for individuals enrolled in FFS delivery systems; [392] and that 10 percent of those for individuals enrolled in FFS delivery systems (21,542 = 215,419 × 0.1) will be made through provider reports and 90 percent (193,877 = 215,419 × 0.9) through claims identification and other sources.[393] We estimate 0.166 hr or 10 minutes at $36.52/hr for a data entry worker to record the information on each reported critical incident reported by providers for individuals enrolled in FFS delivery systems. In aggregate, we estimate an ongoing burden each year of 3,576 hours (21,542 incidents × 0.166 hr) at a cost of $130,594 (3,576 hr × $36.52/hr) to record the information on each reported critical incident reported by providers for individuals enrolled in FFS delivery systems. While States can establish different processes for the reporting of critical incidents for individuals enrolled in managed care, we assume for the purpose of this analysis that the States would delegate provider reporting critical incidents and identification of critical incidents through claims and other data sources to managed care plans and that the managed care plans would be responsible for reporting the identified critical incidents to the State.[394] We further assume that the information reported by managed care plans to the State and identified by the State through claims and other data sources would be in an electronic form. For the 68,027 more critical incidents for individuals enrolled in managed care (283,446 more critical incidents identified × 24 percent for individuals enrolled in managed care), and the 193,877 more critical incidents identified through claims and other data sources for individuals enrolled in FFS (283,446 more critical incidents identified × 76 percent for individuals enrolled in FFS × 90 percent identified through claims and other sources), we estimate 2 minutes (0.0333 hr) at $36.52/hr for a data entry worker to record the information on each of these 261,904 critical incidents (68,027 + 193,877). In aggregate, for § 441.302(a)(6), we estimate an ongoing annual burden of 8,721 hours (261,904 incidents × 0.0333 hr) at a cost of $318,491 (8,721 hr × $36.52/hr) on these critical incidents.

In total, for § 441.302(a)(6), we estimate an ongoing burden each year of 12,297 hours (3,576 hr + 8,721 hr) at a cost of $449,085 ($130,594 + $318,491) to record the information on all critical further estimate it would take 12 hours at $79.50/hr for a business operations specialist to maintain processes for information sharing with other entities; 20 hours at $106.30/hr for a computer and information analyst to update and maintain reports for using claims and other data to identify unreported incidents; 24 hours at $118.14/hr for a general and operations manager to monitor the operations associated with this requirement; and 4 hours at $236.96/hr for a chief executive to review and approve all operations associated with this collection of information requirement in each State. In aggregate, we estimate an ongoing burden of 15,177 hours ([60 hr × 48 States] + 12,297 hr) at a cost of $778,520 ($449,085 + [48 States × ((12 hr × $79.50/hr) + (20 hr × $106.30/hr) + (24 hr × $118.14/hr) + 4 hr × $236.96/hr)]). In addition, we estimate an on-going annual technology-related cost of $500,000 per State for States to maintain their electronic incident management systems. In aggregate, we estimate an ongoing burden of $24,000,000 ($500,000 × 48 States) for States to maintain their electronic incident management systems. In total, we estimate an ongoing annual burden of 15,177 hours at a cost $24,778,520 ($778,520 + $24,000,000). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $12,389,260 ($24,778,520 × 0.50).

BILLING CODE 4120–01–P

[389] Data on the number of critical incidents is limited. We base our estimate on available public information, such as *https://oig.hhs.gov/oas/reports/region7/71806081.pdf* and *https://dhs.sd.gov/servicetotheblind/docs/2015%20CIR%20Annual%20Trend%20Analysis.pdf.*

b. Service Providers and Managed Care Plans

The burden associated with this final rule will affect service providers that provide HCBS under sections 1915(c), (i), (j), and (k) authorities, as well as managed care plans that States contract with to provide managed long-term services and supports.

The following discussion estimates an ongoing burden for service providers to implement these requirements and both a one-time and ongoing burden for managed care plans.

i. On-Going Incident Management System Requirements: Service Provider

To estimate the number of service providers that will be impacted by this final rule, we used unpublished data from the Provider Relief Fund to estimate that there are 19,677 providers nationally across all payers delivering the types of HCBS that are delivered under sections 1915(c), (i), (j), and (k) authorities. We then prorate the number to estimate the number of providers in the 48 States that are subject to this requirement (19,677 providers nationally × 48 States subject to the proposed requirement/51 States = 18,520 providers). We used data from the Centers for Disease Control and Prevention [395] to estimate the percentage of these HCBS providers that participate in Medicaid and, due to uncertainty in the data and differences in provider definitions, estimate both a lower and upper range of providers affected. At a low end of 78 percent Medicaid participation, we estimate that there are 14,446 providers impacted (18,520 providers × 0.78), while at a high end of 85 percent participation, we estimate that there are 15,742 providers impacted (18,520 providers × 0.85). To be conservative and not underestimate our projected burden analysis, we are using the high end of our estimates to score the PRA-related impact of the changes.

As discussed earlier, we estimate that providers will report 10 percent, or 28,345, of the more critical incidents (283,446 more critical incidents × 0.10) identified annually as a result of these requirements. Based on these figures, we estimate that, on average, each provider will report 1.8 (28,345 incidents/15,742 providers) more critical incidents annually. We further estimate that, on average, it would take a provider 1 hour at $118.14/hr for a general and operations manager to collect the required information and report the information to the State or to the managed care plan as appropriate for each incident.[396] In aggregate, for § 441.302(a)(6), we estimate an ongoing burden of 28,345 hours (28,345 incidents × 1 hr) at a cost of $3,348,678 (28,345 hr × $118.14/hr).

TABLE 10: Summary of Ongoing Burden for Service Providers for the Incident Management System Requirements

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
Collect the required information and report the information to the State or to the managed care plan (§ 441.302(a)(6)(i)(C))	15,742 providers	28,345 incidents	Annually	1	28,345	118.14	3,348,678	n/a
Total	15,742 providers	28,345 incidents	Annually	1	28,345	118.14	3,348,678	n/a

ii. One Time Incident Management System Requirements: Managed Care Plans (§ 441.302(a)(6))

As required under § 441.302(a)(6), while States can establish different processes for the reporting of critical incidents for individuals enrolled in managed care, we assume for the purpose of this analysis that the States will delegate provider reporting of critical incidents and identification of critical incidents through claims and other data sources to managed care plans and that the plans will be responsible for reporting the identified critical incidents to the State.[397] We further assume that the information reported by managed care plans to the State would be in an electronic form.

We estimated that there are 161 managed long-term services and supports plans providing services across 25 States.[398] With regard to the one-time requirements at § 441.302(a)(6), we estimate it would take: 20 hours at $111.18/hr for an administrative

[395] *https://www.cdc.gov/nchs/data/series/sr_03/sr03_43-508.pdf.*

[396] The actual amount of time for each incident will vary depending on the nature of the critical incident and the specific reporting requirements of each State and managed care plan. This estimate assumes that some critical incidents will take substantially less time to report, while others could take substantially less time.

services manager to draft policy for contracted providers; 20 hours at $100.64/hr for a management analyst to update provider manuals; 40 hours at $67.18/hr for a training and development specialist to develop and conduct training for providers; 80 hours at $106.30/hr for a computer and information analyst to build, design, and implement reports for using claims and other data to identify unreported incidents; and 6 hours at $236.96/hr for a chief executive to review and approve all operations associated with this requirement. In aggregate, we estimate a one-time burden of 26,726 hours (161 managed care plans × 166 hr) at a cost of $2,712,747 (161 managed care plans × [(20 hr × $111.18/hr) + (20 hr × $100.64/hr) + (40 hr × $67.18/hr) + (80 hr × $106.30/hr) + (6 hr × $236.96/hr)]).

TABLE 11: Summary of One-Time Burden for Managed Care Plans for the Incident Management System Requirements at § 441.302(a)(6)

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)

Review and approve all operations associated with this requirement	161	161	Once	6	966	236.96	228,903	n/a
Total	161	161	Once	Varies	26,726	Varies	2,712,747	n/a

iii. Ongoing Incident Management System Requirements: Managed Care Plans (§ 441.302(a)(6))

The ongoing burden to managed care plans consists of the collection and maintenance of information on critical incidents. As noted earlier, we estimate that these requirements will result in the identification of 283,446 more critical incidents annually than are currently identified by States. We further estimate that 24 percent, or 68,027 (283,446 × 0.24), will be reported for individuals enrolled in managed care delivery systems [399] and that 10 percent, or 6,803 (68,027 × 0.10), will be made through provider reports and 90 percent, or 61,224 (68,027 × 0.90), through claims identification and other sources.[400] We estimate that it will take 0.166 hr at $36.52/hr for a data entry worker to record the information on each reported critical incident reported by providers (§ 441.302(a)(6)(i)(B)(*2*)). In aggregate, we estimate an ongoing burden of 1,129 hours (6,803 critical incidents made through provider reports × 0.166 hr) at a cost of $41,231 (1,129 hr × $36.52/hr). We also estimate that it will take: 20 hours at $106.30/hr for a computer and information analyst to update and maintain reports for using claims and other data to identify unreported incidents (§ 441.302(a)(6)(i)(B)(*3*)); 6 hours at $118.14/hr for a general and operations manager to monitor the operations associated with this requirement and report the information to the State (§ 441.302(a)(6)(i)(E)); and 1 hour at $236.96/hr for a chief executive to review and approve all operations associated with this collection of information requirement (§ 441.302(a)(6)(i)(G)). In aggregate, we estimate an ongoing burden of 5,476 hours (1,129 hr + [161 managed care plans × 27 hr]) at a cost of $535,791 ($41,231 + (161 managed care plans × [(20 hr × $106.30/hr) + (6 hr × $118.14/hr) + (1 hr × $236.96/hr)]).

BILLING CODE 4120–01–P

[399] *https://www.medicaid.gov/medicaid/long-term-services-supports/downloads/ltss-user-brief-2019.pdf.*

[400] Data is limited on the identification of critical incidents through various data sources. We conservatively assume that 25 percent of additional critical incidents identified as a result of these requirements will be reported by providers even though claims data will likely identify a substantially higher of percentage of claims than will be reported by providers.

TABLE 12: Summary of Ongoing Burden for Managed Care Plans for the Incident Management System Requirements

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)

5. ICRs Regarding Payment Adequacy Reporting (§ 441.311(e); Applied to Other HCBS Authorities at §§ 441.474(c), 441.580(i), and 441.745(a)(1)(vii) and to Managed Care at § 438.72(b))

The following changes will be submitted to OMB for approval after this final rule is finalized and when our survey instrument has been developed. The survey instrument will be made available to the public for their review under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices. In the meantime, we are setting out our burden figures (see below) as a means of scoring the impact of this rule's changes. The availability of the survey instrument and more definitive burden estimates will be announced in both **Federal Register** notices. The CMS ID number for that collection of information request is CMS–10854 (OMB control number 0938–TBD). Since this would be a new collection of information request, the OMB control number has yet to be determined (TBD) but will be issued by OMB upon their approval of the new collection of information request.

We finalized at § 441.311(e)(2) a new requirement that States report to us annually on the percentage of total payments (not including excluded costs) for furnishing homemaker services, home health aide services, personal care, and habilitation services, as set forth in § 440.180(b)(2) through (4) and (6), that are spent on compensation for direct care workers.

Section 441.311(e)(1)(i), as finalized, defines compensation to include salary, wages, and other remuneration as defined by the Fair Labor Standards Act and implementing regulations (29 U.S.C. 201 *et seq.*, 29 CFR parts 531 and 778); benefits (such as health and dental benefits, paid leave, and tuition reimbursement); and the employer share of payroll taxes for direct care workers delivering services authorized under section 1915(c) of the Act. Section 441.311(e)(1)(ii), as finalized, defines direct care workers to include workers who provide nursing services, assist with activities of daily living (such as mobility, personal hygiene, eating), or provide support with instrumental activities of daily living (such as cooking, grocery shopping, managing finances). Specifically, direct care workers include nurses (registered

nurses, licensed practical nurses, nurse practitioners, or clinical nurse specialists) who provide nursing services to Medicaid-eligible individuals receiving HCBS, licensed or certified nursing assistants, direct support professionals, personal care attendants, home health aides, and other individuals who are paid to directly provide services to Medicaid beneficiaries receiving HCBS to address activities of daily living or instrumental activities of daily living. Direct care workers include individuals employed by a Medicaid provider, State agency, or third party; contracted with a Medicaid provider, State agency, or third party; or delivering services under a self-directed service model. (Refer to section II.B.5. of this final rule for complete discussion of these definitions.)

We are also finalizing § 441.311(e) to include a definition of excluded costs at § 441.311ek)(1)(iii). Excluded costs are costs that are not included in the calculation of the percentage of Medicaid payments to providers that is spent on compensation for direct care workers. Such costs are limited to: costs of required trainings for direct care workers (such as costs for qualified trainers and training materials); travel reimbursements (such as mileage reimbursement or public transportation subsidies) provided to direct care workers; and personal protective equipment for direct care workers. This policy was not included in the NPRM calculations. While we do not believe the policy of allowing providers to deduct excluded costs will affect the activities described in this cost estimate, we acknowledge that they may require additional time for some of the activities (such as drafting policy manuals or training providers on the policy.) These costs have been added to the revised burden estimate.

As discussed in section II.B.7. of this rule, we had initially proposed at § 441.311(e) that States would be required to report on the percent of Medicaid compensation spent on compensation for direct care workers providing homemaker, home health aide, and personal care services as defined at § 440.180(b)(2) through (4), and that the State must report this data for each service, with self-directed services reported separately. We are finalizing this requirement to include reporting on an additional service (habilitation services, as defined at § 440.180(b)(6)). We are also finalizing a new requirement that in addition to reporting by service, with separate reporting for self-directed services, States must also report facility-based services separately. Below, we include in our revised calculations the increased anticipated burden associated with the addition of reporting on habilitation services and separate reporting for facility-based services in § 441.311(e). We anticipate an increased burden on States and managed care plans to address data collection on the additional services. While we are increasing our estimate of the number of impacted providers, we do not believe this will change providers' activities associated with this requirement.

To ensure that States are prepared to comply with the reporting requirement at § 441.311(e)(2), we are finalizing a requirement at § 441.311(e)(3) to require that one year prior to the first payment adequacy report, States must provide a status update on their readiness to report the data required in § 441.311(e)(2). This will allow us to identify States in need of additional support to come into compliance with § 441.311(e)(2) and provide targeted technical assistance to States as needed. Our burden estimate below has been revised to include the activities associated with the State's one-time submission of this report. We do not anticipate an additional burden on managed care plans or providers associated with this requirement.

We also finalized at § 441.311(e)(4) an exemption for the Indian Health Service and Tribal health programs subject to 25 U.S.C. 1641, which exempts these providers from the requirements in § 441.311(e). Based on internal figures, we believe that about 100 HCBS provide As discussed in section II.B.7. of this final rule, we are applying the finalized requirements at § 441.311(e) to services delivered in both FFS and managed care delivery systems. We are applying the requirements to services that are delivered in 1915(c), (i) and (k) programs. We note also that the reporting requirement will go into effect 4 years after this rule is finalized.

We are finalizing the requirements at §§ 441.311(e) with the substantive modifications as described above. Burden estimates for the finalized requirements are below. We note an additional change to the burden estimates. As presented in the proposed rule at 88 FR 28047, we had presented the burden estimate of both the payment adequacy reporting requirement at § 441.311(e) and the HCBS payment adequacy minimum performance requirements at § 441.302(k) in a single ICR. Since the publication of the NPRM, upon further consideration we have determined that as §§ 441.302(k) and 441.311(e) represent distinct sets of requirements, it is more appropriate to present the costs associated with § 441.302(k) under a separate ICR (ICR 11) in this section IV. of the final rule.

However, while § 441.311(e) represents a distinct set of requirements from those in § 441.302(k), we also expect that States will employ certain efficiencies in complying with both §§ 441.302(k) and 441.311(e). In particular, we expect that States will build a single IT infrastructure and use the same processes both for collecting data for the reporting requirement at § 441.311(e) and for determining providers' compliance with HCBS payment adequacy performance requirements at § 441.302(k). The burden associated with States' development of infrastructure and processes to determine what percentage of HCBS providers' Medicaid payments for certain HCBS is spent on direct care worker compensation, as well as providers' reporting of this information to the State, is included in this ICR for § 441.311(e). We believe representing these costs under only one ICR avoids duplicative or inflated burden estimates. Burden estimates associated specifically with the minimum performance requirements in § 441.302(k) are presented in ICR 11 of this Collection of Information (section IV. of this final rule.)

a. State Burden

The burden associated with the requirements at § 441.311(e) will affect the 48 States (including Washington DC) that deliver HCBS under sections 1915(c), (i), (j), or (k) authorities.[401] [402] We estimate both a one-time and ongoing burden to implement these requirements at the State level.

Under § 441.311(e), we expect that States will have to: (1) draft new policy (one-time); (2) update provider manuals and other policy guidance to include reporting requirements (including information regarding excluded costs) for each of the services subject to the requirement (one-time); (3) inform providers of services through State notification processes, both initially and annually of reporting requirements (one-time and ongoing); (4) assess State systems and submit a one-time report to us on the State's readiness to comply with the ongoing reporting requirement at 441.311(e)(2) (one-time); (5) collect the information from providers for each service required (ongoing); (6) aggregate the data broken down by each service, as well as self-directed services

[401] Arizona, Rhode Island, and Vermont do not have HCBS programs under any of these authorities.

[402] For purposes of this burden analysis, we are not taking into consideration temporary wage increases or bonus payments that have been or are being made.

(ongoing); (7) derive an overall percentage for each service including self-directed services (ongoing); and (8) report to us on an annual basis (ongoing).

i. One Time Payment Adequacy Reporting Requirements (§ 441.311(e)): State Burden

With regard to the one-time requirements, we estimate it will take: 40 hours at $111.18/hr for an administrative services manager to: draft policy content, and draft provider agreements and contract modifications for managed care plans; 20 hours at $100.64/hr for a management analyst to update provider manuals for each of the affected services; 32 hours at $98.84/hr for a computer programmer to build, design, and operationalize internal systems for collection, aggregation, stratification by service, reporting, and creating remittance advice; 50 hours at $67.18/hr for a training and development specialist to develop and conduct training for providers on the reporting elements and reporting process; 20 hours at $118.14/hr for a general and operations manager to: review, approve managed care contract modifications, policy and rules for publication, and training materials, and to complete the annual reporting and complete the reporting readiness report (required at § 441.311(e)(3)) for submission to CMS; and 10 hours at $236.96/hr for a chief executive to review and approve all operations associated with these requirements.

In aggregate, we estimate a one-time burden of 7,776 hours (172 hr × 48 States) at a cost of $850,285 (48 States × [(40 hr × $111.18/hr) + (20 hr × $100.64/hr) + (32 hr × $98.84/hr) + (50 hr × $67.18/hr) + (20 hr × $118.14/hr) + (10 hr × $236.96/hr)]). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $425,143 ($850,285 × 0.50).

BILLING CODE 4120–01–P

Build, design, and operationalize internal systems for collection, aggregation, stratification by service, reporting, and creating remittance advice	48	48	Once	32	1,536	98.84	151,818	75,909
Develop and conduct training for providers on the reporting elements and reporting process	48	48	Once	50	2,400	67.18	161,232	80,616
Review, approve managed care contract modifications, policy and rules for publication, and training materials, and to complete the annual reporting and complete the reporting readiness report (required at § 441.311(e)(3)) for submission to CMS	48	48	Once	20	960	118.14	113,414	56,707
Review and approve all operations associated with this requirement	48	48	Once	10	480	236.96	113,74	56,780
Total	48	48	Once	Varies	7,776	varies	850,285	425,173

ii. Ongoing Payment Adequacy Reporting Requirements (§ 441.311(e)): State Burden

With regard to the ongoing requirements, we estimate it will take 8 hours at $98.84/hr for a computer programmer to: (1) collect the information from all providers for each service required; (2) aggregate and stratify by each service as well as self-directed services; (3) derive an overall percentage for each service including self-directed and facility-based services; and (4) develop the reports for CMS on an annual basis. We also estimate it will take: 10 hours at $67.18 for a training and development specialist to develop and conduct training for providers on the reporting elements and reporting process; 5 hours at $118.14/hr by a general and operations manager to

review, verify, and approve reporting required at § 441.311(e)(2) to CMS; and 2 hours at $236.96/hr for a chief executive to review and approve all operations associated with these requirements.

In aggregate, we estimate an ongoing burden of 1,200 hours (25 hr × 48 States) at a cost of $121,302 (48 States × [(8 hr × $98.84/hr) + (10 hr × $67.18) + (5 hr × $118.14/hr) + (2 hr × $236.96/hr)]). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $60,651 ($121,302 × 0.50) per year.

TABLE 14: Summary of Ongoing Burden for States for Payment Reporting Requirements at § 441.311(e)

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
Collect information from providers; aggregate and stratify data as required; derive an overall percentage for each service; identify percentages for providers subject to flexibilities; and develop report annually	48	48	Annually	8	384	98.84	37,954	18,977
Develop and conduct annual training for providers on the reporting elements and reporting process	48	48	Annually	10	480	67.18	32,246	16,123
Review, verify and approve reporting as required in § 441.302(k) and § 441.311(e) -to CMS	48	48	Annually	5	240	118.14	28,354	14,177
Review and approve all operations associated with reporting requirements at § 441.302(k) and § 441.311(e)	48	48	Annually	2	96	236.96	22,748	11,374
Total	Varies	48	Annually	Varies	1,200	Varies	121,302	60,651

BILLING CODE 4120–01–C

b. Service Providers and Managed Care Plans

The burden associated with this final rule will affect both service providers that provide the services listed at § 440.180(b)(2) through (4) and (6) across HCBS programs as well as managed care plans that contract with the States to provide managed long-term services and supports. We estimate both a one-time and ongoing burden to implement the reporting requirements § 441.311(e) for both service providers and managed care plans.

As noted in the proposed rule at 88 FR 28049, we had estimated an impact on 11,155 HCBS providers that provided homemaker, home health aide, or personal care services. We are adjusting this burden estimate to account for the inclusion of providers that also provide habilitation services in the finalized requirements in § 441.311(e). To estimate the number of service providers that will be impacted by this final rule, we used unpublished data from the Provider Relief Fund to estimate that there are 19,677 providers nationally across all payers delivering the types of HCBS that are delivered under sections 1915(c), (i) and (k) authorities. We then prorate the number to estimate the number of providers in the 48 States that are subject to this requirement (19,677 providers nationally × 48 States subject to the requirement/51 States = 18,520 providers). We used data from the Centers for Disease Control and Prevention[403] to estimate the percentage of these HCBS providers that participate in Medicaid and, due to uncertainty in the data and differences in provider

[403] *https://www.cdc.gov/nchs/data/series/sr_03/sr03_43-508.pdf.*

definitions, estimate both a lower and upper range of providers affected. At a low end of 78 percent Medicaid participation, we estimate that there are 14,446 providers impacted (18,520 providers × 0.78), while at a high end of 85 percent participation, we estimate that there are 15,742 providers impacted (18,520 providers × 0.85). To be conservative and not underestimate our projected burden analysis, we are using the high end of our estimates to score the PRA-related impact of the changes. We also note that it is possible that some of the providers included in this count do not provide the services impacted by § 441.311(e) (homemaker, home health aide, personal care, or habilitation services.) However, as we believe a significant number of the providers included in this count do provide at least one of these services. We note that from this number (15,742) we are subtracting 100 providers to represent the providers we believe will be eligible for the exemption at § 441.311(e)(4) for HIS and Tribal providers subject to 25 U.S.C. 1641. This brings the estimated number of providers impacted by the reporting requirement at § 441.311(e) to 15,642.

i. One Time HCBS Payment Adequacy Requirements: Service Providers (§ 441.311(e))

With regard to the one-time requirements, we estimate it would take: 35 hours at $73.00/hr for a compensation, benefits and job analysis specialist to calculate compensation, as defined by § 441.(311)(e)(1)(i) for each direct care worker defined at § 441.311(e)(1)(ii); 40 hours at $98.84/hr for a computer programmer to build, design and operationalize an internal system to calculate each direct care worker's compensation as a percentage of total revenues received, aggregate the sum of direct care worker compensation as an overall percentage, and separate self-directed services to report to the State; and 8 hours at $118.14/hr for a general and operations manager to review and approve reporting to the State.

In aggregate, we estimate a one-time burden of 1,298,286 hours (15,642 providers × 83 hr) at a cost of $116,591,088 (15,642 providers × [(35 hr × $73.00/hr) + (40 hr × $98.84/hr) + (8 hr × $118.14/hr)]).

TABLE 15: Summary of One-Time Burden for Service Providers for the Payment Adequacy Reporting Requirements at § 441.311(e)

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
Calculate compensation for each direct care worker	15,642	15,642	Once	35	547,470	73.00	39,965,310	n/a
Build, design and operationalize an internal system for reporting to the State	15,642	15,642	Once	40	625,680	98.84	61,842,211	n/a
Review and approve reporting to the State	15,642	15,642	Once	8	125,136	118.14	14,783,567	n/a
Total	15,642	15,642	Once	Varies	1,298,286	varies	116,591,088	n/a

ii. Ongoing Payment Adequacy Reporting Requirements (§ 441.311(e)): Service Providers

With regard to the on-going requirements, we estimate it will take 8 hours at $73.00/hr for a compensation, benefits, and job analysis specialist to account for new hires and/or contracted employees; 8 hours at $98.84/hr for a computer programmer to calculate compensation, aggregate data, and report to the State as required; and 5 hours at $118.14/hr for a general and operations manager to review and approve reporting to the State. In aggregate, we estimate an on-going burden of 328,482 hours (15,742 providers × 21 hr) at a cost of $30,743,100 (15,642 providers × [(8 hr × $73.00/hr) + (8 hr × $98.84/hr) + (5 hr × $118.14/hr)]).

TABLE 16: Summary of Ongoing Burden for Service Providers for the HCBS Payment Adequacy Requirements at § 441.311(e)

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
Account for new hires and/or contracted employees	15,642	15,642	Once	8	125,136	73.00	9,134,928	n/a
Calculate compensation, aggregate data, and report to the State	15,642	15,642	Once	8	125,136	98.84	12,368,442	n/a
Review and approve reporting to the State	15,642	15,642	Once	5	78,210	118.14	9,239,729	n/a
Total	15,642	15,642	Once	Varies	328,482	varies	30,743,100	n/a

iii. On-Time Payment Adequacy Reporting Requirements (§ 441.311(e)): Managed Care Plans

As noted earlier, the burden associated with this final rule will affect managed care plans that contract with the States to provide managed long-term services and supports. We estimate that there are 161 managed long-term services and supports plans providing services across 25 States.[404] We estimate both a one-time and ongoing burden for managed care plans to implement these requirements. Specifically, managed care plans would have to: (1) draft new policy (one-time); (2) update provider manuals for each of the services subject to the requirement (one-time); (3) inform providers of requirements (one-time and ongoing); (4) collect the information from providers for each service required (ongoing); (5) aggregate the data as required by the States (ongoing); and (6) report to the State on an annual basis (ongoing).

With regard to the one-time requirements, we estimate it would take 50 hours at $111.18/hr for an administrative services manager to draft policy for contracted providers; 32 hours at $98.84/hr for a computer programmer to build, design, and operationalize internal systems for data collection, aggregation, stratification by service, and reporting; 40 hours at $67.18/hr for a training and development specialist to develop and conduct training for providers; and 4 hours at $236.96/hr for a chief executive to review and approve reporting to the State. In aggregate, we estimate a one-time burden of 20,286 hours (161 MCPs × 126 hr) at a cost of $1,989,464 (161 MCPs × [(50 hr × $111.18/hr) + (32 hr × $98.84/hr) + (40 hr × $67.18/hr) + (4 hr × $236.96/hr)]).

TABLE 17: Summary of One-time Burden for Managed Care Plans for the Payment Adequacy Reporting Requirements at § 441.311(e)

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
Draft policy for contracted providers	161	161	Once	50	8,050	111.18	894,999	n/a
Build, design, and operationalize internal systems for data collection, aggregation, stratification by service, and reporting	161	161	Once	32	5.152	98.84	509,224	n/a
Develop and conduct training for providers	161	161	Once	40	6,440	67.18	432,639	n/a
Review and approve reporting to the State	161	161	Once	4	644	236.96	152,602	n/a
Total	161	161	Once	Varies	20,286	varies	1,989,464	n/a

iv. Ongoing Payment Adequacy Reporting Requirements (§ 441.311(e)): Managed Care Plans

With regard to the ongoing requirements, we estimate it will take: 8 hours at $98.84/hr for a computer programmer to: (1) collect the information from all providers for each service required, (2) aggregate and stratify data as required, and (3) develop report to the State on an annual basis; and 2 hours at $236.96/hr for a chief executive to review and approve the reporting to the State. In aggregate, we estimate an ongoing burden of 1,610 hours (161 MCPs × 10 hr) at a cost of $203,607 (161 MCPs × [(8 hr × $98.84/hr) + (2 hr × $236.96/hr)]).

TABLE 18: Summary of Ongoing Burden for Managed Care Plans for the Payment Adequacy Reporting Requirements at § 441.311(e)

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)

6. ICRs Regarding Supporting Documentation for HCBS Access (§§ 441.303(f)(6) and 441.311(d)(1); Applied to Managed Care at § 438.72(b)))

The following changes will be submitted to OMB for approval after this final rule is finalized and when our survey instrument has been developed. The survey instrument and burden will be made available to the public for their review under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices. In the meantime, we are setting out our burden figures (see below) as a means of scoring the impact of this rule's changes. The availability of the survey instrument and more definitive burden estimates will be announced in both **Federal Register** notices. The CMS ID number for that collection of information request is CMS–10854 (OMB control number 0938–TBD). Since this will be a new collection of information request, the OMB control number has yet to be determined (TBD) but will be issued by OMB upon their approval of the new collection of information request.

Section 1915(c) of the Act authorizes States to set enrollment limits or caps

on the number of individuals served in a waiver, and many States maintain waiting lists of individuals interested in receiving waiver services once a spot becomes available. States vary in the way they maintain waiting lists for section 1915(c) waivers, and if a waiting list is maintained, how individuals may join the waiting list. Some States permit individuals to join a waiting list as an expression of interest in receiving waiver services, while other States require individuals to first be determined eligible for waiver services to join the waiting list. States have not been required to submit any information on the existence or composition of waiting lists, which has led to gaps in information on the accessibility of HCBS within and across States. Further, feedback obtained during various interested parties' engagement activities conducted with States and other interested parties over the past several years about reporting requirements for HCBS, as well as feedback received through the RFI[405] discussed earlier, indicate that there is a need to improve public transparency and processes related to States' HCBS waiting lists.

In this final rule, we are finalizing an amendment to § 441.303(f)(6) by adding language to the end of the regulatory text to specify that if the State has a limit on the size of the waiver program and maintains a list of individuals who are waiting to enroll in the waiver program, the State must meet the reporting requirements at § 441.311(d)(1). Per the finalized requirements at § 441.311(d)(1), for States that limit or cap enrollment in a section 1915(c) waiver and maintain a waiting list, States will be required to provide a description annually on how they maintain the list of individuals who are waiting to enroll in a section 1915(c) waiver program. The description must include, but not be limited to, information on whether the State screens individuals on the waiting list for eligibility for the waiver program, whether the State periodically rescreens individuals on the waiver list for eligibility, and the frequency of rescreening, if applicable. In addition, States will be required to report on the number of people on the waiting list if applicable, as well as the average amount of time that individuals newly enrolled in the waiver program in the past 12 months were on the waiting list, if applicable.

We are finalizing these proposals without substantive modifications. Burden estimates for this requirement are presented below.

a. One Time Waiting List Reporting Requirements: States (§ 441.311(d)(1))

The one-time State burden associated with the waiting list reporting requirements in § 441.311(d)(1) will affect the 39 State Medicaid programs with waiting lists for section 1915(c) waivers.[406] We estimate both a one-time and ongoing burden to implement these requirements at the State level. Specifically, States will have to query their databases or instruct their contractors to do so to collect information on the number of people on existing waiting lists and how long they wait; and write or update their existing waiting list policies and the information collected. In some States, HCBS waivers are administered by more than one operating agency, in these cases each will have to report this data up to the Medicaid agency for submission to us.

With regard to the one-time requirements, we estimate it will take: 16 hours at $111.18/hr for an administrative services manager to write or update State policy, direct information collection, compile information, and produce a report; 20 hours at $98.84/hr for a computer programmer or contractor to query internal systems for reporting requirements; 3 hours at $118.14/hr for a general and operations manager to review and approve report; and 2 hours at $236.96/hr for a chief executive to review and approve all reports associated with this requirement. In aggregate, we estimate a burden of 1,599 hours (39 States × 41 hr) at a cost of $178,777 (39 States × [(16 hr × $111.18/hr) + (20 hr × $98.84/hr) + (3 hr × $118.14/hr) + (2 hr × $236.96/hr)]). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $89,388 ($178,777 × 0.50).

Assuming no changes to the State waiting list policies, each year States will only need to update the report to reflect the number of people on the list of individuals who are waiting to enroll in the waiver program and average amount of time that individuals newly enrolled in the waiver program in the past 12 months were on the list.

TABLE 19: Summary of One-Time Burden for States for the Waiting List Reporting Requirements at § 441.311(d)(1)

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
Write or update State policy, direct information collection, compile information, and produce a report	39	39	Once	16	624	111.18	69,376	34,688
Query internal systems for reporting requirements	39	39	Once	20	780	98.84	77,095	38,548
Review and approve report at management level	39	39	Once	3	117	118.14	13,822	6,911
Review and approve all reports associated with this requirement at the executive level	39	39	Once	2	78	236.96	18,483	9,242
Total	39	39	Once	Varies	1,599	Varies	178,777	89,388

b. Ongoing Waiting List Reporting Requirements: States (§ 441.311(d)(1))

With regard to the on-going burden for the section 1915(c) waiver waiting list reporting requirements at § 441.311(d)(1), we estimate it will take: 4 hours at $111.18/hr for an administrative services managers across relevant operating agencies to direct information collection, compile information, and produce a report; 6 hours at $98.84/hr for a computer programmer or contractor to query internal systems for reporting requirements; 3 hours at $118.14/hr for a general and operations manager to review and approve report; and 2 hours at $236.96/hr for a chief executive to review and approve all reports associated with this requirement. In aggregate, we estimate a burden of 585 hours (39 States × 15 hr) at a cost of $72,778 (39 States × [(4 hr × $111.18/hr) + (6 hr × $98.84/hr) + (3 hr × $118.14/hr) + (2 hr × $236.96/hr)]. Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost will be $36,389 ($72,778 × 0.50) per year.

TABLE 20: Summary of Ongoing Burden for States for the Waiting List Reporting Requirements at § 441.311(d)(1)

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
Direct information collection, compile information, and produce a report	39	39	Annually	4	156	111.18	17,344	8,672
Query internal systems for reporting requirements	39	39	Annually	6	234	98.84	23,129	11,564
Review and approve report at the management level	39	39	Annually	3	117	118.14	13,822	6,911

BILLING CODE 4120–01–C

7. ICRs Regarding Additional HCBS Access Reporting (§ 441.311(d)(2)(i); Applied to Other HCBS Authorities at §§ 441.474(c), 441.580(i), and 441.745(a)(1)(vii) and to Managed Care at § 438.72(b))

The following changes will be submitted to OMB for approval after this final rule is finalized and when our survey instrument has been developed. The survey instrument and burden will be made available to the public for their review under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices. In the meantime, we are setting out our burden figures (see below) as a means of scoring the impact of this rule's changes. The availability of the survey instrument and more definitive burden estimates will be announced in both **Federal Register** notices. The CMS ID number for that collection of information request is CMS–10854 (OMB control number 0938–TBD). Since this will be a new collection of information request, the OMB control number has yet to be determined (TBD) but will be issued by OMB upon their approval of the new collection of information request.

We proposed additional HCBS access reporting at § 441.311(d)(2)(i). We proposed at § 441.311(d)(2)(i) to require States to report annually on the average amount of time from when homemaker services, home health aide services, or personal care services, listed in § 440.180(b)(2) through (4), are initially approved to when services began for individuals newly approved to begin receiving services within the past 12 months. We also proposed at § 441.311(d)(2)(ii) to require States to report annually on the percent of authorized hours for homemaker services, home health aide services, or personal care, as listed in § 440.180(b)(2) through (4), that are provided within the past 12 months. States are allowed to report on a statistically valid random sample of individuals newly approved to begin receiving these services within the past 12 months.

We are finalizing the requirements at § 441.311(d)(2) with a modification to add reporting on habilitation services as defined at § 440.180(b)(6), in addition to the other services. We have adjusted our burden estimates below to reflect additional reporting on habilitation services.

The burden associated with the additional HCBS access reporting requirements at § 441.311(d)(2) will affect the 48 States (including Washington DC) that deliver HCBS under sections 1915I, (i), (j), or (k) authorities.[407] Specifically, States will have to query their databases or instruct their contractors to do so to collect information on the average amount of time from which homemaker services, home health aide services, personal care, and habilitation services, as listed

[407] Arizona, Rhode Island, and Vermont do not have HCBS programs under any of these authorities.

in § 440.180(b)(2) through (4) and (6), are initially approved to when services began, for individuals newly approved to begin receiving services within the past 12 months, and the percent of authorized hours for these services that are provided within the past 12 months. We expect many States will need to analyze report this metric for a statistically valid random sample of beneficiaries. They will then need to produce a report for us within such information. For States with managed long-term services and supports, they will need to direct managed care plans to report this information up to them.

We estimate one-time and ongoing burden to implement the requirements at § 441.311(d)(2) at the State level.

One-Time HCBS Access Reporting Requirements: States (§ 441.311(d)(2))

With regard to the one-time burden related to the HCBS access reporting requirements, we estimate it will take: 30 hours at $111.18/hr for an administrative services manager across relevant operating agencies to direct information collection, compile information, and produce a report; 80 hours at $98.84/hr for a computer programmer or contractor to analyze service authorization and claims data; 50 hours at $101.46/hr for a statistician to conduct data sampling; 4 hours at $118.14/hr for a general and operations manager to review and approve report; and 3 hours at $236.96/hr for a chief executive to review and approve all reports associated with this requirement. In aggregate, we estimate a one-time burden of 8,016 hours (48 States × 167 hr) at a cost of $839,954 (48 States × [(20 hr × $111.18/hr) + (60 hr × $98.84/hr) + (40 hr × $101.46/hr) + (3 hr × $118.14/hr) + (2 hr × $236.96/hr)]). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost will be $419,977 ($839,954 × 0.50) per year.

BILLING CODE 4120–01–P

TABLE 21: Summary of One-Time Burden for States for the HCBS Access Reporting Requirements at § 441.311(d)(2)

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
Direct information collection, compile information, and produce a report	48	48	Once	30	1,440	111.18	160,099	80,050
Analyze service authorization and claims data	48	48	Once	80	3,840	98.84	379,546	189,773

Review and approve report at the management level	48	48	Once	4	192	118.14	22,683	11,341
Review and approve all reports associated with this requirement at the executive level	48	48	Once	3	144	236.96	34,122	17,061
Total	48	48	Once	Varies	8,016	Varies	839,954	419,977

b. Ongoing HCBS Access Reporting Requirements: States (§ 441.311(d)(2))

With regard to the on-going burden related to the HCBS access reporting requirements for States, we estimate it will take: 15 hours at $111.18/hr for an administrative services manager to direct information collection, compile information, and produce a report; 30 hours at $98.84/hr for a computer programmer or contractor to analyze service authorization and claims data; 15 hours at $101.46/hr for a statistician to conduct data sampling; 4 hours at $118.14/hr for a general and operations manager to review and approve report; and 2 hours at $236.96/hr for a chief executive to review and approve all reports associated with this requirement. In aggregate, we estimate a burden of 3,168 hours (48 States × 67 hr) at a cost of $340,861 (48 States × [(15 hr × $111.18/hr) + (30 hr × $98.84/hr) + (15 hr × $101.46/hr) + (4 hr × $118.14/hr) + (2 hr × $236.96/hr)]). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost will be $170,431 ($340,861 × 0.50) per year.

TABLE 22: Summary of Ongoing Burden for States for the HCBS Access Reporting Requirements at § 441.311(d)(2)

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
Direct information collection, compile information, and produce a report	48	48	Annually	15	720	111.18	80,050	40,025
Analyze service authorization and claims data	48	48	Annually	30	1,440	98.84	142,330	71,165
Conduct data sampling	48	48	Annually	15	720	101.46	73,051	36,526
Review and approve report at the management level	48	48	Annually	4	192	118.14	22,683	11,341
Review and approve all reports associated with this requirement at the executive level	48	48	Annually	2	96	236.96	22,748	11,374
Total	48	48	Annual	Varies	3,168	Varies	340,861	170,431

c. One-Time HCBS Access Reporting Requirements: Managed Care Plans (§ 441.311(d)(2))

With regard to the one-time HCBS access reporting requirements at § 441.311(d)(2) for managed care plans, we estimate it will take: 15 hours at $111.18/hr for an administrative services manager to direct information collection, compile information, and produce a report to the State; 45 hours at $98.84/hr for a computer programmer to analyze service authorization and claims data; 15 hours at $101.46/hr for a statistician to conduct data sampling; and 2 hours at $236.96/hr for a chief executive review and approval. In aggregate, we estimate a one-time burden of 12,397 hours (161 MCPs × 77 hr) at a cost of $1,305,923 (161 MCPs × [(15 hr × $111.18/hr) + (45 hr × $98.84/hr) + (15 hr × $101.46/hr) + (2 hr × $236.96/hr)]).

TABLE 23: Summary of One-Time Burden for Managed Care Plans for the HCBS Access Reporting Requirements at § 441.311(d)(2)

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
Direct information collection, compile information, and produce a report to the State	161	161	Once	15	1,610	111.18	179,000	n/a
Analyze service authorization and claims data	161	161	Once	45	5,635	98.84	556,963	n/a
Conduct data sampling	161	161	Once	15	1,610	101.46	163,351	n/a
Review and approve report	161	161	Once	2	322	236.96	76,301	n/a
Total	161	161	Once	Varies	12,397	Varies	1,305,923	n/a

d. Ongoing HCBS Access Reporting Requirements: Managed Care Plans (§ 441.311(d)(2))

With regard to the ongoing requirements associated with the annual collection, aggregation, and reporting of the HCBS access measures at § 441.311(d)(2), we estimate it will require: 5 hours at $111.18/hr for an administrative services manager to direct information collection, compile information, and produce a report to the State; 25 hours at $98.84/hr for a computer programmer to analyze service authorization and claims data; 10 hours at $101.46/hr for a statistician to conduct data sampling; and 2 hours at $236.96/hr for a chief executive to review and approve. In aggregate, we estimate a burden of 6,762 hours (161 MCPs × 42 hr) at a cost of $726,983 (161 MCPs × [(5 hr × $111.18/hr) + (25 hr × $98.84/hr) + (10 hr × $101.46/hr) + (2 hr × $236.96/hr)]).

TABLE 24: Summary of Ongoing Burden for Managed Care Plans for Additional HCBS Access Reporting Requirements at § 441.311(d)(2)

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
Direct information collection, compile information, and produce a report to the State	161	161	Annually	5	805	111.18	89,500	n/a

8. ICRs Regarding Compliance Reporting (§ 441.311(b); Applied to Other HCBS Authorities at §§ 441.474(c), 441.580(i), and 441.745(a)(1)(vii) and to Managed Care at § 438.72(b))

a. Ongoing Incident Management System Assessment Requirements: States (§ 441.311(b)(1)

The following changes will be submitted to OMB for approval after this final rule is finalized and when our survey instrument has been developed. The survey instrument and burden will be made available to the public for their review under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices. In the meantime, we are setting out our burden figures (see below) as a means of scoring the impact of this rule's changes. The availability of the survey instrument and more definitive burden estimates will be announced in both **Federal Register** notices. The CMS ID number for that collection of information request is CMS–10692 (OMB control number 0938–1362).

As discussed in II.B.3 of this final rule, we are finalizing at § 441.302(a)(6), a requirement that States provide an assurance that they operate and maintain an incident management system that identifies, reports, triages, investigates, resolves, tracks, and trends critical incidents. We are finalizing at § 441.311(b)(1)(i) a requirement that States must report, every 24 months, on the results of an incident management system assessment to demonstrate that they meet the requirements in § 441.302(a)(6). We are also finalizing at § 441.311(b)(1)(ii) a flexibility in which we may reduce the frequency of reporting to up to once every 60 months for States with incident management systems that are determined by CMS to meet the requirements in § 441.302(a)(6).

The reporting requirements finalized at § 411.311(b)(1) are intended to standardize our expectations and States' reporting requirements to ensure that States operate and maintain an incident management system that identifies, reports, triages, investigates, resolves, tracks, and trends critical incidents. The requirements were informed by the responses to the HCBS Incident Management Survey (CMS–10692; OMB 0938–1362) recently released to States.

We estimate that the reporting requirement at § 441.311(b)(1) would apply to the 48 States (including Washington DC) that deliver HCBS under sections 1915(c), (i), (j), or (k) authorities. Some States employ the same incident management system across their waivers, while others employ an incident management system specific to each waiver and will require multiple assessments to meet the requirements at § 441.311(b)(1). Based on the responses to the previously referenced survey, we estimate that on average States will conduct assessments on two incident management systems, totaling approximately 96 unique required assessments (48 State Medicaid programs × 2 incident management system assessments per State). Because the requirements under § 441.311(b)(1) are required every 24 months, we estimate 48 assessments on an annual basis (96 unique assessments every 2 years). With regard to the ongoing requirements, we estimate that it will take 1.5 hours at $76.26/hr for a social/community service manager to gather information and complete the required assessment; and 0.5 hours at $118.14/hr for a general and operations manager to review and approve the assessment. In aggregate, we estimate an ongoing annual burden of 96 hours (48 States × 2 hr) at a cost of $8,326 (48 States × [(1.5 hr × $76.26/hr) + (0.5 hr × $118.14/hr)]). Taking into account the Federal contribution to Medicaid administration, the estimated State

share of this cost would be $4,163 ($8,326 × 0.50) per year.

TABLE 25: Summary of the Ongoing Burden for States for the Incident Management System Assessment Requirements at § 441.311(b)(1)

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
Gather information and complete the required assessment	48	48	Annually	1.5	72	76.26	5,491	2,745
Review and approve the assessment	48	48	Annually	0.5	24	118.14	2,835	1,418
Total	48	48	Annually	Varies	96	varies	8,326	4,163

b. Reporting on Critical Incidents (§ 441.311(b)(2)), Person-Centered Planning (§ 441.311(b)(3)), and Type, Amount, and Cost of Services (§ 441.311(b)(4))

The following changes will be submitted to OMB for approval after our survey instrument has been developed. The survey instrument and burden will be made available to the public for their review under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices. In the meantime, we are setting out our burden figures (see below) as a means of scoring the impact of this rule's changes. The availability of the survey instrument and more definitive burden estimates will be announced in both **Federal Register** notices. The CMS ID number for that collection of information request is CMS 0938–0272 (CMS–372(S)).

This final rule codifies existing compliance reporting requirements on critical incidents, person-centered planning, and type, amount, and cost of services. At § 441.311(b)(2), we are finalizing a reporting requirement which requires States to report annually on the minimum performance standards for critical incidents that are finalized at § 441.302(a)(6). At § 441.311(b)(3), we are finalizing a reporting requirement to require States to report annually on the minimum performance standards for person-centered planning that are finalized at § 441.301(c)(3). Similar reporting requirements were previously described in 2014 guidance.[408] We are also finalizing a redesignation of the existing requirement at § 441.302(h)(1) to report on type, amount, and cost of services as § 441.311(b)(4), to make the requirement part of the new consolidated compliance reporting section finalized at § 441.311.

This final rule removes our currently approved burden and replaces it with the burden associated with the amendments to § 441.311(b)(2) through (4). In aggregate, the change will remove 11,132 hours (253 waivers × 44 hr) and $891,451 (11,132 hr × $80.08/hr for a business operations specialist). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost reduction would be minus $445,725 (−$891,451 × 0.50).

[408] *https://www.hhs.gov/guidance/sites/default/files/hhs-guidance-documents/3-cmcs-quality-memo-narrative_0_71.pdf.*

TABLE 26: Summary of the Removal of Approved Ongoing Burden for Form 372(S) as a Result of the Requirements at § 441.311(b)(2) through (b)(4)

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
Remove currently approved burden under control number 0938–0272 (CMS–372(S))	48	(253)	Annually	(44)	(11,132)	80.08	(891,451)	(445,725)
Total	48	(253)	Annually	(44)	(11,132)	80.08	(891,451)	(445,725)

We expect, as a result of the changes discussed in this section, to revise the Form CMS–372(S) and the form's instructions based on the reporting requirements. The consolidated reporting requirements at § 441.311(b)(2) through (4) also assume that 48 States (including Washington DC) are required to submit the Form CMS–372(S) Report on an annual basis. However, a separate form will no longer be required for each of the 253 approved waivers currently in operation. We estimate a burden of 50 hours at $80.08/hr for a business operations specialist to draft each Form CMS–372(S) Report submission. The per response increase reflects the increase to the minimum State quality performance level for person-centered planning (finalized at § 441.301(c)(3)(ii)) and critical incident reporting (finalized at § 441.302(a)(6)(ii)) from the 86 percent threshold established by the 2014 guidance to 90 percent in this final rule. This slight increase to the minimum performance level will help ensure that States are sufficiently meeting all section 1915(c) waiver requirements but may also increase the evidence that some States may need to submit to document that appropriate remediation is being undertaken to resolve any compliance deficiencies. As a result, we estimate a total of 50 hours for each Form CMS–372(S) Report submission, comprised of 30 hours of recordkeeping, collection and maintenance of data, and 20 hours of record assembly, programming, and completing the Form CMS–372(S) Report in the required format. We also estimate 3 hours at $118.14/hr for a general and operations manager to review and approve the report to CMS; and 2 hours at $236.96/hr for a chief executive to review and approve all reports associated with this requirement.

TABLE 27: Summary of the New Burden for Form 372(S) Annual Report on HCBS Waivers, Inclusive of Updates to § 441.311(b)(2) through (4)

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
Draft Form CMS 372(S) Report submission	48	48	Annually	50	2,400	80.08	192,192	96,096
Review and approve the report at the management level	48	48	Annually	3	144	118.14	17,012	8,506
Review and approve all reports associated with this requirement at the executive level	48	48	Annually	2	96	236.96	22,748	11,374
Total	48	48	Annually	Varies	2,640	varies	231,952	115,976

The net change resulting from reporting requirements on critical incidents, person-centered service planning, and type, amount, and cost of services, finalized in § 441.311(b)(2) through (4) is a burden decrease of 8,492 hours (2,640 hr—11,132 hr) and $329,749 (State share) ($115,976—$445,725).

9. ICRs Regarding Reporting on the Home and Community-Based Services (HCBS) Quality Measure Set (§ 441.311(c); Applied to Other HCBS Authorities at §§ 441.474(c), 441.580(i), and 441.745(a)(1)(vii) and to Managed Care at § 438.72(b)))

The following changes will be submitted to OMB for approval after this final rule is finalized and when our survey instrument has been developed. The survey instrument and burden will be made available to the public for their review under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices. In the meantime, we are setting out our burden figures (see below) as a means of scoring the impact of this rule's changes. The availability of the survey instrument and more definitive burden estimates will be announced in both **Federal Register** notices. The CMS ID number for that collection of information request is CMS–10854 (OMB control number 0938–TBD). Since this would be a new collection of information request, the OMB control number has yet to be determined (TBD) but will be issued by OMB upon their approval of the new collection of information request.

a. States

At § 441.311(c), we finalized a requirement that States report every other year on the HCBS Quality Measure Set, which is described in section II.B.8. of this final rule. The reporting requirement will affect the 48 States (including Washington DC) that deliver HCBS under section 1915(c), 1915(i), 1915(j), and 1915(k) authorities. We estimate both a one-time and ongoing burden to implement these requirements at the State level. Unlike other reporting requirements finalized at § 441.311, the effective date of § 441.311(c) will be 4 years, rather than 3 years, after the effective date of the final rule.

As finalized at § 441.311(c), the data collection includes reporting every other year on all measures in the HCBS Quality Measure Set that are identified by the Secretary.[409] For certain measures which are based on data already collected by us, the State can elect to have the Secretary report on their behalf.

As finalized at§ 441.312(c)(1)(iii), States are required to establish performance targets, subject to our review and approval, for each of the measures in the HCBS Quality Measure Set that are identified as mandatory for States to report or are identified as measures for which we will report on behalf of States, as well as to describe the quality improvement strategies that they will pursue to achieve the performance targets for those measures.

We are finalizing the requirements at § 441.312 without substantive modification. Our burden estimates are described below.

i. One Time HCBS Quality Measure Set Requirements: States (§ 441.311(c))

This one-time burden analysis assumes that States must newly adopt one of the ''experience of care'' surveys cited in the HCBS Quality Measure Set: The Consumer Assessment of Healthcare Providers and Systems Home and Community-Based (HCBS CAHPS®) Survey, National Core Indicators®-Intellectual and Developmental Disabilities (NCI®-IDD), National Core Indicators-Aging and Disability (NCI–AD)™, or Personal Outcome Measures (POM)® to fully meet the HCBS Quality Measures Set mandatory requirements.

[409] Available at *https://www.medicaid.gov/federal-policy-guidance/downloads/smd22003.pdf.*

Currently most States use at least one of these surveys; however, States may need to use multiple ''experience of care'' surveys, depending on the populations served by the States' HCBS program and the particular survey instruments that States select to use, to ensure that all major population groups are assessed using the measures in the HCBS Quality Measure Set.

The estimate of one-time burden related to the effort associated with the requirements is for the first year of reporting. It assumes that the Secretary will initially require 25 of the 97 measures currently included in the HCBS Quality Measure Set. The estimate disregards costs associated with the voluntary reporting of measures in the HCBS Quality Measure Set that are not yet mandatory, and voluntary stratification of measures ahead of the phase-in schedule, discussed later in this section.

Additionally, we are finalizing a requirement at § 441.312(f) that the Secretary will require stratification by demographic characteristics of 25 percent of the measures in the HCBS Quality Measure Set for which the Secretary has specified that reporting should be stratified 4 years after the effective date of these regulations, 50 percent of such measures by 6 years after the effective date of these regulations, and 100 percent of measures by 8 years after the effective date of these regulations. The burden associated with stratifying data is considered in the ongoing cost estimate only. We anticipate that certain costs will decline after the first year of reporting, but that some of the reduction will be supplanted with costs associated with stratifying data.

With regard to the one-time requirements at § 441.311(c) for reporting on the initial mandatory elements of the HCBS Quality Measure Set, we estimate that will take: 540 hours at $111.18/hr for administrative services managers to conduct project planning, administer and oversee survey administration, compile measures, establish and describe performance targets, describe quality improvement strategies, and produce a report; 40 hours at $101.46/hr for a statistician to determine survey sampling methodology; 500 hours at $63.88/hr for survey researcher(s) to be trained in survey administration and to administer an in-person survey; 200 hours at $36.52/hr for a data entry worker to input the data; 60 hours at $98.84/hr for a computer programmer to synthesize the data; and 5 hours at $236.96/hr for a chief executive to verify, certify, and approve the report. In aggregate, we estimate a one-time burden of 64,560 hours (48 States × 1,345 hr) at a cost of $5,301,830 (48 States × [(540 hr × $111.18/hr) + (40 hr × $101.46/hr) + (500 hr × $63.88/hr) + (200 hr × $36.52/hr) + (60 hr × $98.84/hr) + (5 hr × $236.96/hr)]) Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost will be $2,650,915 ($5,301,830 × 0.50).

BILLING CODE 4120–01–P

TABLE 28: Summary of the One-Time Burden for States for the HCBS Quality Measure Set Requirements at § 441.311(c)

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
Conduct project planning, administer and oversee survey administration, compile measures, establish and describe performance targets, describe quality improvement strategies, and produce a report	48	48	Once	540	25,920	111.18	2,881,786	1,440,893
Determine survey sampling methodology	48	48	Once	40	1,920	101.46	194,803	97,402
Receive training in survey administration and administer an in-person survey	48	48	Once	500	24,000	63.88	1,533,120	766,560
Input data	48	48	Once	200	9,600	36.52	350,592	175,296
Synthesize data	48	48	Once	60	2,880	98.84	284,659	142,330
Verify, certify, and approve the report	48	48	Once	5	240	236.96	56,870	28,435
Total	48	48	Once	Varies	64,560	varies	5,301,830	2,650,915

ii. Ongoing HCBS Quality Measure Set Requirements: States (§ 441.311(c))

With regard to the ongoing burden of fulfilling requirements at § 441.311(c), every other year, for reporting on mandatory elements of the HCBS Quality Measure Set, including data stratification by demographic characteristics, we estimate it will take: 520 hours at $111.18/hr for administrative services managers to conduct project planning, administer and oversee survey administration, compile measures, update performance targets and quality improvement strategy description, and produce a report; 80 hours at $101.46/hr for a statistician to determine survey sampling methodology; 1,250 hours at $63.88/hr for survey researcher(s) to be trained in survey administration and to administer an in-person survey; 500 hours at $36.52/hr for a data entry worker to input the data; 100 hours at $98.84/hr for a computer programmer to synthesize the data; and 5 hours at $236.96/hr for a chief executive to verify, certify, and approve a State data submission to us. In aggregate, we estimate an ongoing burden of 117,840 hours (48 States × 2,455 hr) at a cost of $8,405,242 (48 States × [(520 hr × $111.18/hr) + (80 hr × $101.46/hr) + (1,250 hr × $63.88/hr) + (500 hr × $36.52/hr) + (100 hr × $98.84/hr) + (5 hr × $236.96/hr)]). Given that reporting is every other year, the annual burden will be 58,920 hours (117,840 hr/2 years) and $4,202,621 ($8,405,242/2 years). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $2,101,310 ($4,202,621 × 0.50).

TABLE 29: Summary of the Ongoing Burden for States for the HCBS Quality Measure Set Requirements at § 441.311(c)

Requirement	No. Respondents	Total Responses *	Frequency	Time per Response (hr)	Total Time (hr)*	Wage ($/hr)	Total Cost ($)*	State Share ($)*
Conduct project planning, administer and oversee survey administration, compile measures, update performance targets and quality improvement strategy description, and produce a report	48	12 per year) (24 biennially)	Biennial	520	12,480	111.18	1,387,526	1,387,526

b. HCBS Quality Measure Set Requirements: Beneficiary Experience Survey (§ 441.311(c))

State adoption of existing beneficiary experience surveys, contained in the HCBS Quality Measure Set, to fulfill the mandatory reporting requirements includes a burden on beneficiaries. As finalized in § 441.312, a State must newly adopt one of the ''experience of care'' surveys cited in the HCBS Quality Measure Set: The Consumer Assessment of Healthcare Providers and Systems Home and Community Based (HCBS CAHPS®) Survey, National Core Indicators® Intellectual and Developmental Disabilities (NCI® IDD), National Core Indicators Aging and Disability (NCI AD)™, or Personal Outcome Measures (POM)®.

With regard to beneficiary burden, we estimate it will take 45 minutes (0.75 hr) at $20.71/hr for a Medicaid beneficiary to complete a survey every other year that will be used to derive one or more of the measures in the HCBS Quality Measure Set. At 1,000 beneficiaries/State and 48 States, we estimate an aggregate burden of 36,000 hours (1,000 beneficiary responses/State × 48 States × 0.75 hr/survey) at a cost of $745,560 (36,000 hr × $20.71/hr). Given that survey is every other year, the annual burden will be 18,000 hours (36,000 hr/2 years) and $372,780 ($745,560/2 years).

TABLE 30: Summary of Ongoing Beneficiary Experience Survey Burden for the HCBS Quality Measure Set Requirements at § 441.311(c)

Requirement	No. Respondents	Total Responses *	Frequency	Time per Response (hr)	Total Time (hr)*	Wage ($/hr)	Total Cost ($)*	State Share ($)
Complete beneficiary experience survey	48,000	24,000	Biennial	0.75	18,000	20.71	372,780	n/a
Total	48,000	24,000	Biennial	0.75	18,000	20.71	372,780	n/a

*Annualized over 2 years.

10. ICRs Regarding Website Transparency (§ 441.313; Applied to Other HCBS Authorities at §§ 441.486, 441.595, and 441.750, and to Managed Care at § 438.72(b))

The following changes will be submitted to OMB for approval after our survey instrument has been developed. The survey instrument and burden will be made available to the public for their review under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices. In the meantime, we are setting out our burden figures (see below) as a means of scoring the impact of this rule's changes. The availability of the survey instrument and more definitive burden estimates will be announced in both **Federal Register** notices. The CMS ID number for that collection of information request is CMS–10854 (OMB control number 0938–TBD). Since this would be a new collection of information request, the OMB control number has yet to be determined (TBD) but will be issued by OMB upon their approval of the new collection of information request.

We are finalizing a new section, at § 441.313, titled, ''website Transparency, to promote public transparency related to the administration of Medicaid-covered HCBS under section 1915(c) of the Act.'' Specifically, at § 441.313(a), we proposed to require States to operate a website that meets the availability and accessibility requirements at § 435.905(b) and that provides the data and information that States are required to report under the newly finalized reporting section at § 441.311. At § 441.313(a)(1), we proposed to require that the data and information that States are required to report under § 441.311 be provided on one website, either directly or by linking to the web pages of the managed care organization, prepaid ambulatory health plan, prepaid inpatient health plan, or primary care case management entity that is authorized to provide services. At § 441.313(a)(2), we proposed to require that the web page include clear and easy to understand labels on documents and links.

At § 441.313(a)(3), we proposed to require that States verify the accurate function of the website and the timeliness of the information and links at least quarterly. At § 441.313(c), we proposed to apply these requirements to services delivered under FFS or managed care delivery systems. At § 441.313(a)(4), we proposed to require that States explain that assistance in accessing the required information on the website is available at no cost and include information on the availability of oral interpretation in all languages and written translation available in each prevalent non-English language, how to request auxiliary aids and services, and a toll-free and TTY/TDY telephone number. Further, we proposed to apply the proposed requirements at § 441.313 to sections 1915(j), (k), and (i) State plan services by finalizing §§ 441.486, 441.595, and 441.750, respectively.

We are finalizing the requirements without substantive changes. Our burden estimates are described below. The burden associated with the website transparency requirements at § 441.313 will affect the 48 States (including Washington, DC) that deliver HCBS under sections 1915(c), (i), (j), or (k) authorities. We are requiring at § 441.313(c) to apply the website transparency requirements to services delivered under FFS or managed care delivery systems, and we are providing States with the option to meet the requirements at § 441.313 by linking to the web pages of the managed care organization, prepaid ambulatory health plan, prepaid inpatient health plan, or primary care case management entity that are authorized to provide services. However, we are not requiring managed care plans to report the data and information required under § 441.311 on their website. As such, we estimate that there is no additional burden for managed care plans associated with the requirements to link to the web pages of the managed care organization, prepaid ambulatory health plan, prepaid inpatient health plan, or primary care case management entity that are authorized to provide services for § 441.313. Further, the burden associated with the requirements for managed care plans to report the data and information required under § 441.311 is estimated in the ICRs Regarding Compliance Reporting (§ 441.311(b)).

If a State opts to comply with the requirements at § 441.313 by linking to the web pages of the managed care organization, prepaid ambulatory health plan, prepaid inpatient health plan, or primary care case management entity that are authorized to provide services, the State will incur a burden. However, such burden will be less than the burden associated with posting the information required under § 441.311 on their own website. We are unable to estimate the number of States that may opt to comply with the requirements at § 441.313 by linking to the web pages of the managed care organization, prepaid ambulatory health plan, prepaid inpatient health plan, or primary care case management entity that are authorized to provide services. As a result, we do not take into account the option in our burden estimate and conservatively assume that all States subject to the requirements at § 441.313 by posting the information required under § 441.311 on their own website.

We estimate both a one-time and ongoing burden to implement these requirements at the State level.

a. One Time Website Transparency Requirements: States (§ 441.313)

The burden associated with the website transparency requirements at § 441.313 will affect the 48 States (including Washington DC) that deliver HCBS under sections 1915(c), (i), (j), or (k) authorities. We estimate both a one-time and ongoing burden to implement these requirements at the State level. In developing our burden estimate, we assumed that States will provide the data and information that States are required to report under newly proposed § 441.311 through an existing website, rather than develop a new website to meet this requirement.

With regard to the one-time burden, based on the website transparency requirements, we estimate it will take: 24 hours at $111.18/hr for an administrative services manager to determine the content of the website; 80 hours at $98.84/hr for a computer programmer or contractor to develop the website; 3 hours at $118.14/hr for a general and operations manager to review and approve the website; and 2 hours at $236.96/hr for a chief executive to review and approve the website. In aggregate, we estimate a one-time burden of 5,232 hours (48 States × 109 hr) at a cost of $547,385 (48 States × [(24 hr × $111.18/hr) + (80 hr × $98.84/hr) + (3 hr × $118.14/hr) + (2 hr × $236.96/hr)]). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost will be $273,693 ($547,385 × 0.50) per year.

TABLE 31: Summary of the One-Time Burden for States for the Website Transparency Requirements at § 441.313

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)/year
Determine content of website	48	48	Once	24	1,152	111.18	128,080	64,040
Develop website	48	48	Once	80	3,840	98.84	379,546	189,773
Review and approve the website at the management level	48	48	Once	3	144	118.14	17,012	8,506
Review and approve the website at the executive level	48	48	Once	2	96	236.96	22,748	11,374
Total	48	48	Once	Varies	5,232	Varies	547,385	273,693

b. Ongoing Website Transparency Requirements: States (§ 441.313)

With regard to the State on-going burden related to the website transparency requirement, per quarter we estimate it will take: 8 hours at $111.18/hr for an administrative services manager to provide updated data and information for posting and to verify the accuracy of the website; 20 hours at $98.84/hr for a computer programmer or contractor to update the website; 3 hours at $118.14/hr for a general and operations manager to review and approve the website; and 2 hours at $236.96/hr for a chief executive to review and approve the website. In aggregate, we estimate an ongoing annual burden of 6,336 hours (33 hr × 48 States × 4 quarters) at a cost of $709,359 (48 States × 4 quarters × [(8 hr × $111.18/hr) + (20 hr × $98.84/hr) + (3 hr × $118.14/hr) + (2 hr × $236.96/hr)]). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $354,680 ($709,359 × 0.50) per year.

TABLE 32: Summary of the Ongoing Burden for States for the Website Transparency Requirements at § 441.313

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
Provide updated data and information for posting and verify the accuracy of the website	48	192	Quarterly	8	1,536	111.18	170,772	85,386
Update website	48	192	Quarterly	20	3,840	98.84	379,546	189,773
Review and approve website at the management level	48	192	Quarterly	3	576	118.14	68,049	34,024
Review and approve website at the executive level	48	192	Quarterly	2	384	236.96	90,993	45,496
Total	48	192	Quarterly	Varies	6,336	Varies	709,359	354,680

11. ICRs Regarding HCBS Payment Adequacy (§ 441.302(k); Applied to Other HCBS Authorities at §§ 441.464(f), 441.570(f), 441.745(a)(1)(vi), and to Managed Care at § 438.72(b))

The following changes will be submitted to OMB for approval after this final rule is finalized and when our survey instrument has been developed. The survey instrument will be made available to the public for their review under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices. In the meantime, we are setting out our burden figures (see below) as a means of scoring the impact of this rule's changes. The availability of the survey instrument and more definitive burden estimates will be announced in both **Federal Register** notices. The CMS ID number for that collection of information request is CMS–10854 (OMB control number 0938–TBD). Since this would be a new collection of information request, the OMB control number has yet to be determined (TBD) but will be issued by OMB upon their approval of the new collection of information request.

We proposed, and are finalizing, a new policy at § 441.302(k)(3)(i), which requires that 80 percent of Medicaid payments for the following services for homemaker services, home health aide services, and personal care services (as set forth in § 440.180(b)(2) through (4)) be spent on compensation for direct care workers. We proposed, and are finalizing, definitions for compensation and direct care workers at §§ 441.302(k)(1) and (2), respectively, which are discussed in greater detail in section II.B.5. of this final rule. As finalized, States must comply with the requirements in § 441.302(k) 6 years after this rule is finalized.

As discussed in greater detail in section II.B.5. of this final rule, we are finalizing this policy with additional modifications which have an impact on our burden estimates. We are finalizing a policy at § 441.302(k)(3)(ii) that allows States to apply a different minimum performance threshold for small providers. We are finalizing a requirement at § 441.302(k)(4)(i) that allows States to develop reasonable, objective criteria through a transparent process (which includes public notice and opportunities for comment from interested parties) to identify small providers that the State would require to meet this alternative minimum performance requirement. We are finalizing a requirement at § 441.302(k)(4)(ii) that the State must set the percentage for a small provider to meet the minimum performance level based on reasonable, objective criteria that it develops through a transparent process that includes public notice and opportunities for comment from interested parties. The costs associated with establishing the small provider threshold (including activities related to public notice and opportunities for comment) have been added to this burden estimate for States. We do not estimate an impact on managed care plans associated with the small provider threshold. We estimate a small impact on providers associated with this requirement; while we believe providers' activities would remain the same whether they were complying with the 80 percent threshold or a State-set small provider threshold, we also assume an additional activity associated with demonstrating eligibility for the State-set small provider threshold. We note that while we have not specified a process by which a State would have providers determine eligibility for a small provider threshold, we are calculating a burden based on the assumption that States would have such a process.

We are also finalizing at § 441.302(k)(5) a flexibility to allow States to offer certain providers temporary hardship exemptions. As finalized, this requirement would allow States to develop reasonable, objective criteria through a transparent process (which includes public notice and opportunities for comment from interested parties) to exempt from the minimum performance requirement at paragraphs (k)(3) of this section a reasonable number of providers determined by the State to be facing extraordinary circumstances that prevent their compliance with either the 80 percent threshold requirement or the State's small provider threshold. The costs associated with establishing the hardship exemption (including activities related to public notice and opportunities for comment) have been added to this burden estimate for States. We do not anticipate a specific impact on managed care plans as a result of this requirement. We do not estimate an impact on managed care plans associated with the hardship exemption. We estimate a small impact on providers associated with this requirement, as we assume an additional activity associated with demonstrating eligibility for the State-set hardship exemption. We note that while we have not specified a process by which a State would have providers determine eligibility for a hardship exemption, we are calculating a burden based on the assumption that States would have such a process.

We are finalizing at § 441.302(k)(6) reporting requirements for small provider minimum performance levels and hardship exemptions. Under this requirement, States that establish a small provider minimum performance level must report to CMS annually the following information, in the form and manner, and at a time, specified by CMS: the State's small provider criteria developed in accordance with paragraph (k)(4)(i) of this section; the State's small provider minimum performance level; the percentage of providers of services set forth at § 440.180(b)(2) through (4) that qualify for the small provider minimum performance level; and a plan, subject to CMS review and approval, for small providers to meet the minimum performance requirement at paragraph (k)(3)(i) of this section within a reasonable period of time. States that provide a hardship exemption must report to CMS annually the following information, in the form and manner, and at a time, specified by CMS: the State's hardship criteria; the percentage of providers of services set forth at § 440.180(b)(2) through (4) that qualify for a hardship exemption; and a plan, subject to CMS review and approval, for reducing the number of providers that qualify for a hardship exemption within a reasonable period of time. We also finalized a flexibility at § 441.302(k)(6)(iii) that CMS may waive the reporting requirements if the State demonstrates it has applied the small provider minimum performance level or the hardship exemption to less than 10 percent of the State's providers.

We have added the burden associated with the reporting requirement finalized at § 441.302(k)(6) to the burden estimate. We do not expect that all States will need to submit such a report (because some States will expect most, if not all, of their providers to comply with the minimum performance threshold); we also expect that over time, fewer States will need to submit such a report (again, as more States begin to require that more than 90 percent of their providers comply with the minimum performance threshold.) However, to avoid underestimating burden, we have calculated the burden of this requirement based on the assumption that all 48 States will submit such a report annually. We do not anticipate an impact on managed care plans or providers associated with this additional requirement.

We also finalized at § 441.302(k)(7) an exemption for the Indian Health Service and Tribal health programs subject to 25 U.S.C. 1641, which exempts these providers from the requirements in § 441.302(k). Based on internal data, we believe that about 100 providers would be eligible for this exclusion as § 441.302(k)(7) requires no additional action on the part of the State or providers impacted by this exemption) we did not calculate a change in the burden activities as a result of this exemption.

We are finalizing the application of these requirements to services delivered under FFS or managed care delivery systems. Further, we are finalizing the application of the finalized requirements sections 1915(j), (k), and (i) State plan services by cross-referencing at §§ 441.450(c), 441.540(c), and 441.725(c), respectively.

We are finalizing the requirements at §§ 441.302(k) with the substantive modifications as described above. Burden estimates for the finalized requirements are below. We note an additional change to the burden estimates. As presented in the proposed rule at 88 FR 28047, we had presented the burden estimate of both the HCBS payment adequacy provision at § 441.302(k) and the payment adequacy reporting requirement at § 441.311(e) in a single ICR. Since the publication of the NPRM, upon further consideration we have determined that as §§ 441.302(k) and 441.311(e) represent distinct sets of requirements, it is more appropriate to present the costs associated with § 441.311(e) under a separate ICR in this section IV. of the final rule.

However, while § 441.311(e) represents a distinct set of requirements from those in § 441.302(k), we also expect that States will employ certain efficiencies in complying with both §§ 441.302(k) and 441.311(e). In particular, we expect that States will build a single IT infrastructure and use the same processes both for collecting data for the reporting requirement at § 441.311(e) and for determining providers' compliance with the 80 percent threshold at § 441.302(k)(3)(i) or the small provider threshold at § 441.302(k)(3)(ii). The burden associated with States' development of infrastructure and processes to determine what percentage of HCBS providers' Medicaid payments for homemaker, home health aide, or personal care services is spent on direct care worker compensation, as well as providers' reporting of this information to the State, is included in the ICR for § 441.311(e) (ICR 5 of this section IV. of the final rule). We believe representing these costs under only one ICR avoids duplicative or inflated burden estimates.

The burden estimates below include costs associated specifically with § 441.302(k), namely: development and application of the small provider threshold under § 441.302(k)(3)(ii) and (4), development and application of the hardship exemption under § 441.302(k)(5), and the reporting on the small provider threshold and hardship exemption under § 441.302(k)(6).

a. States

The burden associated with the requirements at § 441.302(k) will affect the 48 States (including Washington DC) that deliver HCBS under sections 1915(c), (i), (j), or (k) authorities.[410] [411] We estimate both a one-time and ongoing burden to implement these requirements at the State level. Specifically, under §§ 441.302(k) States will have to: (1) draft new policy regarding the application of the 80 percent minimum performance level at

[410] Arizona, Rhode Island, and Vermont do not have HCBS programs under any of these authorities.

[411] For purposes of this burden analysis, we are not taking into consideration temporary wage increases or bonus payments that have been or are being made.

§ 441.302(k)(3), the small provider performance level and criteria described in § 441.302(k)(4), and the hardship exemptions described in § 441.302(k)(5) (one-time); (2) publish the proposed requirements for the small provider performance level described in § 441.302(k)(4) and threshold and the hardship exemption described in § 441.302(k)(5) through State notice and publication processes (one-time); (3) update provider manuals and other policy guidance regarding the performance levels described in § 441.302(k)(3) and (4) and the hardship exemption described in § 441.302(k)(5) for each of the services subject to the requirement (one-time); (4) inform providers of the process for demonstrating eligibility for the small provider performance level described at § 441.302(k)(4) or the hardship exemption described at § 441.302(k)(5) through State notification processes, both initially and annually (one-time and ongoing); (5) review providers' eligibility for the small provider performance level described at § 441.302(k)(4) or hardship exemption described in § 441.302(k)(5) (ongoing); and (6) provide the report on the small provider performance level and the hardship exemption required at § 441.302(k)(6) to us on an annual basis (ongoing).

i. One Time HCBS Payment Adequacy Requirements (§ 441.302(k)): State Burden

With regard to the one-time requirements, we estimate it will take 100 hours at $111.18/hr for an administrative services manager to: draft policy content; prepare notices and draft rules for publication, conduct public hearings on the small provider performance level and hardship exemptions in accordance with § 441.302(k)(4) and (5), respectively. We estimate it will take 50 hours at $100.64/hr for a management analyst to: update provider manuals for each of the affected services (explaining the policies for § 441.302(k) generally, and the policies and criteria related to the small provider performance level and hardship exemption described at § 441.302(k)(4) and (5), respectively; and draft provider agreement and managed care contract amendments regarding the requirements at § 441.302(k)(3), (4) and (5). We estimate it will take 8 hours at $98.84/hr for a computer programmer to build, design, and operationalize internal systems for identifying providers falling under § 441.302(k)(4) or (5). We estimate it will take 40 hours at $67.18/hr for a training and development specialist to: develop and conduct training for providers specific to the requirements associated with § 441.302(k)(3), (4), and (5). We estimate it will take 20 hours at $118.14/hr for a general and operations manager to: review and approve provider agreement amendment sand managed care contract modifications; and to review and approve policy guidance for publication. We estimate it will take 10 hours at $236.96/hr for a chief executive to review and approve all operations associated with these requirements.

In aggregate, we estimate a one-time burden of 10,944 hours (228 hr × 48 States) at a cost of $1,169,295 (48 States × [(100 hr × $111.18/hr) + (50 hr × $100.64/hr) + (8 hr × $98.84/hr) + (40 hr × $67.18/hr) + (20 hr × $118.14/hr) + (10 hr × $236.96/hr)]). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $584,648 ($1,169,295 × 0.50).

BILLING CODE 4120–01–P

TABLE 33: Summary of One-Time Burden for States for the HCBS Payment Adequacy Requirements at § 441.302(k)

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
Draft policy content; prepare notices and draft rules for publication, conduct public hearings for § 441.302(k)(4) and (5)	48	48	Once	100	4,800	111.18	533,664	266,832
Update provider manuals for each of the affected services (explaining the policies related to § 441.302(k) (4) and (5); and draft provider agreement and managed care contract amendments	48	48	Once	50	2,400	100.64	241,536	120,768
Build, design, and operationalize internal systems for marking providers identified as under § 441.302(k)(4) or (5)	48	48	Once	8	384	98.84	37,955	18,977
Develop and conduct training for providers for the requirements associated with § 441.302(k)	48	48	Once	40	1,920	67.18	128,986	64,493
Review, approve managed care contract modifications, provider agreement updates, policy and rules for publication, and training materials	48	48	Once	20	960	118.14	113,414	56,707
Review and approve all operations associated with this requirement	48	48	Once	10	480	236.96	113,740	56,780
Total	48	48	Once	Varies	10,944	varies	1,169,295	584,648

ii. Ongoing HCBS Payment Adequacy Requirements (§ 441.302(k)): State Burden

We also expect that States will have to review, on an ongoing basis, providers' requests to be considered under the small provider performance level at § 441.302(k)(4) or the hardship exemption at § 441.302(k)(5). As noted in the Collection of Information in the proposed rule at 88 FR 28049, we estimate that 11,555 HCBS providers provide homemaker, home health aide, or personal care services and thus are subject to the requirements at § 441.302(k). We estimate that around 15 percent of these providers will request consideration under either the

small provider performance level or hardship exemption; 10 percent is selected as we expect States will set criteria to apply to 10 percent or less of providers. Thus, we expect that States (collectively) will need to review 1,155 requests for flexibilities under § 441.302(k)(4) or (5) on an ongoing, annual basis; we expect that it will take 0.5 hours at $100.64/hr for a management analyst to review each request.

With regard to additional ongoing requirements, we estimate it will take 2 hours at $98.84/hr for a computer programmer to update providers' status in any system that tracks providers subject to the small provider performance level and hardship exemptions under § 441.302(k)(4) or (5), respectively, and calculate the percent of providers subject to 441.302(k)(4) or (5). We also estimate it will take 2 hours at $118.14/hr by a general and operations manager to generate the report required at § 441.302(k)(6) for submission to CMS. We estimate it will take 2 hours at $236.96/hr for a chief executive to review and approve all operations associated with these requirements.

In aggregate, we estimate an ongoing burden of 866 hours [(0.5 hr × 1,155 providers) + (6 hr × 48 States)] at a cost of $101,698 [1,155 providers × (0.5 hr × $100.65) + (48 States × [(2 hr × $98.84/hr) + (2 hr × $118.14/hr) + (2 hr × $236.96/hr)]). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $50,849 ($101,698 × 0.50) per year.

TABLE 34: Summary of Ongoing Burden for States for the HCBS Payment Adequacy Requirements at §§ 441.302(k)

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
Review providers' requests for classification under § 441.302(k)(4) or (5)	1,155	1,155	Annually	0.5	576	100.64	58,120	29,060

BILLING CODE 4120–01–C

b. Service Providers

The burden associated with § 441.302(k) being finalized in this final rule will affect service providers that provide the services listed at § 440.180(b)(2) through (4) and (6). We estimate an ongoing burden on providers to request, on an ongoing basis, either qualification as a small provider under the small provider criteria (in accordance with § 441.302(k)(4)) or eligibility for the hardship exemption (in accordance with § 441.302(k)(5)). (We do also expect there to be a burden on providers to implement the separate payment adequacy reporting requirement at § 441.311(e); these costs are addressed in a separate ICR.)

As noted above, we expect that annually, we estimate that 1,155 providers will request consideration for eligibility for the small provider performance level or the hardship exemption under § 441.302(k)(4) or (5), respectively.

With regard to the ongoing requirement, we estimate it would take: 1 hour at $118.14/hr for a general and operations manager to file the request for the State. In aggregate, we estimate an ongoing burden of 1,155 hours (1,155 providers × 1 hr) at a cost of $136,452 (1,155 providers × (1 hr × $118.14/hr).

TABLE 35: Summary of Ongoing Burden for Service Providers for the HCBS Payment Adequacy Requirements at § 442.302(k)

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
Request qualification under § 441.302(k)(4) or (5)	1,155	1,155	Once	1	1,155	118.14	136,452	n/a
Total	1,155	1,155	Once	1	1.155	118.14	136,452	n/a

12. ICRs Regarding Payment Rate Transparency (§ 447.203)

The following changes will be submitted to OMB for approval under control number 0938–1134 (CMS–10391).

This final rule will update documentation requirements in § 447.203. To develop the burden estimates associated with these changes, we account for the removal of existing information collection requirements in current § 447.203(b), and the introduction of new requirements at 447.203(b) and (c). As described later in this section, we estimate the impact of the revisions to § 447.203 will result in a net burden reduction. We do not anticipate any additional information collection burden from the conforming edits finalized in § 447.204, as the conforming edits merely alter the items submitted as part of an existing submission requirement, and the burden of producing those items is reflected in the estimates related to § 447.203, including instances where we move language from § 447.204 to § 447.203.

a. Removal of Access Monitoring Review Plan: States (§ 447.203(b)(1) Through (8))

The burden reduction associated with the removal of § 447.203(b)(1) through (8) consists of the removal of time and effort necessary to develop and publish AMRPs, perform ongoing monitoring, and corrective action plans.

Former § 447.203(b)(1) and (2) described the minimum factors that States must consider when developing an AMRP. Specifically, the AMRP must include: input from both Medicaid beneficiaries and Medicaid providers, an analysis of Medicaid payment data, and a description of the specific measures the State will use to analyze access to care. Section 447.203(b)(3) required that States include aggregate percentage comparisons of Medicaid payment rates to other public (including, as practical, provider payments rates in Medicaid managed care or Medicare rates) and private health coverage rates within geographic areas of the State. Section 447.203(b)(4) described the minimum content that must be included in the monitoring plan. States were required to describe: measures the State uses to analyze access to care issues, how the measures relate to the overarching framework, access issues that are discovered as a result of the review, and the State Medicaid agency's recommendations on the sufficiency of access to care based on the review. Section 447.203(b)(5) described the timeframe for States to develop the AMRP and complete the data review for the following categories of services: primary care, physician specialist services, behavioral health, pre- and post-natal obstetric services including labor and delivery, home health, any services for which the State has submitted a SPA to reduce or restructure provider payments which changes could result in diminished access, and additional services as determined necessary by the State or CMS based on complaints or as selected by the State. While the initial AMRPs have been completed, the plan had to be updated at least every 3 years, but no later than October 1 of the update year. Section 447.203(b)(6)(i) required that any time a State submits a SPA to reduce provider payment rates or restructure provider payments in a way that could diminish access, the State must submit an AMRP associated with the services affected by the payment rate reduction or payment restructuring that has been completed within the prior 12 months.

Former § 447.203(b)(6)(ii) required that States have procedures within the AMRP to monitor continued access after implementation of a SPA that reduces or restructures payment rates. The monitoring procedures were required to be in place for a period of at least 3 years following the effective date of the SPA. However, States were already required to submit information on compliance with section 1902(a)(30)(A) of the Act prior to the 2015 final rule with comment period. Therefore, removal of § 447.203(b)(6)(ii) results in a burden reduction.

Finally, we note that this section references the rescission of the AMRP process contained in § 447.203(b)(1) through (b)(8). However, the requirements of former paragraph (b)(7) are reflected in new paragraph (b)(4), and the requirements of former paragraph (b)(8) are reflected in new paragraph (c)(5). As such, there is not a change in impact related to the rescission of these specific aspects of the AMRP process and are not reflected in this section.

In our currently approved information collection request, we estimated that the requirements to develop and make the AMRPs publicly available for the specific categories of Medicaid services will affect each of the 50 State Medicaid programs and the District of Columbia

(51 total respondents). We will use that estimate here as well, although we note that the requirements may not be limited to solely those States, as some territories may not be exempt under waivers; however, because these figures fluctuate, we are maintaining the estimate for consistency. As such, for consistency, we will maintain the estimate of 51 respondents subject to this final rule. We further note that the one-time cost estimates have already been met for AMRPs, and the ongoing monitoring requirements are every 3 years. As such, the estimates in this section for burden reduction are for 17 respondents, which is one-third of the 51 affected respondents, to provide an annual estimate of the reduced burden.

We estimated that every 3 years, it would take: 80 hours at $55.54/hr for a social science research analyst to gather data, 80 hours at $106.30/hr for a computer and information analyst to analyze the data, 100 hours at $100.64/hr for a management analyst to develop the content of the AMRP, 40 hours at $80.08/hr for a business operations specialist to publish the AMRP, and 10 hours at $118.14/hr for a general and operations manager to review and approve the AMRP. In aggregate, and as shown in Table 36, we estimate the reduced annual burden of the rescission of the ongoing AMRP requirements would be minus 5,270 hours (17 States × 310 hr) and minus $465,729 (17 States × [(80 hr × $55.54/hr) + (80 hr × $106.30/hr) + (100 hr × $100.64/hr) + (40 hr × $80.08/hr) + (10 hr × $118.14/hr)]). Taking into account the 50 percent Federal contribution for administrative expenditures, the rescission represents a saving to States of minus $232,865 ($465,729 × 0.50).

The currently approved ongoing burden associated with the requirements under § 447.203(b)(6)(ii) is the time and effort it takes each of the State Medicaid programs to monitor continued access following the implementation of a SPA that reduces or restructures payment rates. In our currently approved information collection request, we estimated that in each SPA submission cycle, 22 States will submit SPAs to implement rate changes or restructure provider payments based on the number of submissions received in FY 2010. Using our currently approved burden estimates we estimate a reduction of: 40 hours at $100.64/hr for a management analyst to develop the monitoring procedures, 24 hours at $100.64/hr for a management analyst to periodically review the monitoring results, and 3 hours at $118.14/hr for a general and operations manager to review and approve the monitoring procedures. In aggregate, we estimate burden reduction of minus 1,474 hours (22 responses × 67 hr) and minus $149,498 (22 States × [(40 hr × $100.64/hr) + (24 hr × $100.64/hr) + (3 hr × $118.14/hr)]). Accounting for the 50 percent Federal administrative match, the total State cost reduction is adjusted to minus $74,749 ($149,498 × 0.50).

TABLE 36: Summary of Annual Burden Reduction Associated with Removal of Access Monitoring Review Plan Requirements (§ 447.203(b)(1) through (8))

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
Rescission of §447.203(b)(1) through (b)(6)(i)	17	17	Triennial (figures are annualized)	(310)	(5,270)	Varies	(465,729)	(232,865)
Rescission of § 447.203(b)(6)(ii)	22	22	Varies (figures are annualized)	(67)	(1,474)	Varies	(149,498)	(74,749)
TOTAL	39	39	Varies	Varies	(6,744)	Varies	(615,227)	(307,614)

b. Payment Rate Transparency (§ 447.203(b)(1) Through (5))

We proposed to replace the AMRP requirements with new payment rate transparency and analysis requirements at § 447.203(b)(1) through (5), which we are finalizing as proposed apart from minor technical adjustments. The burden associated with these requirements consists of the time and effort to develop and publish a Medicaid FFS provider payment rate information and analysis.

Section 447.203(b)(1) specifies that all FFS Medicaid payments must be published on a publicly accessible website that is maintained by the State. Section 447.203(b)(2) specifies the service types that are subject to the proposed payment analysis, which include: primary care services; obstetrical and gynecological services; outpatient mental health and substance use disorder services; and certain HCBS. Section 447.203(b)(3) describes the required components of the payment analysis to include, for services in § 447.203(b)(2)(i) through (iii), a percentage comparison of Medicaid payment rates to the most recently published Medicare payment rates effective for the time period for each of the service categories specified in paragraph (b)(2). We also specify that the payment analysis must include percentage comparisons made on the basis of Medicaid base payments. For HCBS described in § 447.203(b)(2)(iv), we require a State-based comparison of average hourly payment rates. Section 447.203(b)(4) details the payment analysis timeframe, with the first payment analysis required to be published by the State agency by July 1, 2026, which is a change from our proposed date of January 1, 2026, and updated every 2 years by July 1. Section 447.203(b)(5) describes our mechanism

for ensuring compliance and that we may take compliance action against a State that fails to meet the requirements of the payment rate transparency, comparative payment rate analysis, and payment rate disclosure provisions in preceding paragraphs in § 447.203(b), including a deferral or disallowance of certain of the State's administrative expenditures following the procedures described at part 430, subpart C.

We estimate that the requirements to complete and make publicly available all FFS Medicaid payments and the comparative payment rate analysis and payment rate disclosures under § 447.203(b)(1) through (5) for the specific categories of Medicaid services will affect 51 total respondents, based on the estimate in the prior section regarding the variation in States and territories subject to these requirements. We require applicable States and territories to publish all FFS Medicaid payments initially by July 1, 2026, while future updates to the payment rate transparency information would depend on when a State submits a SPA updating provider payments and we have approved that SPA. As such, we assume 51 one-time respondents for the initial rates publication. Because the comparative payment rate analysis and payment rate disclosure requirement is biennial, we assume 26 annual respondents in any given year, and we will assume this figure would account for the updates made following a rate reduction SPA or rate restructuring SPA approval. The comparative payment rate analysis will be similar to the prior requirement at § 447.203(b)(3) that required AMRPs to include a comparative payment rate analysis against public or private payers. The inclusion of levels of provider payment available from other payers is also one of five required components of the AMRP as specified by current § 447.203(b)(1). To estimate the burden associated with our comparative payment rate analysis and payment rate disclosure provisions, we assume this work will require approximately 25 percent of the ongoing labor hour burden that we previously estimated to be required by the entire AMRP, to account for the service categories subject to the comparative payment rate analysis and payment rate disclosure in § 447.203(b)(2) as decreased from the full body of AMRP service requirements. We invited comment on these estimated proportions. We are finalizing this requirement to include reporting on an additional service (habilitation services, as defined at § 440.180(b)(6)) in the payment rate disclosure. Below, we include in our burden calculations the minimal increased anticipated burden associated with the addition of reporting on habilitation services.

With regard to the developing and publishing the payment rate transparency data under § 447.203(b)(1), we estimate a low one-time and ongoing burden due to the data being available, and the main work required to meet the proposed requirement would be formatting and web publication. As such, we estimate it will initially take: 5 hours at $55.54/hr for a research assistant to gather the data, 5 hours at $80.08/hr for a business operations specialist to publish, and 1 hour at $118.14/hr for a general and operations manager to review and approve the rate transparency data. In aggregate, we estimate a one-time burden of 561 hours (51 responses × 11 hr) at a cost of $40,608 (51 responses × [(5 hr × $55.54/hr) + (5 hr × $80.08/hr) + (1 hr × $118.14/hr)]). Taking into account the Federal administrative match of 50 percent, the requirement will cost States $20,304 ($40,608 × 0.50).

For the ongoing cost to update assumed to take place every 2 years (although we proposed that updates would only be required as necessary to keep the data current, with any update made no later than 1 month following the date of CMS approval of the SPA or similar amendment providing for the change), we estimate an annualized impact on 26 respondents (51 respondents every 2 years) of: 2 hours at $55.54/hr for a research assistant to update the data, 1 hour at $80.08/hr for a business operations specialist to publish the updates, and 1 hour at $118.14/hr for a general and operations manager to review and approve the rate transparency update. In aggregate, we estimate an annualized burden of 104 hours (26 responses × 4 hr) at a cost of $8,042 (26 responses × [(2 hr × $55.54/hr) + (1 hr × $80.08/hr) + (1 hr × $118.14/hr)]). Taking into account the Federal administrative match of 50 percent, the requirement will cost States $4,021 ($8,042 × 0.50).

With regard to developing and publishing the comparative payment rate analysis and payment rate disclosure at § 447.203(b)(2), we estimate it will take: 22 hours at $55.54/hr for a research assistant to gather the data, 22 hours at $106.30/hr for an information analyst to analyze the data, 25 hours at $100.64/hr for a management analyst to design the comparative payment rate analysis, 11 hours at $80.08/hr for a business operations specialist to publish the comparative payment rate analysis and payment rate disclosure, and 3 hours at $118.14/hr for a general and operations manager to review and approve the comparative payment rate analysis and payment rate disclosure. In aggregate, we estimate an annualized burden, based on 51 respondents every 2 years, of 2,054 (26 responses × 79 hr) at a cost of $190,107 (26 States × [(22 hr × $55.54/hr) + (22 hr × $106.30/hr) + (25 hr × $100.64/hr) + (11 hr × $80.08/hr) + (3 hr × $118.14/hr)]). We then adjust the total cost to $95,053 ($190,107 × 0.50) to account for the 50 percent Federal administrative match. We have summarized the total burdens in Table 37.

TABLE 37: Summary of Burden Associated with Payment Rate Transparency Requirements (§ 447.203(b)(1) through (5))

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
§ 447.203(b)(1) Rate Transparency	51	51	One-time	11	561	Varies	40,608	20,304
§ 447.203(b)(1) Rate Transparency	26	26	Biannual (figures are annualized)	4	104	Varies	8,042	4,021
§ 447.203(b)(2) and (3) Rate Analysis	26	26	Biannual (figures are annualized)	79	2,054	Varies	190,107	95,053
TOTAL	51	103	Varies	Varies	2,719	Varies	238,757	119,378

c. Medicaid Payment Rate Interested Parties' Advisory Group (§ 447.203(b)(6))

The burden associated with the recordkeeping requirements at § 447.203(b)(6), specifically the online publication associated with the reporting and recommendations of the interested parties advisory group, will consist of the time and effort for all 50 States and the District of Columbia to:

- Appoint members to the interested parties' advisory group.
- Provide the group members with materials necessary to:
  - ++ Review current and proposed rates.
  - ++ Hold meetings.
  - ++ Provide a written recommendation to the State.
- Publish the group's recommendations to a website maintained by the single State agency.

The requirements will require varying levels of efforts for States depending on the existence of groups that may fulfil the requirements of this group. However, because it is unknown how many States will be able to leverage existing practices, and to what extent, this estimate does not account for those differences. We are finalizing the requirements at § 447.203(b)(6) with a modification to add habilitation services as defined at § 440.180(b)(6), in addition to the previously identified services, to the group's purview. However, this addition is not expected to create any additional burden. We estimate that it will take 40 hours at $140.14/hr for a human resources manager to recruit interested parties and provide the necessary materials for the group to meet. In aggregate, we estimate a one-time burden of 2,040 hours (51 responses × 40 hr) at a cost of $285,886 (2,040 hr × $140.14/hr). Taking into account the 50 percent administrative match, the total one-time State cost is estimated to be $142,943 ($285,886 × 0.50).

We believe the ongoing work to maintain the needs of this group will take a human resources manager 5 hours at $140.14/hr annually. Additionally, we estimate it will take 4 hours for the biennial requirement, or 2 hours annually at $118.14/hr for an operations manager to review and prepare the recommendation for publication. In aggregate, we estimate an ongoing annualized burden of 182 hours (26 responses × 7 hr) at a cost of $24,361 (26 Respondents × [(5 hr × $140.14/hr) + (2 hr × $118.14/hr)]). Accounting for the 50 percent Federal administrative match, the total State cost is adjusted to $12,181 ($24,361 × 0.50). We have summarized the total burden in Table 38.

TABLE 38: Summary of Burden for Medicaid Payment Rate Interested Parties' Advisory Group

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
§ 447.203(b)(6) (Establish advisory group)	51	51	One-time	40	2,040	140.14	285,886	142,943
§ 447.203(b)(6) (Support and publish recommendation)	51	26	Biennial (figures are annualized)	7	182	Varies	24,361	12,181
TOTAL	51	77	Varies	Varies	2,222	Varies	310,247	155,124

d. State Analysis Procedures for Payment Rate Reductions or Payment Restructuring (§ 447.203(c))

The State analysis procedures for payment rate reductions and payment restructurings at § 447.203(c)(1) through (3) within this final rule effectively will replace payment rate reduction or payment restructuring procedures in current § 447.203(b)(6). As noted, the burden reduction associated with the removal of § 447.203(b)(6)(i) has already been accounted for in the recurring burden reduction estimate shown in Table 36 for the removal of the AMRP requirements, and the burden reduction associated with the removal of monitoring requirements at current § 447.203(b)(6)(ii) has been accounted for in Table 36 as well. Our replacement procedures at § 447.203(c)(1) through (3) will introduce new requirements as follows.

i. Initial State Analysis for Rate Reduction or Restructuring (§ 447.203(c)(1))

Section 447.203(c)(1) will require that for States proposing to reduce or restructure provider payment rates, the State must document that their program and proposal meet all of the following requirements: (1) Medicaid rates in the aggregate for the service category following the proposed reduction(s) or restructurings are at or above 80 percent of most recent Medicare prices or rates for the same or a comparable set of services; (2) Proposed reductions or restructurings result in no more than a 4 percent reduction of overall spending for each service category affected by a proposed reduction or restructuring in a single State fiscal year; and (3) Public process yields no significant access concerns or the State can reasonably respond to concerns.

Section 447.203(c)(1) will apply to all States that submit a SPA that proposes to reduce or restructure provider payment rates. We limited our estimates for new information collection burden to the requirements at § 447.203(c)(1)(i) through (ii). Our estimates assume States will build off the comparative analysis required by § 447.203(b)(2) through (4) to complete the requirements by § 447.203(c)(1)(i), which will limit the additional information collection burden. We also assume no additional information collection burden posed by the public review process required by § 447.203(c)(1)(iii), as this burden is encapsulated by current public process requirements at § 447.204.

The requirements of § 447.203(c) apply to all 50 States and the District of Columbia, as well as US territories. We will again use the estimate of 51 utilized in preceding sections, although we note some territories may be subject to these requirements if not exempt under waivers, and these figures fluctuate. As such, for consistency, we will maintain the estimate of 51 respondents subject to this rule. While we cannot predict how many States will submit a rate reduction SPA or rate restructuring SPA in a given year, the figures from 2019 provide the best recent estimate, as the years during the COVID pandemic do not reflect typical behavior. In 2019, we approved rate reduction and rate restructuring SPAs from 17 unique State respondents. Therefore, to estimate the annualized number of respondents subject to this information collection burden, we will utilize a count of 17 respondents.

With regard to the burden associated with completing the required State analysis for rate reductions or restructurings at § 447.203(c)(1), we estimate that it will take: 20 hours at $100.64/hr for a management analyst to structure the rate reduction or restructuring analysis, 25 hours at $106.30/hr for an information analyst to complete the rate reduction or restructuring analysis, and 3 hours at $118.14/hr for a general and operations manager to review and approve the rate reduction or restructuring analysis. In aggregate, we estimate a burden of 816 hours (17 States × 48 hr) at a cost of $85,420 (17 States × [(20 hr × $100.64/hr) + (25 hr × $106.30/hr) + (3 hr × $118.14/hr)]). Accounting for the 50 percent Federal administrative reimbursement, this adjusts to a total State cost of $42,710 ($85,420 × 0.50).

TABLE 39: Burden Associated with Tier 1 State Analysis Procedures for Rate Reductions or Restructurings (§ 447.203(c)(1))

Requirement	No. Respondents	Total Responses	Frequency	Time per Response (hr)	Total Time (hr)	Wage ($/hr)	Total Cost ($)	State Share ($)
§ 447.203(c)(1)	17	17	Annual	48	816	Varies	85,420	42,710
TOTAL	17	17	Annual	48	816	Varies	85,420	42,710

We solicited public comment on these estimates as well as relevant State data to further refine the burden and time estimates. We did not receive public comments on this issue, and therefore, we are finalizing as proposed.

ii. Additional State Rate Analysis (§ 447.203(c)(2))

Section 447.203(c)(2) describes requirements for payment proposals that do not meet the requirements in paragraph (c)(1), requiring the State to provide the nature of the change and policy purpose, the rates compared to Medicare and/or other payers pre- and post-reduction or restructuring, counts/trends of actively participating providers by geographic areas, counts of FFS Medicaid beneficiaries residing in geographic areas/characteristics of the beneficiary population, service utilization trends, access to care complaints from beneficiaries, providers, and other interested parties, and the State's response to access to care complaints.

The information collection requirements at § 447.203(c)(2) applies to those States that submit rate reduction or restructuring SPAs that do not meet one or more of the criteria proposed by § 447.203(c)(1). Using 2019 rate reduction and restructuring SPA figures, we estimate that 17 States will submit rate reduction or restructuring SPAs per year. Then, a 2019 Urban Institute analysis [412] indicates that 22 States (or 43 percent) have rates that meet the 80 percent fee ratio threshold proposed in § 447.203(c)(1)(i) across all services. Although our proposal did not

[412] Zuckerman, S. et al. ''Medicaid Physician Fees Remained Substantially Below Fees Paid By Medicare in 2019.'', *Health Affairs,* Volume 40, Number 2, February 2021, p. 343–348, *https://www.healthaffairs.org/doi/10.1377/hlthaff.2020.00611,* accessed August 31, 2022.

include all services, using this all services amount is our best method to estimate how many States may fall below on any given service without knowing which. Because we cannot predict the amount a State may propose to reduce, once or cumulatively for the SFY, and because failure of any one criterion in § 447.203(c)(1) will require additional analysis under § 447.203(c)(2), we will use that percentage to assess how many States will need to perform additional analysis. Using this percentage, we estimate that 7 (43 percent × 17) of the estimated 17 unique State respondents may submit rate reduction or restructuring SPAs meet the criteria for the streamlined analysis process under proposed § 447.203(c)(1). Therefore, we assume that 10 out of 17 unique annual State respondents who submit rate reduction or restructuring SPAs will also need to perform the additional analysis § 447.203(c)(2).

The required components of the review and analysis in § 447.203(c)(2) are similar to the AMRP requirements found at current § 447.203(b)(1). However, due to the availability of a template for States to facilitate completion of the required analysis, as well as the lack of a requirement to publish the analysis, we anticipate a moderately reduced burden associated with § 447.203(c)(2) when compared to the burden estimated for the AMRPs.

With regard to our requirements, we estimate that it would take: 64 hours at $55.54/hr for a social science research assistant to gather data, 64 hours at $106.30/hr for a computer and information analyst to analyze data, 80 hours at $100.64/hr for a management analyst to structure the analyses and organize output, and 8 hours at $118.14/hr for a general and operations manager to review and approve the rate reduction or restructuring analysis. In aggregate, we estimate a burden of 2,160 hours (10 States × 216 hr) at a cost of $193,541 (10 States × [(64 hr × $55.54/hr) + (64 hr × $106.30/hr) + (80 hr × $100.64/hr) + (8 hr × $118.14/hr)]). The total cost is adjusted down to $96,771 ($193,541 × 0.50) for States after accounting for the 50 percent Federal administrative match. We solicited public comment on these estimates as well as relevant State data to further refine the burden and time estimates. We did not receive public comments on this issue, and therefore, we are finalizing as proposed.

We do not assume any additional information collection imposed by the compliance procedures at § 447.203(c)(3).

Table 40 shows our estimated combined annualized burden for § 447.203(c), which includes 17 States for § 447.203(c)(1) and 10 States for § 447.203(c)(2). In total, we estimate an annualized burden of 2,976 (816 hours + 2,160 hours) hours at a cost of $278,961 ($85,420 + $193,541). This cost to States is then adjusted to $139,481 after the 50 percent Federal administrative reimbursement is applied.

BILLING CODE 4120–01–C

IV. Regulatory Impact Analysis

A. Statement of Need

1. Medicaid Advisory Committee

The changes to § 431.12 are intended to provide beneficiaries a greater voice in State Medicaid programs. In making policy and program decisions, it is vital for States to include the perspective and experience of those served by the Medicaid program. States are currently required to operate a MCAC, made up of health professionals, consumers, and State representatives to ''advise the Medicaid agency about health and medical care services.'' This rule establishes new requirements for a MAC in place of the MCAC, with additional membership requirements to include a broader group of interested parties, to advise the State Medicaid agency on matters related to the effective administration of the Medicaid program. We seek to expand the viewpoints represented on the MAC, to provider States with richer feedback on Medicaid program and policy issues. States are already required to set up and use MCACs. The changes will result in the State also setting up a smaller group, the BAC, which will likely have a cost implication. The additional cost will depend on whether or not States already have a beneficiary committee—we know that many States already do. This smaller group which feeds into the larger MAC will benefit the Medicaid program by creating a forum for beneficiaries to weigh in on key topics and share their unique views as Medicaid program participants. The new provisions of § 431.12 also enhance transparency and accountability through public reporting requirements related to the operation and activities of the MAC and BAC, and guidelines for operation of both bodies.

2. Home and Community-Based Services (HCBS)

The proposed changes at part 441, subpart G, seek to amend and add new Federal requirements, which are intended to improve access to care, quality of care, and health outcomes, and strengthen necessary safeguards that are in place to ensure health and welfare, and promote health equity for people receiving Medicaid-covered HCBS. The provisions in this final rule are intended to achieve a more consistent and coordinated approach to the administration of policies and procedures across Medicaid HCBS programs in accordance with section 2402(a) of the Affordable Care Act, and is made applicable to part 441, subparts J, K, and M, as well as part 438 to achieve these goals.

Specifically, the proposed rule seeks to: strengthen person-centered services planning and incident management systems in HCBS; require minimum percentages of Medicaid payments for certain HCBS to be spent on compensation for the direct care workforce; require States to establish grievance systems in FFS HCBS programs; report on waiver waiting lists in section 1915(c) waiver programs, service delivery timeframes for certain HCBS, and a standardized set of HCBS quality measures; and promote public transparency related to the administration of Medicaid-covered HCBS through public reporting on measures related to incident management systems, critical incidents, person-centered planning, quality, access, and payment adequacy.

In 2014, we released guidance [413] for section 1915(c) waiver programs, which described a process in which States were to report on State-developed performance measures to demonstrate that they meet the six assurances that are required for section 1915(c) waiver programs. Those six assurances include the following:

1. *Level of Care:* The State demonstrates that it implements the processes and instrument(s) specified in its approved waiver for evaluating/reevaluating an applicant's/waiver participant's level of care consistent with care provided in a hospital, nursing facility, or Intermediate Care Facilities for Individuals with Intellectual Disabilities.

2. *Service Plan:* The State demonstrates it has designed and implemented an effective system for reviewing the adequacy of service plans for waiver participants.

3. *Qualified Providers:* The State demonstrates that it has designed and implemented an adequate system for assuring that all waiver services are provided by qualified providers.

4. *Health and Welfare:* The State demonstrates it has designed and implemented an effective system for assuring waiver participant health and welfare.

[413] *https://www.hhs.gov/guidance/sites/default/files/hhs-guidance-documents/3-cmcs-quality-memo-narrative_0_71.pdf.*

5. *Financial Accountability:* The State demonstrates that it has designed and implemented an adequate system for insuring financial accountability of the waiver program.

6. *Administrative Authority:* The Medicaid Agency retains ultimate administrative authority and responsibility for the operation of the waiver program by exercising oversight of the performance of waiver functions by other State and local/regional non-State agencies (if appropriate) and contracted entities.

Despite these assurances, there is evidence that State HCBS systems still need to be strengthened and that there are gaps in existing reporting requirements. We believe that this final rule is necessary to address these concerns and strengthen HCBS systems. The requirements in this final rule are intended to supersede and fully replace reporting and performance expectations described in the 2014 guidance for section 1915(c) waiver programs. They are also intended to promote consistency and alignment across HCBS programs, as well as delivery systems, by applying the requirements (where applicable) to sections 1915(i), (j), and (k) authorities State plan benefits and to both FFS and managed care delivery systems.

3. Fee-for-Service (FFS)

Provisions under § 447.203 from this final rule will impact States' required documentation of compliance with section 1902(a)(30)(A) of the Act to ''assure that payments are . . . sufficient to enlist enough providers so that care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area.'' We have received comments from State agencies that the existing AMRP requirement first established by the 2015 final rule with comment period imposes excessive administrative burden for its corresponding value in demonstrating compliance with section 1902(a)(30)(A) of the Act.

This final rule will replace the existing AMRP requirement with a more limited payment rate transparency requirement under proposed § 447.203(b), while requiring a more detailed access impact analysis (as described at proposed § 447.203(c)(2)) when a State proposes provider rate reductions or restructurings that exceed certain thresholds for a streamlined analysis process under proposed § 447.203(c)(1). By limiting the data collection and publication requirements imposed on all States, while targeting certain provider rate reductions or restructuring proposals for a more detailed analysis, this final rule will provide administrative burden relief to States while maintaining a transparent and data-driven process to assure State compliance with section 1902(a)(30)(A) of the Act.

B. Overall Impact

We have examined the impacts of this rule as required by E.O. 12866 on Regulatory Planning and Review (September 30, 1993), E.O. 13563 on Improving Regulation and Regulatory Review (January 18, 2011), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104–4), E.O. 13132 on Federalism (August 4, 1999), and the Congressional Review Act (5 U.S.C. 804(2)). Pursuant to Subtitle E of the Small Business Regulatory Enforcement Fairness Act of 1996 (also known as the Congressional Review Act, 5 U.S.C. 801 *et seq.*), OMB's Office of Information and Regulatory Affairs has determined that this final rule does meet the criteria set forth in 5 U.S.C. 804(2).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Section 3(f) of Executive Order 12866 as amended by Executive Order 14094 defines a ''significant regulatory action'' as an action that is likely to result in a rule: (1) having an annual effect on the economy of $200 million or more in any 1 year, or adversely and materially affecting a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local or tribal governments or communities; (2) creating a serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raising legal or policy issues for which centralized review would meaningfully further the President's priorities, or the principles set forth in the Executive Order.

A regulatory impact analysis (RIA) must be prepared for rules that meet section 3(f)(1) of the Executive Order. This final rule does meet that criterion as the aggregate amount of benefits and costs may meet the $200 million threshold in at least 1 year.

Based on our estimates using a ''no action'' baseline in accordance with OMB Circular A–4, (available at *https://www.whitehouse.gov/wpcontent/uploads/legacy_drupal_files/omb/circulars/A4/a-4.pdf*), OMB's Office of Information and Regulatory Affairs has determined that this rulemaking is significant or otherwise meets section 3(f)(1). Therefore, OMB has reviewed these proposed regulations, and the Departments have provided the following assessment of their impact.

C. Detailed Economic Analysis

As mentioned in the prior section, and in accordance with OMB Circular A–4, the following estimates were determined using a ''no action'' baseline. That is, our analytical baseline for impact is a direct comparison between the provisions and not proposing them at all.

1. Benefits

a. Medicaid Advisory Committees (MAC)

We believe the changes to § 431.12 will benefit State Medicaid programs and those they serve by ensuring that beneficiaries have a significant role in advising States on the experience of receiving health care and services through Medicaid. These benefits cannot be quantified. However, the BAC and a more diverse and transparent MAC will provide opportunities for richer interested parties feedback and expertise to positively impact State decision making on Medicaid program and policy chances. For example, beneficiary feedback on accessing health care services and the quality of those services can inform decisions on provider networks and networks adequacy requirements. Issues that States need to address, like cultural competency of providers, language accessibility, health equity, and disparities and biases in the Medicaid program, can be revealed through beneficiary experiences. The MAC falls into the Public Administration 921 Executive, Legislative, and Other General Government Support.

b. Person-Centered Service Plans, Grievance Systems, Incident Management Systems

The changes benefit Medicaid beneficiaries and States by requiring States to demonstrate through reporting requirements that they provide safeguards to assure eligibility for Medicaid-covered care and services is determined and provided in a manner that is in the Medicaid beneficiaries'

best interest, although these potential benefits cannot be monetarily quantified at this time. The changes will provide further safeguards that ensure health and welfare by strengthening the person-centered service plan requirements, establishing grievance systems, amending requirements for incident management systems, and establishing new reporting requirements for States, and contracted managed care plans identified by the North American Industry Classification System (NAICS) industry code (Direct Health and Medical Insurance Carriers (524114).

These changes will benefit individuals on HCBS waiver wait lists, and individuals who receive homemaker, home health aide, personal care, and habilitation services under the finalized regulations found at §§ 441.301(c), 441.302(a)(6), 441.302(h), 441.303(f), 441.311, 441.725, and amended regulations in §§ 441.464, 441.474, 441.540, 441.555, 441.570, 441.580, and 441.745. These benefits cannot be monetarily quantified at this time.

c. Home and Community-Based Services (HCBS) Payment Adequacy and Payment Adequacy Reporting

This final rule adds a new reporting requirement at § 441.311(e) (and amends §§ 441.474(c), 441.580(i), and 441.745(a)(1)(vii)) to require States to demonstrate through reporting what percent of payments to providers of certain HCBS (homemaker, home health aide, personal care, and habilitation services) are spent on compensation to direct care workers. The goal of this requirement is to promote transparency and to assure that payments are consistent with efficiency, economy, and quality of care, in accordance with section 1902(a)(30)(A) of the Act. This final rule seeks to address access to care that is being affected by direct care workforce shortages. States will be required to report annually and will be required to separately report on payments for services that are self-directed and services that include facility costs. benefit from reporting in the aggregate for each service subject to the requirement across HCBS programs and delivery systems, which minimizes administrative burden while providing us better oversight of compensation of the direct care workforce. These potential benefits cannot be monetarily quantified at this time due to the variety of State data collection approaches.

Additionally, through this final rule, we are finalizing § 441.302(k), which establishes certain minimum thresholds for the percent of Medicaid payments for certain HCBS must be spent on compensation for direct care workers. We believe this requirement will help to ensure that payments to workers are sufficient to provide access to care that is at least comparable to that of the general population in the same geographic location, in accordance with section 1902(a)(30)(A) of the Act. We are also finalizing a number of flexibilities to allow States to address needs of specific providers, such as providers that are small or rural, or are experiencing particular hardship that would temporarily prevent the provider for adhering to the minimum payment level. Through this requirement, we can better ensure payment adequacy to a provider population experiencing worker shortages that impact beneficiary access. While we believe this requirement will promote increases in direct care worker compensation in some regions, these potential benefits cannot be monetarily quantified at this time due to the variety of State data collection approaches.

d. Home and Community-Based Services (HCBS) Quality Measure Set Reporting

As described in section II.B.8. of this final rule, on July 21, 2022, we issued State Medicaid Director Letter (SMDL) #22–003 [414] to release the first official version of the HCBS Quality Measure Set. This final rule provides definitions and sets forth requirements at § 441.312 that expand on the HCBS Quality Measure Set described in the SMDL. By expanding and codifying aspects of the SMDL, we can better drive improvement in quality of care and health outcomes for beneficiaries receiving HCBS. States will also benefit from the clarity afforded by this final rule, and from the assurance that other States they may be looking to for comparison are adhering to the same requirements. The clarity and assurance, at this time, cannot be measured.

e. Fee-for-Service (FFS) Payment Transparency

The changes to § 447.203 will update requirements placed on States to document access to care and service payment rates. The updates create a systematic framework through which we can assess compliance with section 1902(a)(30)(A) of the Act, while reducing existing burden on States and maximizing the value of their efforts, as described in section III.C.11.a. of this rule.

The payment rate transparency provisions at § 447.203(b) create a process that will facilitate transparent oversight by us and other interested parties. By requiring States to calculate Medicaid payment rates as a percent of corresponding Medicare payment rates, this provision offers a uniform benchmark through which CMS and interested parties can assess payment rate sufficiency. When compared to the existing AMRP requirement, the rate analysis proposed by § 447.203(b) should improve the utility of the reporting, while reducing the associated administrative burden, as reflected in the Burden Estimate Summary Table 38. Updates at § 447.203(c) specify required documentation and analysis when States propose to reduce or restructure provider payment rates. By establishing thresholds at § 447.203(c)(1), this final rule will generally limit the more extensive access review prescribed by § 447.203(c)(2) to those SPAs that we believe more likely to cause access concerns. In doing so, these proposed updates reduce the State administrative burden imposed by existing documentation requirements for proposed rate reductions or restructurings, without impeding our ability to ensure proposed rate reduction and restructuring SPAs comply with section 1902(a)(30)(A) of the Act. These burden reductions are reflected in the Collection of Information section of this rule.

When considering the benefits of these regulatory updates, we considered the possibility that the improved transparency required by § 447.203(b) could create upward pressure on provider payment rates, and that the tiered nature of documentation requirements set by § 447.203(c) could create an incentive for States to moderate proposed payment reductions or restructurings that were near the proposed thresholds that would trigger additional analysis and documentation requirements. If either of these rate impacts were to occur, existing literature implies there could be follow-on benefits to Medicaid beneficiaries, including but not limited to increased physician acceptance rates,[415] increased appointment availability,[416] and even improved self-reported health.[417] However, nothing in this final rule will require States to directly adjust payment

rates, and we recognize that multiple factors influence State rate-setting proposals, including State budgetary pressures, legislative priorities, and other forces. These competing influences create substantial uncertainty about the specific impact of the provisions at § 447.203 on provider payment rate-setting and beneficiary access. Rather, the specific intent and anticipated outcome of these provisions is the creation of a more uniform, transparent, and less burdensome process through which States can conduct required payment rate and access analyses and we can perform our oversight role related to provider payment rate sufficiency.

2. Costs

a. Medicaid Advisory Committee (MAC)

In addition to the costs reflected in section III.C.1 of this final rule, States will incur additional ongoing costs (estimated below in Table 42) in appointing and recruiting members to the MAC and BAC and, also developing and publishing bylaws, membership lists, and meeting minutes for the MAC and BAC. All of these costs can be categorized under the NAICS Code 921 (Executive, Legislative, and Other General Government Support) since States are the only entity accounted for in the MAC and BAC. How often these costs occur will also vary in how often the State chooses to make changes such as add or replace members of the MAC and BAC or change its bylaws. Additionally, there will be new, ongoing costs, estimated below, for States related to meeting logistics and administration for the BAC. All of these new costs can also be categorized under the NAICS Code 921 (Executive, Legislative, and Other General Government Support). To derive average costs, as in the previous section of this final rule, we used data from the U.S. Bureau of Labor Statistics' (BLS') May 2022 National Occupational Employment and Wage Estimates for all salary estimates (*http://www.bls.gov/oes/2022/may/oes_nat.htm*). Costs include our estimated cost of fringe benefits and other indirect costs, calculated at 100 percent of salary, in our adjusted hourly wage.

Since most States are already holding MAC meetings under current regulatory requirements, any new costs related to MAC requirements would likely be minimal. In terms of the MAC and BAC meeting costs, we estimate a total cost for 5 years of $3.414 million or $682,821 annually for States. We estimate it will take a business operations specialist 10 hours to plan and execute each BAC meeting, at a total cost of $162,180 ($79.50/hour × 10 hours × 4 meetings/year) × 51 States and the District of Columbia). To satisfy the requirements of § 431.12(h)(3)(i), a public relations specialist will spend an estimated 80 hours/year supporting Medicaid beneficiary MAC and BAC members at a total cost of $308,122 ($75.50/hour × 80 hours) × 51 States and the District of Columbia). A chief executive in State government, as required by § 431.12(h)(3)(iii) will spend a total of 8 hours a year attending BAC meetings, which we estimate will be 2 hours in duration, 4 times a year at a total cost of $ 49,319 ($120.88/hour × 2 hours/meeting × 4 meetings) × 51 States and the District of Columbia). Each meeting of the BAC will cost States an estimated $200 in meeting costs and telecommunication, at an annual total cost of $40,800 ($200 × 4 meetings) × 51 States and the District of Columbia). The meeting costs are estimated by adding the average cost for telecommunications (approximately $130[418] per meeting) to the average cost of meeting supplies (approximately $70 per meeting for photocopies, name tags, etc.). While we cannot estimate precisely the costs for meeting materials and additional items to support meetings, we are including a nominal estimate of $70 per meeting to acknowledge these costs.

There will also be a per meeting cost to States for financial support for beneficiary members participating in MAC and BAC meetings, as described in § 431.12(h)(3)(ii). We estimate a cost of $75/beneficiary/meeting in the form of transportation vouchers, childcare reimbursement, meals, and/or other financial compensation. Assuming 4 meetings per year (with BAC and MAC meetings co-located and occurring on the same day) and an average of 8 beneficiary members on the BAC and MAC, the cost of financial support for beneficiary members across States is estimated to cost approximately $122,400 annually (($75/beneficiary × 8 beneficiaries × 4 meetings/year) × 51 States and the District of Columbia). This cost will vary depending on the decisions States make around financial support, the number of beneficiary members of the BAC and MAC, and the number of meetings per year. We solicited comment on the costs associated with planning, execution, and participation in the MAC and BAC meetings.

We did not receive public comments specifically on these estimates, and therefore, we are finalizing as proposed.

Costs will vary depending by State, on how many in person meetings are held, and how many Medicaid beneficiaries are selected for the MAC and BAC											

b. Home and Community-Based Services (HCBS)

Costs displayed in Table 43 are inclusive of both one-time and ongoing costs. One-time costs are split evenly over the years leading up to the provision's applicability date. For example, if a finalized provision is applicable 3 years after the final rule's publication, the one-time costs would be split evenly across each of the years leading to that applicability date. Please note the following applicability dates (beginning after the effective date of this final rule): 2 years for the grievance process requirements finalized at § 441.302(c)(7); 3 years for the person-centered planning, incident management, changes to Form 372(S), access reporting, and website transparency requirements finalized at §§ 441.301(c)(3), 441.302(a)(6), 441.311(b), 441.311(d) and 441.313, respectively; 4 years for the reporting requirements for the HCBS Quality Measure Set and for payment adequacy reporting finalized at § 441.311(c) and (e), respectively; 5 years for the electronic incident management system requirement at § 441.302(a)(6); and 6 years for the HCBS payment adequacy requirements finalized at § 441.302(k). The estimates below do not account for higher costs associated with medical care, as the costs are related exclusively to reporting costs. Costs to States, the Federal government, and managed care plans do not account for enrollment fluctuations, as they assume a stable number of States operating HCBS programs and managed care plans delivering services through these programs. Similarly, costs to providers and beneficiaries do not account for enrollment fluctuations. In the COI section, costs are based on a projected range of HCBS providers and beneficiaries. Given this uncertainty, here, we based cost estimates on the mid-point of the respective ranges and kept those assumptions consistent over the course of the 5-year projection. Per OMB guidelines, the projected estimates for future years do not include ordinary inflation. (that is, they are reported in constant-year dollars).

Table 44 summarizes the estimated ongoing costs for States, managed care plans (Direct Health and Medical Insurance Carriers (NAICS 524114)), and providers (Services for the Elderly and Persons with Disabilities (NAICS 624120) and Home Health Care Services (NAICS 621610)) from the Collection of Information section (section III. of this final rule) of the HCBS provisions of the final rule projected over 10 years. This comprises the entirety of anticipated quantifiable costs associated with changes to part 441, subpart G. It is also possible that increasing the threshold from 86 percent to 90 percent for compliance reporting at § 441.311(b)(2) through (3) may lead to additional costs to remediate issues pertaining to critical incidents or person-centered planning. However, the various avenues through which States could address these concerns creates substantial uncertainty as to what those costs may be. While we acknowledge the potential for increased costs in a limited number of States that may fall within the gap between the existing and the compliance thresholds, we do not quantify them here.

* Totals were calculated based on actual figures, so the total row and projected 10-year total column may appear slightly different than had they been calculated based on estimates to the nearest million.

c. Fee-for-Service (FFS) Payment Rate Transparency

The costs associated with the payment rate transparency proposals are wholly associated with information collection requirements, and as such those impacts are reflected in the COI section of this rule. For ease of reference, and for projection purposes, we are including those costs here in Table 45.

TABLE 45: Projected 5-Year State Costs for Updates to 42 CFR 447.203

BILLING CODE 4120–01–C

3. Transfers

Transfers are payments between persons or groups that do not directly affect the total resources available to society. They are a benefit to recipients and a cost to payers, with zero net effects. Because this rule proposes changes to requirements to State agencies without changes to payments from Federal to State governments, the transfer impact is null, and cost impacts are reflected in the other sections of this rule.

4. Regulatory Review Cost Estimation

If regulations impose administrative costs on private entities, such as the time needed to read and interpret this proposed or final rule, we should estimate the cost associated with regulatory review. There is uncertainty involved with accurately quantifying the number of entities that will review the rule. However, for the purposes of this final rule we assume that on average, each of the 51 affected State Medicaid agencies will have one contractor per State review this final rule. This average assumes that some State Medicaid agencies may use the same contractor, others may use multiple contractors to address the various provisions within this final rule, and some State Medicaid agencies may perform the review in-house. We also assume that each affected managed care plan (estimated in the COI section to be 161 managed care plans) will review the final rule. Lastly, we assume that an average of two advocacy or interest group representatives from each State will review this final rule. In total, we are estimating that 314 entities (51 State Contractors + 161 Managed Care Plans + 102 Advocacy and Interest Groups) will review this final rule. We acknowledge that this assumption may understate or overstate the costs of reviewing this rule. We did not receive public comment on this issue.

We also recognize that different types of entities are in many cases affected by mutually exclusive sections of this final rule, and therefore for the purposes of our estimate we assume that each reviewer reads approximately 50 percent of the rule. We solicited comments on this assumption.

We did not receive public comments on this provision, and therefore, we are finalizing as proposed.

Using the wage information from the Bureau of Labor Statistics, *https://www.bls.gov/oes/current/oes_nat.htm,* we are considering medical and health service managers (Code 11–9111), as including the 51 State Contractors, 161 Managed Care Plans and 102 Advocacy and Interest Groups identified in this final rule, and we estimate that the cost of reviewing this rule is $123.06 per hour, including fringe benefits and other indirect costs. Assuming an average reading speed of 250 words per minute, we estimate that it will take approximately 6.67 hours for each individual to review half of this final rule ([200,000 words × 0.5]/250 words per minute/60 minutes per hour). For each entity that reviews the rule, the estimated cost is $820.40 (6.67 hours × $123.06). Therefore, we estimate that the total one-time cost of reviewing this regulation is $257,605.60 ($820.40 per individual review × 314 reviewers).

D. Alternatives Considered

1. Medicaid Advisory Committee (MAC)

In determining the best way to promote beneficiary and interested parties' voices in State Medicaid program decision making and administration, we considered several ways of revising the MCAC structure and administration. We considered setting minimum benchmarks for each category of all types of MAC members, but we viewed it as too restrictive. We ultimately concluded that only setting minimum benchmarks (at least 25 percent) for beneficiary representation on the MAC and requiring representation from the other MAC categories would give States maximum flexibility in determining the exact composition of their MAC. However, we understand that some States may want us to set specific thresholds for each MAC category rather than determine those categories on their own.

We also considered having not having a separate BAC, but we ultimately determined that requiring States to establish a separate BAC assures that there is a dedicated forum for States to receive beneficiary input outside of the MAC. In the MAC setting, a beneficiary might not feel as comfortable speaking up among other Medicaid program interested parties. The BAC also provides an opportunity for beneficiaries to focus on the issues that are most important to them, and bring those issues to the MAC.

Finally, we also considered setting specific topics for the MAC to provide feedback. However, due to the range of issues specific to each State's Medicaid program, we determined it was most conducive to allow States work with their MAC to identify which topics and priority issues would benefit from interested parties' input.

2. Home and Community-Based Services (HCBS)

a. Person-Centered Service Plans, Grievance Systems, Incident Management Systems

We considered whether to codify the existing 86 percent performance level that was outlined in the 2014 guidance for both person-centered service plans and incident management systems. We did not choose this alternative due to feedback from States and other interested parties of the importance of these requirements, as well as concerns that an 86 percent performance level may not be sufficient to demonstrate that a State has met the requirements.

We considered whether to apply these requirements to section 1905(a) ''medical assistance'' State Plan personal care, home health, and case management services. We decided against this alternative based on State feedback that they do not have the same data collection and reporting capabilities for these services as they do for HCBS delivered under sections 1915(c), (i), (j), and (k) of the Act and because of differences between the requirements of those authorities and section 1905(a) State Plan benefits.

Finally, we considered allowing a good cause exception to the minimum performance level reporting requirements to both the person-centered service plan and the incident management system. We decided against this alternative because the 90 percent performance level is intended to account for various scenarios that might impact a State's ability to achieve these performance levels. Furthermore, there are existing disaster authorities that States could utilize to request a waiver of these requirements in the event of a public health emergency or a disaster.

b. HCBS Payment Adequacy and Payment Adequacy Reporting

We considered several alternatives to this final rule. We considered whether the requirements at § 441.302(k) relating to the percent of payments going to the direct care workforce should apply to other services, such as adult day health, habilitation, day treatment or other partial hospitalization services, psychosocial rehabilitation services, and clinic services for individuals with mental illness. As discussed in section II.B.5, we decided against these alternatives because the services (homemaker, home health aide, and personal care) are those for which the vast majority of payment should be comprised of compensation for direct care workers and for which there will be low facility or other indirect costs. We

also did not include other services for which the percentage might be variable due to the diversity of services included or for which worker compensation will be reasonably expected to comprise only a small percentage of the payment.

As an alternative to the payment adequacy reporting requirement finalized at § 441.311(e), we considered whether other reporting requirements such as a State assurance or attestation or an alternative frequency of reporting could be used to collect data from States regarding the percent of Medicaid payments is spent on compensation to direct care workers. We determined, upon reviewing public comment, that collecting the data is necessary to promote transparency and inform future policymaking. We considered whether to require reporting at the delivery system, HCBS waiver program, or population level but decided against additional levels of reporting because it will increase reporting burden for States without providing additional information necessary for demonstrating that Medicaid payments are being allocated efficiently in accordance with section 1902(a)(30)(A) of the Act.

We considered whether to apply both § 441.302(k) and the reporting requirements finalized at § 441.311 to section 1905(a) ''medical assistance'' State Plan personal care and home health services, but decided not to, largely due to concerns that the statutory and regulatory requirements for section 1905(a) services are different from the statutory and regulatory requirements for section 1915 services; these differences will require additional consideration and rulemaking should the requirements be applied to section 1905(a) services. States also provided feedback that, for the purposes of § 441.311, they do not have the same data collection and reporting capabilities for these services as they do for sections 1915(c), (i), (j), and (k) HCBS.

c. Supporting Documentation Requirements

No alternatives were considered.

d. HCBS Quality Measure Set Reporting

We considered giving States the flexibility to choose which measures they will stratify and by what factors but decided against this alternative as discussed in the Mandatory Medicaid and CHIP Core Set Reporting proposed rule (see 87 FR 51313). We believe that consistent measurement of differences in health outcomes between different groups of beneficiaries is essential to identifying areas for intervention and evaluation of those interventions.[419] Consistency could not be achieved if each State made its own decisions about which data, it would stratify and by what factors.

3. Payment Rate Transparency

In developing this final rule, we considered multiple alternatives. We considered not proposing this rule and maintaining the status quo under current regulations at § 447.203 and 204. However, as noted throughout the Background and Provisions sections of this rule, since the 2011 proposed rule, we have received concerns from interested parties, including State agencies, about the administrative burden of completing AMRPs and questioning whether they are the most efficient way to determine access to care. These comments expressed particular concern about the AMRPs' value when they are required to accompany a proposed nominal rate reduction or restructuring, or where proposed rate changes are made via application of a previously approved rate methodology. At the same time, and as we have discussed, in *Armstrong* v. *Exceptional Child Care, Inc.,* 575 U.S. 320 (2015), the Supreme Court held that Medicaid providers and beneficiaries do not have private right of action against States to challenge State-determined Medicaid payment rates in Federal courts. This decision made our administrative review of SPAs proposing to reduce or restructure payment rates all the more important. For both of these reasons, this rule includes requirements that will create an alternative process that both reduces the administrative burden on States and standardizes and strengthens our review of payment rate reductions or payment restructurings to ensure compliance with section 1902(a)(30)(A) of the Act.

We considered, but did not propose, adopting a complaint-driven process or developing a Federal review process for assessing access to care concerns. Although such processes could further our goals of ensuring compliance with the access requirement in section 1902(a)(30)(A) of the Act, we concluded similar effects can be achieved through methods that did not require the significant amount of Federal effort that will be necessary to develop either or both of these processes. Additionally, a complaint-driven process will not necessarily ensure a balanced review of State-proposed payment rate or payment structure changes, and it is possible that a large volume of complaints could be submitted with the intended or unintended effect of hampering State Medicaid program operations. Therefore, the impact of adopting a complaint-driven process or developing a Federal review process for assessing access to care concerns may be negligible given existing processes. Instead, we believe that relying on existing processes that States are already engaged in, such as the ongoing provider and beneficiary feedback channels under paragraph (b)(7) in § 447.203 and the public process requirement for States submitting a SPA that are required to reduce or restructure Medicaid service payments in § 447.204, will be more effective than creating a new process. While we are relying on existing public feedback channels and processes that States are already engaged in, we solicited public comment regarding our alternative consideration to adopting a complaint driven process or developing a Federal review process for assessing access to care concerns.

We also considered numerous variations of the individual provisions of the final rule. We considered, but did not propose, maintaining the benefits outlined in the current § 447.203(b)(5)(ii)(A) through (H) or requiring all mandatory Medicaid benefit categories be included in the comparative payment rate analysis proposed under § 447.203(b)(2). We also considered, but did not propose, including inpatient hospital behavioral health services and covered outpatient drugs including professional dispensing fees as additional categories of services subject to the comparative payment rate analysis proposed under § 447.203(b)(2). We considered, but did not propose, requiring States whose Medicaid payment rates vary by provider type, calculate an average Medicaid payment rate of all providers for each E/M CPT code subject to the comparative payment rate analysis. We also considered, but did not propose, different points of comparison other than Medicare under the comparative payment rate analysis proposed under § 447.203(b)(2) or using a peer payment rate benchmarking approach for benefit categories where Medicaid is the only or primary payer, or there is no comparable Medicare rate under the comparative payment rate analysis proposed under § 447.203(b)(2) and (3). We considered, but did not propose, varying timeframes for the comparative payment rate analysis proposed under § 447.203(b)(2). We also considered not

[419] Schlotthauer AE, Badler A, Cook SC, Perez DJ, Chin MH. Evaluating Interventions to Reduce Health Care Disparities: An RWJF Program. Health Aff (Millwood). 2008;27(2):568–573.

proposing the payment rate transparency aspect of this rule proposed under § 447.203(b)(1), leaving the comparative payment rate analysis to replace the AMRP process as proposed under § 447.203(b)(2). With regard to the proposal in § 447.203(c), we considered, but did not propose, establishing alternative circumstances from those described in the 2017 SMDL for identifying nominal payment rate adjustments, establishing a minimum set of required data for States above 80 percent of the most recent Medicare payment rates after the proposed reduction or restructuring, using measures that are different from the proposed measures that would be reflected in the forthcoming template, allowing States to use their own unstructured data for States that fail to meet all three criteria in § 447.203(c)(1), and CMS producing and publishing the comparative payment rate analysis proposed in § 447.203(b).

We considered, but did not propose, maintaining the benefits outlined in the current § 447.203(b)(5)(ii)(A) through (H) or requiring all mandatory Medicaid benefit categories be included in the comparative payment rate analysis proposed under § 447.203(b)(2). Maintaining the benefits in previous § 447.203(b)(5)(ii)(A) through (H) might have simplified the transition from the AMRP process to the payment rate transparency and comparative payment rate analysis requirements. However, our experience implementing the 2015 final rule with comment period, as well as interested parties' and States' feedback about the AMRP process, encouraged us to review and reconsider the current list of benefits subject to the AMRP process under current regulations § 447.203(b)(5)(ii)(A) through (H) to determine where we could decrease the level of effort required from States while still allowing ourselves an opportunity to review for access concerns. During our review of the current list of benefits under § 447.203(b)(5)(ii)(A) through (H), we considered, but did not propose, requiring all mandatory Medicaid benefit categories be included in the comparative payment rate analysis. However, when considering the existing burden of the AMRP process under current § 447.203)(b), we believed that expanding the list of benefits to include under proposed § 447.203(b) and (c) would not support our goal to develop a new access strategy that aims to balance Federal and State administrative burden with our shared obligation to ensure compliance with section 1902(a)(30)(A) of the Act. As previously noted in section II. of this rule, we solicited public comment on primary care services, obstetrical and gynecological services, outpatient behavioral health services, and personal care, home health aide, and homemaker services provided by individual providers and providers employed by an agency as the proposed categories of services subject to the comparative payment rate analysis requirements in proposed § 447.203(b)(2)(i). Additionally, we solicited public comment regarding our alternative consideration to propose maintaining the benefits outlined in the current § 447.203(b)(5)(ii)(A) through (H) or propose requiring all mandatory Medicaid benefit categories.

We considered, but did not propose, requiring States whose Medicaid payment rates vary by provider type to calculate an average Medicaid payment rate of all provider types for each E/M CPT code subject to the comparative payment rate analysis. Rather than proposing States distinguish their Medicaid payment rates by each provider type in the comparative payment rate analysis, we considered proposing States calculate an average Medicaid payment rate of all providers for each E/M CPT code. This consideration would have simplified the comparative payment rate analysis because States would include a single, average Medicaid payment rate amount and only need to separately analyze their Medicaid payment rates for services delivered to pediatric and adult populations, if they varied. However, calculating an average for the Medicaid payment rate has limitations, including sensitivity to extreme values and inconsistent characterizations of the payment rate between Medicaid and Medicare. In this rule, we propose to characterize the Medicare payment rate as the non-facility payment rate listed on the Medicare PFS for the E/M CPT/HCPCS codes subject to the comparative payment rate analysis. If we were to propose the Medicaid payment rate be calculated as an average Medicaid payment rate of all provider types for the same E/M CPT/HCPCS code, then States' calculated average Medicaid payment rate could include a wide variety of provider types, from a single payment rate for physicians to an average of three payment rates for physicians, physician assistants, and nurse practitioners. This wide variation in how the Medicaid payment rate is calculated among States would provide a less meaningful comparative payment rate analysis to Medicare. The extremes and outliers that would be diluted by using an average are not necessarily the same for both Medicaid and Medicare, so even if both sides of the comparison used an average, we would not be able to look more closely at specific large differences between the respective rates. As previously noted in section II. of this final rule, we solicited public comment on the proposed characterization of the Medicaid payment rate, which accounts for variation in payment rates for pediatric and adult populations and distinguishes payment rates by provider type, in the comparative payment rate analysis. Additionally, we solicited public comment regarding our alternative consideration to propose requiring States whose Medicaid payment rates vary by provider type to calculate an average Medicaid payment rate of all provider types for each E/M CPT code subject to the comparative payment rate analysis.

We considered, but did not propose, requiring States to use a different point of comparison, other than Medicare, for certain services where Medicare is not a consistent or primary payer, such as pediatric dental services or HCBS. The impact of requiring a different point of comparison, other than Medicare, would have carried forward the current regulation requiring States to ''include an analysis of the percentage comparison of Medicaid payment rates to other public (including, as practical, provider payment rates in Medicaid managed care) and private health insurer payment rates within geographic areas of the State'' in their AMRPs. As previously discussed in this rule, FFS States expressed concerns following the 2015 final rule with comment period that private payer payment rates were proprietary information and not available to them, therefore, the challenges to comply with current regulations would be carried forward into the proposed rule. Therefore, we also considered, but did not propose, using various payment rate benchmarking approaches for benefit categories where Medicaid is the only or primary payer, or there is no comparable Medicare rate. As previously noted in section II. of this final rule, we considered benchmarks based on national Medicaid payment averages for certain services included within the LTSS benefit category, benchmarks that use average daily rates for certain HCBS that can be compared to other State Medicaid programs, and benchmarks that use payment data specific to the State's Medicaid program for similarly situated services so that the service payments may be benchmarked to national average. Notwithstanding the

previously described limitations of the alternative considered for situations where differences between Medicaid and Medicare coverage and payment exists, we solicited public comment regarding our alternative consideration to propose States use a different point of comparison, other than Medicare, for certain services where Medicare is not a consistent or primary payer or States use a payment rate benchmarking approach for benefit categories where Medicaid is the only or primary payer, or there is no comparable Medicare rate. Specifically, we solicited public comment on the feasibility and burden on States to implement these alternatives considered for the proposed comparative payment rate analysis. For any comparison to other State Medicaid programs or to a national benchmark, we also solicited public comment on the appropriate role for such a comparison in the context of the statutory requirement to consider beneficiary access relative to the general population in the geographic area.

We considered, but did not propose, various timeframes for the comparative payment rate analysis, including annual (every year), triennial (every 3 years), or quinquennial (every 5 years) updates after the initial effective date of January 1, 2026. As noted in section II. of this final rule, we did not propose an annual timeframe as we believed that an annual update requirement was too frequent due to many States' biennial legislative sessions that provide the Medicaid agency with authority it make Medicaid payment rate changes as well as create more or maintain a similar level of administrative burden of the AMRPs. While some States do have annual legislative sessions and may have annual Medicaid payment rate changes, we believed that proposing annual updates solely for the purpose of capturing payment rate changes in States that with annual legislative sessions would be overly burdensome and duplicative for States with biennial legislative sessions who do not have new, updated Medicaid payment rates to update in their comparative payment rate analysis. Therefore, for numerous States with biennial legislative sessions, the resulting analysis would likely not vary significantly from year to year. Additionally, the comparative payment rate analysis proposes to use the most recently published Medicare payment rates and we are cognizant that Medicare payment rate updates often occur on a quarterly basis. While Medicare often increases rates by the market basket inflation amount, as well as through rulemaking, it does not always result in payment increases for providers.[420] [421] We also considered, but did not propose, maintaining the triennial (every 3 years) timeframe currently in regulation, because we thought it necessary to make significant changes to the non-SPA-related reported in § 447.203(b) that would represent a significant departure from the initial AMRP process in the 2015 final rule with comment in the current § 447.203(b)(1) and this new proposed approach did not lend itself to the triennial timeframe of the current AMRP process. Lastly, we considered, but did not propose, the comparative payment rate analysis be published on a quinquennial basis (every 5 years), because this timeframe was too infrequent for the comparative payment rate analysis to provide meaningful, actionable information. As previously noted in section II. of this rule, we are solicited public comment on the proposed timeframe for the initial publication and biennial update requirements of the comparative payment rate analysis as proposed in § 447.203(b)(4). Additionally, we solicited public comment regarding our alternative consideration to propose an annual, triennial, or quinquennial timeframe for the updating the comparative payment rate analysis after the initial effective date.

We considered, but did not propose, requiring the comparative payment rate analysis be submitted directly to us, as this would not achieve the public transparency goal of the proposed rule. As proposed in § 447.203(b)(3), we are requiring States develop and publish their Medicaid comparative payment rate analysis on the State's website in an accessible and easily understandable format. This proposal is methodologically similar to the current regulation, which requires AMRPs be submitted to us and publicly published by the State and CMS. We found this aspect of the rule to be an effective method of publicly sharing access to care information, as well as ensuring State compliance. As previously noted in section II. of this rule, we solicited public comment on the proposed requirement for States to publish their Medicaid FFS payment rates for all services and comparative payment rate analysis and payment rate disclosure information on the State's website under the proposed § 447.203(b)(1) and (3), respectively. Additionally, we solicited public comment regarding our alternative consideration to propose requiring the comparative payment rate analysis be submitted directly to us and not publicly published.

We considered, but did not propose, that we produce and publish the comparative payment rate analysis proposed in § 447.203(b)(2) through (3) whereby we would develop reports for all States demonstrating Medicaid payment rates for all services or a subset for Medicaid services as a percentage of Medicare payment rates. Shifting responsibility for this analysis would remove some burden from States and allow us to do a full cross-comparison of State Medicaid payment rates to Medicare payment rates, while ensuring a consistent rate analysis across States. However, this approach would rely on T–MSIS data, which would increase the lag in available data due to the need for CMS to prepare it, and introduce uncertainty into the results due to ongoing variation in State T–MSIS data quality and completeness. Although our proposed approach still relies on State-supplied data, they are able to perform the comparisons on their own regardless of the readiness and compliance of any other State. Furthermore, we would need to validate its results with States and work through any discrepancies. Ultimately, we determined the increased lag time and uncertainty in results would diminish the utility of the rate analyses proposed in § 447.203(b), if performed by us instead of the States, to support our oversight of State compliance with section 1902(a)(30)(A) of the Act. As previously noted in section II. of this rule, we solicited public comment on our proposal to require States to develop and publish a comparative payment rate analysis and payment rate disclosure as proposed in § 447.203(b)(2) and (3). Additionally, we solicited public comment regarding our alternative consideration to propose that we produce and publish the comparative payment rate analysis and payment rate disclosure proposed in § 447.203(b)(2) and (3) for all States.

We considered, but did not propose, establishing alternative circumstances

[420] Although ''market basket'' technically describes the mix of goods and services used in providing health care, this term is also commonly used to denote the input price index (that is, cost category weights and price proxies combined) derived from that market basket. Accordingly, the term ''market basket'' as used in this document refers to the various CMS input price indexes. A CMS market basket is described as a fixed-weight, Laspeyres-type index because it measures the change in price, over time, of the same mix of goods and services purchased in the base period. FAQ—Medicare Market Basket Definitions and General Information, updated May 2022. *https://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/MedicareProgramRatesStats/Downloads/info.pdf* Accessed January 4, 2023.

[421] Medicare Unit Cost Increases Reported as of April 2022. *https://www.cms.gov/files/document/ffs-trends-2021-2023-april-2022.pdf.* Accessed January 4, 2023.

from the 2017 SMDL for identifying nominal payment rate adjustments when States propose a rate reduction or restructuring. We previously outlined in SMDL #17–004 several circumstances where Medicaid payment rate reductions generally would not be expected to diminish access: reductions necessary to implement CMS Federal Medicaid payment requirements; reductions that will be implemented as a decrease to all codes within a service category or targeted to certain codes, but for services where the payment rates continue to be at or above Medicare and/or average commercial rates; and reductions that result from changes implemented through the Medicare program, where a State's service payment methodology adheres to the Medicare methodology. This final rule will not codify this list of policies that may produce payment rate reductions unlikely to diminish access to Medicaid-covered services. We considered, but did not propose, setting a different percentage for the criteria that State Medicaid rates for each benefit category affected by the reductions or restructurings must, in the aggregate, be at or above 80 percent of the most recent comparable Medicare payment rates after the proposed reduction or restructuring as a threshold. We considered setting the threshold at 100 percent of Medicare to remain consistent with the 2017 SMDL. However, after conducting a literature review, we determined that 80 percent of the most recently published Medicare payment rates is currently the most reliable benchmark of whether a rate reduction or restructuring is likely to diminish access to care. We also considered, but did not propose, setting a different percentage for the criteria that proposed reductions or restructurings result in no more than 4 percent reduction of overall FFS Medicaid expenditures for a benefit category. We considered a variety of percentages, but determined that codifying the 4 percent threshold from the 2017 SMDL and proposed in the 2018 proposed rule [422] was the best option based on our experience implementing this established policy after the publication of the 2017 SMDL. Additionally, we received a significant number of comments in the 2018 proposed rule from State Medicaid agencies that signaled strong support for this percentage threshold as a meaningful threshold for future rate changes.[423] [424] [425] Lastly, we considered, but did not propose, defining what is meant by ''significant'' access concerns received through the public process described in § 447.204 when a State proposes a rate reduction or restructuring. As proposed, we expect State Medicaid agencies to make reasonable determinations about which access concerns are significant when raised through the public process, and as part of our SPA review, may request additional information from the State to better understand any access concerns that have been raised through public processes and whether they are significant. Based on our experience implementing the policies outlined in the 2017 SMDL and a literature review of relevant research about payment rate sufficiency, we proposed criteria for States proposing rate reductions or restructurings that would reduce the SPA submission requirements when those criteria are met. Additionally, each of these thresholds is one of a three-part test where States must meet all three, or else it will trigger a requirement for additional State analysis of the rate reduction or restructuring. As previously noted in section II. of this rule, we solicited public comment on the streamlined criteria proposed in § 447.203(c)(1). Additionally, we solicited public comment regarding our alternative consideration to propose establishing alternative circumstances from the 2017 SMDL for identifying nominal payment rate adjustments when States propose a rate reduction or restructuring.

We considered, but did not propose, establishing a minimum set of required data for States above 80 percent of the most recent Medicare payment rates after the proposed reduction or restructuring regardless of the remaining criteria. This requirement would minimize administrative burden on States by not requiring States submit all items in § 447.203(c)(2) and establish a baseline for comparison if future rate reductions or restructurings are proposed that may lower the State's payment rates below 80 percent of the most recent Medicare payment rates. However, we determined that, while we believe 80 percent to be an effective threshold point, we did not want that to serve as the only trigger for additional analysis. As proposed, only States that do not meet all of the proposed requirements in § 447.203(c)(1) will have to submit the required data outlined in § 447.203(c)(2). As previously noted in section II. of this rule, we solicited public comment on our proposal to require all three criteria described in § 447.203(c)(1)(i) through (iii) for assessing the effect of a proposed payment rate reduction or payment restructuring on access to care. Additionally, we solicited public comment regarding our alternative consideration to propose establishing alternative circumstances from the 2017 SMDL for identifying nominal payment rate adjustments when States propose a rate reduction or restructuring.

We considered, but did not propose, allowing States to use their own unstructured data, similar to the AMRP process, for States that fail to meet all three criteria in § 447.203(c)(1), thereby eliminating the need for us to develop a template for States proposing rate reductions or restructurings. While this would reduce administrative burden on us and provide States with flexibility in determining relevant data for complying with statutory and regulatory requirements, we received feedback after the 2015 final rule with comment period that States found developing an AMRP from scratch with minimal Federal guidelines a challenging task and other interested parties noted that States had too much discretion in documenting sufficient access to care. Therefore, we proposed developing a template to support State analyses of rate reduction or restructuring SPAs that fail to meet the criteria in § 447.203(c)(1). As noted elsewhere in the preamble, we are releasing subregulatory guidance, including a template to support completion of the analysis that would be required under paragraph (c)(2), alongside this final rule. We also anticipate working directly with States through the SPA review process to ensure compliance with section 1902(a)(30)(A) of the Act. Additionally, we solicited public comment regarding our alternative consideration to propose allowing States to use their own unstructured data, similar to the AMRP process, for States that fail to meet all three criteria in § 447.203(c)(1).

After careful consideration, we ultimately determined that the requirements in proposed § 447.203(b) and (c) would strike a more optimal balance between alleviating State and Federal administrative burden, while ensuring a transparent, data-driven, and consistent approach to States' implementation and our oversight of

[425] Florida Agency for Health Care Administration, Comment Letter on 2018 Proposed Rule (May 24, 2018), *https://downloads.regulations.gov/CMS-2018-0031-0083/attachment_1.pdf.*

State compliance with the access requirement in section 1902(a)(30)(A) of the Act.

We considered finalizing the payment rate transparency provisions under 447.203(b)(1) as proposed, but in response to commenter concerns about the requirement to breakdown bundled payment rates into constituent services and rates, we added regulatory language to provide States with flexibility in complying with the payment rate transparency publication requirements when individual rates for constituent services within a State's bundle payment rate do not exist. Specifically, we added the following language: ''unless this information is not reasonably available'' to the requirement that ''in the case of a bundled or similar payment methodology'' States must ''identify each constituent service included within the rate and how much of the bundled payment is allocated to each constituent service under the State's methodology.'' We also clarified in this final rule through a previous comment response that facility payment rates (for example, provider-specific rates and per diem rates) are not considered to be bundled payment rates and are not subject to the payment rate transparency provisions. We believe this additional regulatory language and clarification will reduce administrative burden on States by narrowing the scope of bundled payment rates subject to the payment rate transparency requirements. While we still believe this requirement is necessary to ensure maximum transparency of payment rates in the case of bundled fee schedule payment rates, it is also necessary to account for circumstances where a State does not have information available to comply with this regulatory requirement.

We considered finalizing the payment rate transparency provisions under 447.203(b)(1) as proposed, but in response to commenter concerns about requiring States with prospective effective dates to publish rates that are not yet in effect, we added regulatory language to address this circumstance. Specifically, the regulation now states that the agency is required to include the date the payment rates were last updated on the State Medicaid agency's website and to ensure these data are kept current, where any necessary update must be made no later than either 1 month following the date of CMS approval of the State plan amendment, section 1915(c) HCBS waiver amendment, or similar amendment revising the provider payment rate or methodology, or 1 month following the effective date of the approved amendment, whichever date occurs latest. If we finalized the regulatory language as proposed, then States would be required to update their payment rate transparency publications with payment rates that are not yet in effect, and this would not align with our transparency efforts to ensure a States' payment rate transparency publication is as current as possible, and accurate once published.

We considered finalizing the payment rate transparency provisions under § 447.203(b)(1) with a requirement to organize the payment rate transparency publication by CPT/HCPCS code, similar to the comparative payment rate analysis, but in response to commenter concerns about administrative burden on States to comply with the provisions as proposed, we did not require the payment rate transparency publication to be organized in this manner. While we still require both the payment rate transparency publication and comparative payment rate analysis to be organized in such a way that a member of the public can readily determine the amount that Medicaid would pay for the service, requiring the publication to be organized by CPT/HCPCS code would create substantial burden for States that do not current organize their payment rates in this manner as all fee schedule payment rates are subject to this provision. By not requiring the payment rate transparency publication to be organized a particular way, we are providing States with the flexibility to use existing fee schedule publications for compliance with the regulations finalized in this rule.

We considered, but did not finalize, an increase to the 80 percent of Medicare threshold in § 447.203(c)(1)(i) to 100 percent of Medicare as suggested by some of the commenters. Taking such an action would have increased the threshold for States to qualify for the streamlined review process and increased administrative burden on the States. We ultimately decided not to pursue this alternative because this threshold was not intended to provide absolute assurance that a provider would participate in the Medicaid program. Instead, we are using 80 percent as a threshold to determine the level of analysis and information a State must provide to CMS to support consistency with section 1902(a)(30)(A) of the Act and allow CMS to focus its review efforts on proposals at the highest risk of access concerns. We also note that the 80 percent threshold was just one of three criteria that must be met for a streamlined review. Our stated intention in this rule was that we were intending this to provide States with relief from the more burdensome AMRP process defined in the 2015 final rule with comment period, and establishing a higher threshold would not fit within that stated purpose.

We received public comments on several of these alternatives, but many of those comments blended with discussion of the relevant provisions, so in general our responses to those comments are contained in section II.C. However, we did receive some comments on alternatives not already addressed in this final rule.

Comment: One commenter responded to our decision not to propose adopting a complaint-driven process or developing a Federal review process for assessing access to care concerns. That commenter stated that CMS' reliance on existing State processes, such as the ongoing provider and beneficiary feedback channels and the public process requirement for States submitting a SPA that proposed to reduce or restructure Medicaid services would be acceptable if the existing processes are responsive and delivered timely action when concerns are raised.

Response: We agree with the commenter regarding existing processes being responsive and timely. As described in the proposed rule, these processes must meet requirements under newly finalized § 447.203(c)(4) (which includes existing requirements from the 2015 final rule with comment period that was relocated from § 447.203(b)(7)), as well as § 447.204 (which includes existing requirements from the 2015 final rule with comment period with confirming changes to align with this final rule). These existing regulatory requirements require States have ongoing mechanisms for beneficiary and provider input on access to care in which they promptly respond to public input and maintain a record the public input, as well as how the State responded. While this is a general requirement for ensuring States have a method for collecting access to care issues from the public, these requirements also specifically apply to States proposing a rate reduction or restructuring.

Comment: One commenter agreed with CMS' decision to exclude outpatient drugs from the proposed comparative payment rate analysis under § 447.203(b)(2) noting that, in addition to the reasons CMS outlined in the proposed rule, the cost of outpatient drugs can change weekly and there are anticipated cost differences compared to other payers, such as Medicare or States. The commenter recommended that, if CMS decides to subject outpatient drugs to the comparative payment rate

analysis, then CMS should develop a unique methodology for States to follow in making the comparison to another payer.

Response: We appreciate the commenter's support for our decision, as well as their recommendation for how we could subject outpatient drugs to the comparative payment rate analysis if we did end up deciding to include them. We are not changing the services subject to the analysis in this final rule, although we note we have updated ''outpatient behavioral health services'' to ''outpatient mental health and substance use disorder services.''

E. Accounting Statement and Table

As required by OMB Circular A–4 (available at *https://www.whitehouse.gov/wp-content/uploads/legacy_drupal_files/omb/circulars/A4/a-4.pdf*), we have prepared an accounting statement in Table 48 showing the classification of the impact associated with the provisions of this final rule. Note, Table 47 shown previously in this final rule provides a summary of the one-time and annual costs estimates.

TABLE 48: Accounting Table

Category	Estimates	Units		
		Year Dollar	Discount Rate	Period Covered
Regulatory Review Costs				
Annualized Monetized	.112	2023	7%	2024 - 2028
($million/year)	.117	2023	3%	2024 - 2028
Costs to States				
Annualized Monetized	72.12	2023	7%	2024 - 2028

($million/year)	106.44	2023	3%	2024 - 2028
Costs to Managed Care Plans				
Annualized Monetized	6.84	2023	7%	2024 - 2028
($million/year)	7.13	2023	3%	2024 - 2028

F. Regulatory Flexibility Act (RFA)

The RFA requires agencies to analyze options for regulatory relief of small entities, if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, we estimate that *almost all* of Home Health Care Services, Services for the Elderly and Persons with Disabilities, and Direct Health and Medical Insurance Carriers are small entities as that term is used in the RFA (include small businesses, nonprofit organizations, and small governmental jurisdictions). The great majority of hospitals and most other health care providers and suppliers are small entities, either by being nonprofit organizations or by meeting the SBA definition of a small business (having revenues of less than $9.0 million to $47 million in any 1 year).

For purposes of the RFA, approximately 95 percent of the health care industries impacted are considered small businesses according to the Small Business Administration's size standards with total revenues of $47 million or less in any 1 year.

According to the SBA's website at *http://www.sba.gov/content/small-business-size-standards* HCBS Provider Costs and Managed care Plan fall in the North American Industrial Classification System 621610 Home Health Care Services, 624120 Services for the Elderly and Persons with Disabilities, and 524114 Direct Health and Medical Insurance Carriers.

BILLING CODE 4120–01–P

Tables 50, 51, and 52 aid in showing the distribution of firms and revenues at their 6 digits NAICS code level. These tables aim to provide an understanding of the disproportionate impacts among firms, between small and large firms.

Individuals and States are not included in the definition of a small entity. This rule will not have a significant impact measured change in revenue of 3 to 5 percent on a substantial number of small businesses or other small entities. All the industries combined, according to the 2017 Economic Census, earned approximately $46,771,961,000.00. Hence, all the costs combined, amounts to about 1 percent.

TABLE 53: NAICS Classification of Services, the Distribution of Costs, Annualized Cost per Industry, Average Annual Revenue for Small Firms, and Revenue Test

Services	NAICS	Percentage of Costs	Annualized Cost* per Industry	Avg. Annual Revenue for Small Firms	Revenue Test
Managed Care Plans	Direct Health and Medical Insurance Carriers (524114)	100 Percent	$370,989,000	**$5,320,704.31**	**1.4%**
Home and Community-Based Services (HCBS)	Elderly and Persons with Disabilities (624120)	67 Percent	$248,562,630.00	**$3,117,267.70**	**1.3%**
Home and Community-Based Services (HCBS)	Home Health Care Services (621610)	37 Percent	$137,265,930.00	**$25,087,240.51**	**18%**

*Annualized Cost per Industry was determined from the Accounting Table 7.

BILLING CODE 4120–01–C

Therefore, as its measure of significant economic impact on a substantial number of small entities, HHS uses a change in revenue of more than 3 to 5 percent.

According to Table 12, for Direct Health and Medical Insurance Carriers (524114) and Elderly and Persons with Disabilities (624120), we do not believe that the 3 to 5 percent threshold will be reached by the requirements in this final rule. However, Home Health Care Services (621610) has a substantial effect on its small businesses.

Therefore, the Secretary has certified that this final rule will not have a significant economic impact on a substantial number of small entities in

the Direct Health and Medical Insurance Carriers (524114) and Elderly and Persons with Disabilities (624120) industries. However, the Secretary cannot certify that this final rule will not have a significant economic impact on the Home Health Care Services (621610) industry.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the Act. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a metropolitan statistical area and has fewer than 100 beds. This final rule will not have a significant impact on the operations of small rural hospitals since small hospitals are not affected by the proposed rule. Therefore, the Secretary has certified that this final rule will not have a significant impact on the operations of a substantial number of small rural hospitals.

G. Unfunded Mandates Reform Act (UMRA)

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2023, that threshold is approximately $177 million. This final rule will impose a mandate that will result in the expenditure by the private sector, of more than $177 million in at least 1 year.

Several of the provisions in this final rule address gaps in existing regulations. In these cases, the costs for States to implement the changes to existing processes will likely be minimal. For the remaining areas of the rule, we have sought to minimize burden whenever possible, while still achieving the goals of this rulemaking, as reflected in the burden analyses and estimates described in sections III. and IV. of this final rule. We further note that, as reflected in those sections, States would be able to claim administrative match for the work required to implement the proposals.

We have described the projected paperwork costs to providers, as well as to States, the Federal Government, and managed care plans (as applicable) in the Collection of Information section (section III. of this final rule.) We note that the requirements finalized at § 441.302(k) regarding the HCBS payment adequacy requirements represent the biggest impact on small entities. We have not calculated an additional financial impact on providers beyond what is reflected in the Collection of Information (in section III.) and the Regulatory Impact Analysis (section (this section, section IV. of the final rule.) The requirements finalized at § 441.302(k) may require that a number of HCBS providers ensure that they allocate more of their Medicaid payments to direct care workers than they had prior to the implementation of § 441.302(k); this does not reflect a change in the Medicaid payments. The underlying assumption of this requirement is that providers are capable of allocating 80 percent their Medicaid payments to direct care workers by ensuring that payments are allocated efficiently and that overhead is kept to a minimum. Additionally, as discussed in II.B.5. of this final rule, we have provided States with several flexibilities for certain providers that would be unable to operate successfully under this requirement. While we received anecdotal data from public commenters regarding current Medicaid rates, workforce shortages, and survey responses from providers regarding their reaction to the proposal in the proposed rule, we did not receive data (nor do we have other sources of data) on which to estimate additional costs associated with § 441.302(k) aside from what is presented in the Collection of Information and Regulatory Impact Analysis sections above.

H. Federalism

E.O. 13132 establishes certain requirements that an agency must meet when it issues a proposed rule that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. This rule does not impose substantial direct costs on State or local governments, preempt State law, or otherwise have Federalism implications. As mentioned in the previous section of this rule, the costs to States by our estimate do not rise to the level of specified thresholds for significant burden to States. In addition, many proposals amend existing requirements or further requirements that already exist in statute, and as such would not create any new conflict with State law.

I. Conclusion

The policies in this final rule, will enable us to implement enhanced access to health care services for Medicaid beneficiaries across FFS, managed care, and HCBS delivery systems.

The analysis in section IV. of this final rule, together with the rest of this preamble, provides a regulatory impact analysis. In accordance with the provisions of E.O. 12866, this final rule was reviewed by the Office of Management and Budget.

Chiquita Brooks-LaSure, Administrator of the Centers for Medicare & Medicaid Services, approved this document on April 11, 2024.

List of Subjects

42 CFR Part 431

Administrative practice and procedure, Consumer protection, Grant programs—health, Medicaid, Organization and functions (Government agencies), Public assistance programs, Reporting and recordkeeping requirement.

42 CFR Part 438

Administrative practice and procedure, Grant programs—health, Health professions, Medicaid, Older adults, People with Disabilities, Reporting and recordkeeping requirements.

42 CFR Part 441

Administrative practice and procedure, Consumer protection, Grant programs—health, Health professions, Medicaid, Older adults, People with Disabilities, Reporting and recordkeeping requirements.

42 CFR Part 447

Accounting, Administrative practice and procedure, Drugs, Grant programs—health, Health facilities, Health professions, Medicaid, Reporting and recordkeeping requirements, and Rural areas.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services amends 42 CFR Chapter IV as set forth below:

PART 431—STATE ORGANIZATION AND GENERAL ADMINISTRATION

■ 1. The authority citation for part 431 continues to read as follows:

Authority: 42 U.S.C. 1302.

■ 2. Section 431.12 is revised to read as follows:

§ 431.12 Medicaid Advisory Committee and Beneficiary Advisory Council.

(a) *Basis and purpose.* This section, based on section 1902(a)(4) of the Act, prescribes State Plan requirements for establishment and ongoing operation of a public Medicaid Advisory Committee

(MAC) with a dedicated Beneficiary Advisory Council (BAC) comprised of current and former Medicaid beneficiaries, their family members, and caregivers, to advise the State Medicaid agency on matters of concern related to policy development, and matters related to the effective administration of the Medicaid program.

(b) *State plan requirement.* The State plan must provide for a MAC and a BAC that will advise the director of the single State Agency for the Medicaid program on matters of concern related to policy development and matters related to the effective administration of the Medicaid program.

(c) *Selection of members.* The Director of the single State Agency for the Medicaid program must select members for the MAC and BAC for a term of length determined by the State, which may not be followed immediately by a consecutive term for the same member, on a rotating and continuous basis. The State must create a process for recruitment and selection of members and publish this information on the State's website as specified in paragraph (f).

(d) *MAC membership and composition.* The membership of the MAC must be composed of the following percentage and representative categories of interested parties in the State:

(1) For the period from July 9, 2024 through July 9, 2025, 10 percent of the MAC members must come from the BAC; for the period from July 10, 2025 through July 9, 2026, 20 percent of MAC members must come from the BAC; and thereafter, 25 percent of MAC members must come from the BAC.

(2) The remaining committee members must include representation of at least one from each of the following categories:

(A) State or local consumer advocacy groups or other community-based organizations that represent the interests of, or provide direct service, to Medicaid beneficiaries.

(B) Clinical providers or administrators who are familiar with the health and social needs of Medicaid beneficiaries and with the resources available and required for their care. This includes providers or administrators of primary care, specialty care, and long-term care.

(C) As applicable, participating Medicaid MCOs, PIHPs, PAHPs, PCCM entities or PCCMs as defined in § 438.2, or a health plan association representing more than one such plans; and

(D) Other State agencies that serve Medicaid beneficiaries (for example, foster care agency, mental health agency, health department, State agencies delegated to conduct eligibility determinations for Medicaid, State Unit on Aging), as ex-officio, non-voting members.

(e) *Beneficiary Advisory Council.* The State must form and support a BAC, which can be an existing beneficiary group, that is comprised of: individuals who are currently or have been Medicaid beneficiaries and individuals with direct experience supporting Medicaid beneficiaries (family members and paid or unpaid caregivers of those enrolled in Medicaid), to advise the State regarding their experience with the Medicaid program, on matters of concern related to policy development and matters related to the effective administration of the Medicaid program.

(1) The MAC members described in paragraph (d)(1) of this section must also be members of the BAC.

(2) The BAC must meet separately from the MAC, on a regular basis, and in advance of each MAC meeting to ensure BAC member preparation for each MAC meeting.

(f) *MAC and BAC administration.* The State agency must create standardized processes and practices for the administration of the MAC and the BAC that are available for public review on the State website. The State agency must—

(1) Develop and publish, by posting publicly on its website, bylaws for governance of the MAC and BAC along with a current list of members. States will also post publicly the past meeting minutes of the MAC and BAC meetings, including a list of meeting attendees. States will give BAC members the option to include their names in the membership list and meeting minutes that will be posted publicly.

(2) Develop and publish by posting publicly on its website a process for MAC and BAC member recruitment and selection along with a process for selection of MAC and BAC leadership;

(3) Develop, publish by posting publicly on its website, and implement a regular meeting schedule for the MAC and BAC; the MAC and BAC must each meet at least once per quarter and hold off-cycle meetings as needed. Each MAC and BAC meeting agenda must include a time for members and the public (if applicable) to disclose conflicts of interest.

(4) Make at least two MAC meetings per year open to the public and those meetings must include a dedicated time during the meeting for the public to make comments. BAC meetings are not required to be open to the public, unless the State's BAC members decide otherwise. The public must be adequately notified of the date, location, and time of each public MAC meeting and any public BAC meeting at least 30 calendar days in advance of the date of the meeting.

(5) Offer a rotating, variety of meeting attendance options. These meeting options are: all in-person attendance, all virtual attendance, and hybrid (in person and virtual) attendance options. Regardless of which attendance type of meeting it is, States are required to always have, at a minimum, telephone dial-in option at the MAC and BAC meetings for its members. If the MAC or BAC meeting is deemed open to the public, the State must offer at a minimum a telephone dial-in option for members of the public;

(6) Ensure that the meeting times and locations for MAC and BAC meetings are selected to maximize member attendance and may vary by meeting; and

(7) Facilitate participation of beneficiaries by ensuring that that meetings are accessible to people with disabilities, that reasonable modifications are provided when necessary to ensure access and enable meaningful participation, and communications with individuals with disabilities are as effective as with others, that reasonable steps are taken to provide meaningful access to individuals with Limited English Proficiency, and that meetings comply with the requirements at § 435.905(b) of this chapter and applicable regulations implementing the ADA, Title VI of the Civil Rights Act of 1964, section 504 of the Rehabilitation Act, and section 1557 of the Affordable Care Act at 28 CFR part 35 and 45 CFR parts 80, 84 and 92, respectively.

(g) *MAC and BAC participation and scope.* The MAC and BAC participants must have the opportunity to advise the director of the single State Agency for the Medicaid program on matters related to policy development and matters related to the effective administration of the Medicaid program. At a minimum, the MAC and BAC must determine, in collaboration with the State, which topics to provide advice on related to—

(1) Additions and changes to services;

(2) Coordination of care;

(3) Quality of services;

(4) Eligibility, enrollment, and renewal processes;

(5) Beneficiary and provider communications by State Medicaid agency and Medicaid MCOs, PIHPs, PAHPs, PCCM entities or PCCMs as defined in § 438.2;

(6) Cultural competency, language access, health equity, and disparities and biases in the Medicaid program;

(7) Access to services; and

(8) Other issues that impact the provision or outcomes of health and medical care services in the Medicaid program as determined by the MAC, BAC, or State.

(h) *State agency staff assistance, participation, and financial help.* The single State Agency for the Medicaid program must provide staff to support planning and execution of the MAC and the BAC to include—

(1) Recruitment of MAC and BAC members;

(2) Planning and execution of all MAC and BAC meetings and the production of meeting minutes that include actions taken or anticipated actions by the State in response to interested parties' feedback provided during the meeting. The minutes are to be posted on the State's website within 30 calendar days following each meeting. Additionally, the State must produce and post on its website an annual report as specified in paragraph (i) of this section; and

(3) The provision of appropriate support and preparation (providing research or other information needed) to the MAC and BAC members who are Medicaid beneficiaries to ensure meaningful participation. These tasks include—

(i) Providing staff whose responsibilities are to facilitate MAC and BAC member engagement;

(ii) Providing financial support, if necessary, to facilitate Medicaid beneficiary engagement in the MAC and the BAC; and

(iii) Attendance by at least one staff member from the single State Agency for the Medicaid program's executive staff at all MAC and BAC meetings.

(i) *Annual report.* The MAC, with support from the State, must submit an annual report describing its activities, topics discussed, and recommendations. The State must review the report and include responses to the recommended actions. The State agency must then—

(1) Provide MAC members with final review of the report;

(2) Ensure that the annual report of the MAC includes a section describing the activities, topics discussed, and recommendations of the BAC, as well as the State's responses to the recommendations; and

(3) Post the report to the State's website. States have 2 years from July 9, 2024 to finalize the first annual MAC report. After the report has been finalized, States will have 30 days to post the annual report.

(j) *Federal financial participation.* FFP is available at 50 percent of expenditures for the MAC and BAC activities.

(k) *Applicability dates.* Except as noted in paragraphs (d)(1) and (i)(3) of this section, the requirements in paragraphs (a) through (j) of this section are applicable July 9, 2025.

■ 3. Section 431.408 is amended by revising paragraph (a)(3)(i) to read as follows:

§ 431.408 State public notice process.

(a) * * *

(3) * * *

(i) The Medicaid Advisory Committee and Beneficiary Advisory Council that operate in accordance with § 431.12 of this subpart; or

* * * * *

PART 438—MANAGED CARE

■ 4. The authority citation for part 438 continues to read as follows:

Authority: 42 U.S.C. 1302.

■ 5. Section 438.72 is added to subpart B to read as follows:

§ 438.72 Additional requirements for long-term services and supports.

(a) [Reserved]

(b) *Services authorized under section 1915(c) waivers and section 1915(i), (j), and (k) State plan authorities.* The State must comply with the requirements at §§ 441.301(c)(1) through (3), 441.302(a)(6), 441.302(k), 441.311, and 441.313 for services authorized under section 1915(c) waivers and section 1915(i), (j), and (k) State plan authorities.

PART 441—SERVICES: REQUIREMENTS AND LIMITS APPLICABLE TO SPECIFIC SERVICES

■ 6. The authority citation for part 441 continues to read as follows:

Authority: 42 U.S.C. 1302.

■ 7. Section 441.301 is amended by revising paragraphs (c)(1) introductory text and (c)(3), and adding paragraph (c)(7) to read as follows:

§ 441.301 Contents of request for a waiver.

* * * * *

(c) * * *

(1) *Person-centered planning process.* The individual, or if applicable, the individual and the individual's authorized representative, will lead the person-centered planning process. When the term ''individual'' is used throughout § 441.301(c)(1) through (3), it includes the individual's authorized representative if applicable. In addition, the person-centered planning process:

* * * * *

(3) *Review of the person-centered service plan*—(i) *Requirement.* The State must ensure that the person-centered service plan for every individual is reviewed, and revised as appropriate, based upon the reassessment of functional need at least every 12 months, when the individual's circumstances or needs change significantly, or at the request of the individual.

(ii) *Minimum performance at the State level.* The State must demonstrate, through the reporting requirements at § 441.311(b)(3), that it ensures the following minimum performance levels are met:

(A) Complete a reassessment of functional need at least every 12 months for no less than 90 percent of the individuals continuously enrolled in the waiver for at least 365 days; and

(B) Review, and revise as appropriate, the person-centered service plan, based upon the reassessment of functional need, at least every 12 months, for no less than 90 percent of the individuals continuously enrolled in the waiver for at least 365 days.

(iii) *Applicability date.* States must comply with the performance levels described in paragraph (c)(3)(ii) of this section beginning 3 years after July 9, 2024; and in the case of the State that implements a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act and includes HCBS in the MCO's, PIHP's, or PAHP's contract, the first rating period for contracts with the MCO, PIHP, or PAHP beginning on or after the date that is 3 years after July 9, 2024.

* * * * *

(7) *Grievance system*—(i) *Purpose.* The State must establish a procedure under which a beneficiary may file a grievance related to the State's or a provider's performance of the activities described in paragraphs (c)(1) through (6) of this section. This requirement does not apply to a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act. The State may have activities described in paragraph (c)(7) of this section performed by contractors or other government entities, provided, however, that the State retains responsibility for ensuring performance of and compliance with these provisions.

(ii) *Definitions.* As used in this section:

Grievance means an expression of dissatisfaction or complaint related to

the State's or a provider's performance of the activities described in paragraphs (c)(1) through (6) of this section, regardless of whether remedial action is requested.

Grievance system means the processes the State implements to handle grievances, as well as the processes to collect and track information about them.

(iii) *General requirements.* (A) The beneficiary or a beneficiary's authorized representative, if applicable, may file a grievance. All references to beneficiary include the role of the beneficiary's representative, if applicable.

(*1*) Another individual or entity may file a grievance on behalf of the beneficiary, or provide the beneficiary with assistance or representation throughout the grievance process, with the written consent of the beneficiary or authorized representative.

(*2*) A provider cannot file a grievance that would violate the State's conflict of interest guidelines, as required in § 441.540(a)(5).

(B) The State must:

(*1*) Base its grievance processes on written policies and procedures that, at a minimum, meet the conditions set forth in this paragraph (c)(7);

(*2*) Provide beneficiaries reasonable assistance in ensuring grievances are appropriately filed with the grievance system, completing forms and taking other procedural steps related to a grievance. This includes, but is not limited to, ensuring the grievance system is accessible to individuals with disabilities and providing meaningful access to individuals with Limited English Proficiency, consistent with § 435.905(b) of this chapter, and includes auxiliary aids and services where necessary to ensure effective communication, such as providing interpreter services and toll-free numbers that have adequate TTY/TTD and interpreter capability;

(*3*) Ensure that punitive or retaliatory action is neither threatened nor taken against an individual filing a grievance or who has had a grievance filed on their behalf;

(*4*) Accept grievances and requests for extension of timeframes from the beneficiary;

(*5*) Provide to the beneficiary the notices and information required under this subsection, including information on their rights under the grievance system and on how to file grievances, and ensure that such information is accessible for individuals with disabilities and individuals with Limited English Proficiency in accordance with § 435.905(b);

(*6*) Review any grievance resolution with which the beneficiary is dissatisfied; and

(*7*) Provide information about the grievance system to all providers and subcontractors approved to deliver services.

(C) The process for handling grievances must:

(*1*) Allow the beneficiary to file a grievance with the State either orally or in writing;

(*2*) Acknowledge receipt of each grievance;

(*3*) Ensure that the individuals who make decisions on grievances are individuals:

(*i*) Who were neither involved in any previous level of review or decision-making related to the grievance nor a subordinate of any such individual;

(*ii*) Who are individuals who have the appropriate clinical and non-clinical expertise, as determined by the State; and

(*iii*) Who consider all comments, documents, records, and other information submitted by the beneficiary without regard to whether such information was submitted to or considered previously by the State;

(*4*) Provide the beneficiary a reasonable opportunity, face-to-face (including through the use of audio or video technology) and in writing, to present evidence and testimony and make legal and factual arguments related to their grievance. The State must inform the beneficiary of the limited time available for this sufficiently in advance of the resolution timeframe for grievances as specified in paragraph (c)(7)(v) of this section;

(*5*) Provide the beneficiary their case file, including medical records in compliance with the HIPAA Privacy Rule (45 CFR part 160 and part 164 subparts A and E), other documents and records, and any new or additional evidence considered, relied upon, or generated by the State related to the grievance. This information must be provided free of charge and sufficiently in advance of the resolution timeframe for grievances as specified in paragraph (c)(7)(v) of this section; and

(*6*) Provide beneficiaries, free of charge, with language services, including written translation and interpreter services in accordance with § 435.905(b), to support their participation in grievance processes and their use of the grievance system.

(iv) *Filing timeframes.* A beneficiary may file a grievance at any time.

(v) *Resolution and notification*—(A) *Basic rule.* The State must resolve each grievance, and provide notice, as expeditiously as the beneficiary's health condition requires, within State-established timeframes that may not exceed the timeframes specified in this section.

(B) *Resolution timeframes.* For resolution of a grievance and notice to the affected parties, the timeframe may not exceed 90 calendar days from the day the State receives the grievance. This timeframe may be extended under paragraph (c)(7)(v)(C) of this section.

(C) *Extension of timeframes.* The States may extend the timeframe from that in paragraph (c)(7)(v)(B) of this section by up to 14 calendar days if –

(*1*) The beneficiary requests the extension; or

(*2*) The State documents that there is need for additional information and how the delay is in the beneficiary's interest.

(D) *Requirements following extension.* If the State extends the timeframe not at the request of the beneficiary, it must complete all of the following:

(*1*) Make reasonable efforts to give the beneficiary prompt oral notice of the delay;

(*2*) Within 2 calendar days of determining a need for a delay, but no later than the timeframes in paragraph (c)(7)(v)(B) of this section, give the beneficiary written notice of the reason for the decision to extend the timeframe; and

(*3*) Resolve the grievance as expeditiously as the beneficiary's health condition requires and no later than the date the extension expires.

(vi) *Format of notice.* The State must establish a method to notify a beneficiary of the resolution of a grievance and ensure that such methods meet, at a minimum, the standards described at § 435.905(b) of this chapter.

(vii) *Recordkeeping.* (A) The State must maintain records of grievances and must review the information as part of its ongoing monitoring procedures.

(B) The record of each grievance must contain, at a minimum, all of the following information:

(*1*) A general description of the reason for the grievance;

(*2*) The date received;

(*3*) The date of each review or, if applicable, review meeting;

(*4*) Resolution of the grievance, as applicable;

(*5*) Date of resolution, if applicable; and

(*6*) Name of the beneficiary for whom the grievance was filed.

(C) The record must be accurately maintained in a manner available upon request to CMS.

(viii) *Applicability date.* States must comply with the requirement at paragraph (c)(7) of this section beginning 2 years after July 9, 2024.

■ 8. Section 441.302 is amended by—
■ a. Adding paragraph (a)(6);
■ b. Revising paragraph (h); and
■ c. Adding paragraph (k).

The additions and revision read as follows:

§ 441.302 State assurances.

* * * * *

(a) * * *

(6) Assurance that the State operates and maintains an incident management system that identifies, reports, triages, investigates, resolves, tracks, and trends critical incidents.

(i) *Requirements.* The State must:

(A) Define critical incident to include, at a minimum—

(*1*) Verbal, physical, sexual, psychological, or emotional abuse;

(*2*) Neglect;

(*3*) Exploitation including financial exploitation;

(*4*) Misuse or unauthorized use of restrictive interventions or seclusion;

(*5*) A medication error resulting in a telephone call to, or a consultation with, a poison control center, an emergency department visit, an urgent care visit, a hospitalization, or death; or

(*6*) An unexplained or unanticipated death, including but not limited to a death caused by abuse or neglect;

(B) Use an information system, as defined in 45 CFR 164.304 and compliant with 45 CFR part 164, that, at a minimum, enables—

(*1*) Electronic critical incident data collection;

(*2*) Tracking (including of the status and resolution of investigations); and

(*3*) Trending;

(C) Require providers to report to the State, within State-established timeframes and procedures, any critical incident that occurs during the delivery of services authorized under section 1915(c) of the Act and as specified in the beneficiary's person-centered service plan, or occurs as a result of the failure to deliver services authorized under section 1915(c) of the Act and as specified in the beneficiary's person-centered service plan;

(D) Use claims data, Medicaid fraud control unit data, and data from other State agencies, such as Adult Protective Services or Child Protective Services, to the extent permissible under applicable State law to identify critical incidents that are unreported by providers and occur during the delivery of services authorized under section 1915(c) of the Act and as specified in the beneficiary's person-centered service plan, or occur as a result of the failure to deliver services authorized under section 1915(c) of the Act and as specified in the beneficiary's person-centered service plan;

(E) Ensure that there is information sharing on the status and resolution of investigations, such as through the use of information sharing agreements, between the State and the entity or entities responsible in the State for investigating critical incidents as defined in paragraph (a)(6)(i)(A) of this section if the State refers critical incidents to other entities for investigation;

(F) Separately investigate critical incidents if the investigative agency fails to report the resolution of an investigation within State-specified timeframes; and

(G) Demonstrate that it meets the requirements in paragraph (a)(6) of this section through the reporting requirement at § 441.311(b)(1).

(ii) *Minimum performance at the State level.* The State must demonstrate, through the reporting requirements at § 441.311(b)(2), that it meets the following minimum performance levels:

(A) Initiate an investigation, within State-specified timeframes, for no less than 90 percent of critical incidents;

(B) Complete an investigation and determine the resolution of the investigation, within State-specified timeframes, for no less than 90 percent of critical incidents; and

(C) Ensure that corrective action has been completed within State-specified timeframes, for no less than 90 percent of critical incidents that require corrective action.

(iii) *Applicability date.* States must comply with the requirements in paragraph (a)(6) of this section beginning 3 years after July 9, 2024; except for the requirement at paragraph (a)(6)(i)(B) of this section, with which the State must comply beginning 5 years after July 9, 2024; and in the case of the State that implements a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act and includes HCBS in the MCO's, PIHP's, or PAHP's contract, the first rating period for contracts with the MCO, PIHP, or PAHP beginning on or after 3 years after July 9, 2024, except for the requirement at paragraph (a)(6)(i)(B) of this section, with which the first rating period for contracts with the MCO, PIHP or PAHP beginning on or after 5 years after July 9, 2024.

* * * * *

(h) *Reporting.* Assurance that the agency will provide CMS with information on the waiver's impact, including the data and information as required in § 441.311.

* * * * *

(k) *HCBS payment adequacy.* Assurance that payment rates are adequate to ensure a sufficient direct care workforce to meet the needs of beneficiaries and provide access to services in the amount, duration, and scope specified in beneficiaries' person-centered service plans.

(1) *Definitions.* As used in this paragraph—

(i) *Compensation* means:

(A) Salary, wages, and other remuneration as defined by the Fair Labor Standards Act and implementing regulations (29 U.S.C. 201 *et seq.,* 29 CFR parts 531 and 778);

(B) Benefits (such as health and dental benefits, life and disability insurance, paid leave, retirement, and tuition reimbursement); and

(C) The employer share of payroll taxes for direct care workers delivering services authorized under section 1915(c) of the Act.

(ii) *Direct care worker* means any of the following individuals who may be employed by a Medicaid provider, State agency, or third party; contracted with a Medicaid provider, State agency, or third party; or delivering services under a self-directed services delivery model:

(A) A registered nurse, licensed practical nurse, nurse practitioner, or clinical nurse specialist who provides nursing services to Medicaid beneficiaries receiving home and community-based services available under this subpart;

(B) A licensed or certified nursing assistant who provides such services under the supervision of a registered nurse, licensed practical nurse, nurse practitioner, or clinical nurse specialist;

(C) A direct support professional;

(D) A personal care attendant;

(E) A home health aide; or

(F) Other individuals who are paid to provide services to address activities of daily living or instrumental activities of daily living, behavioral supports, employment supports, or other services to promote community integration directly to Medicaid beneficiaries receiving home and community-based services available under this subpart, including nurses and other staff providing clinical supervision.

(iii) *Excluded costs* means costs that are not included in the calculation of the percentage of Medicaid payments to providers that is spent on compensation for direct care workers. Such costs are limited to:

(A) Costs of required trainings for direct care workers (such as costs for qualified trainers and training materials);

(B) Travel costs for direct care workers (such as mileage reimbursement or public transportation subsidies); and

(C) Costs of personal protective equipment for direct care workers.

(2) *Requirement.* (i) Except as provided in paragraph (k)(2)(ii) of this section, the State must demonstrate annually, through the reporting requirements at paragraph (k)(6) of this section and § 441.311(e), that it meets the minimum performance levels in paragraph (k)(3) of this section for furnishing homemaker, home health aide, or personal care services, as set forth at § 440.180(b)(2) through (4), that are delivered by direct care workers and authorized under section 1915(c) of the Act.

(ii) *Treatment of certain payment data under self-directed services delivery models.* If the State provides that homemaker, home health aide, or personal care services, as set forth at § 440.180(b)(2) through (4), may be furnished under a self-directed services delivery model in which the beneficiary directing the services sets the direct care worker's payment rate, then the State does not include such payment data in its calculation of the State's compliance with the minimum performance levels at paragraph (k)(3) of this section.

(3) *Minimum performance at the provider level.* Except as provided in paragraphs (k)(5) and (7) of this section, the State must meet the following minimum performance level as applicable, calculated as the percentage of total payment (not including excluded costs) to a provider for furnishing homemaker, home health aide, or personal care services, as set forth at § 440.180(b)(2) through (4), represented by the provider's total compensation to direct care workers:

(i) Except as provided in paragraph (k)(3)(ii) of this section, the State must ensure that each provider spends 80 percent of total payments the provider receives for services it furnishes as described in paragraph (k)(3) of this section on total compensation for direct care workers who furnish those services.

(ii) At the State's option, for providers determined by the State to meet its State-defined small provider criteria in paragraph (k)(4)(i) of this section, the State must ensure that each provider spends the percentage set by the State in accordance with paragraph (k)(4)(ii) of this section of total payments the provider receives for services it furnishes as described in paragraph (k)(3) of this section on total compensation for direct care workers who furnish those services.

(4) *Small provider minimum performance level*—(i) *Small provider criteria.* The State may develop reasonable, objective criteria through a transparent process to identify small providers that the State would require to meet the minimum performance requirement at paragraph (k)(3)(ii) of this section. The transparent process for developing criteria to identify providers that qualify for the minimum performance requirement in paragraph (k)(3)(ii) of this section must include public notice and opportunities for comment from interested parties.

(ii) *Small provider minimum performance level.* The State must set the percentage for a small provider to meet the minimum performance level at paragraph (k)(3)(ii) of this section based on reasonable, objective criteria it develops through a transparent process that includes public notice and opportunities for comment from interested parties.

(5) *Hardship exemption.* The State may develop reasonable, objective criteria through a transparent process to exempt from the minimum performance requirement at paragraph (k)(3) of this section a reasonable number of providers determined by the State to be facing extraordinary circumstances that prevent their compliance with paragraph (k)(3) of this section. The State must develop these criteria through a transparent process that includes public notice and opportunities for comment from interested parties. If a provider meets the State's hardship exemption criteria, then the State does not include that provider in its calculation of the State's compliance with the minimum performance level at paragraph (k)(3) of this section.

(6) Reporting on small provider minimum performance level and hardship exemption.

(i) States that establish a small provider minimum performance level under paragraph (k)(4) of this section must report to CMS annually the following information, in the form and manner, and at a time, specified by CMS:

(A) The State's small provider criteria developed in accordance with paragraph (k)(4)(i) of this section;

(B) The State's small provider minimum performance level developed in accordance with paragraph (k)(4)(ii) of this section;

(C) The percentage of providers of services set forth at § 440.180(b)(2) through (4) that qualify for the small provider minimum performance level at paragraph (k)(4) of this section; and

(D) A plan, subject to CMS review and approval, for small providers to meet the minimum performance requirement at paragraph (k)(3)(i) of this section within a reasonable period of time.

(ii) States that provide a hardship exemption in accordance with paragraph (k)(5) of this section must report to CMS annually the following information, in the form and manner, and at a time, specified by CMS:

(A) The State's hardship criteria developed in accordance with paragraph (k)(5) of this section;

(B) The percentage of providers of services set forth at § 440.180(b)(2) through (4) that qualify for a hardship exemption as provided in paragraph (k)(5) of this section; and

(C) A plan, subject to CMS review and approval, for reducing the number of providers that qualify for a hardship exemption within a reasonable period of time.

(iii) CMS may waive the reporting requirements in paragraphs (k)(6)(i)(D) or (k)(6)(ii)(C) of this section, as applicable, if the State demonstrates it has applied the small provider minimum performance level at paragraph (k)(4)(ii) of this section or the hardship exemption at paragraph (k)(5) of this section to less than 10 percent of the State's providers.

(7) *Exemption for the Indian Health Service and Tribal health programs subject to 25 U.S.C. 1641.* The Indian Health Service and Tribal health programs subject to the requirements at 25 U.S.C. 1641 are exempt from the requirements at paragraph (k) of this section.

(8) *Applicability date.* States must comply with the requirements set forth in paragraph (k) of this section beginning 6 years after July 9, 2024; and in the case of the State that implements a managed care delivery system under the authority of section 1915(a), 1915(b), 1932(a), or 1115(a) of the Act and includes homemaker, home health aide, or personal care services, as set forth at § 440.180(b)(2) through (4) in the MCO's, PIHP's, or PAHP's contract, the first rating period for contracts with the MCO, PIHP, or PAHP beginning on or after the date that is 6 years after July 9, 2024.

■ 9. Section 441.303 is amended by revising paragraph (f)(6) to read as follows:

§ 441.303 Supporting documentation required.

* * * * *

(f) * * *

(6) The State must indicate the number of unduplicated beneficiaries to which it intends to provide waiver services in each year of its program. This number will constitute a limit on the size of the waiver program unless the State requests and the Secretary approves a greater number of waiver

participants in a waiver amendment. If the State has a limit on the size of the waiver program and maintains a list of individuals who are waiting to enroll in the waiver program, the State must meet the reporting requirements at § 441.311(d)(1).

* * * * *

■ 10. Section 441.311 is added to subpart G to read as follows:

§ 441.311 Reporting requirements.

(a) *Basis and scope.* Section 1902(a)(6) of the Act requires State Medicaid agencies to make such reports, in such form and containing such information, as the Secretary may from time to time require, and to comply with such provisions as the Secretary may from time to time find necessary to assure the correctness and verification of such reports. Section 1902(a)(19) of the Act requires States to provide safeguards to assure that eligibility for Medicaid-covered care and services will be determined and provided in a manner that is consistent with simplicity of administration and the best interests of Medicaid beneficiaries. This section describes the reporting requirements for States for section 1915(c) waiver programs, under the authority at section 1902(a)(6) and (a)(19) of the Act.

(b) *Compliance reporting*—(1) *Incident management system.* As described in § 441.302(a)(6)—

(i) The State must report, every 24 months, in the form and manner, and at a time, specified by CMS, on the results of an incident management system assessment to demonstrate that it meets the requirements in § 441.302(a)(6).

(ii) CMS may reduce the frequency of reporting to up to once every 60 months for States with incident management systems that are determined by CMS to meet the requirements in § 441.302(a)(6).

(2) *Critical incidents.* The State must report to CMS annually on the following information regarding critical incidents as defined in § 441.302(a)(6)(i)(A), in the form and manner, and at a time, specified by CMS:

(i) Number and percent of critical incidents for which an investigation was initiated within State-specified timeframes;

(ii) Number and percent of critical incidents that are investigated and for which the State determines the resolution within State-specified timeframes;

(iii) Number and percent of critical incidents requiring corrective action, as determined by the State, for which the required corrective action has been completed within State-specified timeframes.

(3) *Person-centered planning.* To demonstrate that the State meets the requirements at § 441.301(c)(3)(ii) regarding person-centered planning (as described in § 441.301(c)(1) through (3)), the State must report to CMS annually on the following, in the form and manner, and at a time, specified by CMS—

(i) Percent of beneficiaries continuously enrolled for at least 365 days for whom a reassessment of functional need was completed within the past 12 months. The State may report this metric using statistically valid random sampling of beneficiaries.

(ii) Percent of beneficiaries continuously enrolled for at least 365 days who had a service plan updated as a result of a re-assessment of functional need within the past 12 months. The State may report this metric using statistically valid random sampling of beneficiaries.

(4) Annually, the State will provide CMS with information on the waiver's impact on the type, amount, and cost of services provided under the State plan, in the form and manner, and at a time, specified by CMS.

(c) *Reporting on the Home and Community-Based Services Quality Measure Set,* as described in § 441.312.

(1) *General rules.* The State—

(i) Must report every other year, according to the format and schedule prescribed by the Secretary through the process for developing and updating the measure set described in § 441.312(d), on all measures in the Home and Community-Based Services Quality Measure Set that are identified by the Secretary pursuant to § 441.312(d)(1)(ii) of this subpart.

(ii) May report on all other measures in the Home and Community-Based Services Quality Measure Set that are not described in § 441.312(d)(1)(ii) and (iii) of this subpart.

(iii) Must establish, subject to CMS review and approval, State performance targets for each of the measures in the Home and Community-Based Services Quality Measure Set that are identified by the Secretary pursuant to § 441.312(d)(1)(ii) and (iii) of this subpart and describe the quality improvement strategies that the State will pursue to achieve the performance targets.

(iv) May establish State performance targets for each of the measures in the Home and Community-Based Services Quality Measure Set that are not identified by the Secretary pursuant to § 441.312(d)(1)(ii) and (iii) of this subpart and describe the quality improvement strategies that the State will pursue to achieve the performance targets.

(2) Measures identified per § 441.312(d)(1)(iii) of this subpart will be reported by the Secretary on behalf of the State.

(3) In reporting on Home and Community-Based Services Quality Measure Set measures, the State may, but is not required to:

(i) Report on the measures identified by the Secretary pursuant to § 441.312(c) of this subpart for which reporting will be, but is not yet required (that is, reporting has not yet been phased-in).

(ii) Report on the populations identified by the Secretary pursuant to § 441.312(c) of this subpart for whom reporting will be, but is not yet required.

(d) *Access reporting.* The State must report to CMS annually on the following, in the form and manner, and at a time, specified by CMS:

(1) *Waiver waiting lists.* (i) A description of how the State maintains the list of individuals who are waiting to enroll in the waiver program, if the State has a limit on the size of the waiver program, as described in § 441.303(f)(6), and maintains a list of individuals who are waiting to enroll in the waiver program. This description must include, but is not limited to:

(A) Information on whether the State screens individuals on the list for eligibility for the waiver program;

(B) Whether the State periodically re-screens individuals on the list for eligibility; and

(C) The frequency of re-screening, if applicable.

(ii) Number of people on the list of individuals who are waiting to enroll in the waiver program, if applicable.

(iii) Average amount of time that individuals newly enrolled in the waiver program in the past 12 months were on the list of individuals waiting to enroll in the waiver program, if applicable.

(2) *Access to homemaker, home health aide, personal care, and habilitation services.* (i) Average amount of time from when homemaker services, home health aide services, personal care services, and habilitation services, as set forth in § 440.180(b)(2) through (4) and (6), are initially approved to when services began, for individuals newly receiving services within the past 12 months. The State may report this metric using statistically valid random sampling of beneficiaries.

(ii) Percent of authorized hours for homemaker services, home health aide services, personal care services, and habilitation services, as set forth in § 440.180(b)(2) through (4) and (6), that

are provided within the past 12 months. The State may report this metric using statistically valid random sampling of beneficiaries.

(e) *Payment adequacy*—(1) *Definitions.* As used in this paragraph (e)-

(i) *Compensation* means:

(A) Salary, wages, and other remuneration as defined by the Fair Labor Standards Act and implementing regulations (29 U.S.C. 201 *et seq.,* 29 CFR parts 531 and 778);

(B) Benefits (such as health and dental benefits, life and disability insurance, paid leave, retirement, and tuition reimbursement); and

(C) The employer share of payroll taxes for direct care workers delivering services authorized under section 1915(c) of the Act.

(ii) *Direct care worker* means any of the following individuals who may be employed by a Medicaid provider, State agency, or third party; contracted with a Medicaid provider, State agency, or third party; or delivering services under a self-directed services delivery model:

(A) A registered nurse, licensed practical nurse, nurse practitioner, or clinical nurse specialist who provides nursing services to Medicaid beneficiaries receiving home and community-based services available under this subpart;

(B) A licensed or certified nursing assistant who provides such services under the supervision of a registered nurse, licensed practical nurse, nurse practitioner, or clinical nurse specialist;

(C) A direct support professional;

(D) A personal care attendant;

(E) A home health aide; or

(F) Other individuals who are paid to provide services to address activities of daily living or instrumental activities of daily living, behavioral supports, employment supports, or other services to promote community integration directly to Medicaid beneficiaries receiving home and community-based services available under this subpart, including nurses and other staff providing clinical supervision.

(iii) *Excluded costs* means costs that are not included in the calculation of the percentage of Medicaid payments to providers that are spent on compensation for direct care workers. Such costs are limited to:

(A) Costs of required trainings for direct care workers (such as costs for qualified trainers and training materials);

(B) Travel costs for direct care workers (such as mileage reimbursement or public transportation subsidies); and

(C) Cost of personal protective equipment for direct care workers.

(2) *Payment adequacy reporting.* (i) Except as provided in paragraphs (e)(2)(ii) and (e)(4) of this section, the State must report to CMS annually on the percentage of total payments (not including excluded costs) for furnishing homemaker services, home health aide services, personal care, and habilitation services, as set forth in § 440.180(b)(2) through (4) and (6), that is spent on compensation for direct care workers, at the time and in the form and manner specified by CMS. The State must report separately for each service and, within each service, must separately report services that are self-directed and services delivered in a provider-operated physical location for which facility-related costs are included in the payment rate.

(ii) If *the* State provides that homemaker, home *health* aide, personal care services, or habilitation services, as set forth at § 440.180(b)(2) through (4) and (6), may be furnished under a self-directed services delivery model in which the beneficiary directing the services sets the direct care worker's payment rate, then the State must exclude such payment data from the reporting required in paragraph (e) of this section.

(3) *Payment adequacy reporting readiness.* One year prior to the applicability date for paragraph (e)(2)(i) of this section, the State must report on its readiness to comply with the reporting requirement in (e)(2)(i) of this section.

(4) *Exclusion of data from the Indian Health Service and Tribal health programs that are subject to 25 U.S.C. 1641.* States must exclude the Indian Health Service and Tribal health programs subject to the requirements at 25 U.S.C. 1641 from the reporting required in paragraph (e) of this section, and not require submission of data by, or include any data from, the Indian Health Service or Tribal health programs subject to the requirements at 25 U.S.C. 1641 for the State's reporting required under paragraph (e)(2) of this section.

(f) *Applicability dates.* (1) The State must comply with the reporting requirements at paragraphs (b) and (d) of this section beginning 3 years after July 9, 2024; and in the case of a State that implements a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act and includes HCBS in the MCO's, PIHP's, or PAHP's contract, the first rating period for contracts with the MCO, PIHP, or PAHP beginning on or after the date that is 3 years after July 9, 2024.

(2) The State must comply with the reporting requirements at paragraphs (c) and (e) of this section beginning 4 years after July 9, 2024; and in the case of a State that implements a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act and includes HCBS in the MCO's, PIHP's, or PAHP's contract, the first rating period for contracts with the MCO, PIHP or PAHP beginning on or after the date that is 4 years after July 9, 2024.

■ 11. Section 441.312 is added to subpart G to read as follows:

§ 441.312 Home and community-based services quality measure set.

(a) *Basis and scope.* Section 1102(a) of the Act provides the Secretary of HHS with authority to make and publish rules and regulations that are necessary for the efficient administration of the Medicaid program. Section 1902(a)(6) of the Act requires State Medicaid agencies to make such reports, in such form and containing such information, as the Secretary may from time to time require, and to comply with such provisions as the Secretary may from time to time find necessary to assure the correctness and verification of such reports. This section describes the Home and Community-Based Services Quality Measure Set, which States are required to use in section 1915(c) waiver programs to promote public transparency related to the administration of Medicaid-covered HCBS, under the authority at sections 1102(a) and 1902(a)(6) of the Act.

(b) *Definitions.* As used in this subpart—

(1) *Attribution rules* means the process States use to assign beneficiaries to a specific health care program or delivery system for the purpose of calculating the measures on the Home and Community-Based Services Quality Measure Set.

(2) *Home and Community-Based Services Quality Measure Set* means the Home and Community-Based Services Quality Measures for Medicaid established and updated by the Secretary through a process that allows for public input and comment, including through the **Federal Register**, as described in paragraph (d) of this section.

(c) *Responsibilities of the Secretary.* The Secretary shall—

(1) Identify, and update no more frequently than every other year, beginning no later than December 31, 2026, the quality measures to be included in the Home and Community-Based Services Quality Measure Set as defined in paragraph (b) of this section.

(2) Make technical updates and corrections to the Home and Community-Based Services Quality Measure Set annually as appropriate.

(3) Consult at least every other year with States and other interested parties identified in paragraph (g) of this section to—

(i) Establish priorities for the development and advancement of the Home and Community-Based Services Quality Measure Set;

(ii) Identify newly developed or other measures which should be added including to address any gaps in the measures included in the Home and Community-Based Services Quality Measure Set;

(iii) Identify measures which should be removed as they no longer strengthen the Home and Community-Based Services Quality Measure Set; and

(iv) Ensure that all measures included in the Home and Community-Based Quality Measure Set reflect an evidenced-based process including testing, validation, and consensus among interested parties; are meaningful for States; and are feasible for State-level, program-level, or provider-level reporting as appropriate.

(4) In consultation with States, develop and update, no more frequently than every other year, the Home and Community-Based Services Quality Measure Set Quality Measure Set using a process that allows for public input and comment as described in paragraph (d) of this section.

(d) *Process for developing and updating the HCBS Quality Measure Set.* The process for developing and updating the Home and Community-Based Services Quality Measure Set Quality Measure Set will address all of the following:

(1) Identification of all measures in the Home and Community-Based Services Quality Measure Set, including:

(i) Measures newly added and measures removed from the prior version of the Home and Community-Based Services Quality Measure Set;

(ii) The specific measures for which reporting is mandatory;

(iii) The measures for which the Secretary will complete reporting on behalf of States and the measures for which States may elect to have the Secretary report on their behalf; and

(iv) The measures, if any, for which the Secretary will provide States with additional time to report, as well as how much additional time the Secretary will provide, in accordance with paragraph (c) of this section.

(2) Technical information to States on how to collect and calculate the data on the Home and Community-Based Services Quality Measure Set.

(3) Standardized format and reporting schedule for reporting measure data required under this section.

(4) Procedures that State agencies must follow in reporting measure data required under this section.

(5) Identification of the populations for which States must report the measures identified by the Secretary under paragraph (e) of this section, which may include, but is not limited to beneficiaries—

(i) Receiving services through specified delivery systems, such as those enrolled in a MCO, PIHP, or PAHP as defined in § 438.2 or receiving services on a fee-for-service basis;

(ii) Who are dually eligible for Medicare and Medicaid, including beneficiaries whose medical assistance is limited to payment of Medicare premiums or cost sharing;

(iii) Who are older adults;

(iv) Who have physical disabilities;

(v) Who have intellectual and development disabilities;

(vi) Who have serious mental illness; and

(vii) Who have other health conditions.

(6) Technical information on attribution rules for determining how States must report on measures for beneficiaries who are included in more than one population, as described in paragraph (d)(5) of this section, during the reporting period.

(7) The subset of measures among the measures in the Home and Community-Based Services Quality Measure Set that must be stratified by race, ethnicity, sex, age, rural/urban status, disability, language, or such other factors as may be specified by the Secretary and informed by consultation every other year with States and interested parties in accordance with paragraphs (b)(2) and (g) of this section.

(8) Describe how to establish State performance targets for each of the measures in the Home and Community-Based Services Quality Measure Set.

(e) *Phasing in of certain reporting.* As part of the process that allows for developing and updating the Home and Community-Based Services Quality Measure Set described in paragraph (d) of this section, the Secretary may provide that mandatory State reporting for certain measures and reporting for certain populations of beneficiaries will be phased in over a specified period of time, taking into account the level of complexity required for such State reporting.

(f) *Selection of measures for stratification.* In specifying which measures, and by which factors, States must report stratified measures consistent with paragraph (d)(7) of this section, the Secretary will take into account whether stratification can be accomplished based on valid statistical methods and without risking a violation of beneficiary privacy and, for measures obtained from surveys, whether the original survey instrument collects the variables necessary to stratify the measures, and such other factors as the Secretary determines appropriate; the Secretary will require stratification of 25 percent of the measures in the Home and Community-Based Services Quality Measure Set for which the Secretary has specified that reporting should be stratified by 4 years after July 9, 2024, 50 percent of such measures by 6 years after July 9, 2024, and 100 percent of measures by 8 years after July 9, 2024.

(g) *Consultation with interested parties.* For purposes of paragraph (c)(2) of this section, the Secretary must consult with interested parties as described in this paragraph to include the following:

(1) State Medicaid Agencies and agencies that administer Medicaid-covered home and community-based services.

(2) Health care and home and community-based services professionals, including members of the allied health professions who specialize in the care and treatment of older adults, children and adults with disabilities, and individuals with complex medical needs.

(3) Health care and home and community-based services professionals (including members of the allied health professions), providers, and direct care workers who provide services to older adults, children and adults with disabilities, and individuals with complex medical and behavioral health care needs who live in urban and rural medically underserved communities or who are members of distinct population sub-groups at heightened risk for poor outcomes.

(4) Providers of home and community-based services.

(5) Direct care workers and national organizations representing direct care workers.

(6) Consumers and national organizations representing older adults, children and adults with disabilities, and individuals with complex medical needs.

(7) National organizations and individuals with expertise in home and community-based services quality measurement.

(8) Voluntary consensus standards setting organizations and other

organizations involved in the advancement of evidence-based measures of health care.

(9) Measure development experts.

(10) Such other interested parties as the Secretary may determine appropriate.

■ 12. Section 441.313 is added to subpart G to read as follows:

§ 441.313 Website transparency.

(a) The State must operate a website consistent with § 435.905(b) of this chapter that provides the results of the reporting requirements specified at §§ 441.302(k)(6) and 441.311. The State must:

(1) Include all content on one website, either directly or by linking to websites of individual MCO's, PIHP's, or PAHP's, as defined in § 438.2 of this chapter;

(2) Include clear and easy to understand labels on documents and links;

(3) Verify no less than quarterly, the accurate function of the website and the timeliness of the information and links; and

(4) Include prominent language on the website explaining that assistance in accessing the required information on the website is available at no cost and include information on the availability of oral interpretation in all languages and written translation available in each non-English language, how to request auxiliary aids and services, and a toll-free and TTY/TDY telephone number.

(b) CMS must report on its website the results of the reporting requirements specified at §§ 441.302(k)(6) and 441.311 that the State reports to CMS.

(c) The State must comply with these requirements beginning 3 years after July 9, 2024; and in the case of the State that implements a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), and 1115(a) of the Act and includes HCBS in the MCO's, PIHP's, or PAHP's contract, the first rating period for contracts with the MCO, PIHP, or PAHP beginning on or after the date that is 3 years after July 9, 2024.

■ 13. Section 441.450 is amended in paragraph (c) by revising the definition of ''Service plan'' to read as follows:

§ 441.450 Basis, scope, and definitions.

* * * * *

(c) * * *

Service plan means the written document that specifies the services and supports (regardless of funding source) that are to be furnished to meet the needs of a participant in the self-directed PAS option and to assist the participant to direct the PAS and to live in the community. The service plan is developed based on the assessment of need using a person-centered and directed process. The service plan supports the participant's engagement in community life and respects the participant's preferences, choices, and abilities. The participant's representative, if any, families, friends, and professionals, as desired or required by the participant, will be involved in the service-planning process. Service plans must meet the requirements of § 441.301(c)(3), except that the references to section 1915(c) of the Act are instead references to section 1915(j) of the Act.

* * * * *

■ 14. Section 441.464 is amended by—

■ a. Adding paragraph (d)(5);

■ b. Redesignating paragraphs (e) and (f) as paragraphs (g) and (h); and

■ c. Adding new paragraphs (e) and (f).

The revisions and additions read as follows:

§ 441.464 State assurances.

* * * * *

(d) * * *

(5) Implement and maintain a grievance process in accordance with § 441.301(c)(7), except that the references to section 1915(c) of the Act are instead references to section 1915(j) of the Act.

(e) *Incident management system.* The State operates and maintains an incident management system that identifies, reports, triages, investigates, resolves, tracks, and trends critical incidents and adheres to requirements of § 441.302(a)(6), except that the references to section 1915(c) of the Act are instead references to section 1915(j) of the Act.

(f) *Payment rates. Payment rates* are adequate to ensure a sufficient direct care workforce to meet the needs of beneficiaries and provide access to services in the amount, duration, and scope specified in beneficiaries' person-centered service plans, in accordance with § 441.302(k), except that the references to section 1915(c) of the Act are instead references to section 1915(j) of the Act.

* * * * *

■ 15. Section 441.474 is amended by adding paragraph (c) to read as follows:

§ 441.474 Quality assurance and improvement plan.

* * * * *

(c) The quality assurance and improvement plan must comply with all components of §§ 441.302(k)(6), 441.311 and 441.312 and related reporting requirements relevant to the State's self-directed PAS program, except that the references to section 1915(c) of the Act are instead references to section 1915(j) of the Act.

■ 16. Section 441.486 is added to subpart J to read as follows:

§ 441.486 Website transparency.

For States subject to the requirements of subpart J, the State must operate a website consistent with § 441.313, except that the references to section 1915(c) of the Act are instead references to section 1915(j) of the Act.

■ 17. Section 441.540 is amended by revising paragraph (c) to read as follows:

§ 441.540 Person-centered service plan.

* * * * *

(c) *Reviewing the person-centered service plan.* The State must ensure that the person-centered service plan for every individual is reviewed, and revised as appropriate, based upon the reassessment of functional need at least every 12 months, when the individual's circumstances or needs change significantly, and at the request of the individual. States must adhere to the requirements of § 441.301(c)(3), except that the references to section 1915(c) of the Act are instead references to section 1915(k) of the Act.

■ 18. Section 441.555 is amended by adding paragraph (e) to read as follows:

§ 441.555 Support system.

* * * * *

(e) Implement and maintain a grievance process, in accordance with § 441.301(c)(7), except that the references to section 1915(c) of the Act are instead references to section 1915(k) of the Act.

■ 19. Section 441.570 is amended by adding paragraphs (e) and (f) to read as follows:

§ 441.570 State assurances.

* * * * *

(e) An incident management system in accordance with § 441.302(a)(6) is implemented, except that the references to section 1915(c) of the Act are instead references to section 1915(k) of the Act.

(f) Payment rates are adequate to ensure a sufficient direct care workforce to meet the needs of beneficiaries and provide access to services in the amount, duration, and scope specified in beneficiaries' person-centered service plans, in accordance with § 441.302(k), except that the references to section 1915(c) of the Act are instead references to section 1915(k) of the Act.

■ 20. Section 441.580 is amended by redesignating paragraph (i) as (j), and adding a new paragraph (i) to read as follows:

§ 441.580 Data collection.

* * * * *

(i) Data and information as required in §§ 441.302(k)(6) and 441.311, except that the references to section 1915(c) of the Act are instead references to section 1915(k) of the Act.

* * * * *

■ 21. Section 441.585 is amended by adding paragraph (d) to read as follows:

§ 441.585 Quality assurance system.

* * * * *

(d) The State must implement the Home and Community-Based Services Quality Measure Set in accordance with § 441.312, except that the references to section 1915(c) of the Act are instead references to section 1915(k) of the Act.

■ 22. Section 441.595 is added to subpart K to read as follows-

§ 441.595 Website transparency.

For States subject to the requirements of subpart K, the State must operate a website consistent with § 441.313, except that the references to section 1915(c) of the Act are instead references to section 1915(k) of the Act.

■ 23. Section 441.725 is amended by revising paragraph (c) to read as follows:

§ 441.725 Person-centered service plan.

* * * * *

(c) Reviewing the person-centered service plan. The State must ensure that the person-centered service plan for every individual is reviewed, and revised as appropriate, based upon the reassessment of functional need as required in § 441.720, at least every 12 months, when the individual's circumstances or needs change significantly, and at the request of the individual. States must adhere to the requirements of § 441.301(c)(3), except that the references to section 1915(c) of the Act are instead references to section 1915(i) of the Act.

■ 24. Section 441.745 is amended by–

■ a. Revising paragraph (a)(1)(iii) and adding (a)(1)(iv) through (vii);

■ b. Revising paragraph (b)(1)(i); and

■ c. Adding paragraph (b)(1)(v).

The revision and additions read as follows:

§ 441.745 State plan HCBS administration: State responsibilities and quality improvement.

* * * * *

(a) * * *

(1) * * *

(iii) *Grievances.* A State must implement and maintain a grievance process in accordance with § 441.301(c)(7), except that the references to section 1915(c) of the Act are instead references to section 1915(i) of the Act.

(iv) *Appeals.* A State must provide individuals with advance notice of and the right to appeal terminations, suspensions, or reductions of Medicaid eligibility or covered services as described in part 431, subpart E, of this chapter.

(v) A State must implement an incident management system in accordance with § 441.302(a)(6), except that the references to section 1915(c) of the Act are instead references to section 1915(i) of the Act.

(vi) A State must assure payment rates are adequate to ensure a sufficient direct care workforce to meet the needs of beneficiaries and provide access to services in the amount, duration, and scope specified in beneficiaries' person-centered service plans, in accordance with § 441.302(k), except that the references to section 1915(c) of the Act are instead references to section 1915(i) of the Act.

(vii) A State must assure the submission of data and information as required in § 441.302(k)(6) and § 441.311, except that the references to section 1915(c) of the Act are instead references to section 1915(i) of the Act.

* * * * *

(b) * * *

(1) * * *

(i) Incorporate a continuous quality improvement process that includes monitoring, remediation, and quality improvement, including recognizing and reporting critical incidents, as defined in § 441.302(a)(6)(i)(A), except that the references to section 1915(c) of the Act are instead references to section 1915(i) of the Act.

* * * * *

(v) Implementation of the Home and Community-Based Services Quality Measure Set in accordance with § 441.312, except that the references to section 1915(c) of the Act are instead references to section 1915(i) of the Act.

* * * * *

■ 25. Section 441.750 is added to subpart M to read as follows—

§ 441.750 Website transparency.

For States subject to the requirements of subpart M, the State must operate a website consistent with § 441.313, except that the references to section 1915(c) of the Act are instead references to section 1915(i) of the Act.

PART 447—PAYMENT FOR SERVICES

■ 26. The authority citation for part 447 is revised to read as follows:

Authority: 42 U.S.C. 1302, and 1396r–8, and Pub. L. 111–148.

■ 27. Section 447.203 is amended by revising paragraph (b) and adding paragraph (c) to read as follows:

§ 447.203 Documentation of access to care and service payment rates.

* * * * *

(b)(1) *Payment rate transparency.* The State agency is required to publish all Medicaid fee-for-service fee schedule payment rates on a website that is accessible to the general public.

(i) For purposes of this paragraph (b)(1), the payment rates that the State agency is required to publish are Medicaid fee-for-service fee schedule payment rates made to providers delivering Medicaid services to Medicaid beneficiaries through a fee-for-service delivery system.

(ii) The website where the State agency publishes its Medicaid fee-for-service payment rates must be easily reached from a hyperlink on the State Medicaid agency's website.

(iii) Medicaid fee-for-service payment rates must be organized in such a way that a member of the public can readily determine the amount that Medicaid would pay for a given service.

(iv) In the case of a bundled payment methodology, the State must publish the Medicaid fee-for-service bundled payment rate and, where the bundled payment rate is based on fee schedule payment rates for each constituent service, must identify each constituent service included within the rate and how much of the bundled payment is allocated to each constituent service under the State's methodology.

(v) If the rates vary, the State must separately identify the Medicaid fee-for-service payment rates by population (pediatric and adult), provider type, and geographical location, as applicable.

(vi) The initial publication of the Medicaid fee-for-service payment rates shall occur no later than July 1, 2026 and include approved Medicaid fee-for-service payment rates in effect as of July 1, 2026. The agency is required to include the date the payment rates were last updated on the State Medicaid agency's website and to ensure these data are kept current where any necessary update must be made no later than 1 month following the latter of the date of CMS approval of the State plan amendment, section 1915(c) HCBS waiver amendment, or similar amendment revising the provider payment rate or methodology, or the effective date of the approved amendment. In the event of a payment rate change that occurs in accordance with a previously approved rate methodology, the State will ensure that its payment rate transparency

publication is updated no later than 1 month after the effective date of the most recent update to the payment rate.

(2) *Comparative payment rate analysis and payment rate disclosure.* The State agency is required to develop and publish a comparative payment rate analysis of Medicaid fee-for-service fee schedule payment rates for each of the categories of services in paragraphs (b)(2)(i) through (iii) of this section. If the rates vary, the State must separately identify the payment rates by population (pediatric and adult), provider type, and geographical location, as applicable. The State agency is further required to develop and publish a payment rate disclosure of the average hourly Medicaid fee-for-service fee schedule payment rates for each of the categories of services in paragraph (b)(2)(iv) of this section, as specified in paragraph (b)(3) of this section. If the rates vary, the State must separately identify the payment rates by population (pediatric and adult), provider type, geographical location, and whether the payment rate includes facility-related costs, as applicable.

(i) Primary care services.

(ii) Obstetrical and gynecological services.

(iii) Outpatient mental health and substance use disorder services.

(iv) Personal care, home health aide, homemaker, and habilitation services, as specified in § 440.180(b)(2) through (4) and (6), provided by individual providers and provider agencies.

(3) *Comparative payment rate analysis and payment rate disclosure requirements.* The State agency must develop and publish, consistent with the publication requirements described in paragraphs (b)(1) through (b)(1)(ii) of this section, a comparative payment rate analysis and a payment rate disclosure.

(i) For the categories of services described in paragraph (b)(2)(i) through (iii) of this section, the comparative payment rate analysis must compare the State agency's Medicaid fee-for-service fee schedule payment rates to the most recently published Medicare payment rates effective for the same time period for the evaluation and management (E/M) codes applicable to the category of service. The State must conduct the comparative payment rate analysis at the Current Procedural Terminology (CPT) or Healthcare Common Procedure Coding System (HCPCS) code level, as applicable, using the most current set of codes published by CMS, and the analysis must meet the following requirements:

(A) The State must organize the analysis by category of service as described in paragraphs (b)(2)(i) through (iii) of this section.

(B) The analysis must clearly identify the base Medicaid fee-for-service fee schedule payment rates for each E/M CPT/HCPCS code identified by CMS under the applicable category of service, including, if the rates vary, separate identification of the payment rates by population (pediatric and adult), provider type, and geographical location, as applicable.

(C) The analysis must clearly identify the Medicare non-facility payment rates as established in the annual Medicare Physician Fee Schedule final rule effective for the same time period for the same set of E/M CPT/HCPCS codes, and for the same geographical location as the base Medicaid fee-for-service fee schedule payment rates, that correspond to the base Medicaid fee-for-service fee schedule payment rates identified under paragraph (b)(3)(i)(B) of this section, including separate identification of the payment rates by provider type.

(D) The analysis must specify the base Medicaid fee-for-service fee schedule payment rate identified under paragraph (b)(3)(i)(B) of this section as a percentage of the Medicare non-facility payment rate as established in the annual Medicare Physician Fee Schedule final rule identified under paragraph (b)(3)(i)(C) of this section for each of the services for which the base Medicaid fee-for-service fee schedule payment rate is published pursuant to paragraph (b)(3)(i)(B) of this section.

(E) The analysis must specify the number of Medicaid-paid claims and the number of Medicaid enrolled beneficiaries who received a service within a calendar year for each of the services for which the base Medicaid fee-for-service fee schedule payment rate is published pursuant to paragraph (b)(3)(i)(B) of this section.

(ii) For each category of services specified in paragraph (b)(2)(iv) of this section, the State agency is required to publish a payment rate disclosure that expresses the State's payment rates as the average hourly Medicaid fee-for-service fee schedule payment rates, separately identified for payments made to individual providers and provider agencies, if the rates vary. The payment rate disclosure must meet the following requirements:

(A) The State must organize the payment rate disclosure by category of service as specified in paragraph (b)(2)(iv) of this section.

(B) The disclosure must identify the average hourly Medicaid fee-for-service fee schedule payment rates by applicable category of service, including, if the rates vary, separate identification of the average hourly Medicaid fee-for-service fee schedule payment rates for payments made to individual providers and provider agencies, by population (pediatric and adult), provider type, geographical location, and whether the payment rate includes facility-related costs, as applicable.

(C) The disclosure must identify the number of Medicaid-paid claims and the number of Medicaid enrolled beneficiaries who received a service within a calendar year for each of the services for which the average hourly Medicaid fee-for-service fee schedule payment rates are published pursuant to paragraph (b)(3)(ii)(B) of this section.

(4) *Comparative payment rate analysis and payment rate disclosure timeframe.* The State agency must publish the initial comparative payment rate analysis and payment rate disclosure of its Medicaid fee-for-service fee schedule payment rates in effect as of July 1, 2025 as required under paragraphs (b)(2) and (b)(3) of this section, by no later than July 1, 2026. Thereafter, the State agency must update the comparative payment rate analysis and payment rate disclosure no less than every 2 years, by no later than July 1 of the second year following the most recent update. The comparative payment rate analysis and payment rate disclosure must be published consistent with the publication requirements described in paragraphs (b)(1)introductory text, (b)(1)(i) and (b)(1)(ii) of this section.

(5) *Compliance with payment rate transparency, comparative payment rate analysis, and payment rate disclosure requirements.* If a State fails to comply with the payment rate transparency, comparative payment rate analysis, and payment rate disclosure requirements in paragraphs (b)(1) through (b)(4) of this section, including requirements for the time and manner of publication, future grant awards may be reduced under the procedures set forth at 42 CFR part 430, subparts C and D by the amount of FFP CMS estimates is attributable to the State's administrative expenditures relative to the total expenditures for the categories of services specified in paragraph (b)(2) of this section for which the State has failed to comply with applicable requirements, until such time as the State complies with the requirements. Unless otherwise prohibited by law, deferred FFP for those expenditures will be released after the State has fully complied with all applicable requirements.

(6) *Interested parties advisory group for rates paid for certain services.* (i) The State agency must establish an advisory

group for interested parties to advise and consult on provider rates with respect to service categories under the Medicaid State plan, 1915(c) waiver, and demonstration programs, as applicable, where payments are made to the direct care workers specified in § 441.311(e)(1)(ii) for the self-directed or agency-directed services found at § 440.180(b)(2) through (4), and (6).

(ii) The interested parties advisory group must include, at a minimum, direct care workers, beneficiaries, beneficiaries' authorized representatives, and other interested parties impacted by the services rates in question, as determined by the State.

(iii) The interested parties advisory group will advise and consult with the Medicaid agency on current and proposed payment rates, HCBS payment adequacy data as required at § 441.311(e), and access to care metrics described in § 441.311(d)(2), associated with services found at § 440.180(b)(2) through (4) and (6), to ensure the relevant Medicaid payment rates are sufficient to ensure access to personal care, home health aide, homemaker, and habilitation services for Medicaid beneficiaries at least as great as available to the general population in the geographic area and to ensure an adequate number of qualified direct care workers to provide self-directed personal assistance services.

(iv) The interested parties advisory group shall meet at least every 2 years and make recommendations to the Medicaid agency on the sufficiency of State plan, 1915(c) waiver, and demonstration direct care worker payment rates, as applicable. The State agency will ensure the group has access to current and proposed payment rates, HCBS provider payment adequacy reporting information as described in § 441.311(e), and applicable access to care metrics as described in § 441.311(d)(2) for HCBS in order to produce these recommendations. The process by which the State selects interested party advisory group members and convenes its meetings must be made publicly available.

(v) The Medicaid agency must publish the recommendations produced under paragraph (b)(6)(iv) of the interested parties advisory group consistent with the publication requirements described in paragraph (b)(1) through (b)(1)(ii) of this section, within 1 month of when the group provides the recommendation to the agency.

(c)(1) *Initial State analysis for rate reduction or restructuring.* For any State plan amendment that proposes to reduce provider payment rates or restructure provider payments in circumstances when the changes could result in diminished access where the criteria in paragraphs (c)(1)(i) through (iii) of this section are met, the State agency must provide written assurance and relevant supporting documentation that the following conditions are met as well as a description of the State's procedures for monitoring continued compliance with section 1902(a)(30)(A) of the Act, as part of the State plan amendment submission in a format prescribed by CMS as a condition of approval:

(i) Medicaid payment rates in the aggregate (including base and supplemental payments) following the proposed reduction or restructuring for each benefit category affected by the proposed reduction or restructuring would be at or above 80 percent of the most recently published Medicare payment rates for the same or a comparable set of Medicare-covered services.

(ii) The proposed reduction or restructuring, including the cumulative effect of all reductions or restructurings taken throughout the current State fiscal year, would be likely to result in no more than a 4 percent reduction in aggregate fee-for-service Medicaid expenditures for each benefit category affected by proposed reduction or restructuring within a State fiscal year.

(iii) The public processes described in paragraph (c)(4) of this section and § 447.204 yielded no significant access to care concerns from beneficiaries, providers, or other interested parties regarding the service(s) for which the payment rate reduction or payment restructuring is proposed, or if such processes did yield concerns, the State can reasonably respond to or mitigate the concerns, as appropriate, as documented in the analysis provided by the State pursuant to § 447.204(b)(3).

(2) *Additional State rate analysis.* For any State plan amendment that proposes to reduce provider payment rates or restructure provider payments in circumstances when the changes could result in diminished access where the requirements in paragraphs (c)(1)(i) through (iii) of this section are not met, the State must also provide the following to CMS as part of the State plan amendment submission as a condition of approval, in addition to the information required under paragraph (c)(1) of this section, in a format prescribed by CMS:

(i) A summary of the proposed payment change, including the State's reason for the proposal and a description of any policy purpose for the proposed change, including the cumulative effect of all reductions or restructurings taken throughout the current State fiscal year in aggregate fee-for-service Medicaid expenditures for each benefit category affected by proposed reduction or restructuring within a State fiscal year.

(ii) Medicaid payment rates in the aggregate (including base and supplemental payments) before and after the proposed reduction or restructuring for each benefit category affected by proposed reduction or restructuring, and a comparison of each (aggregate Medicaid payment before and after the reduction or restructuring) to the most recently published Medicare payment rates for the same or a comparable set of Medicare-covered services and, as reasonably feasible, to the most recently available payment rates of other health care payers in the State or the geographic area for the same or a comparable set of covered services.

(iii) Information about the number of actively participating providers of services in each benefit category affected by the proposed reduction or restructuring. For this purpose, an actively participating provider is a provider that is participating in the Medicaid program and actively seeing and providing services to Medicaid beneficiaries or accepting Medicaid beneficiaries as new patients. The State must provide the number of actively participating providers of services in each affected benefit category for each of the 3 years immediately preceding the State plan amendment submission date, by State-specified geographic area (for example, by county or parish), provider type, and site of service. The State must document observed trends in the number of actively participating providers in each geographic area over this period. The State may provide estimates of the anticipated effect on the number of actively participating providers of services in each benefit category affected by the proposed reduction or restructuring, by geographic area.

(iv) Information about the number of Medicaid beneficiaries receiving services through the FFS delivery system in each benefit category affected by the proposed reduction or restructuring. The State must provide the number of beneficiaries receiving services in each affected benefit category for each of the 3 years immediately preceding the State plan amendment submission date, by State-specified geographic area (for example, by county or parish). The State must document observed trends in the number of Medicaid beneficiaries receiving services in each affected benefit category in each geographic area

over this period. The State must provide quantitative and qualitative information about the beneficiary populations receiving services in the affected benefit categories over this period, including the number and proportion of beneficiaries who are adults and children and who are living with disabilities, and a description of the State's consideration of the how the proposed payment changes may affect access to care and service delivery for beneficiaries in various populations. The State must provide estimates of the anticipated effect on the number of Medicaid beneficiaries receiving services through the FFS delivery system in each benefit category affected by the proposed reduction or restructuring, by geographic area.

(v) Information about the number of Medicaid services furnished through the FFS delivery system in each benefit category affected by the proposed reduction or restructuring. The State must provide the number of Medicaid services furnished in each affected benefit category for each of the 3 years immediately preceding the State plan amendment submission date, by State-specified geographic area (for example, by county or parish), provider type, and site of service. The State must document observed trends in the number of Medicaid services furnished in each affected benefit category in each geographic area over this period. The State must provide quantitative and qualitative information about the Medicaid services furnished in the affected benefit categories over this period, including the number and proportion of Medicaid services furnished to adults and children and who are living with disabilities, and a description of the State's consideration of the how the proposed payment changes may affect access to care and service delivery. The State must provide estimates of the anticipated effect on the number of Medicaid services furnished through the FFS delivery system in each benefit category affected by the proposed reduction or restructuring, by geographic area.

(vi) A summary of, and the State's response to, any access to care concerns or complaints received from beneficiaries, providers, and other interested parties regarding the service(s) for which the payment rate reduction or restructuring is proposed as required under § 447.204(a)(2).

(3) *Compliance with requirements for State analysis for rate reduction or restructuring.* A State that submits a State plan amendment that proposes to reduce provider payment rates or restructure provider payments in circumstances when the changes could result in diminished access that fails to provide the information and analysis to support approval as specified in paragraphs (c)(1) and (2) of this section, as applicable, may be subject to State plan amendment disapproval under § 430.15(c) of this chapter. Additionally, States that submit relevant information, but where there are unresolved access to care concerns related to the proposed State plan amendment, including any raised by CMS in its review of the proposal and any raised through the public process as specified in paragraph (c)(4) of this section or under § 447.204(a)(2), may be subject to State plan amendment disapproval. If State monitoring of beneficiary access after the payment rate reduction or restructuring takes effect shows a decrease in Medicaid access to care, such as a decrease in the provider-to-beneficiary ratio for any affected service, or the State or CMS experiences an increase in beneficiary or provider complaints or concerns about access to care that suggests possible noncompliance with the access requirements in section 1902(a)(30)(A) of the Act, CMS may take a compliance action using the procedures described in § 430.35 of this chapter.

(4) *Mechanisms for ongoing beneficiary and provider input.* (i) States must have ongoing mechanisms for beneficiary and provider input on access to care (through hotlines, surveys, ombudsman, review of grievance and appeals data, or another equivalent mechanism), consistent with the access requirements and public process described in § 447.204.

(ii) States should promptly respond to public input through these mechanisms citing specific access problems, with an appropriate investigation, analysis, and response.

(iii) States must maintain a record of data on public input and how the State responded to this input. This record will be made available to CMS upon request.

(5) *Addressing access questions and remediation of inadequate access to care.* When access deficiencies are identified, the State must, within 90 days after discovery, submit a corrective action plan with specific steps and timelines to address those issues. While the corrective action plan may include longer-term objectives, remediation of the access deficiency should take place within 12 months.

(i) The State's corrective actions may address the access deficiencies through a variety of approaches, including, but not limited to: Increasing payment rates, improving outreach to providers, reducing barriers to provider enrollment, providing additional transportation to services, providing for telemedicine delivery and telehealth, or improving care coordination.

(ii) The resulting improvements in access must be measured and sustainable.

(6) *Compliance actions for access deficiencies.* To remedy an access deficiency, CMS may take a compliance action using the procedures described at § 430.35 of this chapter.

■ 28. Section 447.204 is amended by—

■ a. Revising paragraphs (a)(1) and (b); and

■ b. Removing paragraph (d).

The revisions read as follows:

§ 447.204 Medicaid provider participation and public process to inform access to care.

(a) * * *

(1) The data collected, and the State analysis performed, under § 447.203(c).

* * * * *

(b) The State must submit to CMS with any such proposed State plan amendment affecting payment rates documentation of the information and analysis required under § 447.203(c) of this chapter.

* * * * *

Xavier Becerra,

Secretary, Department of Health and Human Services.

BILLING CODE 4120–01–P

Ensuring Access to Medicaid Services (CMS-2442-F)
Provisions and Relevant Timing Information and Dates*

Updated September 9, 2024

Regulation Section(s) in Title 42 of the CFR	Applicability Dates**
Medicaid Advisory Committee (MAC) & Beneficiary Advisory Council (BAC) § 431.12	§ 431.12 MAC & BAC: Except as noted in paragraphs (d)(l) and (i)(3), the requirements in paragraphs (a) through (j) are applicable 1 year after the effective date of the final rule.
Medicaid Advisory Committee (MAC) & Beneficiary Advisory Council (BAC) § 431.12	§ 431.12 (d)(l) BAC crossover on MAC: For the period from 1 year after the effective date of the final rule through 2 years after the effective date of the final rule, 10 percent; for the period from 2 years plus one day after the effective date of the final rule through 3 years after the effective date of the final rule, 20 percent; and thereafter, 25 percent of committee members must be from the BAC.
Medicaid Advisory Committee (MAC) & Beneficiary Advisory Council (BAC) § 431.12	§ 431.12 (i)(3) Annual report: States have 2 years from the effective date of the final rule to finalize the first annual report. After the report has been finalized, States will have 30 days to post the annual report.
Person-Centered Service Plans §§ 441.301(c)(1) and (3), 441.450(c), 441.540(c), and 441.725(c)	Beginning 3 years after the effective date of the final rule***
Grievance Systems §§ 441.301(c)(7), 441.464(d)(5), 441.555(e), and 441.745(a)(1)(iii)	Beginning 2 years after the effective date of the final rule
Incident Management System §§ 441.302(a)(6), 441.464(e), 441.570(e), 441.745(a)(1)(v), and (b)(1)(i)	Beginning 3 years after the effective date of the final rule***; except for the requirement at § 441.302(a)(6)(i)(B) (electronic incident management system), which begins 5 years after the effective date of the final rule***
HCBS Payment Adequacy §§ 441.302(k), 441.464(f), 441.570(f), and 441.745(a)(1)(vi)	Beginning 6 years after the effective date of the final rule***
Reporting Requirements §§ 441.311, 441.474(c), 441.580(i), and 441.745(a)(1)(vii)	Beginning 3 years after the effective date of the final rule*** for § 441.311(b) (compliance reporting) and § 441.311(d) (access reporting) Beginning 4 years after the effective date of the final rule*** for § 441.311(c) (reporting on the HCBS Quality Measure Set) and (e) (HCBS payment adequacy reporting)
HCBS Quality Measure Set §§ 441.312, 441.474(c), 441.585(d), and 441.745(b)(1)(v)	HHS Secretary begins identifying quality measures no later than December 31, 2026, and no more frequently than every other year. HHS Secretary shall make technical updates and corrections to the HCBS Quality Measure Set annually as appropriate.
Website Transparency §§ 441.313, 441.486, 441.595, and 441.750	Beginning 3 years after the effective date of the final rule***
Payment Rate Transparency Publication § 447.203(b)(1)	July 1, 2026, then updated within 30 days of a payment rate change.
Comparative Payment Rate Analysis Publication § 447.203(b)(2) to (4)	July 1, 2026, then every 2 years
Payment Rate Disclosure § 447.203(b)(2) to (4)	July 1, 2026, then every 2 years
Interested Parties Advisory Group § 447.203(b)(6)	The first meeting must be held within 2 years after effective date of the final rule (then at least every 2 years).
Rate Reduction and Restructuring SPA procedures § 447.203(c)(1) and (2)	Effective date of the final rule

* Regulatory provisions in this table are applicable at the time this rule becomes effective.

** In this final rule, including the regulations being finalized herein, we use the term “applicability date” to indicate when a new regulatory requirement will be applicable and when States must begin compliance with the requirements as specified in that regulation.
*** In the case of the State that implements a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act and includes HCBS in the managed care organization’s (MCO), prepaid inpatient health plan’s (PIHP), or prepaid ambulatory health plan’s (PAHP) contract, the applicability date is the first rating period for contracts with the MCO, PIHP or PAHP beginning on or after the applicability date specified in the chart.

Pennsylvania Homecare Association

MEMORANDUM

To: Members of the Pennsylvania Senate and House of Representatives

Date: May 1, 2024

Subject: CMS Final Rule on Medicaid Access Threatens the Longevity of Home-Based Care

In May 2023, the Centers for Medicare & Medicaid Services (CMS) proposed a rule requiring Home and Community-Based Services (HCBS) agencies to allocate at least 80% of Medicaid payments for direct care worker compensation, known as the 80/20 Rule. Despite concerns from providers and Medicaid agencies about burdensome reporting and lack of flexibility for implementation, CMS finalized the "Ensuring Access to Medicaid Services" rule with the problematic provisions still in place.

The Pennsylvania Homecare Association (PHA) has significant concerns with the final rule and its impact on the over 700 home-based care providers we represent. The proposed rule introduces a nationwide Medicaid pass-through requirement, mandating that 80% of all HCBS Medicaid payments be directed towards compensating direct care workers (DCWs), with the remaining 20% allocated for other operational expenses. While this rule aims to enhance care quality, it lacks substantiated evidence and threatens access for vulnerable individuals.

PHA strongly opposes the 80/20 provision of this mandate, as it will exacerbate challenges in homecare services rather than improving them. Our industry is already facing underinvestment in critical support services, leading to workforce shortages and a crisis in care quality.

Pennsylvania's Medicaid fee-for-service reimbursement rates for personal assistance services (PAS) are among the lowest regionally with an average regional rate of $20.63. Before implementing arbitrary standards for direct and indirect costs of administering services, we must evaluate the impact on care access and quality. PHA advocates for higher wages for caregivers but opposes efforts that dictate how employers invest Medicaid funds, hindering innovation and patient outcomes.

While the rule aims to improve access to care and promote health equity, the home care community has significant concerns regarding statutory authority, inequities across states, and the need for actuarial studies coupled with further data to support the 80/20 division. PHA continues to push for better DCW compensation through increased Medicaid reimbursement rates. Additionally, PHA supports elements of the rule that seek to address Medicaid Payment Adequacy and improve access to care and health outcomes for Medicaid beneficiaries.

In conclusion, federal processes like the 80/20 provision that overreach and extend a one size fits all model to state operations risk undermining the long-term sustainability of our healthcare systems and detract from the overarching objective of establishing a system that effectively supports individuals as they age.

Thank you for your attention to this critical matter. We look forward to your continued support in providing a system that offers quality, home-based care for all Pennsylvania residents.

Policy Update

CMS Releases Final Rule: Medicaid Program; Ensuring Access to Medicaid Services

Summary

On April 22, 2024 the Centers for Medicare & Medicaid Services (CMS) published the final rule Medicaid Program; Ensuring Access to Medicaid Services. The rule has a particular focus on home- and community-based services (HCBS), including direct care worker compensation requirements, HCBS waitlists, grievance process development, critical incident reporting definitions and HCBS quality reporting. The final rule also seeks to increase transparency in payment rates.

The rule is effective 60 days after publication, but many provisions have an effective date that widely differs from the overarching effective date. CMS also released a fact sheet on the regulation and timeline for the various effective dates.

Key Takeaways

The Medicaid; Ensuring Access to Medicaid Services final rule includes the following key proposals:

- CMS requires that at least 80% of Medicaid payments for personal care, homemaker and home health aide services be spent on compensation for direct care workers (as opposed to administrative overhead). CMS also made many modifications in the proposed rule which altered the applicability of the provision.
- States will be required to establish a grievance process for fee-for-service HCBS beneficiaries to submit complaints.
- CMS establishes a minimum definition of “critical incident” and minimum state performance and reporting requirements for investigation and action related to critical incidents, as well as requires states to operate and maintain an electronic incident management system.
- The final rule requires states to ensure that the person-centered service plan is reviewed and revised, at least every 12 months for at least 90% of individuals continuously enrolled in a state’s HCBS programs.
- CMS is requiring states to report on waiting lists in section 1915(c) waiver programs and on service delivery timeliness for personal care, homemaker, home health aide services, and habilitation services.
- CMS requires states to report every other year on the HCBS Quality Measure Set and establishes a process for updating the measure set.
- The final rule requires states to publish all fee-for-service (FFS) Medicaid fee schedule payment rates on a publicly available and accessible website. It also requires states to compare their FFS payment rates for primary care, obstetrical and gynecological care, and outpatient mental health and substance use disorder services to Medicare rates, and publish the analysis every two years, and also requires states to publish the average hourly rate paid for personal care, home health aide, homemaker, and habilitation services, and publish the disclosure every two years.
- States will be required to establish and operate the newly named Medicaid Advisory Committee (MAC) and a Beneficiary Advisory Council (BAC) one year after the rule’s effective date.

Home and Community Based Services

Compensation to HCBS Direct Care Workers

Key Takeaway: CMS requires that at least 80% of Medicaid payments for personal care, homemaker and home health aide services be spent on compensation for direct care workers (as opposed to administrative overhead). CMS also made many modifications in the proposed rule which altered the applicability of the provision.

One of the most controversial provisions in the final rule is the requirement that at least 80% of Medicaid payments for homemaker, home health aide and personal care services be spent on compensation for direct care workers. As in the proposed rule, this proposal would apply to both Medicaid fee-for-service (FFS) and managed care delivery systems. In particular, it applies to these homemaker, home health aide and personal care services provided through section 1915(c), (j), (k) and (i) authorities, and applicable to managed care delivery systems authorized by section 1915(a), 1915(b), 1932(a), or 1115(a).

Although the services and authorities did not change from the proposed rule to the final rule, CMS made several definitional changes that impact this provision.

First, CMS changed the definition of compensation in the final rule. Compensation is defined to include: salary, wages, and other remuneration defined by the Fair Labor Standards Act, benefits, and the employer share of payroll taxes. In the final rule, CMS updated the definition of "benefits" within compensation. CMS noted that benefits are inclusive of health and dental benefits, life and disability insurance, paid leave, retirement, and tuition reimbursement. However, in the final rule "sick leave" was changed to "paid leave," life and disability insurance" was added, and "retirement" was added as a blanket term for retirement plans and contributions. In the final rule, CMS also created a new definition of "excluded costs" which are costs not included in the state's calculation of the percentage of Medicaid payment that is spent on compensation. Excluded costs are "training costs (such as costs for training materials or payment to qualified trainers); travel costs for direct care workers (such as mileage reimbursement or public transportation subsidies); and costs of personal protective equipment for direct care workers."

CMS modified and expanded the definition direct care workers to include clinical supervisors in the definition of direct care workers in the final rule. Under the final rule, direct care workers include individuals who may be employed by a Medicaid provider, State agency, or third party; contracted with a Medicaid provider, State agency, or third party; or delivering services under a self-directed services delivery model:

- A registered nurse, licensed practical nurse, nurse practitioner, or clinical nurse specialist who provides nursing services to Medicaid beneficiaries receiving home and community-based services available under this subpart;
- A licensed or certified nursing assistant who provides such services under the supervision of a registered nurse, licensed practical nurse, nurse practitioner, or clinical nurse specialist;
- A direct support professional;
- A personal care attendant;
- A home health aide; or
- Other individuals who are paid to provide services to address activities of daily living or instrumental activities of daily living, behavioral supports, employment supports, or other services to promote community integration directly to Medicaid beneficiaries receiving home and community-based services available under this subpart, including nurses and other staff providing clinical supervision.

Also, of note, in the final rule, CMS specified that for self-directed services, when the beneficiary is directing the services sets the direct care worker's payment rate, then the State does not include such payment data in its calculation of the State's compliance with the 80% requirement.

However, the final rule makes some modifications to allow states to exclude certain providers and provide some state flexibilities from the requirement. First, CMS is allowing states to set a separate minimum performance level for small providers, and allowing states the option to develop "reasonable, objective criteria to identify small providers" to meet this small provider minimum performance level set by the state. Second, the final rule also allows state to develop a "hardship exemption" for some providers determined by the state "to be facing extraordinary circumstances" that prevent them from meeting the 80% pass through requirement. An finally, CMS is exempting Indian Health Service and Tribal health programs from the 80% pass through requirement.

As it relates to reporting requirements, in three years, states will be required to report on their readiness to collect data regarding the percentage of Medicaid payments for homemaker, home health aide, personal care, and habilitation services spent on compensation to the direct care workers furnishing these services. While in four years, states must report to CMS annually on the percentage of total payments (not including excluded costs) for furnishing homemaker services, home health aide services, personal care, and habilitation services, that is spent on compensation for direct care workers. In addition, the state must report separately for each service and, within each service, must separately report services that are self-directed and services delivered in a provider-operated physical location for which facility-related costs are included in the payment rate.

Also in the final rule, CMS notes that they intend that this policy apply to the provider level and that states must ensure that each provider spends 80% of Medicaid payments they receive for certain HCBS on direct care worker compensation.

CMS proposes that these payment and transparency requirements would be effective six years after the effective date of the final rule for FFS, and would apply to the first managed care plan contract rating period that begins on or after the date six years following the final rule's effective date of the final rule. This represents a delay in effective date as compared to the proposed rule, which was a four year effective timeframe.

As it relates to enforcement of this provision, CMS notes it will "continue to use our standard enforcement tools and discretion, as appropriate." However, no specific enforcement actions are outlined in the final rule.

HCBS Grievance Procedures

Key Takeaway: States will be required to establish a grievance process for FFS HCBS beneficiaries to submit complaints.

Beginning 2 years after the effective date of the final rule, states will be required to establish grievance procedures for Medicaid beneficiaries who receive FFS HCBS through Section 1915(c) and in the final rule made the requirements applicable to section 1915(j), (k) and (i) authorities. The grievance process gives beneficiaries (or an authorized representative) an opportunity to file an expression of dissatisfaction or complaint, related to the State's or a provider's performance of the person-centered service plan and HCBS settings requirements. The rule outlines requirements for the grievance procedures, including recordkeeping, timelines for acknowledgments and procedures, notices to beneficiaries and protocols for handling grievance submissions. The finalized rule also specifies that States must provide beneficiaries with reasonable assistance in ensuring grievances are appropriately filed with the grievance system.

Definition of Critical Incident

Key Takeaway: CMS establishes a minimum definition of "critical incident" and minimum state performance and reporting requirements for investigation and action related to critical incidents, as well as requires states to operate and maintain an electronic incident management system.

As in the proposed rule, CMS finalized a new standard definition of a critical incident to include, at a minimum, "verbal, physical, sexual, psychological, or emotional abuse; neglect; exploitation including financial exploitation; misuse or unauthorized use of restrictive interventions or seclusion; a medication error resulting in

a telephone call to or a consultation with a poison control center, an emergency department visit, an urgent care visit, a hospitalization, or death; or an unexplained or unanticipated death, including but not limited to a death caused by abuse or neglect." No such standardized federal definition currently exists.

In the final rule, CMS requires that states operate and maintain an electronic incident management system that identifies, reports, triages, investigates, resolves, tracks and trends critical incidents. CMS requires that states report to CMS every 24 months on the results of an incident management system assessment.

States need to identify critical incidents through required provider reporting and other data sources (*e.g.*, claims, Medicaid Fraud Control Units, Adult Protective Services, Child Protective Services, law enforcement) and have information sharing agreements with those entities for investigations.

CMS proposes that these requirements would be effective three years after the effective date of the final rule for FFS. However, CMS is allowing for five years for states to implement the electronic incident management system.

HCBS Person-Centered Planning

Key Takeaway: The final rule requires states to ensure that the person-centered service plan is reviewed and revised, at least every 12 months for at least 90% of individuals continuously enrolled in a state's HCBS programs.

Under the final rule, states are required to demonstrate that an assessment of functional need is conducted annually for at least 90% of individuals continuously enrolled in a state's HCBS programs. States are required to demonstrate that they reviewed the person-centered service plan and revised the plan as appropriate based on the results of this required reassessment of functional need every 12 months, for at least 90% of individuals continuously enrolled in the state's HCBS programs. These requirements will be applied across section 1915(c), (i), (j) and (k) waiver authorities. They will not apply to section 1905(a) "medical assistance" state plan personal care, home health and case management services.

The rule also requires states to report on the percentage of beneficiaries continuously enrolled in the state's HCBS programs for 365 days or longer who had a service plan updated as a result of a reassessment of functional need within the past 12 months.

A person-centered plan includes six elements: level of care, service plan, qualified providers, health and welfare, financial accountability and administrative authority. States are required to conduct systemic remediation and implement a quality improvement project when they score below 90 percent on any of these performance measures, as proposed.

Wait List Reporting

Key Takeaway: CMS is requiring states to report on waiting lists in section 1915(c) waiver programs and on service delivery timeliness for personal care, homemaker, home health aide services, and habilitation services.

States have the option to cap the number of people enrolled in HCBS waivers. As a result, there are often waiting lists for individuals to receive HCBS. Under this final rule, CMS is requiring states to report on waiting lists in section 1915(c) waiver programs and on service delivery timeliness for personal care, homemaker, home health aide services, and habilitation services. As compared to the proposed rule, the final rule is an expansion of services with the inclusion of habilitation services in this reporting requirement.

Specific reporting requirements for the state include:

- A description of how the State maintains the list of individuals who are waiting to enroll in the waiver program, if the State has a limit on the size of the waiver program, and maintains a list of individuals who are waiting to enroll in the waiver program.

- Average amount of time from when homemaker services, home health aide services, personal care services, and habilitation services are initially approved to when services began, for individuals newly receiving services within the past 12 months.
- Percent of authorized hours for homemaker services, home health aide services, personal care services, and habilitation services that are provided within the past 12 months.

HCBS Quality Measurement Set

Key Takeaway: CMS requires states to report every other year on the HCBS Quality Measure Set and establishes a process for updating the measure set.

The HCBS Quality Measure Set is a set of nationally standardized quality measures for Medicaid-covered HCBS. The final rule requires that states report every other year on measures identified in the HCBS Quality Measure Set as mandatory measures. The rule also creates a process to regularly update and maintain the required measure set.

Specifically, beginning December 31, 2026, CMS will solicit comments on the HCBS Quality Measure Set no more frequently than every other year in order to do the following:

- Establish priorities for the development and advancement of the HCBS quality measure set,
- Identify newly developed or other measures that should be added, including to address gaps in the HCBS quality measure set,
- Identify measures that should be removed because they no longer strengthen the HCBS quality measures, and
- Ensure that all measures included in the HCBS quality measure set are evidence-based, meaningful for states, and feasible for state-level and program-level reporting as appropriate.

The final rule, also establishes a process for updating the HCBS quality measurement set, which includes the following steps:

- Identify all measures in the HCBS quality measure set, including newly added measures, measures that have been removed, mandatory measures, measures that the Secretary will report on states' behalf, measures that states can elect to have the Secretary report on their behalf, and measures for which the Secretary will provide states additional time to report,
- Inform states how to collect and calculate data on the measures,
- Provide a standardized format and schedule for reporting the measures,
- Provide procedures that states must follow in reporting the measure data,
- Identify specific populations for which states must report the measures,
- Identify the subset of measures that must be stratified by race, ethnicity, sex, age, rural/urban status, disability, language or other factors as may be specified by the Secretary, and
- Describe how to establish state performance targets for each of the measures.

The requirements will be effective four years after the final rule's effective date (rather than three as proposed).

Payment Rate Transparency

Key Takeaway: The final rule requires states to publish all FFS Medicaid fee schedule payment rates on a publicly available and accessible website. It also requires states to compare their FFS payment rates for primary care, obstetrical and gynecological care, and outpatient mental health and substance use disorder services to Medicare rates, and publish the analysis every two years, and also requires states to publish the average hourly rate paid for personal care, home health aide, homemaker, and

habilitation services, and publish the disclosure every two years.

State Medicaid programs are required to ensure that payments to providers are consistent with efficiency, economy, and quality of care and are sufficient to enlist enough providers so that care and services are available to beneficiaries at least to the extent as to the general population in the same geographic area. However, there are currently no specific requirements for how much a state Medicaid program is required to pay a provider. Moreover, in *Armstrong v. Exceptional Child Center*, the Supreme Court of the United States ruled that Medicaid providers and beneficiaries do not have a private right of action to challenge Medicaid payment rates in federal courts. As a result, there is significant variation across states in payment rates for services rendered. Medicaid payment rates are historically lower than Medicare payment rates across provider types.

Currently, there are no requirements for states to publicly post payment rate information, and if information is made available, it often is not easily accessible or understandable. States are required to conduct access monitoring review plans (AMRPs) to analyze data and supporting information to reach conclusions on sufficient access for covered services provided under fee-for-service. When states submit a state plan amendment to reduce or restructure provider payment rates, they must consider the data collected through the AMRP and undertake a public process that solicits input on the potential impact of the final reduction or restructuring of Medicaid FFS payment rates on beneficiary access to care.

This final rule rescinds the AMRP requirements and instead requires states to publish all Medicaid FFS payment rates in a clearly accessible location on a public website. The final rule requires Medicaid payment rates to be organized such that a member of the public could readily determine the amount that Medicaid would pay for a service and, in the case of a bundled or similar payment methodology, identify each constituent service included within the rate and how much of the bundled payment is allocated to each constituent service under the state's methodology. If the rates vary, the state would be required to separately identify the Medicaid FFS payment rates by population (pediatric and adult), provider type (*e.g.*, physician, advanced practice nurse, physician assistant) and geographical location, as applicable. States also have to date when the payment rates were last updated on the state Medicaid agency's website. In addition, states are now required to publish payment rates no later than July 1, 2026, including approved Medicaid FFS payment rates in effect as of July 1, 2026. (Of note, the Medicaid managed care rule that was released in coordination with this final rule includes requirements for publishing Medicaid managed care payment rates.)

CMS is also finalizing its proposal to require states to conduct a comparative payment rate analysis between their Medicaid payment rates and Medicare rates for primary care services, obstetrical and gynecological services, and outpatient mental health and substance use disorder services." If the rates vary, the State must separately identify the payment rates by population (pediatric and adult), provider type, and geographical location, as applicable.

For HCBS services – personal care, home health aide, homemaker, and habilitation services – states are required to develop and publish a payment rate disclosure of the average hourly Medicaid fee-for-service fee schedule payment rates. (The addition of habilitation services to this requirement is new and an expansion.) For HCBS, if rates vary, states need separate identification of the average hourly Medicaid fee-for-service fee schedule payment rates for payments made to individual providers and provider agencies:

- by population (pediatric and adult),
- provider type,
- geographical location,
- and whether the payment rate includes facility-related costs, as applicable. (Adding the requirement for states to include facility related costs is new to the final rule.)

The State agency must publish the initial comparative payment rate analysis and payment rate disclosure of its

Medicaid fee-for-service fee schedule payment rates in effect as of July 1, 2025, by no later than July 1, 2026. Thereafter, the State agency must update the comparative payment rate analysis and payment rate disclosure no less than every 2 years, by no later than July 1 of the second year following the most recent update.

In the final rule, CMS is requiring states to establish an interested parties' advisory group to advise and consult with the state on payment rates for direct care workers for personal care, home health aide, homemaker, and habilitation services. The addition of habilitation services to this group's purview is an addition and expansion in the final rule. This group would include, at a minimum, direct care workers, beneficiaries and their authorized representatives, and other interested parties. There appears to no explicit mention of providers in the group. The interested parties advisory group shall meet at least every 2 years and make recommendations to the Medicaid agency on the sufficiency of State plan, 1915(c) waiver, and demonstration direct care worker payment rates.

Finally, states are required to conduct an "excess access review" if payment reduction or restructuring results in any of the following scenarios:

- Aggregate Medicaid payment rates are lower than 80% of the most recently published Medicare payment rates.
- Changes to Medicaid payment rates are more than a 4% reduction in aggregate FFS Medicaid expenditures for each affected benefit category during the state fiscal year.
- The public processes raise significant access-to-care concerns from beneficiaries, providers or other interested parties.

Medical Care Advisory Committees

Key Takeaway: States will be required to establish and operate the newly named Medicaid Advisory Committee (MAC) and a Beneficiary Advisory Council (BAC) one year after the rule's effective date.

Currently, states are required to have a Medical Care Advisory Committee (MCAC) in place to advise the state Medicaid agency about health and medical care services. However, current laws include very little specificity regarding how states should use MCACs to ensure the proper and efficient administration of the Medicaid program and promote beneficiary perspectives. As a result, MCAC membership, transparency, meeting frequency, and meeting structure varies significantly across states. The final rule seeks to increase transparency and uniformity while also improving committee effectiveness.

The final rule would rename the MCAC to the Medicaid Advisory Committee (MAC) and create a separate Beneficiary Advisory Council (BAC). In the proposed rule, this was referred to as the Beneficiary Advisory Group, or BAG. The MAC and BAC will serve as vehicles for bi-directional feedback between interested parties and the state on matters related to the effective administration of the Medicaid program. Federal matching funds for Medicaid administrative activities would remain available to states in the same manner as the former MCAC.

The MAC and its corresponding BAC will advise the state on issues related to health and medical services, matters related to policy development, and the effective administration of the Medicaid program, consistent with the requirement that a state plan must meaningfully engage Medicaid beneficiaries and other low-income people in the administration of the plan.

Every state would vary in the size and make-up of its committees and the topics that would benefit from interested parties' feedback. Members of the MAC and BAC would be selected by the state Medicaid director on a rotating, continuous basis. The MAC and BAC must each meet at least once per quarter with off-cycle meetings as needed, and at least two MAC meetings per year must be opened to the public. CMS also proposes an administrative framework for the MAC and BAC to ensure transparency and a meaningful feedback loop with the public and among MAC and BAC members.

CMS also finalized that at least 10 to 25 percent of MAC members must be individuals from the BAC with lived Medicaid beneficiary experience (*e.g.*, they are currently or have been a Medicaid beneficiary or the family member/care giver of a Medicaid beneficiary). Instead of the 25 percent minimum threshold coming into effect right away as proposed, 10 percent of the MAC members must come from the BAC through July 9, 2025; for the period from July 10, 2025 through July 9, 2026, 20 percent of MAC members must come from the BAC; and thereafter, 25 percent of MAC members must come from the BAC.

The rest of the MAC membership should include representation from each of the following categories:

- Members of state or local consumer advocacy groups or other community-based organizations that represent the interests of, or provide direct service, to Medicaid beneficiaries
- Clinical providers or administrators who are familiar with the health and social needs of Medicaid beneficiaries and with the resources available and required for their care
- Representatives from participating Medicaid managed care plans or the state health plan association representing such plans, as applicable
- Representatives from other state agencies serving Medicaid beneficiaries as *ex officio* members.

Conclusion

As noted above, the rule is effective 60 days after publication, but many provisions have an effective date that widely differs from the overarching effective date. Stakeholders should review the final rule to assess the changes and its implications for their business lines.

Of note, CMS also clarifies in the rule that if any provision of this final rule is held to be invalid or unenforceable by its terms, or stayed pending further State action, it shall be severable from this final rule, and not affect the remainder of other provisions.

Should you have any questions regarding the Medicaid Access final rule, please contact the McDermottPlus team.

Key Messages/Talking Points:
Medicaid Access Rule

High Level Messages:

- We all recognize the value that direct care workers provide as well as the need to pay them more. We want to do so, but this policy is counterproductive and would have opposite effect.
- NAHC and our partners have been willing and repeatedly offering to engage in constructive problem solving with CMS and remain ready to do so.
- There are many great things in this rule; however, the pass-through will undermine all other positive policies.
- Any Federally required pass through is unallowable under law, regardless of the percentage.

Specific Items to Discuss:

- Survey data from PMHC, ANCOR, HCAOA, and NAHC consistently showed that this policy would lead to provider closures & exits from Medicaid.
- The restrictive threshold definitions will serve to limit resources for caregiver support and other enhanced care-focused operations, resulting in reduced quality, health and safety, and oversight in HCBS.
- This provision will reduce, not increase, access. Individuals who rely on HCBS to live their lives in home-based settings will lose services, particularly if providers cannot meet these new requirements or are forced to restrict innovative, value-added care supports.
- States across the political spectrum, including California, Washington State, Colorado, Florida, Missouri, Tennessee, and many others, opposed the policy because it is unworkable in the Medicaid program.
- Multiple law firm analyses found that there is no statutory authority for the provision – i.e. CMS is acting outside of its legal authority.
- The provision appears to have been arbitrarily created and not based on data or an explained rationale.
- The blanket approach undermines state autonomy, creates stark inequities across and within states, limits the ability to modify program requirements, and penalizes providers and states that have more regulation and oversight.
- State programs are all extremely different and this rule tries to apply a blanket policy that does not fit within the framework of the 56 unique Medicaid programs.
- Analyses of over a dozen state ratesetting methodology and regulations found that none of these states would meet the threshold due to requirements such as supervision, physical building locations, quality oversight, travel time, and other non-negotiable expenses.
- Smaller providers will be impacted the most, including rural and culturally-specific companies, further exacerbating the stark access challenges their clients face.

- The provision seeks to establish precedent that CMS/HHS has the authority to dictate how providers spend Medicaid revenue, which would not only devastate HCBS access but also place other providers at risk of arbitrary limits on the use of their Medicaid revenue in the future.
- The proposal places a massive unfunded mandate on both states and providers.
    - Analyses of current state rate structures show that states, on average, would need to raise rates by over 45% to meet the mandate without requiring massive cuts to quality, health and safety, and other required activities.
    - Without rate increases, providers would need to cut their non-caregiver wage expenses by over 2/3rds.
- The biggest issue is inadequate payment rates, and no amount of mandating how existing reimbursement is allocated will solve that. We need a holistic solution to ensure direct care providers are well cared for and well compensated.

Pennsylvania
Department of Human Services

Medical Assistance BULLETIN

ISSUE DATE	EFFECTIVE DATE	NUMBER
August 23, 2024	August 23, 2024	05-24-01, 07-24-01, 54-24-05, 59-24-05, 00-24-02

SUBJECT
Updated Electronic Visit Verification Manual Edits Compliance Percentage Requirements in the Fee-for-Service Delivery and Managed Care Delivery Systems

BY	BY	BY
 Sally A. Kozak, Deputy Secretary Office of Medical Assistance Programs	 Juliet Marsala, Deputy Secretary Office of Long-Term Living	 Kristin Ahrens, Deputy Secretary Office of Developmental Programs

IMPORTANT REMINDER: All providers must revalidate the Medical Assistance (MA) enrollment of each service location every 5 years. Providers should log into PROMISe to check the revalidation dates of each service location and submit revalidation applications at least 60 days prior to the revalidation dates. Enrollment (revalidation) applications may be found at: https://www.pa.gov/en/agencies/dhs/resources/for-providers/promise/promise-provider-enrollment.html.

PURPOSE:

The purpose of this Medical Assistance (MA) bulletin is to advise providers of changes to the manual edit thresholds for Electronic Visit Verification (EVV) records in both personal care services (PCS) and home health care services (HHCS), effective with dates of service on and after January 1, 2025.

SCOPE:

This bulletin applies to providers enrolled in the MA Program who render PCS and HHCS to beneficiaries or participants (beneficiaries) in the MA fee-for-service (FFS) delivery system, including through home and community-based services waivers, and the managed care delivery system via Physical HealthChoices or Community HealthChoices. Beneficiaries may receive services within the following programs:

COMMENTS AND QUESTIONS REGARDING THIS BULLETIN SHOULD BE DIRECTED TO:

Fee-for-service provider service center: 1-800-537-8862

Physical and Community HealthChoices providers should address any questions regarding EVV to the applicable MCO.

Visit the Office of Medical Assistance Programs Website at: https://www.pa.gov/en/agencies/dhs/resources/for-providers/ma-for-providers/contact-information-for-ma-providers.html

- Office of Developmental Programs (ODP): Adult Autism Waiver, Community Living Waiver, Consolidated Waiver, Person/Family Directed Support Waiver, and Base Funded Program;

- Office of Long-Term Living (OLTL): OBRA Waiver, Act 150, and Community HealthChoices; or,

- Office of Medical Assistance Programs (OMAP): MA FFS and Physical HealthChoices.

Providers in the managed care delivery system are to address any provider EVV-related interface, billing, and payment questions with the applicable managed care organization (MCO).

BACKGROUND:

On August 26, 2020, the Department of Human Services (Department) issued MA Bulletin 05-20-03, titled "Electronic Visit Verification for Personal Care Services Provided in the Fee-for-Service Delivery System," which advised OMAP providers that it was expected that no more than 50% of their PCS claims billed have manual edits, beginning November 20, 2020 (https://www.pa.gov/content/dam/copapwp-pagov/en/dhs/documents/docs/publications/documents/forms-and-pubs-omap/MAB2020082601.pdf).

On September 10, 2020, the Department issued MA Bulletin 07-20-04 et. al, titled "Electronic Visit Verification (EVV) for Personal Care Services (PCS)," which advised OLTL and ODP providers that it was expected that no more than 50% of their PCS EVV records have manual edits within a federal fiscal year quarter, beginning January 1, 2021 (https://www.pa.gov/content/dam/copapwp-pagov/en/dhs/documents/docs/publications/documents/forms-and-pubs-omap/MAB2020091001.pdf).

On August 10, 2022, the Department issued MA Bulletin 05-22-09 et. al, titled "Electronic Visit Verification Requirements for Home Health Care Services in the Fee-for-Service Delivery and Managed Care Delivery Systems," which advised OLTL, ODP, and OMAP providers that to meet federal compliance requirements no more than 50% of their HHCS records could contain manual edits within a federal fiscal year quarter, beginning January 1, 2023, and also contained a note that the percentage would be periodically updated and move to no more than 15% of claims on a federal fiscal year quarterly basis by January 1, 2025 (https://www.pa.gov/content/dam/copapwp-pagov/en/dhs/documents/docs/publications/documents/forms-and-pubs-omap/MAB2022081001.pdf).

DISCUSSION:

Beginning with dates of service on and after January 1, 2025, in order to meet federal EVV compliance requirements, providers must achieve 85% of EVV records for verified visits

without manual edits for PCS and HHCS. This includes all participants/Common Law Employers in Participant-Directed Services, as they will be disenrolled from Participant-Directed Services if there is continued non-compliance. Providers rendering services to beneficiaries across multiple programs must achieve 85% of records without manual edits in each program to be considered fully compliant.

Additional information on timelines related to monitoring, technical assistance, corrective action plans, and penalties for not meeting manual edit thresholds will be provided in a future MA Bulletin before January 1, 2025.

PROCEDURE:

Effective with dates of services on and after January 1, 2025, providers must achieve 85% of EVV records for verified visits without manual edits for PCS and HHCS on a federal fiscal year quarterly basis. The EVV Compliance report is currently available in the EVV Aggregator. To access the EVV Compliance Report, providers need to log into the Aggregator and perform the following steps: 1) Choose Reports from the menu on the left; 2) In the Report Type drop down, choose Date Range Reports; 3) In the Report Name drop down, choose EVV Compliance; and 4) Choose Run Report. Providers have the ability to choose dates to run the report and can also narrow the report down by Account (if you have more than one), Client Name or Employee Name. The report provides detail information based on visit date, client, and employee for each account. The last page of the report shows summary information including the percentages of compliance.

For further PCS and HHCS information and updates, providers and MCOs should refer to the Department's EVV web page at: https://www.pa.gov/en/agencies/dhs/resources/for-providers/evv.html.

DEFINITIONS:

Verified Visit – A visit which contains all six of the service elements required by the 21st Century Cures Act. These service elements are the type of service provided, the name of the individual receiving service, the date of service delivery, the location of service delivery, the name of the individual providing the service, and the time the service begins and ends. A visit without these elements is considered incomplete.

Manual Visit – Any verified visit which has been manually entered or edited after the point of service. Manual Visits include both Manual Entries and Manual Edits.

Manual Entry – A verified visit that has been manually entered into a provider's EVV software after the point of service.

Manual Edit – A verified visit in which visit information was entered incorrectly and requires any type of edit or correction. If a provider has to manipulate data or add missing data or change data in any way after the service is delivered, even if a visit was originally captured using a visit modality that captures in real-time; this is deemed a manual edit.

SUPERSEDED BULLETINS:

This MA Bulletin supersedes, in part, MA Bulletins 05-20-03, 07-20-04 et. al, and 05-22-09 et. al.

Department of Human Services Updates

Electronic Visit Verification for Personal Care Services and Home Health Care Services

General Information

Q: Where can I find more information on how to implement EVV (Electronic Visit Verification)? Where do I go to get started?

A: The Pennsylvania (PA) Department of Human Services' (DHS) website with Electronic Visit Verification (EVV) information and guidance can be found at https://www.dhs.pa.gov/providers/Billing-Info/Pages/EVV.aspx.

Q: How does DHS communicate significant changes related to EVV?

A: DHS uses its website, Medical Assistance Bulletins, public meeting, listserv communications, and operations memorandums when necessary to communicate EVV changes.

Home Health Care Services (HHCS)

pennsylvania
DEPARTMENT OF HUMAN SERVICES

Q: What Home Health Care services are subject to EVV?

A: The procedure codes subject to Home Health Care Services EVV are located DHS website at https://www.dhs.pa.gov/providers/Billing-Info/Pages/EVV-HHCS.aspx.

Medicaid as Secondary Payor

pennsylvania
DEPARTMENT OF HUMAN SERVICES

Q: Is EVV required when commercial insurance is the primary and Medicaid is the secondary payor?

A: Claims and encounters submitted to Medicaid that do not have any cost sharing with Medicare or Medicare Advantage are subject to EVV error status codes in PROMISe.

Q: Is EVV required when Medicare is the primary and Medicaid is the secondary payor?

A: Claims and encounters submitted to Medicaid by Medicare are not submitted to EVV processing since Medicare performs the EVV validation.

Q: Is EVV required when Medicare Advantage is the primary and Medicaid is the secondary payor?

A: Claims and encounters submitted to Medicaid by Medicare Advantage are not submitted to EVV processing since Medicare Advantage performs the EVV validation.

GPS Range

pennsylvania
DEPARTMENT OF HUMAN SERVICES

Q: What is the current required GPS range in feet?

A: In the fee-for-service (FFS) delivery system, the perimeter for locations is set at 1/4-mile in the PA-DHS EVV System; however, even if the recorded location is outside the 1/4-mile perimeter, this will not cause an exception in the PA-DHS EVV System. The provider will be able to enter multiple addresses where services are provided, and these addresses can be updated as needed. If an error occurs, any system errors may be corrected through the web portal by the administrator.

Although location is a required element and must be submitted as part of the EVV record, PA-DHS is not currently validating against the location for billing purposes. In essence, PA-DHS validates that a location is captured, but does not validate whether the location matches any location on file. If this policy changes in the future, PA-DHS will communicate that to providers.

GPS Range

Q: What is the current required GPS range in feet? (Cont'd)

In the managed care delivery system, your managed care organizations (MCO) may have different requirements. Please inquire with your MCO about their policy regarding location, utilizing the MCO Directory at https://www.dhs.pa.gov/providers/Providers/Documents/Managed%20Care%20Information/MCO%20Directory.pdf.

Manual Edit Compliance

pennsylvania
DEPARTMENT OF HUMAN SERVICES

Q: What is the current target for EVV compliance percentage?

A: The thresholds and timeframes are specified in Medical Assistance Bulletin 05-22-09 and Medical Assistance Bulletin 07-20-04.

Medical Assistance Bulletin 05-22-09:
https://www.dhs.pa.gov/docs/Publications/Documents/FORMS%20AND%20PUBS%20OMAP/MAB2022081001.pdf)

Medical Assistance Bulletin 05-22-09:
https://www.dhs.pa.gov/docs/Publications/Documents/FORMS%20AND%20PUBS%20OMAP/MAB2020091001.pdf

Manual Edit Compliance

pennsylvania
DEPARTMENT OF HUMAN SERVICES

Q: What is the current target for EVV compliance percentage? (Cont'd)

To meet federal EVV compliance requirements, providers must achieve 50% of EVV records. DHS will review manual edit data on the fiscal year quarterly basis for providers providing services through a FFS program and will both provide technical assistance to those providers that do not achieve the 50% threshold for manual edits and develop corrective action plans as part of the standard monitoring process when necessary.

For providers rendering services in the managed care delivery system, the MCOs and DHS will conduct the review of manual edit data on a fiscal year quarterly basis and contact the provider regarding any needed quality improvement plan.

NOTE: The Office of Developmental Programs (ODP), the Office of Long-Term Living (OLTL), and the Office of Medical Assistance Programs (OMAP) will conduct their own program office manual edit reviews. Any changes to DHS offices responsible for manual edit reviews will be communicated on the DHS' EVV web page at https://www.dhs.pa.gov/providers/Billing-Info/Pages/EVV-HHCS.aspx.

Manual Edit Compliance

pennsylvania
DEPARTMENT OF HUMAN SERVICES

Q: Is the state still planning to increase the compliance rate to 85%? If so, when does this change take effect?

By January 1, 2025, each provider must have manual edits to no more than 15% of claims on a quarterly basis. Threshold percentages may change over time until January 1, 2025. Percentages and deadlines will be communicated to providers on the DHS EVV web page at https://www.dhs.pa.gov/providers/Billing-Info/Pages/EVV-HHCS.aspx.

Manual Edit Compliance

pennsylvania
DEPARTMENT OF HUMAN SERVICES

Q: What compliance percentage are providers at today (aggregate)?

A: DHS calculates manual edit compliance by provider, not by aggregate.

- OLTL FFS: In January of 2024, 62% of claims were auto-verified, and 38% were manual visits.
- ODP FFS: In January of 2024, 70% of claims were auto-verified, and 30% were manual visits.
- OMAP FFS: In January of 2024, 76% of claims were auto-verified, and 24% were manual visits.
- MCO: In January of 2024, 69% of claims were auto-verified, and 31% were manual visits.

Manual Edit Compliance

pennsylvania
DEPARTMENT OF HUMAN SERVICES

Q: How does DHS calculate compliance percentages? If using HHAeXchange, can you please reference the exact report location and name?

A: The total number of manually verified visits divided by the total number of verified visits equals the percentage of manual visits. Your manual visit percentage should be less than 50%. If 50% or more of your visits per quarter are manual, you are non-compliant.

DHS utilizes a report generated by a business intelligence tool that mirrors the DHS aggregator to identify compliance percentages.

Providers should reach out to their own vendor for assistance with EVV reports. Providers should reach out to their MCOs, if applicable, for compliance guidance.

Manual Edit Compliance

pennsylvania
DEPARTMENT OF HUMAN SERVICES

Q: How often does DHS assess compliance percentages?

A: DHS reviews manual edit data on a fiscal year quarterly basis for providers rendering services through a FFS program. For providers rendering services in the managed care delivery system, the MCOs and DHS will conduct the review of manual edit data on a fiscal year quarterly basis and contact the provider regarding any needed quality improvement plan.

Providers should continually be monitoring their own compliance via their own vendor's reports and within the DHS Aggregator. To view your agency's compliance within the DHS Aggregator, click on **Reports** > **Date Range Reports** > **EVV Compliance**.

Manual Edit Compliance

pennsylvania
DEPARTMENT OF HUMAN SERVICES

Q: What happens if providers do not meet the compliance percentage requirement?

A: OLTL: Currently, OLTL's Quality Management Efficiency Team (QMET) monitors EVV compliance for FFS providers. QMETs are primarily verifying that providers are keeping the proper hard-copy documentation for manual visits and are providing technical assistance and guidance to agencies who are near or below the threshold percentage.

ODP: Currently, ODP sends out letters through their EVV mailbox.

OMAP: OMAP continue to monitor EVV manual edit compliance rates each calendar quarter. The expectation is that manual edit compliance rates should be less than 25% of the DHS-established threshold, and OMAP would like to show manual edit percentage improvements each subsequent calendar quarter. If you have any concerns regarding technical issues, please contact the Provider Assistance Center (PAC) Help Line at 1-800-248-2152.

Participant Cell Phone Use

pennsylvania
DEPARTMENT OF HUMAN SERVICES

Q: Can a direct care worker clock in and clock out using a client's cell phone? Does that count as an EVV compliant visit?

A: A participant's cell phone can be used under the following conditions:

- The participant has given consent to the caregiver to use their electronic device.
- The visit is captured via Mobile Visit Verification (MVV) or Fixed Visit Verification (FVV) visit modalities (Not Telephony).

Providers should not have a written policy that implies the agency will rely solely on participant cell phone use. It is the agency's responsibility to ensure caregivers are able to clock in and out to comply with EVV.

1:2 Services

Q: If you have a 1:2 ratio (1 employee to 2 customers), what is the recommendation for collection of EVV data? Does the employee have to clock in to 2 customers at the same time (and does Sandata allow an employee to clock in twice for 2 different customers) OR does the second customer always require a manual edit?

A: DSPs/SSPs that provide support services to more than one individual concurrently must clock-in/clock-out for each individual for the service to be accurately captured and stored in the EVV aggregator. If a DSP/SSP fails to check-in/check-out for each individual, related claims will deny during EVV validation as no record will be found in the aggregator.

The employee can clock in and out for two (2), or more, individuals, and manual edits are not necessary.

ODP is editing a third version of technical guidance. The current version can be found here: https://www.dhs.pa.gov/providers/Documents/EVV/ODP%20EVV%20Guidance_Version%202.0.pdf.

2:1 Services

pennsylvania
DEPARTMENT OF HUMAN SERVICES

Q: If you have a 2:1 ratio (2 employees to 1 customer), each employee would clock in to the one customer, but the bill rate is combined. What is the recommendation for capture of the service code in this scenario so that billing is not duplicated due to the 2 clock ins? How do Sandata and DHS recommend we address these scenarios?

A: For personal care services with 2:1 staff to individual ratios, at least two (2) instances (records) for the same service/same individual/same date of service/same provider must be present in the EVV aggregator to pass EVV validation. The total unit calculation for the service itself is based on logic that is designed in the system to look at the earliest common time and the latest common time between both DSPs/SSPs. The minutes associated with this time will then be converted to units, stored in the aggregator and compared to the units found on the claim. While there are two (2) visits present in the Sandata aggregator, it is only necessary to bill one (1) claim in PROMISe.

Late/Missing Authorizations

pennsylvania
DEPARTMENT OF HUMAN SERVICES

Q: For payors who utilize HHAeXchange for billing, if the authorization is not in the system, the provider cannot bill. However, in many circumstances, we have evidence of authorization from the plan, but the authorization is not in HHAX. Thus, billing is held up and there is potential disruption to EVV compliance. How should providers address this issue?

A: Late authorizations do not and should not affect EVV manual edit compliance. HHAeXchange has informed the DHS that authorizations, clients, schedules, etc. can be linked after a visit has been completed. As with any alternate EVV (AltEVV) software questions or issues, you should reach out to your AltEVV vendor for assistance.

Provider billing issues should be addressed with the applicable payor. Reach out to your MCO or the Service Coordinator for assistance with missing authorizations.

Submitting Data from Different Source Systems

pennsylvania
DEPARTMENT OF HUMAN SERVICES

Q: Is there a known limitation that one provider (with one EIN [Employer Identification Number]) cannot submit data on the same client from two different source systems (ex: one from HHAeXchange and one from Alaya Care)?

A: DHS does not currently allow for one provider to submit data for the same client from two different source systems as this can have negative impacts on data feeds.

Typically, when a provider is switching vendors there is a cutoff date set for when they will stop using the old system and begin using the new system. There may be some overlap, but the Alternate EVV team closely monitors those situations and limits the time that can occur for.

pennsylvania
DEPARTMENT OF HUMAN SERVICES

Q: For Highmark Wholecare, which requires the use of Netsmart, our providers are being told that they must capture an electronic signature at point of care but are not being required to capture GPS location. Can you please clarify what is required and why signatures would not be required by the plan? Also, can you share best practices on universal precautions and keeping electronic devices clean between uses if this is required?

A: DHS does not require the use of electronic signatures; however, payors can have additional requirements that go beyond DHS requirements. Please reach out to your contracted MCO for guidance.

OLTL Contact Information

pennsylvania
DEPARTMENT OF HUMAN SERVICES

Electronic Visit Verification (EVV) for Personal Care Services and Home Health Care Services

Manual Edit Compliance History

pennsylvania
DEPARTMENT OF HUMAN SERVICES

On August 26, 2020, Medical Assistance Bulletin 05-20-03 advised Office of Medical Assistance Programs (OMAP) providers that it was expected that no more than 50% of personal care services (PCS) claims billed have manual edits, beginning November 20, 2020. - https://www.pa.gov/content/dam/copapwp-pagov/en/dhs/documents/docs/publications/documents/forms-and-pubs-omap/MAB2020082601.pdf

On September 10, 2020, Medical Assistance Bulletin 07-20-04 et. al advised Office of Long-Term Living (OLTL) and Office of Developmental Programs (ODP) providers that it was expected that no more than 50% of PCS claims billed have manual edits within a federal fiscal quarter, beginning January 1, 2021. - https://www.pa.gov/content/dam/copapwp-pagov/en/dhs/documents/docs/publications/documents/forms-and-pubs-omap/MAB2020091001.pdf

Manual Edit Compliance History

pennsylvania
DEPARTMENT OF HUMAN SERVICES

On August 10, 2022, Medical Assistance Bulletin 05-22-09 et. al advised OLTL, ODP, and OMAP providers that to meet federal compliance requirements no more than 50% of their home health care services (HHCS) records could contain manual edits within a federal fiscal year quarter, beginning January 1, 2023. The bulletin also contained a note that the percentage would be periodically updated and move to no more than 15% of claims on a federal fiscal year quarterly basis by January 1, 2025. - https://www.pa.gov/content/dam/copapwp-pagov/en/dhs/documents/docs/publications/documents/forms-and-pubs-omap/MAB2022081001.pdf

Updated Manual Edit Requirements

pennsylvania
DEPARTMENT OF HUMAN SERVICES

On August 23, 2024, Medical Assistance Bulletin 05-24-01 et. al advised OLTL, ODP, and OMAP providers that to meet federal compliance requirements providers must achieve 85% of their PCS and HHCS verified visits without manual edits on a federal fiscal year quarterly basis, beginning January 1, 2025. - https://www.pa.gov/content/dam/copapwp-pagov/en/dhs/documents/docs/publications/documents/forms-and-pubs-omap/MAB2024082301.pdf

This bulletin includes Participant-Directed Services and includes a definitions section that is universal across program offices.

There will be no incremental changes to the percentage requirement before the end of Calendar Year 2024.

Fee-for-Service Compliance Review

pennsylvania
DEPARTMENT OF HUMAN SERVICES

DHS reviews manual edit data on the fiscal year quarterly basis for providers rendering services through a Fee-for-Service program and in Calendar Year 2025 will both provide technical assistance to those providers that do not achieve the 15% threshold for manual edits and develop corrective action plans as part of the standard monitoring process when necessary.

DHS is currently exploring how to standardize processes across program offices. Additional information on timelines related to monitoring, technical assistance, corrective action plans, and penalties beginning in Calendar Year 2026 for not meeting manual edit thresholds will be provided in a future Medical Assistance Bulletin.

Managed Care Compliance Review

pennsylvania
DEPARTMENT OF HUMAN SERVICES

For providers rendering services in the managed care delivery system, the Managed Care Organizations and DHS conduct the review of manual edit data on a fiscal year quarterly basis and contact the provider regarding any needed quality improvement plan. Providers with questions regarding beneficiaries in the managed care delivery system should contact their contracted MCO(s) for information.

Office of Developmental Programs

Comprehensive Guide to Electronic Visit Verification

VERSION 3.0

This resource provides Office of Developmental Programs (ODP) specific Electronic Visit Verification (EVV) information for stakeholders

Contents

***New** – added to this version of guidance

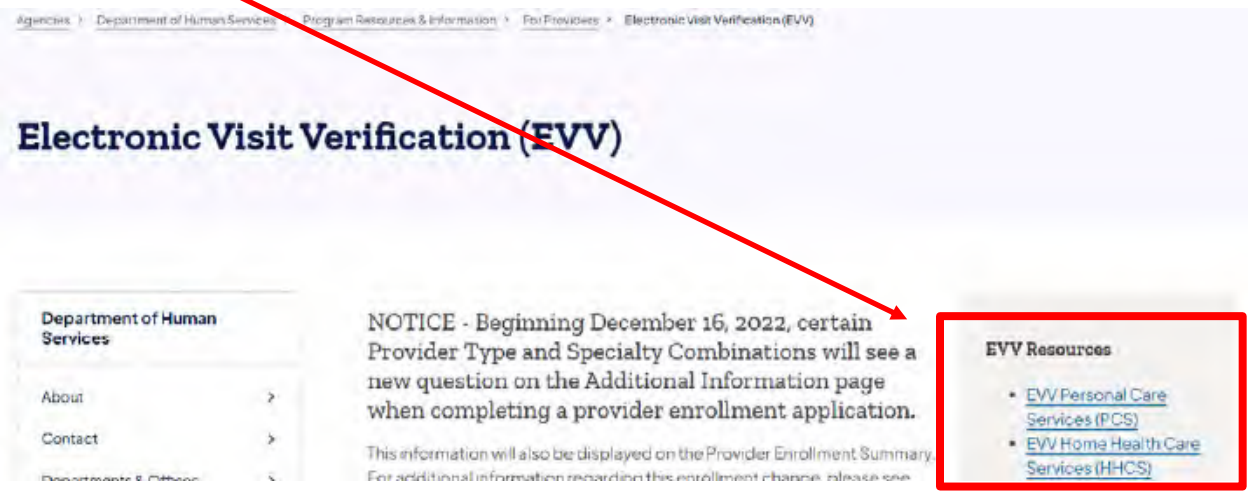
INTRODUCTION

This document is technical in nature and provides detailed information to support EVV (billing/claims, EVV errors and EVV calculation logic). The DHS EVV website contains the majority of other information that IS NOT contained in this document including public meeting notices, EVV listserv communications, contact information, training and Frequently Asked Questions (FAQs) that address general, provider, technology, and training questions: EVV Provider Billing

Effective January 1, 2020, Section 12006 of the 21st Century Cures Act required that care workers, providers, provider agencies, Agency with Choice (AWC) and Vendor Fiscal (VF)/Employer Agents (EAs) use an EVV system to electronically capture Personal Care Service (PCS) visits and corresponding visit data. Pennsylvania also requires these provider entities to electronically send these captured visits to the DHS EVV aggregator as the source of record and for them to be validated against during claims processing. On January 1, 2021, EVV for PCS was fully implemented to be in compliance with the 21st Century Cures Act.

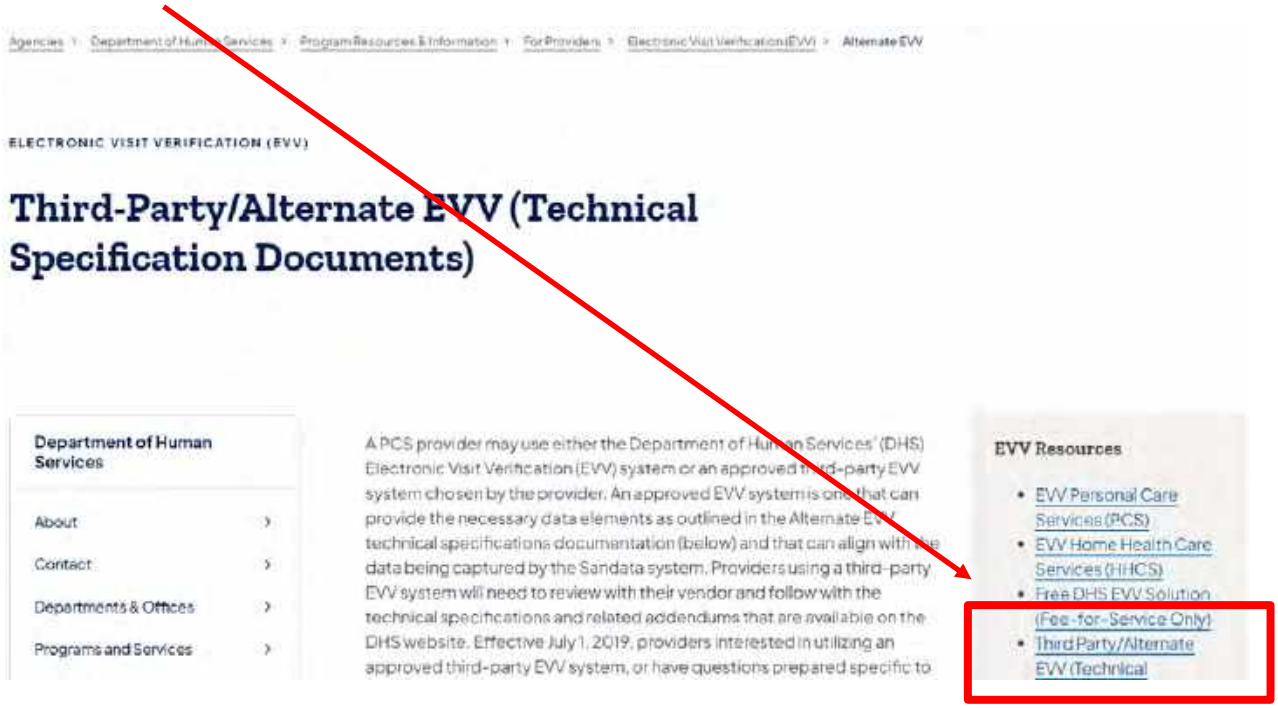
In addition, Section 12006 of the 21st Century Cures Act requires that DHS implement a statewide EVV system for providers rendering Home Health Care Services (HHCS) by January 1, 2023.

For a list of ODP personal care and home healthcare services subject to EVV, visit the DHS EVV website at: DHS EVV Website under EVV Resources



Pennsylvania uses an open EVV system model. This means that providers, provider agencies, AWCs and VF/EAs may choose to use the DHS EVV system, at no cost to the provider, **OR** they may utilize an alternate EVV vendor system to capture the six data elements required under the 21st Century Cures Act. Alternate EVV users are required to meet the EVV technical

specifications for interfacing with the DHS Aggregator. To view this document, go to: Alternate EVV Webpage under EVV Resources.



The Consolidated Waiver, Person Family Directed Supports (P/FDS) Waiver, Community Living Waiver, Adult Autism Waiver and the Base program all offer personal care and home health care services that are subject to EVV. All EVV systems must capture the following data points:

- Type of service(s)
- Individual receiving the service(s)
- Date of the service(s)
- Location of the service(s) delivery
- Care worker(s) providing the service(s)
- Time the service(s) begins and ends.

In addition to the six (6) required data points, providers, provider agencies, AWCs, VF/EAs using a third party/alternate EVV vendor system, are required to transmit additional visit related data elements to the EVV aggregator[1] for the record to successfully be accepted into and be stored in the DHS EVV aggregator for claims validation. For providers using an alternate EVV solution, see the Alternate EVV Technical specifications on the DHS EVV website (see screenshot above for document web location).

[1] The DHS EVV Aggregator is a system that receives and stores data from third-party systems (also referred to as Alternate EVV) and the DHS EVV system into a single uniform platform to facilitate payments of claims. The DHS Aggregator allows providers to use a third-party system (also referred to as Alternate EVV) for visit verification. The DHS EVV aggregator **DOES NOT** submit claims.

NOTE:

- The DHS EVV aggregator only stores EVV data captured during the visit and is validated against during claims processing when an EVV service is found on a claim transaction. No edits/visit changes can physically be performed by the provider in the aggregator environment. In other words, the aggregator does not allow providers to physically go into it and make changes to previously captured EVV visits. Edits to previously captured visits can only be made in the EVV source system where the visit was captured. The DHS EVV aggregator is view only and DOES NOT submit claims.

- If an EVV record is sent by an alternate EVV vendor system to the DHS EVV aggregator and is missing required data or the format is incorrect, as specified in the Alternate EVV technical specifications, the record will be rejected and, therefore, the record will not be stored in the DHS EVV aggregator. Rejected and missing records in the DHS EVV aggregator will set an EVV claim validation edit error status code (ESC) 928, *"NO MATCHING PCS EVV VISIT FOUND" or ESC 938, "NO MATCHING EVV HHCS VISIT FOUND"), when this scenario presents itself and the claim detail line will deny. Providers should ensure that errors and exceptions are corrected in the EVV source system they use and resubmitted to the EVV aggregator as an update to an existing visit BEFORE claim transactions are submitted to the Medicaid Management Information System (MMIS), currently referred to as PROMISe™.

ODP PERSONAL CARE SERVICES (PCS) SUBJECT TO EVV

The Centers for Medicare & Medicaid Services (CMS) states that PCS consists of services supporting activities of daily living (ADL), such as movement, bathing, toileting, transferring, and personal hygiene or services that offer support for instrumental activities of daily living (IADL), such as meal preparation, money management, shopping, and telephone use.

There are six ODP services that are considered personal care services and are subject to EVV. The DHS EVV system and EVV aggregator, provided by Sandata, will ONLY support the six ODP services below.

PCS Services Subject to EVV for
Consolidated Waiver, Person/Family Directed Support Waiver (P/FDS), Community Living Waiver (CLW), and Base Services
(Applies to Care workers, Provider, Provider Agency, AWC and VF/EA)

- Companion
- In-Home and Community Support
- Unlicensed Respite (excludes respite camp)
- Homemaker

PCS Services Subject to EVV for Adult Autism Waiver (AAW)

- Community Support
- Unlicensed Respite (In-Home Only)

ODP HOME HEALTH CARE SERVICES (HHCS) SUBJECT TO EVV

There are five ODP services considered HHCS and are subject to EVV. The DHS EVV system and EVV aggregator will ONLY support the five ODP HHCS below.

HHCS Services Subject to EVV for Consolidated Waiver, Person/Family Directed Support Waiver (P/FDS), Community Living Waiver (CLW), and Base Services (Applies to Provider, Provider Agency, AWC and VF/EA)

- Shift Nursing (1:1 and 2:1)
- Physical Therapy
- Occupational Therapy
- Speech/Language Therapy

HHCS Services Subject to EVV for Adult Autism Waiver (AAW)

- Therapy – Speech

IMPORTANT DATES AND EXPECTED ACTION

Per the 21st Century Cures Act mandate, Pennsylvania first implemented EVV for personal care services (PCS) on January 1, 2020, and again for Home Health Care Services (HHCS) on January 1, 2024.

DHS EVV Sandata Solution Users

Providers, Provider Agencies and AWCs who are new to EVV and are interested in using the DHS Sandata EVV solution to electronically capture visits for PCS or HHCS should reach out to the Provider Assistance Center papac1@gainwelltechnologies.com or 1-800-248-2152 to express interest, obtain more information and request a Welcome Kit. Please note, that Providers, Provider Agencies and AWCs will be instructed by the PAC line to attend self-paced mandatory training first to use and access the DHS Sandata EVV system. The training may be accessed at https://sandatalearn.com/?KeyName=PAEVVAgency.

Alternate EVV System Users

Providers, Provider Agencies, AWCs and VF/EAs who choose to use an Alternate (Third Party) EVV system for either PCS or HHCS should go to the DHS EVV website to understand the requirements for using an alternate EVV system. To locate this information, go to the main landing page of the DHS EVV website, find and click on the hyperlink in the red box shown in the screenshot on the following page.

EVV MANUAL THRESHOLD COMPLIANCE AND MONITORING

ODP and OLTL's EVV Bulletin (Electronic Visit Verification (EVV) for Personal Care Services (PCS), number 07-20-04, 54-20-04, 59-20-04, 00-20-03), issued September 10, 2020, contains information about manual edits and compliance rate expectations that begins on page 6 of the Bulletin and can be found here: ODP and OLTL EVV Bulletin.

*Medical Assistance Bulletin number 05-22-09, 07-22-03, 54-22-01, 59-22-01, 00-22-06," Electronic Visit Verification Requirements for Home Health Care Services in the Fee-for-Service Delivery and Managed Care Delivery Systems", was issued on August 10, 2022. This bulletin applies to OMAP, ODP and OLTL. It contains information about manual edits and compliance rate expectations that begins on page 6 of the Bulletin. This information is consistent with the information communicated in the aforementioned Bulletin number 07-20-04, 54-20-04, 59-20-04, 00-20-03 and can be found here: MAB2022081001.pdf (pa.gov).

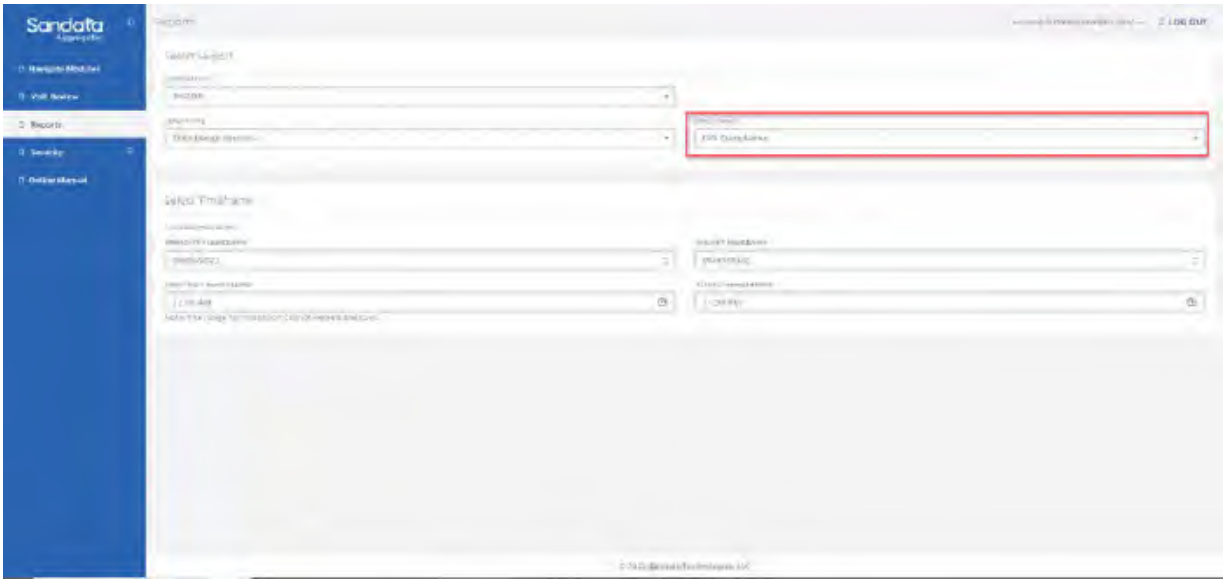
CMS requires that states actively assess EVV manual compliance. ODP Electronic Visit Verification team regularly monitors EVV manual compliance rates and emails quarterly progress notices from the ODP EVV resource account, ra-pwodpevvissues@pa.gov.

It is a sound business practice and strongly encouraged that the providers, provider agencies, AWCs and VF/EA ensure they have documentation demonstrating the service was rendered as specified in the waivers, that the service rendered meets the anticipated needs of the individual, as defined in the ISP, and any manual updates made to the EVV record corroborates with any claims submitted.

The EVV Compliance report is currently available in the EVV Aggregator. To access the EVV Compliance Report you need to log into the Aggregator and perform the following steps:

1. Choose Reports from the menu on the left.
2. In the Report Type drop down, choose Date Range Reports.
3. In the Report Name drop down, choose EVV Compliance.
4. Choose Run Report.

You will have the ability to choose dates to run the report. You can also narrow the report down by Account (if you have more than one), Client Name or Employee Name. The report provides detail information based on visit date, client, and employee for each account. The last page of the report shows summary information including the percentages of compliance.



ODP has incorporated EVV Manual Threshold compliance into their Claims Documentation review process, which is a component of ODP's Quality Assessment and Improvement (QA&I) process. For more information on claim documentation requirements see Bulletin 00-02-03, Technical Guidance for Claim and Service Documentation.

EVV ASSISTANCE/CONTACT INFORMATION

ODP EVV Claim Inquiries: ODP EVV claim inquiries should be made to the ODP Claims Resolution Section: ra-odpclaimsres@pa.gov 1-866-386-8880
Hours of operation: Monday - Thursday, 8:30 AM -12 PM & 1 PM - 3:30PM

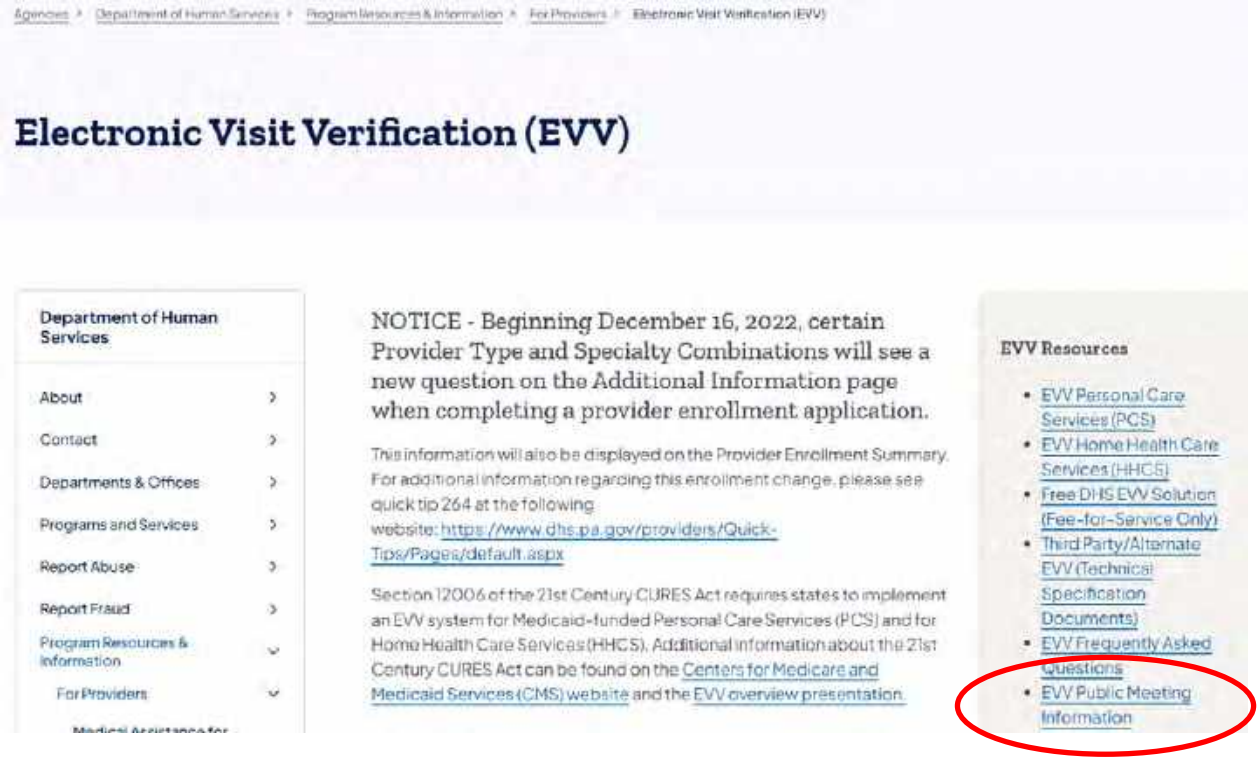
For technical issues such as DHS Sandata account assistance, Welcome Kit reissuance, account unlock issues for DHS Sandata EVV, please contact Provider Assistance Center (PAC) – papac1@gainwelltechnologies.com or 1-800-248-2152.

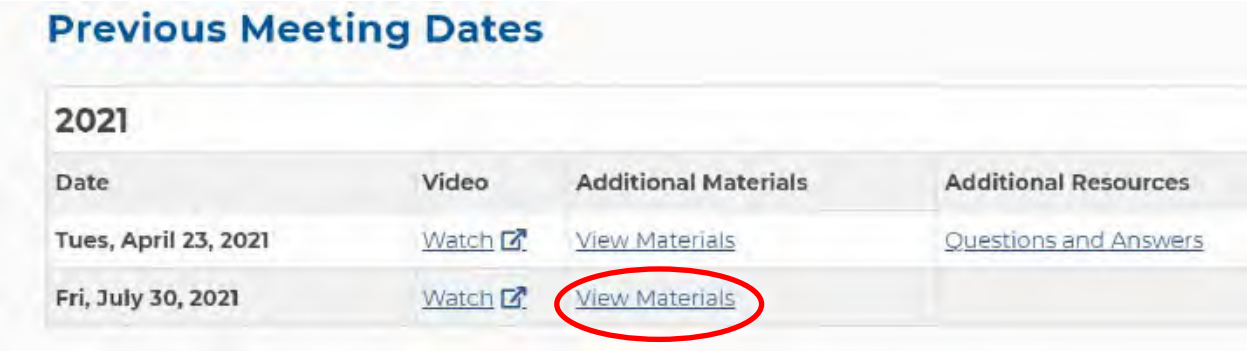
For general EVV program issues or requests to be added to the EVV Listserv, please contact EVV Resource Account at: RA-PWEVVNOTICE@pa.gov

Providers with technical issues reaching out to PAC or Sandata Alternate EVV team should copy DHS on those emails at the following email address: RA-PWEVVISSUES@pa.gov
Providers with support ticket numbers they wish to escalate with DHS should reach out to DHS at the following email address: RA-PWEVVISSUES@pa.gov

The Sandata Online Customer Service/Ticket Portal (also referred to as the Knowledge Center) is available as a resource for providers experiencing EVV issues. For information on how to access this portal and the EVV resources within it, go to the slide deck from the July 30, 2021

Public Meeting. See the first and second screen shot below for the resource location that explains how to access the Sandata Online Customer Service portal.





EVV AGGREGATOR

The DHS EVV Aggregator is a system that receives and stores data from third-party EVV systems and the DHS EVV Sandata system into a single uniform platform to facilitate payments of claims. The DHS EVV aggregator allows providers to use a third-party system (also referred to as Alternate EVV) for visit verification. The DHS EVV aggregator **DOES NOT** submit claims.

If a claim detail line passes EVV validation, the Internal Control Number (ICN) associated with the claim is passed to and stored in the DHS EVV aggregator. When viewing EVV records in the DHS EVV aggregator, please note that the presence of an ICN does not mean the claim was paid. It only means that the claim passed EVV validation and was allowed to continue through the usual claim's adjudication process. After EVV validation occurs against the DHS EVV aggregator, the claim will still need to go through HCSIS plan validation and may set edits during this process. An EVV record in the DHS EVV aggregator will show a "Processed" status after EVV validation occurs and passes while a "Verified" status in the aggregator means EVV claims validation has not yet occurred against the visit record.

The DHS EVV Aggregator is a read-only web portal for the provider, provider agency, AWC or VF/EA to view their EVV data, search and run reports. Aggregator reports are downloadable in Excel or CSV format.

VISIT SIGN OFF/SIGNATURE

Provider Agency Using the DHS Sandata EVV System: If the provider agency is using the DHS Sandata EVV system, this system does not require sign-off/signature on the visit. This feature was disabled in the DHS Sandata EVV system.

Provider Agency Using an Alternative EVV System: If the provider agency is using an alternative EVV system, then the provider agency may require a signature.

If a signature is required by the provider agency and if the participant is unable to sign or voice verify for EVV, the Supports Coordinator should:

a. Document the reason the participant cannot verify EVV in the Individual's care plan.

b. Document who, if anyone, will verify the service for the participant.

VF/FMS Model: If the participant is using the ODP Vendor Fiscal/Financial Management Service model, currently managed by Public Partnership LLC (PPL) the EVV system PPL uses requires a signature. The Common Law Employer, NOT the participant, is required to sign the timesheet.

AWC Model: If the participant is in the Agency with Choice (AWC) model, regardless of whether the AWC is using the DHS Sandata EVV system or an alternate EVV system, the Managing Employer (ME) is NOT required to approve time sheets for services subject to EVV, however, the AWC provider is still required to ensure service delivery was provided.

CHECK-IN/CHECK-OUT REQUIREMENTS

EVV does not affect or change access to care or the policy and provision of services. Service provision should support/align with the service definition found in the approved waiver(s) and the services' duration, frequency and scope as described in the individual's approved plan.

There will be no change in service delivery as a result of EVV. However, it is the responsibility of the provider, provider agency, AWC and VF/EA to ensure DSPs (Direct Support Professionals)/SSPs (Support Service Professionals):

- Are informed of which EVV solution they are required to use to capture PCS and HHCS visit information,
- Are trained on the agency's EVV system or DHS's EVV solution, and
- Understand and comply with the organization's expectations regarding their business practices to support EVV.

COMBINING PARTIAL UNITS

NOTE: <u>ODP is a fee-for-service program that does not round time or individual units of service.</u> The rate methodology for ODP personal care and home health care services is designed to take into consideration the time differential that may occur normally with service delivery.

ODP PCS and HHCS EVV services are associated with the following units of service:

- Respite (unlicensed and agency managed), In-Home and Community Supports, Companion and Specialized Skill Development (Adult Autism Waiver), Nursing: 15 minutes
- Homemaker Services: 1 Hour
- Respite (unlicensed): 24 Hours/Day Unit. (Does not include respite camp and respite in a Life Sharing setting)

ODP rounding rules for 15-minute units of service that are applied in the EVV Aggregator:

- 14 minutes = 0 units
- 15 minutes to 29 minutes = 1 unit
- 30 minutes to 44 minutes = 2 units
- 45 minutes to 59 minutes = 3 units

ODP rounding rules for 1-hour units of service that are applied in the EVV Aggregator:

- 59 minutes = 0 Units
- 1 hour to 1 hour and 59 minutes = 1 unit
- 2 hours to 2 hours and 59 minutes = 2 units

ODP rounding rules for 24 hours/day units of service that are applied in the EVV Aggregator:

- 16 hours = 0 units
- 16 hours and 1 minute to 40 hours = 1 unit
- 40 hours and 1 minute to 64 hours = 2 units
- 64 hours and 1 minute to 72 hours = 3 units
- 72 hours and 1 minute to 96 hours = 4 units

This section is intended to provide additional clarification on combining partial units when billing for Personal Care and Home Health Care Services subject to EVV. The ODP announcement can be found here: ODP Announcement 22-098

All ODP PCS and HHCS subject to EVV are permitted to bill units on one claim detail line that are based on the total accumulated continuous or non-continuous service time across an individual calendar day or across multiple calendar days not to exceed 31 days. The 31-day restriction is based on a limitation associated with the EVV aggregator. If 31 days are exceeded, error status code (ESC) 933 will set and deny the claim detail line.

The begin and end date submitted on a claim detail line informs the system what date range to use when locating visit time in the EVV Aggregator that will be used by the system to calculate units for the same provider, same individual and same service, regardless if the service delivery time was rendered continuous or non-continuously. Once all service time in the aggregator is located, the system totals all the time found and use the total time to calculate units. The total calculated units in the EVV aggregator are then assessed against the units submitted on the claim when determining to pass or fail the claim detail line.

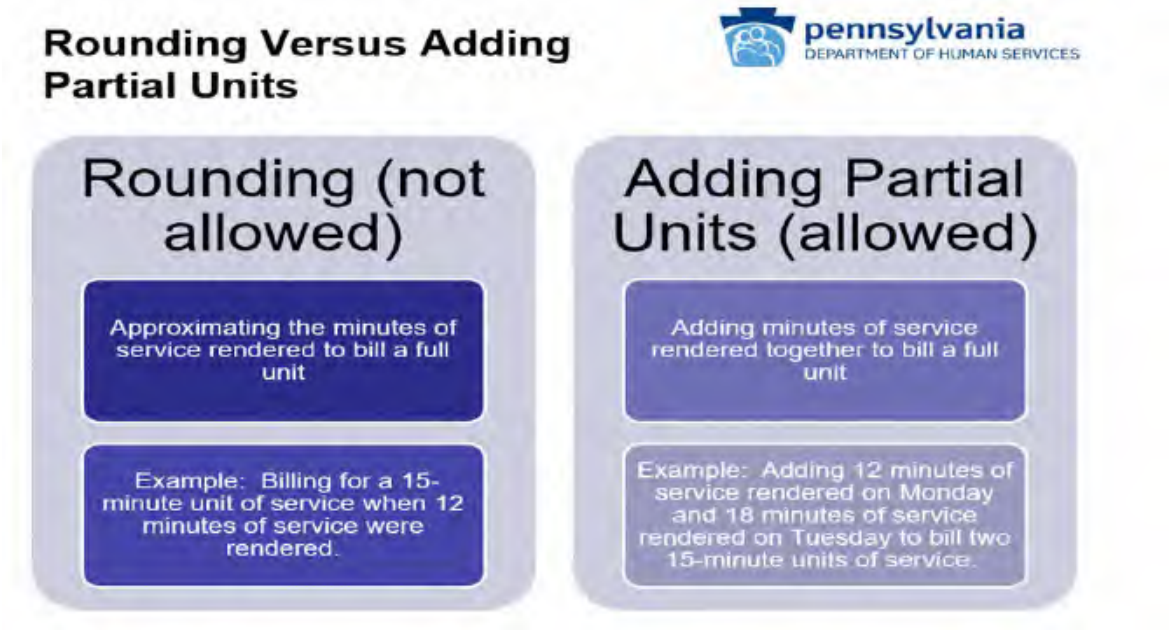
As long as the total calculated units found in the EVV aggregator ***is equal to or greater than*** the units submitted on the claim detail line, the claim will pass EVV validation and continue moving through the claims adjudication process where it is subject to individual support plan validation and additional Medical Assistance and ODP specific edits and audits in the Medicaid Management Information System (PROMIS*e*™).

ROUNDING

ODP issued Bulletin 00-22-05 Individual Support Plans on August 9, 2022. Please refer to the most recent update found here Individual Support Plan Manual.pdf (pa.gov) to review how ODP defines units of service. Rounding is not permitted.

ODP conforms with the Office of Medical Assistance Fee for Service Programs regarding rounding. The rate methodology for ODP personal care and home health care services is designed to take into consideration the time differential that may occur normally with service delivery.

Please note that seconds electronically captured during a visit are not considered in the unit calculation. In other words, if a service delivery visit is 7 minutes and 55 seconds, the EVV system would consider this visit 7 minutes in duration.



PLACE OF SERVICE CODES (POS)

Several data points represent the "location of service delivery".

- The first point is the place of service code (POS) on a claim transaction. During normal claims processing, the POS code on the claim detail line is always validated to ensure the location in which the service was rendered is permissible as specified in the waiver. All valid POS codes for each service are in the ISP Manual.

  ODP EVV services are associated with four (4) place of service codes:

  - 99: Other (Community)
  - 12: Home
  - 11: Office
  - *02: Telehealth (only applies to HHCS which includes Physical Therapy, Occupational Therapy and Speech/Language Therapy)

- The second data point that represents the location of service delivery is on the EVV record itself. For DHS Sandata EVV users, the "VisitLocationType" is anticipated to be enforced/required when submitting EVV transactions. The user will be required to select either "Home" or "Community" for the record to be considered complete. If the service

is/will be rendered in both the home and community during the service visit period, the user should select the value where the service was primarily rendered.

- When a third-party/alternate vendor EVV transaction is submitted to the EVV aggregator, the aggregator will validate that the "location of service delivery" is present in the transaction. If it is not present in the alternate EVV transaction or the field is blank, the EVV record will be rejected and will need to be resubmitted to the Aggregator with the "location of service delivery" included.

For PCS and HHCS, the GPS location where service delivery was provided is stored in the EVV aggregator. This information is accessible to AWC, VF/EA, provider, provider agencies and DHS who may review this information or perform audits as needed. While in the community, DSPs/SSPs have the option to turn off GPS to alleviate any privacy concerns about tracking community locations.

If the same service was rendered consecutively in multiple places within a 24-hour period, the visit may be electronically captured as one visit or two separate visits each representing a different place of service. It is at the discretion of the provider, provider agency, AWC and VF/AE to prescribe business rules as it applies to checking-in/checking-out when the same service is delivered consecutively during a 24-hour period in different locations. Billing should align with the check-in/check-out rules defined by the provider/provider agency.

Visit Capture Guidance When Location Changes Within a 24-hour Period: *In-home and community supports* services were rendered in the home from 8am – 12:00pm then in the community from 12:00pm - 2:00pm. For DHS EVV compliance, the location is only required to be captured at check-in and check-out for each service provided to the individual. The service may start at one location and end at another location; however, the locations visited by the caregiver and the individuals receiving support in-between check-in and check-out for the service are not required to be captured. In the noted example, the caregiver would need to check in at 8:00 am and check out at 2:00 pm, with the location being captured at check-in as the home and the location for the check-out captured as the community. Agencies may establish policies to capture the location where the service was rendered, including check-in and check-out based more accurately on when the service delivery location changes. Agencies are encouraged to instruct DSPs/SSPs on their rules for checking-in/checking-out when the same service is delivered in different settings consecutively in a 24-hour period.

Place of Service Billing Instructions:

Option 1: For the above scenario, if the DSP/SSP checked-in/checked-out for each location in which the same service was delivered to the same individual within a 24-hour period, the provider has two (2) billing options:

1. Bill one claim detail with units that reflect the period 8am – 2pm and use the place of service code that was most prominent during the time span of service delivery.
2. Bill two (2) claim detail lines with **different place of service codes** while entering the same service, date of service and same recipient ID. If this method is used, Error Status Code (ESC) 5000, "Detail is a suspected duplicate-modifier", will set for informational purposes only and the claim detail line will be approved for payment, assuming no other edits set for other reasons. No additional action is needed by the provider when ESC 5000 sets.

Option 2: If the same service was delivered consecutively in different settings from 8am to 2pm and the DSP/SSP checked-in at 8am and checked-out at 2pm, the provider would bill one (1) claim detail line, enter units that reflect the period 8am – 2pm and enter the place of service code that was most prominent during the time span of service delivery.

Choosing a place of service code to enter on a claim detail line when billing the same service that is rendered non-consecutively in multiple locations (i.e., home and community) during a 24-hour period. If there is a break in service and the setting changed for the same provider, same service, and same consumer during a 24-hour period, the service's visit check-in/check-out time and locations should be individually captured by the EVV application and will be stored as multiple records in the EVV aggregator. When billing, the claim detail line(s) should align with the date, service (procedure code and modifier(s), if applicable), location and number of units stored in the EVV records. If the same service was rendered non-consecutively in different locations throughout a calendar day and the visits were electronically captured in this manner, all accumulated units rendered in the community should be entered on one claim detail line while all accumulated units rendered in the home should be entered on a second claim detail line.

A claim with multiple claim detail lines that contain different place of service codes, will cause Error Status Code (ESC) 5000 to set, "Detail is a suspected duplicate-modifier". This ESC is an informational edit and will not prevent the claim from continuing to process. No additional action is needed by the provider when this ESC sets.

Place of Service Billing Rule: The place of service code is a required field on a claim and only one code is permitted on each claim detail line to specify where the service was rendered.

2:1 STAFFING RATIOS

2:1 Staff to Individual Ratio (Applies to Respite and In-Home and Community Supports Services)

For Personal Care Services subject to EVV with 2:1 staff to individual ratios, **both** DSPs/SSPs **MUST** check-in/check-out for the same individual/same service/same date/time and same location. ODP recognizes that it may sometimes be challenging for both DSPs/SSPs to check-in/check-out at the exact same time and has designed system logic to account for potential check-in/check-out time differences associated with 2:1 staff to individual ratios. It is important to understand this logic to train staff appropriately and minimize/eliminate claim payment issues.

For personal care services with 2:1 staff to individual ratios, at least two (2) instances (records) for the same service/same individual/same date of service/same provider must be present in the EVV aggregator in order for the claim to pass EVV validation. The total unit calculation for the service itself is based on logic that is designed in the system to look at the earliest common time and the latest common time between both DSPs/SSPs. The minutes associated with this time will then be converted to units, stored in the aggregator and compared to the units found on the claim.

For example, DSP/SSP "A" checks in at 4:55 PM and checks out at 5:10 PM, and DSP/SSP "B" checks in at 5:00 PM and checks out at 5:15 PM. The common check-in time between both DSPs/SSPs is 5:00 PM, and the common check-out time between both DSPs/SSPs is 5:10 PM. In this example, only 10 minutes will be calculated as the common time in which the service was delivered by both DSPs/SSPs, which equates to zero (0) units. For this example, if a claim is billed for 1 unit, it will deny in the system.

*If a check-in or check-out time was not accurately captured or not electronically captured at all for one or both care workers, EVV systems allow for the visit to be manually entered or manually adjusted to reflect the time-of-service delivery. If there are time disparities between the care workers rendering a 2:1 service due to device or connectivity at the point of care limitations and both care workers were, in fact, present at the exact same time to render services, a manual adjustment to the EVV record is justified. Manual adjustments should always contain notes documenting why the adjustment was made.

*RULE: For 2:1 services, the DHS EVV System expectation is that only two caregivers are clocked in at the same time. **IF** a 2:1 service has more than two caregivers at the point of care at the same time, this results in overlapping check in times for the same provider, participant, service, and date of service. This scenario will cause ESC 927 to set and the claim will be denied. To correct this issue, it is recommended the provider manually adjusts the EVV record of the third caregiver, whose shift overlaps with the original two caregivers who began the visit then resubmit the EVV record to the DHS Aggregator. When making the manual EVV record adjustment, the start time of the third caregiver's visit should be no earlier than the exact time the shift is intended to begin. To avoid this issue altogether and prevent the need for a manual EVV record adjustment, it is recommended that the third care worker not check in until after the care worker they are replacing checks out.

Linking 2 to 1 visits with the Group Code Field

AltEVV- According to our PA-DHS Alternate EVV Technical Specifications, the "GroupCode" field is optional.

DHS EVV- For those using the Sandata system and capturing visits using the SMC app (as opposed to a telephony visit)

- If the service being rendered is a group service which is a 2:1 service, then, the Group Code must be assigned otherwise the claim would deny once billed in PROMIS*e*™.
- If the service being rendered is a 1: Many service (e.g., 1:2, 1:3, 1:4), then the Group Code is optional (lack of the code would not cause a claim to deny once billed in PROMIS*e*™.

1:2, 1:3 and 1:4 STAFFING RATIOS

DSPs/SSPs that provide support services to more than one individual concurrently, must check-in/check-out for each individual for the service/visit to be accurately captured and stored in the EVV aggregator. If a DSP/SSP fails to check-in/check-out for each individual, related claims will deny during EVV validation because no record will be found in the Sandata aggregator.

VALIDATE HCSIS AUTHORIZATION PRIOR TO EVV AND BILLING

Providers, provider agencies, AWCs and VFs/AEs should regularly review Service Authorization Notices and/or the Provider Service Detail Report in HCSIS prior to service delivery and billing to ensure the service(s), date span associated with the authorized service line on the plan (service begin and end-date), the provider authorized on the plan is accurate and sufficient units and dollars are authorized on the individual's plan. Service Authorization Notices can be run and re-run to view changes made to the plan within a specific period by entering a date in the "*Date Last Changed From:*" field and "To:" field.

Regularly reviewing Service Authorization Notices and/or the Provider Service Detail report will minimize and/or prevent claim/claim detail line denials.

BILLING FOR 15 MINUTE SERVICES

Same logic applies for 1-hour units of service.

1. **Bill a single date of service delivery (that does not cross midnight) on one calendar day for the same service, same participant, and same provider/provider agency.**

Bill Single Visit on Single Calendar Day				
Date	**Time In**	**Time Out**	**Total Time**	**Total Units**
01/01/2019	**11:00 am**	**11:50 am**	**50 min**	**3**

From DOS	To DOS	POS	Proc Code	Modifiers 1	2	3	4	Diag XRef	Units Billed	Units Alwd
2019/01/01	2019/01/01	12	W1726					1	3.00	3.00

- **Claim 1:** If "Units Alwd" on claim are less than or equal to the units found in the EVV aggregator, the claim detail line will pass EVV validation in the aggregator and continue processing.

From DOS	To DOS	POS	Proc Code	Modifiers 1	2	3	4	Diag XRef	Units Billed	Units Alwd
2019/01/01	2019/01/01	12	W1726					1	2.00	2.00

- **Claim 2:** If "Units Alwd" on claim are greater than the units in the EVV aggregator, the claim detail line will be denied and stop processing.

2. **Bill two non-consecutive visits (that do not cross midnight) in one calendar day by the same or two different DSPs/SSPs for the same service, same participant (RID) and same provider/provider agency.**

Bill Two Visits on the Same Day				
Date	**Time In**	**Time Out**	**Total Time**	**Total Units**
01/01/2019	**11:00 am**	**11:16 am**	**16 minutes**	**1**
01/01/2019	**11:00 pm**	**11:18 pm**	**18 minutes**	**1**

From DOS	To DOS	POS	Proc Code	Modifiers 1	2	3	4	Diag XRef	Units Billed	Units Alwd
2019/01/01	2019/01/01	12	W1726					1	2.00	2.00

- **Claim 1:** Detail line will pass EVV validation and continue processing because "Units Alwd" are equal to units found in the EVV aggregator records.

3. **Bill a single date of service delivery (that does not cross midnight) over two calendar days by the same or two different DSPs/SSPs for the same service, same participant, and same provider/provider agency. The provider can bill 2 separate detail line, one for each day OR span bill.**

Bill Two Claim Detail Lines One for Each Day				
Date	**Time In**	**Time Out**	**Total Time**	**Total Units**
01/01/2019	**11:00 am**	**11:16 am**	**20 minutes**	**1**
01/03/2019	**11:00 am**	**11:40 am**	**40 minutes**	**2**

From DOS	To DOS	POS	Proc Code	Modifiers 1	2	3	4	Diag XRef	Units Billed	Units Alwd
2019/01/01	2019/01/01	12	W1726					1	1.00	1.00
2019/01/03	2019/01/03	12	W1726					1	2.00	2.00

- Claim 1: Two separate claim detail lines where the EVV aggregator would calculate units strictly with no rounding applied for each day. In other words, one unit would be calculated for 01/01 and two units calculated for 01/03.

Bill One Claim Detail Line and Date Span				
Date	**Time In**	**Time Out**	**Total Time**	**Total Units**
01/01/2019	**11:00 am**	**11:55 am**	**55 minutes**	**3**
01/03/2019	**1:00 pm**	**1:40 pm**	**20 minutes**	**1**
Total accumulated time for date span 1/1/2019 - 1/3/2019			**75 minutes**	**5**

From DOS	To DOS	POS	Proc Code	Modifiers 1	2	3	4	Diag XRef	Units Billed	Units Alwd
2019/01/01	2019/01/02	99	W1726					1	5.00	5.00

- Claim 2: one claim detail line for both dates of service using span dating on one claim detail line. The EVV aggregator will add up all the minutes for the two dates of service then convert the total accumulated minutes to units.

4. **Bill multiple non-consecutive service deliveries (that do not cross midnight) over two calendar days by the same or two different DSPs/SSPs for the same service, same participant and same provider/provider agency. The provider can bill 2 separate detail line, one for each day OR span bill.**

Bill Two Claim Detail Lines One for Each Day						
Date	**Time In**	**Time Out**	**Time In**	**Time Out**	**Total Time**	**Total Units**
01/01/2019	11:00 am	11:09 am	1:00 pm	1:07 pm	16 minutes	1
01/03/2019	11:00 am	11:25 am	1:00 pm	1:15 pm	40 minutes	2

From DOS	To DOS	POS	Proc Code	Modifiers 1	2	3	4	Diag XRef	Units Billed	Units Alwd
2019/01/01	2019/01/01	12	W1726					1	1.00	1.00
2019/01/03	2019/01/03	12	W1726					1	2.00	2.00

- Billing two claim detail lines where the EVV aggregator would calculate units strictly with no rounding applied for each day. In other words, one unit would be calculated for 01/01 and two units calculated for 01/03.

Bill ONE Claim Detail Line and Span Date						
Date	**Time In**	**Time Out**	**Time In**	**Time Out**	**Total Time**	**Total Units**
01/01/2019	11:00 am	11:20 am	1:00 pm	1:20 pm	40 minutes	2
01/02/2019	11:00 am	11:20 am	1:00 pm	1:20 pm	40 minutes	2
Total accumulated time for date span 1/1/2019 - 1/3/2019					**80 minutes**	**5**

From DOS	To DOS	POS	Proc Code	Modifiers 1	2	3	4	Diag XRef	Units Billed	Units Alwd
2019/01/01	2019/01/02	99	W1726					1	5.00	5.00

- Billing one claim detail line for both dates of service using span dating on one claim detail line. The EVV aggregator will add up all the minutes for the two dates of service then convert the total accumulated minutes to units.

5. **Bill a single date of service delivery that DOES cross midnight on one calendar day for the same service, same participant, and same provider/provider agency (when service delivery is less than 24 hours)**

Bill Single Visit that Crosses Midnight and is LESS THAN 24 hours				
Date	**Time In**	**Time Out**	**Total Time**	**Total Units**
01/01/2019	**11:50 pm**	**12:40 am**	**50 min**	**3 units**

2019/01/02	2019/01/02	99	W1726					1	2.00	2.00

- **Claim 1**: Bill 2 individual lines considering less than 24 hours for visit occurring over midnight in which "From DOS" and "To DOS" that is equal and reflects the date in which the service began.

From DOS	To DOS	POS	Proc Code	Modifiers 1	2	3	4	Diag XRef	Units Billed	Units Alwd
2019/01/01	2019/01/02	99	W1726					1	5.00	5.00

- **<u>Claim 2:</u>** Span bill in which the EVV aggregator will add up all the minutes for the two dates of service then convert the total accumulated minutes to units.

7. **Bill multiple consecutive service deliveries for same service event over two consecutive calendar days in excess of 24 hours by the same or two different DSPs/SSPs for the same service, same participant and same provider/provider agency.**

Bill Multiple Visits that Cross Midnight GREATER THAN 24 hours				
Date	**Time In**	**Time Out**	**Total Time**	**Total Units**
01/02/2021	**10:00 am**	**9:00 pm**	**11 Hours**	**44 Units**
01/02/2021	**8:47 pm**	**7:01 pm**	**22 Hours 14 Min**	**88 Units**
			33 Hours 14 Minutes	**132 Units (> 96 Units so dates on claim should reflect 1/2/2021 - 1/3/2021)**

BILLING FOR UNLICENSED RESPITE DAY SERVICES

For unlicensed respite day services, providers/provider agencies should ensure the visit record in the EVV aggregator shows at least 16 hours and one minute of continuous service delivery to align with the ISP Manual, which indicates that "day respite must be provided for periods of more than 16 hours". From a visit capture perspective, DSPs/SSPs should ensure that their clock-in and clock-out time reflects at least 16 hours and one minute of consecutive service delivery. Please remember that seconds captured are not considered when calculating units in the system so the care worker should ensure they capture at least an additional minute either at check-in or check-out to ensure more than 16 hours is captured. For unlicensed respite day services, there cannot be a break in service for a single service delivery event. For this service, the provider/provider agency has the option to bill for a single care event or multiple care events (span dating) on one claim detail line.

1. **Bill a single continuous care event by the same service, same provider, same DSP on one claim detail line that was rendered within one calendar day for unlicensed respite day 1:1, 1:2, 1:3 and 1:4 staff to individual ratios.**

   - To bill for unlicensed respite day services delivered continuously for at least 16 hours within one calendar day, the "From DOS" and "To DOS" on a single claim detail line should reflect the same date with "Units Billed" as "1".

Single Respite Day Visit				
Date	**Time In**	**Time Out**	**Total Time**	**Total Units**
01/01/2019	**6:00 am**	**11:00 pm**	**17 hours**	**1**

From DOS	To DOS	POS	Proc Code	Modifiers 1	2	3	4	Diag XRef	Units Billed	Units Alwd
2019/01/01	2019/01/01	11	W9799					1	1.00	1.00

2. **Bill multiple nonconsecutive visits for the same service, same provider, same (or multiple) DSPs on one claim detail line that was rendered within one calendar day for unlicensed respite day 1:1, 1:2, 1:3 and 1:4 staff to individual ratios.**
   - As long as the total time of service delivery is greater than 16 hours the claim will pass EVV validation and continue processing.

Multiple Non-Consecutive Visits Within a Day				
Date	**Time In**	**Time Out**	**Total Time**	**Total Units**
01/01/2019	**5:00 am**	**2:00 pm**	**9 hours**	**1**
01/01/2019	**3:00 pm**	**11:00 pm**	**8 hours**	

From DOS	To DOS	POS	Proc Code	Modifiers 1	2	3	4	Diag XRef	Units Billed	Units Alwd
2019/01/01	2019/01/01	11	W9799					1	1.00	1.00

3. **Bill a single continuous service event on one claim detail line that overlaps into another calendar day (crosses midnight) for unlicensed respite day 1:1, 1:2, 1:3 and 1:4 staff to individual ratios:**
   - For this billing scenario, the "From DOS" and "To DOS" of service on the single claim detail line should reflect the same date. This scenario assumes the care worker **did not** check-in and out at midnight and one EVV record is stored in the EVV aggregator reflecting this care event.

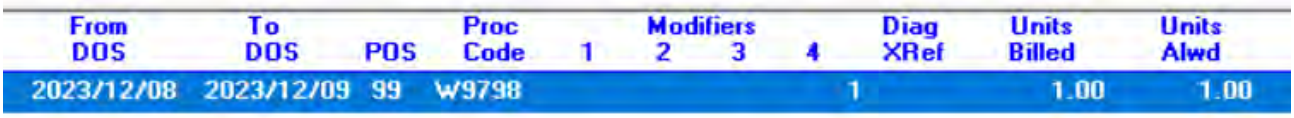
Single Respite Day Visit Across Midnight				
Date	**Time In**	**Time Out**	**Total Time**	**Total Unit**
01/01/2019	6:00 pm	11:00 am	17 hours	1

From DOS	To DOS	POS	Proc Code	Modifiers 1	2	3	4	Diag XRef	Units Billed	Units Alwd
2019/01/01	2019/01/01	11	W9799					1	1.00	1.00

4. **Bill a single service event on one claim detail line that crosses midnight where the provider/provider agency required the care worker(s) to check-out at midnight and check-in after midnight for unlicensed respite day 1:1, 1:2, 1:3 and 1:4 staff to individual ratios:**

    - Because the provider/provider agency requires the care worker to check-out and check back in at midnight, this creates two (2) EVV records in the EVV aggregator that represents one continuous care event. To account for this, the "From DOS" should reflect the date the service began and the "To DOS" should reflect the date the service was completed with "Units Billed" as "1". This will tell the system to look for and add up all time found in the aggregator that is associated with the same service/same individual/same provider for all dates in the date range submitted on the claim detail line then the system will use the total time found that is tied to those EVV records to calculate units.

Single Respite Day Visit Clock Out/In at Midnight				
Date	**Time In**	**Time Out**	**Total Time**	**Total Units**
12/08/2023	**6:00 pm**	**12:00am**	**6 hours**	1
12/09/2023	**12:00am**	**11:00am**	**11 hours**	



From DOS	To DOS	POS	Proc Code	Modifiers 1	2	3	4	Diag XRef	Units Billed	Units Alwd
2023/12/08	2023/12/09	99	W9798					1	1.00	1.00

5. **Bill multiple nonconsecutive visits for the same service, same provider, same (or multiple) DSPs on one claim detail line that crosses two different calendar days in excess of a 24-hour period unlicensed respite day 1:1, 1:2, 1:3 and 1:4 staff to individual ratios.**
    - When billing for services associated with a day unit that are rendered overnight and cross calendar days (**even if period exceeds 24 hours**), the claim detail line **MUST** contain only one date of service. The "From DOS" and "To DOS" **MUST** be the same and equal the first day the service was delivered in order to pass EVV validation and continue processing, as seen below.

Single Respite Day Visit Across 2 Calendar Days				
Date(s) of Service	**Time In**	**Time Out**	**Total Time**	**Total Unit(s)**
01/01/2019	**6:00 am**	**2:00 pm**	**8 hours**	**1**
01/01/19 – 01/02/19	**11:00 pm**	**8:00 am**	**9 hours**	

From DOS	To DOS	POS	Proc Code	Modifiers 1	2	3	4	Diag XRef	Units Billed	Units Alwd
2019/01/01	2019/01/01	11	W9799					1	1.00	1.00

6. **Bill a single service event on one claim detail line that was rendered within one calendar day for unlicensed respite day <u>2:1 staff</u> to individual ratio:**

- To bill for unlicensed respite day services delivered by two care workers within a calendar day, the "From DOS" and "To DOS" on the single claim detail line should reflect the same date.
- During claims validation against the EVV aggregator for 2:1 day unit services, the system will look for at least two (2) EVV records that contain the same service/same individual/same date of service/same provider for the claim to pass EVV validation. The total unit calculation for the service itself looks at the earliest common time and the latest common time between both care workers. The common minutes associated with this time are then converted to units and compared to the units found on the claim.

Single Respite Day Visit 2:1					
Employee	**Date**	**Time In**	**Time Out**	**Total Time**	**Total Units**
Care worker A	**01/26/2024**	**6:00 am***	**12:00am**	**18 hours**	**1**
Care worker B	**01/26/2024**	**5:45am**	**11:45pm***	**18 hours**	

*Common time begins when Care Worker A clocks in at 6:00am and ends when Care Worker B clocks out at 11:45pm. The common time is 17 hours and 45 minutes which passes the verification for an unlicensed respite day unit of 16 hours and 1 minute.

Detail No	Stat	From DOS	To DOS	POS	Proc Code	Modifiers 1	2	3	4	Diag XRef	Units Billed	Units Alwd
001	P	2024/01/26	2024/01/26	99	W9801					1	1.00	1.00

7. **Bill a single continuous service event <u>with no break in service</u> that overlaps into another calendar day (crosses midnight) on one claim detail line for unlicensed respite day services with a <u>2:1</u> staff to individual ratio:**

- For this billing scenario, the "From DOS" and "To DOS" of service on the single claim detail line should reflect the same date. This scenario assumes the care worker **<u>did not</u>** check-in and out at midnight and one EVV record is stored in the EVV aggregator reflecting this care event.
- During claims validation against the EVV aggregator for 2:1 unlicensed respite day service, the system looks for at least two (2) EVV records that contain the same service/same individual/same date of service/same provider for the claim to pass EVV validation. The total unit calculation for the service itself looks at the earliest common time and the latest common time between both

care workers. The minutes associated with the common time are then converted to units and compared to the units found on the claim.

Single Respite Day Visit 2 to 1 Across Midnight					
Employee	**Date**	**Time In**	**Time Out**	**Total Time**	**Total Units**
Care worker A	01/26/2024	6:00 pm	12:00 pm	18 hours	1
Care worker B	01/26/2024	6:00 pm	12:00 pm	18 hours	

Detail No.	Stat	From DOS	To DOS	POS	Proc Code	Modifiers 1	2	3	4	Diag XRef	Units Billed	Units Alwd
001	P	2024/01/26	2024/01/26	99	W9801					1	1.00	1.00

8. Bill a single continuous service event with a break in service on one claim detail line that overlaps into another calendar day (clock out/in at midnight) for unlicensed respite day <u>2:1</u> staff to individual ratio:

- Because the provider/provider agency required the care worker(s) to check-out and check back in at midnight amid a continuous service delivery, this action generated and stored four EVV records (and possibly more if shift changes also occurred) in the EVV aggregator that actually represents one continuous care event. To account for this, the "From DOS" should reflect the date the service began and the "To DOS" should reflect the date the service was completed with "Units Billed" as "1". This will tell the system to look for and add up all common time found in the aggregator that is associated with the same service/same individual/same provider and same dates in the date range submitted on the claim detail line then use the total common time found that is tied to those EVV records to calculate units.

- During claims validation against the EVV aggregator for 2:1 unlicensed respite day services, the system looks for at least two (2) EVV records that contain the same service/same individual/same date of service/same provider for the claim to pass EVV validation. The total unit calculation for the service itself looks at the earliest common time and the latest common time between both care workers. The minutes associated with this time are then converted to units and compared to the units found on the claim.

Single Respite Day Visit 2: 1 Clock Out/In at Midnight					
Employee	**Date**	**Time In**	**Time Out**	**Total Time**	**Total Unit**
Care worker A	**12/08/2023**	**6:00pm**	**12:00am**	**6 hours**	**1**
Care worker B	**12/08/2023**	**6:00pm**	**12:00am**	**6 hours**	
Care worker A	**12/09/2023**	**12:00am**	**11:00am**	**11 hours**	
Care worker B	**12/09/2023**	**12:00am**	**11:00am**	**11 hours**	

From DOS	To DOS	POS	Proc Code	Modifiers 1	2	3	4	Diag XRef	Units Billed	Units Alwd
2023/12/08	2023/12/09	99	W9798					1	1.00	1.00

A special note on Shift Changes: For 2:1 unlicensed respite day services, if the aggregator contains overlapping time for three or more care workers, the system is unable to determine which care worker visit time to use when calculating units; and as a result, the claim detail line will deny. While this scenario can occur for other EVV services, it occurs most frequently when multiple DSPs are providing care to one individual. This typically occurs during shift changes:

Overlapping Shifts					
Employee	**Date**	**Time In**	**Time Out**	**Total Unit**	**Total Time**
Care worker A	**06/30/2023**	**6:00 pm**	**12:00 pm**		**18 hours**
Care worker B	**06/30/2023**	**6:00 pm**	**11:06 pm***	**?**	**5 hours**
Care worker C	**06/30/2023**	**11:00 pm***	**12:00 pm**		**13 hours**

*To resolve this issue, the provider should the manually adjust the new shift care worker's EVV visit time to a time that does not overlap with the care worker's time whose shift is ending. Due to this system limitation, a manual edit for this scenario is acceptable by DHS.

9. **Bill for multiple care events on one claim detail line (span dating) rendered over two or more calendar days for unlicensed respite day 1:1, 1:2, 1:3 or 1:4 services where each care event occurred within a calendar day and did not cross midnight.**

    - To bill for multiple unlicensed respite day service care events that crossed into one or more calendar days (referred to as span dating), the claim detail line must show a date span with a "From DOS" that reflects a date when the first service began and a "To DOS" that reflects a date when the last service delivery ended.

Multiple Respite Days Span Date				
Date	**Time In**	**Time Out**	**Total Unit**	**Total Time**
12/17/2023	6:00am	10:30pm	1	16.5 hours
12/23/2023	6:00am	10:15pm	1	16.15 hours

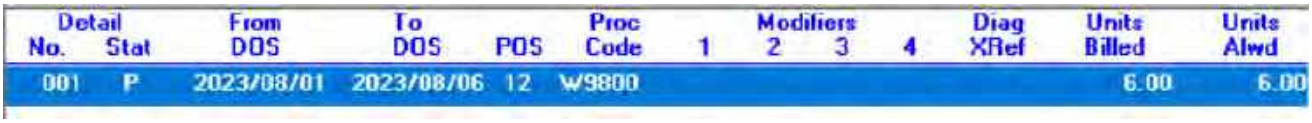
Care worker B	08/05/2023	6:00am	12:00am		18 hours
Care worker A	08/0/2023	2:00am	07:00pm		17 hours
Care worker B	08/06/2023	2:00am	07:00pm		17 hours



Detail No.	Stat	From DOS	To DOS	POS	Proc Code	Modifiers 1	2	3	4	Diag XRef	Units Billed	Units Alwd
001	P	2023/08/01	2023/08/06	12	W9800						6.00	6.00

Please note: When date spanning, a claim detail line should not contain any more than 31 days in a date span. In other words, the "From DOS" and "To DOS" should not exceed 31 days. The 31-day restriction is based on a limitation associated with the EVV aggregator. If 31 days are exceeded, error status code (ESC) 933 will set and deny the claim detail line.

APPENDIX A: EVV Error Status Codes (ESCs)

The claims adjudication process will flow as it currently does today, EXCEPT when an EVV service is found on the claim, PROMISe™ will make a "call" to the EVV aggregator to validate a record(s) is present and ensures the EVV record(s) found in the EVV aggregator matches what is specified on the claim. If the claim detail line passes EVV validation, the claim will continue processing and next validate against the plan in HCSIS before completing the claims processing adjudication cycle. No EVV validation call will be made when a claim is voided. The ESCs below describe the EVV validation logic. **All error resolution corrections should be made in the original system. Once a correction is made, the corrected EVV record should be resent to the aggregator before a claim is resubmitted**. No corrections can be made in the EVV aggregator itself. The EVV aggregator is read only.

EVV ERROR STATUS CODES (ESC)			
EVV ESC CODE	**EVV ESC DESCRIPTION**	**WHY IS THIS ESC SETTING?**	**RESOLUTION ACTIVITY**
ESC 925	EVV PCS Visit Verified	Providers will see these ESCs each time PROMISe™ determines a service subject to EVV is found on the claim and the claim detail line passed EVV validation against the EVV Aggregator record(s).	These two edits set for informational purposes only. They serve to inform the provider, provider agency, AWC, and VF/EA, that the claim passed EVV validation in the Aggregator. No action is needed by the provider. When a claim passes EVV validation, it continues processing through the claims adjudication process as it currently does today.
ESC 935	EVV HHCS Visit Verified		
ESC 926	Duplicate Matching EVV PCS Visits Found	A duplicate EVV record exists in the aggregator.	When two exact EVV records exist in the aggregator, the claim validation call does not know which record to match with, so it will set either ESC 926 or ESC 936 and deny.

EVV ERROR STATUS CODES (ESC)			
EVV ESC CODE	**EVV ESC DESCRIPTION**	**WHY IS THIS ESC SETTING?**	**RESOLUTION ACTIVITY**
ESC 936	Duplicate Matching EVV HHCS Visits Found		To correct this issue for alternate EVV users, the EVV record should contain "BillVisit" set to "False". This will tell the aggregator to set the duplicate record to "Omit" so it is not considered during EVV validation against the aggregator. In addition, alternate EVV users should ensure when sending records for omission that they submit the same "VisitOtherID" that was assigned to the original record they wish to omit/remove.
ESC 927	PCS Units Billed Exceed Units Verified in EVV	When the provider sees either ESC set, the claim detail line denied because the **allowed** units on the claim detail line are greater than the units found on the EVV record in the Aggregator.	Provider, provider agencies, AWC and VF/EA, should determine if the units on the claim detail line or the units found in the EVV record need to be corrected. PROMISe™ is not designed to cut back units on the claim for an EVV service if the allowed units on the claim are greater than the total units found in the Aggregator. Providers should make corrections as applicable and resubmit the claim, ensuring the units found in the EVV Aggregator are equal to or greater than the units submitted on the claim. While performing claims resolution analysis, providers are encouraged to review the rounding rules and/or the calculation rules, make corrections accordingly and resubmit claim. Note: "Allowed" units on a claim detail line are not always equal to the exact units submitted on the claim because other edits/audits are performed before the units on the claim are validated against the units found in the EVV Aggregator record. Example: Fiscal year unit limitations or weekly unit limitations may "cutback" units submitted on a claim which would make the units on the claim less than what was submitted on the actual claim.
ESC 937	HHCS Units Billed Exceed Units Verified in EVV		
ESC 928	No Matching PCS EVV Visit Found	When the provider sees either ESC set, the claim detail line denied for one of the following reasons: 1. No EVV record was found in the Aggregator, OR	1. Submit EVV record to the Aggregator then resubmit the claim. 2. Verify if the claim was submitted and processed BEFORE the visit information was successfully sent to the EVV Aggregator. If not, resubmit claim. 3. If the EVV record in the Aggregator is in an "Incomplete" status, there is an exception(s) associated with the record that will need a manual update made. Go

EVV ERROR STATUS CODES (ESC)			
EVV ESC CODE	**EVV ESC DESCRIPTION**	**WHY IS THIS ESC SETTING?**	**RESOLUTION ACTIVITY**
ESC 938	No Matching HHCS EVV Visit Found	2. The EVV record was submitted to the aggregator AFTER the claim was submitted and processed, OR 3. The status of the EVV record in the EVV Aggregator is in an "Incomplete" status OR 4. Mismatch was found between either the date of service, RID (10 digits), procedure code/modifier and/or MPI (9 digit) code that is found on the claim versus what is found in the EVV record, OR 5. 2:1 service with overlapping time in the aggregator for 3 or more care workers (typically due to shift changes)	into the source EVV system you use, correct the data, ensure the record is in a "Verified" status then resubmit the visit to the EVV Aggregator. Resubmit the claim once you are sure the EVV record status has been sent to the Aggregator and in a "Verified" status. 4. If the EVV record that is found in the Aggregator contains a mismatch between one or more data elements on the claim, review the EVV record in the Aggregator and manually validate if the data elements found in the Aggregator record(s) contains the appropriate values as specified in the Alternate EVV technical specifications found on the DHS EVV website. A frequently seen error is when the EVV record contains a 9-digit MA ID # instead of the 10-digit Recipient ID number (RID) that is contained on the claim. If you experience this issue, update your client/participant number from 9 to 10-digits in your source system that feeds the alternate EVV system records that are sent to the aggregator. 5. For 2:1 services specifically, the system is unable to determine which care worker visit to use when calculating units if the aggregator contains overlapping time for 3 or more care workers. This scenario will typically occur during shift changes. To resolve this issue, the provider should manually adjust the 3rd care worker's EVV visit to a time that does not overlap with the care worker's time whose shift is ending. Due to this system limitation, a manual edit for this scenario is acceptable by DHS.
ESC 929	EVV Web Service Timeout	When this ESC sets, PROMISe™ received a web service timeout when communicating with the EVV Aggregator.	When this ESC sets, the claim will suspend and the PROMISe™ technical vendor, Gainwell, will resolve the error and reprocess the claim within a 24-hour period. **No action is needed by the provider.** If a provider, provider agency, AWC or VF/EA sees this ESC while performing claims reconciliation activities, DO NOTHING to the claim and check back later in the day or the following day to confirm the claim was reprocessed on its own.

EVV ERROR STATUS CODES (ESC)			
EVV ESC CODE	**EVV ESC DESCRIPTION**	**WHY IS THIS ESC SETTING?**	**RESOLUTION ACTIVITY**
ESC 930	EVV Internal Error	When this ESC sets, PROMISe™ received an internal error when communicating with the EVV Aggregator.	When this ESC sets, the claim will suspend and the PROMISe™ technical vendor, Gainwell, will resolve the error and reprocess the claim within a 24-hour period. **No action is needed by the provider.** If a provider, provider agency, AWC or VF/EA sees this ESC while performing claims reconciliation activities, DO NOTHING to the claim and check back later in the day or the following day to confirm the claim was reprocessed on its own. If this ESC continues to be present 24 hours after claim submission, contact the Provider Assistance Center (PAC).
ESC 931	EVV-PROMISe Internal Error	ESC sets when there is a technical issue related to the interface.	When this ESC sets, the claim will suspend and the PROMISe™ technical vendor, Gainwell, will resolve the error and reprocess the claim within a 24-hour period. **No action is needed by the provider.**

EVV ERROR STATUS CODES (ESC)			
EVV ESC CODE	**EVV ESC DESCRIPTION**	**WHY IS THIS ESC SETTING?**	**RESOLUTION ACTIVITY**
ESC 933 (Previously ESC 926)	EVV Internal Record Format Error	This ESC will set when PROMISe™ sends an incorrectly formatted record to the EVV Aggregator during the EVV record validation process **OR** when a provider bills a claim with a date span on one claim detail lines that is equal to or greater than 31 calendar days.	This ESC sets and will suspend the claim detail line for one of two reasons: 1. If an incorrectly formatted record is sent to the aggregator during the claim's validation process, this ESC sets, the claim will suspend and the PROMISe™ technical vendor, Gainwell, will resolve the error and reprocess the claim within a 24-hour period. **No action is needed by the provider**. If an AWC, VF/EA, provider or provider agency sees this ESC while performing claims reconciliation activities, DO NOTHING to the claim and check back later in the day or the following day to confirm the claim was reprocessed on its own. 2. This ESC will also set if a claim detail line is billed with a date span that is equal to or greater than 31 days. To resolve this issue, the date span on the claim detail line will either need to be split onto two separate claim detail lines and resubmitted or split and resubmitted on two separate claims.

APPENDIX B: ABBREVIATIONS/DEFINITION OF TERMS

ACRONYM/ABBREVIATION/ TERM	DEFINITION/TRANSLATION
AAW	Adult Autism Waiver
Aggregator	The DHS EVV Aggregator is a system that integrates data from third-party systems (also referred to as Alternate EVV systems) and the DHS EVV system into a single uniform platform to facilitate payments of claims. The DHS Aggregator allows providers to use a third-party system (also referred to as Alternate EVV) for visit verification.
AWC	An Agency with Choice is one option a participant can use when self-directing their own services.
Claim	A transaction submitted requesting provider-rendered service payment. ODP providers use the 837 Professional format for claim transactions/billing.
CMS	Federal entity that translates to the Centers for Medicare and Medicaid Services
Community Support	An AAW service that assists a participant to gain skills needed to live in the community. The intent of this service is to reduce the need for direct assistance by improving a participant's ability to live independently in the community.
Companion	A service offered by the Consolidated, P/FDS, Community Living Waiver and Base program to provide supervision and assistance focused on health and safety of the individual. Not available to those in licensed residential settings.
DHS	Pennsylvania Department of Human Services
DOS	Date of Service abbreviation in PROMISe™
DSP/SSP	Direct Service Professional/Support Service Professional
ESC	Stands for Error Status Code. ESCs set during claims processing to inform the biller of what action took place while processing a claims transaction. When an ESC sets, it will either deny, pay or suspend an entire claim or just a claim detail line.
EVV	Electronic Visit Verification
FAQs	Frequently Asked Questions
HCSIS	Home and Community Services Information System
HHS	Home Healthcare Services
Homemaker	A service offered by the Consolidated, P/FDS, Community Living Waiver and Base program. Service includes household cleaning/maintenance and homemaker activities such as meal preparation, laundry, or services to keep the home clean and in safe condition.
IHCS	**In-Home and Community Supports:** A service offered by the Consolidated, P/FDS, Community Living Waiver and Base program. This service assists individuals with acquiring, retaining, and improving self-help, socialization, and adaptive skills. Service can be provided in home and community settings. This service may be made available

APPENDIX B: ABBREVIATIONS/DEFINITION OF TERMS

ACRONYM/ABBREVIATION/ TERM	DEFINITION/TRANSLATION
	to individuals in their own home or in other residential of community settings not subject to licensing regulations. Recreation is not an eligible service. Camp day or overnight can only be provided under respite/family aid. Entrance fees to events are not covered.
MMIS	Medicaid Management Information System (currently known as PROMISe™)
ODP	Office of Developmental Programs
OLTL	Office of Long-Term Living
OMAP	Office of Medical Assistance Programs
PCS	Personal Care Services
POS	Place of Service terminology used in PROMISe™
PROMISe™	Claims processing and management information system for the Commonwealth of Pennsylvania, Department of Human Services.
QA and I	Quality Assessment and Improvement. ODP Quality Assessment process designed to conduct a comprehensive quality management review of providers delivering services and supports to individuals with intellectual disabilities and autism spectrum disorders
Respite	A service offered by the Adult Autism Waiver, Consolidated, P/FDS, Community Living Waivers and Base program. This service is provided on a short-term basis to relieve those persons normally providing care to the individual.
Sandata	DHS EVV solution
VF/EA	Vendor Fiscal/Employer Agent

AGENDA

Background

Who this applies to

Why EVV

How It Works

Manual Edits

EVV Compliance Thresholds

Improving EVV Compliance

Tips, Tricks, and Best Practices!

Background

Electronic Visit Verification (EVV): A technological solution used to electronically verify that personal care providers and home health care providers delivered or rendered services as billed. EVV systems enable real-time confirmation of when a visit begins and ends, reducing the opportunity for fraudulent activities.

EVV systems must verify the:

- Type of service performed;
- Individual receiving the service;
- Date of service;
- Location of service delivery;
- Individual providing the service; and
- Time the service begins and ends

Section 12006(a) of the **21st Century Cures Act** (the Cures Act) requires states to implement EVV for all Medicaid PCS (personal care services) and HHCS (home health care services) requiring an in-home visit by a provider.

- States must have implemented EVV for PCS by January 1, 2020 and for HHCS by January 1, 2023, unless granted a one-year Good Faith Effort (GFE) exemption.

PHA
PENNSYLVANIA
HOMECARE ASSOCIATION

Who This Applies To

1. **Personal Care Services (PCS):** Services supporting Activities of Daily Living (ADLs) or services supporting both ADLs and Instrumental Activities of Daily Living (IADLs) provided under sections 1905(a)(24), 1915(c), 1915(i), 1915(j), 1915(k), or Section 1115.

   For a list of PA service codes that are considered “personal care services”, click here: EVV-PCS (pa.gov)

2. **Home Health Care Services (HHCS):** Nursing services and/or home health aide services delivered in the home provided under 1905(a)(7) of the Social Security Act or a waiver. At the state’s option, HHCS may also include physical therapy, occupational therapy, and speech pathology and audiology services.

   For a list of PA service codes that are considered “home health care services”, click here: EVV-HHCS (pa.gov)

Why EVV?

Why Payers Care About EVV?

1. **Improved Outcomes:** Care delivered to a recipient when they need it improves outcomes and supports continued independence in their home and community setting, reducing the need for more costly facility care.

2. **Reduced Cost:** Billing is more accurate with consistent capture of time in and out. Fraud and abuse is minimized.

3. **Enhanced Operational Efficiency:** Billing processes are streamlined, allowing faster claims processing, reducing administrative burden for and improving the utilization of resources within the plan.

4. **Regulatory Compliance:** The 21st Century Cures Act mandates the use of EVV. Payers must comply to avoid fines and safeguard their reputation.

5. **Long Term Sustainability:** With growing PCS and HHCS industries, it is important that plans have access to real time data. This data helps drive efficiencies, administrative oversight, and innovation. In an age where data is king, EVV rules.

PHA
PENNSYLVANIA
HOMECARE ASSOCIATION

Why EVV?

Why Providers Use EVV?

1. **Improved Outcomes:** Care delivered to a recipient when they need it improves outcomes and supports continued independence in their home and community setting, reducing the need for more costly facility care.

2. **Improved Reputation:** EVV lets providers be PROACTIVE when there are staffing issues instead of reactive, earning the respect and trust of customers.

3. **Reduced Cost through Operational Efficiency:** Reduces manual paper processes and creates automation from time capture to billing to payroll processes.

4. **Reduced Take Backs:** A well run EVV operation reduces the risk of takebacks, as you are capturing accurate claim documentation without the risk of filing misses.

5. **Regulatory Compliance:** The 21st Century Cures Act mandates the use of EVV. Providers must comply to avoid fines and safeguard their reputation.

PHA PENNSYLVANIA HOMECARE ASSOCIATION

How It Works

EVV requires workers to clock in when they are present with a member through:

1. A landline phone call (IVR/telephony),
2. A FOB device, OR
3. A submission of a GPS enabled location through a smart phone app

Best Compliance with #3: GPS Location Capture

PHA
PENNSYLVANIA
HOMECARE ASSOCIATION

TIP

Important Compliance Tip:

IVR or telephony use MUST be from a landline telephone.

Clocking in/out via IVR (calling an 800 number) from a cell phone, whether it is the customers or the employees, will result in takebacks during an audit.

Q: Can a caregiver clock in and clock out using a client's cell phone?
A: A participant's cell phone can be used under the following conditions:

- The participant has given consent to use their electronic device.
- The visit is captured via by FOB or GPS location (NOT telephony).

Q: Can I just use the phone number the MCO provided in the care plan and trust it is approved for EVV?
A: No, it is the agency's responsibility to validate that the MCO provided phone number is a landline.

Q: How do I confirm if the phone numbers programmed in my EVV system are a cell phone or landline?
A: PHA recommends using a free phone validator such as: www.phonevalidator.com to perform entity audits for compliance.

Manual Edits

If an EVV visit is missing information or the EVV visit information was entered incorrectly and requires any type of edit or correction, where a provider has to manipulate data in any way after the service is delivered, this is deemed a manual edit.

"Providers must be able to produce hard copy documentation of manual corrections or edits made due to missing or incorrect date elements for auditing purposes upon request. Hard copy documentation is a paper copy." MAB2022081001.pdf (pa.gov) August 10, 2022

Lack of appropriate documentation for Manual Edits is the #1 cause of MCO directed provider takebacks, as recently reported in a survey of Pennsylvania Providers

PHA PENNSYLVANIA HOMECARE ASSOCIATION

Manual Edits in HC

Documentation Requirements for Manual Edits in Physical HealthChoices Program

- No changes to existing documentation requirements, as dictated by licensure, CMS, and payers.

- Consider EVV requirements to be “in addition” to existing documentation requirements

- Note: **Highmark Wholecare** partnered with NetSmart for EVV. Providers are currently required at the time of clock out to capture patient and employee electronic signature when using NetSmart. This is in addition to GPS location.

  NetSmart and Highmark declined to change this policy at this time when approached by PHA. PHA will continue conversations if this presents provider hardship.

PHA PENNSYLVANIA HOMECARE ASSOCIATION

EVV Compliance

EVV Compliance is measured as the % of visits that do not have a manual edit.

Providers must achieve:

50% compliance beginning January 1, 2023

85% compliance beginning January 1, 2025

PHA
PENNSYLVANIA
HOMECARE ASSOCIATION

Calculating EVV Compliance

$$\text{EVV Compliance} = \left[1 - \frac{\text{Total Visits with Manual Edits}}{\text{Total Visits}}\right] * 100$$

Example: 2 out of 10 visits are NOT EVV compliant (manual edits).

1 – [2/10] = .80 *100 = 80% Compliant

Note: HHAeXchange offers 5 standard EVV (Exception) reports to all clients. Those reports are:

Exception By Caregivers (recommended)
Exception By Reason
Exception Detail Report
Exceptions Statistics
Exception Summary by Provider

Service Verification

"Service Verification" positions are growing in number to support:

- Caregiver training
- Care Coordinator/Scheduler training
- Monitoring of EVV dashboards
- EVV compliance tracking
- Client and caregiver satisfaction
- Value Based Payment management and development
- Collaboration and support for the following processes:
  - Billing
  - Scheduling
  - Payroll
  - Accounting
  - Quality/compliance

PHA PENNSYLVANIA HOMECARE ASSOCIATION

EVV Innovation

Don’t Fight it… Use it!

Use it to drive value for your patients and your organization….

- Capture more data, the right data, to enhances your value to payers, such as:
  - Key information influencing social determinants of health
  - Client Satisfaction
  - Changes in Condition (preventative healthcare)
  - Employee Training Needs

- Set yourself apart… while many agencies are struggling to achieve high compliance scores, set yourself apart with stellar EVV performance!

- Incentivize your workforce. Tie EVV compliance to enhanced pay rates, raise eligibility, free give away opportunities, points for gamification, or other incentives. Some providers can offset this cost with VBP from MCO payers.

PHA
PENNSYLVANIA
HOMECARE ASSOCIATION

PHA
PENNSYLVANIA
HOMECARE ASSOCIATION

Improving EVV Compliance

1. **Education and Training**
   - Train caregivers and internal teams on EVV
2. **System Integration/Automation**
   - Ensure seamless data exchange between EVV and other systems
   - Use technology to gamify EVV and improve compliance (ex: Caribou Rewards)
   - Use technology to more easily connect with caregivers on scheduling changes to improve compliance (ex: Care Connect)
   - Use technology to hold internal teams accountable to Manual Edit capture
3. **System Settings**
   - Make sure your system settings are not impacting your compliance
4. **Regular Monitoring**
   - Monitor EVV data regularly to identify discrepancies – address timely!
5. **State-Specific Requirements**
   - Understand your state-specific EVV requirements
6. **Collaborate with Stakeholders**
   - As in today's session!

PHA PENNSYLVANIA HOMECARE ASSOCIATION

Tips, Tricks and Best Practices

Tip	Description
Turn on "Automatic Splitting" for overnight shifts	This feature found in many EVV systems allows a caregiver to clock in and out one time only, even if the shift crosses two calendar days. Ex: Shift scheduled from 11PM – 7AM. Without Automatic Splitting, the direct care professional would need to clock out at midnight and clock back in immediately. With Automatic Splitting, the direct care professional clocks in at 11PM and out at 7AM only.
Turn on "Offline Option"	If internet or phone service is unavailable, many EVV systems have an offline option to allow the visit information to be captured despite the lack of service. However, this is a setting in the EVV system and frequently you have to request that this option be turned on. Make sure this setting is "ON" by contacting your EVV provider.
Lengthen the "tolerance range" for the scheduled time that a caregiver can clock in and out	In EVV systems, providers have the ability to set a tolerance range for clock ins/outs so that your system can escalate to your team when a caregiver is late for a shift or staying longer at a shift. If a caregiver clocks in and out outside of that tolerance range, it could flag or error the visit. Lengthening the clock in and out time, for example from 15 minutes to 30 minutes, could have a significant impact on your EVV Compliance score.

PHA PENNSYLVANIA HOMECARE ASSOCIATION

Tips, Tricks and Best Practices

Tip	Description
Mobile GPS Visit Verification Tolerance Range	Higher thresholds for GPS distance from client home result in less manual edits. Maximum set by EVV mandate is 1,320 ft or 0.25 miles.
Single Clock in/out for Consecutive Shifts	The scenario: Same client, same employee, two consecutive shifts with different billing rates. Caregiver ONLY has to clock in and out at the beginning of the first shift and end of the second shift if this setting is turned on. Talk to your EVV vendor about enabling this functionality.
Link Temp Members with Plan Members!	Don't negatively impact your EVV % by manually moving visit data in your HHAeXchange system. Example: If you had to create a Temp Member due to a missing authorization issue in the system, don't manually move the data to the Plan Member once it drops in HHAeXchange. Use their linking feature to assign that data to the Plan Member for EVV compliant visits. This works with redeterminations as well!
Consider allowing "unscheduled visits" for recipients with frequent schedule changes	If your EVV vendor does not allow you to link EVV attempts to scheduled shifts, consider allowing "unscheduled visits" where the worker can clock in and out without having a predetermined schedule. This requires the worker having a customer ID to identify who they are clocking in for. The agency may need to add bill rate, but the EVV capture will be assigned.

PHA PENNSYLVANIA HOMECARE ASSOCIATION

Tips, Tricks and Best Practices

Tip	Description
Rounding Rules: Let the system round for you!	Don't let rounding rules impact your compliance score. The systems are designed to do shift rounding for you! Rounding is typically done based on the total duration of a shift. For example: If the shift is 57 minutes long, it would round up to 60 minutes. Do not adjust shift times to accommodate authorization/utilization on a per day basis. MCOs have expressed flexibility in utilization management to allow for "reasonable" rounding scenarios. Providers must ensure that weekly or monthly utilization is not overutilized, but minor unit discrepancies on a per day basis are generally allowable. Providers should monitor utilization on a regular basis to ensure overutilization by the expiration of an authorization period does NOT occur. NOTE: ODP programs do not allow rounding up in any scenario. In that case, a shift that is 57 minutes would round DOWN to 45 minutes.

PHA Working For You!

When a participant requests a visit start somewhere other than the home, this is considered a **community-based visit.**

Currently in Pennsylvania:

1. This is an acceptable visit scenario… However,
2. It results in non-compliant EVV visit due to the GPS location not matching what is set as an acceptable GPS location

ADVOCACY: PHA is beginning conversations with MCOs and DHS to discuss the possibility of allowing EVV compliant "community-based" visits, if marked as such on a visit. This would likely require additional documentation to satisfy EVV needs, but may be a good option to improve compliance for agencies supporting populations that frequently begin and end care in a community setting.

Annual Conference

REIMAGINING HOMECARE

PHA

2024 ANNUAL CONFERENCE

MAY 15-17 | KALAHARI RESORTS | POCONO MOUNTAINS

As the healthcare landscape evolves, staying at the forefront of industry trends, standards and advancements is crucial for ensuring the success and quality of home care in Pennsylvania.

Join PHA as we reimagine home care during the 2024 Annual Conference, May 15-17, at Kalahari Resorts!

HOMECARE ASSOCIATION

Thank you to all members who attended our Electronic Visit Verification (EVV) Lunch & Learn on April 2!

PHA CEO, Mia Haney, led the conversation on best practices to improve your EVV compliance. During the session we covered how to tackle common pitfalls, optimize your system, and track EVV compliance effectively. If you missed it, check out the Session Handout.

As promised, we are sharing answers to attendee questions submitted via Teams Chat!

What is telephony?

Telephony is a term used to describe Interactive Voice Response (IVR) or clocking in/out from a landline telephone number.

Where do we find the sample Community HealthChoices timesheet for AmeriHealth Caritas?

See the sample timesheet here. AmeriHealth Caritas/Keystone First Providers are not required to use this timesheet, but if they select another format, it must include the following fields (guidance announced in late 2023):

- Agency Name
- TIN and Provider ID
- Direct Care Worker's Name
- Direct Care Worker's last 4 digits of SSN
- Participant's Name
- Participant's Medicaid ID #
- Location of Service
- Date
- Start and End Time
- Total Hours Worked
- Services Provided Based on POC
- Participant's Signature and Date
- Provider's Signature, Agency Role, and Date
- Direct Care Worker's Signature and Date

See the PowerPoint presentation from the EVV Lunch & Learn for manual edit requirements by payor.

Do we still secure a physical timesheet even if there is still EVV record? I thought that because of EVV the timesheet would only be required when the caregiver missed the EVV.

If the EVV clock in and out has captured type, scope, amount, frequency, and duration of the shift, then a paper timesheet is not necessarily required. Tasks may be used to capture scope. However, if tasks are not utilized, the provider must have documentation of scope in another format to meet those claims documentation

PHA reserves the right to modify/change responses to these questions based on receipt of additional information or instruction from an oversight entity. Changes will be published in PHA's weekly "Connections" e-newsletter.

requirements. If a caregiver has failed to clock in or out, requiring a manual edit, then manual edit guidelines apply for documentation capture.

Does UPMC require customer and employee signature for manual edit documentation?
Signatures are required for the employee only with UPMC. See this guidance document which references this question.

Can we use DocuSign or a PDF filler? Are scanned, faxed, or emailed images of paper timesheets allowable?
PHA is working with the MCOs to get clarity on electronic signature options as well as acceptability of scanned paper timesheets. We will provide further updates as we receive them.

Can we have the documentation requirements for Manual Edits from all MCOs the same?
PHA is happy to discuss this with greater membership and consider adding it to our regulatory priorities.

How do we stay compliant if caregivers are telling us that other home care agencies allow caregivers to clock in/out using participant's cell phone, if we enforce landline, they threaten to transfer.
This is an unfortunate situation. We want our provider community to be engaged in activities that promote compliance and enhance accountability. Providers who are not EVV compliant and do not have satisfactory documentation for manual edits may face significant takebacks in an audit. Also, a provider's reputation with a plan is jeopardized if they do not meet baseline compliance requirements. We encourage all providers to focus on compliance and dedicate resources to fraud waste and abuse prevention in the system.

When a caregiver arrives late and the (OLTL) rounding rule is applied, resulting in a 15-minute reduction from the shift (which is automatically removed in HHA Ex), should we categorize these 15 minutes as a missed visit?
No. This would not be a missed visit.

Are there any discussions to implement exceptions to EVV for family caregivers?
Not that PHA is aware of.

How can we determine the duty codes if there is no care plan? Service coordinators are not putting in care plans.
PHA has experienced that agencies self-create a Care Plan for the participant to guide caregivers on appropriate duties that fall within the service definition of Personal Assistance Services and are the preference of the participant.

Where do we find our EVV % as a company as a whole?
If you do not use HHAeXchange, you can find your EVV compliance in the DHS Aggregator Portal, Sandata system. If you use HHAeXchange, navigate to the following reports to review compliance:

- Exception By Caregivers
- Exception By Reason
- Exception Detail Report
- Exceptions Statistics
- Exception Summary by Provider

PHA reserves the right to modify/change responses to these questions based on receipt of additional information or instruction from an oversight entity. Changes will be published in PHA's weekly "Connections" e-newsletter.

Where do you get the FOBs?
Contact your EVV vendor to see if they offer a FOB option. HHAeXchange does offer the option for FOBs. Note, FOBs may be associated with additional fees for the agency.

What do we do if a caregiver forgot to clock in/out and also failed to obtain a timesheet for the missed EVV? We are requiring our caregivers to clock in/ out but human error occurs.
In this scenario, you do not have documentation to justify the claim. This visit is not billable.

Some consumers receive services at a secondary location such as a family member's residence or out in the community. How does EVV work for this scenario? Is it acceptable for a consumer to request services be rendered somewhere other than their home and it be EVV compliant?
Yes, these examples are acceptable. In many EVV vendor software programs, providers can program multiple locations as acceptable for EVV compliance. As a best practice, providers should maintain documentation of why these locations were approved and subsequently programmed by the agency and maintain documentation that the Service Coordinator was made aware.

Do we know if Highmark Wholecare plans are changing to HHA Exchange or if any of the payors plan on changing to Sandata?
Not that PHA has been made aware of.

HHA Exchange and cell companies have outages. Does anyone know how MCOs calculate outages into our provider EVV compliance rates?
When available, providers should enable "offline mode" in these circumstances to avoid manual edits.

When will MCO start enforcing the compliance rate of 85%?
The 85% compliance threshold begins January 1, 2025.

What if your compliance is 100%?
Congratulations! We want to hear your best practices. Contact PHA to share your success tips!

Why doesn't offline mode work for me?
First, you must make sure "offline mode" is enabled for your system. This is an administrative setting. Speak with your EVV vendor to ensure it is turned on for your organization. For some phones that are still trying to connect to service in an area where service is questionable, you must put the phone in airplane mode to force the offline mode to work.

We are really struggling to get answers from HHA. Is there any way to get in touch with them besides just creating tickets with them? We've found that sometimes our tickets are being closed without a resolution.
Please use PHA's Support Form. We meet bi-weekly with HHAeXchange to escalate tickets and discuss system enhancements that would benefit all Pennsylvania providers.

PHA reserves the right to modify/change responses to these questions based on receipt of additional information or instruction from an oversight entity. Changes will be published in PHA's weekly "Connections" e-newsletter.

Do we still need to require our caregivers to have a participant signed timesheet even if there is an EVV? I thought that signed timesheet is only needed if there is a missed EVV.
The agency must maintain sufficient documentation to justify the billing claim. Documentation must include type, scope, amount, frequency, and duration of care. If the EVV capture fails to obtain this justification, additional documentation would need to be obtained. For example, if tasks are not used in EVV, the provider would need to maintain documentation of scope of services in another manner.

Many of our manual edits are due to back-to-back shifts. When you have one caregiver relieving another caregiver, there could be an overlap as the workers signing off is providing a report to the worker signing in to ensure seamless continuity of care. This results in manual edits frequently.
You cannot bill for two staff at the same time if it is not authorized on a care plan. The time spent reviewing patient information then is payable, not billable. Training with the workers on clocking in and out and reporting payable, not billable time in a manner that does not create a manual edit is advisable.

Where specifically do we turn on in HHA to capture the GPS even if no signal?
This is called "offline mode." It is most often in administrative settings. You can submit an EVV Vendor support ticket to have this changed in administrative settings if you are unable to change the setting yourself (HHAeXchange requires a support ticket for this change).

Where can we turn on automatic splitting on HHA Exchange?
You can submit an EVV Vendor support ticket to have this changed in administrative settings.

What do we do when HHA doesn't have the authorization in or when you email them to correct a patient's address or phone number and they never correct it. This will affect the EVV.
If there is no authorization, enter a Temporary Member, add the correct address as an approved GPS location (documenting with the MCO the correct address) and have the staff clock in and out. When the authorization appears in HHAeXchange, use the linking feature to link the visits to the member. This will result in a transfer of the EVV data to the member for EVV compliance purposes.

What happens if the patient is unable to sign?
MCOs have asked that you contact your Supports Coordinator for direction in this scenario.

We have an unusual situation with a current consumer. We provide dual staffing, 24/7, for this case. There is always a CNA and LPN present. It is billed under one code covering both the aide and nurse. This is through Consolidated Waiver/ODP. To be paid, we were told by ODP, that we had to "manually adjust" each punch in/out to the specific hour. Our staff is using EVV appropriately, (HHA Exchange), however, because we have to adjust, we are not considered to be within the compliance percentages. To provide you with an example… First shift is 6am to 2pm. If our nurse or aide clocks in at 5:58am, we must adjust to 6am and document a note stating, "2:1 Systems Limitation." If we do not have this, we cannot get paid. It is some kind of issue with the system because of the dual staffing.
"*For 2:1 service specifically, the system is unable to determine which care worker visit to use when calculating units if the aggregator contains overlapping time for 3 or more care workers. This scenario will typically occur during shift changes. To resolve this issue, the provider should manually adjust the third care worker's EVV visit to a time that does not overlap with the care worker's time whose shift is ending. Due to this system limitation, a manual edit for this scenario is acceptable by DHS." – DHS website*

PHA reserves the right to modify/change responses to these questions based on receipt of additional information or instruction from an oversight entity. Changes will be published in PHA's weekly "Connections" e-newsletter.

The above language suggests that you should ONLY have to do a manual edit if there is a shift change where the 2 caregivers on the first shift overlap clock in and out times with 1 or more caregivers on the second shift. If this occurs, you should only need to adjust the caregiver on shift 2's clock in time to make sure it doesn't overlap with the clock out from the "shift 1" caregivers.

Sometimes there will be an overlap in shifts. Ex: 1st shift person clocks out on time, but system rounds so it matches the clock in time and then 2nd shift clock in overlaps. We make a manual adjustment so there is no overlap, does a timesheet have to be signed?
Any time you have a manual edit, manual edit documentation guidelines apply.

Can PHA find the window of clock in and out from State, OLTL and MCOs?
There is no required clock in and out window related to scheduled time in and out. This is at the discretion of the provider.

Is the window for clocking in and out 7.5 minutes?
No. 7.5 minutes is the billing rounding rule for some program offices in Pennsylvania. Rounding and clock in/out thresholds are separate considerations.

Guidance for UPMC Community HealthChoices Personal Assistance Services Providers Regarding Record Keeping and Electronic Visit Verification Requirements

Personal assistance services (PAS) are a home- and community-based services benefit that are covered through the Community HealthChoices Long-Term Services and Supports (LTSS) program. PAS primarily include hands-on assistance for participants, as specified in a person-centered service plan (PCSP), to enable a participant to more fully integrate into their community and ensure their health, welfare, and safety. PAS are intended to help participants complete activities of daily living (ADLs) and instrumental activities of daily living (IADLs) that the participant would perform on their own if they did not have a disability.

> **Activities of daily living:** These include eating, drinking, ambulating, transferring in to and out of a bed or chair, toileting, bladder and bowel management, personal hygiene, self-administering medication, and proper turning and positioning in a bed or chair.
>
> **Instrumental activities of daily living:** These include the following activities when done on behalf of a participant: laundry, shopping, securing and using transportation, using a telephone, making and keeping appointments, caring for personal possessions, writing correspondence, using a prosthetic device, and housekeeping.

See Application for 1915(c) HCBS Waiver: PA.0386.R04.07 - Jan 01, 2022 (as of Jan 01, 2022) (the "Waiver") and 55 Pa. Code § 52.3 for more information. These definitions should be regarded as general guidance for scope of services, tasks, and duties encompassed by PAS; however, the examples are not exhaustive. As the Waiver indicates, "this service will be provided to meet the participant's needs, as determined by an assessment, in accordance with Department requirements and as outlined in the participant's service plan."

For each participant, UPMC CHC develops a person-centered service plan (PCSP) that addresses how the participant's health needs will be managed under their Community HealthChoices plan. The PCSP includes an LTSS service plan, which is designed to "identify and address how LTSS needs will be met and how services will be provided in accordance with the Person-Centered Service Planning (PCSP)." See the 2022 Community Healthchoices Agreement for more information.

PCSPs document the type, scope, amount, duration, and frequency of services needed by the participant. These plans are furnished to the participant and, can be shared directly with the PAS provider through the UPMC Health Plan Provider OnLine website in order for the PAS provider to develop a plan of care to meet the daily needs of the participant. In addition, the elements of the scope of work—the tasks that are identified in the PCSP for completion with and for the participant—are outlined in the Service Authorization through HHAeXchange. PAS providers must provide services in accordance with this scope of work.

Documentation Requirements for PAS Providers

PAS providers must complete and maintain documentation that records all services provided to a participant, and those services must be in accordance with the type, scope, amount, duration, and frequency found in the PCSP and the details of the Service Authorization. Specifically, provider records should

note all ADL/IADL tasks performed during the PAS encounter and demonstrate how each service was related to needs identified on the PCSP. Additional guidance can be found in 55 Pa. Code § 52.14 (Ongoing responsibilities of providers), § 52.15 (Provider records), and § 52.43 (Audit requirements). (Please note that the responsibilities listed in those regulations are not exhaustive.) Providers must complete documentation as contemporaneously with service delivery as possible.

Electronic Visit Verification Requirements for PAS Providers

Under Section 12006(a) of the 21st Century Cures Act (Cures Act) and Pennsylvania DHS Medical Assistance Guidance, PAS providers are required to implement Electronic Visit Verification (EVV) for all PAS services. In order to fulfill the EVV requirement, the following data must be captured and provided to UPMC Health Plan via its EVV vendor, HHAeXchange:

- Type of service performed
- Participant receiving the service
- Individual providing the service
- Date of the service
- Location of service delivery
- Time the service begins and ends

See the UPMC Health Plan Provider Manual, UPMC Community HealthChoices (Medical Assistance) – Chapter N, for further guidance on EVV.

The minimum threshold for use of EVV is electronic verification of 50 percent of all PAS encounters. Any use of EVV below this threshold is grounds for imposition of a Compliance Plan and may be grounds for termination of a PAS provider's participating provider agreement with UPMC CHC. See OLTL Bulletin 07-20-04 for more information.

The EVV requirement **is separate from and in addition to the record-keeping requirements described above.** Compliance with the EVV requirements does not abrogate a PAS provider's responsibility to keep records of all ADL/IADL tasks performed during a PAS encounter and how each service relates to needs identified on the PCSP.

Additional Requirements for PAS Providers

Finally, 28 Pa. Code § 611.57 ("Consumer protections") states that the following information must be provided by PAS providers to consumers: "A listing of the available home care services that will be provided to the consumer by the direct care worker and the identity of the direct care worker who will provide the services." This participant-facing documentation is independent of either the provider's record keeping or EVV requirements.

Frequently Asked Questions:

Aren't type, scope, amount, duration, and frequency included in the EVV encounter? Why do I need to keep separate records of task details?

The six required EVV data elements (see above) do not include all required details of the service delivery. EVV only accounts for the type (PAS or Respite and with the applicable CPT code), amount (based on the overall units of the shift between the clock in/clock out), duration (based on the elapsed time between clock in/clock out), and the frequency (based on the appropriate interval for service delivery per the PCSP and POC).

Scope (i.e., tasks, duties, ADLs, IADLs) is not part of the EVV requirements but it is a requirement based on both Pennsylvania Code (see above) and your participating provider agreement with UPMC CHC. This requirement helps ensure that participants are receiving the right care, in the right way, at the right time, every time.

How much scope detail should the direct care worker record?

The direct care worker should provide as much scope detail as possible, generally adhering to the ADL and IADL tasks noted in the definitions above and in the PCSP. All tasks for a date of service should be

recorded. Keep in mind that tasks identified on the PCSP and plan of care should be recorded if they are performed during a visit, even if they are not specified in the CMS and Pa. Code service definition.

Remember, only tasks truly completed during the encounter date of service should be recorded.

What if the provider's EVV system does not record scope of work (i.e., tasks, duties, ADLs, IADLs)?

If the provider is not recording tasks (ADLs/IADLs) in a digital system, the direct care worker should produce a document—digital or paper—that includes the scope of work performed during the visit and the direct care worker's signature.

My tasks are recorded digitally but the data is not integrated with (transferred into) HHAeXchange. What should I do?

The electronic scope detail (tasks, duties, ADLs, IADLs) should be retained according to the timeline specified in your participating provider agreement. It should be made available during an audit or a documentation request by Quality Monitoring.

If there is a missing EVV clock in OR clock out, does the provider need to have a reference document with a direct care worker sign-off that indicates the time of the clock in or out?

Yes. It does not have to be a physical copy—it could be a digital document if the provider has the technology for electronic signature attestation—but it does need to be a reference document (not necessarily a complete time sheet) for auditing purposes.

If there is both a missing EVV clock in AND clock out, what documentation should be recorded?

The provider would need a full time sheet (digital or paper) with the direct care worker's signature. Again, it could be a digital document if the provider has the capacity to record all applicable timesheet details with a direct care worker's electronic signature/attestation. It should include all the task details that were not otherwise recorded in the digital system.

If the EVV encounter was performed, do we need a direct care worker's signature on documentation?

If the EVV system captures the required scope information, a direct care worker's signature is not needed on documentation. However, if the scope of work—all the tasks performed during an encounter shift—is separately recorded in the provider's preferred system, those records would require the direct care worker's signature.

If we need to correct a minor EVV error—such as a geofence adjustment because of a participant address mismatch or a direct care worker's clock out in the community—how would we address the manual edit documentation?

The provider administrator should note the circumstances in the linked HHAeXchange note or their system of record. No direct care worker signature is required.

Can we substitute an administrator's signature for a direct care worker's signature in any of the above scenarios? What if the direct care worker no longer works for our agency?

No. The direct care worker signature is required regardless of the circumstances.

Does manual documentation require a participant's signature?

No. For agency-model services (that is, services provided by a direct care worker employed by an agency and not directly by the participant), the participant is not expected to sign the provider's time sheets or other forms of manual encounter documentation. However, the provider may choose to require a participant's signature for these circumstances based on their business practices.

Is there a recommended time frame for manual documentation completion?

Manual documents should be completed immediately, on the date of service. The provider should train the employed direct care worker to

immediately document missed clock in and clock out when identified, and to record scope (tasks, duties, ADLs, IADLs) upon completion of the task or upon the close of the encounter/shift. This should be acknowledged within a provider's internal policies.

Do I need to have a record-keeping policy/procedure and an EVV policy/procedure for my organization?

Yes, and the direct care worker should be trained on record keeping and EVV to ensure successful utilization.

As indicated in OLTL Bulletin 07-20-04, "Providers are to establish policy on documentation required to meet auditing requirements and standards, as well as organizational needs."

UPMC CHC will regularly monitor and review provider EVV policies. At minimum, policies should set clear guidelines on EVV requirements, the effective use of the provider's EVV solution of choice, and contingency planning in the event that a visit (or a portion of a visit) was not captured using EVV or requires an edit and/or correction, etc. All stakeholders—administrators, direct care workers, participants, and Support Team members—should be trained on a provider's EVV process respective of their roles.

Direct care workers should always be prepared for circumstances in which there could be manual entry circumstance for the encounter.

What happens if the GPS coordinates are in the community when the shift starts/ends but that is where the participant wants to start?

If a visit (encounter) begins or ends in the community in an atypical location (a location that is not identified as the primary residence in the managed care organization [MCO] system of record) the encounter is regarded as a noncompliant manual exception under the DHS PCS EVV Bulletin, Cures Act, and the UPMC Health Plan Provider Manual, UPMC Community HealthChoices (Medical Assistance)—Chapter N.

In these circumstances, the GPS location of the start/end location recorded on the caregiver's smartphone EVV app will not align with the customary service delivery location, or the telephone modality will be unavailable.

In best practice, the direct care worker should clock in and clock out in the community where visits begin and end using an EVV solution if/when available but notate manual exceptions per the above.

Additionally, it is allowable to revert to recording the missing EVV visit/encounter details in an alternative format (i.e., paper or a digital document) that should be signed by the attending caregiver. However, please note that this will be regarded as a manual exception, not a compliant EVV encounter.

Can a secondary service location be added to support EVV encounter recording?

Yes. A secondary service address can be added if the participant customarily receives PAS in a non-primary location (for example, if a participant receives ongoing agency PAS at their daughter's home twice a week).

Providers can request the addition of this address for the purposes of EVV compliance tracking by contacting their Network representative via CHCProviders@upmc.edu. (Participants should contact their service coordinator with all requests.)

All secondary address additions must be reviewed by the participant's service coordinator and approved in the PCSP before they are entered into the HHAeXchange system. Normal GPS geofence restrictions apply.

Can additional landlines be added to support EVV encounter recording?

Yes. Additional landlines can be approved for participants who receive services at locations other than their home. Like additional locations, additional landlines must be reviewed and approved per the above guidelines.

What if the participant only has a cell phone and the direct care worker does not have a cell phone?

Using a participant's cell phone is not acceptable for telephonic verification unless there is a way to capture location, such as a fixed visit verification device.

Telephonic verification must include validation through a GPS or location system.

EVV policies for providers incorporating a landline telephone modality should include a process for verifying the participant's phone type, ideally during new participant intake and annually.

Providers are advised to closely monitor landline telephone use, ensuring that Interactive Voice Response (IVR) call-in/call-outs associated with visits are initiated from a landline at the participant's registered service locations.

Direct care workers should be advised to provide notification of any changes that impact EVV capture.

Visits not recorded using EVV tools and entered as manual visits are regarded as noncompliant manual exceptions with the EVV for Personal Care Services, (PCS) Bulletin (#07-20-04), Cures Act, and the UPMC Health Plan Provider Manual (Chapter N).

Can my organization use fixed object devices to track EVV?

Yes. Fixed object devices (FOBs) are an allowable alternative to EVV tools. All FOBs must be permanently affixed at the primary service location.

For providers using only the free HHAeXchange system, FOBs can be requested by contacting the UPMC Health Plan Network team at CHCProviders@upmc.edu. Providers are required to complete a short survey to verify whether an FOB is the best fit for each circumstance.

How does UPMC CHC monitor for EVV compliance?

The UPMC Provider Monitoring team refers providers to the waiver citation regarding acceptable EVV methodology: "The methods used to capture visits include mobile phone applications, telephonic entry via a landline telephone, and fixed verification devices."

The Provider Monitoring team must validate a PAS visit via compliant means to ensure the location of the visit.

Noncompliant manual exceptions to EVV are factored into the aggregate EVV Compliance percentage.

For example, if a provider completes 100 visits per quarter and 25 of the 100 visits were noncompliant manual exceptions, the provider is considered to be 75 percent EVV compliant.

UPMC Health Plan monitors EVV compliance on a quarterly basis and will request Compliance Plans for providers that fail to meet a 50 percent EVV compliance threshold for all reported encounters, effective Jan. 1, 2023.

Often, situations with GPS coordinates outside the home are identified by the Monitoring and Audit teams. These teams take into consideration a participant's address history (GPS coordinates possibly tie to prior address, causing a mismatch of the caregiver and participant pins), the marked tasks/duties for the PAS visit, and manual edits in provider's participant record.

PENNSYLVANIA HOMECARE ASSOCIATION

AmeriHealth Caritas/Keystone First Manual Edit Signature Capture Requirements

Type of Signature	Allowable?	Description of Signature type
Original Paper Signature	Allowable	Wet signature completed with a pen, pencil or other writing device on traditional paper that includes the individual's personally identifiable signature, including first and last name.
Scanned Paper Signature	Allowable	A scan or image of a paper document that had the original wet signature of the individual's first and last name in their own handwriting using a pen, pencil or other writing device.
Digitized Signatures	Allowable	The signer is asked to sign their name on a digital input device. The signature is recorded and stored with the document. For a higher level of identity validation, software may be used to compare the signature with a pre-existing sample. This is a form of biometrics. A common example of this is the use of electronic signature pads for credit card transactions in retail establishments.
Check box / Click on/ Click to Sign	Not Allowable	The signer of the document is asked to check off a box that's labeled "I accept," "Yes," "I agree," etc. or click a corresponding button. Generally he/she is given the option to make either a "Yes" or "No" choice. Sometimes the signer may be asked to type the words "I Agree" in a text box to ensure that there is no misunderstanding. Upon selecting the (usually) affirmative box, the signer is allowed to proceed with the action of the system. A common example of this is the installation of a software package on a computer. Particularly with commercial software, the installer is asked to agree to terms and conditions before the software is actually installed on the system. Failing to click on the "I Agree" button or check the "Yes" box aborts the software installation process. Despite the lack of any real validation of the installer's or user's identity, many people have been successfully prosecuted for software piracy based on this eSignature. There is little or no validation of the signer's identification in this type of eSignature. Generally it should only be used for low-risk or low-value transactions.

Personal Identification Number (PIN) or Password	Not allowable	The signer is asked to provide identifying information (userID, Social Security Number, etc.) and a shared secret (something that both parties know) such as a PIN or password. Once the information is entered, the system authenticates the signer by checking that the shared secret is indeed the one that was established for the claimed identity. Generally there needs to be a pre-existing relationship between the entities. The process for validating a user and subsequently issuing a shared secret can vary widely and may be as strong or as weak as deemed necessary for the transaction. For example, a customer may establish an account with an online retailer simply by entering some basic information (name, address, phone number, email account) and supplying their own choice of userID and password. This is sufficient to enter the site, browse the online catalog and even put items into a shopping cart. However, when it comes time for checkout, a higher level of authentication is required in the form of verifiable and valid credit card in the user's name and with the appropriate billing address, etc. Once this higher level of identity has been established, subsequent transactions of the sort may rely only on the userID and password and stored information. An example of such a system being used within the Commonwealth is the online filing of state income tax returns. Here there is a pre-existing relationship between the user and the Commonwealth. The userID is the user's Social Security Number and the validating information or shared secret is information off of the user's previous year's state income tax return or the user's PA Drivers License or Identification Card number. As noted above, the validation of the user's identity can vary widely and the process should be tailored to the risk/value of the transaction.
Digital Signatures (PKI)	Not allowable	A digital signature (not a *digitized* signature) makes use of public key infrastructure (PKI). A trusted (third party) certification authority validates the identity of a user and issues a two-piece digital key. One is the private key and is held by the user. The other is a public key and is made available to the world. The two keys are mathematically linked to each other and can be used to encrypt and to sign documents. Without going too in depth into the details, a document encrypted with one of the two keys (generally the public key) can only be decrypted with the other one of the pair. A document signed by one of the keys (generally the private one) can have the signature validated by the other key of the pair. This type of eSignature provides a high level of security and validation of a document, depending on the rigor applied in the registration process. It is correspondingly costly. Also the key pairs must be preserved for the lifetime of the document; without them the signature cannot be validated and if the document is encrypted, it cannot be decrypted. Generally this type of signature is reserved for high risk/high value transactions such as high value bank transfers or corporate orders.

Biometrics	Not allowable	Personal characteristics (fingerprints, iris or retinal patterns, DNA, voice, handwriting) can provide a very high level of identity validation when used as or as a part of an eSignature process. These are not widely used at this point in time, however, examples include the comparison of a digitized signature with a previous sample (as mentioned above) or the recording of a signer's voice as he/she makes a required statement.
Hardware Tokens	Not allowable	While not necessarily an eSignature in itself, hardware tokens such as smart cards, single use PIN generators (e.g., RSA SecureID) can be used to augment an eSignature process. A smart card, for example, can be used to hold the user's private key in a digital signature solution or a user's biometric characteristics. A PIN generator can provide a higher level of security for a shared secret eSignature.

Avoiding Unnecessary Manual Edits With EVV: Key Tips For Compliance

August 16, 2024

As Pennsylvania prepares to move to an 85% threshold for EVV compliance on January 1, 2025, PHA is committed to helping you stay prepared. If you missed our review in last month's *Quick Hits*, here are some critical setting changes HHAeXchange users should consider to avoid unnecessary manual edits:

- Disable "Visit Confirmation Rounding"
- Disable "Auto-Round Overlapping Shifts"
- Enable "Automatic Splitting"
- Enable "Offline Option"
- Lengthen "Tolerance Range" for scheduled time a caregiver can clock in and out
- Set higher GPS Distance Thresholds (regulatory allowable is up to 0.25 miles or 1,320 ft)
- Enable "Single Clock In/Out for Consecutive Shifts" to allow caregivers to clock in at the start of the first shift and out at the end of the second shift, even with different billing rates

Use the HHAeXchange ticketing system to understand what the above requests mean to your operations. If you agree to the change implications, you can request to change to your current settings.

Join PHA on September 5 at the Best Western Premier or online in Harrisburg for our revamped EVV Compliance Collaborative. This event puts a new spin on our usual EVV Check-In, featuring peer education sessions on key compliance topics and an Enhanced Ticketing Table, where you can receive personalized support from HHAeXchange and MCO representatives. Register today!

PRINTER'S NO. 3220

THE GENERAL ASSEMBLY OF PENNSYLVANIA

HOUSE BILL

No. 2372 Session of 2024

INTRODUCED BY BENHAM, ORTITAY, PROBST, HOHENSTEIN, McNEILL, HARKINS, SANCHEZ, WAXMAN, KHAN, BRIGGS, ABNEY, BOROWSKI, DEASY, HILL-EVANS, DELLOSO, PISCIOTTANO, KRAJEWSKI, GREEN, CERRATO, DALEY, SHUSTERMAN, SALISBURY, DONAHUE, MADDEN, CEPEDA-FREYTIZ, FRANKEL, POWELL, MERSKI AND COOK, JUNE 3, 2024

REFERRED TO COMMITTEE ON APPROPRIATIONS, JUNE 3, 2024

AN ACT

Amending the act of April 9, 1929 (P.L.343, No.176), entitled "An act relating to the finances of the State government; providing for cancer control, prevention and research, for ambulatory surgical center data collection, for the Joint Underwriting Association, for entertainment business financial management firms, for private dam financial assurance and for reinstatement of item vetoes; providing for the settlement, assessment, collection, and lien of taxes, bonus, and all other accounts due the Commonwealth, the collection and recovery of fees and other money or property due or belonging to the Commonwealth, or any agency thereof, including escheated property and the proceeds of its sale, the custody and disbursement or other disposition of funds and securities belonging to or in the possession of the Commonwealth, and the settlement of claims against the Commonwealth, the resettlement of accounts and appeals to the courts, refunds of moneys erroneously paid to the Commonwealth, auditing the accounts of the Commonwealth and all agencies thereof, of all public officers collecting moneys payable to the Commonwealth, or any agency thereof, and all receipts of appropriations from the Commonwealth, authorizing the Commonwealth to issue tax anticipation notes to defray current expenses, implementing the provisions of section 7(a) of Article VIII of the Constitution of Pennsylvania authorizing and restricting the incurring of certain debt and imposing penalties; affecting every department, board, commission, and officer of the State government, every political subdivision of the State, and certain officers of such subdivisions, every person, association, and corporation required to pay, assess, or

collect taxes, or to make returns or reports under the laws imposing taxes for State purposes, or to pay license fees or other moneys to the Commonwealth, or any agency thereof, every State depository and every debtor or creditor of the Commonwealth," in human services, providing for personal assistance services rate; and, in general budget implementation, further providing for Department of Human Services.

The General Assembly of the Commonwealth of Pennsylvania hereby enacts as follows:

Section 1. Article XVI-T of the act of April 9, 1929 (P.L.343, No.176), known as The Fiscal Code, is amended by adding a section to read:

Section 1607-T. Personal assistance services rate.

(a) Community HealthChoices.--Effective January 1, 2025, a provider who receives funding through Community HealthChoices through the existing Office of Long-Term Living (OLTL) Home and Community Based Waiver Services Fee Schedule Rate for Procedure Codes W1793 - PAS (Agency) and W1792 - PAS (Consumer) Services shall spend no less than 80% of the funds received on salary and benefits of a personal assistance worker.

(b) Enhanced provider rate.--The Department of Human Services shall establish an enhanced rate for a provider that invests no less than 90% of funds received from the Commonwealth on the wages and benefits of an agency-directed personal assistance worker. Notice of the enhanced rate shall be transmitted to the Legislative Reference Bureau for publication in the next available issue of the Pennsylvania Bulletin.

(c) Evaluation of rate.--

(1) No later than December 31, 2027, and every three years thereafter, the Department of Human Services shall review the current rate paid to personal assistance workers and make recommendations on any proposed changes to the current rate. In the department's review, the department

shall, at a minimum:

(i) Identify key cost components for each service based on the service.

(ii) Obtain input from the Medicaid Rate Workgroup.

(iii) Collect and analyze Pennsylvania-specific wage data, including inflation and the Consumer Price Index.

(iv) Review and analyze updated assumptions.

(v) Model the fee ranges for each service and solicit feedback on the proposed fee ranges.

(2) The following shall apply:

(i) The Governor shall consider any proposed changes to the rate under this subsection in the annual budget development and implementation process.

(ii) The General Assembly shall consider any proposed changes to the rate under this subsection in the annual budget development and implementation process.

Section 2. Section 1729-E(a) of the act is amended by adding a paragraph to read:

Section 1729-E. Department of Human Services.

(a) Appropriations.--The following shall apply to appropriations for the Department of Human Services:

* * *

(9) From money appropriated for Long-Term Living (OLTL) Home and Community Based Waiver Services:

(i) Sufficient funds are included for a 16% increase, effective January 1, 2025, to the existing Office of Long-Term Living (OLTL) Home and Community Based Waiver Services Fee Schedule Rate for Procedure Code W1792 - PAS (Consumer) Services. This increase shall be used to provide a wage increase for direct care

workers providing consumer-directed personal assistance services.

(ii) Sufficient funds are included for a 10% increase, effective January 1, 2025, to the existing Office of Long-Term Living (OLTL) Home and Community Based Waiver Services Fee Schedule Rate for Procedure Code W1793 - PAS (Agency) Services. This increase shall be used to provide a wage increase for direct care workers providing agency-directed personal assistance services.

* * *

Section 3. This act shall take effect in 60 days.

The Honorable Stephen Kinsey
Majority Chairman
Human Services Committee
Pennsylvania House of Representatives
317 Irvis Office Building
Harrisburg, PA 17120-2201

The Honorable Doyle Heffley
Minority Chairman
Human Services Committee
Pennsylvania House of Representatives
218 Ryan Office Building
Harrisburg, PA 17120- 2122

May 9, 2024

Dear Chairmen Kinsey and Heffley,

On behalf of the Pennsylvania Homecare Association (PHA), I am writing in response to a recent House Co-Sponsorship Memorandum introduced by Reps. Jessica Benham and Jason Ortitay, "Agency Accountability and Livable Wages for Pennsylvania's Home Care Workers". PHA has nearly 700 members providing home health, homecare, and hospice services across the Commonwealth. Our members reflect the diverse landscape of home and community-based service providers credentialed by the State of Pennsylvania to deliver services to the most vulnerable Pennsylvanians.

We were encouraged to see an increase in state funding for rates under Personal Assistance Services (PAS) in PA's Medical Assistance Community HealthChoices (CHC) programs in the proposal. Additionally, we wholeheartedly support a market-based analysis of rates every three years to ensure rates are more regularly adjusted for inflation going forward.

That said, PHA has serious concerns about the requirement that at least 80 percent of the total funding be spent on workers compensation, with annual reporting requirements to document the use of public funds. This language mirrors the final "Ensuring Access to Medicaid Services" rule that was recently released by the Centers for Medicare & Medicaid Services (CMS). Despite concerns from providers and Medicaid agencies about burdensome reporting requirements, state expense for administrative oversight, disparate impacts on small and rural providers, and lack of actuarial studies to support the 80/20 data recommendation, CMS finalized the rule with the problematic provisions still in place. Separately creating a state-mandated 80/20 provision is not only duplicative, but it also exacerbates workforce challenges in homecare services rather than alleviating them.

In a national and regional context, Pennsylvania's Medicaid fee-for-service reimbursement rates for personal assistance services (PAS) are notably low, averaging $20.63, the lowest rate of our surrounding states with the exception of West Virginia. This rate has seen minimal increases over the past decade, failing to keep pace with inflation. Moreover, this rate covers all care aspects, including wages, overtime, administration, background checks, quality, nursing supervision, innovation, technology, and essential resources like PPE.

Similarly, we oppose the provision allowing "mission-driven non-profit" home-care agencies an enhanced rate for allocating 90 percent of their total rate to the workforce. Enhanced rates should be value-based and tied directly to quality and overall cost of care reductions, rather than arbitrary percentages that are not actuarily sound. Our industry focus should be on innovation, training, career pathways and investments in quality of care, rather than simply pay rates.

600 N. 12th Street, Suite 200 • Lemoyne, PA 17043

www.pahomecare.org

PHA has been a vocal advocate for pay rate increases, especially to address the critical shortage in attracting and retaining workers. This reflects our commitment to supporting Pennsylvanians and acknowledging the vital role of direct care workers.

The Co-Sponsorship Memorandum unjustly portrayed home care agencies as solely profit-driven entities, which is inaccurate, home-based care providers are deeply committed to ensuring access to high-quality care for all Pennsylvanians in need and enhancing professional standards. PHA and our members have spearheaded efforts for homecare licensing, more stringent training requirements, and enhanced regulatory standards. Our dedication to quality care is steadfast. We support quality metrics, higher reimbursement rates and wages for DCWs, and transparency in the system.

We urge all stakeholders to collaborate for the sustainable future of home-based care and prioritize rates that support quality services over arbitrary requirements. It is imperative for Pennsylvania to establish a framework that effectively supports aging individuals and ensures high-quality care for all in need.

Sincerely,

Mia Haney, CEO
Pennsylvania Homecare Association

The Honorable Seth Grove
Minority Chairman
Appropriations Committee
Pennsylvania House of Representatives
245 Main Capitol Building
Harrisburg, PA 17120- 2196

June 7, 2024

Dear Chairmen Harris and Grove:

On behalf of the undersigned associations, we write to share feedback on House Bill 2372, "Agency Accountability and Livable Wages for Pennsylvania's Home Care Workers," sponsored by Reps. Jessica Benham and Jason Ortitay. The Pennsylvania Homecare Association (PHA), the Pennsylvania Association of Home and Community-Based Services, and the Rehabilitation & Community Providers Association (RCPA) collectively represent hundreds of thousands of participants and caregivers in Pennsylvania's Medicaid Home and Community-Based Services (HCBS) program.

We fully support the proposed increases in state funding for personal assistance services (PAS). However, we advocate for the following clarifications:

1. **We request that any rate changes be made to the Office of Long-Term Living fee schedule and all applicable programs.** This ensures that the changes impact all LTSS workforce, including those providing critical brain injury supports and rehabilitation services. Current verbiage excludes these programs, which are smaller than Community HealthChoices, but just as critical.
2. **We support a 16% wage increase for direct care workers across all models of care in the LTSS space.** Creating disparities by assigning different rate increases to agency and consumer-directed models at this critical juncture in the workforce crisis is counterproductive, and creates unnecessary conflict within the industry (current verbiage contains a 10% for agency model and 16% for consumer-directed model). Increases to rates specifically address the significant changes in compensation needed to be competitive in the current marketplace. Agencies, consumer-directed care, and rehabilitation all face the same reality; their workforce can make more money at the local gas station, retail store, or restaurant. A 16% increase in all models is a recognition from the legislature that inflationary impacts must be addressed, and this workforce secured, in order to protect Pennsylvania's most vulnerable population. It also can be viewed as a positive step towards leveling rates with contiguous states, following more than a decade of under-funding across both models of care. Our current reimbursement rates lag bordering states by $4.50/hour or more.
3. **We support language that requires the Department of Human Services to adopt a rate review and rate setting process that occurs at a minimum of every three years**, including obtaining input from a Medicaid Rate Work Group comprised of stakeholders across all models of care.

We appreciate the acknowledgment of the importance of continued funding support for health-sustaining services that enable individuals across Pennsylvania to thrive in their homes and communities, which are both the preferred and more cost-effective settings. **However, we have significant concerns regarding the requirement that at least 80% of the total funding be allocated to worker compensation, along with the accompanying annual reporting requirements to document the use of public funds.** This requirement reflects the language found in the recently released "Ensuring Access to Medicaid Services" rule by the Centers for Medicare & Medicaid Services (CMS).

During an extensive review and public comment period for the CMS rule, numerous concerns were raised by providers and Medicaid agencies. These concerns included the burdensome nature of the reporting

requirements, the administrative oversight costs, the disparate impact on small and rural providers, and the lack of actuarial studies supporting the 80/20 funding allocation recommendation. Consequently, CMS delayed the implementation of this mandate until 2030 to ensure proper implementation and to avoid unintended consequences, such as a decline in access to care.

For Pennsylvania to implement a similar provision in a more expedited manner is not only duplicative but also undermines the efforts made by CMS to ensure that this federal rule is promulgated successfully and without causing undue hardship for states. **If these rules are to be implemented, the timeline should follow the federal guidelines.**

In addition, we oppose the provision allowing "mission-driven nonprofit" agencies to receive enhanced rates if they allocate 90% of their total rate to the workforce. We would suggest that all providers of Medicaid services are “mission-driven” regardless of their tax status. Any enhanced rates should be value-based and directly tied to quality and cost reductions, rather than arbitrary percentages. Our focus should be on investments in innovation, training, career pathways, and quality of care, which are critical to achieving the best outcomes for both the workforce and the individuals receiving care.

Our collective organizations believe that increased funding for personal assistance services and residential habilitation is the priority. We would welcome the opportunity to make changes to this bill that would eliminate restrictive provisions which divert attention from our true imperative and pressing need; reimbursement to support competitive wages.

We urge all stakeholders to collaborate on creating a sustainable future for home-based care, prioritizing rates that support quality services over arbitrary requirements. Pennsylvania must establish a framework that effectively supports aging individuals and ensures high-quality care for all in need.

Sincerely,

The Honorable Jason Kavulich
Secretary
Department of Aging
Commonwealth of Pennsylvania
555 Walnut Street
Harrisburg, PA 17101

June 21, 2024

Via Electronic Mail

Dear Secretary Kavulich,

As the Pennsylvania Department of Aging (PDA) works to improve the network of care, housing, and infrastructure needed to support Pennsylvania's older adults, particularly as baby boomers continue to transition into retirement, we urge you to remain cognizant of the delicate ecosystem that makes up the network of supports our commonwealth's seniors rely on. While ensuring our state's older adults have critical access to protective services should be a priority, at the current moment, lack of funding and state investment in the industry is one of the largest threats to our state's seniors. Ensuring access to care through meaningful investment and addressing an ongoing workforce crisis must be the main focus.

The below-signed associations and interested parties appreciate the opportunity to comment on the proposed legislation to reform the Older Adult Protective Service Act (OAPSA) and request that the PDA reconvene a stakeholder group to discuss this in more detail. As currently drafted, we must oppose this legislation. The comments below reflect some of our current concerns as well as the nuance that providers and the Department previously negotiated following the introduction of Senate Bill 819 (R-2019). We look forward to a robust discussion with the Department and administration before further action on the proposed legislation.

Immunity

The proposed bill does not include immunity language for facilities that make good faith efforts to comply with the bill section, which outlines the hiring or retention of applicants or employees with criminal histories, including provisional hiring of those individuals. Stakeholders have advocated for language that protects the facility's liability in attempting to hire/retain employees with a criminal history. An example of this language is:

> "A facility that employs an individual shall not be held civilly liable for any action directly related to doing so in good faith compliance with subsection 702-A of this act."

Including language to protect providers that do hire applicants affected by the justice system is needed. Additionally, there is also a **lack of civil provider protections from applicants who are awarded a waiver by the department but are ultimately not hired by the employer**.

Availability of Background Checks

The current version **does not include any parameters/responsibilities for the department to meet in order to ensure adequate access to background check processing sites**. Providers advocated for these parameters to be included to ensure that obtaining a background check is not an additional barrier to employment. Among others, requirements may include:

- Ability to schedule appointments within 10 days.
- Nonstandard business hours of operation.
- At least one location in each PA County.
- Waiving background requirements if parameters were not met.

With the lack of availability of these sites, particularly in rural areas, there will undoubtedly be delays in hiring, not just for direct care but all aging services workers.

The proposed language would also **require providers** to bear the cost of these additional background checks. Costs have increased significantly over the past few years to $25.25 per Federal Bureau of Investigation (FBI) background check, plus $22.00 per criminal history record. Imposing these added costs, in addition to initial costs of onboarding and training, in the midst of a workforce crisis, for providers who are already underfunded for the care they provide further exemplifies the department's lack of understanding regarding the impact major reforms to OAPSA would have on the aging services community. While providers may elect to cover those costs, they should not be required to do so.

Background check requirements

Current law only requires federal checks on individuals who have not lived in PA for the prior two consecutive years. The proposed bill states:

> The following individuals shall submit to the criminal history information inquiry required under subsection (a):
>
> (1) An applicant.
>
> (2) An administrator who has or may have direct contact with a recipient.
>
> (3) An operator who has or may have direct contact with a recipient.

The drafted bill requires ***applicants*** to submit check prior to employment commencing. It is unclear whether current employees are "grandfathered" into the act.

"Operator" is not defined and it is unclear who that would include.

Requiring both FBI and State background checks, even for applicants, still poses a barrier for aging services providers to hire, especially when considering other prerequisites to working in long-term care, including license/certification, tuberculosis (TB) testing, etc., and the

concerns with the availability of testing sites discussed above.

Provisional hiring

The bill allows for facilities to provisionally hire an applicant who has submitted Pennsylvania State Police (PSP) and FBI background checks if the facility has no knowledge about the applicant that would disqualify the applicant from employment and the applicant swears or affirms in writing that the applicant is not disqualified from employment under this act for **a single period of 45 days.** Stakeholders **previously advocated for a provisional hiring period of 90 days**. Given the availability of background check facilities and the potential for delays or appeals, extending the provisional hiring period would be appropriate.

Mandatory reporter protections

Stakeholders advocated that language be included to protect mandatory reporters from liability for additional reporting requirements that the department may require in addition to the required reporting outlined in the bill. Sample language would be:

> "If an area agency on aging does not advise any additional reporting, a mandatory reporter shall be deemed in compliance with this chapter and relevant licensure regulations."

Additionally, the current draft states that a mandatory reporter must make an *immediate* oral report within 24 hours. The language is confusing and should require reporters to make an oral report to the Department within 24 hours.

Imprecise Definitions

To ensure consistency in applicability and capture adequately those persons, entities, and facilities who deliver care, we recommend the following changes to Section 103-A. Definitions.

- **We recommend the following change to the definition of subsection 8 within the definition of "Facility."**

  (8) Any other public or private organization, entity, person, or part of an organization that uses Medicaid funds and is paid, in part, to provide care and support to care-dependent individuals in the older adult's place of residence or preferred community-based setting.

- **We recommend the following change to the definition of "Employee" section (iii):**
  (iii) Any person who is employed or who enters into a contractual relationship to provide care to an older adult for monetary consideration in the older adult's place of residence or preferred community-based setting.

- **We recommend the following change to the definition of "Mandated Reporters":**

  Add "(6) caregivers"

It is with these initial concerns in mind that we must oppose this legislation as currently drafted. We ask that you consider the funding and workforce crises that have culminated into an access to care crisis as you consider reforms to OAPSA. Again, all of our organizations welcome the opportunity to participate in stakeholder discussion to ensure this legislation achieves its primary goal of protecting vulnerable older adults from abuse, neglect, and exploitation while still avoiding unnecessary delays in hiring and liability risks for providers.

Again, we welcome the opportunity to participate in stakeholder discussions to ensure this legislation achieves its primary goal of protecting vulnerable elderly adults from abuse, neglect, and exploitation without exacerbating workforce challenges.

Dear Chairpersons Madden and Mentzer,

I am writing on behalf of the Pennsylvania Homecare Association (PHA), representing over 700 home health, hospice, and homecare members across the Commonwealth. Our member agencies employ thousands of direct care workers and home health personnel who provide essential care to hundreds of thousands of Pennsylvanians, enabling our aging and disabled populations to remain in their homes and communities. We wish to share our feedback regarding the proposed OAPSA omnibus rewrite.

The Older Adult Protective Services Act (OAPSA) is crucial to PHA, our members, and the constituencies they serve. PHA wholeheartedly supports the primary goal of this legislation—protecting vulnerable elderly adults from abuse, neglect, and exploitation. However, we have concerns about the practical implications of the legislation as currently drafted. PHA advocates for enhanced protections for seniors, including a comprehensive overhaul of the financial protection provisions of OAPSA.

However, we oppose this bill as written and urge you to consider the consequences for the home health care and long-term care industry, specifically:

Provider/Stakeholder Input Must Be Considered to Protect Access to Care

PHA would happily participate in discussions on how to revise OAPSA to best meet the needs of the long-term care community.

Over the past several years, significant provider effort resulted in revisions to formerly proposed bills that we would welcome revisiting to be able to ensure the safety of the most vulnerable in our Commonwealth. This proposal does not address key concerns that were previously discussed at length with revision recommendations being overlooked in this current proposal. This language addressed those provisions that were overly burdensome and those that put workforce availability at risk, which in turn creates access to care issues across the long-term care continuum in the Commonwealth. Should the Department like to revisit those revision recommendations, PHA would be willing to engage in this effort.

Additional and Costly Background Checks Delay and Deter Hiring During Severe Workforce Shortage

The legislation proposes that all applicants be subject to both the state police background check and the FBI background check, the latter to be administered by the Pennsylvania Department of Aging (PDA).

This move to subject *all applicants* to the federal background check is new and problematic for the following reasons:

1. PDA, is unlikely to be able to handle the higher volume of federal background checks. Currently they are only using federal checks on individuals that have not lived in PA for the prior two consecutive years. The home health care industry alone represents 292,577 jobs in Pennsylvania. Compounded by high turnover rates that will result in multiple criminal record reviews for the same individual who is changing employers, it is unlikely PDA will be capable of keeping pace with this increased workload without considerable investment from the Department.

2. The cost of these additional background checks will be borne by facilities. The cost has increased significantly over the past few years to $25.25 per FBI background check, plus $22.00 per criminal history record. Facilities having to now bear this cost for *all applicants* plus the proposed training requirements, which would result in additional wages, means that providers will have to make cuts in other places. Additionally, the Department must consider that reimbursement rates for set by the state for public assistance programs, such as Home and Community Based Services, will now need to reflect these additional costs in their rate setting methodologies, increasing budgetary costs that are not directly reflected in this proposed legislation. For providers such as those who offer Office of Long Term Living Personal Assistance Services, reimbursement rates of just over $20/hour mean that increases to hiring costs will mean cuts to other areas of the program, potentially impacting quality of care or workforce benefits.

3. Medicaid beneficiaries receiving personal assistance services who choose to hire their own caregivers and direct their own care without an agency would also be required to the new background check requirements at the expense of the Commonwealth.

4. FBI fingerprint locations already are limited, especially in rural areas, and many have wait times for applicants to secure appointments, which will result in delays to hiring and thus access to care limitations. Applicants often end up spending significant time and money traveling to far locations for fingerprinting. This exacerbates an already precarious workforce crisis, especially for caregiving and nursing positions and places undue burden on this workforce.

Department of Aging as an Employment Clearing House Diminishes a Workforce Already in Crisis

This legislation proposes that the Department of Aging takes the responsibility of acting as a clearinghouse for both the Pennsylvania State Police criminal history report as well as the FBI fingerprinting and background checks for all applicants for employment, which in the long-term care industry will be thousands of individuals monthly. Currently, the Department only acts as an intermediary for FBI checks for a limited population of applicants – only individuals who have not lived in the state of Pennsylvania for the two years immediately preceding their application for employment.

PHA has serious concerns that the Department will create lengthy delays in the hiring process for Pennsylvania's critical home healthcare workforce. The proposed legislation requires that the Department make a determination with 30 days, a timeframe within which an applicant could find employment outside of the industry. Policy should dictate that we push people towards this profession,

not away from it. Furthermore, for the critical Direct Care Workforce, 30 days without employment hinders their ability to feed their families, pay rent and provide basic essentials for everyday life. While 30 days may seem satisfactory to a government entity, we assure you, this is unacceptable in real world applications.

The Department's increase in workload to act as a criminal record clearing house will be exponential compared to what they process today. The impacts of any delay to hiring, let alone delays that are weeks long (as that is the current wait time for FBI fingerprint processing) could be crippling to care delivery in Pennsylvania.

Lack of Employer Transparency in Hiring Decisions and Waiver Process

While we appreciate the Department's recognition that the legislation must reflect a due process option for individuals who have been deemed ineligible for employment, we must point out the lack of transparency for the employer who would no longer be a part of the deliberation surrounding the criminal conviction, and thus no longer responsible for the hiring decisions, or termination decision if provisionally hired.

In discussions with the Department regarding previous iterations of OAPSA, Department staff have repeatedly told providers that they would receive a notice stating only whether an applicant could be hired or not. They are not able to disclose what is on a criminal history check that was submitted to them, leaving the would-be-employer with only a portion of the information to make a hiring decision. Confounding the issue, OAPSA bills that had been previously introduced did not provide immunity for providers who hired someone with a waiver without knowing the full history of who they were hiring, leaving them in a difficult position whether to hire or not.

Furthermore, without this information, employers are less likely to take advantage of the waiver process as they would not be aware of why the applicant was denied employment in the first place. Applicants would likely be offput by the lengthy time to 1. Receive an employment determination, 2. Apply for a waiver and 3. Await department decisioning on a waiver application, deteriorating the workforce. In many home care programs, employees are family members or close friends to the patient. The department will see a volume of waiver applications from these models of care that are likely unprecedented. Determinations could result in a family member unable to care for their aging or ill loved one. Without a fair, timely and transparent waiver process, the industry could be left with a dwindling workforce that cannot meet the demand of Pennsylvania's aging population.

Excessive Conviction List Limits Workforce Availability

The list of convictions, which is much longer than those included in the original OAPSA statute, must be revisited to ensure that the prohibitions do not prevent employment for individuals that are otherwise qualified. For instance, there is a prohibition on employment for five years for anyone convicted of check fraud. This seems obvious to prevent the employment of someone who may be more likely to steal an older adult's money. However, many applicants for caregiving are low-income, single mothers who are working multiple jobs to make ends meet. There is a very real possibility that these individuals might have to choose to write a check for rent that they know will bounce and buy groceries or go without food for their families.

A thorough review of the list of criminal convictions contained in the legislation is necessary to make sure that the bill serves its intended purpose.

Grandfathering of Current Workforce

PHA would also like to address the issue of "grandfathering" for current employees. The homecare industry is unique in that placement of employees is not simply about filling open positions. Our agencies work to place care workers in the homes of individuals where the worker is essentially "part of the family." For those employees who have been providing care to a consumer for several years, PHA respectfully recommends that the care worker be grandfathered under this legislation.

Provisional Hire Policies Diminish Workforce Hiring, Deter Workforce from the Industry, and Disparately Impact Rural Providers

Current language includes a provisional hiring period of 45 days, which conflicts with currently established Department of Health provisional hiring periods of 30 or 90 days, depending on whether an individual has lived in the Commonwealth in the 2 years prior to hire. Contradictory regulations confuse providers and hinder the use of provisional hiring. Without effective provisional hiring, the workforce time to hire will increase dramatically, adding a waiting window for 1. a criminal history check, 2. An FBI fingerprint check (which has to occur at a live site with available appointment times) and 3. a Department issued "eligibility for hire" designation following the review of #s 1. and 2.

PHA estimates this will delay hiring by 4 – 12 weeks, disparately impacting rural providers where fingerprinting locations and available appointments are scarce. This will also deter individuals from entering the home based care industry, as they can get hired more quickly in other industries.

Immunity for the Provider Community

First and foremost, the legislation, as currently drafted, does not contain any language that addresses immunity from civil liability for providers. The following is current law:

"§ 10225.503. Grounds for denying employment.

> (c) Immunity.--An administrator or a facility shall not be held civilly liable for any action directly related to good faith compliance with this section."

"§ 10225.707. Immunity.
An administrator or a facility shall not be held civilly liable for any action directly related to good faith compliance with this chapter."

The homecare provider community is unaware of the policy determination behind the repeal of these sections from the OAPSA bill. Our providers already face the difficult task of appropriately placing care workers and home health workers with clients. With a workforce shortage already taking a toll on the home health industry, a provider who acts in good faith to their detriment based on a decision rendered by the Department of Aging should not be punished. Accordingly, we respectfully request that you replace the immunity language that is currently removed from OAPSA in your legislation.

Improved Data Transparency

As previously advocated for, improved transparency of data regarding older adult protective services and the needs of the Commonwealth would better inform revisions to OAPSA and help secure stakeholder consensus for provisions of the act and their applicability. We continue to advocate for this data transparency.

Conclusion

Historically, PHA has been an active partner in providing feedback and thought leadership on various proposals pertaining to OAPSA, which have included cumbersome hurdles to hiring practices for all long-term care providers. While PHA recognizes the need for concrete guidance on hiring practices, we caution that elements of the current proposal will create new, less-desirable challenges.

In summary, it is crucial to balance the need for thorough background checks and employment restrictions with the realities of workforce shortages and the practical challenges faced by providers. Overly stringent regulations may hinder the ability to provide quality care and meet the growing demand for services.

We welcome the opportunity to participate in stakeholder discussions to ensure this legislation achieves its primary goal of protecting vulnerable elderly adults from abuse, neglect, and exploitation without exacerbating workforce challenges.

Sincerely,

Mia Haney
Chief Executive Officer

Alexandra McMahon
Director of Government Relations

PRIOR PRINTER'S NO. 132 PRINTER'S NO. 951

THE GENERAL ASSEMBLY OF PENNSYLVANIA

HOUSE BILL

No. 155 Session of 2023

INTRODUCED BY SANCHEZ, MADDEN, GUENST, HANBIDGE, STURLA, FRANKEL, HILL-EVANS, DELLOSO, HOWARD, BURGOS, D. WILLIAMS, CERRATO, VENKAT, SCHLOSSBERG, McNEILL, MULLINS, BENHAM, T. DAVIS, WEBSTER, SOLOMON, RADER, BRENNAN, ROZZI, HARKINS, N. NELSON, SHUSTERMAN, OTTEN, CONKLIN, BENNINGHOFF, KHAN AND MALAGARI, MARCH 8, 2023

AS REPORTED FROM COMMITTEE ON HEALTH, HOUSE OF REPRESENTATIVES, AS AMENDED, APRIL 21, 2023

AN ACT

Amending the act of July 19, 1979 (P.L.130, No.48), entitled "An act relating to health care; prescribing the powers and duties of the Department of Health; establishing and providing the powers and duties of the State Health Coordinating Council, health systems agencies and Health Care Policy Board in the Department of Health, and State Health Facility Hearing Board in the Department of Justice; providing for certification of need of health care providers and prescribing penalties," in licensing of health care facilities, further providing for consumer protections; and abrogating a regulation.

The General Assembly of the Commonwealth of Pennsylvania hereby enacts as follows:

Section 1. Section 806.3(b)(7) of the act of July 19, 1979 (P.L.130, No.48), known as the Health Care Facilities Act, is amended to read:

Section 806.3. Consumer protections.

* * *

(b) Information to be provided.--Each consumer or the consumer's legal representative or responsible family member

shall receive an information packet from the home care agency or home care registry prior to the commencement of services which includes the following in a form that is able to be easily understood and read:

* * *

(7) Documentation from the home care agency or a home care registry that demonstrates personal face-to-face interviews with all employees from a home care agency or independent contractors referred by the home care registry and documentation of at least two satisfactory reference checks prior to referral to the consumer. The face-to-face requirement of this paragraph may be fulfilled through the use of two-way video ~~or other~~ remote technology. <--

* * *

Section 2. The provisions of 28 Pa. Code § 611.51(a)(1) are abrogated to the extent of any inconsistency with this act.

Section 3. This act shall take effect immediately.

ALLOW VIRTUAL INTERVIEWS IN HOMECARE HIRING

BACKGROUND

Current regulations at 28 Pa. Code §611.51(a)(1) require providers to conduct "face-to-face" interviews prior to hiring direct care workers (DCWs).

However, between 2020 and 2022, a COVID-19 waiver enabled homecare agencies to conduct remote video interviews with DCWs, resulting in efficient hiring practices with no adverse effects on consumers.

CALL TO ACTION

Support House Bill 155. Allow homecare providers across Pennsylvania to conduct remote 'face-to-face' interviews.

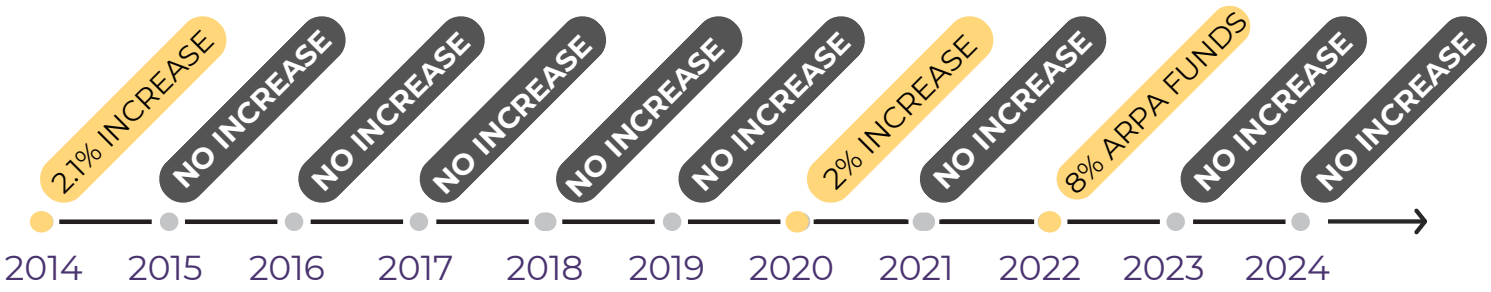
Virtual interviews are easier to schedule and conduct, eliminating transportation costs and obstacles to hiring for the direct care workforce.

This will help to ensure that individuals in need have timely access to a quality workforce.

OUR POSITION

- Homecare agencies in Pennsylvania face severe workforce shortages, requiring efficient recruitment and onboarding support for quality caregivers.
- Pennsylvania's Department of Labor predicts a demand for 65,000+ DCWs in the near future to address workforce shortages.
- Many DCWs rely on public transportation or hold multiple jobs, posing challenges for scheduling in-person interviews.
- The interview phase is part of a multi-step onboarding process, allowing providers ample opportunity to implement recruitment and retention best practices.
- Flexibility ensures Pennsylvania avoids unnecessary barriers to critical care access for vulnerable citizens.
- Several agencies obtained permanent exceptions to the PA Department of Health's rule interpretation; supporting this change extends flexibility to all providers.

Support Rate Increases for Direct Care Workers



BACKGROUND

The need for in-home personal assistance services has surged in recent years. Aging adults and adults with disabilities prefer to be cared for in the comfort of their homes, where they experience better health outcomes. Notably, home care is also cost-effective, with institutional care costing 117% more.

PA faces a significant workforce shortage, ranking fifth in the nation for the need for Direct Care Workers (DCWs). By 2035, the state is projected to require 65,370 more DCWs. This shortage has critical implications for access to care and quality of care across the Commonwealth, particularly for the more than 130,000 Medicaid home care recipients currently relying on these services.

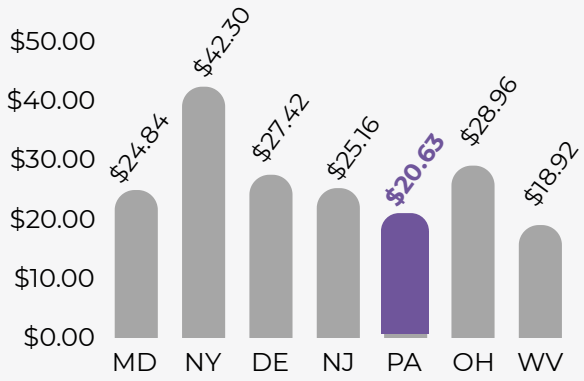
CALL TO ACTION

- **Support a 10% increase** for Personal Assistance Services in the Office of Long Term Living (OLTL) programs; a $212M annual impact in state funding.
- Support language that requires the Office of Long-Term Living to **review rates at least every three years** consistent with other PA programs.

	Current Rate	Proposed Rate
Region 1 (Pitt)	$ 19.32	$ 21.25
Region 2	$ 21.48	$ 23.63
Region 3	$ 20.20	$ 22.22
Region 4 (Phila)	$ 21.52	$ 23.67

OUR POSITION

- Pennsylvania Direct Care Workers (DCWs) earn $13.94/hour[1]. However, employer taxes and regulatory mandates consume reimbursement, hindering:
  - Fair DCW compensation commensurate with the important work they perform
  - Sufficient investment in quality and innovation
- Reimbursement rates have not kept pace with inflation and increased cost of care.
- Pennsylvania's critical underfunding of this program exacerbates the workforce crisis in comparison to neighboring states:



- PA has varying Medicaid program rates due to disparities in rate review and study practices. Consequently, OLTL programs are left significantly underfunded.

1 https://www.bls.gov/oes/current/oes_pa.htm#39-0000

January 18, 2024

The Honorable Josh Shapiro
Governor
Commonwealth of Pennsylvania
508 Main Capitol Building
Harrisburg, PA 17120
Via Electronic Mail

Dear Governor Shapiro:

On behalf of the Pennsylvania Homecare Association (PHA), a statewide association representing nearly 700 homecare, home health, hospice, and supporting organizational members, I write in advance of your 2024-25 Executive Budget address to urge you to include an increase in funding for programs and services that will enhance the quality of life for vulnerable populations, as previously discussed with members of your administration.

PHA represents nursing, therapy, non-medical personal assistance services (PAS), and end-of-life care in hundreds of thousands of individual's homes across the Commonwealth. Many of the services are provided through Pennsylvania's Medical Assistance program and require an investment of state funds. Without the necessary funding, home-based care providers cannot compete in the marketplace for qualified employees because they cannot offer competitive wages. Unlike providers who provide care to non-Medicaid recipients, Medicaid-enrolled providers are unable to pass costs through to their consumers and patients. Recent increases have not kept pace with inflation, nor do they reflect the actual cost of delivering high quality care.

In Pennsylvania the average Medicaid fee-for-service reimbursement rate for personal assistance services is $20.63 per hour, which is significantly less than nearly all the bordering states. While some neighboring states have a moderately higher average cost of living per U.S. News and World Report, it is especially notable that Ohio recently increased rates while ranking below Pennsylvania in average cost of living. Additionally, Pennsylvania ranks fifth among all the states in population of adults 65 years or older, with the population of adults over 85 years of age with more acute needs growing at more than 10 times the general population.

Medicaid Fee – for – Service Rates for Personal Assistance Services

State	Hourly Rate	Average Cost of Living Per Year [1]
Pennsylvania	$20.63	$40,066
New York	$42.30	$49,623
New Jersey	$25.16	$49,511
Maryland	$47.00	$48,235
Ohio	$28.96	$35,932
Delaware	$27.42	$44,389
West Virginia	$18.92	$34,861

[1] Examining The Cost Of Living By State In 2024

Private Duty Nursing Medicaid Fee – for – Service Rates

State	Hourly Rate Registered Nurse (RN)	Hourly Rate Licensed Practical Nurse (LPN)
Pennsylvania	$66.20	$44.08
New Jersey	$63.00	$51.00
Maryland	$71.27	$46.18
Connecticut	$59.17	$50.06
Delaware	$63.66	$57.04
Virginia	NOVA: $81.62 Rest of State: $71.29	NOVA: $71.29 Rest of State: $52.40

The reality is direct care workers, nurses, and home health aides providing care to the most vulnerable communities are not being paid competitive wages that reflect the valuable work that they do. Retaining workers in a field with an average turnover rate of 40 to 60 percent each year is an impossibility with the current level of state support. If home health care agencies are going to attract and retain a highly qualified workforce, Pennsylvania's Medical Assistance programs must be funded appropriately.

We commend you for your allocation of state funds to offset expiring federal ARPA funds during the current 2023-24 fiscal year, and we hope that commitment to retain previous increases is included in your upcoming proposal. Further, we recognize the recently-announced grant funding available through the Department of Labor and Industry to bolster programs that support the direct care workforce. That said, more must be done.

Over a decade of chronic underfunding as a result of largely stagnant Medicaid rates for personal assistance services has placed a severe strain on homecare agencies across the Commonwealth – additional funding is needed now. By directing additional funding to the Community HealthChoices waiver, pediatric home health aide services, pediatric shift nursing services, and adult shift nursing services, you will help to incentivize individuals to join and remain in the caregiving workforce, which will protect access to high quality home-based care for thousands of Pennsylvanians every day.

The challenges facing Pennsylvania’s health care continuum and broader economic health are worsening with an increased demand for health care and long-term care services predicted in the coming years. The burden placed on family caregivers has already had downstream impacts on the state’s broader workforce and economy, and the outlook remains negative without significant investment in supporting a stable, sustainable homecare workforce.

I urge you to prioritize individuals who rely on home-based care as a lifeline as well as caregivers providing that critical care in this year’s budget. Pennsylvania’s economic viability depends upon it.

Sincerely,

Mia Haney

Re: Fiscal Code Rate Considerations for Home Health Care Services within the Department of Human Services

Dear Chairmen:

The Pennsylvania Homecare Association (PHA) is a statewide membership association with approximately 700 home health, homecare and hospice members across Pennsylvania. On behalf of our members, we offer the following comments regarding increased reimbursement rates that **support compensation for Direct Care Workers, Nurses and Home Health Aides across the Commonwealth.**

Personal Assistance Services (PAS) - Office of Long-Term Living

1. **Current reimbursement rates are insufficient to support this critical Direct Care Workforce:** Since the last Department commissioned rate study in 2010, several factors necessitate a re-evaluation and adjustment of the current rates. The primary drivers for this request include:

    - **Increases in Minimum Wage**: *A rising minimum wage will significantly impact labor costs across both models of Personal Assistance Services: Consumer-directed and Agency Model care.* Increases to minimum wages apply equally to both models. Ensuring competitive compensation is crucial to attract and retain a qualified workforce.
    - **Inflationary Effects**: General inflation has increased the cost of goods and services, impacting operational costs for providers.
    - **Workforce Compensation**: Adequate compensation for Direct Care Workers is essential to secure a stable and skilled workforce capable of delivering quality care to vulnerable patients.

2. **Support 10% rate adjustment for PAS in both consumer-directed and agency models:**
Recent legislation (HB2372) was proposed to increase PAS rates disproportionately for the agency model by 10% and the consumer-directed model by 16%.

PHA is writing to advocate for an equitable adjustment in reimbursement rates of 10% for both models of Personal Assistance Services (PAS).

By aligning both models to the same % increase, we equally prioritize all workers in these programs.

3. **Historically both the consumer-direct and agency models of care have received equal % rate adjustments, setting precedent and aligning with third party rate setting methodologies:** The state has a long history of proportionally increasing PAS rates regardless of the existing two models of care: consumer-directed or agency model. We ask that that practice of giving the same % increase to both models continue. The current rate setting methodology was established through a study conducted by Mercer and commissioned by the Department of Public Welfare. This methodology identified differences in reimbursement between consumer-directed services and the agency model. This study took into account the varying requirements and administrative burdens associated with each model. While both service models fundamentally provide similar care, the agency model incurs significantly higher administrative responsibilities, compliance requirements, quality assurance, and oversight, justifying the current rate differential.

Reimbursement increases that are inequitable, or that only recognize one model of care, would fail to recognize the inherent regulatory differences between the models. This approach would be inequitable, break historic precedent, disregard previously commissioned rate setting methodologies, and would further destabilize this workforce population that is already in crisis.

As the budget is discussed, the rates that should be increased proportionally are the following HCPCS codes found at this OLTL HCBS fee schedule:

- W1793 (agency PAS)
- W1792 (consumer-directed PAS)
- W1792 TU (consumer-directed PAS overtime)
- T1005 Respite (agency Respite)
- S5150 (consumer-directed Respite)

Adult and Pediatric Shift Nursing & Home Health Aides Services - Office of Long Term Living and Office of Medical Assistance Programs

We also urge our legislative leaders to increase funding for the pediatric and adult shift nursing programs. Nurses and home health aides working in this program provide life sustaining care to more than 13,000 medically complex children, adults, and seniors in the Commonwealth. Because of years of inadequate reimbursement rates, children are spending much more time in the hospital (in some cases over 800 days) because the industry does not have the nurses needed to bring these individuals home. This negatively impacts the patient and their families, causing financial distress to them and to Pennsylvania. We ask that you support these programs by:

1. **Increasing the pediatric shift nursing rates by $5 per hour**
2. **Increase the pediatric home health aide rate delivered in conjunction with nursing by 10%.**
3. **Standardize the shift nursing rate under OLTL to $55 per hour.**

We urge you as appropriators to take this request into account as the details of the budget are finalized. The sustainability of home and community-based services depends on adequate funding and support. By addressing these financial challenges, we can continue to provide essential services to our most vulnerable populations and ensure that they receive the care they deserve.

Thank you for your attention to this matter. Should you require any additional information or wish to discuss this further, please do not hesitate to contact me

Sincerely,

Mia Haney, CEO
Pennsylvania Homecare Association

Deputy Secretary, Juliet Marsala
Department of Human Services
Office of Long–Term Living
555 Walnut Street, Forum Place 6th Floor
Harrisburg, PA 17101

Amy Korzenowski, LHSE, Principal
Mercer
akorzenowski@mercer.com

Dear Deputy Secretary Marsala and Ms. Korzenowski:

I am writing on behalf of the Pennsylvania Homecare Association (PHA), representing over 700 home health, hospice, and homecare members across the Commonwealth. Our member agencies employ thousands of direct care workers and home health personnel who provide essential care to hundreds of thousands of Pennsylvanians, enabling our aging and disabled populations to remain in their homes and communities.

The rate study Mercer is conducting on behalf of the Office of Long Term Living is of significant interest to our membership. **We commend OLTL for initiating this rate study which has the ability to inform future rate setting methodologies and reimbursement.** The need for this study and subsequent rate adjustments has grown significantly over the 10+ years since this was last conducted and the workforce challenges that our providers face are at an all–time high. We hope that OLTL policymakers, along with our Governor's office, will consider ongoing rate reviews in the future of no less than every three years for OLTL programs, akin to other similar HCBS programs in Pennsylvania.

PHA and its membership recognizes that the current rate study is being conducted in an expedited manner to meet forecasting and budgeting needs. However, our membership is concerned that these condensed time frames could jeopardize the quality of the data provided *OR* result in an incomplete depiction of the true cost of care. In an effort to address this concern, **our membership has collectively gathered the below information to help inform data capture, collection and analysis related to this rate study, particularly for the provision of Personal Assistance Services.**

We welcome engagement from Mercer as they further conduct this analysis and would be happy to provide additional feedback and input throughout the process.

Considerations/Recommendations

1. **QuestionPro Provider Survey:**
    a. **Provider Education**: Implement training how–to guides and webinars to educate providers on the Provider Survey to be released via QuestionPro. This will ensure the information provided is accurate and comprehensive.
    b. **Confidentiality Commitments**: Ensure that Mercer/OLTL includes a privacy notice or confidentiality agreement for providers completing the Question Pro survey. Many organizations will not submit information without such commitments from the state.

2. **Market Analysis**:
    a. **Multi-Industry Approach:** Conduct a thorough market analysis of industries competing for the same workforce, including retail stores, gas stations, and other customer service industries.
    b. **Regional (State by State) Rate Comparison**: Analyze rates in regional area or neighboring states and consider their rate–setting methodologies to ensure a comprehensive and competitive approach for Pennsylvania. This will ensure that caregivers in Pennsylvania that live near the state border do not secure work in other states due to higher pay wages.
3. **Addressing Current and Future Demand**: Given that the prior rate study was conducted over a decade ago, it is crucial to account for current and projected demands for HCBS services in this rate study. Rates must support a workforce poised to meet the growing needs of Pennsylvania's expanding aging population, reflecting these well–documented trends.
4. **21st Century Cures Act Compliance**: While initial intentions were that the Electronic Visit Verification requirement of the 21st Century Cures Act would not financially impact providers, providers across the nation argue otherwise. The costs of EVV software and the administrative investment costs for the management of the service verification process have resulted in many organizations increasing FTE headcounts significantly to 1. ensure compliance, 2. combat fraud waste and abuse, and 3. prevent audits or takebacks from unintended misuse of the system.
5. **CMS Final Rule Consideration:** Given the historic precedent of infrequent rate studies, this study should include recommendations for consideration of the 80/20 provision of the recently released CMS final rule that is scheduled to be implemented in 2030. The impact of this provision to the provider community is significant and should be accounted for in this rate study.
6. **State Policy Goals**: Align the rate–setting process with state policy goals, such as promoting community–based care over institutional care, improving patient outcomes, and driving improvements in quality of care. Eliminating non-required or non-regulatory functions from the rate study consideration jeopardizes future enhancements and improvements in care delivery. It also does not account for the preventative nature of HCBS spending compared to more costly institutional interventions.
7. **Attracting Qualified Staff**: Ensure rates are sufficient to attract and retain qualified staff capable of providing high–quality care. The workforce crisis continues to escalate across the nation, but especially in Pennsylvania where the volume of the aging population is among the highest in the country.
8. **Inflation and Cost Adjustments**: Adjust rates to account for inflation and increases in the costs of goods and services both historically and into the future.
9. **Stakeholder Feedback**: Gather robust input from stakeholders, including feedback from recipients and their families, regarding access to and quality of care.
10. **Equitable Access**: Ensure rates support equitable access to care across different communities, including underserved areas.
11. **Cultural Competence**: Set rates that allow providers to offer culturally competent care to diverse populations, especially those where English is a second language.

Direct Costs for Agencies

Categories	Area of Cost	Regulatory Body
Direct Wages	Direct care hours	FLSA
	Training hours	FLSA, OLTL, DOH
	Travel time	FLSA
	Show up time (employee arrives, customer not home)	FLSA
	Sick time	City of Philadelphia
	Paid time off	*Agency policies to remain competitive*
	Overtime	FLSA
	Employment orientation	FLSA
	Deeming competence in direct care	DOH
Insurance and Taxes	Workers Compensation Costs	OLTL
	Payroll Related Taxes (Social Security, Medicare)	SSA
	Unemployment Insurance	DOL
Onboarding Expenses	PPE (gloves, masks, hand sanitizer, gowns)	DOH
	TB testing (up to an including chest x–ray) on hire and ongoing	DOH/CDC
	Hepatitis B vaccination	OSHA
	Scrubs/Uniforms	*Agency policies to remain competitive*
	Background Checks (criminal $22, FBI Dept of Aging $25.25, FBI CPS $25.25, Child abuse $13)	OAPSA, CPSL, DOH, OLTL
	Social Security Number Verification	OLTL
	Training for mandated reporters (if any likelihood of child in the home)	CPSL
	Initial and monthly Medicaid, Medicare Fraud Checks	OLTL
	Department regulated ID Badges	DOH
Perks and Benefits	401k administration and matching	*Agency policies to remain competitive*
	health insurance	ACA
	ancillary benefits, including dental, vision, STD, etc	*Agency policies to remain competitive*
	Appreciation Bonuses, Sign–on Bonuses, and Performance Bonuses	*Agency policies to remain competitive*

General and Administrative Agency Costs

Quality	Trainers	OLTL, DOH
	Training equipment	OLTL, DOH
	Patient Health Outcome Innovation and Initiatives	OLTL
	Coordination with SCE and Case Management entities	OLTL
	Quality Management Plan administration and oversight	OLTL
	Supervisory team, often including nursing staff, performing start of care visits, delivering and reviewing	DOH, OLTL

	consumer protections, for oversight of care, workforce training and support and advisement for improved patient outcomes	
Insurance	Commercial General Liability Insurance Costs	OLTL
	Professional Liability Insurance	OLTL
Compliance	TB Maintenance Program (annual TB risk assessment)	CDC/DOH
	Incident Reporting	DOH, OAPSA, APS, CPS, OLTL, MCOs
	HIPAA (including staff training)	OLTL, HIPAA
	Americans with Disabilities Act	ADA
	OSHA, including administration of annual OSHA Reporting, including ongoing data capture of workplace injuries	OSHA
	QMET	OLTL
	DOH	DOH
	Cost of annual licensure	DOH
Workforce	English Proficiency/ESL services and supports	OLTL
	Oversight of DCW for provisional hiring	OLTL, DOH
	Marketing/Advertising	Standard business expenses
	Workforce Development Initiatives	DHS
Operations	Brick/mortar office space (required for licensure)	DOH
	Office equipment (printer, fax, software licenses, etc)	Standard business operating expenses
	Office Expenses	DOH, Standard business expenses
	Accounting support (financial solvency, tax returns, balance sheets and other requirements for validation, audits for audited financials as required in Medicaid revalidation)	OLTL, DHS
	Payroll support	FLSA
	Medicaid revalidation support	ACA
	Billing and Accounts Receivable	OLTL
	Scheduling and Case Management Support	OLTL, DOH
	Service Verification Support (EVV verification)	OLTL, 21st Century Cures Act
	Provider Monitoring/Oversight	OLTL, QMET, BPI, BFO, OIG
	Talent Acquisition/Workforce Development	Standard business operating expenses
	Human Resources Support	Standard business operating expenses
	Administrative Salaries	Standard business operating expenses
	Training and Professional Development	Standard business operating expenses
	Travel (including mileage for supervisory staff) and	Standard business

	Transportation	operating expenses
	Technology Support to support integrations with the state aggregator, clearing houses, etc	21st Century Cures Act, DHS
Technology	Computers	21st Century Cures Act, DHS
	Electronic Visit Verification Software, maintenance	21st Century Cures Act, DHS
	Record Retention firms (ex: Iron Mountain)	OLTL, DOH, DOL, HIPAA, etc
	Satisfaction/Complaint Survey (NPS, eNPS, etc)	OLTL
	Phone Systems	Standard business operating expenses
	Fax	Standard business operating expenses
	Websites	Standard business operating expenses
	Texting technology for mass communication with DCWs	Standard business operating expenses
	Cybersecurity measures	HIPAA
Miscellaneous	Dues for professional associations, subscriptions to industry publications	Standard business operating expenses
	Accreditation	Standard business operating expense
	Legal Fees	Standard business operating expenses
	Consulting Services	Standard business operating expenses

Historically, PHA has been an active partner in providing feedback and thought leadership to enhance the Department of Human Services program. We welcome the opportunity to participate in stakeholder discussions to ensure this rate study achieves its primary goal of protecting the important population receiving these services and securing a quality and sufficient workforce to meet growing demands.

Sincerely,

Mia Haney

VBP — Value-Based Purchasing
WIC — Women, Infants and Children.

SECTION I: INCORPORATION OF DOCUMENTS

A. Operative Documents

This Agreement is comprised of the following documents, which are listed in the order of precedence in the event of a conflict between documents:

1. This document consisting of its Recitals and Sections I-XVI and Appendices 3-5 and Exhibits A – FF.
2. RFP Number 12-15 attached as Appendix 1.
3. The CHC-MCO's Proposal, attached as Appendix 2.

B. Approval of CHC-MCO Policies, Procedures, and Processes

The CHC-MCO must submit for Department review and approval any type of change to Department previously approved CHC-MCO policies, processes and procedures prior to the implementation of the change. Unless otherwise required by law, the CHC-MCO must continue to operate in accordance with the existing approved policy, process, or procedure until the Department has approved the change.

SECTION II: DEFINITIONS

Abuse — Any practices that are inconsistent with sound fiscal, business, or medical practices and result in unnecessary costs to the MA Program or in reimbursement for services that are not Medically Necessary or that fail to meet professionally recognized standards or Agreement obligations and the requirements of Federal or State statutes and regulations for healthcare in a managed care setting, committed by the CHC-MCO, a subcontractor, Provider, or Participant, among others.

ACCESS Card — An identification card issued by the Department to each MA Participant.

Act 150 Program — A state-funded program under the Attendant Care Services Act (62 P.S. §§ 3051 – 3058), which provides certain personal assistance services to eligible adults.

Activities of Daily Living (ADLs) — Basic personal everyday activities that include bathing, dressing, transferring (e.g., from bed to chair), toileting, mobility, and eating.

Actuarially Sound Capitation Rate — Actuarially sound Capitation rates are projected to provide reasonable, appropriate and attainable costs that are required under the terms of the contract and for the operation of the Primary Contractor for the time period and the population covered under the terms of the contracts, and

such Capitation rates are developed in accordance with the requirement in 42 C.F.R. §438.4(b).

Adjudicated Claim — A Claim that has been processed to payment or denial.

Advanced Healthcare Directive — A healthcare power of attorney, living will, or a written combination of a healthcare power of attorney and living will.

Affiliate — An individual, corporation, partnership, joint venture, trust, unincorporated organization or association, or other similar organization ("Person") controlling, controlled by, or under common control with the CHC-MCO or its parent(s), whether such control be direct or indirect. Without limitation, all officers, or persons, holding five percent (5%) or more of the outstanding ownership interests of the CHC-MCO or its parent(s), directors, or subsidiaries of the CHC-MCO or of the parent(s) are Affiliates. For purposes of this definition, "control" means the possession, directly or indirectly, of the power (whether or not exercised) to direct or cause the direction of the management or policies of a person, whether through the ownership of voting securities, other ownership interests, or by contract or otherwise, including but not limited to the power to elect a majority of the directors of a corporation or trustees of a trust.

Behavioral Health Managed Care Organization (BH-MCO) — An entity, operated by county government or licensed by the Commonwealth as a risk-bearing HMO, which manages the purchase and provision of Behavioral Health Services under an Agreement with the Department.

Behavioral Health Services — Mental health and substance use disorder services.

Beneficiary — A person determined eligible to receive services in the MA Program.

Capitation Payment — A payment the Department pays per month to the CHC-MCO for each Participant to provide coverage of all Covered Services, whether or not the Participant receives services during the period covered by the payment.

Centers for Medicare & Medicaid Services (CMS) — The federal agency within the US DHHS responsible for oversight of the Medicare and Medicaid Programs.

Certificate of Authority — A document issued jointly by the Pennsylvania Departments of Health and Insurance authorizing a corporation to establish, maintain, and operate an HMO in Pennsylvania.

Certified Nurse Midwife — A licensed registered nurse licensed to practice

midwifery in the Commonwealth.

Certified Registered Nurse Practitioner (CRNP) — A registered nurse licensed in the Commonwealth who is certified in a particular clinical specialty area and who, while functioning in the expanded role as a professional nurse, performs acts of medical diagnosis or prescription of medical therapeutic or corrective measures in collaboration with and under the direction of a physician licensed to practice medicine in the Commonwealth.

Claim — A bill from a Provider that is assigned a unique identifier (i.e., Claim reference number). A Claim does not include an Encounter form for which no payment is made or only a nominal payment is made.

Clean Claim — A Claim that can be processed without obtaining additional information from the Provider or from a third party, including a Claim with errors originating in the CHC-MCO's Claims system. Claims under investigation for Fraud or Abuse or under review to determine if they are Medically Necessary are not Clean Claims.

Client Information System (eCIS) — The Department's database of Beneficiaries, including Participants, containing demographic and eligibility information for all Participants.

Clinical Eligibility Determination — A determination of an individual's clinical eligibility for LTSS.

Cloud Computing Service — Any computing service that is procured through and hosted by or within a third-party vendor, licensor, contractor, or supplier (Service Organizations) or its subcontractor(s) (Subservice Organization(s)) managed infrastructure regardless of deployment model (public, private, or hybrid) or type such as, but not limited to, software-as-a-service (SaaS) for web-based applications, infrastructure-as-a-service (IaaS) for Internet-based access to storage and computing power, and platform-as-a-service (PaaS) that gives developers the tools to build and host Web applications. Solutions deployed through traditional hosting methods and without the use of NIST Cloud capabilities (i.e., rapid elasticity, resource pooling, measured service, broad network access, and on demand self-service) are also included.

Commonwealth — The Commonwealth of Pennsylvania

Community-Based Organizations (CBOs) — Community-Based Organizations (CBOs) are nonprofit organizations that work at a local level to improve life for residents and normally focus on building equality across society in many areas, including but not limited to access to social services. These organizations must also be registered as a 501(c)(3) nonprofit corporation in Pennsylvania. A health care provider is not considered a CBO.

Complaint — A dispute or objection regarding a particular Provider or the coverage operations, or management of a CHC-MCO, which has not been resolved by the CHC-MCO and has been filed with the CHC-MCO or with PID's Bureau of Managed Care (BMC), including but not limited to:

- a denial because the requested service or item is not a Covered Service; which does not include BLE;
- the failure of the CHC-MCO to provide a service or item in a timely manner, as defined by the Department;
- the failure of the CHC-MCO to decide a Complaint or Grievance within the specified time frames;
- a denial of payment by the CHC-MCO after a service has been delivered because the service or item was provided without authorization by a provider not enrolled in the MA Program;
- a denial of payment by the CHC-MCO after a service or item has been delivered because the service or item provided is not a Covered Service for the Participant; or
- a denial of a Participant's request to dispute a financial liability, including cost sharing, copayments, premiums, deductibles, coinsurance, and other Participant financial liabilities.

The term does not include a Grievance.

Comprehensive Medical and Service Record — A record kept by the CHC-MCO and available to the Participant and relevant Providers that contains, at a minimum, documentation of care and services rendered to the Participant by Providers.

Comprehensive Needs Assessment (Assessment)– An evaluation, utilizing a Department approved tool, of the Participant's physical health; the Participant's behavioral health; and the Participant's social, psychosocial, environmental, caregiver, LTSS, and other needs and the Participant's preferences, goals, housing, and informal supports.

Concurrent Review — A review conducted by the CHC-MCO during a course of treatment to determine whether the amount, duration, and scope of the prescribed service continues to be Medically Necessary or whether any service, a different service, or lesser level of service is Medically Necessary.

Consumer Assessment of Healthcare Providers and Systems (CAHPS) — A comprehensive and evolving family of survey instruments to evaluate Participant experience and quality of care on various aspects of services.

County Assistance Office (CAO) — The county offices of the Department that determine eligibility for all benefit programs, including MA, on the local level.

Covered Drug — A brand name drug, a generic drug, or an OTC drug which:

- Is approved by the FDA;
- Is distributed by a manufacturer that entered into a Federal Drug Rebate Program Agreement with the CMS;
- May be dispensed only upon prescription in the MA Program;
- Has been prescribed or ordered by a licensed prescriber within the scope of the prescriber's practice.

The term includes biological products and insulin.

Covered Services — Services which the CHC-MCO is required to offer to Participants as specified in Exhibit A, Covered Services List.

Critical Incident — An occurrence of an event that jeopardizes the participant's health or welfare.

Cultural Competency — The ability of individuals, as reflected in personal and organizational responsiveness, to understand the social, linguistic, moral, intellectual, and behavioral characteristics of a community or population, and translate this understanding systematically to enhance the effectiveness of healthcare delivery to diverse populations.

Daily 834 Eligibility File — An electronic file in a HIPAA compliant 834 format using data from eCIS that is transmitted to the CHC-MCO daily on state business days by the Department's MMIS contractor.

Day — A calendar day unless specified otherwise.

Deliverables — Documents, records, and reports required to be furnished to the Department for review and approval pursuant to the terms of this Agreement.

Denied Claim — An Adjudicated Claim that does not result in a payment obligation to a Provider.

Department — The Department of Human Services of the Commonwealth of Pennsylvania.

Direct Care Worker — A person employed for compensation by a provider or Participant who provides personal assistance services or respite services.

Disability Competency — The demonstration that an entity or individual has the capacity to understand the diverse nature of disabilities and the impact that different disabilities can have on a Participant, access to services, and experience of care.

Disease Management — An integrated treatment approach that includes the collaboration and coordination of patient care delivery systems and that focuses on measurably improving clinical outcomes for a particular medical condition through the use of appropriate clinical resources such as preventive care, treatment guidelines, patient counseling, education, and outpatient care; and that includes evaluation of the appropriateness of the scope, setting, and level of care in relation to clinical outcomes and cost of a particular condition.

Disenrollment — The process by which a Participant's ability to receive services from a CHC-MCO is terminated.

Drug Efficacy Study Implementation (DESI) — Drug products that have been classified as less-than-effective by the FDA.

Dual Eligible — A Beneficiary who is enrolled in Medicare.

Dual Eligible Special Needs Plan (D-SNP) — A Medicare Advantage Plan that primarily or exclusively enrolls individuals who are enrolled in both Medicare and MA.

Eligibility Period — A period of time during which an individual is eligible to receive MA benefits, indicated by the eligibility start and end dates in eCIS, and a blank eligibility end date signifies an open-ended Eligibility Period.

Eligibility Verification System (EVS) — An automated system available to Providers and other specified organizations for automated verification of MA eligibility, CHC-MCO Enrollment, PCP assignment, TPR, and scope of benefits.

Emergency Back-up Plan – The steps to be taken to meet the Participant's medical and non-medical needs during an emergency. Emergency back-up plans address power outages, weather events, travel restrictions, and other events, including failure of individualized back-up plans during emergency events. Federal and state emergency management agencies (FEMA/PEMA) provide guidance on emergency planning.

Emergency Medical Condition — A medical condition manifesting itself by acute symptoms of sufficient severity, including severe pain, such that a prudent layperson, who possesses an average knowledge of health and medicine, could reasonably expect the absence of immediate medical attention to result in: (a) placing the health of the individual or, in respect to a pregnant woman, the health of the woman or her unborn child, in serious jeopardy, (b) serious impairment to bodily functions, or (c) serious dysfunction of any bodily organ or part.

Emergency Participant Issue — A problem of a CHC-MCO Participant, including problems related to whether an individual is a Participant, the resolution of which should occur immediately or before the beginning of the next

day in order to prevent a denial or significant delay in care to the Participant that could precipitate an Emergency Medical Condition or need for urgent care.

Emergency Services — Covered inpatient and outpatient services that: (a) are furnished by a Provider, and (b) are needed to evaluate or stabilize an Emergency Medical Condition.

Encounter — Any Covered Service provided to a Participant, regardless of whether it has an associated Claim.

Encounter Data — A record of any Covered Service provided to a Participant and includes Encounters reimbursed through Capitation, FFS, or other methods of payment regardless of whether payment is due or made.

Enrollment — The process by which a Participant is enrolled in a CHC-MCO.

Enrollment Date — Date that a Beneficiary becomes eligible for CHC.

Enterprise Incident Management (EIM) system — Under CHC, EIM is a comprehensive, web-based incident reporting system that provides the capability to record and review incidents for HCBS LTSS program participants.

Expanded Service — A Medically Necessary service provided to a Participant which is covered under Title XIX of the SSA, 42 U.S.C. §§ 1396 et seq., but not included in the Commonwealth's Medicaid State Plan.

External Quality Review — An annual independent, external review by an EQRO of the quality of services furnished by a CHC-MCO including the evaluation of quality outcomes, timeliness, and access to services.

External Quality Review Organization (EQRO) — An independent organization that meets the competence and independence requirements set forth in 42 C.F.R. § 438.354, and performs EQR or other EQR-related activities as set forth in 42 C.F.R. § 438.358, or both.

Extranet – An Intranet site that can be accessed by authorized internal and external users to enable information exchange securely over the Internet.

Family Planning Services — Diagnosis, treatment, drugs, supplies, and related counseling which are provided to individuals of child-bearing age to enable the individuals to determine freely the number and spacing of their children.

Federally Qualified Health Center (FQHC) — An individual health center site location that is receiving, or meets all of the requirements to receive (FQHC "look alike"), grant funds under Sections 329, 330, 340, or 340A of the Public Health

Services (PHS) Act; or that does not currently meet all of the FQHC requirements under the PHS Act, but does meet all applicable requirements for Medical Assistance (MA) providers as set forth in Chapter 1101 of the MA regulations (including licensure and certification standards under Pennsylvania Law), and receives a temporary waiver from the Secretary of the U.S. Department of Health and Human Services allowing the health center to act as a FQHC.

Fee-for-Service (FFS) — Payment to Providers on a per-service basis for healthcare services provided to Beneficiaries.

Formulary — A Department-approved list of Medicaid covered drugs and products not included on the Statewide Preferred Drug List (PDL) and determined by the CHC-MCO's P&T Committee to have a significant, clinically meaningful therapeutic advantage in terms of safety, effectiveness, and cost for the CHC-MCO Participants. MCOs may also refer to this list as the supplemental formulary or supplemental PDL.

Fraud — Any type of intentional deception or misrepresentation, including any act that constitutes fraud under applicable Federal or State law, made by an entity or person with the knowledge that the deception could result in some unauthorized benefit to the entity or person, or some other person in a managed care setting, committed by any entity, including the CHC-MCO, a subcontractor, a Provider, or a Participant.

Grievance — A request to an MA Managed Care Plan by a Participant or a health care provider (with the written consent of the Participant), or a Participant's authorized representative to have an MA Managed Care Plan reconsider a decision solely concerning the medical necessity, appropriateness, health care setting, level of care or effectiveness of a health care service. If the MA Managed Care Plan is unable to resolve the matter, a grievance may be filed regarding the decision that:

(1) disapproves full or partial payment for a requested health care service;
(2) approves the provision of a requested health care service for a lesser scope or duration than requested; or
(3) disapproves payment for the provision of a requested health care service but approves payment for the provision of an alternative health care service
(4) reduces, suspends, or terminates a previously authorized service.

The term does not include a complaint.

Healthcare-Acquired Condition (HCAC) — A condition occurring in any inpatient hospital setting, identified as a hospital-acquired condition by the US DHHS Secretary under § 1886(d)(4)(D)(iv) of the SSA, other than Deep Vein Thrombosis/Pulmonary Embolism as related to total knee replacement or hip

replacement surgery in pediatric and obstetric patients.

Healthcare-Associated Infection — A localized or systemic condition that results from an adverse reaction to the presence of an infectious agent or its toxins that:

- occurs in a patient in a healthcare setting;
- was not present or incubating at the time of admission, unless the infection was related to a previous admission to the same setting; and
- if occurring in a hospital setting, meets the criteria for a specific infection site as defined by the CDC in its National Healthcare Safety Network.

Healthcare Effectiveness Data and Information Set (HEDIS®) — The set of managed care performance measures maintained by the NCQA.

Health Information Organization (HIO) — An entity that governs the exchange of health-related information among organizations according to nationally recognized standards.

Health Maintenance Organization (HMO) — A Commonwealth-licensed risk-bearing entity which combines delivery and financing of healthcare and which provides basic health services to enrolled Participants for fixed, prepaid fees.

Home- and Community-Based Services (HCBS) — A range of services and supports provided to individuals in their homes and communities, including assistance with ADLs and IADLs, which promote the ability for older adults and adults with disabilities to live independently to the greatest degree and remain in their homes for the longest time as is possible.

Hospice — A coordinated program of home and inpatient care that provides non-curative medical and support services for persons certified by a physician to be terminally ill with a life expectancy of six or fewer (6) months, including palliative and supportive care to Participants and their families.

Implementation Date — The date on which an CHC-MCO began in a particular zone.

In Lieu of Services (ILOS) — ILOS is defined as a service or setting that is provided to a Participant as a substitute for a State Plan Service or Setting in accordance with 42 CFR § 438.3(e)(2). This includes services and settings defined in 1905(a), 1915(i), or 1915(k) of the Social Security Act, or a waiver under section 1915(c) of the Social Security Act. An ILOS can be used as an immediate or longer-term substitute for a State Plan Service or Setting, or when the ILOS can be expected to reduce or prevent the future need to utilize a State Plan Service or Setting.

Independent Enrollment Entity (IEB) — An independent and conflict-free entity that is responsible for providing information about CHC and the CHC-MCOs and otherwise assist the individual to choose a CHC-MCO and enrollment services to Potential Participants and Participants.

Independent Review Organization (IRO) — An entity approved by the Pennsylvania Insurance Department that conducts independent reviews of grievances.

Individualized Back-Up Plan — An individualized plan that is developed as part of the PCSP, which identifies the strategies to be taken in the event that authorized services are not able to be delivered to a Participant, which, depending on the Participant's preferences and choice, may include but are not limited to the use of family and friends of the Participant's choice, or agency staff, or both.

Information Resource Management (IRM) — A program planned, developed, implemented, and managed by DHS's Bureau of Information Systems, the purpose of which is to provide coordinated, effective, and efficient employment of information resources in support of DHS business goals and objectives.

Instrumental Activities of Daily Living (IADLs) — Activities related to independent living, including preparing meals, managing money, shopping for groceries or personal items, performing housework, and communication.

Internal Control Number (ICN) — The unique number assigned by the Department's MMIS to identify an individual Claim or Encounter.

Limited English Proficiency (LEP) — An individual's limited ability to read, write, speak, or understand English because English is not the individual's primary language.

Linguistic Competency — The demonstration that an entity or individual has the capacity to communicate effectively and convey information in a manner that is easily understood by diverse audiences including persons with LEP, persons who have low literacy skills or are not literate, and persons with disabilities who require communication accommodations.

Living Independence for the Elderly (LIFE) — A comprehensive service delivery and financing program model in certain geographic areas of the Commonwealth (which is known nationally as the Program of All-Inclusive Care for the Elderly) that provides comprehensive healthcare services under dual capitation agreements with Medicare and the MA Program to individuals age 55 and over who are NFCE.

Lock-In — The restriction of a Participant who is involved in fraudulent activities

or who is identified as abusing MA services to one or more specific Providers to obtain all of his or her services in an attempt to appropriately manage care.

Long-Term Services and Supports (LTSS) — Services and supports provided to a Participant who has functional limitations or chronic illnesses that have a primary purpose of supporting the ability of the Participant to live or work in the setting of his or her choice, which may include the individual's home or worksite, a provider-owned or -controlled residential setting, a NF, or other institutional setting.

Market Share — The percentage of Participants enrolled with a particular CHC-MCO when compared to the total number of Participants enrolled in all the CHC-MCOs within a CHC zone.

Marketing — Any communication from the CHC-MCO, or any of its agents or independent contractors, with a potential Participant who is not enrolled in the CHC-MCO, that can reasonably be interpreted as intended to influence that individual to enroll in the CHC-MCO or to disenroll from or not enroll in another CHC-MCO.

Marketing Materials – Any materials that are produced in any medium by or on behalf of the CHC-MCO that can reasonably be interpreted as intended to be Marketing.

Master Provider Index (MPI) — A component of the Department's MMIS, which is a central repository of Provider profiles and demographic information that registers and identifies Providers uniquely within the Department.

Medical Assistance (MA) — The Medical Assistance Program authorized by Title XIX of the SSA, 42 U.S.C. §§ 1396 et seq., and regulations promulgated thereunder, and 62 P.S. §§ 441.1 et seq. and regulations at 55 Pa. Code Chapters 1101 et seq.

Medical Assistance Transportation Program (MATP) — A non-emergency medical transportation service provided to eligible persons who need to make trips to or from any MA service for the purpose of receiving treatment, medical evaluation, or purchasing prescription drugs or medical equipment.

Medically Necessary (also referred to as Medical Necessity) — Compensable under the MA Program and meeting any one of the following standards:

- Will, or is reasonably expected to, prevent the onset of an illness, condition or disability.
- Will, or is reasonably expected to, reduce or ameliorate the physical, mental or developmental effects of an illness, condition, injury or disability.

- Will assist a Participant to achieve or maintain maximum functional capacity in performing daily activities, taking into account both the functional capacity of the Participant and those functional capacities that are appropriate for Participants of the same age.
- Will provide the opportunity for a Participant receiving LTSS to have access to the benefits of community living, to achieve person-centered goals, and live and work in the setting of his or her choice.

Medicare — The federal health insurance program administered by CMS pursuant to 42 U.S.C. §§ 1395 et seq., covering almost all Americans sixty-five (65) years of age and older and certain individuals under sixty-five (65) who have disabilities or chronic kidney disease.

MIPPA Agreement — An agreement required under the Medicare Improvements for Patients and Providers Act of 2008, Pub. Law 110–275, between a D-SNP and the Department which documents each entity's roles and responsibilities with regard to Dual Eligibles and describes the D-SNP's responsibility to integrate and coordinate Medicare and MA benefits.

MMIS Provider ID — A thirteen (13)-digit number consisting of a combination of the nine (9)-digit base MPI Provider Number and a four (4)-digit service location.

Monthly 834 Eligibility File — An electronic file in a HIPAA-compliant 834 format using data from eCIS that is transmitted to the CHC-MCO on a monthly basis by the Department's MMIS contractor.

Network — All contracted or employed Providers with the CHC-MCO who are providing Covered Services.

Network Provider — An MA-enrolled Provider that has a written Network Provider Agreement and, participates in the CHC-MCO's Network to serve Participants.

Net Worth (Equity) — The residual interest in the assets of an entity that remains after deducting its liabilities.

Non-Participating Provider — A Health Care Provider not enrolled in the Pennsylvania Medicaid Program.

Nursing Facility (NF) — A general, county, or hospital-based nursing facility, which is licensed by DOH and enrolled in the MA Program.

Nursing Facility Clinically Eligible (NFCE) — Having clinical needs that require the level of care provided in a NF.

Nursing Facility Ineligible (NFI) — Having clinical needs that do not require

the level of care provided in a NF.

Ongoing Medication — A medication that has been previously dispensed to a Participant for the treatment of an illness that is chronic in nature or for an illness for which the medication is required for a length of time to complete a course of treatment, until the medication is no longer considered necessary by the prescriber, and that has been used by the Participant without a gap in treatment.

OPTIONS Program — The Pennsylvania Department of Aging's state-funded program of HCBS for eligible consumers who are 60 years of age and older to assist them in maintaining independence in the community.

Other Related Condition (ORC) — A physical disability such as cerebral palsy, epilepsy, spina bifida or similar condition which occurs before the age of twenty-two (22), is likely to continue indefinitely, and results in three (3) or more substantial functional limitations in the following areas: self-care, receptive and expressive language, learning, mobility, self-direction, and capacity for independent living.

Out-of-Area Covered Services — Covered Services provided to a Participant under one (1) or more of the following circumstances:

- The Participant has An Emergency Medical Condition that occurs while outside the CHC zone.
- The health of the Participant would be endangered if the Participant returned to the CHC zone for needed services.
- The Participant is attending a college or university in a state other than the Commonwealth or a zone other than his or her zone of residence or who is travelling outside of the CHC zone but remains a resident of the Commonwealth and the CHC zone and requires Covered Services, as identified in his or her PCSP or otherwise.
- The Provider is located outside the CHC zone, but regularly provides Covered Services to Participants at the request of the CHC-MCO.
- The needed Covered Services are not available in the CHC zone.

Out-of-Network Provider — A Provider that does not have a signed Network Provider Agreement with the CHC-MCO and does not participate in the CHC MCO's network but provides services to a CHC-MCO participant.

Out-of-Plan Services — Services which are non-capitated and are not the responsibility of the CHC-MCO as Covered Services.

Participant — A Beneficiary who is enrolled with the CHC-MCO.

Participant Self-Directed Service — A Covered Service that the Department specifies may be directed by a Participant or their designated representative

as a common-law employer.

Participant-Direction — The opportunity for a Participant to exercise choice and control in identifying, accessing, and managing LTSS and other supports in accordance with his or her needs and personal preferences.

Participant Record — A record contained on the Daily 834 Eligibility File or Monthly 834 Eligibility File that contains information on MA eligibility, managed care coverage, and the category of assistance, which establish the Covered Services for which a Participant is eligible.

Penalty Period — A Period of ineligibility for the payment of LTSS, including NF and HCBS, due to a transfer of assets for less than fair market value or excess home equity.

Pennsylvania Open Systems Network (POSNet) — A peer-to-peer network based on open systems products and protocols that was previously used for the transfer of information between the Department and MCOs and has been replaced by IRM Standards.

Performance Improvement Project — A project in which a CHC-MCO assesses its organization and makes changes to meet its goals through assessment, systematic gathering of information, and making improvements in care or services.

Person-Centered Planning Team (PCPT) — A team of individuals that participates in Person-Centered Service Planning with and provides person-centered coordinated services to a Participant.

Person-Centered Service Plan (PCSP) — A written description of Participant-specific healthcare, LTSS, and wellness goals to be achieved, and the amount, duration, frequency, and scope of the Covered Services to be provided to a Participant in order to achieve such goals, which is based on the comprehensive assessment of the Participant's healthcare, LTSS, and wellness needs and preferences.

Person-Centered Service Planning — The process of developing an individualized PCSP based on an assessment of needs and preferences of the Participant.

Personal Assistance Services — As set forth in the “Section 1915(c) Home and Community-Based Services Waiver” for Community HealthChoices, services aimed at assisting the participant to complete ADLs and IADLs that would be performed independently if the participant had no disability.

Physician Incentive Plan — A compensation arrangement between a CHC-

MCO and a physician or physician group that may directly or indirectly have the effect of reducing or limiting services furnished to Participants.

Plan Transfer — The process by which a Participant changes CHC-MCOs.

Post-Stabilization Services — Medically Necessary Covered Services as defined in 42 C.F.R. § 438.114.

Potential Participant — An individual who has applied to enroll in CHC.

Preadmission Screening and Resident Review (PASRR) — A Federally mandated process that applies to all individuals seeking admission to a NF enrolled in the MA Program, regardless of payment source (private pay, private insurance, or MA), and is completed prior to admission and no later than the day of admission, to determine whether an individual who has a mental illness, ID, or an ORC requires NF services and also requires specialized services to treat the co-occurring conditions, based on the criteria established by CMS.

Primary Care — Healthcare services and laboratory services customarily furnished by or through a general practitioner, family physician, internal medicine physician, or obstetrician/gynecologist acting within the scope of practice.

Primary Care Practitioner (PCP) — A specific physician, physician group, or CRNP acting within the scope of his or her practice, who is responsible for supervising, prescribing, and providing Primary Care services; locating, coordinating, and monitoring other medical care and rehabilitative services; and maintaining continuity of care on behalf of a Participant.

Primary Care Practitioner Site — The location or office of a PCP where Participant care is delivered.

Prior Authorization — A determination made by the CHC-MCO to approve or deny payment for a Provider's request to provide a service or course of treatment of a specific duration and scope to a Participant prior to the Provider's initiation or continuation of the requested service.

Provider — An individual or entity that is engaged in the delivery of medical or professional services, or ordering or referring for those services, and is legally authorized to do so by the Commonwealth or State in which it delivers the services, including a licensed hospital or healthcare facility, medical equipment supplier, or person who is licensed, certified, or otherwise regulated to provide healthcare services under the laws of the Commonwealth or states in which the entity or person provides services, including a physician, podiatrist, optometrist, psychologist, physical therapist, CRNP, RN, clinical nurse specialist, certified registered nurse anesthetist, certified nurse midwife, physician’s assistant,

chiropractor, dentist, dental hygienist, pharmacist, and an individual accredited or certified to provide behavioral health services.

Provider Agreement — A Department-approved written agreement between the CHC-MCO and a Provider to provide medical or professional services to Participants to fulfill the requirements of this Agreement.

Provider Appeal — A written request from a Provider for reversal of a determination by the CHC-MCO of:

- A Provider credentialing denial;
- A Claim denial; or
- A Provider Agreement termination.

Provider Dispute — A written communication to a CHC-MCO, made by a Provider, expressing dissatisfaction with a CHC-MCO decision that directly impacts the Provider, excluding decisions concerning Medical Necessity.

Provider-Preventable Condition — A condition that meets the definition of an HCAC or other condition as defined in 42 C.F.R. § 447.26(b).

Provider Reimbursement (and) Operations Management Information System electronic (PROMISe™) — The Department's Medicaid Management Information System (MMIS) that supports the FFS and managed care delivery programs, or its successor system.

Quality Management/Quality Improvement (QM/QI) — An ongoing, objective, and systematic process of monitoring, evaluating, and improving the quality, appropriateness, and effectiveness of care.

Readily Accessible — Electronic information and services which comply with modern accessibility standards such as section 508 guidelines, section 504 of the Rehabilitation Act, and W3C's Web Content Accessibility Guidelines (WCAG) 2.0 AA and successor versions.

Recipient Restriction Program — The program to Lock-In Participants for a period of time.

Rejected Claim — A non-claim that has erroneously been assigned a unique identifier and is removed from the claims processing system prior to adjudication.

Related Party — An entity that is an Affiliate of the CHC-MCO or a CHC-MCO subcontractor and (1) performs some of the CHC-MCO or subcontracting CHC-MCO's management functions under contract or delegation; or (2) furnishes services to Participants under a written agreement; or (3) leases real property or

sells materials to the CHC-MCO or CHC-MCO's subcontractor at a cost of more than $2,500.00 during any year of this Agreement.

Restraint — A Restraint can be physical or chemical.

- A physical restraint is any apparatus, appliance, device, or garment applied to or adjacent to a Participant's body, which restricts or diminishes the Participant's level of independence or freedom.
- A chemical restraint is a psychopharmacologic drug that is used for discipline or convenience and not required to treat medical symptoms.
- A device used to provide support for functional body position or proper balance or a device used for medical treatment, such as sand bags to limit movement after medical treatment, a wheelchair belt used for body positioning and support, or a helmet to prevent injury during seizure activity is not a restraint.

Retrospective Review — A review conducted by the CHC-MCO to determine whether services were delivered as authorized and consistent with the CHC-MCO's payment policies and procedures.

Routine Care — Care for conditions that generally do not need immediate attention and minor episodic illnesses that are not deemed urgent. Examples of routine care include immunizations, screenings, and physical exams.

Seclusion — The involuntary confinement of an individual alone in a room or an area from which the individual is physically prevented from having contact with others or leaving.

Services My Way — The Budget Authority model of service, which provides Participants with a range of opportunities for Participant Self-Direction under which Participants have the opportunity to hire and manage staff that perform personal assistance type services, manage a flexible spending plan, and purchase allowable goods and services through their spending plan.

Sexual Abuse of a Participant — Intentionally, knowingly, or recklessly causing or attempting to cause the rape of, involuntary deviate sexual intercourse with, sexual assault of, statutory sexual assault of, aggravated indecent assault of, indecent assault of, or incest with a Participant.

Social Determinants of Health (SDOH) — Conditions in the environments in which people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes which can lead to inequities and risks.

Start Date — The first date on which the CHC-MCO is operationally responsible and financially liable for the provision of Covered Services to a Participant.

Statewide Preferred Drug List (Statewide PDL) – A list of drugs and products that are grouped into therapeutic classes. The Department's Pharmacy and Therapeutics (P&T) Committee recommends therapeutic classes to include on the Statewide PDL, preferred or non-preferred status for the drugs in each class, and corresponding prior authorization guidelines for each class. The committee's recommendations are approved by the secretary of the Department of Human Services (DHS) prior to implementation. The Statewide PDL applies to beneficiaries who receive their pharmacy benefits through the FFS and managed care delivery systems.

Step Therapy — A type of Prior Authorization requirement intended as a cost savings that begins drug therapy with the most cost-effective drug therapy, and progresses to other more costly therapies determined to be Medically Necessary.

Stop-Loss Protection — Coverage designed to limit the amount of financial loss experienced by a Provider.

Subcapitation — A fixed per capita amount that is paid by the CHC-MCO to a Network Provider for each Participant identified as being in its capitation group, whether or not the Participant receives medical services.

Subcontract — A contract between the CHC-MCO and an individual or entity to perform part or all of the CHC-MCO's responsibilities under this Agreement, excluding Provider Agreements.

Sustained Improvement — Improvement in performance documented through continued measurement of quality indicators after the performance project/study/quality initiative is completed.

Substantial Financial Risk — Financial risk set at greater than twenty-five percent (25%) of potential payments for Covered Services, regardless of the frequency of assessment (i.e., collection) or distribution of payments. The term "potential payments" means the maximum anticipated total payments that a physician or physician group could receive if the use or cost of referral services were significantly low.

Third Party Liability — The financial responsibility for all or part of a Participant's healthcare or LTSS expenses of an individual, entity, or program (e.g., Medicare) other than the CHC-MCO.

Third Party Resource — An individual, entity, or program that is liable to pay all or part of the medical or service cost of injury, disease, or disability of a Participant. Examples of TPR include government insurance programs such as Medicare or CHAMPUS; private health insurance companies or carriers; liability

or casualty insurance; and court-ordered medical support.

Urgent Medical Condition — An illness, injury, or severe condition which under reasonable standards of medical practice should be diagnosed and treated within a twenty-four (24) hour period and, if left untreated, could rapidly become a crisis or Emergency Medical Condition. The term also includes situations where a Participant's discharge from a hospital will be delayed until services are approved or a Participant's ability to avoid hospitalization depends upon prompt approval of services.

Utilization Management — An objective and systematic process for planning, organizing, directing, and coordinating healthcare resources to provide Medically Necessary, timely, and quality healthcare services in the most cost-effective manner.

Utilization Review Guidelines — Detailed standards, decision algorithms, models, or informational tools that describe the factors used to make Medical Necessity determinations for services, including but not limited to level of care, place of service, scope of service, and duration of service.

Value-Added Service — A service that is not a Covered Service that the CHC-MCO offers to encourage Participant Enrollment, encourage healthy lifestyles, or otherwise support CHC program objectives.

Value-Based Payments (VBP) Arrangements — Agreements between the MCO and providers, which specify how providers are paid for services rendered. VBP arrangements link provider payments to the value of services provided and to relevant quality measures that are indicative of health outcomes.

Value-Based Purchasing Models — VBP Models define a way to organize and deliver care, and may incorporate one or more VBP Payment Strategies as ways to pay providers.

Value-Based Purchasing Payment Strategies — Refers to the mechanism that MCOs use to pay providers (such as performance-based contracting, shared savings, shared risk, population-based payment).

Vital Documents — Documents which contain information that is critical for obtaining or understanding CHC-MCO benefits and services, such as provider directories, Participant handbooks, denial, complaint and grievance notices, and other documents identified by the Department as critical to obtaining services.

SECTION III: RELATIONSHIP OF PARTIES

A. Term of Agreement

The term of this Agreement will commence on January 1, 2018, and will have an initial term of five (5) years, provided that no court order, administrative decision, or action by the Federal or State government is outstanding which prevents the commencement of the Agreement.

The Department has the option to extend this Agreement for an additional two (2) year period upon the same terms and conditions. DHS will notify the CHC-MCO of its election to exercise the renewal option in writing at least one hundred twenty (120) days prior to the expiration of the then-current term provided, however, that the Department's right to exercise any such renewal option shall not expire unless and until the CHC-MCO has given the Department written notice of the Department's failure to timely exercise its renewal option and has provided a ten (10) day opportunity from the Department's receipt of the notice to cure the failure. If the Department exercises its option to renew, it will promptly commence rate discussions with the CHC-MCO.

If the Department has exercised its option to extend and the CHC-MCO and the Department are unable to agree upon terms for the extension, this Agreement will continue on the same terms and conditions for a period of one hundred twenty (120) days after the expiration of the Initial Term unless this Agreement has been terminated in accordance with Exhibit B, Standard Terms and Conditions for Services.

B. Nature of Agreement

The CHC-MCO must provide for all Covered Services and related services to Participants through Providers in accordance with this Agreement in the following zones: the Southwest Zone, Southeast Zone, Lehigh Capital Zone, Northwest Zone, and Northeast Zone. The Department may impose remediation for any CHC-MCO non-compliance with CHC program requirements contained within this Agreement.

SECTION IV: APPLICABLE STATUTES AND REGULATIONS

A. Certification, Licensing and Accreditation

1. Providers

The CHC-MCO must require its Network Providers to comply with all certification and licensing laws and regulations applicable to the profession or

entity. All ordering, referring, prescribing, or rendering providers within an MCO's network must be MA enrolled. The CHC-MCO may not employ or enter into a relationship with a Provider that is precluded from participation in the MA Program or other Federally funded healthcare program in any State. The CHC-MCO must screen all Providers at the time of hire or contracting and thereafter, on an ongoing monthly basis, to determine if they have been excluded from participation in any federally funded healthcare programs.

The CHC-MCO must use the streamlined credentialing process that the Department develops, in conjunction with that of the CHC-MCO.

2. National Accreditation

The CHC-MCO must be accredited by NCQA and obtain accreditation within the accreditation body's specified timelines. A CHC-MCO applying for accreditation must select an accreditation option and notify the accrediting body of the accreditation option chosen. Accreditation obtained under the NCQA Full Accreditation Survey (First Survey), or the LTSS Distinction for Health Plans options will be accepted by the Department. The Department will accept the use of the NCQA Corporate Survey process, to the extent deemed allowable by NCQA, in the NCQA accreditation of the CHC-MCO, however, the CHC-MCO must obtain accreditation in a manner that allows the plan to submit their HEDIS results to NCQA for the CHC-MCO Participant population only.

If the CHC-MCO is accredited as of the Start Date, the CHC-MCO shall maintain accreditation throughout the term of this Agreement. If the CHC-MCO is not accredited as of the Start Date, the CHC-MCO shall obtain the First Survey accreditation and the LTSS Distinction for Health Plans no later than the end of the second full calendar year of operation and shall maintain accreditation for the term of this Agreement.

The Department will confirm the CHC-MCO's accreditation on an annual basis and will consider failure to obtain accreditation and failure to maintain accreditation a material breach of this Agreement. A CHC-MCO with provisional accreditation status must submit a corrective action plan to the Department within thirty (30) days of receipt of notification from the accreditation body and may be subject to termination of this Agreement.

The CHC-MCO must submit the final hard copy Accreditation Report for each accreditation cycle within ten (10) days of receipt of the report. The CHC-MCO must submit to the Department updates of accreditation status, based on annual HEDIS scores, within ten (10) days of receipt. The Department will post the accreditation status on the Department's website.

B. Specific to the Medical Assistance Program

The CHC-MCO must enroll to participate in the MA Program, arrange for the provision of Medically Necessary Covered Services to its Participants, and comply with all Federal and State laws generally and specifically governing participation in the MA Program. The CHC-MCO must provide services in the manner prescribed by 42 U.S.C. § 300e(b), and warrants that the organization and operation of the CHC-MCO is in compliance with 42 U.S.C. § 300e(c). The CHC-MCO must comply with all applicable rules, regulations, and Bulletins promulgated under such laws, including but not limited to, 42 U.S.C. §§ 1396 et seq.; 62 P.S. §§ 101 et. seq.; 42 C.F.R. Parts 431 through 481 and 45 C.F.R Parts 74, 80, and 84, and the Department regulations except as specified in Exhibit C, Managed Long Term Services and Supports Regulatory Compliance Guidelines.

A Participant who is an Indian, as defined in 42 CFR § 438.14(a), and who is eligible to receive or has received an item or service furnished by an I/T/U HCP or through referral under contract health services as defined in 42 CFR § 447.51 is exempt from any premiums or other cost sharing imposed by the Department.

C. Specific to Medicare

The CHC-MCO must operate a CMS-approved D-SNP as provided in this Agreement in each zone.

The D-SNP must enter into a MIPPA Agreement with the Department. The MIPPA Agreement will address the eight (8) required elements set forth in CMS Medicare Managed Care Manual, Chapter 16b, § 40.5.1 (Rev. Nov. 28, 1014), Available at: https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/mc86c16b.pdf, and will include additional requirements to ensure the greatest possible coordination between the CHC-MCO and the D-SNP, including but not limited to the following:

1. The goal of the CHC-MCO and its companion D-SNP is to provide a coordinated experience from the perspective of Dual Eligible Participants who enroll in both. This includes but is not limited to an integrated assessment and care coordination process that spans all MA and Medicare services, including behavioral health services.
2. Administrative integration is expected to evolve over the life of CHC. The CHC-MCO will cooperate fully with the Department and CMS in their ongoing efforts to streamline administration of the two programs, which may include, but is not limited to, coordinated readiness reviews, monitoring, enrollment, Participant materials and appeals processes.

D. General Statutes and Regulations

1. The CHC-MCO must comply with Titles VI and VII of the Civil Rights Act of 1964, 42 U.S.C. §§ 2000d et seq. and 2000e et seq.; Title IX of the Education Amendments of 1972, 20 U.S.C. §§ 1681 et seq.; Section 504 of the Rehabilitation Act of 1973, 29 U.S.C. § 794; the Age Discrimination in Employment Act of 1975, 42 U.S.C. §§ 6101 et seq.; the Americans with Disabilities Act, 42 U.S.C. §§ 12101 et seq.; Section 1557 of the Patient Protection and Affordable Care Act (ACA), [42 C.F.R. 438.3(f)(1); 42 C.F.R. 438.100(d)]; the Health Insurance Portability and Accountability Act of 1996 (HIPAA) 42 U.S.C. §§ 1320d-1320d-9; the Pennsylvania Human Relations Act of 1955, 71 P.S. §§ 941 et seq.; Article XXI of the Insurance Company Law of 1921, 40 P.S. §§ 991.2102 et seq.; and the Drug and Alcohol Use and Dependency Coverage Law (Act 106 of 1989), 40 P.S. §§ 908-1 et seq.

2. The CHC-MCO must comply with all applicable regulations and policies of DOH and PID.

   The CHC-MCO must comply with applicable Federal and State laws that pertain to Participant rights and protections.

3. The CHC-MCO and its subcontractors must respect the conscience rights of providers, and comply with the state law prohibiting discrimination on the basis of a refusal or willingness to provide healthcare services on moral or religious grounds as set forth in 40 P.S. § 901.2121(e)(3) and § 991.2171; 43 P.S. § 955.2 and 18 Pa. C.S. § 3213(d).

   If the CHC-MCO elects not to provide, pay for, or provide coverage of a counseling or referral service because of an objection on moral or religious grounds, the CHC-MCO must furnish information, to the Department, about the services not covered in accordance with the provisions of 42 C.F.R. § 438.102(b):

   - With its Proposal in response to the RFP
   - Whenever it adopts the policy during the term of the Agreement.

   The CHC-MCO must provide this information to the IEB for Enrollment purposes and to Participants no less than thirty (30) days prior to the effective date of the policy.

4. Nothing in this Agreement shall be construed to permit or require the Department to pay for any services or items which are not or cease to be compensable under the statutes, rules, and regulations governing the MA Program at the time such services are provided.

E. Limitation on the Department's Obligations

The obligations of the Department under this Agreement are limited and subject to

the availability of funds.

F. Statutes, Regulations, Policies, and Procedures

The CHC-MCO must comply with future changes in Federal and State statutes and regulations, and Department requirements and procedures related to changes in the MA Program, including any changes to 1915(b) or (c) Waivers and changes to MIPPA Agreements.

The Department will issue CHC Operations (CHC OPS) Memos via the Pennsylvania HealthChoices Extranet https://pagov.sharepoint.com/sites/DHS-HC-Extranetto provide clarifications to requirements pertaining to CHC and copies of required templates referenced in the Agreement. The CHC-MCOs must routinely check the Pennsylvania HealthChoices Extranet site.

Unauthorized Programs and Activities

Should any part of the scope of work under this Agreement relate to a state program that is no longer authorized by law (e.g., which has been vacated by a court of law, or for which CMS has withdrawn federal authority, or which is the subject of a legislative repeal), CHC-MCOs must do no work on that part after the effective date of the loss of program authority. The state must adjust capitation rates to remove costs that are specific to any program or activity that is no longer authorized by law. If a CHC-MCO works on a program or activity no longer authorized by law after the date the legal authority for the work ends, the CHC-MCO will not be paid for that work. If the state paid a CHC-MCO in advance to work on a no-longer-authorized program or activity and under the terms of this Agreement the work was to be performed after the date the legal authority ended, the payment for that work should be returned to the state. However, if a CHC-MCO worked on a program or activity prior to the date legal authority ended for that program or activity, and the state included the cost of performing that work in its payments to the MCO, the MCO may keep the payment for that work even if the payment was made after the date the program or activity lost legal authority.

SECTION V: PROGRAM REQUIREMENTS

The Department may impose remediation for any CHC-MCO non-compliance with the CHC program requirements contained in this section.

A. Covered Services

The CHC-MCO must provide Medically Necessary PH services and LTSS in accordance with the requirements of this Agreement. The CHC-MCO must require that Medical Necessity determinations of Covered Services be documented in writing and that they be based on medical information provided by a Participant, the Participant's family or caretaker and PCP, as well as other Providers,

programs, or agencies that have evaluated the Participant. A determination of Medical Necessity must be made by qualified and trained Providers with clinical expertise comparable to the prescribing Provider.

The MCO may but is not required to impose copayments, but only for those services, items, and pharmacy services that have a copayment in the MA FFS delivery system and subject to the exemptions in the MA FFS delivery system. If the MCO imposes copayments, the amount of the copayments may not exceed the amounts imposed in the MA FFS delivery system. If the CHC-MCO is found to have overcharged Participants for copayments, they will be required to return the amount of the overcharge to the Participant. Network Providers and other Providers that may render services under the Agreement may not deny a covered service because a Participant is unable to pay the copayment amount, but the Provider may continue to attempt to collect the copayment amount.

1. Amount, Duration, and Scope

At a minimum, the CHC-MCO must provide the Covered Services in Exhibit A, Covered Services List, in the amount, duration, and scope available in the MA FFS Program and in the approved 1915(c) waiver for CHC. The CHC-MCO must provide services that are sufficient in amount, duration, and scope to reasonably be expected to achieve the purpose for which the services are furnished. If services are added to the MA Program or the CHC Program, or if Covered Services are expanded or eliminated, the CHC-MCO must implement such changes on the same day as the Department, unless the CHC-MCO is notified by the Department of an alternative implementation date.

The CHC-MCO shall not arbitrarily deny or reduce the amount, duration, or scope of a Covered Service based on a Participant's diagnosis, disability, or type of illness/condition.

2. Home- and Community-Based Services

The CHC-MCO must provide Home and Community Based LTSS as Covered Services for Participants determined to be NFCE. The CHC-MCO must make HCBS LTSS services available seven (7) days per week, twenty-four (24) hours per day at any hour of the day and for any number or combination of hours, as dictated by Participants' needs and outlined in their approved PCSPs.

For Participants who were living in the community at the time of implementation of CHC in the zone and who chose to remain in the community, the CHC-MCO must support that choice and support the Participants in the community.

3. Program Exceptions

The CHC-MCO must establish a program exception process, reviewed and approved by the Department, whereby a Provider or Participant may request coverage, under extraordinary circumstances, for items or services that are of a type covered by the MA program but are not currently listed on the MA Program Fee Schedule. The CHC-MCO must use the program exception process to accept requests to exceed limits for items or services that are on the Fee Schedule if the limits are not based in statute or regulation. These requests are recognized by the Department as a Program Exception as described in 55 Pa. Code § 1150.63.

4. Expanded Services and Value-Added Services

The CHC-MCO may provide Expanded Services or Value-Added Services with prior written approval by the Department. Best practice approaches to delivering Covered Services are not Expanded Services or Value-Added Services.

If it provides Expanded Services or Value-Added Services, the CHC-MCO must offer the services to all Participants for whom the services are appropriate and must provide them at no cost to the Department. These services must be made available by appropriate Network Providers. The CHC-MCO may generally not condition these services on specific Participant performance; however, the Department may grant exceptions in limited circumstances if the CHC-MCO demonstrates the benefit of such condition for the Participant. Once an Expanded Service or Value-Added Service is approved, the CHC-MCO must continue to offer the service unless the CHC-MCO is notified, in writing, by the Department to discontinue the service or the Department approves a request from the CHC-MCO to discontinue the service. The CHC-MCO must send written notice to Participants and affected Providers at least thirty (30) days prior to the effective date of the change and must simultaneously amend all written materials describing its Expanded Service or Value-Added Services.

The CHC-MCO is permitted and encouraged to offer LTSS Services as Expanded Services to Participants who are not NFCE.

The CHC-MCO may provide individually tailored supportive items or services in addition to Covered Services where such services are determined by the CHC-MCO through the PCSP process to be appropriate for supporting a Participant in remaining in his or her home- or community-based setting. The CHC-MCO must report these individually tailored service or item authorizations to the Department but does not need prior approval from the Department.

The CHC-MCO may cover services or settings for Participants that are in lieu of those covered under the state plan if the Department determines that the

alternative service or setting is a medically appropriate and cost-effective substitute for the covered service or setting under the state plan.

The CHC-MCO may also cover services or settings for Participants that are in lieu of those covered under the state plan if:

- the Participant is not required by the CHC-MCO to use the alternative service or setting
- the in lieu of service (ILOS) is annually authorized and approved by the Department, utilizing the template developed by the Department in Appendix 5
- the approved ILOS are authorized and identified in the CHC-MCO contract; and
- the approved ILOS are offered to Participants at the option of the CHC-MCO.

The Department may determine that certain in lieu of services, which are medically necessary and cost-effective alternatives to State Plan services or settings, may be provided by the CHC-MCO. CHC-MCOs are not required to provide in lieu of services but have the option to provide these approved services. Appendix 5 contains the required process/instructions for obtaining Department approval and a list of approved ILOS.

5. Referrals

The CHC-MCO must establish and maintain a referral process to effectively utilize and manage the care of its Participants. The CHC-MCO may require a referral for any medical services that cannot be provided by the PCP, except where specifically provided otherwise in this Agreement.

The CHC-MCO must allow an Out-of-Network I/T/U HCP to refer a Participant who is an Indian to a CHC-MCO Network Provider as defined in 42 CFR § 438.14(a).

6. Self-Referral/Direct Access

A Participant may self-refer for vision, dental care, obstetrical and gynecological (OB/GYN) services, provided the Participant obtains the services within Network. A Participant may access chiropractic services in accordance with the process set forth in Medical Assistance Bulletin 15-07-01, and physical therapy services in accordance with the Physical Therapy Act (63 P.S. §§ 1301 et seq.) The CHC-MCO may request Department approval to allow other Covered Services to be directly available without referral.

The CHC-MCO may not use either the referral process or Prior Authorization

to manage the utilization of Family Planning Services. The CHC-MCO may not restrict the right of a Participant to choose a Provider for Family Planning Services and must make such services available without regard to marital status, age, sex, sexual orientation, gender identity, or parenthood. Participants may access, at a minimum, health education and counseling necessary to make an informed choice about contraceptive methods, pregnancy testing and counseling, basic contraceptive supplies such as oral birth control pills, diaphragms, foams, creams, jellies, condoms (male and female), Norplant, injectables, intrauterine devices, and family planning procedures. The CHC-MCO must pay for Out-of-Network Family Planning Services.

The CHC-MCO must permit Participants to select a Network Provider, including Certified Nurse Midwives, to obtain OB/GYN Services without prior approval from a PCP, including selecting a Network Provider to provide an annual well-woman gynecological visit, primary and preventive gynecology care, including PAP smears and referrals for diagnostic testing related to maternity and gynecological care, and follow-up care.

In situations where a newly enrolled Participant is pregnant and already receiving care from an Out-of-Network OB/GYN specialist at the time of Enrollment, the Participant may continue to receive services from that specialist throughout the pregnancy and postpartum care related to the delivery.

7. Drug Services

The CHC-MCO must provide coverage of prescription and OTC medicines for Participants who are not otherwise eligible for a Medicare Part D prescription drug plan. The CHC-MCO must provide pharmacy services for all other Participants. The CHC-MCO must coordinate pharmacy services with Medicare Part D, and other third party pharmacy coverage so that the Participant receives the pharmacy services outlined in the Participant's PCSP. The CHC-MCO must offer assistance to Dual Eligible Participants in selecting a Medicare Part D plan, including advising on the benefit of enrolling in a Medicare Part D plan with a zero co-pay and assisting the Participant with obtaining health insurance counseling through Pennsylvania Medicare Education and Decision Insight (PA MEDI).

The CHC-MCO must also comply with the requirements described in Exhibit D, Drug Services.

8. Emergency Services

The CHC-MCO is responsible for ensuring the coordination of Emergency Services including those categorized as mental health or drug and alcohol

services, except for ED evaluations for voluntary and involuntary commitments pursuant to 50 P.S. §§ 7101 et seq.

The CHC-MCO must comply with the provisions of 42 U.S.C. § 1396u-2(b)(2), 40 P.S. § 991.2102 and § 991.2116, and 28 Pa. Code § 9.672 pertaining to coverage and payment of Medically Necessary Emergency Services.

The CHC-MCO may not:

- Limit what constitutes an Emergency Medical Condition based on lists of diagnoses or symptoms.
- Refuse to cover Emergency Services based on the ED, hospital, or fiscal agent not notifying the Participant's PCP or CHC-MCO of the Participant's screening and treatment within ten (10) calendar days of presentation for Emergency Services.
- Hold a Participant who has an Emergency Medical Condition liable for payment of subsequent screening and treatment needed to diagnose the specific condition or stabilize the Participant.
- Deny claims for emergency services provided to Participants by a Provider that is a licensed emergency medical services agency solely because the Participant did not require transportation or refused transportation.

The CHC-MCO may not require Prior Authorization of Emergency Services. A Provider may initiate necessary intervention to stabilize an Emergency Medical Condition without seeking or receiving Prior Authorization. The treating Provider determines when a Participant is sufficiently stabilized for transfer or discharge, and that determination is binding on the CHC-MCO.

The CHC-MCO must limit the amount paid to Out-of-Network Providers of Emergency Services to no more than the amount that would have been paid for such services under the Department's FFS Program.

The CHC-MCO may not deny payment for Emergency Services when:

- A Participant has an Emergency Medical Condition, including cases in which the absence of immediate medical attention would not have placed the health of the individual or, with respect to a pregnant woman, the health of the woman or her unborn child, in serious jeopardy, serious impairment to bodily functions, or serious dysfunction of any bodily organ or part; or
- A representative of the CHC-MCO instructs the Participant to seek Emergency Services.

The CHC-MCO may not apply case management protocols when they would

interfere with Emergency Services. In the case of a pregnant woman who is having contractions, the CHC-MCO may not use case management protocols unless adequate time exists to effect a safe transfer before delivery or the transfer would not pose a threat to the health and safety of the Participant or the unborn child. When a transfer occurs, the CHC-MCO must have and maintain documentation that its case management protocols did not interfere with the transferring hospital's obligation to:

- Restrict transfer until the Participant is stabilized;
- Effect an appropriate transfer or provide medical treatment within its capacity to minimize the risk of transfer;
- Require a supervised transfer;
- Provide the Participant with the opportunity to make an informed decision to consent to or refuse transfer, along with documentation of the associated risks and benefits; and
- Not divert the Participant being transported by emergency vehicle on the basis of insurance coverage.

A CHC-MCO may:

- Track, trend, and profile ED utilization;
- Retrospectively review and, where appropriate, deny payment for inappropriate ED use;
- Use appropriate methods to encourage Participants to use PCPs rather than EDs for symptoms that do not qualify as an Emergency Medical Condition; and
- Use a Participant Lock-In methodology for Participants with a history of significant inappropriate ED usage as referenced in Section V.X.1., Recipient Restriction Program.

The CHC-MCO must have a process to have PCPs promptly see Participants who presented to an ED but did not require or receive services for those symptoms prompting the ED visit.

9. Post-Stabilization Services

The CHC-MCO must cover Post-Stabilization Services.

The CHC-MCO must limit charges to a Participant for Post-Stabilization Services to an amount no greater than what the CHC-MCO would charge the Participant if he or she had obtained the services through the Network.

The CHC-MCO must cover Post-Stabilization Services without authorization, and regardless of whether the Participant obtains the services within or outside of its Network if any of the following situations exists:

a. The Post-Stabilization Services were administered to maintain the Participant's stabilized condition within one (1) hour of the Provider's request to the CHC-MCO for pre-approval of Post-Stabilization Services.

b. The Post-Stabilization Services were not pre-approved by the CHC-MCO because the CHC-MCO did not respond to the Provider's request for pre-approval of the Post-Stabilization Services within one (1) hour of the request.

c. The Post-Stabilization Services were not pre-approved by the CHC-MCO because the Provider could not reach the CHC-MCO to request pre-approval.

d. The CHC-MCO and the treating physician could not reach an agreement concerning the Participant's care and a CHC-MCO physician is not available for consultation. In this situation, the CHC-MCO must give the treating physician the opportunity to consult with a CHC-MCO physician, and the treating physician may continue with the care of the Participant until a CHC-MCO physician is reached or one of the criteria applicable to termination of a CHC-MCO's financial responsibility described below is met.

The CHC-MCO's financial responsibility for Post-Stabilization Services that the CHC-MCO has not pre-approved ends when:

a. A Network physician with privileges at the treating hospital assumes responsibility for the Participant's care;

b. A Network physician assumes responsibility for the Participant's care through transfer;

c. The CHC-MCO and the treating physician reach an agreement concerning the Participant's care; or

d. The Participant is discharged.

10. Examinations to Determine Abuse or Neglect

a. The CHC-MCO must provide Participants under evaluation as possible victims of abuse or neglect and who present for physical examinations for determination of abuse or neglect, with such services.

b. The CHC-MCO must inform Network Providers they are mandatory reporters and must require all Network Providers to know the procedures for reporting suspected abuse and neglect. This requirement must be included in all applicable Provider Agreements. The CHC-MCO must have

a sufficient number of Network Providers qualified to conduct the specialty evaluations necessary for investigating alleged physical and sexual abuse.

c. Should a Network PCP determine that a mental health assessment is needed, the PCP must inform the Participant or the APS or OAPS representative on how to access mental health services and coordinate access to these services, when necessary.

11. Hospice Services

The CHC-MCO must provide Hospice and use certified Hospice Providers in accordance with 42 C.F.R. Part 418, Subpart G. The CHC-MCO must coordinate with Hospice Providers for Dual Eligible Participants who are receiving Hospice through their Medicare coverage. Hospice provided to Participants by Medicare-approved Hospice Providers is directly reimbursed by Medicare.

12. Organ Transplants

The CHC-MCO must pay for transplants to the extent that the MA FFS Program pays for such transplants. When Medically Necessary, the MA FFS program currently covers the following transplants: kidney, heart, heart/lung, lung, liver, pancreas, pancreas/kidney, intestinal, corneal, stem cell, bone marrow, or peripheral stem cell.

13. Transportation

The CHC-MCO must provide all Participants with Medically Necessary emergency ambulance transportation and Medically Necessary non-emergency ambulance transportation. The CHC-MCO must provide all NFCE Participants with non-medical transportation. The CHC-MCO may provide non-medical transportation to other Participants at its own discretion and own cost. Non-medical transportation includes transportation to community activities, grocery shopping, religious services, Adult Daily Living centers, employment and volunteering, and other activities or LTSS services as specified in the Participant's PCSP.

a. The CHC-MCO must pay rates for ambulance services that are not less than the amounts listed in PA's MA fee schedule. If the MA fee schedule rates are increased to comply with Act 15 of 2023, and if the change is such that an actuarial analysis determines that a rate change is appropriate, the Department will adjust capitation rates to account for this change.

b. Effective January 1, 2021, the CHC-MCOs must pay rates to the ambulance service owned and operated by the City of Pittsburgh that are at least 105 percent of the Medicare Fee Schedule, Urban Base Rate for the following list

of services. Effective January 1, 2023, the CHC-MCOs must pay rates to the ambulance service owned and operated the City of Philadelphia that are at least 105 percent of the Medicare Fee Schedule, Urban Base Rate for the following list of services.

- Basic Life Support, non-emergency transport - (A0428)
- Basic Life Support, emergency transport - (A0429)
- Advanced Life Support, Level 1 - (A0426 & A0427)
- Advanced Life Support, Level 2 - (A0433)

If the payment rates required in Section V.A.13.a are higher than any or all of the payment rates required by this Section, then the CHC-MCO must apply Section V.A.13.a in place of the requirements in this Section for any or all of the ground ambulance services listed above. For all other services provided by the ground ambulance service owned and operated by the City of Pittsburgh and the City of Philadelphia not specifically listed in this Section, the CHC-MCO must apply Section V.A.13.a requirements above.

c. The requirements in subsections 13.a., and 13.b. above apply to any Subcontractor of the CHC-MCO, as required by Section V.X.2.

The CHC-MCO must provide non-emergency medical transportation for NF residents. The CHC-MCO must also provide any specialized non-emergency medical transportation for Participants, including transportation for Participants who are stretcher-bound.

All other non-emergency transportation for Participants to and from Medicare-covered services and Covered Services must be arranged through the MATP vendor.

The Medical Assistance Transportation Program (MATP) is responsible for the following:

- Non-emergency transportation to a medical service that is covered by Medicare or CHC. This includes transportation for urgent care appointments. Participants whose service is paid by Medicare can receive MATP service as long as the service is performed by a Network Provider and all other eligibility requirements are met.

- Transportation to another county, as Medically Necessary, to get medical care as well as advice on locating a train, bus, and route information.

- Reimbursement for mileage, parking, and tolls with valid receipts, if the Participant used own car or someone else's car to get to the Provider.

When requested, the CHC-MCO must arrange non-emergency medical transportation for urgent appointments for its Participants through the MATP. Some Participants may qualify for non-emergency medical transportation through programs such as Shared Ride. Because MATP is the payor of last resort, for Participants who require CHC-MCO assistance in coordinating non-emergency medical transportation the CHC-MCO must coordinate access to transportation through all available programs and not just the MATP program.

MATP agencies have been instructed to contact the CHC-MCO for verification that a Participant's request is for transportation to a Covered Service. The CHC-MCO should jointly undertake activities with MATP agencies such as sharing Provider Network information, developing informational brochures, and establishing procedures which enhance transportation services for Participants.

The CHC-MCO must arrange and coordinate transportation with the MATP providers so Participants receive the MATP services outlined in their PCSP.

14. Healthy Beginnings Plus Program

The CHC-MCO must provide services that meet or exceed HBP standards in effect as defined in 55 Pa. Code Chapter 1140 (relating to Healthy Beginnings Plus Program) and current or future guidance provided in MA Bulletins. The CHC-MCO must also continue the coordinated services relating to pregnancy included in the HBP Program by utilizing enrolled HBP Providers or developing comparable resources. The CHC-MCO must submit any such comparable programs to the Department for review and approval.

The CHC-MCO's prenatal program must have the majority of its pregnant Participants seen face-to-face in a community setting. Majority is defined as greater than fifty percent (50%) of unique pregnant women that have an initial care management assessment as reported. This will be accomplished by relationships within the CHC-MCO's Network, CHC-MCO employees, or delegated vendor relationship.

The HBP Program requires that pregnant women be adequately screened for substance use disorders and referred to treatment for positive screenings.

15. Nursing Facility Services

The CHC-MCO is responsible for payment for Medically Necessary NF services, including bed hold days up to fifteen (15) days per hospitalization if the NF satisfies the occupancy percentage requirements and up to thirty (30) Therapeutic Leave Days per year if a Participant is admitted to a NF or resides in a NF at the time of Enrollment.

The CHC-MCO must, in coordination with the Department, monitor for

completion of all NF-related processes, including but not limited to: PASRR process, specialized service delivery, Participant's rights, patient pay liability, personal care accounts, or other identified processes. CHC-MCOs must cover all Program required and necessary specialized services for CHC-enrolled Participants as mandated in the Federal PASRR regulations. In accordance with those regulations, which control, CHC-MCOs are required to provide supportive services to individuals residing in nursing facilities who have been determined to have a condition that meets program criteria for Mental Health, ID/DD, and ORC (Physical, Sensory, or Neurological disability), for which they require specialized services. These services are ancillary to the services a nursing facility generally provides. For individuals with Mental Health conditions, the CHC-MCOs in coordination with the BH-MCO, must at a minimum provide specialized services for partial psychiatric hospitalization, psychiatric outpatient clinic, mobile mental health treatment, crisis intervention services, targeted mental health case management and resource coordination, peer support services, and outpatient drug and alcohol services. For individuals with ID/DD, the CHC-MCOs must at a minimum provide assistive technology, behavioral support, communication specialist, companion services, housing transition and tenancy sustaining services, in-home and community support, supports coordination, support in a medical environment, and transportation. For individuals with an Other Related Condition, the CHC-MCOs must at a minimum provide specialized services for service coordination/advocacy, community integration, peer counseling/support groups, training, and transportation needed to access specialized services. BH-MCOs are responsible for payment of behavioral health specialized services. CHC-MCOs must ensure that their staff is adequately educated on the PASRR process and specialized services.

16. Participant Self-Directed Services

CHC-MCOs must offer and educate Participants who are eligible for HCBS the opportunity to self-direct Personal Assistance Services as the first option over the traditional agency model, through one of the following models. CHC-MCOs must discuss what this model entails and provide educational materials to Participants on the self-directed model of care. CHC-MCOs must document the rationale given if a Participant decides to opt out of the self-directed model.

a. Vendor/Fiscal Employer Agent

- Participants may elect the Participant-Directed Employer Authority model, in which the Participant employs his or her own personal assistance and/or respite provider, who can be a family member, a friend, a neighbor, or any other qualified personal assistance worker as determined by the Department. Participants in this model may elect to also receive some of

their services through an agency or both; or

- Participants may elect the Budget Authority model called Services My Way, in which the PCSP is converted to a budget and the Participant develops a spending plan to purchase needed goods and services. Participants in this model may elect to receive personal assistance and/or respite services through an agency or to employ their own personal assistance providers, or both.

Under the Participant-Directed Employer Authority model and Budget Authority model an FMS vendor processes timesheets, makes payments, and manages all required tax withholdings, including Federal Insurance Contributions Act (FICA) taxes, for personal assistance workers employed by Participants under either self-directed model. A full FMS description can be found in Exhibit CC, Financial Management Services (FMS).

b. Agency with Choice

- Upon Federal approval, Participants may elect the Participant-Directed Agency with Choice (AWC) model, in which the participant selects his or her own personal assistance service and/or respite worker, who can be a family member, a friend, a neighbor, or any other qualified personal assistance worker as determined by the Department. The Participant is supported by an agency that provides administrative functions to the DCWs recruited by the Participant. The Participant directs the DCWs and is considered their managing employer. The Participant, as the managing employer, is responsible for, selecting and dismissing DCWs, directing the responsibilities of their DCWs, scheduling, and arranging for back-up services (with assistance from the Agency as requested), and any individualized training.

  The CHC-MCO may use only the AWC entity procured by the Department and must establish agreements and cooperate with the Commonwealth-procured AWC entity in order that necessary AWC services are provided to Participants. The CHC-MCO is responsible for paying the AWC provider:

- Reimbursement for payments the AWC FMS provider makes on behalf of the Participant-employer for workers' training, required pre-service orientation and wages.

- A per-member per-month fee to perform the tasks outlined in the AWC FMS service description

CHC-MCOs must at a minimum exceed baseline counts per CHC-MCO as of September 2023 as determined by Department data for the number of

Participants receiving services in the self-directed model of care in each of the CHC Zones.

CHC-MCOs must develop and implement strategies to increase education on the use of participant self-directed services. The Department will monitor the CHC-MCOs progress towards an increase in the use of Participant self-directed services through ad hoc and operations reports. The Department may establish a pay for performance program designed to provide incentives to support consumer direction as the first option over traditional agency model in subsequent years.

17. Health and Wellness Education and Outreach for Participants and Caregivers

The CHC-MCO must provide health and wellness opportunities for Participants, such as providing classes, support groups, and workshops, disseminating educational materials and resources, and providing website, email, or mobile application communications on topics including but not limited to heart attack and stroke prevention, asthma, living with chronic conditions, back care, stress management, healthy eating and weight management, oral hygiene, and osteoporosis. The CHC-MCO may also include annual or other preventive care reminders and caregiver resources. The CHC-MCO is also encouraged to identify regional community health education opportunities, improve outreach and communication with Participants and community-based organizations, and actively promote healthy lifestyles as well as disease prevention and health promotion.

18. Settings for HCBS

The CHC-MCO must provide services in the least restrictive, most integrated setting. The CHC-MCO shall only provide HCBS in settings that comply with 42 C.F.R. § 441.301. NFCE Participants who are residing in Personal Care Homes as of the Implementation Date will be permitted to remain in those settings while in CHC. Settings cannot be located on the grounds of a NF, Intermediate Care Facility, Institution for Mental Disease, or a Hospital, unless it meets the standards for the heightened scrutiny process established under 42 C.F.R. § 441.301(c)(5) and is included in the PCSP.

The CHC-MCO must work in collaboration with the Department to assess settings for compliance, which includes, but is not limited to, the following:

a. The CHC-MCO must identify a point person to participate in Department activities related to settings compliance with 42 C.F.R. § 441.301.

b. The CHC-MCO must comply with Department decisions on provider disenrollment in accordance with Exhibit V, CHC-MCO Requirements for Provider Terminations.

CHC-MCOs must also submit within ten (10) business days of identification any possible instances of non-compliance they identify in a format determined by the Department. The CHC-MCO remains obligated to comply with the regulations and may not provide services in a non-compliant setting.

19. Service Delivery Innovation

The CHC-MCO must promote innovation in the CHC service delivery system, including innovation pursued by the CHC-MCO on its own initiative, as well as collaborative efforts with the Department, CMS and local partners. Initial required target areas for CHC-MCO innovation are as follows.

a. Housing innovation that includes but is not limited to:

   i. Pre-tenancy and tenancy supports that help Participants at risk of homelessness or institutionalization obtain and maintain homes in the community, including but not limited to: outreach to and engagement of Participants, housing search assistance, assistance and applying for housing and benefits, assistance with SSI eligibility processes, advocacy and negotiation with landlords and other tenants, moving assistance, eviction prevention, motivational interviewing, and incorporating social determinants of health into the person-centered planning process.

   ii. Participation in local and statewide housing collaboratives, including implementing a Landlord Risk Mitigation program with the Self Determination Housing of PA (SDHP) to address housing barriers, for individuals transitioning from a nursing facility or at risk of a nursing facility placement and cooperating with other local and state housing agencies and social services organizations on housing initiatives.

b. Employment innovation that supports a Participant's ability and efforts to seek, find, and maintain competitive integrated employment or self-employment.

c. Workforce innovation that improves the recruitment, retention, and skills of direct care workers, which may include but are not limited to direct or enhanced payment and other incentives to Providers, Participant-Directed employers, and direct care workers for education, training, and other initiatives designed to enable direct care workers to

become a more functional member of the PCPT. Such initiatives may include but not be limited to:

- Labor/management partnerships or employee/employer partnerships;
- Training programs that exceed DOH and DHS requirements for direct-care worker qualifications, including programs to address complex needs of Participants;
- Pre-service orientation;
- Promotion of direct-care worker organizations and associations;
- Professional support, certifications, and career-ladder opportunities;
- Care team integration that engages front line workers;
- Marketing for the purposes of education and increased awareness of Participant-directed services options.

d. Technology innovation that supports a Participant's ability and efforts to lead a healthy and independent life in the community, which may include but not be limited to home monitoring and telemedicine applications.

e. CHC-MCOs must contract with at least one Health Information Organization that is capable of connecting to the PA Patient and Provider Network (or "P3N"). CHC-MCOs must work with the Department and Health Information Organizations (HIOs) to establish a resource and referral tool.

The CHC-MCO must participate in initiatives in these target innovation areas when requested by the Department. In addition, the CHC-MCO must submit a report to the Department annually that outlines the CHC-MCO's efforts in each of the four areas, lessons learned, and plans for the following year. The CHC-MCO must submit its first report by a date specified by the Department, and submit each subsequent report annually thereafter.

20. Exceptional Durable Medical Equipment

The CHC-MCO must provide Exceptional DME to NF residents. The CHC-MCO must have a process to provide a separate payment for Exceptional DME, Ventilators, and related supplies. The CHC-MCO must also have a process for directly paying a DME vendor for Exceptional DME.

The Department separately includes Exceptional DME from standard DME in developing the capitation rates. In the event of an Exceptional DME purchase, the equipment will belong to the Participant. The CHC-MCO will pay the DME vendor directly for Exceptional DME. The amount of the additional payment authorized is based upon the necessary, reasonable, and prudent cost of the Exceptional DME.

A Ventilator Authorization allows exceptional payments under specific terms to a NF, in addition to the NF's per diem rate, for NF services that are provided for the use of certain ventilator supplies. The amount of the additional payment authorized is based upon the necessary, reasonable, and prudent cost of the Ventilators and related supplies specified in the agreement with the NF.

The CHC-MCO must provide, in accordance with then-existing Department policies and procedures, an Exceptional DME or Ventilator payment where the Exceptional DME or Ventilator is Medically Necessary, and it must be specially adapted for the Participant or designated by the Department. The Department will publish an annual list of Exceptional DME by notice in the *Pennsylvania Bulletin.*

21. Dental Benefit Limit Exceptions (BLEs)

The CHC-MCO has the option to impose the same benefit limits or lesser benefit limits as the Department. For dental services that are covered in a Participant's benefit package only with an approved BLE, the CHC-MCO must use the same criteria as the Department or may use criteria that are less restrictive for its review of a BLE request.

The CHC-MCO must establish and maintain written policies and procedures for its dental BLE process. The CHC-MCO must receive advance written approval from the Department of these policies and procedures. The policies and procedures must comply with guidance issued by the Department. The CHC-MCO's submission of revised policies and procedures for review and approval by the Department shall not act to void any existing policies and procedures which have been prior approved by the Department for operation in a CHC Zone. Unless otherwise required by law, the CHC-MCO may continue to operate under such existing policies and procedures until such time as the Department approves the new or revised version thereof. The Department may periodically request ad hoc information related to CHC-MCO operations surrounding these dental BLE requests.

If the CHC-MCO imposes benefit limits, the CHC-MCO must issue notices to its Participants and notify network providers at least thirty (30) days in advance of the changes. The Participant notices must receive advance Department approval prior to being sent to Participants.

The time frames for notices of decisions for prior authorization set forth at Section V.B.2 and V.B.3. apply to requests for BLEs. If the CHC-MCO denies a BLE request, the CHC-MCO must issue a written denial notice, using the appropriate template available in docuShare.

If the Participant is currently receiving a service or item that is subject to a

benefit limit and the request for a BLE is denied, and the Participant files a complaint, grievance or request for a Fair Hearing that is postmarked or hand-delivered within 10 days of the date of the notice, the CHC-MCO must continue to provide the service until a decision is made.

Participants with approved BLE's are in a course of treatment. As such, the requirements for Continuity of Care for Course of Treatment Services Not Requiring Prior Authorization for Adults Age 21 and Older and Children Under the Age of 21, set forth in MA Bulletin 99-03-13, Attachment D, apply. CHC-MCOs are required to honor all approved BLE requests issued by the Fee-for-Service (FFS) program, another CHC-MCO, or a PH-MCO. The FFS delivery system and PH-MCOs will also honor all approved BLE requests issued by CHC-MCOs.

22. Complex Care Unit

The CHC-MCO must develop, train, and maintain a Complex Care Unit for complex case management and hard to place cases within its organizational structure that will be responsible to provide support and case management services to Participants with complex care needs. The purpose of the Complex Care Unit is to ensure that all Participants with complex circumstances, such as traumatic brain injury or ventilator dependence, are able to receive all necessary services and supports in a timely manner. The Complex Care Unit must also assist each Participant with a complex condition with access to services and information relevant to their special condition or circumstance. The Complex Care Unit must proactively identify and outreach to both NFCE and NFI Participants with special needs to provide these services and information. These services will include all those needed by a Participant with a complex condition to address their condition or circumstance.

B. Prior Authorization of Services

1. General Prior Authorization Requirements

The CHC-MCO may require Prior Authorization for services that require Prior Authorization in the FFS Program. If the CHC-MCO wishes to require Prior Authorization, the CHC-MCO must establish and maintain written policies and procedures which must have advance written approval from the Department. In addition, the CHC-MCO must submit a list and scope of services for referral and Prior Authorization for Department review and prior written approval as outlined in Exhibit E, Prior Authorization Guidelines for CHC-MCOs, and Exhibit F, Quality Management and Utilization Management Program Requirements.

The Department will use its best efforts to review and provide feedback to the

CHC-MCO on requests for written approval, corrective action plans, or denials, within sixty (60) days from the date the Department receives the request for review. For minor updates to existing approved Prior Authorization plans, the Department will use its best efforts to review updates within forty-five (45) days from the date the Department receives the request.

The Department may subject Prior Authorization Denials issued under unapproved Prior Authorization policies to Retrospective Review and reversal and may impose sanctions and require corrective action plans in the event that the CHC-MCO improperly implements a Prior Authorization policy or procedure or implements such policy or procedure without Department approval.

When the CHC-MCO makes a decision to deny, in whole or in part, a request for a service or item, the CHC-MCO must issue a written notice of denial using the appropriate notice templates provided by the Department. In addition, the CHC-MCO must make the notice available in accessible formats for individuals with visual impairments and for persons with LEP. If the CHC-MCO receives a request from the Participant, prior to the end of the required period of advance notice, for a translated and/or accessible version of the notice of denial, the required period of advance notice will begin anew as of the date that CHC-MCO mails the translated and/or accessible notice of denial to the Participant.

The CHC-MCO may not require Prior Authorization of Medicare services for Dual Eligible Participants. If coverage of the service is denied by Medicare, the CHC-MCO may require Prior Authorization if such authorization is required under the CHC-MCO's approved Prior Authorization policies and procedures. If the CHC-MCO does not require Prior Authorization of the services, the CHC-MCO will approve the service. Service Coordinators are required to work with the Participant's Medicare plan to obtain expeditious decision-making and communication of decisions.

2. Time Frames for Notice of Decisions

a. The CHC-MCO must process each request for Prior Authorization and notify the Participant of the decision as expeditiously as the Participant's health condition requires, or at least orally, within two (2) business days of receiving the request, unless additional information is needed. If no additional information is needed, the CHC-MCO must mail written notice of the decision to the Participant, the Participant's PCP, and the prescribing Provider within two (2) business days after the decision is made. The CHC-MCO may make notification of coverage approvals via electronic notices as permitted under 28 Pa. Code § 9.753(b). The two (2) business day decision timeframe for physical health services requests begins on the date the prescribing provider submits the request. The two (2) business day notification timeframe for HCBS requests begins on the date that the updated PCSP is

finalized as a result of the assessment and signed by the Participant, or when an assessment is not necessary, on the date the request is made by the Participant or Participant's representative, which may include the Participant's Provider, or the Participant's Service Coordinator. If additional information is needed to make a decision, the CHC-MCO must request such information from the appropriate Provider within two (2) business days of receiving the request and allow fourteen (14) days for the Provider to submit the additional information. If the CHC-MCO requests additional information, the CHC-MCO must notify the Participant on the date the additional information is requested, using the template provided by the Department, Request for Additional Information Letter. Timeframes specific to home/vehicle modifications, pest eradication, or assistive technology decisions are addressed in Section V.B.3.

b. If the requested information is provided within fourteen (14) days, the CHC-MCO must make the decision to approve or deny the service, and notify the Participant orally, within two (2) business days of receipt of the additional information. The CHC-MCO must mail written notice of the decision to the Participant, the Participant's PCP, and the prescribing Provider within two (2) business days after the decision is made.

c. If the requested information is not received within fourteen (14) days, the CHC-MCO must make the decision to approve or deny the service based upon the available information and notify the Participant orally within two (2) business days after the additional information was to have been received. The CHC-MCO must mail written notice of the decision to the Participant, the Participant's PCP, and the prescribing Provider within two (2) business days after the decision is made.

d. In all cases, the CHC-MCO must make the decision to approve or deny a covered service or item and the Participant must receive written notification of the decision no later than twenty-one (21) calendar days from the date the CHC-MCO received the request, or the service or item is automatically approved. To satisfy the twenty-one (21) day time period, the CHC-MCO may mail written notice to the Participant, the Participant's PCP, and the prescribing Provider on or before the eighteenth (18th) day from the date the request is received. If the notice is not mailed by the eighteenth (18th) day after the request is received, the CHC-MCO must hand deliver the notice to the Participant by the twenty-first (21st) day, or the request is automatically approved.

e. If the Participant is currently receiving a requested service and the CHC-MCO decides to deny the Prior Authorization request, the CHC-MCO must mail the written notice of denial at least ten (10) days prior to the effective date of the denial of authorization for continued services. If probable Participant fraud has been verified, the period of advance notice is

shortened to five (5) days. The CHC-MCO is not required to provide advance notice when it has factual information of the following:

- confirmation of a Participant's death.
- receipt of a clear written statement signed by a Participant that she or he no longer wishes the requested service or gives information that requires termination or reduction of services and indicates that she or he understands that termination will be the result of supplying that information. The Participant's signature on the PCSP alone does not constitute the "clear written statement" that is required under this provision.
- the Participant has been admitted to an institution where she or he is ineligible under CHC for further services.
- the Participant's whereabouts are unknown and the post office returns mail directed to him or her indicating no forwarding address.
- the CHC-MCO established the fact that the Participant has been accepted for MA by another State.
- a change in the level of medical care is prescribed by the Participant's physician.
- the notice involves an adverse determination with regard to preadmission screening requirements of section 1919(e)(7) of the Act (relating to nursing facility admission of individuals with mental illness or intellectual disabilities).
- the transfer or discharge from a facility will occur in an expedited fashion.

3. Time Frames for Notice of Decision for HCBS Waiver Home or Vehicle Modifications, Pest Eradication, or Assistive Technology Requests

The CHC-MCO must evaluate and mail a decision for each home/vehicle modification, pest eradication, or assistive technology request within sixty (60) business days of the date of request. The date of the request is deemed as when the Participant or Participant's representative requests the service or item, or the date the need for these services are identified during an assessment or nursing home transition process. During the sixty-day time frame the CHC-MCO must obtain all information pertinent to rendering a decision and mail the Participant the notice of decision by sixty (60) business days. Requests for additional information must be mailed within fifteen (15) business days of receiving the request and must allow thirty (30) business days for the additional information to be provided. Upon receipt of the additional information the CHC-MCO must make a determination as expeditiously as the Participant's health condition requires and send the Participant notification of the decision. If the service is approved, the CHC-MCO must initiate the process necessary to complete the task within seven (7) business days of authorization by inclusion on the Participant's PCSP. If by sixty (60) business days the CHC-MCO has not been

provided the information necessary to render a decision a denial notice shall be mailed. If the service is denied due to missing information and that information is later received, the request should be reopened as a new request and the process should continue when feasible.

During the sixty (60) business days, the CHC-MCO must obtain all information pertinent to rendering a decision as detailed in the CHC 1915(c) waiver.

Service Coordinators must clearly communicate the process to the Participant, including the information needed within sixty (60) business days and that when feasible the request may be reopened if the needed documentation is received after the denial notice is issued.

In cases where the item or service requested is not a covered service, the CHC-MCO must make a determination within two (2) business days of receipt of the request and mail a denial notice within two (2) business days of the decision.

4. Prior Authorization of Pharmacy Services

The CHC-MCO must comply with the requirements of Exhibit D, Drug Services, specific to Prior Authorization of Drug Services.

C. Continuity of Care

The CHC-MCO must provide continuity of care to Participants upon transition into CHC as follows:

1. NF Residents

A Participant who was already residing in a NF on the CHC Implementation Date must receive NF services from the same NF until the earliest date any of the following:

a. The Participant's stay in the NF ends.
b. The Participant is disenrolled from CHC.
c. The NF is no longer enrolled in the MA Program.

If a Participant appeals a decision to transfer or discharge the Participant from the NF, the continuity of care period will continue until the Participant's appeal is adjudicated by BHA.

A change in CHC-MCO, a temporary hospitalization, or therapeutic leave does not interfere with or terminate this continuity of care period as long as the Participant remains a resident of the NF.

The CHC-MCO in which the Participant is enrolled must enter into an agreement or payment arrangement with the Participant's NF to make

payments for the Participant's NF services during the continuity of care period, regardless of whether the NF is in the CHC-MCO Network. The Department is requiring the extended continuity of care provision described above to avoid unnecessary disruptions in continuity of care for NF residents and to promote their quality of care and quality of life. To meet this requirement the Department expects CHC-MCOs to pay all NFs at the FFS level unless the parties otherwise agree to another payment arrangement. The CHC-MCO may require Out-of-Network NFs to meet the same requirements as Network NFs, with the exception that a CHC-MCO may not require Out-of-Network Providers to undergo full credentialing.

Participants who do not qualify for the continuity of care period in this section, will receive the continuity of care described in Sections C. 3.

2. All Participants

For all Participants, the CHC-MCO must comply with continuity of care requirements for continuation of physical health Providers, services, and any ongoing course of treatment outlined in MA Bulletin 99-03-13, Continuity of Care for Recipients Transferring Between and Among Fee-for-Service and Managed Care Organizations. To ensure continuity of services for Participants receiving LTSS, CHC-MCOs must obtain the transitioning Participants' current PCSP or obtain an electronic record that includes all of the information contained in the current PCSP. CHC-MCOs must contact the providers identified in the service plan from the transferring Fee-for-Service program or CHC-MCO to confirm continuation of service authorization and payment. The term contact means the CHC-MCO provides an authorization of service that includes the type, scope, amount, duration, and frequency of services to be provided. The CHC-MCO must initiate contact within two business days of the date the CHC-MCO receives the PCSP or electronic record. LTSS identified on the Participants PCSP must remain in place until a reassessment is completed.

3. Other Care or Service Plan Transition

For a Participant who is receiving home- and community-based services other than through an HCBS Waiver on the Participant's Start Date, the CHC-MCO must coordinate the Participant's transition into CHC with entities that are providing care or Service Coordination to the Participant at the time of their CHC Enrollment. Entities might include but are not limited to the Act 150 program, the OPTIONS program or OMAP's Special Needs Unit. If a Participant becomes financially ineligible for CHC, their service coordinator shall provide them with information for the Act 150 Program.

D. Choice of Provider

The CHC-MCO must provide Participants with choice of Providers within its Network. The CHC-MCO may not attempt to steer Participants to Affiliates who are Providers or interfere with the Participants' choice of Network Providers. Participants may choose a Provider from within the Network at any time, even during a continuity of care period.

E. Comprehensive Needs Assessments and Reassessments

The CHC MCOs must screen each new Participant who is not NFCE for need within ninety (90) days of the Start Date. This requirement is separate from the assessment of those with LTSS or other special health needs.

The CHC-MCO must conduct a Comprehensive Needs Assessment (Assessment) of every Participant who is determined NFCE. If the Participant has not been determined NFCE, then the CHC-MCO must conduct an Assessment of a Participant when the Participant requests an Assessment or self-identifies as needing LTSS or if either the CHC-MCO or the IEB identifies that the Participant has unmet needs, service gaps, or a need for Service Coordination.

The CHC MCO must complete an in-person Assessment in accordance with the timeframes noted below.

- For NFCE Participants who are not receiving LTSS on their Enrollment Date, no later than five (5) business days from the Start Date.
- For Dual Eligible Participants identified by the IEB as having a need for immediate services, no later than five (5) business days from the Start Date.
- For Participants who are identified as having unmet needs, service gaps, or a need for Service Coordination, no later than fifteen (15) business days from the date the CHC-MCO is aware of the unmet needs, service gaps, or need for Service Coordination.
- When requested by a Participant or a Participant's designee or family member, no later than fifteen (15) days from the request.

The CHC-MCO must conduct a Comprehensive Needs Reassessment (Reassessment) of NFCE Participants at least annually (at least once every 365 days) following the most recent prior Assessment or Reassessment unless a trigger event occurs. CHC-MCOs may conduct a Reassessment prior to the one-year mark of the last Assessment for Participants who are transitioning to them from another CHC-MCO. If a trigger event occurs, the CHC-MCO must complete a Reassessment as expeditiously as possible in accordance with the circumstances and as clinically indicated by the Participant's health status and needs, but in no case more than fourteen (14) days after the occurrence of the following trigger events:

- A significant healthcare event to include but not be limited to a hospital admission, a transition between healthcare settings, or a hospital discharge.
- A change in functional status.
- A change in caregiver or informal support status if the change impacts one or more areas of health or functional status.
- A change in the home setting or environment if the change impacts one or more areas of health or functional status.
- A change in diagnosis that is not temporary or episodic and that impacts one or more area of health status or functioning.
- As requested by the Participant or designee, caregiver, Provider, or the PCPT or PCPT Participant, or the Department.

In addition to the trigger events listed above, if the CHC-MCO identifies that a Participant has not been receiving services to assist with activities of daily living, as indicated on the service plan, for five (5) consecutive scheduled days of service or more, and the suspension of services was not pre-planned, the CHC-MCO must communicate with the Participant to determine the reason for the service suspension within 24 hours of identifying the issue. If a Participant receives an alternative HCBS in this five (5) day span during which activities of daily living are addressed, outreach by the CHC-MCO is not required. If, after communicating, the CHC-MCO determined that the Participant's health status or needs have changed, then the CHC-MCO must conduct a Reassessment within fourteen (14) days of identifying the issue. Unless one of the trigger events listed in this section occur, or the Participant has transitioned from another CHC-MCO, the Reassessment cannot be conducted more than sixty (60) days prior to the one-year mark of the last Assessment date.

CHC-MCOs should utilize the Minimum Data Set (MDS) to evaluate if a Participant requires a Reassessment while in a nursing facility. For Participants who have been in a nursing facility for more than six (6) months, the MCO should conduct an appropriate assessment, including the Inter RAI for Participants who will be receiving HCBS in the community, to determine the Participant's HCBS needs in order to develop a new PCSP upon discharge to community living.

Through the Assessment and Reassessment, the CHC-MCO must assess a Participant's physical health, behavioral health, social, psychosocial, environmental, caregiver, back-up supports, emergency preparedness needs, LTSS, and other needs as well as preferences, goals, housing, and informal supports. The Assessment and Reassessment processes developed by the CHC-MCO must capture the following:

- Need for traditional comprehensive care management of chronic conditions and Disease Management.
- Functional limitations, including cognitive limitations, in performing ADLs and IADLs and level of supports required by the Participant.

- Ability to manage and direct services and finances independently.
- Level of supervision required.
- Supports for unpaid caregivers.
- Identification of risks to the Participant's health and safety.
- Environmental challenges to independence and safety concerns.
- Availability of able and willing informal supports.
- Diagnoses and ongoing treatments.
- Medications.
- Use of adaptive devices.
- Preferences for community engagement.
- Employment and educational goals.

If, after conducting the Assessment, the CHC-MCO determines that a Participant who has not been determined NFCE has a need for LTSS, the CHC-MCO shall refer the Participant for a clinical eligibility determination. The CHC-MCO must abide by the clinical eligibility determination entity's decision as to the need for NF services.

The Department will designate a tool to be used for Assessments and Reassessments. The CHC-MCO is permitted to gather additional information not included in the designated tool to supplement, but not supplant, the Department-designated tool.

F. Person-Centered Planning Team Approach Required

The CHC-MCO must develop a PCPT policy for PCSP development and implementation for Participants who require LTSS. The PCPT approach must comply with the PCPT requirements of 42 C.F.R. § 441.301(c)(1) through (3) and of this Agreement. The CHC-MCO must include the PCPT approach as part of the service planning and Service Coordination processes for Participants who require LTSS. The CHC-MCO may include the PCPT approach as part of the overall care coordination approach for Participants who do not require LTSS. The CHC-MCO PCPT approach must be person-centered and must consider all goals and requirements of CHC. The CHC-MCO must annually submit and obtain Department approval of its PCPT policy prior to the expiration date of the previously approved policy.

G. Person-Centered Service Plans

The CHC-MCO must develop and implement a written, holistic PCSP for each Participant who requires LTSS. The CHC-MCO must comply with the PCSP requirements specified in 42 C.F.R. § 438.208(c)(3) and § 441.301(b) and (c) in developing the PCSP. The developer of the PCSP must be trained in person-centered planning using a person-centered process. Refer to Exhibit Z Person-Centered Service Planning for additional information on PCSP requirements.

The PCSP must address how the Participant's physical, cognitive, and behavioral health needs will be managed, including how Medicare coverage (if the Participant is Dual Eligible) will be coordinated and how the Participant's LTSS services will be coordinated. The holistic PCSP at a minimum, must include the following:

1. Care Management Plan

A Care Management Plan to identify and address how the Participant's physical, cognitive, and behavioral healthcare needs will be care managed, including:

- Active chronic problems, current non-chronic problems, cognitive needs, and problems that were previously controlled or classified as maintenance care but have been exacerbated by disease progression or other intervening conditions.
- Current medications.
- All services authorized and the scope, amount, duration and frequency of the services authorized, including any services that were authorized by the CHC-MCO since the last PCSP was finalized that need to be authorized moving forward.
- A schedule of preventive service needs or requirements.
- Disease Management action steps.
- Known needed physical and behavioral healthcare and services.
- All designated points of contact and the Participant's authorizations of who may request and receive information about the Participant's services.
- How the Service Coordinator will assist the Participant in accessing Services identified in the PCSP.
- How the Service Coordinator will address and offer assistance with barriers to compliance with the physical or behavioral health treatment plans.
- How the CHC-MCO will coordinate with the Participant's Medicare, Veterans, BH-MCO, and other health insurers and other supports.

2. LTSS Service Plan

A LTSS Service Plan to identify and address how LTSS needs will be met and how services will be provided in accordance with the PCSP. The LTSS Service Plan must include the following:

- All LTSS services necessary to support the Participant in living as independently as possible and remaining as engaged in his or her community as possible.
- For the needs identified in the Assessment, the interventions to address each need or preference, reasonable long-term and short-term goals, the measurable outcomes to be achieved by the interventions, the anticipated timelines in which to achieve the desired outcomes, and the staff responsible for conducting the interventions

and monitoring the outcomes.

- Potential problems that can be anticipated, including the risks and how these risks can be minimized to foster the Participant's maximum functioning level of well-being.
- Participant decisions around self-directed care and whether the Participant is participating in Participant-Direction.
- Communications plan.
- The scope, amount, duration and frequency that specific services will be provided.
- Whether and, if so, how technology and telehealth will be used.
- Participant choice of Providers.
- Participant preferences for how often they would like to engage with their Service Coordinator (Participants must not be steered toward minimal quarterly contacts).
- Participant communication preferences including how they would like to be identified, addressed and preferred method of communication.
- Participant identified goals.
- Health related education needs and a plan to ensure understanding of health needs and treatment plan.
- Individualized Back-Up Plan that is verified by the service coordinator.
- Individuals and organizations identified to be included as part of the PCPT.
- The person(s) and Providers responsible for specific interventions or services.
- Participant's available, willing, and able informal support network and services.
- Participant's need for and plan to access community resources, non-covered services, and other supports, including any reasonable accommodations.
- How to accommodate preferences for leisure activities, hobbies, and community engagement.
- Any other needs or preferences of the Participant.
- Participant's goals for the least restrictive setting possible, if he or she is being discharged or transitioned from an inpatient setting.
- How the CHC-MCO will coordinate with the Participant's Medicare, Veterans Benefits, BH-MCO, other health coverage insurers, and other supports.
- Participant's employment and educational goals.
- Emergency back-up plan that is verified by the Service Coordinator, safe and realistic.
- A plan for regularly scheduled follow up communications with the Participant.
- Barriers to the Participant meeting defined goals.
- Measures to prevent future falls which must include at a minimum offering exercise therapy or referral to exercise for participants who have a history of falls or who have been assessed as a fall risk.

The PCSP must specify the need for referrals and the need for assistance from the Service Coordinator in obtaining referrals. To the extent that the PCP is part of the PCSP development or PCTP process, the PCSP must also articulate referrals that the Service Coordinator will enter in the appropriate systems. CHC-MCOs are required to utilize the PCSP checklist template developed by the Department.

If requested, the MCO must share minimum necessary service plan information with providers, consistent with HIPAA rules and regulations. If sufficient justification is demonstrated by a provider, that information may include the following:

• Total number of authorized units per week (i.e., amount);
• Service provision dates (i.e., service begin and end dates);
• Preferred schedule (i.e., duration and frequency);
• List of tasks detailing participant needs (i.e., ADLs/IADLs);
• Service coordinator name, phone, and email address;
• Off hours service coordination contact number;• Special conditions and instructions;
• Unique circumstances (e.g., allergies, smoking, pets, children under 18 years of age, etc.)

When new services are authorized or services are increased via inclusion on a Participant's PCSP, the new service or increased service level must commence within seven (7) business days of the approval, unless the Participant requests a longer timeframe for the services to start.

If a Participant requests a voluntary reduction or termination of services authorized on their PCSP, the CHC-MCO must obtain a clear written statement signed by the Participant attesting to the fact that they no longer wish to receive the service as previously authorized.

The PCSP must consider both In and Out-of-Network Covered Services to support the individual in the environment of his or her choice as well as caregivers' support needs.

PCSPs must be developed and implemented no more than thirty (30) calendar days from the date the Assessment or Reassessment is completed.

PCSPs must be developed by the Service Coordinator, the Participant, the Participant's representative, as appropriate, and the Participant's PCPT. Participants may appeal part or all of their Service Plan as provided in Exhibit G, Complaint, Grievance and DHS Fair Hearing Processes.

H. Care Management Plans

The CHC-MCO must make care management plans available to all Participants. Additionally, the CHC-MCO must develop and implement a written care plan for Participants who do not require LTSS but who have unmet needs, service gaps, or a need for Service Coordination. The care management plan must address how the Participant's physical, cognitive, and BH needs will be care managed, including how Medicare coverage (if the Participant is Dual Eligible) will be coordinated. The CHC-MCO must include in care management plans for Participants who do not require LTSS, at a minimum, the following:

- Active chronic problems, current non-chronic problems, cognitive needs, and problems that were previously controlled or classified as maintenance care but have been exacerbated by disease progression or other intervening conditions.
- Most recent, up to date, medications list.
- Current PCP and specialty providers.
- Potential future LTSS needs based on reasonably anticipated disease progression.
- All services authorized and the scope, amount, duration and frequency of the services authorized, including any services that were authorized by the CHC-MCO since the last care management plan was finalized that need to be authorized moving forward.
- A schedule of preventive service needs or requirements.
- Disease Management action steps.
- Known needed physical and behavioral healthcare and services.
- All designated points of contact and the Participant's authorizations of who may request and receive information about the Participant's services.
- How the care manager will assist the Participant in accessing services identified in the care management plan.
- How the CHC-MCO will coordinate with the Participant's Medicare, Veterans Benefits, BH-MCO, Lottery-funded Services and other healthcare insurance providers.

I. Department Review of Changes in PCSPs

The Department may review, question, and request revisions to PCSPs. The CHC-MCO must provide the Department with monthly aggregate reports on PCSP changes in a format specified by the Department. Additional PCSP requirements can be found in Exhibit Z.

J. Service Coordination

Service Coordinators must assist Participants who need LTSS in obtaining the services that they need. Service Coordinators lead the PCSP process and oversee the implementation of PCSPs. The CHC-MCO must annually submit and obtain Department approval of its Service Coordination staffing plan, including a staff-to-Participant ratio that is consistent with the ratio in its proposal,

after-hours and emergency staffing, Service Coordinator to Participant communications and contact plans, including the required frequency of in-person Service Coordinator contact, Service Coordinator caseloads, and how Service Coordinators share and receive real-time information about Participants and Participant encounters. The CHC-MCO must provide each Participant with a choice of available Service Coordinators employed by the CHC-MCO or Service Coordination entity contracted with the CHC-MCO. Service coordinators must meet with LTSS Participant's at least once every three (3) months by phone or in-person to assure that a Participant's LTSS are meeting their needs. At least two (2) of these visits must be in-person every year. Service Coordinators must allow for more frequent contacts based on Participant's preferences. Service Coordinators must not steer Participants toward minimal quarterly contacts. For Participants residing in a nursing facility that do not have direct telephone access the remote contact can be with the nursing facility staff that oversees the Participants care plan.

Service Coordinators must identify, coordinate, and assist Participants in gaining access to needed LTSS services and other Covered Services, as well as noncovered medical, social, housing, educational, and other services and supports. Service Coordination includes the primary functions of providing information to Participants and facilitating access to, locating, coordinating, and monitoring needed services and supports for Participants. Service Coordinators are also responsible for: informing Participants about available LTSS, required needs assessments, the PCSP process, service alternatives, service delivery options (including opportunities for Participant-Direction), roles, rights (including complaint, grievance, and DHS Fair Hearing rights), Participant's risks and responsibilities; assisting with fair hearing requests when needed and requested; and protecting a Participant's health, welfare, and safety on an ongoing basis.

Service Coordinators must also collect additional necessary information, including, at a minimum, Participant preferences, strengths, and goals to inform the development of the PCSP; conduct the Reassessment annually or more frequently as needed in accordance with Department requirements; assist the Participant and his or her PCPT in identifying and choosing willing and qualified Providers; coordinate efforts and prompt the Participant to complete activities necessary to maintain LTSS eligibility; explore coverage of services to address Participant-identified needs through other sources, including services provided under Medicare or private insurance and other community resources; and actively coordinate with other individuals and entities essential in the physical and behavioral care delivery for the Participant to provide for seamless coordination between physical, behavioral, and support services.

The CHC-MCO must oversee pre-tenancy and transition services for housing, which prepare and support the Participant's move to housing in an integrated setting. These services include assistance to obtain and retain housing,

activities to foster independence, and assistance in developing community resources to support successful tenancy and maintain residency in the community.

The CHC-MCO must develop, submit for DHS approval, and implement a plan to monitor the performance of Service Coordinators. The maximum caseload ratio for Service Coordinators serving HCBS Participants is 1:65 effective January 1, 2024, and will decrease to 1:60 effective July 1, 2024. The maximum caseload ratio for Service Coordinators serving Participants in nursing facilities is 1:225.

Service Coordinators must respond to Participant outreach within two (2) business days, or sooner when an imminent risk to a participant's health and safety is involved.

The CHC-MCO must assist Service Coordination entities with data sharing that supports quality of services for Participants.

The CHC-MCO must provide Service Coordination as an administrative function through appropriately qualified staff or contracts with Service Coordination entities.

All Service Coordinators assigned to nursing homes must have a PPD test for tuberculosis prior to providing services to Participants in nursing homes. See Exhibit B(1)R for additional information on PPD testing requirements.

The CHC-MCO must cooperate with the Department's Disability Advocacy Program, which aids Participants in applying for SSI or Social Security Disability benefits, by sharing Participant-specific information and performing coordination activities as requested by the Department, on a case-by-case basis.

For Participants not already receiving Service Coordination, the CHC-MCO must coordinate with the Participant's Medicare, Veterans, BH-MCO, other health insurers and other supports, including but not limited to the Act 150 program, the OPTIONS program or OMAP's Special Needs Unit, to assist the Participant in accessing all necessary services and supports.

K. Service Coordinator and Service Coordinator Supervisor Qualification Requirements

The CHC-MCO must provide Service Coordinators and Service Coordinator supervisors that have the following qualifications:

- Service Coordinators must: (1) be a Registered Nurse (RN); or (2) have a Bachelor's degree in Social Work, Psychology, or other related fields; or (3) have at least three (3) or more years of experience in a social service or a

healthcare related setting. Service Coordinators hired prior to the CHC zone Implementation Date must have the qualifications and standards proposed by the CHC-MCOs and approved by the Department.

- Service Coordinator supervisors must either: (1) be a RN; or (2) have a Master's degree in Social Work or in a human services or healthcare field and three (3) years of relevant experience with a commitment to obtain either a Pennsylvania Social Work or mental health professional license within one year of hire. Service Coordinator supervisors hired prior to the CHC zone Implementation Date (who do not have a license) must either: 1) obtain a license within one Year of the Implementation Date in the applicable CHC zone, or 2) have the qualifications and standards proposed by the CHC-MCOs and approved by the Department.

L. Nursing Home Transition

CHC-MCOs must provide NHT activities to Participants residing in NFs who express a desire to move back to their homes or other community-based settings. The CHC-MCO must provide NHT as an administrative function through appropriately qualified staff or contracts with nursing home transition entities.

Participants interested in transitioning to a community setting must be referred for NHT services. CHC-MCOs and the NHT provider are responsible to talk to the Participant and their support network about NHT, HCBS, community supports, and their options. If the Participant expresses a choice to move forward with the transition, the CHC-MCOs NHT provider must refer the Participant to the IEB to complete a Medical Assistance HCBS application. If the Participant is found to be ineligible for HCBS for any reason, a denial notice with appeals rights will be issued by the IEB. If a Participant is found eligible for HCBS services, but the CHC-MCO assesses the Participant and determines it would not be a safe discharge from the nursing facility, the CHC-MCO must issue a notice of denial of HCBS services with appeal rights.

M. CHC-MCO and BH-MCO Coordination

To enhance the treatment of Participants who need both Covered Services and BH Services, the CHC-MCO must develop and implement written agreements with each BH-MCO in the CHC zone regarding the interaction and coordination of services provided to Participants. This agreement must include the provisions specified in Exhibit H, coordination with Behavioral Health Managed Care Organizations. The CHC-MCO must submit any newly executed agreements for Department review and prior approval at least thirty (30) days prior to the implementation and make the agreements available to the Department upon request. The CHC-MCO is encouraged to develop uniform coordination agreements with the BH-MCOs to promote consistency in the delivery and administration of services.

The CHC-MCO must work in collaboration with the BH-MCOs through participation in joint initiatives to improve overall health outcomes of its Participants and in those activities that are required by the Department, including:

a. Information exchanges, including BH utilization data provided by the Department to control avoidable hospital admissions, readmissions and emergency department usage for Participants with SMI or SUDs or both.

b. Specific coordination mechanisms to assess and, where appropriate, reduce the use of psychotropic medications prescribed for Participants.

c. The CHC-MCO must, and the Department will require BH-MCOs to, submit to independent binding arbitration in the event of a dispute between the CHC-MCO and a BH-MCO concerning their respective obligations. The Agreement of the CHC-MCO and a BH-MCO to an arbitration process must be included in the written Agreement between the CHC-MCO and the BH-MCO.

d. The CHC-MCO must comply with the requirements specified in Exhibit D, Drug Services.

N. CHC-MCO Responsibility for Reportable Conditions

The CHC-MCO must work with DOH State and District Office Epidemiologists in partnership with the designated county or municipal health department staffs to appropriately report reportable conditions in accordance with 28 Pa. Code §§ 27.1 et seq. The CHC-MCO must designate a single contact person responsible for this requirement.

O. Participant Enrollment, Disenrollment, Outreach, and Communications

1. General

The CHC-MCO is prohibited from restricting Participants from changing CHC-MCOs. A Participant has the right to change his or her CHC-MCO at any time.

The CHC-MCO is prohibited from offering or exchanging financial payments, incentives, or commissions, to another CHC-MCO not receiving a CHC Agreement or choosing not to continue in CHC for the exchange of information on the other MCO's Participants. This includes offering incentives to a terminating CHC-MCO to recommend that its Participants join the CHC-MCO offering the incentives.

2. CHC-MCO Outreach Materials

The CHC-MCO must develop outreach materials such as pamphlets and brochures to be used by the IEB to assist Potential Participants and Participants in choosing a CHC-MCO and PCP. The CHC-MCO must develop such materials in the form and content required by the Department. The Department must approve such materials in writing prior to their use. The Department's review will be conducted within thirty (30) calendar days and approval will not be unreasonably withheld.

The CHC-MCO must develop outreach materials, including the Participant Handbook, and other Participant materials which are accessible, easily understood, written at not more than a sixth (6^{th}) grade reading level and comply with the other requirements in 42 C.F.R. § 438.10 pertaining to information requirements.

The CHC-MCO is prohibited from distributing, directly or through an agent or independent contractor, outreach materials without advance written approval of the Department. In addition, the CHC-MCO must comply with the following:

a. The CHC-MCO may not seek to influence an individual's Enrollment with the CHC-MCO in conjunction with the sale of any other insurance.

b. The CHC-MCO must comply with the Enrollment procedures established by the Department so that an individual is provided with accurate oral and written information sufficient to make an informed decision on Enrollment.

c. The CHC-MCO may not directly or indirectly conduct door-to-door, telephone, email, or texting marketing activities.

d. The CHC-MCO must develop and provide outreach plans, procedures and materials that are accurate and do not mislead, confuse, or defraud either the Participant or the Department and must comply with Exhibit I, Guidelines for CHC-MCO Advertising, Sponsorships, and Outreach.

3. CHC-MCO Outreach Activities

a. The CHC-MCO is prohibited from engaging in Marketing activities associated with Enrollment into the CHC-MCO, except as provided below. Marketing is any interaction with a potential Participant who is not enrolled in the CHC-MCO, that can reasonably be interpreted as intended to:
    1. Influence a potential Participant to enroll in the CHC-MCO,
    2. Persuade a potential Participant to change enrollment from another managed care organization in CHC to the CHC-MCO contacting the potential Participant, or
    3. Dissuade a potential Participant from enrolling with another managed care organization in CHC and enrolling with the CHC-

MCO contacting the potential Participant.

The CHC-MCO is prohibited from subcontracting with an outside entity to engage in outreach activities associated with any form of Enrollment to Potential Participants. The CHC-MCO must not engage in outreach activities associated with Enrollments at the following locations and activities:

- CAOs
- Providers' offices
- Malls, Commercial, or retail establishments
- Hospitals
- NFs
- Adult Day Centers
- Senior Centers
- Check cashing establishments
- Door-to-door visitations
- Telemarketing
- Direct Mail
- Community Centers
- Churches
- Emails
- Texting

b. The CHC-MCO may market its approved, companion D-SNP product to Dual Eligible Participants.

c. The CHC-MCO, either individually or as a joint effort with other CHC-MCOs in the zone, may use commonly accepted media methods for the advertisement of quality initiatives, educational outreach, and health-related materials and activities.

The CHC-MCO may not include, in administrative costs reported to the Department, the cost of advertisements in mass media, including but not limited to television, radio, billboards, the Internet and printed media for purposes other than noted above unless specific prior approval is provided by the Department. The CHC-MCO must obtain from the Department advance written approval of any advertising placed in mass media.

d. The CHC-MCO may participate in or sponsor health fairs or community events. The Department may set limits on contributions and payments made to non-profit groups in connection with health fairs or community events and requires advance written approval for contributions and payments of Two Thousand Dollars ($2,000.00) or more. The Department will consider participation or sponsorship when the CHC-MCO submits a

written request thirty (30) days in advance of the event or fair, thus allowing the Department reasonable time to review the request and provide timely advance written approval. All contributions and payments are subject to audit by the Department and its designees.

e. The CHC-MCO may offer items of little or no intrinsic value such as trinkets with promotional CHC-MCO logos at approved health fairs or other approved community events. The CHC-MCO must make such items available to the general public; such items may not exceed Five Dollars ($5.00) in retail value and must not be connected in any way to Enrollment activity. All such items are subject to advance written approval by the Department.

f. As permitted by Section V.A.4, Expanded Services and Value-Added Services, the CHC-MCO may offer Participants Expanded or Value-Added Services and is permitted to feature such Services in approved outreach materials.

g. The CHC-MCO may offer Participants consumer incentives only if they are directly related to improving health outcomes. The CHC-MCO may not use an incentive to influence a Participant to receive any item or service from a Provider, practitioner, or supplier. In addition, the incentive cannot exceed the total cost of the service being provided. The CHC-MCO must receive advance written approval from the Department prior to offering a Participant incentive. CHC-MCOs must comply with any managed care ops memos related to Participant incentives.

h. Unless approved by the Department, CHC-MCOs are not permitted to directly provide products of value unless they are health-related and are prescribed by a licensed Provider. CHC-MCOs may not offer Participants coupons for products of value.

i. Except where review and approval are specifically required, the Department may review any and all other outreach activities and advertising materials and procedures used by the CHC-MCO, including all outreach activities, advertising materials, and corporate initiatives that are likely to reach MA Beneficiaries. In addition to any other sanctions, the Department may impose monetary penalties or restrict Enrollment if the Department determines the CHC-MCO used unapproved outreach materials or engaged in unapproved outreach practices. The Department may suspend all outreach activities and the completion of applications for new Participants. Such suspensions may be imposed for a period of up to sixty (60) days from notification by the Department to the CHC-MCO citing the violation.

j. The CHC-MCO may not under any conditions use the Department's eligibility system to identify and market to individuals participating in the

LIFE Program or enrolled in another CHC-MCO. The CHC-MCO may not share or sell Participant lists for any purpose, with the limited exception of sharing Participant information with Affiliates or subcontractors under Department-approved arrangements to fulfill the requirements of this Agreement.

k. The CHC-MCO must submit a plan for advertising, sponsorship, and outreach procedures to the Department for advance written approval in accordance with Exhibit I, Guidelines for CHC-MCO Advertising, Sponsorships, and Outreach.

l. The CHC-MCO must conduct and participate in Department Provider and Participant outreach efforts.

m. The CHC-MCO shall include the following statement or a substantially similar statement in all marketing materials in boldface type: “Your managed care plan may not cover all your health care expenses. Read your participant handbook carefully to determine which health care services are covered.”

4. Limited English Proficiency Requirements

Beginning at Enrollment, the CHC-MCO must seek to identify Participants who speak a language other than English as their primary language and who have a limited ability to read, write, speak, or understand English. The CHC-MCO must identify and communicate using spoken and written language preferences identified by the IEB and CHC-MCO during their contacts with the Participant.

The CHC-MCO must provide, at no cost to Participants, oral interpretation and written translation services in the requested language, including American sign language, to meet the needs of Participants. Oral interpretation requirements apply to all non-English languages, not just those that are identified as prevalent. The CHC-MCO must notify Participants that oral interpretation for any language and written translation in prevalent languages, are available upon request at no cost to the Participant. The CHC-MCO must require Network Providers to offer interpretation services and prohibit Network Providers from requiring that a Participant’s family member be used for interpretation. Interpretation services must also include all services dictated by federal requirements. If a Network Provider is unable or unwilling to provide these services, the CHC-MCO must provide interpretation services.

The CHC-MCO must make all Vital Documents disseminated to English speaking Participants available in the prevalent languages designated by the Department. The CHC-MCO must include appropriate instructions in all materials about how to access or receive assistance to access materials in a

prevalent and other language.

Vital Documents must be readily accessible and in an electronic form which can be electronically retained and printed. The CHC-MCO must post Vital Documents on its website and a location that is prominent and Readily Accessible and inform Participants that the information is available in paper form without charge upon request. The CHC-MCO must provide paper forms upon request within five (5) business days.

5. Alternative Format Requirements

The CHC-MCO must provide alternative methods of communication for Participants who have neurocognitive impairments or who are visually or hearing impaired or both, including Braille, audio tapes, large print, compact disc, DVD, computer diskette, special support services, and electronic communication. The CHC-MCO must, upon request from the Participant, make all written materials disseminated to Participants accessible to visually impaired Participants at no cost to the Participant. The CHC-MCO must provide TTY/Videophone and/or Pennsylvania Telecommunication Relay Service for communicating with Participants who are deaf or hearing impaired, upon request.

The CHC-MCO must include appropriate instructions in all materials about how to access or receive assistance to access materials in an alternative format. The CHC-MCO must include in all written material taglines as well as large print, explaining the availability of written translation or oral interpretation to understand the information provided and the toll-free and TTY/TDD telephone number of the CHC-MCO's call center. Large print means printed in a font size no smaller than eighteen (18) points.

6. Enrollment Procedures

The CHC-MCO must have in effect written Enrollment policies and procedures for newly enrolled Participants. The CHC-MCO must also provide written policies and procedures for coordinating Enrollment information with the Department's IEB. The CHC-MCO must receive advance written approval from the Department regarding these policies and procedures.

The CHC-MCO must enroll any Potential Participant who selects or is assigned to the CHC-MCO in accordance with the Enrollment and Disenrollment dating rules that are determined and provided by the Department on the Pennsylvania HealthChoices Extranet and Exhibit J, Participant CHC-MCO Selection and Assignment, regardless of the individual’s race, color, creed, religion, age, sex, national origin, ancestry, marital status, sexual orientation, gender identity, income status, program participation, Grievance status, MA category status, health status, pre-existing

condition, physical or mental disability or anticipated need for healthcare. CHC-MCOs must offer assistance to Participants enrolled in their Plan with completing all paperwork necessary for the Participant to maintain MA eligibility.

The Department will disenroll a Participant from the CHC-MCO when a change in residence places the Participant outside the CHC zone, as indicated on the individual county file maintained by the Department's Office of Income Maintenance.

7. Enrollment of Newborns

Newborns will not be enrolled in CHC. Newborns will be auto-assigned to the HealthChoices PH-MCO aligned with the mother's CHC-MCO if available in the Zone where they reside.

8. Transitioning Participants Between CHC-MCOs

Service Coordinators will assist Participants in facilitating a seamless transition between CHC-MCOs. The CHC-MCO must follow the Department's established processes as outlined in Exhibit K, CHC-MCO Participant Coverage Document.

The CHC-MCO must provide an electronic or hard paper copy of a Participant's existing Comprehensive Medical and Service Record, including PCSPs, and notification if the Participant has had more than three critical incidents within a 12-month period and when there is a substantiated incident related to abuse, neglect, exploitation or abandonment, to the CHC-MCO to which a Participant transfers. The CHC-MCO must expeditiously transfer the information as soon as they are made aware of the transfer, electronically, if possible, not to exceed five (5) business days after notification of the transfer.

9. Transitioning Participants Between the CHC-MCO and LIFE

The Service Coordinator will assist Participants eligible for LIFE who voluntarily choose to transition between the CHC-MCO and LIFE, where available, in order to facilitate a seamless transition. All transitions to the LIFE program will be effective on the date specified by the Department.

10. Change in Participant Status

The CHC-MCO must report the following to the Department's MMIS on the Weekly Enrollment/Disenrollment/Alert file: pregnancy (not in eCIS), death (not on eCIS),and returned mail alerts in accordance with Section VIII.C.5, Alerts.

The CHC-MCO must report HCBS Participant status changes to the

appropriate CAO using the PA 1768 Form within ten (10) business days of the change becoming known. The CHC-MCO must report status changes for all other Participants using the CAO Notification Form within ten (10) business days of the change becoming known. These changes include phone number, address, experiencing homelessness, pregnancy, death, and family addition/deletion. The CHC-MCO also must provide a detailed explanation on the CAO Notification form of how the information was verified.

11. Participant Files

a. Monthly File

The Department will provide a Monthly 834 Eligibility File to the CHC-MCO on the next to the last Saturday of each month. The file contains the MA Eligibility Period, CHC-MCO coverage, BH-MCO coverage, and Participant demographic information. It will contain only the most current record for each CHC Participant where the Participant is both MA and CHC eligible at some point in the following month. The CHC-MCO must reconcile this Participant file against its internal Participant information.

If discrepancies are found, the CHC-MCO must first check eCIS and subsequent Daily 834 files to see if the discrepancy has been resolved prior to reaching out to the Department. If the MCO cannot resolve the discrepancy, the MCO must notify the Department within thirty (30) business days of receipt of the Monthly 834 file with the discrepancy.

Participants not included on the Monthly 834 Eligibility File with a specification of prospective coverage will not be the responsibility of the CHC-MCO unless a subsequent Daily 834 Membership File indicates otherwise.

b. Daily File

The Department will provide a Daily 834 Eligibility File to the CHC-MCO that contains one record for each action taken in eCIS for each Participant where data for that Participant has changed that day. The file will contain add, termination, and change records, but will not contain BH-related information. The file will contain demographic changes, eligibility changes, Enrollment changes, Participants enrolled through the automatic assignment process, and TPL information. The CHC-MCO must process this file within twenty-four (24) hours of receipt.

The CHC-MCO must reconcile this file against its internal Participant data and notify the Department of any discrepancies within thirty (30) business days.

12. Enrollment and Disenrollment Updates

a. Weekly Enrollment/Disenrollment/Alert Reconciliation File

The Department will provide a weekly file with information on Participants enrolled or disenrolled in CHC and the dispositions of Alerts previously submitted by the CHC-MCO. The CHC-MCO must use this file to reconcile Alerts submitted to the Department.

b. Disenrollment Effective Dates

Participant disenrollments will become effective on the date specified by the Department. The CHC-MCO must have written policies and procedures for complying with the disenrollment decisions by the Department. These policies and procedures must be approved by the Department.

13. Involuntary Disenrollment

The Department will involuntarily disenroll Participants from CHC when it determines the Participant is no longer eligible for CHC. The CHC-MCO may not request disenrollment of a Participant for any reason.

The CHC-MCO must aid the disenrolled Participant in transitioning to other resources to provide for continuity of care.

14. New Participant Orientation

The CHC-MCO must provide an orientation to a new Participant within thirty (30) days of the new Participant's start date with the CHC-MCO. For new Participant's receiving LTSS, the CHC-MCO must conduct the orientation face-to-face (the orientation may be part of the service coordination visit). For purposes of New Participant Orientation, a Participant would be considered new to the CHC-MCO if they were not enrolled with the CHC-MCO 365 days prior to the current enrollment. The CHC-MCO must have a written orientation plan or program for new Participants that includes:

- Educational and preventive care programs that include an emphasis on health promotion, wellness and healthy lifestyles and practices,
- The proper use of the CHC-MCO identification card and the ACCESS Card,
- The role of the PCP,
- The Assessment process,
- Access to behavioral health services, transportation, home modifications, etc.,
- What to do in an emergency or urgent medical situation,
- How to report abuse, neglect, and exploitation,
- How to utilize services in other circumstances,

- How to request information from the CHC-MCO,
- How to register a Complaint, file a Grievance or request a DHS Fair Hearing,
- Notice that balance billing is prohibited and what to do in the event a Provider balance bills,
- What Expanded Services or Value-Added Services the CHC-MCO has been approved to provide and how long these are required to be available to Participants who qualify to receive them,
- Assistance in coordinating Medicare services that are available to the Participant,
- The benefit of enrolling in a Medicare Part D plan with a zero copay.

For participant's receiving LTSS, the orientation must also include the following topics:

- The role of the Service Coordinator,
- The role of the PCPT,
- PCSPs and the service planning process,
- Participant Self-Directed models (for Participants receiving HCBS),
- Individual back-up plan,
- Emergency Preparedness,
- Employment Services,
- The role of Service Coordination Unit and how to contact it directly, if necessary.

The CHC-MCO must obtain the Department's advance written approval of the orientation plan or program.

The CHC-MCO is prohibited from contacting a Potential Participant who is identified on the Daily Participant Enrollment File with an automatic assignment indicator (either an "A" auto-assigned or "M" Participant assigned) until five (5) business days before the Enrollment Date, unless otherwise requested by the Department.

15. CHC-MCO Identification Cards

The CHC-MCO must issue its own identification card to Participants. The CHC-MCO must issue an identification card(s) to Participants enrolled in the aligned D-SNP for both the CHC-MCO and the D-SNP.

The Department also issues an identification card, called an ACCESS Card, to each Recipient, which the Participant is required to use when accessing services. Providers must use this card to verify the Participant's most current eligibility in the EVS system.

16. Participant Handbook

The CHC-MCO must provide a Participant handbook with information on

Participant rights and protections as outlined in this Agreement and Exhibit L, Participant Rights and Responsibilities, and how to access services, in the appropriate language or alternative format to Participants within five (5) business days of a Participant's Start Date. As directed by the Department, the CHC-MCO must use the Participant handbook template developed by the Department to create a Participant handbook that complies with this section and Exhibit M, Participant handbook.

The CHC-MCO may provide the Participant handbook in formats other than hard copy. The CHC-MCO will provide Participants with the handbook in one of the following manners:

- A printed copy of the information mailed to the Participant's mailing address;
- By email after obtaining the Participant's agreement to receive the information by email;
- By posting on the CHC-MCO's website and advising the Participant in paper or electronic form that the information is available on the Internet and including the applicable Internet address, provided that Participants with disabilities who cannot access this information online are provided auxiliary aids and services upon request at no cost; or
- By any other method that can reasonably be expected to result in the enrollee receiving that information.

The CHC-MCO must inform Participants what formats are available and how to access each format. The CHC-MCO must annually review the Participant handbook and document that it reviewed the Participant handbook for accuracy and that all necessary modifications were made. The CHC-MCO must notify all Participants on an annual basis of any changes made, and the formats and methods available to access the handbook. Upon request, the CHC-MCO must provide a hard copy of the Participant handbook to the Participant.

a. Participant Handbook Requirements

The Participant handbook must be accessible, easily understood, and written at no higher than a sixth (6^{th}) grade reading level and must include, at a minimum, the information outlined in Exhibit M, Participant Handbook. The CHC-MCO must include a reference and a link to the handbook for the aligned D-SNP so that Participants enrolled in both plans may easily reference the D-SNP handbook.

Additionally, the CHC-MCO must (i) use a font and format are Readily Accessible, (ii) place the information on its CHC-MCO website where it is prominent and available, and (iii) provide that information in an electronic form that can be electronically retained and printed.

b. Department Approval

CHC-MCOs must submit the Participant handbook to the Department for advance written approval prior to distribution to Participants. The CHC-MCO must make any modifications to the Participant Handbook if required for Department approval.

17. Provider Directory

The CHC-MCO must maintain a single directory for all types of Network Providers.

The CHC-MCO must utilize a web-based Provider directory. The web-based Provider directory must be available in a machine-readable file and format as specified in 42 C.F.R. § 438.10. The web-based Provider directory must be updated no less than thirty (30) days after the CHC-MCO receives updated information from the Provider. The CHC-MCO must establish a process to address the accuracy of electronically posted content, including a method to monitor and update changes in Provider information. The CHC-MCO must perform at least monthly reviews and revisions of the web-based Provider directory, subject to random monitoring by the Department.

The CHC-MCO must provide the IEB with an updated electronic version of its Provider directory on at least a weekly basis. The file must include information regarding terminations, additions, PCPs and specialists not accepting new assignments, and other information determined by the Department to be necessary. The CHC-MCO must utilize the file layout and format specified by the Department. The file must include the information specified in Exhibit N, Provider Directory, but not be limited to:

- Correct MMIS Provider ID
- All Providers in the CHC-MCO's Network
- Locations where the PCP will see Participants and if evening or weekend hours are available
- Wheelchair accessibility of Provider sites
- List of non-English language(s) spoken by Providers.

The CHC-MCO must notify its Participants annually of their right to request and obtain a hard copy of the Provider directory and where the online directory may be found. Upon request, the CHC-MCO must provide Participants with a hard copy of its Provider directory in the prevalent languages specified by the Department and in alternative formats. The CHC-MCO must review the Provider directory information and make any necessary updates at least monthly. Upon request from a Participant, the CHC-MCO must print the most recent electronic version from its Provider file and mail it to the Participant.

The CHC-MCO must submit the Provider directory to the Department for advance written approval before distribution to its Participants. Unless the CHC-MCO makes significant format or substantive changes, the CHC-MCO is not required to submit changes to the Department for approval.

The CHC-MCO must reference and include a link to the Provider directory for the aligned D-SNP in the Provider directory so that Participants enrolled in both plans may easily reference the D-SNP directory.

18. Participant Advisory Committee

The CHC-MCO must establish and maintain a PAC for each zone in which it operates. The PAC must include Participants, Network Providers and direct care worker representatives to advise on the experiences and needs of Participants. The CHC-MCO must include Participants who are representative of the population being served as well as family caregivers as members of the PAC. Provider representation must include PH, BH, dental health and LTSS. The CHC-MCO must provide the Department annually with the membership (including designation) of the PAC. The PAC membership must be composed of at least fifty percent (50%) Participants, with twenty-five percent (25%) of the total membership receiving LTSS, ten percent (10%) of which must be nursing facility residents or a representative of a nursing facility resident. In addition to the individual diversity, the CHC-MCO should seek geographic diversity, including both rural and urban representation.

The CHC-MCO must schedule PAC meetings no less than quarterly with in-person meetings, and will reimburse travel expenses for Participants, caregivers, and their family members. The CHC-MCO will provide necessary reasonable accommodations to allow for in-person access to the PAC. PAC communications and meetings must be accessible to Participants with LEP.

The CHC-MCO must provide the Department with advance notification of the date, time, and location of all PAC meetings.

As part of the PAC meetings the CHC-MCOs must detail health education and outreach activities including coordination of health education materials, activities, and programs with public health entities, particularly as they relate to public health priorities and population-based interventions. Population-based interventions include those that are relevant to the populations being served and that take into consideration the ability of these populations to understand and act upon health information.

The CHC-MCO must provide the Department with a written description of all planned health education activities and targeted implementation dates on an annual basis.

The CHC-MCO must also work with the Department to provide its PAC members with an effective means to consult with each other and, when appropriate, coordinate efforts and resources for the benefit of the entire CHC population in the zone and/or populations with LTSS needs. The CHC-MCO must report out any updates or proposed changes, the number and nature of complaints, and any quality improvement strategies or implementations and invite PAC members to raise questions and concerns about topics affecting their quality of life and their experience with the CHC-MCO. The CHC-MCO must provide minutes of the PAC meeting to the Department and post them on the CHC-MCO website.

P. Participant Services

1. General

The CHC-MCO's Participant services functions must be operational, at a minimum, during regular business hours (9:00 a.m. to 5:00 p.m., Monday through Friday), plus one (1) evening per week (5:00 p.m. to 8:00 p.m.) or one (1) weekend per month to address non-emergency problems encountered by Participants. The CHC-MCO must have arrangements to receive, identify, and resolve in a timely manner Emergency Participant Issues on a twenty-four (24) hour-per-day, seven (7) day-per-week basis. The CHC-MCO's Participant services functions include, but are not limited to, the following:

- Explaining the operation of the CHC-MCO and assisting Participants in PCP selection.
- Assisting Participants with making appointments and obtaining services, including interpreter services, as needed.
- Assisting with transportation for Participants through the MATP as required in Section V.A.13., Transportation.
- Receiving, identifying, and resolving Emergency Participant Issues.

The CHC-MCO is prohibited from using unlicensed Participant services staff to provide health-related advice to Participants requesting clinical information. The CHC-MCO must require that all such inquiries be addressed by clinical personnel acting within the scope of their licensure to practice a health-related profession.

The CHC-MCO must forward all telephone calls received by the Participant Service area in which the caller requests his or her Service Coordinator to the Participant's Service Coordinator.

2. CHC-MCO Internal Participant Dedicated Hotline

The CHC-MCO must maintain and staff a twenty-four (24) hour-per-day,

seven (7) day-per-week dedicated toll-free telephone hotline to respond to Participants' inquiries, issues and problems regarding services. The CHC-MCO's internal Participant hotline staff must ask the callers whether they are satisfied with the response given to their call. The CHC-MCO must document all calls. If the caller is not satisfied, the CHC-MCO must refer the call to the appropriate individual within the CHC-MCO for follow-up and resolution within forty-eight (48) hours of the call.

The CHC-MCO is not permitted to utilize electronic call answering methods as a substitute for staff persons. The CHC-MCO must have a dedicated hotline that meets the following performance standards:

- Provides for a dedicated toll-free telephone line for Participants.
- Provides for necessary translation and interpreter assistance for LEP Participants.
- Includes a function specific to connecting Participants with their Service Coordinator.
- Requires representatives to document calls and forward call notes to the Participant's Service Coordinator.
- Be staffed by individuals fully trained by the CHC-MCO in the following areas before allowing staff to assist Participants by handling phone calls:

  – Cultural, Linguistic, and Disability Competency.
  – Addressing the needs of covered populations.
  – The availability of contact information for, and the functions of, the Service Coordinator.
  – Requirements for accessibility.
  – Coordination with BH-MCOs.
  – How to identify and handle any emergency.
  – When to transfer callers to the Nurse Hotline.
  – Covered Services and the availability of protective and social services within the community.
  – Medicare coverage and addressing questions relating to the CHC-MCO's companion D-SNP plan.
  – Medical and non-medical transportation.

- Be staffed with adequate service representatives so that the abandonment rate is less than or equal to five percent (5%) of the total calls.
- Be staffed with adequate service representatives so that at least eighty-five percent (85%) of all calls are answered within thirty (30) seconds.
- Provide for TTY/Videophone and/or Pennsylvania Telecommunication Relay Service availability for Participants who are deaf or hard of hearing.

The CHC-MCO must provide the Department with the capability to monitor the CHC-MCO's Participant services and internal Participant dedicated hotline from each of the CHC-MCO's offices. The Department will only monitor calls from Participants, or their representatives, and will cease monitoring activity

as soon as it becomes apparent that the call is not related to a Participant.

All criteria above also apply to the Service Coordination functionality of the Participant Hotline.

3. Nurse Hotline

The CHC-MCO must maintain and staff a twenty-four (24) hour-per-day, seven (7) day-per-week dedicated toll-free telephone Nurse Hotline to respond to Participants' urgent health matters.

4. Informational Materials

The CHC-MCO must distribute Participant newsletters at least three (3) times per year to each Participant household. The CHC-MCO may provide Participant newsletters in formats other than hard copy, but must provide a hard copy to a Participant who asks for one. The CHC-MCO must include information about common procedures in its Participant newsletter and information provided by the Department related to Department initiatives, and make the same information available on its website in an effort to increase Participant health literacy. The CHC-MCO will also provide information about its aligned D-SNP, including the services covered, the enhanced Service Coordination available to Participants enrolled in both, and how to request enrollment. The CHC-MCO must obtain advance written approval from the Department of all Participant newsletters. The CHC-MCO must notify all Participants of the availability and methods to access each Participant newsletter.

The CHC-MCO must obtain advance written approval from the Department to use Participant or CHC-related information on electronic websites and bulletin boards which are accessible to the public or to the CHC-MCO's Participants.

Q. Additional Addressee

The CHC-MCO must comply with HIPAA and State law requirements and have administrative mechanisms for sending copies of information, notices and other written materials to a Participant's legal guardian, agent under power of attorney, or other designated third party, as per the request and signed consent of the Participant. The CHC-MCO must develop plans to process such individual requests and for obtaining the necessary releases signed by the Participant to protect the Participant's confidentiality rights.

R. Complaint, Grievance, and Fair Hearing Processes

The CHC-MCO must develop, implement, and maintain a Complaint and Grievance process that provides for resolution of Participants' Complaints and Grievances and the processing of requests for DHS Fair Hearings as outlined in Exhibit G, Complaint, Grievance, and Fair Hearing Processes. The CHC-MCO must use templates provided by the Department to inform Participants regarding decisions and the process.

The CHC-MCO must have written policies and procedures approved by the Department, for resolving Participant Complaints and for processing Grievances and DHS Fair Hearing requests, that meet the requirements established by the Department and the provisions of 40 P.S. §991.2101 et seq. (known as Act 68), 28 Pa. Code Chapter 9, 31 Pa. Code CHs. 154 and 301, and 42 C.F.R. §431.200 et seq. The CHC-MCO must also comply with 55 Pa. Code Chapter 275 regarding DHS Fair Hearing Requests and 42 C.F.R. §438.406(b).

The CHC-MCO's submission of new or revised policies and procedures for review and approval by the Department shall not act to void any existing policies and procedures which have been prior approved by the Department. Unless otherwise required by law, the CHC-MCO may continue to operate under such existing policies and procedures until such time as the Department approves the new or revised version.

The CHC-MCO must abide by the final decision of the PID when a Participant has filed an external appeal of a second level Complaint decision.

In accordance with 28 Pa. Code § 9.707(j), when a Participant files an external appeal of a Grievance decision, the CHC-MCO must abide by the decision of the Independent Review Organization (IRO), which was assigned to conduct the independent external review.

The CHC-MCO must abide by the final decision of BHA for those cases when a Participant has requested a DHS Fair Hearing, unless requesting reconsideration by the Secretary of the Department.

S. OLTL and other DHS Hotlines

The CHC-MCO will cooperate with OLTL and other Department Hotlines, which are intended to address clinically-related systems issues encountered by Participants and their advocates or Providers.

T. Provider Dispute Resolution Process

The CHC-MCO must develop, implement, and maintain a Provider Dispute Resolution Process, which provides for informal resolution of Provider Disputes at the lowest level and a formal process for Provider Appeals. The CHC-MCO and

the Provider must handle the resolution of all issues regarding the interpretation of Provider Agreements and shall not involve the Department; therefore, Provider disputes and appeals are not within the jurisdiction of the Department's BHA.

Prior to implementation, the CHC-MCO must submit to the Department its policies and procedures for resolution of Provider Disputes and Provider Appeals for approval.

The CHC-MCO's Provider Disputes and Provider Appeals policies and procedures must include, at a minimum:

- Informal and formal processes for settlement of Provider Disputes.
- Acceptance and usage of this Agreement's definition of Provider Appeals and Provider Disputes.
- Time frames for submission and resolution of Provider Disputes and Provider Appeals.
- Processes to provide equitability for all Providers.
- Establishment of a CHC-MCO Committee to process formal Provider Appeals, which must provide:

  – At least one-fourth (1/4th) of the membership of the Committee must be composed of Providers/peers.
  – Committee members who have the authority, training, and expertise to address and resolve Provider Dispute/Provider Appeal issues.
  – Access to data necessary to assist Committee members in making decisions.
  – Documentation of meetings and decisions of the Committee.

U. Certification of Authority and County Operational Authority

The CHC-MCO must maintain a Certificate of Authority to operate as an HMO in Pennsylvania and must provide to the Department a copy of its Certificate of Authority upon request.

The CHC-MCO must also maintain operating authority in each county within the zone and must provide to the Department a copy of the PID correspondence granting operating authority in each county upon request.

V. Executive Management

The CHC-MCO must include in its Executive Management structure:

- A full-time Administrator with authority over the entire operation of the CHC-MCO.

- A full-time CHC Program Manager to oversee the operation of this

Agreement, if different from the Administrator.

- A full-time Medical Director who is a current Pennsylvania-licensed physician. The Medical Director must be actively involved in all major clinical program components of the CHC-MCO and directly participate in the oversight of the QM Department and UM Department. The Medical Director and his or her staff/consultant physicians must devote sufficient time to the CHC-MCO to provide timely medical decisions, including after-hours consultation, as needed.

- A full-time Pharmacy Director who is a current Pennsylvania-licensed pharmacist. The Pharmacy Director must oversee the pharmacy management and serve on the CHC-MCO P&T Committee.

- A full-time Director of Quality Management who is a Pennsylvania-licensed RN, physician or physician's assistant or is a Certified Professional in Healthcare Quality by the National Association for Healthcare or Quality Certified in Healthcare Quality and Management by the American Board of Quality Assurance and Utilization Review Providers. The Director of Quality Management must be located in Pennsylvania and have experience in quality management and quality improvement. Sufficient local staffing under this position must be in place to meet QM Requirements. The primary functions of the Director of Quality Management position are:

    - Evaluate individual and systemic quality of care
    - Integrate quality throughout the organization
    - Implement process improvement
    - Resolve, track, and trend quality of care complaints
    - Develop and maintain a credentialed Provider network

- A full-time Director of LTSS who is responsible for and oversees all LTSS. The Director of LTSS must have at least five (5) years of experience administering managed long-term care programs. On a case-by-case basis, equivalent experience in administering long-term care programs and services, including HCBS, or in managed care may be substituted, subject to the prior approval of the Department.

- A full-time Chief Financial Officer (CFO) to oversee the budget and accounting systems implemented by the CHC-MCO. The CFO is responsible for providing accurate and timely financial reports. The CFO shall devote sufficient time and resources to responsibilities under this Agreement.

- A full-time Information Systems Coordinator, who is responsible for the oversight of all information systems issues with the Department. The Information Systems Coordinator must have a good working knowledge of the CHC-MCO's entire program and operation, as well as the technical expertise

to answer questions related to the operation of the information system.

- A full-time Special Investigations Unit (SIU) Director who serves as the Department's primary contact for program integrity functions. The SIU Director oversees staff responsible for fraud, waste and abuse activities.

- A Dental Director who is a current Pennsylvania-licensed Doctor of Dental Medicine or Doctor of Dental Surgery. The Dental Director must be actively involved in all program components related to dental services including, but not limited to, dental provider recruitment strategy, assessment of dental network adequacy, providing oversight and strategic direction in the quality of dental services provided, actively engaged in the development and implementation of quality initiatives, and monitor the performance of the dental benefit manger if dental benefits are subcontracted. The Dental Director must be available a minimum of thirty (30) hours per week. They can be shared across Medicaid products for purposes of satisfying this requirement but must be specific to work in Pennsylvania.

Aside from the CFO and Dental Director, these full-time positions must be solely dedicated to CHC. The CHC-MCO must report immediately any changes to Executive Management structure to the Department. Resumes for all Executive Management positions must be submitted to the Department.

W. Other Administrative Components

The CHC-MCO must provide for each of the administrative functions listed below:

- A Quality Management/Quality Improvement Coordinator who is a Pennsylvania-licensed physician, RN, or physician's assistant with past experience or education in QM systems. At the CHC-MCO's request, the Department may consider other advanced degrees relevant to QM in lieu of professional licensure. The QM/QI Coordinator is responsible for overseeing reporting and outcome measurement and HEDIS data collection, serving as point person between the Department and the Department's EQR contractor.

- A BH Coordinator who is a behavioral health professional and is located in Pennsylvania. The Behavioral Health Coordinator shall monitor the CHC-MCO for adherence to BH requirements in this Agreement. The primary functions of the BH Coordinator are:
  - Coordinate Participant care needs with BH Providers.
  - Develop processes to coordinate behavioral healthcare between PCPs and BH Providers.
  - Participate in the identification of best practices for BH in a primary care setting.
  - Coordinate behavioral care with medically necessary services.

- Be knowledgeable of the BH Managed Care Agreement requirements and coordinate with the BH-MCO to effectuate the requirements.

- A Director of Network Management who coordinates all communications and contractual relationships between the CHC-MCO and its subcontractors and Providers. The Director of Network Management must be located in Pennsylvania and is responsible for providing Providers with prompt resolution of their problems or inquiries and appropriate education about participation in CHC and maintaining a sufficient Network. Individual Provider representatives will report directly to the Director of Network Management.

- A UM Coordinator who is a Pennsylvania-licensed physician, RN or physician's assistant with past experience or education in UM systems. At the CHC-MCO's request, the Department may consider other advanced degrees relevant to UM in lieu of professional licensure.

- A Director of Service Coordination who oversees all Service Coordination functions of the CHC plan and who shall have the qualifications of a Service Coordinator and a minimum of five (5) years of management/supervisory experience in the healthcare field. The Director of Service Coordination is responsible for all Service Coordination functions, whether the CHC-MCO provides all Service Coordinator functions in house or contracts with outside entities to meet Service Coordination requirements.

- A Direct Care Worker (DCW) Workforce Coordinator who oversees DCW recruitment and retention.

- A Government Liaison who serves as the Department's primary point of contact with the CHC-MCO for day-to-day management of contractual and operational issues. The CHC-MCO must have a designated back-up trained to be able to handle urgent or time-sensitive issues when the Government Liaison is not available.

- A Participant Services Manager who oversees staff to coordinate communications with Participants and enables Participants to receive prompt resolution of their issues, problems or inquiries.

- A Provider Services Manager who oversees staff to coordinate communications between the CHC-MCO and its Network Providers. There must be sufficient staff in CHC-MCO Provider Services, or equivalent department that addresses this function, staff to promptly resolve Provider Disputes, problems or inquiries. Staff must also be adequately trained to understand Cultural, Linguistic, and Disability competencies.

- A Provider Claims Educator who is located in Pennsylvania and facilitates the exchange of information between the Grievances, Claims processing,

and Provider relations systems. The primary functions of the Provider Claims Educator are to:

- Educate contracted and non-contracted Providers (e.g., HCBS Providers and Participant-Directed Services Providers) regarding appropriate Claims submission requirements, coding updates, electronic Claims transactions and electronic fund transfer, and available CHC-MCO resources such as Provider manuals, website, fee schedules, etc.
- Interface with the CHC-MCO's call center to compile, analyze, and disseminate information from Provider calls.
- Identify trends and guide the development and implementation of strategies to improve Provider satisfaction.
- Communicate frequently (i.e., telephonic and on-site) with Providers to provide for the effective exchange of information and to gain feedback regarding the extent to which Providers are informed about appropriate claims submission practices.

- A Complaint, Grievance and DHS Fair Hearing Coordinator whose qualifications demonstrate the ability to assist Participants throughout the Complaint, Grievance and DHS Fair Hearing processes.

- A Claims Administrator who oversees staff to provide for the timely and accurate processing of Claims, Encounter forms and other information necessary for meeting Agreement requirements and the efficient management of the CHC-MCO.

- A Contract Compliance Officer who monitors the CHC-MCO's compliance with all the requirements of the Agreement.

The CHC-MCO must ensure all staff have appropriate training, education, experience, and orientation to fulfill the requirements of their position and maintain documentation of completion. The CHC-MCO must update job descriptions for each of the positions if responsibilities for these positions change.

The CHC-MCO's staffing should represent the racial, ethnic, and cultural diversity of the Participants being served by CHC and comply with all requirements of Exhibit B, Standard Terms and Conditions for Services. The Cultural Competency may be reflected by the CHC-MCO's pursuit to:

- Identify and value differences.

- Acknowledge the interactive dynamics of cultural differences.

- Continually expand cultural knowledge and resources with regard to the populations served.

- Recruit racial and ethnic minority staff in proportion to the populations served.

- Collaborate with the community regarding service provisions and delivery.

- Commit to cross-cultural training of staff and the development of policies to provide relevant, effective programs for the diversity of people served.

The CHC-MCO must have in place sufficient administrative staff and organizational components to comply with the requirements of this Agreement and include in its organizational structure the components outlined in this Agreement. The CHC-MCO must staff these functions with qualified persons in numbers appropriate to the CHC-MCO's size of Enrollment. The Department will determine whether or not the CHC-MCO is in compliance.

The CHC-MCO may contract with a third party to perform one (1) or more of its functions, subject to the subcontractor conditions described in Section XII, Subcontractual Relationships. The CHC-MCO is required to keep the Department informed at all times of the management individuals whose duties include each of the responsibilities outlined in this section.

X. Administration

The CHC-MCO must have an administrative office within the CHC zone. In its discretion, the Department may grant exceptions if the CHC-MCO has administrative offices elsewhere in Pennsylvania and the CHC-MCO is in compliance with all standards set forth by the DOH and PID.

The CHC-MCO must submit for review by the Department its organizational structure listing the function of each executive as well as administrative staff members. Staff positions outlined in this Agreement must be approved and maintained in accordance with the Department's requirements. The CHC-MCO key personnel must be available to the Department upon request.

1. Recipient Restriction Program

BPI manages a Centralized Recipient Restriction (Lock-in) Program for the MA FFS and the managed care delivery systems. The Department is solely responsible for restricting Participants.

The CHC-MCO will maintain a Recipient Restriction (Lock-in) Program to interface with the Department’s Recipient Restriction (Lock-in) Program, and will provide for appropriate professional resources to manage the CHC-MCO program and to cooperate with the Department in all procedures necessary to restrict Participants. In accordance with 42 CFR § 431.54(e), the restrictions do not apply to emergency services furnished to the Participant. The CHC-

MCO must obtain approval from the Department prior to implementing a Lock-in, including approval of written policies and procedures and correspondence to Participants. The CHC-MCO's process must include:

- Designating a Recipient Restriction Coordinator within the CHC-MCO to manage processes.
- Identifying Participants who are overutilizing or misutilizing medical services, receiving unnecessary services or may be defrauding the MA program.
- Offering a voluntary restriction to a participant to protect his/her medical card from alleged misuse. A voluntary restriction can end at any time.
- Evaluating the degree of abuse including review of pharmacy, medical and inpatient claims/encounter history, diagnoses and other documentation, as applicable.
- Proposing whether the Participant should be restricted to obtaining services from a single, designated Provider for a period of five (5) years.
- Forwarding case information and supporting documentation to BPI at the address below or via secure electronic method for review to determine appropriateness of restriction and to approve the action.
- Forwarding case information to BPI for allegations of participant fraud.
- Upon BPI approval, sending notification via mail to the Participant of the proposed Lock-in, including reason(s), effective date and length of Lock-in, name of designated Provider(s), option to change Provider(s) and appeal rights, with a copy to BPI.
- Sending notification of the Participant's Lock-in to the designated Provider(s) and the CAO.
- Enforcing Restrictions (Lock-ins) through appropriate notifications and edits in the claims payment system.
- Preparing and presenting the case at a DHS Fair Hearing to support Lock-in action.
- Monitoring subsequent utilization to ensure compliance.
- Changing the selected Provider per the Participant, Department or Provider's request, within thirty (30) days from the date of the request, with prompt notification within five (5) business days to BPI through the Intranet Provider change process.
- Continuing a Participant Lock-in from the previous delivery system as a Participant enrolls in an MCO, with written notification to BPI.
- Reviewing the Participant's services prior to the end of the Lock-in period to determine if the Lock-in should be removed or maintained, with notification of the results of the review to BPI, Participant, Provider(s) and CAO.
- Submitting a participant's claim data to BPI, upon request, within ten (10) business days.
- Performing necessary administrative activities to maintain accurate records.
- Educating Participants and Providers about the Lock-in program, including

explanations in handbooks and printed materials.

MA Participants may appeal a Lock-in by requesting a DHS Fair Hearing, but may not file a Complaint or Grievance with the CHC-MCO. A request for a DHS Fair Hearing must be in writing, signed by the Participant and sent to:

Department of Human Services Office of Administration
Bureau of Program Integrity
Division of Program and Provider Compliance Recipient Restriction
P.O. Box 2675
Harrisburg, Pennsylvania 17105-2675
Phone number: (717) 772-4627

2. Contracts and Subcontracts

The CHC-MCO may rely on subcontractors to perform or arrange for the performance of services to be provided to Participants. Notwithstanding its use of subcontractor(s), the CHC-MCO is responsible for compliance with this Agreement, including:

a. The provision of and/or arrangement for the services under this Agreement.

b. The evaluation of a prospective subcontractor's ability to perform the activities to be delegated.

c. The payment of claim payment liabilities owed to Providers for services rendered to Participants under this Agreement, for which a subcontractor is the primary obligor, provided that the Provider has exhausted its remedies against the subcontractor; and provided further that such Provider would not be required to continue to pursue its remedies against the subcontractor in the event the subcontractor becomes insolvent, in which case the Provider may seek payment of such Claims from the CHC-MCO. For the purposes of this section, the term "insolvent" shall mean:

   i. The adjudication by a court of competent jurisdiction or administrative tribunal of a party as bankrupt or otherwise approving a petition seeking reorganization, readjustment, arrangement, composition, or similar relief under the applicable bankruptcy laws or any other similar, applicable Federal or State statute or regulation; or

   ii. The appointment by such a court or tribunal having competent jurisdiction of a receiver or receivers, or trustee, or liquidator or liquidators of a party or of all or any substantial part of its property upon the application of any creditor or other party entitled to so apply in any insolvency or bankruptcy proceeding or other creditor's suit; and

d. The oversight and accountability for any functions and responsibilities delegated to a subcontractor.

The above notwithstanding, if the CHC-MCO makes payments to a subcontractor over the course of a year that exceed one-half of the amount of the Department's payments to the CHC-MCO, the CHC-MCO is responsible for any obligation by the subcontractor to a Provider that is overdue by at least sixty (60) days.

The CHC-MCO shall require that all subcontractors and Network Providers comply with all applicable CHC requirements. The CHC-MCO shall require Subcontractors to comply with all applicable Medicaid rules, regulations, and guidance including the requirement that the subcontractor and Network Providers agree to the audit and inspection authority of the Pennsylvania Office of Attorney General Medicaid Fraud Control Section pursuant to 42 CFR §438.230(3).

The CHC-MCO must make all Subcontracts available to the Department within five (5) days of a request by the Department. All Subcontracts must be in writing and must include, at a minimum, the provisions contained in Exhibit P, Required Contract Terms for Administrative Subcontractors.

In accordance with Exhibit B, Standard Terms and Conditions, the CHC-MCO must submit for prior approval Subcontracts to perform part or all of the selected CHC-MCO's responsibilities under this Agreement. This provision includes, but is not limited to, contracts for vision services, dental services, Claims processing, Participant services, and pharmacy services.

3. Records Retention

The CHC-MCO will comply with program standards regarding records retention, which are set forth in federal and state law and regulations, Exhibit B, Standard Terms and Conditions for Services, and Exhibit O, CHC Audit Clause, except that, for purposes of this Agreement, all records must be retained for a period of ten (10) years beyond expiration or termination of the Agreement, unless otherwise authorized by the Department.

Upon thirty (30) day notice from the Department, the CHC-MCO must provide copies of all records to the Department at the CHC-MCO's site or other location determined by the Department, if requested. This thirty (30) day notice requirement does not apply to records requested by federal or state government agencies for purposes of audits or investigations.

The specific timeframes for providing records requested by federal or state government agencies will be designated by the requesting agency. The

retention requirements in this section do not apply to Department-generated Remittance Advices.

4. Fraud, Waste, and Abuse

The CHC-MCO must develop and implement administrative and management arrangements and procedures and a mandatory written compliance plan to prevent, detect, and correct Fraud, Waste, and Abuse that contains the elements described in 42 CFR §438.608(a)(1)(i-vii) and CMS publication "Guidelines for Constructing a Compliance Program for Medicaid Managed Care Organizations and Prepaid Health Plans" found at:
https://www.cms.gov/Medicare-Medicaid-Coordination/Fraud-Prevention/FraudAbuseforProfs/Downloads/mccomplan.pdf
and that includes the following:

- Written policies, procedures, and standards of conduct that articulate the CHC-MCO's commitment to comply with all applicable requirements and standards under the Agreement, and all applicable Federal and State requirements.
- The designation of a compliance officer and a compliance committee that reports directly to the Chief Executive Officer and the board of directors and is responsible for developing and implementing policies, procedures, and practices designed to ensure compliance with the requirements of this Agreement.
- The establishment of a Regulatory Compliance Committee on the Board of Directors and at the senior management level charged with overseeing the organization's compliance program and its compliance with the requirements under this Agreement.
- Effective training and education for the compliance officer, senior management and CHC-MCO employees on the applicable Federal and State requirements and applicable standards and requirements under the Agreement.
- Effective lines of communication between the compliance officer and CHC-MCO employees.
- Enforcement of standards through well publicized disciplinary guidelines.
- The establishment and implementation of procedures and a system with dedicated staff for routine internal monitoring and auditing of compliance risks, for prompt response to compliance issues as they are raised, for investigation of potential compliance problems as identified in the course of self-evaluation and audits, for correction of such problems promptly and thoroughly (or coordination of suspected criminal acts with law enforcement agencies) to reduce the potential for recurrence, and for ongoing compliance with the requirements under the Agreement.
- Procedures for systematic confirmation of services actually provided.
- Policies and procedures for reporting all Fraud, Waste, and Abuse to the Department and applicable law enforcement agencies.

- Policies and procedures for Fraud, Waste, and Abuse prevention, detection and investigation.
- A policy of non-intimidation and non-retaliation for good faith participation in the compliance program, including, but not limited to, reporting potential issues, investigating issues, conducting self-evaluations, audits and remedial actions, and reporting to appropriate officials.
- A policy and procedure for monitoring provider preclusion through databases identified by the Department.

a. Fraud, Waste and Abuse Unit

The CHC-MCO must establish a Fraud, Waste and Abuse Unit comprised of experienced Fraud, Waste and Abuse reviewers. This Unit must have the primary purpose of preventing, detecting, reducing, investigating, referring, and reporting suspected Fraud, Waste and Abuse that may be committed by Network Providers, Subcontractors, Participants, caregivers, employees, or other third parties. If the CHC-MCO has multiple lines of business, the Fraud, Waste and Abuse Unit must devote sufficient time and resources to the CHC Fraud, Waste and Abuse activities. The Department will determine whether or not the CHC-MCO is in compliance with these requirements in accordance with 42 CFR 438.608(a)(7).

b. Written Policies

The CHC-MCO must create and maintain written policies and procedures for the prevention, detection, investigation, reporting and referral of suspected Fraud, Waste and Abuse, including any and all fraud and abuse policies delineated under state and or federal mandate.

c. Access to Provider Records

The CHC-MCO's Fraud, Waste and Abuse policies and procedures must provide and certify that the CHC-MCO's Fraud, Waste and Abuse unit, as well as the entire Department, and the Pennsylvania Office of Attorney General Medicaid Fraud Control Section, has timely access to records of Network Providers, Subcontractors, and the CHC-MCOs.

d. Audit Protocol

The CHC-MCO must inform all Network Providers of the Pennsylvania MA Provider Self Audit Protocol which allows Providers to voluntarily disclose overpayments or improper payments of MA funds. This includes, but is not limited to, inclusion in the Provider handbook. The CHC-MCO must provide written documentation that this action has been completed.

The protocol is available on the Department's website at https://www.dhs.pa.gov/about/Fraud-And-Abuse/Pages/MA-Provider-Self-Audit-Protocol.aspx

e. Procedure for Identifying Fraud, Waste and Abuse

The CHC-MCO's policies and procedures must also contain the following:

i. A description of the methodology and standard operating procedures used to identify and investigate Fraud, Waste and Abuse.

ii. An active method for verifying directly with Participants whether services billed by providers were received, as required by 42 CFR § 438.608(a)(5). Active verification requires the CHC-MCO to directly engage with consumers and develop a process to track both methods of verification and the results of verification attempts.

iii. A process to recover overpayments or otherwise sanction Providers as required by 42 CFR §§438.608(a)(5) and 438.608(d)(1)(i-iv).

iv. Provisions for payment suspension to a network provider for which the State determines that there is a credible allegation of fraud as required in 42 CFR §§455.23 and 438.608(a)(8).

v. Policies and procedures to initiate a prepayment review of a network provider's services where a review indicates billings are inconsistent with MA regulations or MCO policies, are unnecessary, are inappropriate to the members' health needs or contrary to customary standards of practice.

vi. A description of specific controls in place for Fraud, Waste and Abuse detection, including an explanation of the technology used to identify aberrant billing patterns, edits, post-processing review of Claims, and record reviews.

f. Fraud, Waste, and Abuse Referral

The CHC-MCO must establish and implement a policy on the referral of a suspected Provider or Direct Care Worker of Fraud, Waste and Abuse to the Department and also referral of suspected fraud to the Pennsylvania Office of Attorney General, Medicaid Fraud Control Section as required in 42 C.F.R. §438.608(a)(7). A standardized referral process is outlined in Exhibit Q, Reporting Suspected Fraud, Waste, and Abuse to the

Department and the Pennsylvania Office of Attorney General Medicaid Fraud Control Section.

If a CHC-MCO fails to promptly report a case of suspected fraud or abuse before the suspected fraud or abuse is identified by the Commonwealth of Pennsylvania, its designees, the United States or private parties acting on behalf of the United States, any portion of the fraud or abuse recovered by the Commonwealth of Pennsylvania or designee shall be retained by the Commonwealth of Pennsylvania or its designees.

g. Education Plan

The CHC-MCO must create and disseminate written materials for the purpose of educating its employees, Providers, subcontractors and subcontractors' employees about healthcare Fraud laws, the CHC-MCO's policies and procedures for preventing and detecting Fraud, Waste, and Abuse and the rights of individuals to act as whistleblowers. The CHC-MCO must provide written policies to all employees and to any contractor or agent that provides detailed information about the False Claims Act and other Federal and State laws described in 42 U.S.C. § 1396a(a)(68) and 62 P.S. §1401, et. seq., including information about rights of employees to be protected as whistleblowers.

h. Referral to Senior Management

The CHC-MCO must develop a certification process that demonstrates the policies and procedures under section 4.b above were reviewed and approved by the CHC-MCO's senior management on an annual basis.

i. Prior Department Approval

The Fraud, Waste and Abuse policies and procedures must be submitted to the Department for prior approval, and the Department may, upon review of these policies and procedures, require that specified changes be made within a designated time in order for the CHC-MCO to remain in compliance with the terms of the Agreement. To the extent that changes to the Fraud, Waste and Abuse unit are made, or the policies or procedures are altered, updated policies and procedures must be submitted promptly to the Department. The Department may also require new or updated policies and procedures during the course of the Agreement period.

j. Duty to Cooperate with Oversight Agencies

CHC-MCO employees must cooperate fully with oversight agencies responsible for Fraud, Waste and Abuse detection, investigation, and prosecution activities. Such agencies include, but are not limited to, the Department, Governor's Office of the Budget, Pennsylvania Office of Attorney General Medicaid Fraud Control Section, Pennsylvania Department of the Auditor General, Pennsylvania Treasury Department, Pennsylvania Office of Inspector General, US DHHS Office of Inspector General, CMS, United States Attorney's Office/Justice Department and the Federal Bureau of Investigations.

Such cooperation must include providing access to all necessary case information, computer files, and appropriate staff as well as the results of associated internal investigations and audits. In addition, such cooperation will include participating in periodic Fraud, Waste and Abuse training sessions, meetings, and joint reviews of Providers, subcontractors, caregivers, or Participants.

k. Hotline Information

The CHC-MCO must distribute the Department's toll-free MA Provider Compliance Hotline telephone number and accompanying explanatory statement to its Participants and Providers through its Participant Handbook and Provider handbooks. The explanatory statement needs to include at a minimum the following information:

i. *Recipient Fraud*: Someone who receives cash assistance, Supplemental Nutritional Assistance Program (SNAP) benefits, Heating/Energy Assistance (LIHEAP), child care, medical assistance, or other public benefits AND that person is not reporting income, not reporting ownership of resources or property, not reporting who lives in the household, allowing another person to use his or her ACCESS/MCO card, forging or altering prescriptions, selling prescriptions/medications, trafficking SNAP benefits or taking advantage of the system in any way.

ii. *Provider Fraud*: Billing for services not rendered, billing separately for services in lieu of an available combination code; misrepresentation of the service/supplies rendered (billing brand named for generic drugs; upcoding to more expensive service than was rendered; billing for more time or units of service than provided, billing incorrect provider or service location); altering claims, submission of any false data on claims, such as date of service, provider or prescriber of service, duplicate billing for the same

service; billing for services provided by unlicensed or unqualified persons; billing for used items as new.

I. Duty to Notify

i. Department's Responsibility

The Department will provide the CHC-MCO with prompt notice via electronic transmission or access to Medicheck listings or upon request if a Network Provider is subsequently suspended or terminated from participation in the MA or Medicare Programs. Upon notification from the Department, the CHC-MCO must immediately act to terminate the Provider from its Network. A CHC-MCO's termination must coincide with the MA effective date of termination for loss of licensures and criminal convictions.

The CHC-MCO is required to check the Social Security Administration's Death Master File (SSADMF), and National Plan and Provider Enumeration System (NPPES) at the time of initial enrollment and re-enrollment as well as providers, owners, agents, and managing employees against the U.S. Department of Health and Human Services-Office of Inspector General's (HHS-OIG) List of Excluded Individuals and Entities (LEIE), the Excluded Party List System (EPLS) on the System for Award Management (SAM), and the PA Medicheck list on a monthly basis as required in 42 CFR. §455.436.

ii. CHC-MCO's Responsibility

The CHC-MCO may not knowingly have a Relationship with the following:

- Individuals, entities or subcontractors with a disclosure of any relationship prohibited by 42 C.F.R. § 438.610(b).
- An individual who is an Affiliate, as defined in the Federal Acquisition Regulation, as covered by 48 C.F.R. § 2.101.

"Relationship," for purposes of this section, is defined as follows:

- A director, officer, or partner of the CHC-MCO.
- A person with beneficial ownership of five percent (5%) or more of the CHC-MCO's equity.
- A person with an employment, consulting or other arrangement for the provision of items and services that are significant and material to the CHC-MCO's obligations under this Agreement.
- A Subcontractor as governed by 42 C.F.R. § 438.230.

The CHC-MCO must notify the Department within 24 hours, in writing, if a Network Provider or Subcontractor is suspended, terminated, or voluntarily withdraws from participation in the MA program as a result of suspected or confirmed Fraud, Waste, or Abuse. The CHC-MCO must also immediately notify the Department, in writing, if it terminates or suspends an employee as a result of suspected or confirmed Fraud, Waste, or Abuse. The CHC-MCO must inform the Department, in writing, of the specific underlying conduct that led to the suspension, termination including for cause and/or best interest, or voluntary withdrawal.

The CHC-MCO must also notify the Department if it recovers overpayments or improper payments related to Fraud, Waste, or Abuse of MA funds from non-administrative overpayments, or improper payments made to Network Providers, or otherwise takes an adverse action against a Network Provider, such as restricting the Participants or services of a PCP.

m. Sanctions

The Department may impose sanctions or take other actions as specified in Section VIII.I if the CHC-MCO fails to report the information required in Section V.X.4.I or the Department determines that a CHC-MCO, Network Provider, employee, caregiver or subcontractor has committed Fraud, Waste, or Abuse as defined in this Agreement or has otherwise violated applicable law.

n. Subcontracts and Provider Agreements

i. The CHC-MCO must require all Network Providers and all subcontractors to take actions as are necessary to permit the CHC-MCO to comply with the Fraud, Waste, and Abuse requirements in this Agreement.

ii. To the extent that the CHC-MCO delegates oversight responsibilities to a third party (such as a Pharmacy Benefit Manager), the CHC-MCO must require that such third party complies with the applicable provisions of this Agreement relating to Fraud, Waste and Abuse.

iii. The CHC-MCO will require, via its Provider Agreement, that Network Providers comply with MA regulations and any enforcement actions initiated by the Department under its regulations, including termination and restitution actions.

iv. The CHC-MCO must suspend payment to a Network Provider when the Department determines there is a credible allegation of fraud against that Network Provider, unless the Department determines there is good cause for not suspending such payments pending the investigation.

v. The CHC-MCO shall require its Subcontractors to comply with the requirements set forth at 42 CFR §438.230(c)(3).

vi. The CHC-MCO subcontractor agreement must specifically state that the subcontractor will grant the Department, CMS, the Pennsylvania Office of Attorney General Medicaid Fraud Control Section, HHS OIG, the Comptroller General, or their designees, access to audit, evaluate, and inspect books, records, etc., which pertain to the delivery of or payment for Medicaid services. Subcontractors must make books, records, premises, equipment, staff, etc. all available for an audit at any time. The right to inspect extends for ten (10) years after termination of contract, or conclusion of an audit, whichever is later.

o. Provider Reviews and Overpayment Recovery

- The CHC-MCO shall audit, review and investigate Providers/Participants/caregivers within its Network through prepayment and retrospective payment reviews. The CHC-MCO shall cost avoid or recover any overpayments directly from its Network Providers for audits, reviews or investigations conducted solely by the CHC-MCO or through Network Provider self-audits.

    - The CHC-MCO must notify BPI in writing when it plans to recover and when it has recovered overpayments or improper payments related to Fraud, Abuse or Waste of Medical Assistance services.
    - The CHC-MCO will void Encounters for those claims involving full recovery of the payment and adjust Encounters for partial recoveries.
    - The CHC-MCO must report all voids and adjustments to Encounters to the Department.

- The Department may audit, review and investigate MA Providers/Participants/caregivers in and out of the CHC-MCO network.
    - The CHC-MCO will coordinate audits, reviews or investigations

of MA Providers with the Department to avoid duplication of effort.

- The CHC-MCO must provide information to BPI as requested including, but not limited to, the CHC-MCO's claims history, policies/procedures, provider contracts and fee schedules, provider/participant/caregiver review history and current status, complaints, barriers to reviewing the subject provider/member/caregiver and payment methodology.
- The CHC-MCO must provide this information within fifteen (15) calendar days of the Department's request. The CHC-MCO must respond to urgent requests within two (2) business days.
- The CHC-MCO may not initiate or continue a review, project, or recovery, of a MA Provider/Participant/caregiver after the Department advises the CHC-MCO of its intention to open a review or investigation by the Department, its designee, or another Federal or State agency, without written Departmental authorization to proceed.
  The CHC-MCO will not notify Providers/Participants/caregivers of the Department's intention to initiate a review.
- The Department will inform the CHC-MCO and the subject Provider(s) of its request for records, and the preliminary and final review findings related to BPI's review.
- The Department may utilize statistically valid random sampling in the selection of claims/encounters for review and may apply extrapolation methodology in determining the recover amount in any restitution demand.
- The CHC-MCO must submit an annual report of overpayment recoveries as required in 42 C.F.R. § 438.608(d)(3).
- The CHC-MCO must recover overpayments identified by the Department from its Network Provider after the CHC-MCO receives the final results of the Department review.
- Overpayment recoveries resulting from audits, reviews or investigations initiated by or on behalf of the Department, that are not part of a mutually agreed upon joint investigation, will be recouped from the CHC-MCO.
- The Department will deduct the restitution demanded from a future payment to the CHC-MCO after forty five (45) days from the mail date of the Department's notice of final findings.
- The CHC-MCO must submit a corrective action plan to the Department, upon request, to resolve any Network Provider's regulatory violations identified through the Department's, its vendor's, or other designee's audit, review or investigation.

- The Department may require the CHC-MCO to suspend payment to a MA Provider or to initiate a pre-payment review as a result of law enforcement reviews and activities or the Department's audits, reviews or investigations as required in 42 CFR §§438.608(a)(8)

and 455.23.

- The CHC-MCO will monitor claims to a provider during a payment suspension, and report on a monthly basis, in writing, to BPI the amount of funds withheld to the provider during the payment suspension. If the provider is subsequently convicted, these funds will be adjusted from the capitated payments.
- The Department may agree to joint reviews, audits or investigations with the CHC-MCO or any CMS contractor. Any recoveries as a result of an agreed upon joint audit, review or investigation shall be shared equally between the CHC-MCO and Department after payment to any CMS contractor. DHS's, its contractor's or other designee's request for vetting of a provider and/or the MCO's provision of information related to a provider review, audit or investigation does not constitute a mutually agreed upon joint review.
- The Department may periodically monitor and evaluate the CHC-MCO's audits, reviews and investigations of MA Providers/Participants/caregivers within the CHC-MCO's network.

5. Electronic Visit Verification

The CHC-MCO must have a fully operational EVV system for in-home personal care and home health services that complies with the requirements of 42 U.S.C. § 1396b(l). The EVV system must verify and record electronically (for example, through a telephone or computer-based system) at least the following: the type of service performed, the individual receiving the service, the individual providing the service, the date of the service, the location of the service, and the time the service begins and ends. In addition to capturing the elements outlined above, the EVV system must meet the technical specifications outlined in the DHS EVV Addendum and be able to interface with the DHS EVV Aggregator.

Providers may choose to use their own EVV vendor/system so long as the system meets all of the necessary requirements. Providers using an alternate EVV system in the CHC program will need to establish an interface with the CHC-MCOs.

The CHC-MCOs must follow all EVV requirements outlined by the Department. The CHC-MCOs are responsible for monitoring provider compliance requirements outlined in the corresponding bulletins and must implement corrective action plans when providers do not meet the compliance requirements.

CHC-MCOs are required to validate that visit data submissions support claims submissions as part of the adjudication process. All encounter claims submitted for services subjected to EVV requirements must have

corresponding visit data submitted to the DHS Aggregator.

The implementation of EVV must not negatively impact the provision of services. Neither CHC-MCOs nor Providers may limit the locations for EVV as long as the locations are allowable by the program. The Department's policies and procedures regarding the provision of services remain the same and service delivery should continue as it did before the implementation of these EVV requirements. EVV does not change the method and location for service delivery.

6. Management Information Systems

The CHC-MCO must have a secure, comprehensive, automated, and integrated MIS that includes a test environment and is capable of meeting the requirements listed below and throughout this Agreement. Information on Business and Technical Standards is available on the DHS website.

a. The CHC-MCO must have a minimum of the following MIS components or the capability to interface with other systems containing Participant, Provider, Claims Processing, Prior Authorization, and Reference data.

b. The CHC-MCO must have a sufficient MIS to support data reporting requirements specified in this Agreement.

c. The CHC-MCO's Participant management system must have the capability to receive, update, and maintain Participant files consistent with specifications provided by the Department. The CHC-MCO must have the capability to provide daily updates of Participant information to Subcontractors and Providers who have responsibility for processing Claims or authorizing services based on Participant information.

d. The CHC-MCO's Provider database must be maintained with detailed information on each Provider sufficient to support Provider payment and meet the Department's reporting and Encounter Data requirements.

   The CHC-MCO must be able to cross-reference its internal Provider identification number to the correct MMIS Provider ID and NPI number in the Department's MMIS for each location at which the Provider renders services for the CHC-MCO.

   The CHC-MCO must verify that each Network Provider service location is enrolled and active with MA, and that information for all service locations is maintained in its own system.

   The CHC-MCO must verify that each Network Provider's license

information is valid in the Department's MMIS and must outreach to Network Providers to stress the importance of maintaining up-to-date information in the Department's MMIS.

The CHC-MCO must require Network Providers with specific Provider types and specialties have the same Provider types and specialties in the Department's MMIS for each service location.

e. The CHC-MCO's Claims Processing system must have the capability to process Claims consistent with timeliness and accuracy requirements identified in this Agreement.

f. The CHC-MCO's Prior Authorization system must be linked with its Claims Processing component.

g. The CHC-MCO's MIS must be able to maintain its Claims history with sufficient detail to meet all Department reporting and Encounter Data requirements.

h. The CHC-MCO's credentialing system must have the capability to store and report on Provider-specific data sufficient to meet the Department's credentialing requirements and those listed in Exhibit F, Quality Management and Utilization Management Program Requirements.

i. The CHC-MCO must have sufficient telecommunication capabilities, including email, to meet the requirements of this Agreement.

j. The CHC-MCO must have the capability to electronically exchange data files with the Department and the IEB. The CHC-MCO must use a secure FTP product that is compatible with the Department's product.

k. The CHC-MCO's MIS must be bidirectionally linked to all operational systems listed in this Agreement, so that data captured in Encounter records accurately matches data in Participant, Provider, Claims, and Prior Authorization files. Encounter Data will be utilized for:

- Participant and Provider profiling,
- Claims validation,
- Fraud, Waste, and Abuse monitoring activities,
- Rate setting, and
- Any other research and reporting purposes defined by the Department.

l. The CHC-MCO must comply with the Department's Business and Technical Standards including connectivity to the Commonwealth's network for Extranet access. The CHC-MCO must also comply with any

changes made to these Standards.

The CHC-MCO must comply with the Department's Se-Government Data Exchange Standards.

Whenever possible, the Department will provide advance notice of at least sixty (60) days prior to the implementation of changes. For more complex changes, the Department will make every reasonable effort to provide additional notice.

m. The CHC-MCO must be prepared to document its ability to expand claims processing or MIS capacity should either be exceeded through the enrollment of Participants.

n. The CHC-MCO must designate appropriate staff to participate in DHS-directed development and implementation activities.

o. The CHC-MCO must have formalized System Development Life Cycle processes, procedures, controls, and governance frameworks in place for management of its MIS and affiliated infrastructure, affiliated application, technology, and infrastructure roadmaps in place that outline the current capabilities and future direction of the MIS, and procedures for when CHC-MCO and DHS representatives will be engaged to address current and future business needs and requirements.

p. Subcontractors must meet the same MIS requirements as the CHC-MCO, and the CHC-MCO will be held responsible for MIS errors or noncompliance resulting from the action of a Subcontractor. The CHC-MCO must provide its Subcontractors with the appropriate files and information to meet this requirement (e.g., the Daily 834 Eligibility File, Provider files).

q. The CHC-MCO's MIS shall be subject to review and approval during the Department's Readiness Review process.

r. The CHC-MCO must maintain the security of Commonwealth data and information including:

- Compliance with all applicable Federal and State statutes and regulations regarding security standards,
- Demonstration that specific controls are in place to safeguard MIS and Commonwealth data and information, and
- Demonstration of procedures for mitigating data breaches.

s. Prior to any major modifications to the CHC-MCO's MIS, including

upgrades and new purchases, the CHC-MCO must inform the Department in writing of the potential changes at least 180 days prior to the change. The CHC-MCO must provide a work plan detailing recovery efforts and the use of parallel system testing.

t. The CHC-MCO must be able to accept and generate HIPAA-compliant transactions as required in the ASC X12 Implementation Guides.

u. The Department will make Drug, Procedure Code, and Diagnosis Code reference files available to the CHC-MCO on a routine basis to allow it to effectively meet its obligation to provide services and record information consistent with requirements in this Agreement.

   If the CHC-MCO chooses not to use these files, it must document the use of comparable files to meet its obligation with this Agreement.

   Information about these files is available on the Pennsylvania HealthChoices Extranet.

v. The Department will supply Provider files on a routine basis to allow the CHC-MCO to effectively meet its obligation to provide services and record information consistent with requirements in this Agreement. These files include:

   - List of Active and Closed Providers (PRV414 and PRV415),
   - NPI Crosswalk (PRV430),
   - Provider Revalidation File (PRV720),
   - Special Indicators (PRV435), and
   - Network Provider File (Managed Care Affiliates, PRV640Q).

   The CHC-MCO must use the PRV414 or PRV415 files with the PRV430 on a monthly basis to reconcile its Provider database with that of the Department to confirm:

   - All participating Providers are enrolled in MA for all service locations as defined by MA enrollment rules,
   - Participating Provider license information is valid,
   - Provider Types and Specialties match, and
   - Each Provider's NPI, taxonomy, and nine-digit zip code for each service location match.

   CHC-MCOs must use the PRV640Q to reconcile Provider information previously submitted on the Network Provider file (PRV640M).

   Information about these files is available on the Pennsylvania

HealthChoices Extranet.

w. The CHC-MCO must have a disaster recovery plan in place with written policies and procedures containing information on system backup and recovery in the event of a disaster.

x. The CHC-MCO must reconcile the 820 Capitation Payment file with its internal membership information and report any discrepancies to the Department within thirty (30) days.

y. To support the CHC-MCO in meeting the requirements of this agreement, the Department will provide access to the following systems:

- The Department's MMIS
- Pennsylvania HealthChoices Extranet
- Client Information System (eCIS)
- DocuShare

Access to these systems is in addition to the various files that CHC-MCOs will receive via secure file transfer. Information on obtaining access to these resources is on the Pennsylvania HealthChoices Extranet.

7. Department Access

The CHC-MCO must provide Department staff access to appropriate on-site private office space and equipment. The CHC-MCO must grant the Department, CMS, the Pennsylvania Office of Attorney General Medicaid Fraud Control Section, HHS OIG, the Comptroller General, or their designees to audit, evaluate, and inspect books, records, etc., which pertain to the delivery of or payment for Medicaid services. Subcontractors must make books, records, premises, equipment, staff, etc. all available for an audit at any time. The right to inspect extends for ten (10) years after termination of Agreement, or conclusion of an audit, whichever is later.

In addition to other access requirements, the CHC-MCO must provide the Department with access to administrative policies and procedures pertaining to operations, including, but not limited to:

- Personnel policies and procedures.
- Procurement policies and procedures.
- Public relations and marketing policies and procedures.
- Operations policies and procedures.
- Policies and procedures developed to comply with this Agreement.

Y. Selection and Assignment of PCPs

The CHC-MCO must have a PCP selection process that includes, at a minimum, the following:

- Honors a Participant's selection of a PCP or PCP group, if permitted through the IEB.
- Honors a Dual Eligible Participant's selection of a PCP. A Dual Eligible Participant is not required to have a Network Provider as a PCP and must be permitted to designate his/her Medicare-participating PCP as his or her CHC PCP.
- For all non-dual eligible Participants, the PCP must be a Network Provider except where an Out-Of-Network PCP is permitted under DOH regulations.
- May allow selection of a PCP group. In addition, the CHC-MCO may assign a PCP group to a Participant if the Participant has not selected a PCP or a PCP group at the time of Enrollment.
- If the Participant has not selected a PCP through the IEB for reasons other than cause, the CHC-MCO must make contact with the Participant within seven (7) business days of his or her Enrollment and provide information on options for selecting a PCP, unless the CHC-MCO has information that the Participant should be immediately contacted due to a medical condition requiring immediate care.
- If a Participant does not select a PCP within fourteen (14) business days of Enrollment, the CHC-MCO must make an assignment. If the Participant is enrolled in the D-SNP aligned with the CHC-MCO, the CHC-MCO must assign the PCP who the Participant uses in the D-SNP. The CHC-MCO must consider such factors to the extent they are known, such as current Provider relationships that may be identified through Encounters, existing Service Plans, or any CHC-MCO contacts with the Participant, specific medical needs, physical disabilities of the Participant, language needs, cultural compatibility, area of residence and access to transportation. The CHC-MCO must then notify the Participant by telephone or in writing of his or her PCP's name, location and office telephone number. The CHC-MCO must make every effort to determine PCP choice and confirm this with the Participant prior to the commencement of the CHC-MCO coverage in accordance with Participant Enrollment and Disenrollment, so that new Participants do not go without a PCP for a period of time after Enrollment begins.
- The CHC-MCO must have written policies and procedures for allowing Participants to select or be assigned to a new PCP whenever requested by the Participant, when a PCP is terminated from the Network, or when a PCP change is required as part of the resolution to a Grievance or Complaint proceeding. The policies and procedures must receive advance written approval from the Department.
- In cases where a PCP has been terminated from the Network for reasons other than cause, the CHC-MCO must immediately inform Participants assigned to

that PCP in order to allow them to select another PCP prior to the PCP's termination effective date. In cases where a Participant fails to select a new PCP, re-assignment must take place prior to the PCP's termination effective date.

- Participants can request a specialist as a PCP. If the CHC-MCO denies the request, that denial is appealable.
- If a Participant uses a Pediatrician or Pediatric Specialist as a PCP, the CHC-MCO must, upon request, assist with the transition to a PCP who provides services for adults.
- The CHC-MCO must allow any Participant who is an Indian as defined in 42 CFR § 438.14(a), and who is both enrolled in the CHC-MCO and eligible to receive services from an I/T/U Health Care Provider ("I/T/U HCP") PCP participating in the CHC-MCO's network, to choose that participating I/T/U HCP as their PCP, as long as the I/T/U HCP has capacity to provide the services.

CHC-MCOs must assist medically fragile young adult Participants and or their guardians when transitioning to an adult PCP and are required to develop payment mechanisms to enable both pediatric and adult care Providers to receive payment for medically necessary services provided concurrently during the transition process.

Should the CHC-MCO choose to implement a process for the assignment of a primary dentist, the CHC-MCO must submit the process for advance written approval from the Department prior to its implementation.

Z. Selection and Assignment of Service Coordinators

The CHC-MCO must develop and maintain a process for the selection and assignment of Service Coordinators that includes, at a minimum, the following:

- The CHC-MCO must offer the Participant a choice of Service Coordinators from amongst those employed by or under contract with the CHC-MCO. During the Service Coordinator selection process, the CHC-MCO must provide the Participant with information about Service Coordinators within their coverage area, including a brief description of any special skills and work experience. If requested, the Participant must be allowed to speak to the Service Coordinators as part of the selection process.
- At the time of an Assessment that indicates a need for LTSS, the CHC-MCO must provide the Participant with information on options for selecting or changing a Service Coordinator. If the Participant has not selected a Service Coordinator within seven (7) business days of the Assessment, then the CHC-MCO must assign a Service Coordinator. The CHC-MCO shall assign the Service Coordinator immediately if the CHC-MCO has information that the Participant should be immediately contacted due to a medical condition requiring immediate care.

- When assigning a Service Coordinator the CHC-MCO may consider such factors (to the extent they are known) as current Provider relationships, prior service coordinator, the person assigned to the Participant for care management in the CHC-MCO's aligned D-SNP, specific medical needs, physical disabilities of the Participant, language needs, cultural compatibility, area of residence and access to transportation. The CHC-MCO must then notify the Participant by telephone and in writing of his or her Service Coordinator's name, location and office telephone number. The CHC-MCO must make every effort to determine Service Coordinator choice and confirm this with the Participant. The CHC-MCO may contact new Participants prior to the commencement of their CHC-MCO coverage, so that new Participants do not go without a Service Coordinator for a period of time after Enrollment begins or after Assessment.
- If a Participant requests a change in his or her selected or assigned Service Coordinator, the CHC-MCO must promptly grant the request and process the change in a timely manner.
- The CHC-MCO must have written policies and procedures for allowing Participants to select or be assigned to a new Service Coordinator whenever requested by the Participant, when a Service Coordinator is terminated from the Network or when a Service Coordinator change is required as part of the resolution to a Grievance or Complaint proceeding.
- The CHC-MCO must submit its policies and procedures for review and approval by the Department.

AA. Provider Services

The CHC-MCO must operate Provider service functions, at a minimum, during regular business hours (9:00 a.m. to 5:00 p.m., Monday through Friday). Provider services functions include, but are not limited to, the following:

- Assisting Providers with questions concerning Participant eligibility status.
- Assisting Providers with CHC-MCO Prior Authorization and referral procedures.
- Assisting Providers with PCSP and PCPT Procedures.
- Assisting Providers with Claims payment procedures and handling Provider Disputes and issues.
- Facilitating transfer of Participant medical records among Providers, as necessary.
- Providing to PCPs a monthly list of Participants who are under their care, including identification of new and deleted Participants. An explanation guide detailing use of the list must also be provided to PCPs.
- Developing a process to respond to Provider inquiries regarding current Enrollment.
- Coordinating the administration of Out-of-Plan Services.

Beginning July 1, 2024, CHC-MCOs must maintain a provider portal that complies

with 40 P.S. § 991.2153.

1. Provider Manual

The CHC-MCO must keep its Network Providers informed and up-to-date with the latest policy and procedures changes as they affect the MA Program and must develop and maintain a Provider Manual. The CHC-MCO must distribute Provider Manuals in a manner that makes them easily accessible to all Network Providers. The CHC-MCO may specifically delegate this responsibility to large Providers in its Provider Agreement. The Provider Manual must be updated annually. The Department may grant an exception to this annual requirement upon written request from the CHC-MCO provided there are no major changes to the manual.

The CHC-MCO must submit its Provider Manual and annual updates to the Department for review and prior approval.

The CHC-MCO must include the information in its Provider manual as specified in Exhibit S, Provider Manual.

2. Provider Orientation and Ongoing Education

The CHC-MCO must develop and maintain a Provider Network that is knowledgeable and experienced in treating and supporting Participants in CHC. The CHC-MCO must submit and obtain prior approval from the Department for a new Provider orientation and training work plan and an annual ongoing Provider educational plan that outlines its plans to educate and train Network Providers and its process for measuring outcomes, including the tracking of schedules and attendance. The initial Provider orientation must be completed by the CHC-MCO no later than 45 days after the provider's contract effective date. Ongoing Provider education must be completed at a minimum (each calendar year) yearly by each Provider in the MCOs network. The format for this work plan will be designated by the Department through its operations reporting requirements found on the Pennsylvania HealthChoices Extranet. The CHC-MCO must develop its work plan in conjunction with the Department and must include all topic areas identified by the Department. The CHC-MCO must also include Participants, advocates, direct care worker representatives, and family members in designing and implementation of the work plan.

At a minimum, the CHC-MCO must conduct the new Provider orientation and training, and yearly ongoing Provider education, as appropriate, in the following areas:

a. Needs screening, Assessment and Reassessment, service planning system and protocols and a description of the Provider's role in service planning and Service Coordination.

b. Service Coordination and how the Provider will fit into the PCPT approach.

c. The population being served through CHC.

d. Accessibility requirements with which Providers must comply.

e. Application of the Agreement definition of Medically Necessary.

f. Information around Alzheimer's Disease and related dementias, including information on assisting with and managing the symptoms and care needs of people with dementia throughout the course of their disease.

g. Identification and appropriate referral for mental health and drug, and alcohol and substance abuse services.

h. The diverse needs of persons with disabilities, such as persons who are deaf or hard of hearing, how to obtain sign language interpreters and how to work effectively with sign language interpreters.

i. CHC-MCO policies against discrimination to achieve competency in treating Participants without discrimination on the basis of race, color, creed, sex, religion, age, national origin, ancestry, marital status, sexual orientation, gender identity, language, MA status, income status, program participation, health status, disease or pre-existing condition, anticipated need for healthcare or physical or mental handicap.

j. Cultural, Linguistic and Disability Competency, including: the right of Participants with LEP to engage in effective communication in their language; how to obtain interpreters; and how to work effectively with interpreters.

k. Treating the populations served by the CHC-MCO, including treatment for Participants with disabilities.

l. Administrative processes that include, but are not limited to: COB, Recipient Restriction Program, and Encounter Data reporting.

m. Issues identified by Provider relations or Provider hotline staff in response to calls or complaints by Providers.

n. Issues identified through the QM process.

o. The process to submit materials to the CHC-MCO for utilization review and Prior Authorization review decisions. Submitted materials must include, but are not limited to, letters of medical necessity.

p. The Complaint, Grievance and DHS Fair Hearing and Appeals process, including, but not limited to, expectations for a Provider should a Provider represent a Participant at a Grievance hearing.

q. Performance Improvement Plans and how Providers may benefit from participation in these programs.

r. Dual eligibility for Medicare and Medicaid and coordination of services for Participants who are Dual Eligible.

s. Inform Providers of the Pennsylvania MA Provider Self Audit Protocol located at https://www.dhs.pa.gov/about/Fraud-And-Abuse/Pages/MA-Provider-Self-Audit-Protocol.aspx

The CHC-MCO may submit for review and Department prior approval an alternate Provider training and education work plan should the CHC-MCO wish to combine its activities with other CHC-MCOs operating in the CHC zone or wish to develop and implement new and innovative methods for Provider training and education. Should the Department approve an alternative work plan, the CHC-MCO must have the ability to track and report on the components included in the CHC-MCO's alternative Provider training and education work plan.

BB. Provider Network

The CHC-MCO must establish and maintain adequate Networks to serve all of the eligible CHC population in the CHC zone, including those with LEP or physical or mental disabilities. The CHC-MCO must include Providers for all Covered Services in its Network. The CHC-MCO must comply with the composition of Networks and Participant access to services set forth in Exhibit T, Provider Network Composition/Service Access.

If the CHC-MCO's Provider Network is unable to provide necessary Covered Services covered under the Agreement to a Participant, the CHC-MCO must adequately and timely cover these services out-of-network with an MA-enrolled Provider for the Participant for as long as the CHC-MCO is unable to provide them and must coordinate with that Provider with respect to payment.

1. Provider Qualifications

The CHC-MCO may only include Providers in its Network that meet the minimum qualification requirements established by the Department. The CHC-MCO must credential Providers in accordance with the credentialing framework provided by the Department.

2. Provider Agreements

The CHC-MCO must have written Provider Agreements with a sufficient number of Providers to provide Participant access to all Covered Services as set forth in Exhibit T, Provider Network Composition/Service Access.

The requirements for these Provider Agreements are set forth in Exhibit U, Provider Agreements.

Provider Agreements may not prohibit a Provider from contracting with another CHC-MCO or prohibit or penalize the CHC-MCO for contracting with other Providers.

3. Cultural Competency, Linguistic Competency, and Disability Competency

Both the CHC-MCO and Network Providers must demonstrate Cultural Competency, Linguistic Competency, and Disability Competency.

Racial, ethnic, linguistic, gender, sexual orientation, gender identity and cultural differences between Provider and Participant must not present barriers to Participants' access to and receipt of quality services. The CHC-MCO must develop and implement policies to prevent and monitor access free from such barriers. The CHC-MCO must be willing and able to make the necessary distinctions between traditional treatment methods and non-traditional treatment methods that are consistent with the Participant's racial, ethnic, linguistic or cultural background and which may be equally or more effective and appropriate for the particular Participant; and must demonstrate consistency in providing quality care across a variety of races, ethnicities, and cultures. For example, language, religious beliefs, cultural norms, social-economic conditions, diet, etc., may make one treatment method more palatable to a Participant of a particular culture than to another of a differing culture.

The CHC-MCO must also develop, implement, and monitor policies that require Network Providers to demonstrate willingness and ability to make necessary accommodations in providing services, to employ appropriate language when referring to and talking with people with disabilities, and to understand communication, transportation, scheduling, structural, and attitudinal barriers to accessing services.

4. Primary Care Practitioner Responsibilities

The CHC-MCO must have written policies and procedures for the choice and assignment of PCPs. The PCP must serve as the Participant's initial and most important point of contact regarding healthcare needs. At a minimum, the CHC-

MCO Network PCPs are responsible for:

a. Providing primary and preventive care, acting as the Participant's advocate, and providing, recommending, and arranging for services.

b. Documenting all care rendered in a complete and accurate Encounter record that meets or exceeds the DHS data specifications.

c. Maintaining continuity of each Participant's healthcare.

d. Communicating effectively with the Participant by using specialized interpretive services for Participants who are deaf and blind, and oral interpreters for those Participants with LEP when needed. Interpreter services must be free of charge to the Participant and the PCP cannot require family members to be used for interpretation.

e. Making referrals for specialty care and other Medically Necessary services, both in and out-of-plan.

f. Maintaining a current medical and other service record for the Participant, including documentation of all services provided to the Participant by the PCP, as well as any specialty or referral services.

g. Coordinating BH Services by working with BH-MCOs as specified in Exhibit H, Coordination with the BH-MCOs.

h. The CHC-MCO will retain responsibility for monitoring PCP actions for compliance with this Agreement.

5. Specialists as PCPs

The CHC-MCO must allow a Participant to select a specialist as PCP.

The CHC-MCO must adopt and maintain procedures by which a Participant may request and receive:

- A standing referral to a specialist with clinical expertise in treating the disease or condition; or

- The designation of a specialist to provide and coordinate the Participant's primary and specialty care.

When possible, the specialist must be a Provider participating in the CHC-MCO's Network. If the specialist is not a Network Provider, the CHC-MCO may require the specialist to meet the requirements of the CHC-MCO's Network Providers, including the CHC-MCO's credentialing criteria outlined in

the framework provided by the Department and QM/UM Program policies and procedures.

The CHC-MCO must provide Participants with information on the procedures to request and receive approval for a Specialist to act as a PCP.

The CHC-MCO must have adequate Network capacity of qualified specialists to act as PCPs. These physicians may be predetermined and listed in the directory but may also be determined on an as-needed basis. The CHC-MCO must establish credentialing and recredentialing policies and procedures to ensure compliance with these specifications that meet the credentialing requirements outlined in the framework provided by the Department.

The CHC-MCO must require that Providers credentialed as specialists and as PCPs meet all of the CHC-MCO's standards for credentialing PCPs and specialists, including compliance with recordkeeping standards, the Department's access and availability standards and other QM/UM Program standards. The specialist as a PCP must provide or arrange for all Primary Care, consistent with CHC-MCO preventive care guidelines, including routine preventive care, and provide those specialty medical services consistent with the Participant's assessed needs in accordance with the CHC-MCO's standards and within the scope of the specialist's specialty training and clinical expertise. In order to accommodate the full spectrum of care, the specialist as a PCP also must have admitting privileges at a hospital in the Network.

6. Related Party

A hospital, NF, or home health agency that is a Related Party to a CHC-MCO must negotiate in good faith with other CHC-MCOs regarding the provision of services to Participants. The Department may terminate this Agreement with the CHC-MCO if it determines that a Provider related to the CHC-MCO has refused to negotiate in good faith with other CHC-MCOs. The CHC-MCO must negotiate and make referrals in good faith with non-related providers.

A CHC-MCO must negotiate with and make referrals in good faith to providers that are not Related Parties.

The CHC-MCO must offer Participants a choice of Related-Party and Non-Related Party Network Providers.

7. Integration

The CHC-MCO must prohibit Network Providers from intentionally segregating or discriminating against Participants in any way on the basis of race, color, creed, sex, religion, age, national origin, ancestry, marital status, sexual orientation, gender identity, language, MA status, income status, program participation, health status, disease or pre-existing condition,

anticipated need for healthcare or physical or mental disability, except where medically indicated.

The CHC-MCO must investigate Complaints and take affirmative action when Participants experience discriminatory treatment or are segregated without a medical indication. Examples of prohibited practices include, but are not limited to, the following:

- Denying or not providing a Participant a Covered Service or availability of a facility within the CHC-MCO's Network.
- Subjecting a Participant to segregated, separate, or different treatment, including a different place or time from that provided to other Participants, public or private patients, in any manner related to the receipt of any Covered Service, except where Medically Necessary.
- The assignment of times or places for the provision of services on the basis of the race, color, creed, religion, age, sex, national origin, ancestry, marital status, sexual orientation, gender identity, income status, program participation, language, Medical Assistance status, health status, disease or pre-existing condition, anticipated need for healthcare or physical or mental disability of the participants to be served.

If the CHC-MCO knowingly executes an Agreement with a Provider with the intent of allowing or permitting the Provider to implement barriers to care (i.e., the terms of the Provider Agreement are more restrictive than this Agreement), the CHC-MCO shall be in breach of this Agreement.

The CHC-MCO must have explicit policies to provide access to complex interventions such as cardiopulmonary resuscitations, intensive care, transplantation and rehabilitation when medically indicated and must educate its Network Providers on these policies. Healthcare and treatment necessary to preserve life must be provided to all Participants who are not terminally ill or permanently unconscious, except where a competent Participant objects to such care on his or her own behalf or has objected through an executed Advanced Healthcare Directive.

8. Network Changes/Provider Terminations

a. Network Changes

i) Notification to the Department

Other than terminations outlined below in Section 8.b Provider Terminations, the CHC-MCO must notify the Department within ten (10) days of any changes to its Provider Network such as closed panels, relocations, death of a Provider, and a change in a Network Provider's circumstances that would negatively impact the ability of Participants to access services.

ii) Procedures and Work Plans
The CHC-MCO must have procedures to address changes in its Network that impact Participant access to services, in accordance with the requirements of Exhibit T, Provider Network Composition/Service Access. The Department may find the CHC-MCO in default based on its failure to address changes in Network composition that negatively affect Participant access.

iii) Timeframes for Notification to Participants
The CHC-MCO must update web-based Provider directories to reflect any changes in the Provider Network.

b. Provider Terminations

The CHC-MCO must comply with the requirements for Provider terminations as outlined in Exhibit V, CHC-MCO Requirements for Provider Terminations.

9. Other Provider Enrollment Standards

The CHC-MCO must comply with the program standards regarding Provider enrollment that are set forth in this Agreement.

The CHC-MCO must require all Network Providers to be enrolled in the Commonwealth's MA program and possess an active MMIS Provider ID for each location in which they provide services for the CHC-MCO. In addition, the CHC-MCO must be able to store and utilize the MMIS Provider ID and NPI stored in the Department's MMIS for each location.

CHC-MCOs are not required to contract with all willing Providers (excluding any willing pharmacy requirements), but must accept and respond to letters of interest from any Provider interested in joining the MCO's network.

10. Twenty-Four-Hour Coverage

The CHC-MCO must have coverage available directly or through its PCPs, who may have on-call arrangements with other qualified Providers, for urgent or emergency care on a twenty-four (24) hour-per day, seven (7) day-per-week basis. The CHC-MCO must not use answering services in lieu of the PCP emergency coverage requirements without the knowledge of the Participant. For Emergency or Urgent Medical Conditions, the CHC-MCO must have written policies and procedures on how Participants and Providers can make contact to receive instruction for treatment. If the PCP determines that emergency care is not required, 1) the PCP must see the Participant in accordance with the time frame specified in Exhibit T, Provider Network Composition/Service Access under Appointment Standards, or 2) the

Participant must be referred to an urgent care clinic which can see the Participant in accordance with the time frame specified in Exhibit T.

11. Opioid Use Disorder Centers of Excellence

The OUD-COE initiative is designed to increase capacity to care for those seeking treatment for OUD, as well as increase the overall quality of care. CHC-MCOs must comply with the Department's OUD-COE requirements specified in Exhibit EE Opioid Use Disorder Centers of Excellence.

CC. QM and UM Program Requirements

1. Overview

The CHC-MCO shall provide a Quality Assessment and Performance Improvement Program consistent with federal guidelines under Title XIX of the SSA, 42 C.F.R. Part 438, Subpart E and must comply with the Department's QM and UM Program standards and requirements set forth in Exhibit F, Quality Management and Utilization Management Program Requirements; Exhibit W, External Quality Review; and Exhibit W(2), Healthcare Effectiveness Data and Information Set (HEDIS®) and Consumer Assessment of Healthcare Providers and Systems (CAHPS®). The CHC-MCO must comply with the critical incident reporting and management, provider-preventable condition, and provider serious adverse events reporting requirements outlined in Exhibit W(1), Critical Incident Reporting and Management and Provider Preventable Conditions/Preventable Service Adverse Events Reporting.

The CHC-MCO must comply with the Quality Management/Utilization Management Reporting Requirements found on the Pennsylvania HealthChoices Extranet. The Department retains the right of advance written approval and to review on an ongoing basis all aspects of the CHC-MCO's QM and UM programs, including subsequent changes. The CHC-MCO must comply with all QM and UM program reporting requirements and must submit data in formats to be determined by the Department.

The Department, in collaboration with the CHC-MCO, will determine and prioritize QM and UM activities and initiatives based on areas of importance to the Department and CMS.

2. Quality Management and Performance Improvement

The Department's goal for CHC is to deliver quality and appropriate care that enables Participants to stay healthy, get better, manage chronic illnesses and disabilities, and maintain/improve their quality of life. The CHC-MCO shall provide quality LTSS to Participants and promote improvement in the quality and appropriateness of care provided to Participants through established

quality management and performance improvement processes. The CHC-MCO shall have a written QM/QI program that clearly defines its quality improvement structures and processes and assigns responsibility to appropriate individuals. The CHC-MCO shall have a QMC which shall include medical and LTSS staff and Providers. The role of the committee is to analyze and evaluate the results of QM/QI activities and to develop appropriate policies, actions and follow-up to provide appropriate services to Participants. The CHC-MCO must establish the QMC as a distinct unit within the organizational structure and the QMC must remain separate from other units in the organization.

The CHC-MCO must include the following in its QM program:

- A written Quality Assessment and Performance Improvement plan completed on an annual basis with quarterly updates.
- Monitoring and evaluation activities which include peer review and a QMC.
- Protection of Participant records.
- Communicate and honor Participant rights and responsibilities as outlined in this Agreement and Exhibit L, Participant Rights.
- Tracking and trending Participant and Provider issues.
- Mechanism to assess the quality and appropriateness of care furnished to Participants.
- Performance Improvement programs.
- Submission of Participant's specific data.
- Reporting on designated quality measures as outlined in the Department's reporting requirements, to identify outcomes and trends and how trends will be addressed.
- Procedures outlining how and when information will be entered into the Department's quality data reporting system.
- Mechanisms to assess the quality and appropriateness of care furnished to Participants with special health care needs as defined by the Department in its quality strategy.

3. Utilization Management

The CHC-MCO shall establish a Utilization Management structure consistent with guidance from the Department.

4. Healthcare Effectiveness Data and Information Set

The CHC-MCO must comply with the requirements for HEDIS as set forth in Exhibit W(2), Healthcare Effectiveness Data and Information Set (HEDIS®) and Consumer Assessment of Healthcare Providers and Systems (CAHPS®). The previous calendar year is the standard measurement year for HEDIS data.

5. External Quality Review

The CHC-MCO must comply with the requirements set forth in Exhibit W, External Quality Review. On at least an annual basis, the CHC-MCO will cooperate fully with any external evaluations and assessments of its performance authorized by the Department under this Agreement and conducted by the Department's contracted EQRO or other designee. Independent assessments will include, but not be limited to, any independent evaluation required or allowed by Federal or State statute or regulation. The Department may use the term PA Performance Measures in place of EQR performance measures throughout this Agreement.

6. Pay for Performance Programs

The Department conducts a Pay for Performance (P4P) Program that provides financial incentives for CHC-MCOs that meet quality goals. Information regarding MCO Pay for Performance Programs may be found in Exhibit DD(1), CHC-MCO Pay for Performance Program and Exhibit DD(2), Nursing Facility Quality Incentive Program.

7. QM/UM Program Reporting Requirements

The CHC-MCO must comply with all QM and UM program reporting requirements and time frames outlined in Exhibit F, Quality Management and Utilization Management Program Requirements. The Department will, on a periodic basis, review the required reports and make changes to the information/data and/or formats requested based on the changing needs of CHC. The CHC-MCO must comply with all requested changes to the report information and formats as deemed necessary by the Department. The Department will provide the CHC-MCO with at least sixty (60) days notice of changes to the QM/UM reporting requirements. Information regarding QM and UM reporting requirements may be found on the Pennsylvania HealthChoices Extranet.

8. Delegated Quality Management and Utilization Management Functions

The CHC-MCO may not structure compensation or payments to individuals or entities that conduct UM activities so as to provide incentives for the individual or entity to deny, limit, or discontinue Medically Necessary services to any Participant.

9. Participation in the Quality Management and Utilization Management Programs

The CHC-MCO will participate and cooperate in the work and review of the

Department's formal advisory body through participation in the MAAC and its subcommittees. Additionally, the CHC-MCO will solicit input on its QM and UM programs from the PAC.

10. Confidentiality

The CHC-MCO must have written policies and procedures for maintaining the confidentiality of data that addresses medical records, Participant information and Provider information and is in compliance with the provisions set forth in HIPAA, Section 2131 of the Insurance Company Law of 1921, 40 P.S. § 991.2131; 55 Pa. Code Chapter 105; and 45 C.F.R. Parts 160 and 164 (Standards for Privacy of Individually Identifiable Health Information).

The CHC-MCO must require its Network Provider to have mechanisms that guard against unauthorized or inadvertent disclosure of confidential information.

The CHC-MCO must obtain the Department's prior written approval to release data to third parties, except for releases for the purpose of individual care and coordination among Providers, releases authorized by the Participant or those releases required by court order, subpoena or law.

11. Department Oversight

The CHC-MCO and its subcontractor(s) and Network Providers will make available to the Department upon request, data, clinical and other records and reports for review of quality of care, access and utilization issues, including, but not limited to, activities related to EQR, HEDIS, Encounter Data validation, and other related activities.

The CHC-MCO must submit a plan, in accordance with the timeframes established by the Department, to resolve any performance or quality of care deficiencies identified through ongoing monitoring activities and any independent assessments or evaluations requested by the Department.

The CHC-MCO must obtain advance written approval from the Department before releasing or sharing data, correspondence and/or improvements from the Department regarding the CHC-MCO's internal QM and UM programs with any of the other CHC-MCOs or any external entity.

The CHC-MCO must obtain advance written approval from the Department before participating in or providing letters of support for QM or UM data studies and/or any data related external research projects related to CHC with any entity.

12. CHC-MCO Cooperation with Research and Evaluation

The CHC-MCO must cooperate fully with research and evaluation activities as requested by the Department.

DD. Mergers, Acquisitions, Mark, Insignia, Logo and Product Name

1. Mergers and Acquisitions

The CHC-MCO must notify the Department at least thirty (30) days in advance of a merger or acquisition of the CHC-MCO. The CHC-MCO must bear the cost of reprinting CHC outreach material, if a change involving content is made prior to the IEB's annual revision of materials.

2. Mark, Insignia, Logo, and Product Name Changes

The CHC-MCO must submit mark, insignia, logo, and product name changes within thirty (30) calendar days of projected implementation for the Department's review. The CHC-MCO logo must appear with the DHS CHC logo in all documents. The CHC-MCO is responsible for the cost of reprinting CHC outreach materials, if a change is made prior to the IEB's annual revision of materials.

EE. Cooperation with IEB

The CHC-MCO must cooperate with the IEB, as instructed by the Department.

FF. Employment Support

The CHC-MCO must include employment-related needs and service requirements of Participants as part of the person-centered service plan. The CHC-MCO will provide information about services available through OVR or similar resources to Participants who are not working but express an interest in work or who are working but whose employment status may be jeopardized due to their disability; and will refer the Participant to OVR or other resources in accordance with the approved CHC 1915(c) waiver, unless the Participant makes an informed choice not to be referred for this support. The CHC-MCO must cooperate with OVR or other resources.

As detailed in Pennsylvania's "Employment First" policy, the first consideration and preferred outcome of publicly-funded long-term services and supports for working-age Pennsylvanians with a disability is competitive integrated employment. Competitive integrated employment means any full or part-time work for which a person is:

1. Compensated at not less than federal minimum wage requirements or

State or local minimum wage law (whichever is higher) and not less than the customary rate paid by the employer for the same or similar work performed by people without a disability;
2. At a location where the employee interacts with people without a disability (not including supervisory personnel or people who are providing services to such employee); and
3. Presented, as appropriate, opportunities for similar benefits and advancement like those for other employees without a disability and who have similar positions.

CHC-MCOs will collect and publish data on Participant competitive-integrated employment outcomes, including, but not limited to, number and percentage of Participants, by age group and disability type, in self-employment or competitive-integrated employment as defined by the Workforce Innovation and Opportunities Act, wage rates, weekly wages earned, weekly hours worked, type or classification of job, and whether benefits are part of the compensation package.

CHC-MCOs will offer services that promote or lead to securing or maintaining competitive-integrated employment, including, but not limited to, job coaching and job finding, customized employment, Discovery (for participants with to-be-defined challenging needs), benefits counseling, and transportation. CHC-MCOs must provide the necessary employment related training, resources, and communication to their employment staff and SCs. SCs must engage Participants in ongoing education and discussions with Participants regarding employment and assist Participants with a goal of achieving competitive integrated employment with accessing all available resources.

GG. Advance Directives

The CHC-MCO must maintain written policies and procedures for advance directives (durable power of attorney, mental health, and living wills) for Participants, which shall include the following information:

a. the description of applicable State law;
b. the process for notifying the Participant of any changes in applicable State law as soon as possible, but no later than ninety (90) days after the effective date of the change;
c. any limitation the CHC-MCO has regarding implementation of advance directives as a matter of conscience;
d. the process for Participants or the Participant's representative to file a Complaint concerning noncompliance with the advance directive requirements with the CHC-MCO and DOH;
e. noncompliance with the advance directive requirements with the CHC-MCO and DOH; and

f. how to request written information on advance directive policies.

The CHC-MCO must educate staff concerning its policies and procedures on advance directives.

The CHC-MCO may not condition the provision of care or otherwise discriminate against a Participant based on whether or not the Participant has executed an advance directive.

SECTION VI: PROGRAM OUTCOMES AND DELIVERABLES

Prior to the Enrollment of Participants and a Zone Start Date for a CHC-MCO, the Department will conduct Readiness Review activities to determine the CHC-MCO's ability to provide services as required by this Agreement. The CHC-MCO must cooperate with all the Readiness Review activities, including on-site reviews conducted by the Department. As part of Readiness Review, the CHC-MCO must test successfully its claims processing system in a given zone. Test samples must include all types of payments and adjustments that are billed through the Department's MMIS claims processing system. If the Department determines the CHC-MCO has not demonstrated readiness to provide services as required by this Agreement, the Department will not permit the enrollment of Potential Participants with the CHC-MCO and may extend the time period for the Readiness Review or not operationalize this Agreement.

SECTION VII: FINANCIAL REQUIREMENTS

A. Financial Standards

1. Equity Requirements and Solvency Protection

The CHC-MCO must meet the Equity and solvency protection requirements set forth below and with all financial requirements included in this Agreement, in addition to those of the PID.

The CHC-MCO must maintain a SAP-basis Equity equal to the highest of the amounts determined by the following "Three (3) Part Test" as of the last day of each calendar quarter:

- Twenty Million Dollars ($20.00 million);
- Seven percent (7.000%) of revenue earned by the CHC-MCO during the most recent four (4) calendar quarters; or
- Seven percent (7.000%) of revenue earned by the CHC-MCO during the

current quarter multiplied by three (3).

Revenue, for the purpose of the Equity requirement calculation, is defined as the total gross Direct Business Premiums, for all Pennsylvania lines of business, reported in Schedule T, “Premiums and Other Considerations,” of the PID report.

For the purpose of this requirement, Equity amounts, as of the last day of each calendar quarter, shall be determined in accordance with statutory accounting principles as specified or accepted by the PID. The Department will accept PID determinations of Equity amounts, and in the absence of such determination, will rely on required financial statements filed by the CHC-MCO with PID to determine Equity amounts.

The CHC-MCO must provide the Department with reports as specified in Section VIII.E and F. Financial Reports and Equity.

If the CHC-MCO operates its plan through another legal entity or entities, and if that other entity or those other entities receive(s) from the CHC-MCO a total amount that is at least seventy five percent (75%) of the revenue paid by the Department to the CHC-MCO, then the CHC-MCO may request the following equity requirement as an alternative to the Three (3) Part Test set forth above, subject to the approval of the Department:

1. The CHC-MCO RBC ratio must be at least three (3.0);

2. The CHC-MCO must maintain a SAP-basis Equity no less than an amount that is the higher of:

    a. Five and one-half percent (5.5%) of revenue earned by the CHC-MCO during the most recent four (4) calendar quarters; or

    b. Five and one-half percent (5.5%) of revenue earned by the CHC-MCO during the then-current calendar quarter multiplied by 3; and

3. The other entity or other entities that operate(s) the CHC-MCO’s plan in a particular zone must maintain (individually, in the case of multiple entities) Equity no less than an amount that is the higher of:

    a. Eight and three-tenths percent (8.3%) of revenue earned by the entity during the most recent four (4) calendar quarters; or

    b. Eight and three-tenths percent (8.3%) of revenue earned by the entity during the then-current calendar quarter multiplied by three (3).

Revenue, for the purpose of this alternative equity requirement, would be premiums as noted on the most-recent audited statements.

The CHC-MCO must provide documentation of compliance that is satisfactory to the Department, and failing that, must comply with the standard Three Part Test.

2. Risk Based Capital

The RBC ratio is defined as:

- The Total Adjusted Capital figure in Column One from the page titled Five Year Historical Data in the Annual Statement for the most recent year filed most recently with the PID, divided by the Authorized Control Level Risk-based Capital figure.

The CHC-MCO must maintain a RBC ratio of two (2.0).

3. Prior Approval of Payments to Affiliates

With the exception of payment of a Claim for a medical product or service that was provided to a Participant, and that is paid in accordance with a written Provider Agreement, the CHC-MCO may not pay money or transfer any assets for any reason to an Affiliate without prior approval from the Department, if any of the following criteria apply:

a. The CHC-MCO's RBC ratio was less than two (2.0) as of December 31 of the most recent year for which the due date for filing the annual unaudited PID financial report has passed;

b. The CHC-MCO was not in compliance with the Agreement Equity and solvency protection requirement as of the last day of the most recent quarter for which the due date for filing PID financial reports has passed;

c. After the proposed transaction took place, the CHC-MCO would not be in compliance with the Agreement Equity and solvency protection requirement; or

d. Subsequent adjustments are made to the CHC-MCO's financial statement as the result of an audit, or otherwise modified, such that after the transaction took place, a final determination is made that the CHC-MCO was not in compliance with the Agreement's Equity requirements. In this event, the Department may require repayment of amounts involved in the transaction.

The Department may elect to waive the requirements of this section.

4. Change in Independent Actuary or Independent Auditor

The CHC-MCO must notify the Department within ten (10) days when its contract with an independent auditor or actuary has ended. The CHC-MCO must include in the notification, the date and reason for the change or termination and the name of the replacement auditor or actuary, if any. If the change or termination occurred as a result of a disagreement or dispute, the CHC-MCO must disclose the nature of the disagreement or dispute.

5. Modified Current Ratio

The CHC-MCO must maintain current assets, plus long-term investments that can be converted to cash within five (5) business days without incurring a penalty of more than twenty percent (20%) that equal or exceed current liabilities.

- If a penalty for conversion of long-term investments is applicable, only the value net of the penalty may be counted for the purpose of compliance with this requirement.
- The definitions of current assets and current liabilities are included in the Financial Reporting Requirements.
- Restricted assets may be included only with authorization from the Department.
- The following types of long-term investments may be counted, consistent with above requirements, so long as they are not issued by or include an interest in an Affiliate:

  – Certificates of Deposit
  – United States Treasury Notes and Bonds
  – United States Treasury Bills
  – Federal Farm Credit Funding Corporation Notes and Bonds
  – Federal Home Loan Bank Bonds
  – Federal National Mortgage Association Bonds
  – Government National Mortgage Association Bonds
  – Municipal Bonds
  – Corporate Bonds
  – Stocks
  – Mutual Funds

6. Sanctions

In addition to the Department's general sanction authority specified in Section VIII.I, Sanctions, if the CHC-MCO fails to comply with the requirements of Section VII.A, Financial Requirements, the Department may take any or all of the following actions, in accordance with 42 C.F.R. §§ 438.700; 438.702; and 438.704:

- Discuss fiscal plans with the CHC-MCO's management;
- Suspend payments or a portion of payments for Participants enrolled after the effective date of the sanction and until the Department is satisfied that the reason for the imposition of the sanction no longer exists and is not likely to recur;
- Require the CHC-MCO to submit and implement a corrective action plan;
- Suspend all new and default Enrollment of Participants into the CHC-MCO, including auto-assignments, after notification by the Federal or State government;
- Terminate this Agreement upon forty-five (45) days written notice, in accordance with Section X of this Agreement, Termination and Default.

In addition, the Department may impose sanctions described above when a CHC-MCO, either directly or through a Subcontractor, acts or fails to act as follows:

- Fails substantially to arrange for Medically Necessary services that the CHC-MCO is required to provide to a Participant under law or under its Agreement.
- Imposes on Participants premiums or charges that are in excess of the premiums or charges permitted under the MA program.
- Acts to discriminate among Participants on the basis of their health status or need for healthcare services.
- Misrepresents or falsifies information that it furnishes to CMS, the Department, Participants, Potential Participants, or Healthcare Providers.
- Fails to comply with requirements for PIPs as set forth in 42 C.F.R. §§ 422.208 and 422.210.
- Has distributed directly, or indirectly through any agent or independent contractor, marketing materials that have not been approved by the Department or that contain false or materially misleading information.

7. Payment for Disproportionate Share Hospitals and Graduate Medical Education

The Department will make direct Disproportionate Share Hospital and Graduate Medical Education Payments to hospitals.

8. Participant Liability

In accordance with 42 C.F.R. § 438.106, the CHC-MCO must provide that its Participants are not held liable for the following:

a. Debts of the CHC-MCO in the event of the CHC-MCO's insolvency.

b. Services provided to the Participant in the event that the CHC-MCO fails to receive payment from the Department for such services.

c. Services provided to the Participant in the event of a Provider with a contractual, referral or other arrangement with the CHC-MCO failing to receive payment from the Department or the CHC-MCO for such services.

d. Payments to a Provider that furnishes compensable services under a contractual, referral or other arrangement with the CHC-MCO in excess of the amount that would be owed by the Participant if the CHC-MCO had directly provided the services.

e. Balance billing for Covered Services.

If a Participant's eligibility for MA LTSS is terminated retroactively because the Participant was determined functionally ineligible as a result of the CHC-MCO failure to conduct the Participant's annual Reassessment, the CHC-MCO must continue to provide coverage for services to the Participant until the Participant's functional eligibility determination is made. The CHC-MCO may not recover payments to providers for services provided to the Participant or seek to hold the Participant financially responsible for such services.

9. Restitution for Fees Owed to the Department

The Department may require the CHC-MCO to offset against any payment amount due to a Provider from the CHC-MCO any amounts that are due to the Department from the Provider and that have not been paid by the Provider.

- The Department will notify the CHC-MCO and the Provider in writing of the amount due to the Department.
- If the Network Provider fails to make payment of the amount within 30 days of the written notice, then the Department will notify the CHC-MCO that it must offset the amount due to the Department, for the amount identified by the department, from the CHC-MCO's payments to the Network Provider and pay the Department until the amount due to the Department has been collected in full.
- The Department reserves the right to deduct any unpaid amounts due from Network Provider from future payments to the CHC-MCO after ninety (90) days from the mailing date of the written notice.

B. Department Capitation Payments

1. Payments for Covered Services

The obligation of the Department to make payments shall be limited to Capitation payments and any other payments provided by this Agreement.

2. Capitation Payments

i. The CHC-MCO shall receive capitated payments for the previous month for Covered Services as defined in Section VII.B.1, Payments for Covered Services, and in Appendix 3a, Explanation of Capitation Payments.

ii. The Department will compute Capitation payments using daily per diem rates. The Department will make a monthly payment to the CHC-MCO for each Participant enrolled in the CHC-MCO, for the first (1st) day in the month the Participant is enrolled in the CHC-MCO and for each subsequent day, through and including the last day of the month.

iii. The Department will not make a Capitation payment for a Participant Month if the Department notifies the CHC-MCO before the first (1st) of the month that the individual's MA eligibility or CHC-MCO Enrollment ends prior to the first (1st) of the month.
